

it was observed that certain classes of villagers attacked and destroyed other classes;—the powerful hand of a regular government being temporarily removed, the ancient antipathies of race at once came into play. Dwelling amongst each other, door to door, but yet never mixing, neither eating together nor intermarrying, most of the races remain as distinct as when, 10, 15, 20, 30, 40, and 50 centuries ago, they came to the south. It is this separating system which has kept the stocks of Aryan and Turanian races of India pure. On the slightest suspicion as to descent, all intercourse ceases, and the descendants, in different lines from the same recognised ancestor, form new castes. In this way almost every family of a few hundred years' duration is now broken up. The cause of the origin of this exclusive propensity is unknown, further than that the system of caste and the forms of Brahmanic worship commenced amongst the East Aryans after their passage of the Sutlej, and now every Aryan and most Turanian households are guided by its rules. The tribes and castes are everywhere numerous. It has been estimated that in Bengal alone, if their subdivisions and septs and clans be taken into account, they would amount to many thousands. The Bombay Census Report of 1881 enumerates 1245.

Population of India according to Census of 1881, classified under Sexes and Religion, and distinguishing British Territory from Native States.

Many of the aboriginal tribes, now under the British or feudatory rulers, are broken nationalities, as the Gond, the Bhil, the Kathi, the Gujar, the Mair, the Meena, the Bhar, the Kurku, the Maria, the Khond, the Santal, the Kol. There are smaller tribes in Chutia Nagpur and the Tributary Mahals, wild mountain races in Julpiguri, with more compact clans of Mongoloid tribes in the Garo, Khassya, Jaintia, and Naga Hills, and in Tiperah and the Chittagong Hill tracts. On the hills and in the plains in the extreme south of Peninsular India, are the Nair, the Coorgs, the Beder, the Male Arasar, the Kadar, the Yanadi, the Irular, the Badaga, the Toda, the Kotar and Kurumbar, and the Saura, the Chenchwar of the Eastern Ghats.

The Kallar, Maravar, Teer, and Shanar occupy the plains in the very south of the Peninsula. Some of the predial tribes, the Dom, Pariah, Mhar, Holiyar, Mhang, Dhor, Chamar, Veddar, Puller, Cherumar, are settled in the outskirts of the villages; but the Wadawar, Banjara, Lambari, Korawa, Bhaora, Bhatu, the Yerkala, some of the Kurumbar, and others, are homeless wanderers, moving amid the civilised settled dwellers of the plains, or secluded in the hills and forests, and are largely predatory, as are also the Sansi, Baori, Harni of the Panjab, and the Nat of Northern Hindustan. The Dravidians are in several great nations, as the Tamilar, the Teling, and the Canarese.

The more compact of the smaller nationalities of Dravidian and Kolarian descent have found shelter in the mountain tracts on the south-west of Bengal proper, in the hills of Orissa, and in the valleys of the Satpura and Vindhya ranges, and in northern Gondwana, where they have formed many little states under chiefs claiming to be of ancient lineage, or cadets of Rajput houses.

The next in numbers are the Mahomedans. They are chiefly in Bengal, the N.W. Provinces, and the Panjab, with smaller numbers in Oudh, parts of the Bombay and Madras Presidencies, or dispersed among the Hindu communities. None of them have settled among the semi-civilised or wild aboriginal tribes. Many of them are of Arab, Afghan, Moghul, and Persian descent, but a considerable number are of converts from Hinduism; and the ancestors of the great bulk of those in Bengal, in number 21,704,724 in 1881, are recognised to have been non-Aryan aborigines, though their history is not known. The Mahomedans are in two sects, the Sunni and the Shiah, the former greatly preponderating, with smaller offshoots known as Mahdavi. In 1881, the total of the Mahomedans of Hindustan was 50,121,585.

Hindustan is partly under British, partly under

LIBRARY

mediate between the Papuan and the Negrito. The Papuan are taller than the Malay, but the Negrito are about 4 feet 6 inches or 4 feet 8 inches, or 8 inches shorter than the Malays. The Negrito nose is small, flattened, or turned up at the apex, while the Papuan nose is large and prominent, with the apex prolonged downwards. The Negrito hair is the same as that of the Papuan and also of the African. The Negrito of the Philippines, the Semang and Bila of the Malay Peninsula, and the Mincopi of the Andamans, agree with each other. The Negrito are living in Luçon, Negros, Panay, Mindoro, and Mindanao to the number of 25,000, but are also in Palawan and Formosa. They are small in stature, but well made.

Of the *Malay* race, there are three broad ethnic divisions, viz. the Orang Malayu, the Orang Laut, and the Orang Binua.

The *Orang Malayu* are civilised communities in Sumatra, Malacca, Borneo, etc., are all Muhammadans, and speak High Malay, with a literature written in the Arabic character.

The *Orang Laut*, literally sea people, are known as the Baju Laut of Celebes; and Mr. Keane supposes them to be akin to the Lanun of Borneo and Illanos of Mindanao. They live in their boats on the water, engaged in fishing and addicted to piracy, or, as De Barros says, 'Cujo officio he rubar e pescar.'

The *Orang Binua*, or men of the soil, known also as Orang-Utan or wild men, as Orang Gunong or hillmen, likewise as Orang Darat or landsmen, are wild, savage, and unlettered tribes of the interior of Malacca, parts of Sumatra, Rhio-Lingga, and other islands in the Straits of Malacca. They speak in rude but pure Malay dialects, are in numerous tribes, with names given from the rivers and the districts they occupy.

The *Malay language* proper, wherever current in the Archipelago, is spoken with remarkable uniformity; and that spoken even by the ruder uncivilised tribes in Malacca and Sumatra, known as the Low Malay, does not differ from the High or Literary Malay.

Malay proper is vernacular in Malacca, in a large part of Sumatra, in the islands of Billiton, Banca, Panjor, Penang, Singapore, Rhio-Lingga, Banda, in parts of the Moluccas and Timor, and generally round the coast of Borneo.

Orang Laut.—The custom of living on the water is common in various parts of Southern Asia; it is in some countries occasioned by necessity. But the people who are called Rayats on Banca and in the neighbouring seas, adopt it by choice, and preserve it in situations which would afford a more comfortable mode of life. They are probably dispersed through all the countries where the Malay language is current. They always formed part of the subjects of the Malay princes during their prosperity at Malacca and afterwards at Johore. Those of them who have preserved their manners pure, dwell in small prahus, which carry their possessions and families. These are of the size and class of the vessels distinguished among the Malays by the name of prahu kakap, probably from their supposed resemblance to a fish of the same name in their form and motion; they are equally adapted to rowing and sailing. Their after part is the kitchen, and here a small stove is permanently fixed; the central space serves for their usual occupations during the day, and for their rest at night; several large mats, which are rolled up in the day time, form its principal furniture; their fore parts contain a small chest, in which they preserve their articles of value. During the night, and in bad weather, the vessel is covered by a light mat (or kajang), which, when not in use, is folded over the posterior part. The furniture of each prahu is very simple. One harpoon with a shifting point, and a spear-like implement for searching for crabs in the sand, some empty cocoanut shells, with oar and paddles in proportion to the size of the vessels, are always found; besides these, a drum and a comb of uncommon size; most prahus carry a favourite cat. A number of long wooden lances, as their common weapon of defence, are always placed in conspicuous parts. These they wield with much dexterity. The larger prahus (especially those intended for warlike purposes) are provided with rantakkas, firelocks, spears, and Malay cutlasses.

Each prahu carries a large sail. The day is spent in small excursions on the ocean; at night the vessels are anchored near the shore or fixed to a pole. Smaller vessels are generally drawn upon the beach. When opportunities allow, they seek the shelter of small bays or the outlets of rivers. They often subsist for many days, successively on fish, crabs, oysters, or mussels, which they consume indiscriminately, but they are extraordinarily fond of vegetable food, and whenever they have an opportunity all of them devour double the quantity of rice that will suffice another Malay. The places they occupy or have lately visited are easily known by the remnants of fish, by piles of shells, etc., and are also indicated at a great distance by a nauseous odour. Cleanliness is by no means one of their qualities; they are rarely exempt from eruptions on the skin, and they complain of diseases of the bowels.

They spend their time chiefly in fishing or in preparing fishing-tackle of various kinds. The preparation and arrangement of the leaves of a species of pandanus for sails is the business of the females. Those who have attached themselves to a particular spot sell and barter dried fish, trepang, agar-agar. In the year 1825 the Carimon Islands (Krimun) were occupied by Orang Laut, who plundered when they could do it with impunity. The Carimons, from their central position, were a favourite haunt of pirates, and the strait separating the two islands was seldom without some of their boats.

Sumatra is between 128,500 and 140,000 square miles in area. Its inhabitants have been estimated at from 2 to 4½ millions. Among the people of the Archipelago generally, the island is known as Pulo Purichu, also Pulo Indalas; the Javanese term it Tana-Palembang, the land of Palembang. The origin of the term Sumatra is unknown. The Malay races proper occupy about half the area of the island. Their chief tribes are the Korinchi, the Orang Rawa, Orang Palembang, Rejang, Serawi, Lampong, Batta, the Orang Kubu or Orang Lubu. Marsden mentioned the Orang Gugu, and in the southern belt the Orang Abung, described as a head-hunting race.

Excepting Menangkabau, the whole coast of Sumatra is nominally under five sovereignties, viz. Palembang, Jambi, Indragiri, Siak, and Achecn. Menangkabau province is the plateau in the in-

Kurbagha, near to Dursummund, an independent village of Upper Miranzai, which lies between Hingu and Khurum. He is said to have been accompanied by 3000 of his relations and friends, and 8000 other men of Shuwal. At that time Kohat and Teri were occupied by the Orakzai. Akore with his adventurers drove the Orakzai from Teri, and held that country, their opponents retiring on Kohat, at which place the Bungush, rising on them and joining the Khatak, they were driven fairly out of the country to Thyruh. Tuppee, a village lying three miles S.E. of Kohat, and on the Kalabagh road, is pointed out as the spot where the engagement took place between the Khatak and Bungush on one side, and the Orakzai on the other; after the battle, the conquerors divided the country, making a range of hills which divides Guddukheil and Luchee the boundary between the Khatak and Bungush. This range still forms the boundary between the two tribes. The Khatak country extended to Resee, a village near to and above Mukhud, on the Trans-Indus side. There were then two divisions of the tribe, Turi and Buluk. On the country being divided, Chountra, Dullin, and Durrah fell to the former, and from Buluk sprung two branches, Khurrum and Senee. Joullaee, Ghurzundai, and Unjukhulu lie in one valley, and belong to Khurrum, and the Senee branch passes from Teri to Purshai. Akore and his followers having entered the country as adventurers, left their wives and families at Kurbagha, and had difficulty afterwards in bringing them to rejoin them in their new country.—*Selections from the Public Correspondence*, p. 62; *Papers, East Indies, Kábul and Afghanistan*, 1859, p. 21; *Burnes' Cabool*, p. 105; *Records, Government of India*, No. 11; *Imp. Gaz.*

KHATAM. Ar. Seal or conclusion, the end of a book; a term in the science of exorcism. Khatam-i-Koran, the reading through of the entire Koran.

KHATAMBAND. Hind. Maker of stringed musical instruments.

KHATIB. Arab. One who reads the Khutba, a preacher, a public speaker. Qanoon-i-Islam, by Jafir Sharif, translated by G. A. Herklots, M.D., 1832, says: 'The Khatib (priest), after repeating two rukat prayers, also shukreea, ascends to the second or middle step of the mambur, and, the congregation being seated, he reads the Khutba; that is, offers glory to God, praises the prophets, and passes eulogiums on his companions. He then descends to the lowermost step, recounts the many virtues of the king, and offers up supplications on behalf of him. The king is he whose coin is current in the realm, and in whose name prayers are offered up after the Khutba is read at the mosques and at feasts.' At present (1832) it is in the name of the king of Dehli, but in the author's opinion erroneously, as it should be in the name of the Honourable East India Company.

KHATIK, in Bengal, a race who are poulterers.

KHATIRI, Hind., from Arabic Khatrah, danger; a crop raised in the sand on the banks of a river by manuring and hand-watering. A nominal rent is paid for such, as it may be swept away by a rise.

KHATMANDU. At the foot of the northern range, situated upon the eastern bank of a small river, the Vishenmuttee, in lat. 27° 36′ N., and long. 85° 24′ E., stands the city of Khatmandu. It is not the largest of the towns in Nepal, but it is the residence of the maharaja. It is said to have been founded by Raja Gunakamadeva about A.D. 723. In the square in front of the palace are numerous handsome temples. Many of these are like pagodas, of several storeys in height, and profusely ornamented with carvings, painting, and gilding. In front of several of the temples are tall monoliths, some surmounted by figures of old rajas, who founded the temples, others by the winged figure of Garur. They vary in size, from the gigantic pagoda of Taleju to a diminutive shrine cut out of a single stone, with an image a few inches high in the centre. Many of them present a most repulsive appearance, being dabbled over with the blood of cocks, ducks, goats, and buffaloes, which are sacrificed before them. In length Khatmandu may measure about a mile, its breadth nowhere exceeding half a mile. The name of the town in ancient books is Gorgoolputten; the Newar race call it Yindes; whilst among the Parbuttia, or mountaineers, it is styled Kultipur, an appellation which seems to proceed from the same source with Khatmandu, and derived, it is believed, from its numerous wooden temples, which are among the most striking objects in the city. These edifices are not confined to the body of the town, but are scattered over its environs, particularly along the sides of a quadrangular tank or reservoir of water. The houses are of brick and tile, with pitched or pointed roofs. On the street side, they have frequently enclosed wooden balconies of open carved work, and of a singular fashion; the front piece, instead of rising perpendicularly, projecting in a sloping direction towards the eaves of the roof. They are of two, three, and four storeys, and, almost without a single exception, are of a mean and poor appearance. The streets are exceedingly narrow, and very filthy. See India; Nepal.

KHATMI, or Barra gul Khaira. Hind. Althæa rosea, hollyhock. The seed is considered cooling; in medicine one tola is given; the corollæ and pericarps, when fresh, are exceedingly mucilaginous and used in sherbets. Khatmi Kochak, Pers., is the small mallows. It grows in moist ground, and is useful when applied as a cataplasm to parts of the body stung by wasps or hornets. Khatmi Safaid, Hind., is Malva mauritiana.—*Gen. Med. Top.* p. 143; *Ouseley's Travels*, i. p. 216.

KHATNAH. Arab., Hind., Pers. Circumcision. It was enjoined in the law of Moses on all males of the Hebrews, on the eighth day after birth. It is practised by the Muhammadans on all males, at any age, but it is not enjoined in the Koran. It is practised on girls in Egypt by removing the prepuce of the glans clitoris.—*Zu-al-Mukhtar; Tuhfaci.*

KHATRAN, an independent tribe adjoining the Dehra Ghazi Khan district, and behind the Bozdar Hills, in the midst of the Baluch tribes, with whom they are frequently at feud. They are special enemies of the Bozdars and the Murrees. Their hills scarcely touch the British frontier. Once they sought British alliance against the Murrees, and also offered their support, if an expedition were undertaken against that tribe; but the Government refused to have any relations of this nature with them, in order to avoid being implicated in the feuds of the hill tribes. They number 3000 fighting men, of whom 200 are mounted.

the air, becomes lac. So numerous are these insects, and so closely crowded together, that they often entirely cover a branch; and the groups take different shapes, as squares, hexagons, etc., according to the space left round the insect which first began to form its cell. Under these cells the females deposit their eggs, which after a certain period are hatched, and the young ones eat their way out. The accumulation of insects is so great that the trees on which they live are exhausted and injured by them. The parent lac insect, after laying her eggs, becomes a mere lifeless bag, of an oval shape, containing a small quantity of a beautiful red liquid. The young insects feed on this liquid, and their bodies assume the same hue, so that the branch which bears them appears to be covered with red powder. The cells of gum-lac which shelter them are more or less deeply tinged with the same colour.

The best time for gathering stick-lac so as to secure the colouring matter, is before the insects have made their escape. In some places the insect is sedulously cultivated, the modus operandi being the very simple one of cutting off old branches inhabited by it, and tying them to fresh branches; in other places nature is left to accomplish the work unaided. That a great deal may be done to extend the industry, is evident from the success which has attended its introduction into the territory of Kapurthala, where three maunds of seed were transported safely from so distant a locality as Oudh. The forests of Burma alone are capable of producing an almost unlimited quantity, if plantations are only formed.

The cells made by the insect for its eggs adhere to the branches in grains, completely encrusting them, and, in commerce, are either imported in that form, and called 'stick-lac,' or the grains are gathered from the branches, their colouring matter extracted, and formed into flat cakes, still preserving the granular appearance, and called 'seed-lac,' or the seed-lac is melted up into masses, and called 'lump-lac.' 'Shell-lac' is seed-lac further purified by being put in bags of fine linen, and melted over a charcoal fire until it passes through them. The bags are squeezed, and passed over a smooth surface of wood, on which the lac is deposited in thin layers. If pure, this kind of lac will take fire on a hot iron, and burn with a powerful smell. The heat of a ship's hold will sometimes run it into a solid mass, and thus diminish its value. By pouring warm water on stick-lac, a crimson colouring matter is obtained, which is made into square cakes for sale, and called lac dye, lac lake, or cake lake. These cakes, when broken, are dark-coloured, shining, and compact, but when scraped they yield a bright red powder approaching carmine.

The best quality of stick-lac is obtained from Siam, the twigs being frequently encrusted all round to the depth of a quarter of an inch, while sometimes a great accumulation takes place on one spot; that of Assam ranks next; the stick-lac of Bengal is inferior to these, being scanty and irregular in its coating of resinous matter.

The largest export is from the Central Provinces, but it is also produced in considerable quantity in Assam, and in the Gaya and Hazaribagh districts, in Oudh, the North-Western Provinces, the Panjab, and a limited portion of Sind, in Maisur, and in British Burma. The lac which is so largely exported from Burma is obtained chiefly in the Shan districts, and is perhaps the finest in the world, preferable even to that of Bengal. The jungle at Taldungah consists chiefly of thorny bushes, jujube of two species, an Acacia and Butea frondosa, the twigs of the latter often covered with lurid red tears of lac, which is there collected in abundance.

The supply of lac from among the mountains of India could support a consumption ten times greater than at present. In Cuttack, Travancore, Mysore, and most of the Madras districts, it is found in considerable abundance.

Previous to the discovery of the true cochineal, the colouring matter of the lac insect was universally employed for dyeing red. The crimsons of Greece and Rome, and the imperishable reds of the Brussels and Flemish schools, were obtained from this source.

A mixture of lac, alum, and tamarind-water is the native dye for silk or cotton cloth of a crimson colour.

After the dye is extracted, the gum-lac still requires much purification before it can be used for the more delicate varnishes. A premium of 30 guineas and a gold medal were offered by the Society of Arts for a varnish made from shell or seed lac, equally hard, and as fit for use in the arts, as that prepared from any other substance. These were claimed by two persons, Mr. Field and Mr. Luning, and as both their processes were found to answer the desired end, a premium of 20 guineas was awarded to each.

The chief consumption of lac in Europe is for the manufacture of sealing-wax and varnishes. In India the inferior kind is made into bangles or armlets for women of the lower classes, the superior is fashioned into rings, beads, and other trinkets. To fit it for such purposes, the natives purify it by melting in bags. When the lac begins to exude, it is scraped off, and the bags are twisted or wrung by means of cross sticks at their ends, to force out the melted contents.

The natives of India make a good varnish of lac, coloured with cinnabar or some other pigment, with which they varnish boxes, cabinets, and other articles. Coloured varnishes of this description are much used in the adornment of their religious houses.

Lac and sandarách form the basis of spirit varnishes; these resins are more soluble than amber, anime, and copal. They are dissolved in spirits of wine, or pyroligneous spirit, which is cheaper. Lac is harder than sandarach, and is the basis of most lacquers, and also of French polish. Sandarach is used for making a pale varnish for light-coloured woods. It may be hardened by the addition of shell-lac or of mastic if required to be kept pale; and when required to be polished, Venice turpentine is added to give it body.

The Indian lapidaries make use of lac as a vehicle for retaining the hard corundum powders used in cutting and polishing gems, and as laps.

Lac enters into the composition of the best Chinese lacquer,—gamboge or dragon's blood, with copal, being added to increase the colour.

The exports of lac, of kinds, from India have been as under:—

1880–81, . . .	88,392 cwt.	Rs. 57,83,202
1881–82, . . .	117,601 ,,	71,95,283
1882–83, . . .	138,814 ,,	69,90,156

numbers 1510, of whom the larger proportion (625) live in Madras. There are 145 Frenchmen in the Bombay Presidency. It will surprise many persons to learn that the German-speaking population in India is slightly less numerous than the French. The former, according to Mr. Plowden, number 1471. The British-born population of Bengal, notwithstanding its large planting community, was considerably below that of Bombay. This fact is referred to by Mr. Plowden, who points out that the largest number of British-born persons is found in the North-Western Provinces (20,184) and the Panjab (17,590), owing to the heavy garrisons in those parts of India. Bombay (exclusive of the Feudatory States) follows with 13,772, and Bengal with only 10,583. The other provinces and states stand as follow:—Madras, 5883; Burma, 5346; Central India, 4978; the Nizam's Dominions, 2956; the Central Provinces, 2774; Mysore, 2686; Ajmir, 872; Assam, 795; Baroda, 267; Coorg, 134; the Feudatory States of Bombay, 98; and Berar, 97. Mr. Plowden thus classifies the English-speaking population:—Born in the United Kingdom, 89,015; Eurasians (persons of mixed parentage), 62,085; born of British parents outside the United Kingdom, 50,360; born in America, Australia, and at sea, 2098. Of the eighty-nine thousand odd born in the United Kingdom, nearly fifty-six thousand males are in the army, and about three thousand in the Civil Service. When to this is added the wives and families of British military and civil officers, it will be seen how insignificant, numerically, the non-official portion of the English community in India still is. In his list of the great cities of India, Mr. Plowden places Bombay, with its 772,196 inhabitants, first, and Calcutta (766,298) second. He contends, however, that the population of Howrah, on the right bank of the river Hoogly, should be added, which would bring up the number of inhabitants of the Bengal capital to 871,504. From the chapter on the religions of the people, we find that the Parsees of the various presidencies aggregate 85,397, of whom 78,973 are to be found in Bombay and its Feudatory States, and 8118 in Baroda. There are 916 Parsees in Central India, 638 in Hyderabad, 462 in the Panjab, 399 in the Central Provinces, 242 in the Berars, 156 in Bengal, 143 in Madras, 114 in the North-West Provinces, 83 in Burma, 75 in Ajmir, 47 in Mysore, 21 in Coorg, 7 in Rajputana, and 3 in the Feudatory States of the Panjab.

Urdu.—In the past eight centuries, Muhammadan armies have been bringing into India the Arabic, Turki, Mongol, and Persian tongues. The first of these continues to be the language of the Muhammadan religion; and though the Koran has been translated into Persian, Urdu, and Tamil, also Burmese and Malay, their sacred book, in the original Arabic, is still preferred in British India, is studied by all youths, and read by all their educated religionists. Persian, on the other hand, has been the written language of the Muhammadan courts of Persia and India, and is used by all the educated classes in their correspondence. Under Mahmud, the civil administration must have been entirely conducted by Persians. The two celebrated vizirs, Abúl Abbas and Ahmad Maimendi, were of that nation. The former introduced the practice of writing all public papers in Persian. Ahmad restored Arabic in permanent documents. It is owing to this circumstance that, although India was never directly conquered by Persia, the language of business and of writing in general is all taken from the latter country. The Muhammadan conquerors, whom the Mahrattas first and then the British succeeded, thus left as a legacy the Persian language, as the tongue in which all the learned people, and many of the official people, wrote; but since the 14th century, from it and from the Turki, Arabic, and Hindi a vernacular language has been formed, to which the name of Urdu, or camp tongue, is given. The new tongue is based on the Hindi, with many words from the Arabic, Persian, and Turki, a sprinkling from the Sanskrit, and all the Hindi, Dravidian, Kolarian, and Portuguese tongues spoken in British India. In the south of India, Urdu is called Hindustani, because it had its origin in Northern India or Hindustan; but it was only in the early part of the 19th century that it was given regular forms by Dr. John Borthwick Gilchrist. It is used as a medium of intercommunication by the Hindus of the towns of Oudh and Dehli, by all Indian Muhammadans amongst themselves, and by Hindus and Europeans as a common tongue. It is, however, as a written language, only used by the less educated Muhammadans and by their women, the more highly educated employing Persian. In some districts of Northern India, Persian words predominate in the Urdu; in other parts of India, Hindi words are the more numerous; in the southern part of the Peninsula there is a very considerable admixture of Arabic, and on the west of the Peninsula the Mahrati is greatly infused into it.

Hindi is a term used over much of Northern India to denote the vernacular tongue of the district. Hindi and its dialects are spoken by about 80 millions of people. On the north and east it comes in contact with the Tibeto-Burman family in the Himalaya and in Further India: on the south, in Gondwana, it has on its borders the Uriya, the Karnatica, the Telugu, and the Mahrati; and on the N.W. and W. the Pushtu, the Baluchki, and Brahuiki bound it. Its recognised dialects are reckoned fifty-eight, but there are others wild and uncultivated.

Speaking generally, the whole of Upper India, including the Panjab, from the Himalaya to the Vindhyan range, but exclusive of Bengal, may be said to be possessed by one language, the Hindi. According to Colebrooke and the Serampore translators of the Bible, Hindi owes nine-tenths of its vocables to Sanskrit roots; when it is spoken by Muhammadans, who add to it Arabic and Persian roots, it becomes converted into Urdu or Hindustani. When Hindi is spoken by Hindus, who draw on Sanskrit for enrichment or embellishment, it appropriately retains the name of Hindi. Modified in these various ways, it is found not only on the plains of Hindustan, but also on the southern slope of the Himalaya, for Mr. Trail informs us that the language of Kamaon and Garhwal is Hindi. Indeed, generally, along the Sub-Himalayan range, as far as the Gogra river, an impure Hindi dialect introduced by the Gurkha from the plains appears to be extirpating the vernacular Tibetan tongues of the aboriginal

THIRD EDITION.

LONDON:
BERNARD QUARITCH, 15 PICCADILLY.
1885.

Portuguese, Dutch, and Spanish East Indies are many medical schools, and numerous European, American, and native medical men teaching and practising their profession according to the doctrines of the schools of Europe. Amongst the Hindus, the art of medicine has been carefully studied from the most ancient times, and books on the subject have a large circulation. Of these, the Ayur Véda, which is reckoned a portion of the fourth or Atharva Veda, is considered the oldest treatise and the highest standard. It is said to have consisted originally of 100 sections, each containing 1000 stanzas, but fragments only are now procurable. The works of Charaka and Susruta, who are said to have lived about the time of Rama, are also regarded as of great authority; and Agastya, a Tamil writer, is fabled to have written upwards of 50 treatises on medicine, alchemy, and magic, but some of those attributed to him have been composed after the arrival of Europeans in India; and there are upwards of 120 Tamil works on medicine, some of them of considerable size. Amongst the Hindus of the 19th century, medical science is, however, much in the same state as it was in Greece in the time of Hippocrates. The Greeks seem to have derived from India their systems of philosophy and medicine, and Hippocrates and Plato taught that fire, air, earth, and water were the elemental constituents of our bodies. The views which Pythagoras and Plato entertained of health and disease precisely accord with those of Plato and the Hindu Susruta, and the Hindu system of therapeutics is much the same as that of Galen, who taught that the properties of all medicines are derived from their elementary or cardinal qualities,—heat, cold, moisture, and dryness,—and taught that if a disease be hot or cold a medicine with the opposite qualities is to be prescribed. A general belief in the hot and cold inherent qualities of medicines at this day pervades the whole of India, and the most illiterate labourer, as well as the most learned pandit, explains the action of medicine on this Galenical principle only. Some Hindu medical men are able and trustworthy, but the great mass of the native practitioners have not yet been taught anything of the science of Europe, and have not the slightest knowledge of their art, even according to their own authors. Nevertheless their materia medica is sufficiently voluminous, and their rules for diagnosis, as laid down by their ancient writers, define and distinguish symptoms with great accuracy. Their authors have also paid great attention to regimen and diet, and have a number of works on the food and general treatment suited to the complaint, with a variety of works on the medical treatment of diseases, containing much absurdity with much that is of value. Their value of experience and of a thorough education is also proved by many of their proverbs. The Muhammadans of Persia and India tell us, Nim hakīm, khatra-i-jān, With a half-educated physician there is danger to your life; which is the English proverb of little knowledge is a dangerous thing. A Tamil proverb warns that he only can be a good doctor who has killed ten persons; and a Singhalese proverb is that he who has killed half a thousand is half a doctor. But both the Tamil and Singhalese proverbs simply mean that there is as yet no regular teaching for their physicians, who must acquire their knowledge by their own series of successes and failures. The kachabonda is a herbalist. The vidyan is a learned Hindu practising medicine, the hakīm of the Muhammadans is a learned man, and the tabīb is a physician. In Southern India the native medical practitioners claim to be either of the Yunani *i.e.* Grecian school of medicine, or of the Misri, *i.e.* Egyptian. The Misri is sometimes designated the Suryani or Syrian school. Most of the Muhammadan physicians are of the Yunani school, and the generality of the Hindu physicians follow the Misri school. The Yunani physicians use chiefly vegetable drugs in their treatment of the sick, and with them bleeding is deemed a suitable line of practice. The Misri physicians, on the other hand, chiefly use oxides of metals, sulphur, cinnabar, or sulphide of mercury, and orpiment or sulphate of arsenic; but these drugs are first combined, by the action of fire, with some other mineral substance, otherwise they are regarded as noxious. Also, they consider bleeding as never admissible. Every Muhammadan gentleman necessarily knows something of the healing art. The medical profession, therefore, ranks next to the clerical in point of respectability; and so highly is the study thought of, that even royalty itself will occasionally condescend to dose its subjects. There were in 1872 in Madras several men of noble family who regularly gave medical advice gratis.

The British Indian Government has established medical colleges at Calcutta, Madras, Bombay, and Lahore, and at Bareilly is a medical school for native girls.

The nawab of Hyderabad in 1846 permitted Dr. Maclean, the Residency surgeon of Hyderabad, to open a medical school near the Residency. In 1876, the Madras Government, on the suggestion of Surgeon-General Balfour; arranged for the medical instruction of women, and the Governments of Bombay, Bengal, and the Panjab have since followed in this, and in the N.W. Provinces, Travancore, and the Panjab other schools have been formed. The Bengal Government and the Travancore Government have founded scholarships for them. The English E. I. Company from their first arrival in the country brought to it commissioned medical officers from Britain for their military and civil services; and since the middle of the 19th century medical colleges have been established in connection with the Universities of Bombay, Madras, and Calcutta. At these Indian colleges the majority of the students had been educated for the public service in its military and civil branches, but there have been many private students who have graduated in medicine and surgery.

In the 1st century of the Christian era, Dioscorides made inquiry into the medicinal virtues of many Indian plants which were then brought to the markets of Europe. In the 2d century, the great Cornelius Galen published his famous work, the leading opinions in which, as to hot and cold medicines, were borrowed from India, where they still prevail. In the 7th and 8th centuries, natives of India practised as physicians in the Arabian hospitals of Baghdad, employing many valuable Indian drugs in their practice. Under Mamun, the Arabian professors of that school obtained, and taught from translations of, the

Bhalum, by Bhalacharya Rishi, on nosology and the practice of medicine.
Sharanga Dariyam, by Sharanga, on nosology and the practice of medicine.
Kulliana Karaka Bhashujam, by Wugraditya Charya Rishi, a general work on medicine.
Shikritcha Kalika, by Tisat, on medicine.
Vydia Amrutam, by Siva? on medicine.
Dhanwanatri Saranedi, by Vesya Maha Rishi.
Aurogyah Chintamani, by Pandit Damudara, on medicine.
Rugvi Nachayam, by Madava Chya, on medicine.
Chandrakala, by Bopa Dawa, a commentary on Shatashuloky.
Bavardah Dauyekah, by Vanyduttah, do.
Vydia Jivanam, by Solomba Raja, a short treatise on medicine.
Yoga Shatakam, by Vararoochy, do.
Chunnipata Pada Chendreka, by Manikeyah, is a commentary on Yoga Shatakam.
Bojana Kutuhalum, by Ragunadah Suri, on the nature of alimentary substances, on the differences in the constitutions of men and women. It refers frequently to the Dharma Sastra.
Ayur Veda Prakasam, by Madvopaddeyaey, on the venereal disease.
Ayur Veda Mahodadi, by Stree Mukah, on diet and regimen.
Chamutcara Chintamani, by Govinda Raja, on the treatment of many diseases.
Vydia Vatumsum, by Solimba Raja, on diet and the general management of patients during the time they are taking medicine.
Bhashaja Kulpum, by Bharadwajah, the vulgar synonyms of medicines.
Raja Negundo, also called Abhidana Chudamony, by Narasemma Pandit, a collection of medical tracts.
Patleyah Vebodaha Negundo, a work similar to Raja Negundo.
Mahapadam, dictated by Pala Kavya to Roma padi Raja; it treats of elephants, their breeding and diseases.
Amara Kosha, by Amara Sinha, a Sanskrit dictionary. It was translated by H. T. Colebrooke.
Raja Balabha, by Narayan Dasa, on materia medica. It is in the Bengali character.

The *Tamil*-speaking people are about sixteen millions in India and Ceylon. Their craving for knowledge is great; their energy and self-reliance remarkable. They emigrate readily to the West Indies, South Africa, Mauritius, Burma, Straits Settlements, and the Malay Peninsula. A knowledge of the English language is largely diffused amongst them, and many medical books have been printed in Madras and Jaffna, in Tamil and in English.

The *Telugu*-speaking people occupy the eastern part of the Peninsula of India, from Ganjam to a few miles north of Madras, and from the Bay of Bengal to Dangapura and Murgunda on the west of Beder, and are therefore partly under British rule, and partly under the Nizam of Hyderabad.

Medical Books in Tamil.

Agastya, nineteen books by, viz.—
Vydia Vagadum Ayriti, 1500 verses.
Kanda Puranam, a work on ancient history, 1000 stanzas, written in Sanskrit, and translated by Kashyapa Brahmini into Tamil.
Tiruvaliadal Puranam, 3367 stanzas, on moral philosophy, written in Sanskrit, and translated into Tamil by Parinjati a Pandaram.
Pusavedi, 200 verses, on the religious rites and ceremonies of the Hindus.
Diksha avedi, 200 verses, on magic and enchantment, on the use and virtues of the rosary, and on the education of youth,
Pernul, 10,000 verses, in Shen Tamil, treats fully on all diseases, regimen, etc.
Purana Nul, 200 verses, on exorcising, and contains many forms of prayer.

Purana Sutram, 216 verses, on the initiation of religious disciples and their forms of devotion; also on materia medica and regimen.
Karma Kandam, 300 stanzas, on diseases resulting from folly and vice, supposed to be a translation from the Sanskrit of Dhanwantari.
Aghastier Vydia, Nutiambedu, 150 stanzas, on purification, on sixty-four poisons, metallic, vegetable, and animal, and their manipulation to make them safe medicines.
Aghastier Vydia (Ernuti Anji), 205 stanzas, on medicine and chemistry.
Aghastier Vydia Vagadum, Narpottettu, 48 stanzas, on the cure of gonorrhœa.
Aghastier Vydia Padinaru, 16 verses, on diseases of the head and their remedies.
Kalig-ghianam, 200 stanzas, on theology.
Muppu, 50 stanzas, on 18 different kinds of leprosy and their cure.
Aghastier Vydia, Ayriti Eranuru, 1200 stanzas, on botany and materia medica.
Aghastier Vydia, Annuru, 500 stanzas, treating very fully on many diseases, and containing a great variety of useful formulæ.
Aghastier Vydia, Mun-nuru, 300 stanzas, on pharmacy.
Tanmundri Vagadum, by Tanmundri (Dhanwantari), translated by Agastya into Tamil verse. It has 2000 verses. Hindu practitioners hold it in high veneration for the particular account it gives of many diseases, and the valuable receipts it contains.
Tirumullar Vydia Vagadum, by Tirumullar, 2000 stanzas, on the symptoms of disease, and on the diet while under treatment.
Aghastier (Qu. Agastya) has also—
Karaser Punjadi, Munuru, 300 verses, teaching how to compound strong powders, pills, and other medicines.
Dhanwantari Vagada Vydia Chintamani, teaches how to judge of the pulse, also treats of many diseases, and of the nature of animals, and contains some valuable recipes.
Kylasa Chintamani, Vadanul, on the art of converting nine metals into strong powders. It also treats on arsenic and other powerful drugs.
Bogar, a poetical description, in 700 verses, on the mode of compounding many powerful medicines.
Bogar Yoga Marga Mulika, in two sections—
Kayasiddi, or the art of strengthening the body.
Yogasiddi, or the art of making preparations for strengthening the body (Kulpum), and several other medicines.
Bogar Negundo, on corrosive and soluble drugs, also on gems and various animals. It, moreover, instructs how to mitigate the violence of powerful drugs, and how to make alcoholic tinctures.
Bogar Nainar Terumantram, on the art of preparing several medicines into which metals enter.
Nadi Sastrum, a treatise on the pulse.
Vydia Vagadum, enumerates the name and nature of many diseases and medicines.
Konkana-Ninar-Nul, teaches how to compound many powerful medicines.
Kumbali Chintamani Negundo, a dictionary of drugs and the art of compounding medicines.
Pannamaday Selladi, treats on several medicines prescribed for different diseases.
Yuga Muni, Ennuru, 800 verses, describing several medicines.
Ponnamuttay Palakulembum Attavanai, enumerates several medicines, and treats of a few diseases. This book is not much sought after.
Attavanai Vagadum, similar to the last.
Agaradi Negundo, a dictionary of medicine, in good repute.
Netra Vydiam, 300 verses, on diseases of the eye, and the best remedies for such complaints.
Kermapakum, 300 verses, on surgery?
Detchavadi, 200 verses, on medicine, said to be from divine inspiration.
Shesyam, 100 verses, and Wottiyam, 32 verses, are two works explanatory of six arts, viz. Vussyam, Stumbanam, Moganam, Aukershanam, Uchatanam, Maranam.

CYCLOPÆDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA.

H

H. This letter in the English language, as an aspirate, shows that the vowel following it must be pronounced with a strong guttural emission of voice, as in hammer, house, humidity, helm, history, hyson; but in a few English words it is quiescent, as in hour, honour. There is no letter h in the Tamil alphabet, and in foreign words introduced into it, the h is changed to g, q, or r; but this English letter is represented in the Arabic, Persian, Urdu, Sanskrit, Hindi, Mahrati, Bengali, Uriya, Telugu, Karnatica, and Malealam, though the sounds are mere modifications of the simple breathing. Two of the sounds derived from the Arabic are not very nicely distinguished in Indian pronunciation. One may be something harsher than the other, and so far it agrees with the strong Sanskrit aspirate, whilst the softer breathing of the Nagari alphabet, the Visarga, or sign of the nominative case, may be regarded as peculiar. Sir William Jones distinguishes the harsher forms by an accent, as Ah'med. Gilchrist and Shakespear distinguish it by a dot underneath it; Professor Wilson places the dot beneath the softer Arabic aspirate. In a suggested missionary alphabet, it has been proposed to indicate the unmodified flatus by an apostrophe, as ve'ement for vehement. With the people on the line of the Indus river, the letters s, h, and z are permutable. Hind becomes Sind; Zalim Sing becomes Halim Hing. The difficulties, however, as to the letter h are not greater than in the Italian, where the initial h is quiescent before a vowel, and modifies the sounds of consonants. Colonel Tod says s and h are permutable letters in the Bhakka; and he supposes that Sam or Sham, the god of the Yamuna, may be the Ham or Hammon of Egypt. He also thinks it not unlikely that the Chaora, the tribe of the first dynasty of Anhalwara, is a mere corruption of Saura, as the ch and s are perpetually interchanging. The Mahrattas cannot pronounce the ch; with them Cheeto is Seeto.

HAASIA WIGHTII. *Nees.* This good-sized tree is not uncommon in the moist woods on the Tinnevelly and Travancore range of ghats, at 2000 to 8000 feet elevation, and Animallays 4000 feet. H. oppositifolia, *Thw.*, occurs in Ceylon.—*Beddome.*

HAB, a river on the western frontier of Sind, and for some distance the boundary between British territory and Baluchistan. It rises in Kalat, falls into the Arabian Sea in lat. 24° 52′ N., long. 66° 42′ E., after a total length of about 100 miles. Except the Indus, it is the only permanent river in Sind. It abounds in fish. It has been proposed to supply Karachi (Kurachee) with drinking water from the Hab.—*Imp. Gaz.*

HABAKKUK. This sacred writer says (i. 16), 'They sacrifice unto their net, and burn incense unto their drag; because by them their portion is fat, and their meat plenteous;' from which it would seem that the Jewish idolaters had a custom like that of the Hindu, who annually worship the implements of their trades.

HABARUM, a mount close to the Dead Sea, on which Moses died, in the fortieth year of the exodus. In this interval the whole land of the Emorites had been taken, the Midianites overthrown, and the country of the king of Basan conquered, the river Jabbok crossed, and the western country on the Jordan (Batanæa and Aulonites) taken eastward and northward as far as Hermon.—*Bunsen*, iii. 252.

HABIB-us-SIYAR. A book written by Khond-amir. See Khond-amir.

HABIL. ARAB. Abel, who is suposed to have been buried at Damascus. See Abu Kubays.

HABSHI. HIND. An African or Abyssinian, Habsh being the Arabic reading of Abyssinia. Pl. Habush.

HABZ-i-DAM. PERS. A retention of the breath, or power to discontinue breathing, by which devout Mahomedans are supposed to prolong their lives. It is supposed to be a gift to devout men, and the notion is founded on the erroneous belief that human beings have to take a certain number of respirations, and if the power to suspend breathing be acted on, to that extent life will be prolonged.

HACKERY. HIND. A cart drawn by bullocks, from Akra, a cart. It may, however, be from the Portuguese Carro or Acarretai, to carry.—*W.*

HACKLES, upright pointed wires, through which the stems of flax are drawn to disentangle

Muhammadan Jogi are not uncommon. The Hindu Saringihar Jogi carry a Saringi or small fiddle, with which they accompany their songs; these are usually Bhasha stanzas on religious or mythological topics, amongst which are stanzas ascribed to Bhartrihari, and a Puranic legend of the marriage of Siva and Parvati is peculiarly celebrated. The Saringihara beg in the name of Bhairava (Siva). The Dorihar Jogi sect are small pedlars, selling thread and silk. The Matsyendri or Moch'ch-lendri Jogi take their name from Matsyendra, whom they regard as their founder; and the Bhartrihari Jogi, from a traditional reference to him as their founder. The varieties of the Jogi cannot be specified; they are all errants, fixed residences, or mat'hs, of any Jogi except the Khan Phata rarely occurring.

Besides the above, mention may be made of the Hindu devotees,—Abhyagat, Akali, Aghora, Bahikatha, Bhartrihari, Brahmachari, Bhat, Baitali bhat, Bhau-rupya byragi, Digambar, Gosain, Jati, Jogi, Kanphatta, Kapali, Karta bhoja, Khaki, Sanyasi, Sewara suthra, Udasi.

In Buddhist countries, the Phoungyes pass rapidly through the streets, ringing a bell to attract attention, but otherwise accepting the unsolicited offerings of the people, for the daily food of their monasteries.

The Muhammadan religious mendicants are the darvesh (darvis) of Persia and fakir of India. Their sections in India and Persia are about ten in number, but some in India are not respectable. Mendicancy has undoubtedly greatly diminished since the middle of the 19th century; it is not deemed reputable, and people give less freely. But when a marriage is being celebrated, either in a Hindu or Muhammadan household, the professional beggars of the sect, bhat, ghatak, naga, rawo, and fakir, hang about the doors, and exact largesse.

The Buddhist mendicants of Tibet are not better than the Muhammadans, but those in Burma and Siam are more respected. The Jangama priests and Vaishnava mendicants of Mysore wound themselves to extort alms. It is called Pavada.—*Wilson in Oudh Rept.* p. 121.

MENES. The first who is said to have reigned in Egypt was Menes or Mena, the Eternal, from whom the later kings traced their lineage. According to Egyptian chronologists, he came to the throne about 1500 years before the Persian invasion, that is to say, 2000 years before the Christian era. The accepted date is B.C. 3623. He was probably the Minos of the Greeks, their earliest law-maker and their judge of the dead.—*Sharpe's Egypt*, ii. p. 9.

MENG-BA or Ming-ba. BURM. In Amherst, a timber used for house-posts and rafters.

MENG-DONG, the sacred stone monuments of Tibet. On each of its ends are inscribed the words, Om Mani Padmi Hom,—Oh! the jewel on the lotus, or Oh! the jewel on the lotus, or Hail to him of the lotus and jewel.

MENG-GYI. BURM. The commissioner of a province. Meng-tha, son of a prince. Meng-long, a ruler. Meng-shim-byin, a king.

MENGLA THUT, or Mangala Thok in Sanskrit, Mangala sutra in Pali, Mangala sutta in Burmese, written Mangalasutt, pronounced Mangala Thok. It is the blessed instructions of Gautama; the beatitudes of the Buddhists of Burma, eleven in number. It is the Burmese first book of reading, after the pupil has mastered the Than Bon Gyee or spelling-book. The Mengala Thut are chanted occasionally to drive away the evil one. It was translated by Professor Childers.

MENG-TSZE, the Mencius of Europeans, a great philosopher of China, died B.C. 317. His system of philosophy was in favour for 1300 years.

MEN-GU. BURM. Elæagnus conferta, also the Garcinia mangostana, *Linn.*

MENGUN, a town near Mandalay, the capital of Burma, famed for its great pagoda, the Sen-byu. It was built A.D. 1816 (Burmese year 1178) by Bagyeedau Piyah, grandson of king Bodo Piyah.

MENHIR, a standing-stone used as a monument to the dead. See Cairn; Khassya.

MENISPERMACEÆ. *D.C.* The Cocculus tribe of plants, comprising the genera Anamirta; Clypea, Cyclea, Cocculus, Epibaterium, Pselium, Gynostemma, Cissampelos, Stephania, Phytocrene, Natsiatum, and Coscinium. The plants formerly arranged under the genus Menispermum are now placed to the genera Anamirta, Cocculus, Coscinium, Clypea, and Tinospora.

MEN-JOGI. MAHR. A class of Jogi mendicants in the Mahratta country, worshippers of Bhairava.—*Wils. Gloss.*

MENON is not a Travancore title, strictly speaking, but has been brought into that state from North Malabar, and indicates that the holders' ancestors immigrated from that district.

MENTAUS, also Jumberit, a tree of Java; the wood is white and fine-grained, and is used for inlaying, for furniture, and cabinet-work.

MENTHA, Mint.

Nana, ...	ARAB.	Podinah, .	HIND., PERS.
Bu-di-na, . . .	BURM.	Jia manis, . .	MALAY.
Poh-ho, ...	CHIN.	Widda, ...	TAM.

A genus of plants belonging to the natural order Lamiaceæ or Labiatæ. M. sylvestris, M. viridis, M. piperita, and M. arvensis, remarkable for their odour and taste, have long been used in medicine, and some as sweet herbs. M. arvensis, stems and leaves carminative, antispasmodic, stomachic, alexipharmic. Infusion, as a cooling drink, also as an eye lotion. M. hirsuta, M. crispa, and M. Canadense leaves are used for the extraction of peppermint oil. The oil is used as application to the head, and in the manufacture of peppermint pastilles. A kind of camphor, prepared from the oil at very low temperature, strongly polarizes light. It takes the form of transparent and colourless crystals. M. incana, *Willde.*, is Persian mint. A species of Japan, the peppermint camphor, yields a crystalline substance called minthol.

MENTHA PIPERITA, the peppermint, grows wild in Europe, Asia, N. and S. America. Its aroma is almost destroyed by drying. It is an aromatic stimulant, and the most pleasant of all the mints. It is employed in medicine for several purposes. The essential oil is greenish-yellow, and very liquid; after long keeping, it deposits crystals of camphor; it is useful in flatulent diseases, and in the early stages of malignant cholera. Dissolved in spirit, it constitutes the tincture or essence; distilled with water, it forms the peppermint water of the shops.—*O'Sh.*

MENTHA PULEGIUM, or Pennyroyal, is found

or comb them out, being freed at the same time from remaining extraneous matter. The wire pins are arranged on different frames, in progressive degrees of fineness. The process is now performed by special machinery.

HADA. HIND. A blight, drying up of leaves.

HADAYK-ul-BALAGHAT. ARAB. Literally, the Gardens of Eloquence, an Arabic treatise on eloquence by Mir Shams-ud-Din of Dehli, who lived at the end of the 18th century.

HADI, a helot race, spread over all Bengal, who take their name from the original Santali word for man, Had, and who have supplied such terms as Hadd, base, low-born; Hadduk, a sweeper; Hunda, hog, blockhead, imp; Hudduka, a drunken sot, etc. Also, Hadi, in low Bengali Hadikath, is the name of a rude fetter or stock, by which landholders used to confine their serfs until they agreed to their terms. It means literally the helot's log. It was also used for fastening the head of the victim in the bloody oblations which the Aryan religion adopted from the aboriginal races, especially in the human sacrifices to Kali, to which the low castes even now resort in times of special need. In an account of such a human offering to Kali, during the famine of 1866, it was mentioned that the bleeding head was found fixed on the 'harcat,' *i.e.* helot's log.—*Dr. W. W. Hunter*, p. 30.

HADIAH. ARAB. A maiden of good family and courage, who precedes in battle the Bedouin Arab, mounted on a camel, in the fore ranks. She has to shame the timid and excite the brave by taunts or praise.—*Palgrave.*

HADIS. ARAB. (Pl. Ahadis.) The traditions of the sayings and practice of Mahomed. They are 5266 in number, and are considered a supplement to the Koran. They are also called Sunna or customs, also Ahadis Nabaweya, the Apostolic Acts. The Sunni, the Shiah, and the Wahabi sects all acknowledge traditions as binding on them; but the Shiah sect do not acknowledge the same collection as binding on them which the Sunni adopt, and the Wahabi recognise six Sunni books as correct.

HADIWICKE, a moderately hard, fine, close-grained, rather heavy Ceylon wood.

HADRAMAUT, a province of Arabia Felix, on the sea-coast between Yemen and Oman. The chief products are frankincense, gum-arabic, dragon's blood, myrrh, and aloes.

HADROSPHERUM, Mesospherum, and Microspherum are terms applied by Pliny to varieties of nard; perhaps a mistake of his, as Dioscorides observes that some people made the mistake of regarding malabathrum as the leaf of Indian nard. —*Yule, Cathay*, i. p. cxlv.

HÆMADIPSA CEYLANICA. *Blain.* The land-leech of Ceylon. Another is the Hæmadipsa Boscii, and another is Hæmopsis paludum.

HÆMATIN, a colouring substance obtained from the Cæsalpinia sappan tree.

HÆMATITE. Tai-che-shih, CHIN.

Yu-yu-liang, . .	CHIN.	Red hæmatite, .	ENG.
Brown hæmatite, .	ENG.	Hydrated oxide of iron, ,,	

A name given to certain forms of native peroxide of iron. When of a red colour it is called red hæmatite; and when brown, brown hæmatite. According to Hanbury, it resembles the old lapis setiles. It occurs in British India and China in many places; and the Chinese regard it as crumbs from the table of the great emperor Yu, and use it medicinally in powder and in tincture.—*Smith.*

HÆMATORNIS CAFER is one of the bulbuls of Southern India. It is not a song bird, and is called the bulbul-i-gul-dum, or bulbul with the rose tail. Like quails and cocks, it is trained to fight, and when pitted against an antagonist it will sink from exhaustion rather than release its hold.

HÆMATOXYLON CAMPECHIANUM, the logwood tree; has been introduced into India, where it grows readily and seeds abundantly. It is used only as a dye, and the bark is astringent. It is a low spreading tree, seldom thicker than a man's thigh.—*Cleghorn in Madras E. J. R.*

HÆNKE. The Reliquiæ Hænkianæ of Presl is a folio volume, with plates, devoted to the materials collected by Hænke, who was employed in the Spanish service, and collected in America and Manilla. The Indian plants described are few, and the descriptions and identifications far from satisfactory.—*Hooker f. et Thomson.*

HAE-NUN, called by Europeans Amoy, an island on the S.E. of China about 22 miles in circumference. The town of Amoy is situated on the S.W. part of the island, opposite the small island of Ko-lan-soo, which affords protection to the town anchorage or inner harbour. On the western side of the island is that of Woo-seu-shan, also that of Woo-an. Amoy was delivered over to the British, after the first Chinese war of 1841–2, and forms one of the consulates thereof, Shang-hai and Hong-Kong being others.

HAE-TAN, a large and irregularly-shaped island on the E. coast of China, near the mainland between lat. 25° 24′ and 25° 40′ N. Its northern part, Hae-tan peak, is in lat. 25° 36′ N., and rises to an elevation of 1420 feet; but its eastern and western shores are low, and indented with deep sandy bays.—*Horsburgh.*

HÆTUMAT, a land mentioned in the Vendidad of the Zoroastrians, as the eleventh of which the Aryans took possession. It is the valley of the Helmand to the west of Arachosia.—*Bunsen.*

HAFIZ, ARAB., from the Arabic Hifz, he did remember, is a literary title given to a Mahomedan who can recite the whole of the Koran from memory. It is generally earned by lads, sometimes of very tender years, and in large towns there are always several of the Hafiz. Where so many are actual Hafiz, multitudes have almost attained thereto, and remember vast portions of their religious book; and every Mahomedan with any education can indicate almost any passage under discussion. The Koran is not, perhaps, a third the size of the Old and New Testaments, and the feat of committing it to memory is comparatively easy, which may explain why we so seldom hear of a Bible Hafiz. Recently, however, in 1860 a religious gentleman in Massachusetts having offered several prizes of Bibles to those, old or young, who should commit to memory and repeat the largest portion of the Bible, Mrs. Betsy Conant who had been residing in Melrose, a lady sixty-eight years of age, committed to memory the entire Bible, Old and New Testament, reciting each day in the week. This was certified by her daughter, and also by the superintendent of the Sabbath school. An Irish servant girl repeated nearly 10,000 verses; three other women repeated

times only for 24 hours, others all Lent. Monks of Burma and Siam, as they go round every morning, with a begging-bowl strapped around the neck, accept meekly, without word of thanks or glance thrown to the right or left, the food poured in by the pious. About 8 in the morning, they set out in orderly procession in Indian file. On returning they present what they have received to the Buddha.

Lent is a periodical abstaining rite in the religions of Christians, Muhammadans, and Buddhists. With the first of these, the abstinence is only from certain diet articles, for a period of 40 days; Muhammadans, for a lunar month, call Ramadan or Ramzan, between sunrise and sundown, fast and are continent; but Burmese have a Lenten period of nearly three months' duration. See Myenmo.

Literature. — The Burmese Buddhist's sacred book is the Beetaghat. The Wee nee contains the whole duty of the Burmese monk. The young Buddhists of Burma learn the Payeht gyee and the Payah Shekho, Pali sermons and forms of worship, also the Mingola Thoht, Buddhist Beatitudes. Later on they pore over the Abidhamma Konitgyan, the seven books of the most difficult parts of the Beetaghat, with the Thing-yoh and Thaddah. Their lay literature consists of beast tales, fables of animals, with the Nataka or drama, from Nata, a dancer, or the Pooay or Pwe, a dramatic performance. Amusement usually winds up with a dramatic performance, called a pwe or pooay.

Burmese Buddhists have ten commandments, five of them obligatory on all Buddhists at all times, viz. Do not take any life; nor steal; nor commit adultery; nor lie; nor drink intoxicating liquor. And five incumbent on laymen only on sacred days and Lent, viz. Do not eat after midday; not to sing, dance, or play on any musical instrument; not to use cosmetics, or colour the face; not to sit, stand, or sleep on platforms or elevated places not proper for them; and not to touch gold or silver.

Monks of Burma use rosaries of Canna Indica, which they believe sprang from Shin Gautama's blood. Hermits of Burma, called Ya-theht, are not numerous, though the cells in the rocks above Nyoung Oo near Pagahon, near Old Mandalay Hill, and at other parts of the Irawadi, continue to receive occupants.

In Burma, within the enclosing parawoon or wooden rail of the Burmese kyoung all is sacred, and the laity, when they enter, take off their shoes and carry them in their hands. This applies to the highest in the land; and when a prince or Min-gyee arrives on an elephant, he dismounts at the monastery gate, and enters reverently barefooted. Mandalay Hill is held sacred, and rescued fowls are sent to it. There are great turtle in a tank at the Arakan pagoda. They are held sacred, and are fed by the pious. In March 1879 the tank dried up, and many died before water could be brought from the river. The circumstance was supposed to be an indication of the displeasure of the Nats, at the shedding of the royal blood in February by king Thebaw.

The Thihadaw monastery is on a small island in the middle of the third and lowest defile of the Irawadi. Large numbers of half-tamed dog-fish are in the waters around the island, great five-feet-long, gape-mouthed creatures, which are fed by the pious. All the monastic tanks of Burma have such fish, more or less tame. The Nga-dan or butter-fish at the Kyeiklat monastery are summoned by beating the bank and calling Tit, tit, tit, and fed by the Ya-han and young Ko-yin. The Nga-dan allow their heads to be stroked and to have gold-leaf affixed. There is a peak 3650 feet high, on the crest of the main dividing range between the rivers Tsit-toung and Salwin, in British Burma. Its most remarkable features are the numerous granitoid boulders scattered about the summit, some being balanced in a marvellous manner on the most prominent rocks. On the more striking of these, pagodas have been built, among which the Kyaik-hti-yo-ge-le and the Kyaik-hti-yo are the principal. The latter, about 15 feet high, is built on a huge egg-shaped boulder, perched on the apex of a shelving and tabular rock, which it actually overhangs by nearly one-half. Pious Buddhists believe that the pagoda is retained in its position solely by the power of the hair of Buddha or Gautama enshrined in it. This relic is fabled to have been given to a hermit living on the mountain by Buddha himself.

The gurus of most of the Hindu sects are monks, and several of the sects are ascetics, who recruit their numbers by adoption. The gurus or priors reside in the math or monasteries. They are not numerous with Hindus, and asceticism and monasticism among the Muhammadan sects is very rare.

Monasticism, among Christians, first took its rise in Egypt; and the Coptic monasteries of St. Anthony and St. Paul claim to be founded on the spots where the first hermits established their cells on the shores of the Red Sea. Next in point of antiquity are the monasteries of Nitria in the neighbourhood of the Natron lakes, which are situated in the desert to the N.W. of Cairo, on the western side of the Nile. Of these monasteries authentic accounts are extant, dated as far back as the middle of the second century, when Fronto retired to the valleys of the Natron lakes with 70 brethren in his company.

The Abba Ammon and the Abba Bischoi betook themselves to this desert in the beginning of the 4th century, the latter founding the monastery still called after his name, Isaiah or Esa, to which the Copts prefix the article B or P. St. Macarius first retired into the Thebaid A.D. 335, and about 373 established himself in a solitary cell on the borders of the Natron lakes. He died A.D. 394, after 60 years' residence in various deserts. Numerous anchorites followed his example. He was the founder of the monastic order which, as well as the monastery still existing on the site of his cell, was called after his name. After the time of Macarius the number of ascetic monks increased to a surprising amount. Rufinus, who visited them in the year 372, mentions 50 of their convents. Palladius, who was there in the year 387, reckons the devotees at 5000. St. Jerome also visited them, and their number seems to have been kept up without diminution for several centuries.—*Quarterly Review.*

MONEGAR, in the south of India, a superintendent or head of a village or temple, or subordinate revenue officer.—*Wilson.*

MONEGAR CHOULTRY, a charitable institution in Madras, comprising a poorhouse, a foundling hospital, an hospital for native sick, and a leper

above that number; and a list was appended of some 20 more who were able to repeat from 8000 to 9000 verses. It is noticeable that more than two-thirds of the successful competitors were women, showing how strong the faculty of memory is among the sex as a general rule.

HAFIZ, a lyric poet, native of Shiraz, author of the Dewan-i-Hafiz. Many of his poems have been translated; one by Sir William Jones, and which perhaps surpasses the original, commences with

'Sweet maid, if thou wouldst charm my sight,
And bid these arms thy neck enfold;
That rosy cheek, that lily hand,
Would give thy lover more delight
Than all Bokhara's vaunted gold—
Than all the gems of Samarkand.'

Hafiz is his takhallus, or poetical appellation. His own name was Muhammad Shams-ud-Din. Very little is known of his life; and it appears to have been in no degree remarkable for incident. He was born at Shiraz in the beginning of the 14th century, and died and was buried near there in A.D. 1338. He is now regarded as a holy man, and oblations are offered at his shrine. He is buried in a small garden about half a mile outside the walls of the town. The tomb over his remains was erected by Karim Khan. It is a block of white marble in the form of a coffin, on which are cut, in the most exquisite Persian characters, two of his poems, and the date of his death. A copy of his works is kept in an adjoining house. The white material with which the tomb is formed, has become, from exposure to the weather, very much discoloured, and adds to the sombre effect produced by the cypress trees that surround it. Four well-known distichs of Hafiz inculcate the return of good for evil:

'Learn from yon orient shell to love thy foe,
And store with pearls the hand that brings thee woe:
Free, like yon rock, from base vindictive pride,
Emblaze with gems the wrist that rends thy side:
Mark where yon tree rewards the stony shower
With fruit nectareous, or the balmy flower:
All Nature calls aloud—Shall man do less
Than heal the smiter, and the railer bless?'

—*Pottinger's Tr.* pp. 241–2; *Ouseley*, pp. 241–2; *Sir William Jones; As. Res.* iv.; *MacGregor*, iv. p. 557.

HAFT. PERS. Seven:—

Haft-Aklim, the seven climates, into which Mahomedan geographers divide the earth. The term is meant to include the whole world, and kings have sometimes assumed the title of King of the Seven Climates. It applies, however, to the northern hemisphere, which they partition into zones of various breadth, from east to west. Haft-Kishwar has the same meaning and allusion as Haft-Aklim; and the sovereignty of the world is sometimes assumed under that title.

Haft-Dhat, literally seven metals, corresponding to the planets, each of which ruled a metal: hence Mohar, the sun, for gold; Chandra, the moon, for silver.

Haft-Hind, the seven rivers of the Panjab.

Haft-Khaneh, or Satgurh group of caves, is one of the Behar caves in the neighbourhood of Rajagriha, the most ancient caves in India, about 200 B.C. The others are the Milkmaid's cave, the Brahman Girl's cave, the Nagarjun cave, and in the neighbourhood are the Karna chapara and Lomas Rishi caves.

Haft-Rang, a beautiful variety of the rose.

Haft-Lang, a tribe of the Bakhtiari.

Haft-Tan, literally seven persons who, in the early days of Mahomedanism, were worshipped in Kurdistan by the Ali Ilahi sect as the incarnate deity. Baba Yadgar was one of the seven persons. His tomb is in the pass of Zardah, and is the holy place of the Ali Ilahi sectarians, who believe in upwards of a thousand incarnations of the godhead. At the time of the Arab invasion of Persia, the Zardah pass was regarded as the abode of Elias.

HAFT-AKLIM. Amin Ahmad, Razi, author of a history of the Persian poets, entitled Haft-Aklim, or the Seven Climates, has illustrated his work with much geographical matter. Ahmad was surnamed Razi, being a native of Rai. Amin Ahmad said the cuneiform character was then unintelligible to the learned of all religions.—*Ouseley's Tr.* ii. 402, iii. 10.

HAGENIA ABYSSINIA, the kosso or kousso, a moderate-sized tree of Abyssinia. Its flowers are largely used in tapeworm. It is a drastic purgative, and is largely used by the races who eat raw flesh.

HAGGIS. Sultan Baber compares the jack-fruit to a haggis. 'You would say,' quoth he (p. 325), 'that the tree was hung all round with haggises.'—*Yule, Cathay*, ii. p. 362.

HAIGA, a clan of Brahmans in Canara.

HAIHAYA, son of Yadu, and grandson of Nahusha. The Haihaya are mentioned as a powerful nation, who defeated and killed Jamadagni, and are supposed to be the same with the Persians. In Colonel Tod's time, a tribe of this race were occupying the top of the valley of Sohagpur in Baghelcund. They were aware of their ancient lineage, and though few in number, they were still celebrated for their valour.

HAIL. In Exodus ix. 24, it is mentioned that there was hail, and fire mingled with the hail, very grievous, such as there was none like it in all the land of Egypt since it became a nation. Hail-storms of India occur in very limited patches, and seldom last above 15 or 20 minutes; but falls of hail occur simultaneously in places many miles apart. The hail occasionally consists of masses of ice, destroying houses, men, cattle, goats, and sheep. At the end of the 18th century, a mass fell at Seringapatam the size of an elephant, which took three days to melt.

On the 10th April 1822, at Bangalore, 27 bullocks were killed.

In May 1823, a violent hail-storm, with stones of considerable size, occurred at Hyderabad in the Dekhan. Sufficient quantities were collected to cool the wine for several days.

At Dharwar, in May or June 1825, a hail-storm occurred, with hail in size from that of a filbert to a pigeon's egg.

In 1826, a mass, nearly a cubic yard in size, fell in Kandesh.

At Kotah, on the 5th March 1827, 6 persons were killed, 7 others severely injured, and animals and birds killed and hurt.

In April 1838, a mass of hailstones, 25 feet in its larger diameter, fell at Dharwar.

On the 22d May, after a violent hail-storm 80 miles south of Bangalore, an immense block of ice, consisting of hailstones cemented together, was found in a dry well.

On the 12th May 1853, in the Himalaya, north of Peshawur, 84 human beings and 3000 oxen were killed by masses of ice, nearly a foot in circumference, hard, compact, and spherical.

On the 11th May 1855, ice-pieces fell at Naini Tal of the dimensions of cricket balls, and birds were killed.

A hail-storm occurred at Futtehghur on the 18th April 1878, when much injury to buildings resulted.

In Ceylon hail has fallen at Kornegalle, at Badulla, Kaduganawa, and Jaffna. On the 24th September 1857, during a thunder-storm, hail fell near Matelle in such quantity that in places it formed drifts upwards of a foot in depth.

One year a heavy fall of hailstones took place near Ashtch (the village where Bapoo Gokla fell), which caused severe injuries to people working in the fields, and the death of a girl about ten years of age. Many of the hailstones were larger than a good-sized wood-apple; they fell in an oblique direction, and so accumulated at the foot of walls that it took two days in some places for them to melt away. One piece was larger than a man's head, and took two days to dissolve; the wheat crops, which were then nearly ripe for taking down, were quite destroyed by it. A hail-storm of exceptional severity passed over Tiperah in Eastern Bengal on the evening of the 12th March 1879; 17 persons were killed and 10 wounded. Native reports stated that 29 were killed and 141 injured. Houses were blown down and unroofed, the storm being accompanied by a strong wind.

Hail-storms of India occur in each month of the year, but chiefly in the dry months. Of 127 such hail-storms, 102 occurred in the four months February to May inclusive:—

January, . .	5	May, . . .	17	September, .	2
February, . .	20	June, . . .	4	October, . .	3
March, . .	31	July. . . .	2	November, .	4
April, . . .	34	August, . .	0	December, .	5

In the first fortnight of March in one year, on the 3d, a violent hail-storm occurred at Bolarum, which dashed right through the roofs of the houses, and stripped the trees of their leaves and branches; it was experienced at Secunderabad, but did not extend to Hyderabad itself. A hail-storm occurred at Cawnpur on the 8th, and two violent hail-storms happened at the same time near Meerut, many of the fragments being the size of ostrich eggs. A violent squall, with hail, occurred at Hurryhur on the 12th; 270 birds, which had been killed by it, were picked up in a single garden, and the river was found covered with dead fish, which seemed to have been attracted to the surface, and fell victims to the gratification of their curiosity. In Berar and in the parts of the Mahratta country there is a caste of hail-conjurors, the Garpagari, who pretend to have the power of preventing hail falling on fields.—*Dr. Buist's Physical Research; Dr. Turnbull Christie, Jam. Ed. Jo.* ii. of 1830.

HAILEYBURY COLLEGE, an institution near London, of the English E. I. Company, at which its civil servants were trained to be writers in India, for magisterial, revenue, and judicial offices. It was abolished on the assumption of India by the Queen of Great Britain.

HAINAN, an island bounding the Gulf of Tonquin to the eastward, extends 165 miles in a N.E. and S.W. direction, and is about 75 miles in breadth, between lat. 28° and 31° N., and long. 110° E. Viewed from the sea, it presents many high and uneven appearances, but inland there are many level districts, cultivated with rice, sugar-cane, tobacco, and betel-nut trees. These level tracts are separated by lofty mountains and impenetrable forests, through which paths are opened. The island is subject to the Chinese. The fishing boats are built of a hard, heavy wood, and sail fast. Their fishing voyages, commencing in March, last for two months, and they navigate to 700 or 800 miles from home, collecting beche de mer, dry turtle, and sharks' fins amongst the numerous shoals and sandbanks in the S.E. of the China Sea.—*Horsburgh.* See Tonking.

HAINES, SIR FREDERICK, G.C.S.I., served in the Sutlej campaign of 1845–46, including the battles of Moodkee and Ferozeshah, at the latter of which he was severely wounded; also in the Panjab campaign of 1848–49, and more recently in the Crimea, including the battles of the Alma, Balaclava, Inkermann, and siege of Sebastopol. He was, in 1871, appointed to the command of the Madras army, and in 1876 succeeded Lord Napier of Magdala as Commander-in-Chief in India. He was created a G.C.B. in 1877.

HAIQ. The populations to whom the term Armenian is now applied, call themselves Haiq. Their chief occupancies are the Turkish province of Erzerum, and the Russian district of Erivan, and the patriarch resides in Erivan. They are now under the sway of Russia, Persia, and Turkey, but they are found in all Eastern countries. 37,676 are in European Russia alone; and one important settlement of them is in Venice, that of the Mechitarist monks, on the island of St. Lazarus. In figure the Armenians have been likened to the Jew, the Turk, and the Afghan. They evince great commercial aptitude, and are bankers and merchants. In Armenia, however, they cultivate the soil. Before their conversion they were fire-worshippers. Many of them now are Nestorian Christians, some are Romanists. The language of the present day has affinities with the Iron, and Persian, Syrian, Arabic, and Turki. General tradition and the formation of language point alike to the mountains of Armenia as the birthplace of the Arab and Canaanitish races, and there is especial native evidence to the same effect as regards Edom, consequently the Phœnicians.

HAIR.

Haar, .	DA., DU., GER.	Voloss, ...	RUS.
Cheveux, Poil, . .	FR.	Kesa, ...	SANSK.
Bal, . . .	GUJ., HIND.	Cabellos, ...	SP.

Cabello, ...	PORT.		

With the exception of man, the exposed parts of the bodies of mammals are covered with hair. Hair is a considerable article of traffic. Goats' hair is largely exported from Bombay to England. The hair of the elephant's tail and the bristles of the wild boar are utilized in India. The value of the exports of hair from India amounts to about £2000 annually, about 200 to 300 tons.

A remarkable command is given to the Israelites in Leviticus xix. 27: 'Ye shall not round the corners of your head,' or, literally, 'Ye shall not go round,' *i.e.* with a razor, 'the sides of thy head.' The Septuagint renders this, 'Do not make Sisoen of the hair of your head.' Greek lexicographers say that Sisoen, though not a Greek word, means a lock, or circular portion of hair left unshaven,

and consecrated to Saturn, the grandfather of Bacchus, who is thought to correspond with Siva. In some respects Saturn also resembles Siva. A recent commentator says on the above text, 'It seems probable that this fashion had been learned by the Israelites in Egypt, for the ancient Egyptians had their dark locks cropped short, or shaved with great nicety, so that what remained on the crown appeared in the form of a circle surrounding the head. Frequently a lock or tuft of hair was left on the hinder part of the head, the rest being cut round in the form of a ring, as the Turks, Chinese, and Hindus do at the present day.'

Poole says 'the Gentiles cut their hair for the worship of devils or idols, to whom young men used to consecrate their hair, as Homer, Plutarch, and many others write.' Professor Vitringa looks upon this manner of trimming the hair in a circular form, while the rest of the head is shaven, as a symbol of the sun equally diffusing his rays, which the ancients called his hair. The Romans are said to have worn the hair of the head uncut, either loose or bound behind in a knot, and consecrated it to Apollos.

Herodotus says that the Arabians cut their hair in such a manner, that the circumference of their head is found to be round all about as if they had been cut with a bowl, in imitation of Bacchus, and in honour of him. He says also that the Macians, a people of Sybia, cut their hair round so as to leave a tuft on the top of the head. We learn from Homer that it was customary for parents to dedicate to some god the hair of their children, which they cut off when they came to manhood. Achilles, at the funeral of Patroclus, cut off his golden locks, which his father had dedicated to the river-god Sperchias. From Virgil it appears that the topmost lock of hair was dedicated to the infernal gods. In Athens it is said Hercules and Apollos were the chief deities selected for dedicating the hair,—to the first by the humbler part of the community, and the latter by the more wealthy. Tertullian speaks of an extraordinary rite about the dedication of the hair of infants, which was practised even before they well had any hair, and that cut off when they were named.

The ancient Greeks, in laying out their dead, placed an obolus, a Greek coin, in the mouth to pay Charon's fare across the rivers Styx and Acheron, and a cake made of flour and honey to appease Cerberus. Greek men cut off their hair when they obtained the age of puberty, and dedicated it to some deity. Theseus is said to have repaired to Delphi to perform this ceremony, and to have consecrated his shorn locks to Apollo. After this it was again allowed to grow long, and only cut off as a sign of mourning. Thus, at the funeral of Patroclus (Iliad, xxiii.) the friends of Achilles cut off their hair, and

'On the corse their scattered locks they throw.'

In some parts of Greece, however, it was customary to wear the hair short, and to allow it (Cassandr. 973) to grow long when in mourning.

'Neglected hair shall now luxurious grow,
And by its length their bitter passion show.'

Hindu men, on the death of a relative, abstain from shaving, and the Burmese dead have a coin placed with them for the spirit-world.

The women of nearly all the oriental races wear long hair, differently braided. The men of Baluchistan and Afghanistan shave the front, but wear hair long on the back and sides of the head. Mahomedans of India as a rule shave their heads. Hindu men also shave, leaving only a scalp-lock on the crown. This scalp-lock is noticed by Martial, Seneca, and Tacitus as worn by German races. Brahman women, on the demise of their husbands, have their heads shaved.

In Luristan, the women, on the death of their men relatives, cut off their hair, and hang the locks around the tomb. The hair of Hindu women, and often also that of men, is frequently made a votive offering to their gods. Crowds of the Hindu pilgrims to Triputty and other holy places, both men and women, return with heads shaved. Hindu lads have their heads shaved. Nero placed his first beard in a jewelled box, and dedicated it to Jupiter. Herodotus mentions (Melp. iv. c. 34) that the Delian maidens used to cut off a lock of their hair before marriage, in memory of the Hyperborean virgins who died in Delos. In some tribes of the Orang Benua of the Malay Peninsula, and among the Malay, it is customary to cut off a part of the bride's hair.

The Somali of the east of Africa change their hair into red by mixing it with lime. Amongst the Romans, blonde auburn tresses were most admired, and to obtain these, men steeped their hair in a powerful alkali, as the Somali now do. Mahomedans of India have black hair, occasionally dye it red with henna or mehndi. The tuft of hair, or scalp-lock, Shik'ha, SANSK., D'zutu, TEL., Kudi mai, TAM., is worn by all who profess Hinduism, and it has been a subject of much discussion with Christian missionaries, whether, on conversion, the new Christian's scalp-lock should be removed.—*De Bode*, ii. 218–19; *Newbold; Postans; Lubbock.*

HAIR POWDER.

Poudre à poudrer, . FR.	Polvere di cipri, . . IT.
Pûder, ... GER.	Polvos de peluca, . SP.

Hair powder is generally made from pulverized starch, and perfumed with various scents.—*Faulkner.*

HAI-TSAI. CHIN. Literally, sea vegetable. Hai-tsai, Hai-wan, and Kwan-pu are Chinese names for several species of Laminaria, Rhodomenia, Iridæ, etc., used in China for food, for size, and for jelly. Kwan-pu is the tangle.

HAI-YANG is the Neptune of the Chinese. In Hi-ching-mian is a temple of the sea-god. At Ta-coo, in one hand he holds a magnet as emblematic of security, and a dolphin in the other, to show his sovereignty over the inhabitants of the sea; his head, beard, and hair are evidently intended as a personification of water.—*Macartney's Embassy*, i. 31.

HAIYU, Haioo, Haya, or Vaya. The Haiyu, the Chepang, and the Kusundu are three uncivilised Bhot tribes, who dwell amid the dense forests of the central region of Nepal, to the westward of the great valley, in scanty numbers, and nearly in a state of nature. They live in huts made of the branches of trees, on wild fruits, and the produce of the chase. The Chepang are slight, but not actually deformed, though with large bellies. Mr. Hodgson says they are of Mongol descent. Their language is akin to that of the Lhopa. The Chepang, Haiyu, and Kusunda seem to belong to the Rawat group

of frontier populations. They are named by Mr. Hodgson as Durre, Denwar, and Bramho. They occupy the districts where the soil is moist, the air hot, and the effluvia miasmatic. They dwell in Nepal as the fragments of a tribe of great antiquity, with peculiar traditions, language, and appearance, all tending to isolate them from the people amongst whom they dwell.

HAIZA. Arab., Hind. Cholera. Haiza-ka-patta, Kalanchoe varians.

HAJ. Arab. A pilgrimage by a Mahomedan to Mecca, Medina, Jerusalem, Sinai, etc.; hence the title Haji, a pilgrim. Hajjat, a woman pilgrim. The pilgrimage of Mahomedans to Mecca—enjoined by the Koran (Sura, xxii. 28)—is incumbent on all men and women who have sufficient means to meet the expenses of the journey, and to maintain their families at home during their absence. Its ceremonial continues during three days of the month Zi-ul-haj. The day of the ceremony is the 10th Zi-ul-haj, on the Eed-ūl-Kurban or Bakrid festival. The setting forth of the pilgrims from the distant parts of the world is generally attended with great show. The Persian Shiah sect resort in pilgrimage to three places. The town of Meshid is reckoned the least in the scale of sanctity; and those who have been there to the tomb of Imam-Raza, obtain the title of Meshidi. The next after them are the Karbalai, who stand a degree higher in estimation; while those only who have visited the Kaba at Mecca and the tomb of Mahomed at Medina, can lay claim to the title of Haji. A Persian will feel offended if you call him Meshidi, when he has a right to the superior degree of Karbalai, or the still higher and more pompous appellation of Haji. Thus Meshidi, Karbalai, and Haji become titles of distinction. Haj-ul-Asghar, the lesser pilgrimage. Haj-ul-Akbar, the greater pilgrimage. About 70,000 annually visit Mecca.

The Indian Haj is the most numerous of all the pilgrimages which arrive every year at Jeddah. In 1880 it consisted of 15,000 souls, the next most numerous being the Malay Haj, which numbered 12,000. The latter consists mostly of Dutch subjects. The Dutch encourage their subjects to visit the holy places in Arabia, on the principle that the experience which is gained on the journey of the tyranny and extortion of the Musalman government in Hejaz tends to increase in a Haji the sense of the advantages he enjoys at home.

Haj Darwazah, or Mecca Darwazah, the pilgrim gate of the city, from which the pilgrims issue when proceeding on pilgrimage.

HAJAM, Hind., the Nai of the Hindus, a barber, who shaves, bleeds, cups, cleans the ears, pares the nails, etc., usually included among the members of the village establishment.

HAJAR. Arab. A stone, any stone:—

Hajar-ul-Akab, eagle-stones of the ancients. One of them was probably the bonduc nut of the Guilandina bonduc. The Greeks believed that the eagle-stones or aetiles were only found in the nests of eagles; and the Arabs describe them as resembling tamarind stones, but hollow, and found in eagles' nests, and they believed that the eagles bring them from India.—*King.*

Hajar-ul-Musa, asphalte.

Hajar-us-Siah, also Hajr-ul-Aswad, a celebrated black stone which is built into the Kaba at Mecca, an object of the greatest veneration. This stone is set in silver, and fixed in the south-east corner of the temple. It is deemed by Mahomedans one of the precious stones of paradise that fell to the earth with Adam, and, being preserved at the deluge, the angel Gabriel brought it to Abraham when he was building the Kaba. It was, they say, at first white, but its surface has become black from coming in contact with those who are impure and sinful. It is semi-circular, about six inches in height, and eight inches in breadth. It is in the wall of the Kaba in the east outer corner, about four feet from the ground, its surface undulating and polished. Burton, on reaching the stone, despite popular indignation, testified by impatient shouts, monopolized the use of it for at least ten minutes. Whilst kissing it, and rubbing hands and forehead upon it, he narrowly observed it, and came away persuaded that it is a big aërolite. Ali Bey calls it, 'mineralogically,' a black volcanic basalt, whose circumference is sprinkled with little crystals, pointed and strawlike, with rhombs of tile-red feldspath upon a dark background, like velvet or charcoal, except one of its protuberances, which is reddish. Burckhardt (p. 137) thought it was 'a lava containing several small extraneous particles of a whitish and of a yellowish substance.'

Hajar-ul-Yahudi is encrinite, sold in Peshawur at Rs. 10 the maund.—*Burton's Mecca*, iii. p. 210; *Malcolm's Persia*, ii. p. 336.

HAJONG, a section of the Bodo tribe who dwell in the plains of Cachar.

HAJRAH or Hajirah. Arab. Hagar, the kept woman of Abraham, the mother of Ismael, generally called the Bibi Hajirah.

HAKARI, a tribe of N. Kurdistan inhabiting the mountains on either bank of the great Zab river above Amadia. They have 14 subdivisions, also 94 Christian villages, with 15,520 souls. Their country is precipitous and difficult, the people wilder than any Kurds. They have 25,000 fighting men.—*MacGregor.*

HAKIM. Arab. A doctor of philosophy, a doctor of medicine, a learned man, pronounced Hakeem. The Hakim or Tabib of British India is of the Mahomedan faith, and, like the Vydian Baid or Vaid, is usually a physician purist. The Hakim as a rule claims to be a follower of the Yunani or Grecian school of medicine. He designates the Hindu Vydian as of the Misri or Egyptian school, but recognises also a Suryani or Syrian school. General Ferrier says that the influence which the Hakim Sahib has generally exercised in the British embassy at Teheran, and the employment of such men as Jukes, Campbell, M'Neill, Riach, Bell, Lord, and others, in various important duties in those countries, led the chiefs of Harat to suppose that physicians occupy a higher place in the councils of the British than is accorded to them. —*Ferrier, Journal*, p. 149.

HAKLUYT, RICHARD (Archdeacon), Bishop of Westminster, in 1601 was appointed Historiographer of the East Indies, by the first Chairman of East India Directors. He held constant communication with the seamen, and lectured at Oxford to the students. He died 1616, and his successor was the Rev. Samuel Purchas.—*E. J. Murray, Surveys*, 1871.

HAKODADI was a small town of Japan. Within sight of Hakodadi, and at the distance of about 25 miles, is an active volcano. The crater forms

nearly a circle, from 1500 to 2000 yards round. The ground is in some places so hot that the hand could not touch it. This volcano throws up a hot sulphur spring at about 20 miles distant, and 5 from Hakodadi, the heat of its water being 109° in the warmest part. The natives regard it as almost a certain cure in cases of skin disease. Men, women, and children, all nude, bathe together.

HAKRA, a name of the river Caggar.

HAL. ARAB., HIND. Present, present state, condition, current, as Ibrahim Khan-i-hal, the present Ibrahim Khan; Hal-ki-waste, for the occasion; Hali-sikkah, current coin. It occurs frequently in combination, and is used in revenue accounts to represent the existing state of collections.—*Elliot, Supp. Gloss.*

HAL or Har. HIND. A plough. Hali, a ploughman. It has been suggested that as the Aryans were originally and essentially an agricultural and therefore a peasant race, they may have derived their name from their plough, and words of a similar sound relating to agriculture are found in several tongues. In Latin it is Aratrum, from Aro, I plough. In Egyptian (in Nefruari), Ar is said to mean a plough. In Tamil it is Er, in Telugu Araka, in Sanskrit, along with Nagala or Nagara, it is also called Hala or Hara; and the Aryan race may possibly have obtained their name from this implement of husbandry. The Hal is a pointed beam in a plough, which serves as the ploughshare.

Hala-Ketana, SANSK., the plough-ensign, one of the insignia of royalty of the great Chalukya dynasty, when ruling at Kalian. Hali, a ploughman.

HALA, also Halla Kandi, a ruined city on the Indus, 30 miles above Hyderabad. The Hala deputy collectorate is between lat. 25° 8′ and 26° N., and between long. 68° 16′ 30″ and 69° 17′ E.

HALA, a range of mountains, called also the Brahuic range. It is the great mountain system of Baluchistan, extending from the Suliman Hills, in lat. 30° 30′ N., by the curved Bugti and Mari (Murree) chain to the north of Shawl, and thence in a generally S.S.W. direction to the ocean, which it reaches at Ras Mowari (Cape Monze), in long. 24° 46′. Its breadth and height vary. The Chahl-tan is 11,000 to 12,000 feet, 7000 feet being the highest part at Kalat. Shawl is 5900 feet. In the northern part is the Bolan pass, and the Moolla pass is near Gandava. It throws out to the W. and S.W. numerous offshoots, which traverse Makran, and either sink into the ocean or the desert plains of Eastern Persia, or into the mountain system of Persia.—*MacGregor.*

HALAILI, a cotton stuff with long stripes of white silk, a favourite material amongst the city Arabs. At Constantinople, where the best is made, the piece, which will cut into two shirts, costs about thirty shillings.

HALAL. ARAB. The new moon. It is a favourite symbol in Mahomedan standards as a crescent, indicating continuous increase.

HALAL. HIND. Lawful food for Mahomedans, as opposed to Haram, unlawful food. The lawful animals are such as chew the cud, and are not beasts of prey; birds that pick up food with their bills, and do not seize their prey with their claws, or wound them with their bills; fish, but no other marine animals, and locusts. Reptiles and wine and all intoxicants are unlawful.

HALAL KHOR. HIND. PERS. A sweeper, a house scavenger. The words are Arabo-Persic, and mean a lawful eater, *i.e.* one to whom everything is lawful. Scavengers are usually Mahomedans, and are also called Mahtar, Bhangi, Toti, Lal-Begi.

HALAR, a principality in the Gulf of Cutch, of which Nowanagar is the capital, ruled over by the Jam of Nowanagar. See Rajputs.

HALAS, a branch of the Sakai population of the Malay Peninsula. They tattoo their face and breast, pierce their ears and nose, and insert porcupine quills. See Kedah.

HALAYA PAIKA, or Old Paik, a race in Mysore. Wilson says Halepaik, KARN., is a term applied in Mysore to the drawers of tari, who speak the Tuluva language.

HALAYUDHA BHATTA, author of the Abhidana Ratnamala, a Sanskrit dictionary. He lived about the 7th century.—*Dowson.*

HALBA. GOND. Immigrants into the Central Provinces from the south, and their principal colony is in the S.W., where they hold 37 flourishing villages. They gain their living chiefly by distilling spirits, and worship deified distillers, at the head of whom is Bahadur Kalal, which merely means the 'bold distiller.' They are, next to the Teli, the best cultivators; except in the jungles, they have generally become Hinduized. All that is necessary for a good Halba is that he should sacrifice once in his life three goats and a pig, one to each of the national deities, called Narayan Gosain, Burha Deo, Sati, and Ratna.

HALCYONIDÆ, the kingfisher family of birds, of the tribe Fissirostres, order Insessores. It has two sub-families, the Alcedininæ and Halcyoninæ.

Sub-Fam. Halcyoninæ.

Halcyon amauropterus, *Pearson*, the brown-winged kingfisher of Bengal, Arakan, and Tenasserim.

Halcyon fulgidus, *Gould*, is a very beautiful kingfisher of Lombok. It lives in thickets away from water, and feeds on snails and insects picked from the ground, like the great laughing jackass of Australia.

Halcyon fuscus, *Bodd.*

H. Smyrnensis, *Sykes.*	Alcedo fusca, *Bodd.*
Sade-buk, . . . BENG.	Vichuli, ... TAM.
Match-ranga, . . ,,	Lak-muka, . . . TEL.
Kilkila, ... HIND.	Buche-gadu, . . ,,

The white-breasted kingfisher; inhabits all India, Ceylon, and eastwards to China.

Halcyon leucocephalus, *Gmel.*

H. gurial, *Pearson.*	H. brunnicops, *Jerd.*
H. Capensis, *Linn.*	Alcedo leucocoeph., *Gmel.*
H. Javana, *Gray.*	
Gurial, ... BENG.	Male poyma, . . MAL.

The brown-headed kingfisher, is over all India and the Archipelago.

Halcyon saurophaga, a very fine kingfisher, with white head, neck, and lower parts, green scapulars, and blue wings and tail, from New Guinea, is a very shy bird, frequenting the margin of the island, usually seen perched on some detached or solitary branch, as if sunning itself, and darting off into the dense bush upon being approached.—*Macgillivray, Voyage*, i. p. 245.

Halcyon atricapillus, *Gmel.*

Alcedo atricapillus, *Gm.*	A. pileata, *Bodd.*
A. brama, *Less.*	

The black-capped purple kingfisher; is rare in India, but more common in the countries eastwards to China.

Halcyon Coromandelianus, *Scop.*

H. Coromandel., *Blyth.*	H. lilacina, *Sw.*
H. calipyga, *Hodgs.*	H. Schlegelii, *Bonap.*

The ruddy kingfisher of the Himalaya, Nepal, Sikkim, and the east coast of the Bay of Bengal.

Besides these, are H. cyaniventris from Java, H. concreta from Sumatra, H. pulchella from Malacca and S. Tenasserim.

Todiramphus collaris, *Scopoli.*

A. chlorocephala, *Gm.*	A. sacra, *Gm.*

The white-collared kingfisher of the Sunderbuns, Arakan, Tenasserim, Malayana, and Archipelago. Its feathers are largely prized by the Chinese, who buy the skins at 24 for a dollar.

There are other species in the Nicobars and Archipelago.

Ceyx tridactyla, *Pallas.*

A. erythica, *Pall.*	A. purpurea, *Gmel.*

The three-toed purple kingfisher, is found in Sikkim, Malayana, and the islands.

Sub-Fam. Alcedininæ.

Alcedo Bengalensis, *Gm.*, common Indian kingfisher.

Alcedo euryzona, *Temm.*, great Indian kingfisher.

Several species occur east of the Bay of Bengal, viz. A. Beryllina from Java, A. Moluccensis from Moluccas, A. Meningting of Java.

Ceryle rudes, *Linn.*

Ispidia bicincta, *Sw.*	I. bitorquata, *Sw.*
Karikata, . . . BENG.	Korayala kilkila, HIND.
Phutka-match-ranga, ,,	

The pied kingfisher; occurs in Africa and most parts of South Asia and south of Europe.

Ceryle guttata, *Vigors.*

Matchi bag, HIND.	Ung kashiya, LEP.

The large-crested black and white kingfisher, is a native of the Himalaya.—*Jerdon*, i. pp. 221–235.

HALDA or Harda, HIND., is a mildew affecting the cerealia, in which the plant turns yellow and withers.

HALDA or Haldi. HIND. Among Mahomedans, the ceremony of smearing a couple with turmeric between the period of their betrothal and marriage.

HALDAR or Holdar, a name borne by some Bengal families of the trading castes.—*Wilson.*

HALDIA MOORA and Singia moora are roots brought to Ajmir mixed with haldi; they are acrid and poisonous, and are carefully separated. *Genl. Med. Top.* p. 151.

HALEBID, a village in the Hassan district, Mysore, lat. 13° 12′ 20″ N., long. 76° 2′ E.; population (1871), 1207; the site of the ancient city of Dorasamudra or Dvaravatipura, the capital of the Hoysala Ballala dynasty. It was apparently rebuilt in the 13th century by King Vira Someswara. To him is assigned the erection there of two magnificent temples in honour of Siva, which rank among the masterpieces of Hindu art. The larger, Haisaleswara, rises 25 feet high above the terrace on which it stands. The ornamentation consists of a series of friezes one above another, each about 700 feet long, and carved with the most exquisite elaboration. One frieze alone represents a procession of not less than 2000 elephants. The Ballala kings ruled from about A.D. 950 to A.D. 1310. It was plundered by Ala-ud-Din's general Kafur, a eunuch and converted Hindu leader of a Mahomedan army, and it was finally destroyed by Mahomed III., in A.D. 1326. Jonur, also called Moti-talao, twelve miles from Scringapatam, was afterwards made the capital. The entire walls of the Halebid Saiva temple are covered with carvings in stone, forming a Hindu pantheon. There are also two Jaina temples with colossal idols. The roofs are supported by splendid columns, said to be of potstone, beautifully turned, and so highly polished as to be used as a mirror when wetted with water.

HALFA. ARAB. The Stipa tenacissima, a plant of North Africa, largely utilised as a paper material.

HALHED. Nathaniel Brassy Halhed in 1776 published a code of Gentoo laws or ordinations of the Pandits, from a Persian translation made from the original, written in the Sanskrit language; author of a Grammar of Bengali, A.D. 1778.

HALI, in Kamaon, one of the Dom race who has been bought as a slave. In Surat, the Hali slave was a voluntary bondsman, who had temporarily sold himself for a sum of money.—*Wils. Gloss.*

HALIÆTUS, the sea eagle genus of birds, of the sub-family Aquilinæ, family Falconidæ, and order Raptores.

H. fulviventer, *Vieill.*, ring-tailed sea eagle.

Falco Macei, *Temm.*	H. unicolor, *Gray.*
Haliætus Macei, *Blyth.*	H. lanceolatus, *Hodgs.*
H. albipes, *Hodgs.*	
Macha rang, . . BENG.	Bala, ... BENG.
Mach-manga, . . ,,	Kokna, ... KOL.
Mach-korol, koral, ,,	Ugus, ... ,,

The ring-tailed sea eagle is found throughout the N. of India, along the Ganges and Indus up to Kashmir. It lives on fish, tortoises, and snakes.

H. leucogaster, *Gmel.*, grey-backed sea eagle.

Blagrus leucogaster, *Blyth.*	F. dimidiatus, *Raffles.*
Ichthyætus cultrungus, ,,	F. maritimus, *Gmel.*
Falco blagrus, *Daud.*	

This sea eagle is found throughout India, in Burma, Malayana, and Australia, chiefly on the coast and near the mouths of rivers. It lives on sea-snakes, crabs, rats, and on fish which it picks up on the beach.

H. leucocephalus is a bird of N. America and N.E. Asia.—*Jerdon, Birds,*

HALIASTUR INDUS. *Bodd.*

Falco Indus, *Bodd.*	Milvus ponticer., *Jerd.*
Haliætus ponticerian., *Syk.*	M. rotundicaudus, *Hodg.*
Sunker chil, . . BENG.	Ru-mubarik, . . HIND.
Dhobia chil, . . ,,	Kheman kari, . . SANSK.
Garuda, ... CAN.	Ratta Ookab, . . SIND.
Brahmany kite, . . ENG.	Garudalawa, . . . TEL.
Pis-gender, . . GOND.	Shemberrid, . . YERKALA.
Bahmani chil, . HIND.	Garuda mantaru, ,,

Europeans have given the name of the Brahmany kite to the Haliastur Indus, probably from observing the feelings of the Hindus regarding it, who revere it as Garuda, the eagle vahan of Vishnu, and believe that when two armies are about to engage, its appearance prognosticates victory to the party over whom it hovers. The Brahmany kite is very useful in the populous seaport towns of India, in removing carrion and refuse, and is never killed. Major Moor mentions as an instance of this bird's boldness, of which he was a witness, viz. its stooping and taking a chop off a girdiron standing over the fire that cooked it. The religious Hindu feeds these birds on holidays, by flinging up little portions of flesh, to which they are attracted by the call Hari! Hari! meaning Vishnu, Vishnu.

It is found throughout all India. In Bengal, the kites and Brahmany kites breed chiefly in January and February, and disappear during the rains.

HALICACABUM of Pliny, supposed to have been Physalis somnifera, *var.* flexuosa.

HALICORE DUGONG. *Cuv.*

Trichechus dugong, *Gmel.* H. Indicus, *Owen.*
Halicore cetacea, *Ill.* Dugungus Indicus, *Ham.*
H. Indica, *Desm.*

Indian dugong, . . ENG. Duyung, . MALAY.
Dugong Lamantin, ,, Talla-maha, SINGH.
Le dugong des Indes, FR.

The dugong is an inhabitant of the narrow seas of the Eastern Archipelago; and Professor Owen denominated it Halicore Indicus, in distinction from that of the northern coast of Australia, at a time when the former had not been ascertained to frequent (as a dugong of some kind is now known to do) the Malabar coast and Gulf of Calpentyn in Ceylon. It inhabits the shallows of the Indian Ocean and about Ceylon, where the water is not more than 2 or 3 fathoms deep. It does not appear to frequent the land or the fresh water. Its flesh is delicate. The dugong was noticed as occurring in Ceylon by the early Arab sailors, by Megasthenes (Fragm. lix.) and Ælian, and subsequently by the Portuguese. It is this creature which gave rise to the tales about mermaids, which have till the present day occupied the world, and doubtless had their origin in the tales of the Arab sailors. They are phytophagous, or plant-eaters. The species named by authors are—

H. Indicus, *Owen*, the Malay dugong, an inhabitant of the narrow seas of the Eastern Archipelago.

H. tabernaculi, *Ruppell*, the dugong of the coral banks of the Red Sea, has a feeble voice, and feeds on algæ. It is about ten feet long. In February and March bloody battles occur between the males. Its flesh, teeth, and skin are utilized. Their skins, called tun, are used for sandals.

H. Australis, the manate of Dampier, and white-tailed manate of Pennant, is a native of the west coast of Australia.

H. Indicus, *F. Cuvier.*

Trichechus dugong, *Erxleben.* Halicore tabernaculum, *Ruppell.*
Halicore cetacea, *Illeger.* Dugungus marinus, *Tiedemann apud Schinz.*
Halicore dugong, *Cuvier apud Raffles.* H. Hemprichii, *Ehrenb.*
Dugong of Buffon. Parampuan laut, MALAY.
Dugong, . . . MALAY.

Under these synonyms Dr. Theodore Cantor unites all the above, which he says inhabits the Red Sea, the seas of the Malay Peninsula, Singapore, Sumatra, the Philippine Islands, Moluccas, Sunda Islands, and New Holland.—*Eng. Cyc.; Blyth in B. As. Soc. Journ.; Tennant's Ceylon; Cantor in B. As. Soc. Jour.*, No. clxxii. of 1846.

HALIFAX, LORD, better known as Sir Charles Wood, Secretary of State for India in the middle of the 19th century, and during the time of the revolt and mutiny. During his tenure of office, in 1854, the plan of educating the people of India was promulgated.

HALIOTIDÆ, a family of recent and fossil shells, belonging to the class Gasteropoda, of the mollusca. The genera include the haliotis, ear-shell, sea-ears; deridobranchus; stomatia; scissurella; ianthina, violet snail. One species, the haliotis or sea-ear mollusc or ear-shell, is largely used as food by the people on the coast of Manchuria. They are also dried and exported to China, and sell at 300 for a dollar.—*Adams.*

Haliotis funebris, *Cumming and Reeve.*
H. iris, Auctorum.

Shih-kiuch-ming,. CHIN. | Fu-yu-kiah, . . CHIN.

This mollusc is found on the coasts of Shantung, Foh-kien, and Kwang-tung; they are 4 or 5 inches long, and are smooth and iridescent on their inner surface; the pearly interior is levigated, and applied to opacities of the cornea. Shells with 7 or 9 foramina are most prized.—*Smith.*

HALLI. KARN. A small village or hamlet; written Hully, and added frequently to other names, as Harpan-hully. It is the Telugu Palli.

HALLIKAR, also Hal-wakkal, a tribe of the agricultural Sudra in Mysore.—*Wilson.*

HALWA, a hill race in Bustar, Bandara, and Raipur, who wear the sacred thread, which privilege those in Bustar purchase from the raja.

HALWA. HIND. A kind of sweetmeat, specially that made of honey and camel's milk, and brought from the Persian Gulf, *via* Bombay, in saucers. Halwai is a sweetmeat seller. Halwa-rang means colour of sweetmeat, pale drab, first dyed with naspal, pomegranate rind, then with catechu.

HALWAHA. HIND. In Oudh, a predial slave, employed as a ploughman. See Hal.

HAMADAN, a town of Persia, in the province of Irak-i-Ajam, 180 miles S.W. of Teheran. It is the ancient Ecbatana. It is said to have been founded by Jamshid, a king of the Peshdadian dynasty. The population is about 50,000 souls. It has a delightful neighbourhood, many beautiful bazars. The mountain streams contain gold. In the centre of the town is the tomb of Ali Ben Sina (Avicenna); and not far from it are those of Esther and Mordecai, which are revered by the Jews, and kept in repair. An inscription on the tombs is that, on Thursday, the 15th of the month Adar, the building of this temple over the tombs of Mordecai and Esther was finished by the hands of the two benevolent brothers, Elias and Samuel, sons of the late Ismail Kachan. The town people make felt carpets largely.—*Kinneir; Menteith; Morier; Rich; MacGregor*, iv. p. 172; *Ferrier, Journ.* p. 35; *J. B. Fraser*, p. 221; *Porter's Travels*, ii. p. 91.

HAMAL, or Haml. ARAB. Lit. he carried. Hāmilah, a pregnant woman. Hamāl, a porter, a bearer of a palanquin or tonjons. They carry it by means of the pole on their shoulders, the first man on the right shoulder, the second on the left, and so on, thus always keeping the pole steady.—*Frere, Antipodes*, p. 197.

HAMAM DASTAH. HIND. A mortar; from the Persian Hawan. See Hawang-dastah.

HAMAMELIDEÆ, witch hazels, a very small group of woody exogenous plants of N. America, Japan, China, the central parts of Madagascar, S. Africa, the Khassya mountains, and Upper Assam. Some of the species are large forest trees, affording good timber. Bucklandia populnea tree is found from Cherrapunji to Sururem. Altingia excelsa, *Noronha*, is a large tree of Assam and Burma; the Liquidamber cerasifolia, *Griff.*, occurs in the Malay Peninsula; and L. orientale, *Miller*, is the storax tree of Asia Minor. Hamamelis Chinensis is of China and the Jaintia Hills.—*Hooker, Him. Jour.* ii. p. 318; *Gambier.*

HAMD-ALLAH. ARAB. An abbreviation the ejaculation Al-hamd-ul-illah! The praise be t God. It is as commonly used by Mahomedans as the Thank God! of the English.

HAMILTON, CHARLES, Author of Historical Account of the Rohilla Afghans London, 1787.

HAMILTON, DR. FRANCIS, formerly Buchanan, a Bengal medical officer, who publishe papers in the Linnæan Society's Transactions, author of a Journey through Mysore; An Account of Nepaul; Account of the Fishes found in the river Ganges and its Branches, with a volume of plates. He was the first after Rheede to explore the botany of Malabar.

HAMILTON, CAPTAIN, visited Cambay in A.D. 1681, and gave an account of its quartzose minerals.

HAMILTON, WALTER, author of a Geographical, Statistical, and Historical Description of Hindustan and the Adjacent Countries, 1820.

HAMILTON, WILLIAM, surgeon to the embassy sent from Calcutta under John Surman and Edward Stephenson, which reached Dehli on the 8th July 1715. He was successful in his treatment of the emperor Ferokhsir, who on recovery married the daughter of Jye Singh (Ajit Singh) Hamilton died 4th December 1717, and his epitaph is of historical interest:—

'His Memory ought to be dear to his Nation,
for the Credit he gained the English
in Curing Ferrukseer,
the present King of Hindustan,
of a Malignant Distemper,
by which he made his own name famous
at the Court of that Great Monarch;
and without doubt will perpetuate his Memory
as well in Great Britain as all other
Nations in Europe.'

—*Orme*, ii. p. 20; *Hough*, p. 4.

HAMILTONIA SUAVEOLENS. *Roxb.*

Kanera, Pudari of	BEAS.	Niggi, Tulenni,	RAVI.
Muskei, Kantalu,	CHENAB.	Phul, Golunla of .	
Fisanni of . . .	,,	Pudari of	SUTLEJ.

A common shrub in the Panjab Himalaya, up to near the Indus, at from 2500 to 6000 feet. Its wood is very small; but in Chamba it is said to be used for making gunpowder charcoal.—*Dr. Stewart*; *Roxb.* i. 554.

HAMIR. The Balla race were of sufficient consequence in the thirteenth century to make incursions on Mewar, but the first exploit of the celebrated rana Hamir was his killing the Balla chieftain of Choteela.

HAMIRA. There were four distinguished leaders of this name amongst the vassals of the last Rajput emperor of Dehli; one of them, who turned traitor, and joined Shahab-ud-Din, was a Scythian of the Ghiker race, which maintained their ancient habits of polyandrism even in Baber's time. The Haoli Rao Hamira was lord of Kangra and the Ghikers of Pamir.—*Tod's Rajasthan*, i. 560.

HAMIRPUR, a district in the N.W. Provinces of India, lying between lat. 25° 5′ and 26° 10′ N. and long. 79° 22′ 45″ and 80° 25′ 15″ E. Area, 2289 square miles. It encloses the Native States of Sarila, Jigni, and Banda. There are 62 clans of Rajputs, and the Pariahar, Chauhan, and Bais have been specially guilty of infanticide. The Chandel and Bundela, the old dominant classes, now sunk to 548 and 612 respectively, mostly still cling to the neighbourhood of Mahoba, the seat of their former supremacy. The Bais are far the most numerous of the Rajput classes in the district. Among the Sudras the most numerous are the Lodhi, the Chamar, and the Kori. The Mahomedans are the descendants of converted Hindus, who were originally Thakurs. —*Imp. Gaz.*

HAMITE. Mr. Logan says (J. E. Ar., May to June, 1854) the earliest Hebrew ethnography indicates that the Semitic region was jointly occupied by Shemites and Hamites. Four branches of the Hamites are enumerated, viz. (1) the Cushites, embracing the tribes of Sheba, Havilah, Raamah, etc., in Southern Arabia; (2) the Ethiopan and Euphratan tribes of Nimrodians.

HAMMA-i-JOUR, literally 'joining of hands,' a Parsee ceremony practised in Pappati, similar to the English greeting of a 'Happy New Year.'—*Parsees*, p. 61.

HAMMAM. ARAB. A bath. Hammam lena, to take a bath. Public baths, usual in Turkey, Egypt, Persia, and Kábul, are unknown in India. In the middle of the 19th century there were a hundred of them in Cairo alone.—*Lane*, ii. 43.

HAMMER.

Chakuj; Matripat,	ARAB.	Martillo, ...	IT.
Marteau, ...	FR.	Martillo, ...	SP.
Hathora, . . .	HIND.	Chekij, . . .	TURK.

The native sledge-hammer of Bombay is employed in breaking trap, granite, limestone, and other rocks. Its handle is generally of male bamboo, about two feet long. Its head is something like that of an ill-shapen axe,—thick all along. It weighs about 18 lbs. In the face or striking portion is a bluntish wedge of steel, fastened in with a piece of leather. With this the native quarryman will break up the most obdurate trap into slabs or blocks of almost any size or form, from a pavement flag 3 inches thick and 2 feet square, to a block 2 feet cube. He looks narrowly at the grain of the stone, and then with a series of blows, of no great force, apparently, the stone falls in pieces, seemingly without effort. Similar varieties of this, of exactly the same pattern, are used as hand hammers; they are called Sootki. The blasting, or rather the boring, tool, or jumper, is a plain round rod of iron, about three feet long, pointed at both ends with steel. No hammer is ever employed in boring. The jumper is raised and struck in with both hands, and a man will penetrate some inch or two in an hour. The native punch is a short, dumpy, lancet-pointed tool; it is sharpened by being turned point up, and struck with a piece of flint. When used in stone-dressing, it is held in the left hand, and struck with a hollow-faced iron hammer, the cavity being about an inch in depth and as much in diameter.—*Dr. Buist, Bombay Times.*

HAMPI, a ruined city, in lat. 15° 19′ 50″ N., long. 76° 30′ 10″ E., on the S. bank of the Tumbudra, 36 miles N.W. of Bellary. It is the site of an ancient capital of the Vijayanagar kings. The ruins cover nine square miles, including Kamlapur on the south, and Anagundi, a later seat of the dynasty. Hampi was founded, on the fall of the Ballala dynasty, about 1336 A.D., by two brothers, Bukka and Harihara, whose descendants flourished here till the battle of Talikot, 1565 A.D., and afterwards at Anagundi, Vellore, and Chandragiri for another century, until finally

overwhelmed by the advancing powers of Beder, Ahmadnaggur, Bijapur, and Golconda. The Vijayanagar rajas extended and beautified Hampi with many palaces and temples.—*Imp. Gaz.*

HAMPSAGUR, lat. 15° 9′ N., long. 76° 4′ E., on the right bank of the Tumbudra. The level of the Tumbudra is here 1647 feet above the sea.

HAMS.

Hammen, . . .	Dut.	Presuntas, . . .	Port.
Jambons, ...	Fr.	Okoroku, . . .	Rus.
Schinken, . . .	Ger.	Jamones, ...	Sp.
Prosciutti, ...	It.	But, ...	Turk.

They are largely imported into India for the use of Europeans. Many Mahomedan shopkeepers will not even sell them.

HAMSA, the god of the Druse race.

HAMSAYA. Hind. A neighbour, dependant, vassal.

HAMUN, a name for the lake of Seistan, Hamun is an Old Persian word signifying expanse. —*Ferrier, Journ.* p. 429. See Ab-Istadah.

HAMZA, uncle of Mahomed, slain by Wahsha, a negro slave. See Masailma-el-Aswad.

HAN, the 5th dynasty of China, began B.C. 206, and lasted to A.D. 264. Most of the Han princes were munificent patrons of literature. During the reign of Ming-ti, the 15th of the Han dynasty, considerable intercourse was carried on between the princes of India and China. This had obtained from the earliest period, but particularly during the dynasties of Sum, Leam, and Tam, from the fourth to the seventh centuries, when the princes from Bengal, Malabar, and the Punjab sent embassies to the Chinese monarchs. The Han dynasty of China reformed the Chinese calendar.

HANAFIYAH, a large vessel of copper, sometimes tinned, with a stopcock in the lower part, and generally with a ewer, or a basin, to receive the water.—*Burton's Mecca*, ii. 43.

HANBALI, a commentary of the Koran. The commentator was born at Baghdad A.H. 164, and died there A.H. 241, nearly 70 years old.

HAND.

Yadd, ...	Arab.	Manus, ...	Lat.
Main, ...	Fr.	Dast, ...	Pers.
Hat'h, ...	Hind.	Kai, . . .	Tam., Tel.
Mano, ...	It. Sp.		

The figure of the hand, amongst all nations, is utilized as an emblem.

The hand is an emblem for V., with the three central fingers folded in; and by placing the symbol below, the cardinal X. is produced. In India, amongst Mahomedans and Hindus, the right hand is more honoured than the left; in China the left hand is more honourable than the right; in Siam the right more than the left.

In British India, a person to whom you make a present, a servant to whom you do a kindness, will rush to your hand and press it to his lips. To seize a man's hand is to crave his protection, to profess yourself his servant; hence the act is one of obedience and devotion, almost of servility. The person advancing to seize the hand always does so in a stooping posture, in an attitude of humility. The giving the hand amongst all nations (Prov. xi. 21) has been considered as a pledge for the performance or ratification of some act of importance, and it was the custom amongst the Scythic or Tartar nations of transmitting its impress as a substitute; the hand being immersed in a compost of sandal-wood, is applied to the paper, and the palm and five fingers (panja) is the signature. In Carne's letters from the East is given an anecdote of Mahomed, who, as erroneously supposed, unable to sign his name to a convention, dipped his hand in ink, and made an impression therewith, but Mahomed only followed an ancient solemnity, or custom, for all Mahomedans occasionally stamped or sealed their epistolary communications with the print of their hand. Hyder Ali often did it. It was considered a solemn form of signature. The panja, or palm and five digit form hand, of the Mahomedans, is used at the Maharram in erect Panjah flags or Alam, in the name of Husain and other martyrs.—*Tod's Rajasthan*, i. p. 362.

HANDI. Hind. A cooking-pot or kettle made of pottery, of the same shape as a deghcha, which is of brass.

HANDKERCHIEF.

Mouchoir, . . .	Fr.	Fuzzoletto,	It.
Tuch, Schnupftuch,	Ger.	Panullo, .	Sp.
Rumal, ...	Hind.	Mendil, Mahrama,	Turk.

Handkerchief pieces form a considerable article of manufacture and traffic in Southern India. Handkerchiefs, coloured, from Madras, red from Sydapet and Ventapollem, are much admired for the harmony and richness of the colours, and the superiority of texture. Nellore pocket-handkerchiefs of jean deserve unqualified approbation. The silk handkerchiefs manufactured in Bengal are known in the market as Bāndana, Kora, and Chapa. They are generally figured, and of different colours. They are exported chiefly to the Burmese territories, and sold at from 1½ to 5 rupees each. The coloured cotton handkerchiefs manufactured at Ventapollem, on the east coast, are well known in foreign markets, were formerly highly prized for their superior qualities and colours, but they have been driven from the markets by the Madras and Pulicat manufactures, which the community prefer for their superior qualities and colours. Madras handkerchiefs of superior kinds are sold at 1¾ rupee each, and inferior sorts at 4 annas to 12 annas; the colour of the last description is very perishable. The ordinary colour of the Madras handkerchiefs is red, and Mahomedans and Hindus prefer them to those of other countries. The principal site of the manufacture of silk handkerchiefs for the head is Seringapatam in Mysore; they are of superior quality, and of red and pink colours; they are in squares of 6 cubits, and are, in consequence of their gold lace borders, sold at 35 to 100 rupees each.—*Mad. Ex. J. Rep.*

HAND-MILL.

Meula, ...	Fr.	Mola, ...	It.
Chakki, ...	Hind.		

The grinding at the hand-mill is noticed in Exodus xi. 5, Isaiah xlvii. 2, and Matthew xxiv. 41. It is the quern of the Gael. In all the south of Asia, in small families, the labour of one person suffices to grind enough for the day's consumption; but where the inmates are more numerous, two people sit on the ground with the hand-mill between them. A single person, to cause the upper stone to revolve, has to pull it towards and to push it from her; but when two are working, each pulls towards her side. The Old and New Testaments notice the process, but it is well described in the 47th chapter of Isaiah. It is a heavy task, but they lighten

it by their labour-songs, and they work from the earliest morning hours, 2 or 3 A.M.

HAND-PLANT, Cheirostemon platanoides, *H. B. K.*, venerated by the ancient Mexicans, from the singular resemblance to a clawed hand presented by the curved stamens of the flower.

HANDRO. HIND.? A tree of Chutia Nagpur, with hard, red timber.—*Cal. Cat. Ex.* 1862.

HANGI. HIND. A large horse-hair sieve, used by silk-dyers.

HANGRANG PASS, lat. 31° 47′ 7″, long. 78° 30′ 6, in Kanawar, W. of the Sutlej, leads over to Spiti. The top of the pass is 14,530 feet above the sea, according to the G. T. S.

HANG TUAH, a celebrated champion of Java, called the Laksamana. He must not be confounded with the Laksamana of the Portuguese writers, as the latter lived several generations after the first, who accompanied king Mansur to Majapahit.

HANIA. ARAB. An Arabic salutation, meaning, May it be good to you.

HANIF, an expression employed in the Koran by Mahomed, to signify that he followed the pure and catholic faith of Abraham. One Mahomedan theological sect is called Hanifi. The Hanifi theology chiefly holds by the religion of Abraham.

HANIFAH, a commentator of the Koran, was born at Kufa A.H. 80, and died at Baghdad, in prison, A.H. 150, nearly 70 years old.

HAN JIN and Tan Jin, men of Han or of Tang, from the dynasties of those names.

HANKA, also Ankūs. HIND. The elephant-driver's spear-goad.

HAN-KOW, CHIN., means mouth or port of the Han. See Yang-tze-kiang.

HANLE TSO, a fresh-water lake in Ladakh, in lat. 32° 48′ N., long. 78° 54′ E., at the monastery of Hanle, 14,600 feet above the sea. This is the largest sheet of fresh water in Ladakh.—*Cunningham's Ladakh*, p. 142; *Schlagentweit.*

HAN-LIN-YUEN, the Imperial Academy of China, founded by Kablai Khan. For 600 years the small body of Han-lin scholars have held their sessions undisturbed by dynastic revolutions or political outbreaks. No learned society in the world can compete with it in age or in its intense exclusiveness. The examinations being open to all, and forming as they do the only recognised channel to official rank, every man in the empire who aspires to end his days as something more than a plebeian, enters the lists. At the first competition, which consists of five sessions separated by intervals of a few days each, and which is held annually in the chief city of each district, about 2000 candidates generally present themselves. Out of this number from 20 to 80 of the best are chosen, and on these are conferred the degree of Siu-ts'ai, or 'budding genius.' Every third year the budding geniuses from every district in each province—and there may be 70 or 80—go to the provincial capital to appear before an imperial examiner as candidates for the next degree of Ku jin, or 'promoted scholars.' On this occasion 5000 or 6000 competitors contest the honour of being the one in each 100 who, as the ripest scholar, is admitted to the further degree of Ku jin. In company with all those who have won similar honours in the capital of the 18 provinces of the empire, the successful Ku jin goes, in the succeeding spring, to Pekin, where, if fortune attend him, he wins the distinction of becoming a Tsin shi, or 'one ready for office.' In agreement with this descriptive title, the new Tsin shi may, if they please, ballot for the vacant junior mandarinates, for which they have now shown themselves qualified, and from which they may rise by their own exertions to seats in the Grand Council of State, or to places in the imperial cabinet. But, if desirous of still further distinguishing themselves as scholars, and of obtaining the honour of places in the Imperial Academy, the 200 or 300 survivors of so many contests present themselves at the palace, where they are examined by the emperor in person. Out of this number about 20 are chosen whose scholarship is the ripest, whose penmanship is the best, and whose literary style is the most perfect, and to these are given seats among the Immortals of the Han-lin. On one only of these 20, chosen out of the 300 million inhabitants of the empire, *la crême de la crême*, is conferred the signal title of Chwang-yuen, or model scholar of the empire. Once in three years is this degree granted; and so supreme is the prize, that provinces contend for it, and the birthplace of the victor becomes famous for ever. The instant that the imperial award is given, heralds carry the news at express speed to the friends of the laureate. We have, says Dr. Martin, seen them enter a humble cottage, and, amid the flaunting of banners and the blare of trumpets, announce to its startled inmates that one of their relations had been crowned by the emperor as laureate of the year. And so high was the estimation in which the people held the success of their fellow-townsman, that his wife was requested to visit the six gates of the city, and to scatter before each a handful of rice, that the whole population might share in the good fortune of her household.

Members of the Han-lin are appointed the official poets and historians of the reigning dynasty, and every imperial compilation undertaken is the work of these men. It was they who edited the famous dictionary of the language which added a lustre to the reign of K'ang-he (1661–1721), and who, at the bidding of the Emperor K'een-lung (1755–1795), compiled the celebrated encyclopædia in 5020 volumes, one of the few existing copies of which is now in the library of the British Museum. To act as examiners at the competitive examinations, and as literary chancellors in the provinces, form part also of their duties, as well as composing prayers for the use of the emperor on occasions, writing inscriptions for the temples of various divinities, in acknowledgment of services, and choosing honorific titles for members of the imperial household.

The holders of hereditary titles are so few, that their existence cannot be said to impair the assertion that the holders of official rank form the only aristocracy in China. Unlike the aristocracy of other lands, this charmed circle is, according to law, only to be entered by winning distinction at the examinations; and as these are open to every man in the empire, of whatever age and of whatever station in life, except the very outcasts, the highest prizes are as freely accessible to the peasant or shopman, as to the sons of the loftiest dignitaries. China may thus be said to be a democratic empire, tempered by an aristocracy of talent.—*Dr. W. A. P. Martin, The Chinese,*

their Education and Letters; Huc, Chinese Empire, i. pp. 19, 95.

HANNAMANTU'S PILLAR. About 50 feet west of the high road from Kurnool to Gooty, 50½ miles from Kurnool town, stands this natural pillar of gneiss rock. There is scarcely such another in the world. Amongst a few smaller pillars of a similar kind, it towers 25 feet high, averaging 6 feet square. This average width is exceeded in the middle, and tapers off towards both ends; so that the top is 4 or 5 feet square, and the base about 3 feet square. It is all solid, except that the upper 4 or 5 feet is separated from the rest of the pillar by a fine horizontal crack. The most striking part of it is, that it does not stand on its base fully, nor even upon half of it. A string 10 feet long will encircle the whole of the bearing points of the base, which all lie within a space about 3 feet long and 2 feet wide, in the form of a truncated right-angled triangle. This is a small base for a pillar weighing as much as a couple of locomotive engines with their tenders complete. Yet even on this small base, if, as appears likely, the centre of gravity falls about the centre of the base, it will require a wind-pressure of 80 lbs. on the square foot to overturn the pillar. Years ago, some Hindu enthusiast painted a figure of the monkey god on this pillar. Recently some iconoclast has been removing the figure, by flaking off the stone in a very destructive way.—*Traveller.*

HANNO, according to Pliny, a native of Carthage. When that city was at the height of her prosperity, he circumnavigated the continent of Africa, sailing from Gades (Cadiz) to the extremity of the Arabian Gulf. He wrote all the details of his voyage in the Punic language.

HANOMOREY, betle-box bearers of Oovah in Ceylon, a race or caste held to be more degraded than the Rodiya.—*Tennant.*

HANSA or Hanasa.

Gans, ...	Ger.	Hanza, ...	Pali.
χην, ...	Gr.	Ganso, ...	Port.
Anser, ...	Lat.	Ansar, ...	Sp.
Gangsa, . . .	Malay.		

A swan, a goose. When the followers of the first crusade issued from England, France, and Flanders, they adored a goat and a goose, which they believed to be filled with the Holy Ghost. Salu, translated quails in Numbers xi. 31, are supposed to be red geese. Brahma is styled the Hansa rider, it being his vahan or vehicle. The figure on many Buddhist monuments is the Casarca rutila, or Brahmany goose. The goose is emblazoned on the national standard of Burma.

HANSI, a municipal town of Hissar district, Panjab, and headquarters of the Tahsil, lat. 29° 6′ 19″ N., long. 76° 0′ 19″ E., population (1868) 13,563. Dr. Hunter says it was founded, according to tradition, by Anang Pal Tuar, king of Dehli. Colonel Yule says it was founded by Raja Pethora of Dehli. It was captured by Mahmud of Ghazni, A.D. 1085. The well within the lower fort, or fausse braye, is 120 feet deep. In the centre of the upper fort is a cistern capable of containing 184,000 gallons. It was the capital of George Thomas, who raised himself from being a sailor before the mast to be ruler of a small Indian principality.—*Yule, Cathay*, ii. p. 406; *Imp. Gaz.*

HANSRAJ. Hind. Adiantum caudatum, A. capillus veneris, A. venustum, the pari-soosa or mu-i-puri, fairy-hair ferns, the leaves of which are deemed by the natives of India heating and febrifuge.—*Gen. Med. Top.* p. 127.

HANTU. Malay. A spirit, a ghost.

HANUMAN, a Hindu deity. From Hanu, the cheek, Hanuman means long jaw. His figure is that of a man with a black monkey face and a long tail. Hanuman or Hanumat, in Hindu mythology, is son of Pavana, the wind, by Anjana, wife of a monkey named Kesari, called also Lanka-dahi, also Yoga-chara, Marut-putra; and he has the patronymics Anili, Maruti, and the matronymic Anjaneya. His images are set up in temples, sometimes alone, and sometimes in the society of the former companions of his glory, Rama and Sita. He is supplicated by Hindus on their birthdays to obtain longevity, which he is supposed to have the power to bestow. As the god of enterprise, offerings are made at his shrine by night. Hanuman is said to be a son of Siva. He is fabled to be the son of the wind, and is called Maruti, from Pavana being chief of the Marut, or genii of the winds. He is also called Muhabar. As the monkey-general who assisted Rama in his war with Ravana, he is regarded and worshipped as a demi-god. Both Hanumanji and Boosundi are said to have their lives protracted through the four yuga of Hindu chronology. Boosund was a crow who had more blood than he could drink in the wars of Sambhu and Nesambhu. He just quenched his thirst with blood in the wars of Rama. But in the wars of the Mahabharat he broke his beak by striking it against the hard dry earth, which had soaked in the little blood shed on the occasion. In 1868, Bala, potail of Assaye, who was five years old when Sir Arthur Wellesley fought the battle, was the pujari of the temple in which the editor put up. Bala daily walked in and poured water on the lingam (Abishegam), also on Hanuman and on the bull (Basava); then put rice on all these, then walked around five times, then put rice on the tulsi, and the worship concluded.—*Tr. Hind.* ii. p. 207; *Col. Myth.* p. 59; *Dowson.*

HANUMAN, the Bengal langūr, Presbytes entellus of Bengal and Central India. The males live apart from the females, whom they visit at seasons. See Presbytes.

HANUMAN NATAKA, a long drama on the adventures of Hanuman, by various hands, completed by Damodara Misra, by request of King Bhoja, in the 10th or 11th century.

HANXLEDEN and Paulinus a Sancto Bartolomeo whose real name was Philipp Wesdin, in 1790 published the first Sanskrit grammar.

HAOU? TSING! TSING! The Chinese salutation on meeting, meaning literally, Are you well? hail! hail! See Chin.

HAPTA HINDU, of the Vendidad, is the modern Panjab, the Hapta Sin or Hapta Hin, or the seven rivers, called in the Vedas the Sapta Sindhava. These consist of the Sindhu or Indus, with its six eastern confluents, viz.:

Vitasta or Hydaspes.	Vipas or Hyphasis.
Asikni or Ascesenes.	Satadru or Hesydrus.
Parushni or Hydraotes.	Kubha or Kophen.

In the journeying of the Aryan race, their fourteenth settlement was in Hapta Hindu (Panjab, vi. 19), the land of the seven Hinda, that is, the country between the Indus and Sutlej. In the Vedas, the country of the five rivers is also called the land of the seven rivers. The traditional Greek names also are seven. The Indus

and the Sutlej are each formed by the junction of two arms, which in their earlier course were independent. According to this view, it stands thus:—

1. Kophen (Kubha),	I. Indus.
2. Indus, Upper	
3. Hydaspes (B	II. Hydaspes.
4. Akesines (As	III. Akesines.
5. Hyarotis (Hydraotis, Iravati-Parushi),	IV. Hydraotes.
6. Hyphasis (Vipasa),	V. Hyphasis.
7. Saranges (Upper Satadru, Sutlej, Ghara),	

Ritter supposes that the country extended as far as the Sarasvati, but such a supposition is at variance with history. It is now ascertained from the Vedas that the Aryans passed the Sutlej at a very late period, and settled in what is now India. It was not till their fourteenth settlement, after the migration from the primitive country in the north, that they passed the Hindu Kush and the Indus. The previous resting-places form an unbroken chain of the primitive abodes of the Aryans.—*Bunsen*, iii. 465, 487. See Aryans.

HAQ. ARAB. Right, truth; also an attribute of the deity, Al Haq, the true God, a word in frequent combination. Haq also means any right or due to which a person is entitled. Haq-dar, a person entitled to any right. See Sufi.

HAR. HIND. A necklace; a necklace of honour.

HAR, the Rajput god of war, is Kumara. In the Hindu mythology he is represented with seven heads; the Saxon god of war had six. The six-headed Mars of the Cimbri Chersonese, to whom was raised the Irmanseul on the Weser, was worshipped by the Sacasenæ, the Catti, the Siebi or Suevi, the Jetæ or Gete, and the Cimbri, evincing in name, as in religious rites, a common origin with the martial warriors of Hindustan. The Rajput delights in blood; his offerings to the god of battle are sanguinary,—blood and wine. The cup (cupra) of libation is the human skull, the calvarium. He loves them because they are emblematic of the deity he worships; and he is taught to believe that Har loves them, who in war is represented with the skull to drink the foeman's blood, and in peace is the patron of wine and women. With Parvati on his knee, his eyes rolling from the juice of the p'fool and opium, such is this Bacchanalian divinity of war, who is a perfect analogue of the manners of the Scandinavian heroes. The Rajput slays buffaloes, hunts and eats the boar and deer, and shoots ducks and wildfowl (cookru); he worships his horse, his sword, and the sun, and attends more to the martial song of the bard than to the litany of the Brahman. In the martial mythology and warlike poetry of the Scandinavians, a wide field exists for assimilation; and a comparison of the poetical remains of the Asi of the East and West would alone suffice to suggest a common origin. The cupra of Har, a human skull, the calvarium, in the dialects pronounced cupar, is the cup in Saxon. The cup of the Scandinavian worshippers of Thor, the god of battle, was a human skull, that of the foe, in which they showed their thirst of blood; and Har, the Hindu god of battle, leads his heroes in the 'red field of slaughter' with the cupra in his hand, with which he gorges on the blood of the slain. The Gosain are the peculiar priests of Har or Bal; they seem all to indulge in intoxicating drugs, herbs, and drinks.—*Tod's Rajasthan*, i. 67.

HAR, Terminalia chebula, and other three species, furnish all the discarded myrobalans of old pharmacopœias. The whole are much used in dyeing. The myrobalan from Dehli and Harowti, Hindustan and the Dekhan, are of four kinds, namely, Gûral harra, astringent and purgative, used in mesalihs, given in medicine to children, 4 seers for 1 rupee; Juwal harra, used in the same way, 8 seers for 1 rupee; Chaipel harra, used only in dyeing, 10 seers for 1 rupee. According to the size of the myrobalan, its value augments, so that a very large one may be worth 100 rupees or more, the natives believing that the very large ones have the virtue of causing purging by being merely retained in the hands, and is esteemed to possess wonderful general deobstruent and purgative qualities, etc. etc., but is in reality worthless.—*Genl. Med. Top.* pp. 136, 153.

HAR. HIND. A plough; enters into the composition of many words. See Hal.

HARA, a name of Siva or Mahadeo.

HARA, a mountain range. See Hala.

HARA, a branch of the Chauhan Rajputs, who give their name to Haraoti, which includes Kotah and Bundi. The Hara Rajputs have held Haraoti through all dynastic changes. Bundi is their capital, and they claim descent from the family that ruled in Ajmir before the Mahomedan conquest in 1342. The Hara Rajput is above the middle height, with graceful and well-proportioned limbs. He is wiry, upright, with a commanding presence; with an air of pride and haughty superiority over all men, but devoted to their chiefs. The face is well shaped; nose and mouth finely cut; eye small and long, bright and clear, but not indicative of high intellect. The Hara Rajput partakes freely of tobacco, spirits, and opium, fish, and flesh of all kinds, except that of the cow or buffalo; but thick and coarse cakes of flour form the chief food, with vegetables and milk. This Hara branch of the Chauhan dynasty are descended from Anuraja, a son of Visaldeva, or more properly of Manakya Rai (Tod, ii. p. 454), who in A.D. 695 founded Sambhur, hence his title of Sambri Rao. In A.D. 1024 Anuraja took possession of Asi or Hansi, in Hariana. The Bundi branch of this family reckon from Rao Ratan, who built Ratanpur, the name of the chief town, in 1578 to 1821, in which year was Ram Sinh. The Kotah branch reckon from Madhu Sinh, son of Rao Ratan, in A.D. 1579, to Kiswar Sinh, Madhu Sinh, regent, in A.D. 1819.—*Thomas' Prinsep*, p. 249; *Captain W. H. Beynon*, in vol. vii., *People of India*.

HARA. ARAB. A quarter of the city in Cairo. Every quarter has its shaikh, called Shaikh-ul-Hara. The whole city is also divided into eight districts, over each of which there is a shaikh.

HARAI is the most important of the hill chiefships or zamindaris in the north of the Chindwara district.

HARAKAT. ARAB. Trouble, inconvenience. Under British rule in India, Harakat na hui, barakat hui, Trouble there has been none, blessing hath there been.—*Burton's Mecca*, i. 11.

HARA KIRI is from Hara, JAPANESE, the belly, and Kiri, root form of Kiru, to cut; a self-immolation by disembowelling, a mode of self-execution adopted in Japan. Practically, they make only a small wound in the belly, and in the act of so doing a relative or other person, whom they have

selected, cuts off their head with a sweep of a sword. In 1869, when Taki Zenzaburo was permitted by the Mikado so to die, because he had ordered the Europeans to be fired upon at Kohe, he wore a dress of ceremony and a zimbaori coat. He advanced to the high altar and prostrated himself twice, with his pupil on his left to act as the kaishaku or beheading friend. He was presented with the waki-zashi, short sword or dirk, 9½ inches long, which the victim raised to his head and placed in front of himself. He then confessed aloud, 'I, and I alone, unwarrantably gave the order to fire on the foreigners at Kohe, and again as they tried to escape. For this crime I disembowel myself, and I beg you who are present to do me the honour of witnessing the act.' Bowing again, he let his clothes fall to the waist, then took the dagger, and, stabbing himself below the waist on the left side, he drew it slowly across to the right side, and, turning the dirk in the wound, he gave it a slight upward turn. He then drew out the dirk, leant forward, and stretched out his neck. At that moment the kaishaku sprang to his feet, and with one blow severed the head from the body, made a low bow, wiped his sword, and retired. The stained dagger was then solemnly borne away as proof of the execution. The Samurai, or gentlemen of the military class, are trained from infancy to regard this self-execution as an honourable form of expiation. In some parts of Japan, as the victim criminal stretches out his hand to take the wooden dagger, the kaishaku strikes off his head; or a Daimio disembowels himself and cuts his own throat.—*Mr. Mitford in Cornh. Mag.*, Nov. 1869; *Oliphant*, ii. 147; *Manners and Customs of the Japanese*, 193.

HARAM. ARAB. Sacred; the most sacred place of a temple or a palace; the seraglio of a great man. Harmain, the holy cities of Mecca and Medina. In Arabia, Egypt, and Turkey, the Hărăm or Harm means the female part of the family, and the word is used to avoid the indecorum, in the eyes of a Mahomedan, of mentioning his wives or daughters. It is likewise the name for that part of the house where the females dwell. Mahomedans are so scrupulous to avoid speaking personally of their female relations, that, when obliged to refer to them, they say, 'My house is sick,' or 'My house sends compliments to your house.' The haram in India means a purchased woman associating with her master. In Arabia, the haram woman would be a slave woman taken in war.—*Rich's Kurdistan*, i. p. 2.

HARĀM, in India, unlawful, forbidden; whatever the Mahomedan law disallows; unlawful food, such as pork, wine, mushrooms, etc., hence Harāmi and Haramzādāh, a vicious, wicked man or beast.

HARA-MUK or Gunga bul, TIB., means literally place of the Ganges, and is a sacred lake on the mountain of Haramuk, in Kashmir. It lies under the wildest and most lofty peaks of the mountain, is 1½ mile long and 200 or 300 yards wide, and is about 12,000 feet above the level of the sea.—*Vigne.*

HARAN, the present Karra, a day's journey south of Odessa, to which Abraham went from Ur of the Chaldees. It is the capital of a Turkish pashalik, which extends in a north-west direction from the mouth of the Shat-ul-Arab to the rocks of Merdin, the Baghdad frontier towards Constantinople. In an east and west line it stretches from the confines of Persia to the banks of the Khabour, which separates it from the pashalik of Orfa, the Osrhoene of the Romans, and that part of Mesopotamia which contained the Haran of Abraham, and the famous Edessa of the crusades. —*Bunsen*, iii.

HARAND, a district in Eastern Baluchistan bordering on the Indus. It is one of the three eastern sections of Baluchistan. Harand and Dajil, in Cutch Gandava, are inhabited by the Gurchani tribe of Rinds, and have the Muzari on their south.

HARAQUAITA is the Arachosia of the classics, the country of the Rachos, with whom the immigrant Aryans came in conflict, and who have been turned into the fearful Rakshasa of popular Hindu belief. According to General Ferrier, Arachosia can be distinctly shown by the Greek measurements to have been at the ruins of Shahr-Zohak or Olan Robat, between Kilat-i-Ghilji and Mokoor. According to Ch. Bunsen, Haraquaita is south of Kābul, and is the Harauwati of the cuneiform inscriptions, and the Arachosia of the classics. It was the ninth settlement made by the Aryans (verse 13) in a country which they conquered, and it was here that they commenced to inter their dead, which the Zendavesta strictly prohibits, as being the greatest desecration of the sacred earth—an apostasy, therefore, from the true faith. The Arachotia mentioned on the coins of the Indo-Greek rulers was Kandahar. The Haraquaita of the Zend language is the Saraswati of Sanskrit writers, the Greek Arachotos, and the Chinese Tsaukuta. — *Bunsen*, iii. 464 to 485; *Ferrier's Journ.* p. 323.

HARAWAL. TURK. The advanced guard of an army; the officer commanding it.

HARB. ARAB. Battle. Harbi, martial, valiant. In Mahomedan law, Dar-ul-Harb is a non-Mahomedan state, not subject to Mahomedan rule, and, although at peace, an incessant object of hostilities. Dar-ul-Islam is a Mahomedan state.

HARB, an Arab tribe who warred with Mahomed. Mahomed is fabled to have resuscitated those killed in the war by the application of balsam of Mecca.

HARBOURS. Captain Taylor gives a list of 656 ports and harbours in British India, the chief of which are—Karachi in Sind; on the west coast of India are Poshetra and Serai, in the Gulf of Cutch; Chuch Bandar or Shalbet, on the south coast of Kattyawar, 30 miles east of Diu Head. It is formed by Shalbet Island. Bombay harbour is the best on the west coast. Jyghur and Viziadrug is south of Bombay; Karwar is the port of N. Canara. Cochin harbour is kept clear by its splendid backwater, which acts as a tidal reservoir. Kolachul, on the Travancore coast, has some outlying rocks, and large ships can ride at anchor to leeward of them in still water. Tuticorin, in the Gulf of Manaar, is the port for all the large trade of Tinnevelly, but vessels have to lie 2½ miles from the shore. Chittagong harbour or port is 10 miles up the river Karnfuli. It is one of the best ports in India. The Hoogly, the Irawadi, and the Moulmein rivers are much resorted to.

HARBURENNI and other places in Ceylon have numerous rock inscriptions in the Pali language, from 104 B.C. to twelfth century, in the Lat to the modern Tamil character. Religion

mentioned is Buddhist. Sir Wilmot Horton says there are thousands of these inscriptions in Ceylon, and they exhibit the Deva Nagari in all its transitions. The inscriptions would appear to be much defaced, and little is yet made of them. —Vol. v. p. 554.

HARDAUL-LALA, a chief of Bundelkhand, whose spirit, according to the natives of Northern India, visited the camp of Lord Hastings with cholera in consequence of the slaughter of cows in the grove where the chief's ashes were interred. Hardaur or Hardaul is the name given to the earth mounds on which a flag is placed, raised to avert epidemic disease from the villages of N. India.—*Wilson.*

HARDEHA. HIND. A tribe of the Koch'hi.

HARDINGE, VISCOUNT, G.C.B., a general officer of the British army, who distinguished himself in the Peninsula under the Duke of Wellington. He took the office of Governor-General of India, 23d July 1844, and held it till the 12th January 1848. He endeavoured to preserve peace, but, after the death of the Maharaja Ranjit Singh, the Sikh nation had been agitated, and anarchy followed. On the death of Kurruck Singh, the Sikh army freed themselves from all control, and 50,000 men invaded British territory, and they began to cross the Sutlej on the 11th December 1845. Lord Hardinge had left Calcutta on the 22d September, and placed himself under the orders of Sir Hugh Gough; and on the British Indian army arriving at Moodkee on the 18th December, they found the enemy advancing in order of battle, and the battle that ensued lasted from three in the afternoon until nightfall. The Sikh army lost seventeen guns and several thousand men. In this battle Sir Robert Sale fell. The Sikhs retreated to Firoz Shahar, where for three days they were throwing up entrenchments around their camp. On the 21st December Sir Hugh Gough attacked their entrenchments, and the British army and its generals bivouacked on the field, exposed throughout the night to the fire of the enemy. The battle was renewed next day, and terminated in the success of the British, the camp being taken, after a long and bloody conflict. Prince Vladimir of Prussia was present in this engagement, and his physician, Dr. Hoffmeister, was killed.

The Sikh army retired to the right bank of the Sutlej opposite Lodhiana, which Major-General Sir Harry Smith was sent to protect; and in the subsequent movements the Sikh army opposed him at Aliwal on the 28th January 1846, but were defeated with great loss, and the left bank was cleared. Sir Harry Smith rejoined the commander-in-chief, and on the 10th February 1846 the battle of Sobraon was fought and won, but with great loss on the part of the British,—thirteen officers were killed and above one hundred wounded. A treaty was signed, transferring all the country between the Sutlej and Beas, and afterwards modified to the Beas and Indus. Raja Dhulip Singh was reinstated on the throne, and Raja Gulab Singh made independent, and granted Kashmir and other territory. Sir Henry Hardinge was created a viscount, Sir Hugh Gough a baron, and Sir Harry Smith a baronet. Lord Hardinge returned to England, and was succeeded by Lord Dalhousie.

HARDWAR, ancient historical town and place of Hindu pilgrimage in Saharunpur district, N.W. Provinces, lat. 29° 57′ 30″ N., long. 78° 12′ 52″ E.; population (1872), 4800. It was originally known as Kapila or Gupila, from the sage Kapila, who passed his life in religious austerities at the spot still pointed out as Kapilasthana. Hardwar, or Hari-dwara, literally Vishnu's Gate, seems to be of comparatively modern origin, as both Abu Rihan and Rashid-ul-Din mention only Ganga-dwara, or the Ganges gorge (literally, gate). Tom Coryat visited the place, and described it as 'Hari-dwara, the capital of Siva.' The level of the Ganges at Hardwar is 1024 feet. The Ganges falls rapidly to Hardwar, which is 1300 miles from the mouth. It is a great place of pilgrimage, the pilgrims often occupying the valley of the Ganges to a length of nine and a depth of two miles from the village of Doodea past Hardwar and Myapore to Kunkul and Jooalapore. Its celebrity is owing to the proximity of the Rikikase gorge, from which the Ganges escapes from the Siwalik Hills of the Himalaya mountains, thirteen miles above Hardwar. It was a scene of sacred rites long before either Sivaism or Vishnuism developed in their present forms. As the spot where the Ganges issues forth on its fertilizing career, Hardwar obtained the veneration of each of the great religions of India, and preserves the memorials alike of Buddhism, Sivaism, and Vishnuism, and of rites perhaps earlier than any of them. A dispute exists to this day between the followers of Siva and Vishnu as to which of these deities gave birth to the Ganges. The Vishnu Purana is cited by both, as it ascribes the Ganges to Vishnu, and the Alaknanda, or eastern branch of the Ganges, to 'Siva's Gate;' the Vishnuvites maintain that it is Hari-dwara, 'Vishnu's Gate.' The great object of attraction at the present day is the Hari-ke-charan, or bathing ghat, with the adjoining temple of Ganga-dwara. The charan, or footmark of Vishnu, is imprinted on a stone let into the upper wall of the ghat, and forms an object of special reverence. Each pilgrim struggles to be the first to plunge into the pool after the propitious moment has arrived, and stringent police regulations are required to prevent the crowd tramping one another to death, and drowning each other under the sacred water. In 1819, 430 persons, including some sepoys on guard, lost their lives by crushing in this manner, after which accident Government constructed the present enlarged ghat of sixty steps, 100 feet in width. Riots and bloody fights were of common occurrence amid the excited throng. In 1760, on the last day of bathing (10th April), the rival mobs of the Gosain and Bhairagi sects had a long-continued battle, in which the almost incredible number of 18,000 are said to have perished. In 1795 the Sikh pilgrims slew 500 of the Gosains. In 1829, Gosains fought their way to the Ganges, and many were killed. The great assemblage of pilgrims takes place on the first day of the month of Baisakh, the commencement of the Hindu solar year (March—April), and the anniversary of the day upon which the Ganges first appeared upon earth. Every twelfth year, the planet Jupiter, being then in Aquarius, a feast of peculiar sanctity occurs, known as a Kumbh-mela, and is attended by an enormous concourse of people. The ordinary number of pilgrims at the annual

fair amounts to 100,000, and at the Kumbh-mela to 300,000.

Pilgrims come to Hardwar from all parts of Hindustan and Bengal, from the Dekhan, the Panjab, from Kashmir, Afghanistan, Tartary, Tibet, and China, some as religious devotees, some as worldly tradesmen. For miles around the place it is one immense encampment. Colonel Yule has seen Buddhist pilgrims at Hardwar who had crossed the Himalaya from Maha-Chin, as they said, to visit the holy flame of Jawalamukhi in the Panjab. A great attack of epidemic cholera occurred at Hardwar in 1783, when 20,000 people died in eight days.—*Yule's Cathay*, p. 411; *Taylor's Visit*, p. 177; *Imp. Gaz.*

In commerce, goods of every kind made from metal.—*M'Culloch.*

HARDWARI PEORI, or Indian yellow, is the dried deposit precipitated from the urine of cows that have been fed on the leaves of the mango (Mangifera Indica). It consists principally of magnesia and purreic acid, as it has been called by Sir R. Kane. On treating a solution with weak muriatic acid, after evaporation, yellow scaly crystals of purreic acid are obtained. Hardwari peori is usually met with in the bazars in lumps. Wilayiti peori is chrome yellow, in lumps (chromate of lead). Hardwari indicates the locality where it is obtained. A dye made of the Harsinggar is sold under the same name.—*Powell, Ec. Pr. Panj.* p. 195.

HARDWICKE, MAJOR-GENERAL, a distinguished zoologist, who was employed in Northern India in the early part of the 19th century. His collection was described by Dr. Gray of the British Museum, in one volume.

HARDWICKIA BINATA. *Roxb.*

Atcha, Attimaram, TAM.

This large leguminous tree grows in the forests of the Godavery, in the Nullamallay, on the mountains of the Coromandel coast, in some parts of Kandesh, in the Padshapur jungles, in the Guzzelhutty pass, common in Lulling pass between Malligaum and Dhoolea, and on the hills of the Sone valley. It is a most elegant tree, tall and erect, with an elongated coma, and the branches pendulous. On the Godavery it is often hollow in the centre. Yields a timber of an excellent quality for beams, and a variety of uses. The wood is red or dark-coloured, very hard, very strong and heavy. As the shoots grow up very straight, it is also valuable for rafters. The bark yields a strong fibre, and the people of the island of Siva Samudram use it without further preparation.—*Roxb.; Voigt; Mr. Rohde's MSS.; Hooker's H. J.* i. 50; *W. and A.; Beddome; Dr. Gibson.*

HARDWICKIA PINNATA. *Roxb.* This very large tree is very common on the S. Travancore ghats (Asambu Hills), in the dense moist forests, up to 3000 feet elevation, and is also found on the Tinnevelly side, just above Courtallum (between the 2d and 3d falls), and on the new Manjerabad ghat (S. Canara), about 1500 feet up from Siradi. The tree yields a dark red balsam, which is used medicinally. A deep notch is made into the heart of the tree, and after a time it begins to flow. The tree flowers in March and April, and the legumes ripen in July. The wood is much used by the coffee planters and others for building purposes.—*Roxb.; Beddome, Flora Sylv.* p. 255.

See Lepus; Mammalia.

HARGILA, the Bengali name of the adjutant bird, said to be from Har or Hur, a bone, and Nigalua, to swallow.

HAR GOVIND, a Sikh guru. See Guru.

HAR-HAR, a subdivision or part of an estate. In Saugor it means the cultivated space immediately round a village, which is quite opposed to the meaning it generally bears in the N.W., where it is applied to the land most distant from the site of the village, *i.e.* beyond the Mungha. In Bundelkhand and some other places it signifies a tract of land, but the term in no way indicates separate possession of the tract designated.—*Elliot, Supp. Gloss.*

HARI, the ancient Arya, the country of Herat, is the western province of Khorasan.—*Bellew.*

HARI, a name of Krishna as an avatar of Vishnu. Hari, Hari-bol, amongst Hindus, a shout of applause.

HARI. The great harvests are called in Hindi rabi and kharif, or by the Northern Hindu villagers hari and sawani, from the names of the months in which the crops are ripe. Rabi is the spring harvest, kharif the autumn; but it is not all land that bears two harvests. Land that does so is called do-fasli, and land that only bears once, ek-fasli; but there are certain tracts of country where two or even three harvests are taken off the soil. The principal crops of the rabi are the cold-weather crops of wheat, barley, gram, mattar (Vicia), lentils, tobacco, linseed, sarshaf or sarson, rai, etc. The kharif sowings are jawar, bajra (millet), maize, rice, moth, mung, mash, and other pulses, sugar-cane, and cotton.—*Powell, Handbook.*

HARIALI GRASS, Cynodon dactylon. All its stems which lie near the ground take root, and by this means, though an annual plant, it increases and spreads very wide. It yields abundance of seed, of which small birds are very fond. It has been found very successful to allow the seed to ripen before the hay is cut, as it then propagates itself by seeds, in addition to the runners. This grass is also found in Great Britain, but in that country its produce and nutritive properties are comparatively insignificant, while here it constitutes three-fourths of the pasture. It is the most nutritious grass, indigenous to all parts of India, and, when cultivated, of most luxuriant growth in the hottest time of the year.

HARIANA, a municipal town in Hoshiarpur district, Panjab, lat. 31° 38′ 15″ N., long. 75° 54′ E.; pop. (1868), 7745. The Hariana tract of country is in the Hissar and Rohtak districts, Panjab. It consists of a level upland plain, interspersed with patches of sandy soil, and largely overgrown with brushwood. The Western Jumna

canal now fertilizes a large number of its villages. During the troublous period which followed the decline of the Moghul empire, Hariana formed the battle-field where the Mahratta, the Bhatti, and the Sikh met to settle their territorial quarrels. In 1783, the terrible famine known as the San Chalisa devastated almost the whole surrounding country, which lay waste for several years. In 1795, George Thomas took possession of Hissar and Hansi. By the close of 1799 he had extended his power as far as Sarsa, and the Sikh chieftains of the Cis-Sutlej States began to fear his dangerous encroachments. In 1801 they combined in requesting General Perron, Sindia's general at Dehli, to attack Thomas; and a force under Bourquien in 1802 drove him out of Hariana into British territory.—*Imp. Gaz.*

HARI CHANDRAGARH, a mountain and hill fortress, about 20 miles S.W. from Ankole. It is the culminating point of the watershed of the Bhima and Godavery drainage systems, 4700 feet above the sea. The cap or plateau on its summit is about three miles in breadth. There are Jaina or Buddhist caves in its centre, with a vihara of 750 A.D. according to Fergusson, and 1234 A.D. according to Wilson.

HARIDAS, a disciple of Chaitanya. The name is given to the reader or reciter of the Ramayana, and preacher of the Kirtan during the Ram Naomi. The Haridasari of Mysore recite to music songs and tales from the ancient Hindu writings. See Yugbyasa.

HARIGOLU. TEL. A basket boat.

HARIHAR, a town on the right bank of the Tumbudra river, in the Chittuldrug district of Mysore, lat. 14° 30′ 50″ N., long. 76° 50′ 36″ E.; pop. (1871), 6401. Written Hurryhur.

HARI-HARA, or Hari-Hara putra, a name of the Hindu deity Ayenar.

HARI-MARIAH, a sacrifice of a live kid in front of the village god of the Mahrattas.

HARINA and Sorendip, or Serandah, are Raneh and Madagascar.

HARINAGHATTA, the Trinacachha, one of the mouths of the Ganges.

HARINESWARA or Harinesa, a title of Siva.

HARIPORE, about 12 miles from the Ravi on the eastern bank, supposed to be the Sangala of Alexander. It is west of Pakpatan.

HARISCHANDI, a Vaishnava sect of Hindus, amongst the Dom or sweeper race of the Western Provinces of India. The founder was Haris-Chandra. See Hindu.

HARIS-CHANDRA, the 28th king of the Solar dynasty. He was son of Tri-Sanku, and was celebrated for his piety and justice. There are legends about him in the Aitareya Brahmana, the Mahabharata, the Markandeya Purana, the only intelligible one being in the Aitareya Brahmana, that of his purchasing Suna Sepha to be offered up as a vicarious sacrifice for his son. He was a descendant of Ikshwaku. He is fabled to have had a hundred wives, but no son; and he visited Varuna, offering, if a son were born to him, to sacrifice him to Varuna. A son was born, and named Rohita, and Varuna claimed the sacrifice, but was put off with excuses, until Rohita grew up and began to travel in the forests. There he met a starving rishi, who had three sons, and Rohita offered him 100 cows for one of his sons, to serve as a sacrificial ransom. To this the rishi and his wife agreed, and the middle son, Suna Sepha, was given, and for another hundred cows was bound to the sacrificial post by Ajigarta, son of Suyavasa; but Suna Sepha prayed to Indra, to Agni, to Savitri, to Visva Deva, to the Aswina, to the Ushas, and the deities released him from Varuna's bond.—*Garrett.*

HARIT, in Hindu mythology, the coursers of the sun, the analogue of the Greek Charites, from the root Ghar, to shine or glisten. The Harita in the Rig Veda are 7 or 10 mares of the sun, typical of his rays.—*Dowson.*

HARIVANS, founder of the Radha Vallabhi sect of Hindus, whose special deity is Rad'ha, the mistress of Krishna.

HARIVANSA, a poem of 16,374 verses, giving the genealogy of Hari or Vishnu. It is in three parts. It is thought to have been written in the S. of India in the time of the Puranas. The Harivansa is a comparatively modern sequel to the Mahabharata.—*Growse*, p. 50; *Dowson.*

HARIWA, named in the cuneiform inscriptions, is the Aria of the Greeks, the Haroyu of the Vendidad, the modern Herat.—*Bunsen*, iii. 481.

HARKARA. HIND., PERS. A messenger.

HARM, ARAB., means sacred, and is applied to the Mahomedan women's apartments, also to women captives and purchased women. The words Harām, unlawful, Hurmat, chastity, Harāmi and Haramzadah, a wicked person or animal, and Maharram, the first month of the Mahomedan year, come from this word. See Haram.

HARMALA RUTA. —?

Peganum harmala, —?	Ruta sylvestris, —?
Harka, ... CAN.	Viragu, ... TAM.
Kodar, Harmal, . HIND.	Arkalu, ... TEL.

Grows plentifully at Lahore. The ruins of the old city are covered with this weed and Asclepias gigantea. Harmal, in Lahore, is looked upon as the plant sacred to the Pariah caste; yet though a Sikh or Hindu would not touch harmal, the seeds are in common use among the natives to fumigate the rooms of the wounded. The natives regard a person suffering from any discharge, as hæmorrhoids, menses, etc., as unclean, and think that the exhalation proceeding from such person may be prejudicial to the wound; therefore it is customary, on the entrance of every stranger, to strew a few grains of harmal upon a charcoal fire. The natives, with the exception of Sikhs and Hindus, use these seeds internally against weakness of sight and retention of urine.—*Honig.* p. 284; *O'Sh.*

HAR-MANDUR, a celebrated Sikh temple at Amritsur. It was destroyed in 1762 by Ahmad Shah.

HARMOZIA. This ancient town, in a bay of the Gulf of Ormuz, was subsequently called Gombroon, but now Bandar Abbas. It is a seaport town in the province of Kirman, in a barren country. It is fortified with double walls. Bussora did not long benefit by the fall of Hormus, but appears to have been nearly ruined during the reign of Nadir Shah, whose tyranny extended its baneful influence even to this extremity of the Persian empire; so that in 1750 Mr. Plaisted found there nine houses out of ten deserted. In the year 1639 there seems to have been an English factory at Bussora, subordinate to that at Gombroon, and protected by firmans.—*Ouseley's Tr.* i. p. 155; *A Journal from Calcutta to Aleppo*, etc. p. 11, Lond. 1758; *Kinneir's Memoir*, p. 201.

HARMUZI. HIND. A deep red earth.

HARPALIDÆ, a family of insects, found dispersed in nearly all the countries of the globe: they abound more in the arctic than antarctic regions. The following genera are recorded as belonging to India, viz. Harpalus, Platymetopus, Selenophorus, Cyclosomus, and many others. Some species of Ophonus from Bengal and Poona closely resemble British species.

HARPEGNATHOS SALTATOR, one of a genus of ants of the Peninsula of India, in Malabar and Mysore. It has the name saltator from its making most surprising jumps when alarmed or disturbed. It is very pugnacious, and bites and stings very severely. It makes its nest under ground, generally about the roots of some plant. Its society does not consist of many individuals. It appears to feed on insects, which it often seizes alive.

HARPOCRATES, the ancient Egyptian god Aurora or Day-spring, is often represented seated on the lotus.

HAR-PUJAH. HIND. The worship of the plough on the day which closes the season of ploughing and sowing, usually in Kartik. See Hal; Har; Husbandry.

HARPULLIA IMBRICATA. *Blume.*
Otonychium imbricatum, *Bl.*, *Rumphia*, iii. 180.
Streptostigma viridiflorum, *Thw.*

This tree is common in the western moist forests of the Madras Presidency, from Canara to Cape Comorin, and ascends the mountains to about 3500 feet elevation; it is also found in Ceylon. When covered with its brilliant orange fruit, it is a beautiful sight on the ghats in Malabar and Canara. The tree flowers in the cold season, and ripens its fruit in March and April. The stigma is sometimes not at all twisted.—*Bedd. Fl. Sylv.*

H. cupanioides, *Roxb.*, is a small tree of the hilly parts near Chittagong; it flowers in April, and the fruit ripens in July.—*Roxb.* i. 645.

HARRIER, species of birds of the genus Circus.

HARRIS, GENERAL LORD, commanded at the siege and fall of Seringapatam, A.D. 1799.

HARRIS, LORD, grandson of the first Lord Harris, was born in 1810, and was educated at Christ Church, Oxford, where he took his degree in 1831. The first post that he held under Government was that of Lieutenant-Governor of Trinidad, of which island he was afterwards made Governor and Commander-in-Chief. In 1854 he was made Governor of Madras, and he held the post till 1859, when he was succeeded by Sir Charles Trevelyan. He made a re-valuation of the lands in N. and S. Arcot, from which great advantages resulted to the people and to the State. He sent to Northern India all the Madras soldiers, and, dismantling his own presidency of both men and guns, enabled Lord Clyde and Lord Canning to reconquer Northern India.—*Thurlow, Company and the Crown*, pp. 32, 38.

HARRIS, SIR WILLIAM CORNWALLIS, an officer of the Bombay Engineers, who entered the service in 1823, and died at Poona on 9th October 1848. He wrote on The Wild Sports of Southern Africa, London 1844; and afterwards went to Shoa as an ambassador, of which mission he published a narrative, named The Highlands of Ethiopia, London 1844.

HARSHA DEVA, a king of Kashmir, who reigned A.D. 1113 to 1125, author of the drama called Ratnavali, or the Necklace.

HARSHA VARDDHANA was a paramount sovereign of 36 different states, comprising nearly one-half of India in extent, and including all its richest and most fertile provinces. He was defeated by the Chalukya of Kalyani.—*Cunningham, Ancient Geog. of India*, p. 14.

HAR-SULA. Sacrificial pillars are termed Sura or Sula in Sanskrit, which, conjoined with Har, the Indian god of war, would be Har-sula. The Rajput warrior invokes Har with his trident (tri-sula) to help him in battle, while his battle shout is Mar! mar!—*Tod.*

HARTAL. HIND. Yellow sulphuret of arsenic, orpiment. Two varieties occur,—the hartal-i-wilayiti and hartal-warki, the last so called from its beautiful glittering lamellar texture; varieties of hartal-i-warki are called hartal pili and gulabi. —*Powell*, p. 63.

HART'H. PANJ. A Persian wheel for raising water. See Irrigation Wells.

HARTIGHSEA, *sp.*, in Java yields a fruit used as garlic. Hartighsea spectabilis, the Kohekohe, or New Zealand cedar, is a good timber tree.

HART'S EAR, Cacalia kleinia, *Linn.*

Lisan-us-saur, . .	ARAB.	Yerrimai naku, .	TAM.
Gao-zaban, . . .	PERS.	Yennapa nalika, .	TEL.

The leaves resemble the tongue of the cow (hence its Asiatic names); the stalks are prickly, and covered with white spots. While fresh, the leaves have a strong smell like hemlock, and are given by native practitioners, in the form of decoction, in rheumatism, syphilis, leprosy, and in all other cases in which sarsaparilla is usually employed by European physicians. It is brought to Bombay from the Persian Gulf, and is procurable throughout India in most native druggists' shops.—*Faulkner.*

HARTSHORN, the Luh-koh, Luh-jung of the Chinese, in China used medicinally, in the form of powder, as a jelly, and in tincture.

Hartshorn shavings, Luh-jung-p'ien and Luh-koh-shwang of the Chinese, is used in China in hæmaturia, spermatorrhœa.—*Smith.*

HARUN-ur-RASHID, khalif of Baghdad from A.D. 786 till A.D. 808. He was famed throughout the world for his valour, love of justice, zeal for literature and the arts, and his encouragement of commerce. He placed all public schools under John Mesue, a Nestorian Christian. His household physicians were Manik and Saleh, two Hindu physicians. He is said to have caught the illness of which he died, on his way from Baghdad to Khorasan, whither he was going in order to suppress the revolt of Rafi. At that time the empire of the khalifah was one of the most powerful that ever existed, and extended from the confines of India and Tartary to the Mediterranean, including also all Northern Africa. The reign of Harun-ur-Rashid was prosperous and splendid. Although he has been famed for liberality and justice, his bloody cruelties throw an eternal stain on his memory. He died at Taos in Khorasan, after a reign of 22 years. The Daoudputra, the reigning family at Bahawulpur, claim to be descended from Harun-ur-Rashid.—*Vambery, Bokhara*, p. 58.

HARUT, in Mahomedan belief, the name of an angel who, together with another named Marut, having severely censured mankind before the throne of God, they were sent down to earth in human shape to judge of the temptations to

which man is subject. They were seduced by women, and committed every sort of iniquity, for which they were suspended by the feet in a well in Babylon, where they are to remain in great torment until the day of judgment.

HARVEST.

Hisal, ...	ARAB.	**Mietitura,**	IT.
Moisson, ...	FR.	**Agosto,**	SP.
Erute, Herbst, . .	GER.	**Bichun, Hossad,** .	TURK.
Fasl, ...	HIND.		

In British India there are very generally two harvests in a year,—the summer crop, sown in the spring, being reaped in the end of summer, and known in Northern India as the kharif. The other harvest, known as the rabi, is sown after the autumn, and reaped in early spring. In some localities there are three harvests, known to the Hindus as that of the spring (arit), asu or autumn, and paush or winter. The emperor Akbar introduced into India the harvest, or Fasl, as an era. See Fasli; Rabi.

HARWAHA. HIND. Predial slaves of N. India.

HARWUN. HIND. A pulse equal to rawan.

HASAINZAI, an independent tribe on the N.W. frontier of India. In 1852 the British moved against them, to punish them for the murder of Mr. Carne and Mr. Tapp; and again, in 1868, to punish them for an inroad on British territory at Agror. A force 14,762 strong, with 20 guns, was moved under Major-General Wilde. —*MacGr. N.W. F. I.* pp. 248–268. See Agror.

HASALE or Hussulleeru, KARN. One of the aboriginal tribes of Mysore, occupying the hill districts of Nagar, woodmen, but serving as agricultural labourers.

HASAN and Husain, two sons of Ali by his wife Fatima, daughter of Mahomed. After Ali's death, Hasan and Husain went to reside at Medina. Hasan was poisoned there, A.D. 659, by an emissary of the khalif. The poison was placed in Hasan's way by his wife Zainab. And several years afterwards, on the 10th of the Maharram, A.H. 46, Husain was slain at Kirbala, his eldest son, Zain-ul-Abidin, alone escaping. These events are commemorated in India by the ceremonies of the first ten days of the Maharram. Annually, as this season of mourning returns, the Shiah Mahomedans recite the melancholy story of the deaths of these martyrs.

The deaths of this family, with the assassination of the khalif Omar in the mosque at Jerusalem, caused the great division into the Sunni and the Shiah sects, which continues amongst Mahomedans to the present day throughout all the Mahomedan world. After the death of the third successor of Mahomet, Ali ascended the throne; but after a short reign of six years, during which he had to encounter a serious rebellion headed by Ayesha, he was at last assassinated. For this reason Ali is regarded as a martyr, and the first of the twelve Imams. Of the Shiahs Hasan and Husain, the two sons of Ali and Fatima were grandsons of Mahomet; as boys they had been his darlings, and as men they received much of that warm personal devotion which had been bestowed on the great founder of Islam. Hasan succeeded his father on the throne for a short time, but yielded to the pretensions of a Sunnite khalif. He was afterwards carried off by poison, and was thus in his turn regarded as a martyr, and the second of the twelve Imams.

Husain and his followers rose in arms to assert his right to the throne of the khalifs. Near the banks of the Euphrates the enemy pressed against him in overpowering numbers. Nearly all his followers were slain, and his child was killed in his arms. He himself was fainting from thirst and fatigue; but when the hour of prayer arrived, he performed his religious duties in the face of the enemy; for there were few, even in that hostile host, who were prepared, under such circumstances, to draw the sword upon the grandson of the prophet. At last, exhausted by thirst, he bent his steps towards the Euphrates; his adversaries now rushed forward to intercept him. Husain, however, had already thrown himself on his breast over the stream, and was beginning to taste the refreshing water, when an arrow pierced his mouth. A confused crowd of warriors now closed around him, and began to assail him with their swords. A long and desperate struggle followed, but he was at last overpowered, and his head was carried away as a trophy. Husain was thus regarded as, if possible, the greatest martyr of the three; and not only is he reverenced as the third Imam, but his representatives of the nine succeeding generations are reverenced as the nine Imams who make up the number to twelve. His death, or martyrdom, was followed by a cry of grief wherever men had embraced the faith of Islam; and even in the present day the Shiah Mahomedans are afflicted with the profoundest sorrow throughout the days of the Maharram, and shed tears for their beloved and martyred Imams; it is a melancholy sight.

HASAN ABDAL, a village in the Rawal Pindi district of the Panjab, forming a part of the remarkable group of ancient cities which lie around the site of the ancient Taxila, lat. 33° 48′ 56″ N., long. 72° 44′ 41″ E. Hiwen Thsang in the 7th century visited the tank of the serpent king Elapatra, which has been identified with the spring of Baba Wali, or Panja Sahib. Successive legends of Buddhist, Brahman, Mahomedan, and Sikh origin cluster around this sacred fountain. The shrine of Panja Sahib crowns a precipitous hill, about a mile east of the town; and at the foot stands the holy tank, a small square reservoir of pure water, generally full of fish. It is so called from its being the burial-place of Baba Hasan Abdal, a Sayyid of Sabzwar, in Khorasan, who came to India with Mirza Shah Rukh, son of Timur, and died at Kandahar, and whose tomb is much resorted to by pilgrims. Jahangir, in his memoirs, says: 'To-day I arrived at Baba Hasan Abdal. About a cos east of the town is a waterfall, the water of which rushes down with great rapidity. There is none like it in Kābul, but there are two or three like it in Kashmir. In the middle is a tank, from which the river flows. Raja Man Singh has built here a little villa. There are a great number of fish in the tank, half a yard and a quarter yard long. As the place is so nice, I stayed here for three days, and drank wine with my friends. I also enjoyed fishing. The fishes are caught with peculiar nets, which are difficult to be used. I caught twelve, had pearls strung through their snouts, and set them free.'

HASAN GANGA. In A.D. 1347, four years before the death of Muhammad Taghalaq, Hasan Ganga, an officer of high station in the Dekhan,

headed a successful revolt against his master, and established what was known as the Bahmani dynasty of the Dekhan, fixing his capital at Kulburga. His descendants reigned for thirteen generations, for 174 years, from A.D. 1347 to 1518. He is said to have been an Afghan of low rank, a native of Dehli. He farmed a small spot of land belonging to a Brahman named Ganga, who was in favour with the king; and Hasan, having accidentally found a treasure in his field, he gave it to his landlord. The Brahman, struck with his integrity, advanced his fortunes. Hasan rose to rank in the Dekhan, where he became a leader in the revolt. He had before assumed the name of Ganga, and now added that of Bahmani, by which his dynasty was afterwards distinguished. During the reign of Ala-ud-Din II., in A.D. 1437, dissensions broke out between the native Dekhani and foreign Mahomedan troops, but towards the end of the dynasty the Dekhani troops gained the ascendency. Yusuf Adal Khan, a Turk, and chief of the foreign troops, retired to his government of Bijapur, where he subsequently (A.D. 1489) took the title of king, and founded the dynasty of Adal Shahi. Nizam-ul-Mulk, the Dekhani chief, being afterwards assassinated by Kasim Barid, a Turk, his son Ahmad set up the dynasty of Nizam Shahi at Ahmadnaggur, in the Dekhan. Kasim Barid was now the master of the court of the Bahmani king, Mahmud II. (A.D. 1482), at Beder; and two other great chiefs became independent, and after a time each took the title of king. These were Kutub-Kuli, a Turkoman from Persia, and Imad-ul-Mulk, descended from a Hindu convert. The former (A.D. 1512) founded the dynasty of Kutub Shahi at Golconda, near Hyderabad, and the latter that of Imad Shahi at Ellichpur, in Berar. Ahmad Barid, son of Kasim, governed for some time under a succession of pageants, but at length assumed the title of king, as the first of the Barid kings of Beder, the Bahmani family being thenceforth no longer mentioned.

A temporary union of the kings of Bijapur, Golconda, and Ahmadnaggur, in 1564, enabled them to subvert the empire of Vijayanagar, and reduce the power of its chief to that of a petty raja.—*Elphinstone's India*, 416, ii. app.; *Briggs, The Nizam; Shahab-ud-Din's Hist. MSS.*

HASAN-ibn-SABBAH, or Hasan-us-Sabbah, was the founder of the sect known as the Assassins. He was brought up at Nishapur, under the then renowned saint, the Imam-ul-Muwakkaf, and had for his schoolmates the Persian freethinking poet, Omar-ul-Khaiyam, and another, afterwards known as Nizam-ul-Mulk, 'Marshal of the Empire,' prime minister to Alp Arslan. The three lads had made a compact that whichever of them attained to rank and fortune should share his advantages with the other two; and when the most successful of the three was established in his position as marshal-minister, the other two claimed fulfilment of the promise made in youth. Omar-ul-Khaiyam asked only for the means of devoting himself to literature and science, and has left a name as the most original poet and the greatest astronomer of his time; Hasan-us-Sabbah asked for and obtained an important political post, but devoted his energies to endeavouring to supplant his schoolfellow and benefactor. Failing in this, he turned rebel, and, collecting round him a band of fanatics, took possession of the fortress of Alamut, a mountain on the shores of the Caspian, and spread terror through both Islam and Christendom by the fierce bravery with which he and his followers encountered all opposition, and by the terribly insidious manner in which he removed his enemies by secret assassination, Nizam-ul-Mulk being among his many victims. One of the numerous stories told of him is that, having been summoned to surrender, he called two of his followers to him, and bade one to stab himself, and the other to throw himself from the highest battlements of the fortress. This order the 'Devoted Ones'—Fidwi, as they were called—at once obeyed, and Hasan derisively asked the envoy what his master's troops could do against a chief who commanded such men as those. He was pitiless and inscrutable. It is said that he slew his own son because he drank wine. This does not seem to coincide with the belief that his followers were addicted to the use of the resin of Cannabis Indica, or Indian hemp, called hashish, whence some have derived their name of Hashishin, the 'Assassin' of European languages. Hasan-us-Sabbah was generally known as 'Shaikh-ul-Jabl,' from his mountain fortress; and it is from the title Shaikh, which means both a 'chief' and an 'old man,' that he is known to European history as the 'Old Man of the Mountain.' He gave his name to the Al-Hasani, a heterodox sect, now variously known as the Ismaili, Bathenians, or Assassins, who are spread through Asia from Persia to Western India, and during the crusades he or one of his successors was known as the 'Old Man of the Mountain,' a mistranslation of the Shaikh-ul-Jabl. His career was from A.D. 1090 till his death in A.D. 1124, at Alamut, where he had lived 35 years. The political power of the sect was destroyed by Hulaku, grandson of Chengiz Khan, A.H. 654.—*Porter's Travels*, i. 286; *Osborne's Islam*, p. 357.

HASAN KHEL, (1) A section of the Gadaizai Bunerwal; (2) of the Adam Khel Afridi; (3) of the Mahmud Khel Utmanzai Vaziri.—*MacGr. N. W. F. I.* i. p. 578.

HASAN NIZAMI, author of the Taj-ul-Maasar, or Crown of Victories, was born at Naishapur. Mir Khond and Haji Khalfa call him Sadr-ud-Din Mahomed-bin-Hasan Nizami. He left his home during the troubles that overtook it, and went to Ghazni, and on to Dehli. His book gives the history of Kutub-ud-Din Aibek, with portions of the life of his predecessor, Muhammad Ghazi, and of his successor, Shams-ud-Din Altamsh.—*H. Elliot.*

HASHIM-bin-HAKIM, born at Gaza, near Merv, is known as Mokanna, or the Veiled Prophet of Khorasan, because he was one-eyed, deformed in feature, and bald, and concealed his features. He claimed to be the deity; his most numerous converts were near Samarcand and Bokhara. He was joined by hordes from Turkestan. He had a hundred of the loveliest women of Transoxiana. About the year 163 Hijira, he destroyed himself.

HASHIYA. HIND. A border or edging.

HASHM. ARAB. Train, retinue. Pl. Ahsham.

HASHMEE MAUND, equal to 16 Tabreez maunds of 7¼ lbs. each, or about 116 lbs. English.

HASHT-ANGA. SANSK. Literally, eight limbs. A reverential prostration of the Hindus, in which they touch the ground with the belly, breast, forehead, and both sides of the face successively,

kiss the earth, half rise up, then pass the left over the right forearm, and *vice versa;* and finally, after again saluting mother Hertha, stand erect.

HASHTNAGAR ('Eight Cities'), a Tahsil of the Peshawur district, Panjab; lat. 34° 3′ to 34° 25′ N., and long. 71° 37′ to 71° 57′ E. General Cunningham believes the modern term to be a corruption of Hastinagara, the city of Hasti.

Hasti, Tod says, sent forth three grand branches, Ujamida, Deomida, and Poormida. Ujamida's progeny spread over all the northern parts of India, in the Panjab, and across the Indus; the period, probably 1600 years before Christ. From Ujamida, in the fourth generation, was Bajaswa, who obtained possessions towards the Indus, and whose five sons gave their name, Panchalica, to the Panjab, or space watered by the five rivers. The capital founded by the younger brother, Kampila, was named Kampilnagara. The descendants of Ujamida by his second wife, Kesunee, founded the Kusika kingdom and dynasty, celebrated in the heroic history of N. India.—*Tod.*

HASHU or Hashwi occupy the watershed between the Thoukye Khat and Poung-loung.

HASISH. Arab. Tender tops of Cannabis sativa, after flowering, the Bhâng of India and Persia, and Fasukh of Barbary. It is indulged in to some extent by Mahomedans of India. Egypt surpasses all other nations in the variety of compounds into which this drug enters. The Hottentots use it; and the Siberians intoxicate themselves with the vapour of the seed thrown upon red-hot stones, as the Scythians of old did.

HASORA, a town in Central Asia, 7198 feet above the sea, on the banks of the river which runs northwards to the Indus. The Hasora country is west of Deotsu, and lies to the south of Rongdo. The people speak the Tibetan language. Moorcroft gives it the name of Zungari. It is partially a Bhot district. According to Ad. Schlagentweit, Hasora, or Astor, or Tsunger, in lat. 35° 12′ N., and long. 74° 53′ E., is a fort in the valley of Astor or Hasora.—*Moorcroft; Ad. Schl.; Latham.*

HASSAN, a mountain forming part of Taurus and Zagros, between Diarbakar, Palo, and Moosh. The Kurd race, who inhabit all that part, are called Zaza, which means stuttering, mouthing, or speaking unintelligibly, and seems to be a nickname.—*Rich's Kurdistan*, i. p. 376.

HASSAN, a district of Mysore State, forming the north-western portion of the Ashtagram division, and lying between lat. 12° 30′ and 13° 22′ N., and between long. 75° 32′ and 76° 58′ E. The Jains have been numerous at Sravan-Belgola and other places since the 3d century B.C.; and a Jaina image of Gomateswara, 60 feet high, is on a peak of Chandrabetta. The census of 1871 ascertained the population to be 669,961. Of inferior castes, by far the most numerous are the Wakliga (238,780), who are agricultural labourers; next come the Kuruba (55,841), shepherds; and the Neyige (15,972), weavers. The Lingaets, who have always been influential in this part of the country, number 70,168. Out-castes are returned at 128,913; wandering tribes, 5109; wild tribes, 3603. The village of Sathalli is the centre of an agricultural Christian community, founded by the Abbé Dubois. The total number of this community is about 1000, and they are known as 'Caste Christians,'—that is to say, they retain all the social observances of their Hindu ancestors. The Malnad is greatly dreaded for the malarious fever which prevails after the early rains.—*Imp. Gaz.*

HASSANDHUP. Hind. A hard, white clay, supposed to be a deposit from a mineral spring containing sulphur. But it is also a medicinal compound.

HASSANIYEH, an Arab tribe, who have a very curious form of marriage. The woman is legally married for three days out of four, remaining perfectly free for the fourth.—*Lubbock, Orig. of Civil.* p. 54.

HASSELTIA ABOREA, a handsome tree growing near Jampiam, in Java, with flowers large, yellowish-white, in axillary fascicles. The milk obtained from the trunk by incision, mixed with honey and reduced with boiling water, is employed as a powerful drastic for destroying the tape-worm; it is, however, apt to produce inflammation of the intestines, and in some cases has proved fatal.—*Lindley, Flora Medica, Eng. Cyc.*

HASSKARL, JUSTUS CHARLES, a botanist, Superintendent of the Gardens at Java, 1852–1854. Collected cinchona plants and seeds in South America, and took them to Java. He was created Knight of the Netherlands Lion, and Commander of the Order of the Oaken Crown. He was author of the Hortus Bogoriensis, a catalogue, with occasional notes and descriptions, of new species of the plants cultivated in the Government Botanical Garden of Buitenzorg, near Batavia, published in Batavia in 1844; also author of an octavo volume of descriptions, entitled Plantæ Javanicæ Rariores.—*Hooker f. et Thomson; Markham, Peruv. Bark.*

HASTINAPUR, an ancient city of the Meerut district, N.W. Provinces, lying on the bank of the Burha Ganga, or former bed of the Ganges, 22 miles north-east of Meerut, lat. 29° 9′ N., and long. 78° 3′ E.; pop. (1872) 77. Its remains can still be traced on the banks of the river, but it was destroyed by the river encroaching on it. Hastinapur formed the capital of the great Pandava kingdom, celebrated in the Mahabharata. The legends of the Mahabharata centre around this city.

HASTINGS, FRANCIS, second Earl of Moira, afterwards created Marquess of Hastings, G.C.B., assumed charge of the office of Governor-General of India, 4th October 1813, and held it till his re-embarkation, 9th January 1823. During his tenure of office, he took the field in person, on the 18th October 1817, against the Pindara. The forces under his command in the field were over 100,000 horse and foot, besides 20,000 irregular cavalry. He allotted several positions to the brigades, and closed in upon the Pindara. One leader, Karim Khan, fell into the hands of Sir John Malcolm; another, Sita or Chetu, was killed by a tiger, whilst sheltered in the forests near Asirgarh. While the Governor-General was encamped in the part of the country formerly ruled by a noted chief, Lalla Hurdi, cholera broke out in the camp, and in ten days carried off 764 fighting men and 8000 camp-followers. He broke up his camp, and marched S.E. from the Sind across to the right bank of the Betwa, and encamped at Erich, where the cholera disappeared. The natives of India attributed that outbreak to the malignity of Lalla

Hurdi's ghost, who had been poisoned under extraordinary circumstances. The Marquess induced the Government of Great Britain to extend the Order of the Bath to officers of the E.I. Company's service, and before the conclusion of the third Mahratta war fifteen of them were created Knights Commander. He invested the first of these, Sir David Ouchterlony, on the 20th March 1818, at Terwah. The E. I. Company acknowledged their sense of his services, bestowing on his family two grants of money, in sums of £60,000 and £20,000 respectively. His long rule of 9 years, from 1814 to 1823, was marked by two wars of the first magnitude, namely, the campaigns against the Gurkas of Nepal, and the last Mahratta struggle.

HASTINGS, WARREN, the first Governor-General of India. He was born in 1732, and came to India as a writer in 1749. He returned to England in 1763; but in 1769 he was appointed to be 2d Member of Council at Madras, in 1772 President of Council, Bengal, and in 1773 Governor-General, and on the 1st February 1785 he made over the keys of the fort to the next senior Member of Council, and left India on the 6th of the same month. He carried with him a modest fortune of £80,000. On his arrival in England in 1785, he was well received by the King, Queen, and Court of Directors, and was about to be made a peer, when Mr. Pitt opposed this, and, seven days after his arrival, he was impeached by Messrs. Burke, Fox, and Sheridan, accused of acts of oppression. His trial commenced on the 13th or 15th February 1788, in the presence of the King and Queen. It proceeded for seven years, and at length, after an honourable defence, on the 23d April 1795 Hastings was acquitted; the verdict of an impartial posterity has long since affirmed the award (Marshman, i. p. 427). He passed out at the gate of Westminster Hall ignorant whence the funds were to come by which the weekly bills of his household were to be discharged; but the Court of Directors paid his costs, and granted him an annuity. From all parts of the empire, from men of various creeds and colours, from officers of renown, from Hindus and Mahomedans alike, poured in addresses of congratulation. The Prince Regent made him a Privy Councillor, and hinted at higher honours. Happy in his family life, blest with the healthy old age which is the appropriate reward of a pure and temperate manhood, farming and writing little poems, studying Malthus, and following with delight the rising genius of Walter Scott, the great proconsul glided by an easy road into euthanasia and immortality. He died on the 22d August 1818, in his 86th year; in which year also Sir Philip Francis, his opponent, died. He was the administrative organizer, as Clive had been the territorial founder, of the British Indian Empire. He rested his claims as an Indian ruler on his administrative work. He re-organized the Indian service, reformed every branch of the revenue collections, created courts of justice, and some semblance of a police. In 1781 he founded the Madrassa for Mahomedan teaching, and he extended his patronage alike to Hindu pandits and to European students.—*Imp. Gaz.* iv.

HASYARNAVA. Sansk. Ocean of Laughter, a modern comic piece, by a pandit named Jagadisa.—*Dowson.*

HAT. Hind. A periodical market day, a fair.

HATA or Saif is a long gauntleted weapon used in athletic exhibitions.

HATCHING FOWLS' EGGS by artificial heat, though only obscurely described by ancient authors, appears to have been common in Egypt in very remote times. The building in which the process is now performed is called Maamal-el-Tirakh. In Chusan the hatching-house of ducks is a shed, the roof thickly and compactly thatched with paddy, the walls plastered over with mud. There are a number of straw baskets, thickly besmeared with mud to prevent them from igniting; a tile is so placed as to form the bottom of the basket, and a lid fits closely over the top. A small earthen fire-pot being placed under each basket, the eggs belonging to different folks are put into the baskets as soon as they arrive. The baskets are kept closely shut for five days, a uniform heat being maintained under the basket by means of the before-named earthen fire-pot, and at the expiration of that period they are taken out and carefully examined; the good are placed in holes, which have been cut in a board for their reception, and the bad are laid aside to be returned to their owners. Before the eggs have become cold, they are replaced in the baskets and kept there for nine or ten days; that is, the eggs remain altogether in the baskets about a fortnight or fifteen days, the heat of the hatching-house ranging from 93° to 100°. In the middle of the shed broad shelves are placed, on which the eggs are laid when taken finally from the baskets, being carefully covered over with a thickly wadded coverlet, and the little birds issue from their fragile domicile in about a fortnight or three weeks,—the whole process of hatching an egg occupying one month or five weeks. In the Philippines incubation is performed by placing warm paddy husks under and over the eggs, which are deposited in frames. A canvas covering is spread over the husks. The art is to keep up the needful temperature; and one man is sufficient to the care of a large number of frames, from which he releases the ducklings as they are hatched, and conveys them in little flocks to the water-side.—*Pococke's East*, i. 260; *Bowring's Philippines*, 104; *Sirr's Chinese*, i. 249.

HATHIKRA-GILLI. Hind. An earthenware pestle, weighted, used for crushing gram.

HATHILI, a reputed saint, one of five held in veneration by the lower orders in the N.W. Provinces. He is buried at Barech.

HAT'HPHOR, a tunnel on the northern face of Ramgarh Hill, Sirguja State, Chutia Nagpur. At its mouth it is about 20 feet in height by 30 in breadth, but at the inner extremity of its course of 150 yards it is not more than 8 feet by 12. On the southern side of the recess rises a sandstone cliff, which contains two caves, the larger being 44 feet long, 10 feet wide, and about 6 feet high. It was here, according to the legend, that Sita was carried off by the demon Ravana; and two deep grooves in the rock, in front of the larger cave, are said to be portions of the enchanted circle which Rama drew around her for her protection.—*Imp. Gaz.*

HATIM TAI, an Arab chief, famed amongst Mahomedans for his generosity. Many Persian and Hindustani romances have been written regarding him. He lived about a century before Mahomed. In all Mahomedan countries he is quoted as a model of generosity. Al Maidah says, when he

fought, it was to be triumphant; when he had acquired spoils, he gave to the spoiled; when he besought, he gave; if he contested with the powerful, it was to overcome; when he took captives, he released them.—*Major J. Daklon*, p. 162; *Palgrave.*

HATKAR, a cowherd race of Berar.

HATRAS, formerly highly predatory, under British rule became one of the busiest and most thriving places in Upper Hindustan, and a principal mart for the cotton and indigo of the neighbouring districts.—*Tr. of Hind.* ii. p. 122.

HAUDA. HIND. The howdah or chair for riding on an elephant. It is in various forms. The Hauda-amari is a howdah with a canopy.

HAUDIGA. CAN.? A Mysore wood used for furniture; polishes and turns well; is useful for the cabinetmaker, and would do for veneering.

HAUG. Martin Haug, Doctor of Philosophy, in early life assisted Chevalier Bunsen in preparing his Bibelwerk. He was afterwards appointed Professor of Sanskrit at Poona, an office which he held from 1859 to 1865, and during this time he devoted himself to the study of the Zend. He published his Funf Gatha in the Journal of the German Oriental Society. In Bombay there appeared his essays on the Sacred Language, Writings, and Religion of the Parsees; and he also edited a translation of the Aitareya Brahmana. He returned to Germany in the beginning of 1866, and was almost immediately afterwards appointed Professor of Sanskrit and Comparative Philology in the University of Munich, which he held up to the time of his death. He and dastoor Hoshang Jamasp published two valuable glossaries of the Old Zend-Pehlavi, and an edition and translation of the Arda-Visaf. He died in Switzerland, 2d June 1876.

HAUL. ARAB. Power. La haul wa la quwat ila ba Allah, There is no power nor virtue but in God,—a solemn invocation of Mahomedans.

HAURAN is a term applied to any solitude, whether barren or fertile, and sometimes applied to extensive pasture lands. Hauran is the Auranitis of Josephus, and the Iturea of St. Luke. The countries south of Damascus, viz. the Hauran, the rocky wilderness of the Ledja, and the mountainous district lying east of the Jordan, collectively speaking, formed the country which was first conquered by the Israelites before the subjugation of the land of Canaan, and was allotted to the tribe of Reuben, Gad, and the half tribe of Manasseh. In the time of the Romans, nearly the whole was comprised under the district called Perœa, which was itself divided into the six cantons of Abilene, Trachonitis, Iturea, Gaulonitis, Batanœa, and Perœa, strictly called; to which some geographers have added Decapolis. Abilene was the most northern of these provinces, being situated between the mountains of Libanus and Anti-Libanus, and deriving its name from the city of Abila or Abela. Trachonitis was bounded by the desert on the east, Batanœa on the west, Iturea on the south, and the country of Damascus on the north, and included the rocky district now called El Ledja. Iturea, on the east of Batanœa, and to the south of Trachonitis, derived its name from Ietur, the son of Ishmael, and was called Auranitis, from the city of Auran, which latter appellation it still retains, under that of Hauran. Gaulonitis was a tract on the east side of the lake of Gennesareth and the river Jordan, which derived its name from Gaulan, the city of Og, king of Bashan. Batanœa, the ancient kingdom of Bashan, was situated to the north-east of Gaulonitis, and was celebrated for its excellent breed of cattle, its rich pastures, and for its stately oaks. A part of it is now called El Belka. Perœa, in its strictest sense, included the southern part of the country beyond Jordan and Samaria.

In May the whole of the Hauran plain is covered with swarms of Bedouin wanderers from the desert, who come for water and pasturage during the summer months, and to obtain a provision of corn for the winter; they remain till after September. If they are at peace with the pasha, they encamp generally amongst the villages near the springs or wells; if at war with him, confine themselves to the district to the south of Boazra, towards Om-e-jaml and Jadheins, extending as far as Zerka. The Arabs of the Jabl Hauran (called the Ahl-ul-Jabl) and those of the Ledja seldom encamp beyond their usual limits; they are kept in more strict dependence on the pasha than the other tribes. The Ahl-ul-Jabl are the shepherds of the people of the plains, who entrust them with their flocks during the winter to pasture amongst the rocks and mountains. In spring the Arabs restore the flocks to their proprietors, receiving for their trouble one-fourth of the lambs and kids, and a like proportion of the butter made from the milk during the spring months. Those which are to be sold are taken to Damascus. The soil of the Hauran consists of a fine black earth, of great depth, but little cultivated.—*Burckhardt; Robinson's Travels.*

HAUZ. ARAB., HIND. A fountain, a tank.

HAVELOCK, SIR HENRY, K.C.B., one of three brothers, officers in the British army, who served in India. William was killed in charging the Sikhs at Ramnuggur. Henry, born 1795 at Bishopwearmouth, in 1815 entered the army in the 95th Regiment, and afterwards exchanged into the 13th Light Infantry, and in January 1823 embarked for India. He served in the first Burmese war as Deputy Adjutant-General, and published his Experiences of Campaigns in Ava. On the 9th February 1829 he married Hannah Shepherd, youngest daughter of the Rev. Dr. Marshman. He was with his regiment whilst it was cooped up in Jalalabad. He was present at the battles of Punniar and Maharajpur. In 1857 he commanded a division in the Persian war. When the mutiny and rebellion of 1857 occurred, Havelock suggested the formation of a moveable column at Allahabad, which was immediately formed, and among the troops were Neill's Madras Fusiliers. From this time he commanded in many battles,—on the 11th July 1857, at Futtehpur; on the 15th he fought at Aong; on the 16th he fought and took Cawnpur. His last great effort was the first relief of Lucknow, on the 25th September 1857. The second relief of Lucknow was effected by Sir Colin Campbell, on the 17th November 1857. Sir Colin Campbell had arrived in India, and the Government had superseded Havelock, putting Outram in command of the force in Oudh; but that noble soldier refused to supplant his brave comrade, preferring rather to act under him than deprive him of his well-earned right to relieve Lucknow, and the two together advancing

effected the relief. The Blue Caps (Fusiliers) charged the Char Bagh bridge, but Maude's two guns could not silence the superior artillery of the enemy in their front. Almost every man at them was either killed or wounded, when General Neill, who commanded the first brigade in Sir James Outram's absence, allowed a charge, and the first Madras Fusiliers were ordered to advance. Lieutenant Arnold, a young officer ever conspicuous even among the daring spirits of that noble regiment, had been impatiently watching for the signal. At the first word, and without waiting for the regiment to rise and form, he dashed on to the bridge with some ten of his men. Arnold himself fell, shot through both legs, and his devoted followers were swept down almost to a man. Lieutenant Havelock, the Deputy Assistant Adjutant-General, alone remained on the bridge, the mark for a hundred bullets. The Fusiliers dashed forward with a cheer, without giving the enemy time to reload, advanced over the prostrate bodies of their comrades, and, rushing on the guns amidst a storm of bullets, wrested them from the enemy, and bayoneted the gunners. It was a second Lodi! Poor Arnold died. 'At length,' writes the general, 'we found ourselves at the gates of the Residency, and entered in the dark in triumph.' General Havelock's career was finished. He fell sick, and died in perfect peace and hope, attended by his aide-de-camp, Hargood of the Fusiliers, and his son. Calling the latter to him, he said, 'I die happy and contented.' 'See how a Christian can die.' And when Outram came to visit his dying comrade, he said, 'I have forty years so ruled my life, that when death came I might face it without fear.' A statue has been erected to his memory in Trafalgar Square, London.

HAVILDAR, in the British Indian armies, a non-commissioned officer of native soldiers equal to a sergeant.

HAVVAH or Hawa of the Arabs, the Eve of the Bible, the mother of the human race, and recognised under different names in all cosmogonies. The Astarte of the Assyrians, Isis nursing Horus of the Egyptians, the Demeter and the Aphrodite of the Greeks, and the Scythian Friya. Baltis, in Byblius called Beuth or Behuth, *i.e.* void of genesis, is identical with space, and means the mother's womb, the primeval mother,—the fundamental idea being the mother or source of life, which is the meaning of Havvah, and the Eve of Genesis. The tomb of Eve is pointed out in several places. Mecca is bounded on the east by a hill called Abu-Kubays, and, according to many Mahomedans, Adam, with Eve his wife and son Seth, lie buried there. Also, at less than a mile from the Medina gate of Jedda, is a tomb said to be of our common mother Eve. It is surmounted by a cupola and surrounded by walls, enclosing a pretty cemetery, in which many of her children lie around her.—*Bunsen's Egypt; Hamilton, Sinai.*

HAWAIGAR, in Hindustan, firework manufacturers.

HAWK EAGLE, species of the genera Nissetus and Limnaetus.

HAWKING is a pastime to which several Asiatic races are addicted. The employment of trained hawks may be traced to an exceedingly remote antiquity; and Mr. Layard found a bas-relief at Khorsabad, in which a falconer is bearing a hawk on his wrist. The Bedouins of Mesopotamia are attached to the sport, and especially so with reference to their food supply; and the Arabs may possibly have introduced it, together with the creed of Mahomed, among the Malays of the Archipelago. In Africa this sport is confined to a few of the Mahomedans of the north. In Europe it seems to be first distinctly mentioned by authors about the fifth century; but the garniture of the trained hawks would appear to have been unknown prior to the crusades. In the famous Bayeux tapestry, for instance, falcons are represented as carried upon the wrist unhooded. Trained ospreys were formerly employed in Europe for fishing; and Colonel Montague cites an Act passed in the reign of William and Mary, by which persons were prohibited at a certain period of the year from taking any salmon, salmon peal, or salmon kind, by hawks, racks, guns, etc. There is at least one great hawk fair or sale in the Himalaya, at which Indian falconers, many of whom come from immense distances, congregate for the purpose of buying, selling, and comparing their hawks.

The hawks commonly used are—

1. *Goshawk.*—Astur palumbarius, *Linn.* Baz, Shah-baz, *female;* Jurra, *male.* Europe, Himalaya, Sind, Neilgherries.
2. *Crested Goshawk.*—A. trivirgatus, *Temm.* Gorbesra, Manik-berra, Kot-eswar. All the hilly wooded regions of India.

The Shah-baz, or hawk-king, a large grey goshawk with yellow (gulab) eyes, caught in the hills of Afghanistan and its surrounding regions, is brought down to the plains, and sold, when well reclaimed, trained, and in good condition, for £5 or £6. The tiercelet or male is, as usual, much smaller than the female, and is called Jurra in Persian, 'the active.' Both are uncommonly strong and ferocious. They are accounted the noblest birds; the Sher-baz (lion-hawk), or peregrine of Bokhara and the snowy regions, being all but unknown in Sind.

3. *Peregrine Falcon.*—Falco peregrinus, *Gm.* Bhyri, *female;* Bhyri bacha, *male.* Native of Europe, N. Asia; visits India from October to April.

The Bhyri or Bhairi, Falco peregrinus, so celebrated amongst Indian falconers for her boldness and power, and her tiercel, in Sind improperly called the Shahin, are found in some parts of Sind. They fly at partridges, hares, bustards, curlews, herons, and the saras; being long-winged hawks, or birds of the lure, they are taught to fly high, to wait on the falconer, and to make the point; not greatly prized.

4. *Laggar.*—Falco jugger, *Gray.* Laggar, *female;* Jaggar, *male.* Common over all India, Sind, Panjab.

The Laggar, and her mate the Jaggar, is the only long-winged hawk generally used in Sind; she is large and black-eyed, with yellow legs, black claws, and a tail of a cinereous white colour. She is a native of Sind, moults during the hot months from April to October, and builds in ruined walls and old mimosa trees. The Laggar is flown at quail, partridge, curlew, bastard-bustard, and hares. The best sport is undoubtedly afforded by crows, only she is addicted to carrying the quarry, and is very likely to be killed by her angry enemies. She is trained for the season, and then let loose.

5. *Shahin Falcon.*—Falco peregrinator, *Sund.* Shahin, *female*; Kohi, Koela, *male.* Native of all India, Afghanistan, and Western Asia.

The Shahin is the female of the Falco peregrinator, and is esteemed the first of all the falcons for hawking. It is trained to hover and circle in the air over the falconer and party.

6. *Saker or Cherrug.*—Falco sacer, *Schl.* Chargh, *female;* Charghela, *male.* Africa, Himalaya, Nepal, Europe.

The Saker or cherrug falcon, F. sacer, is trained for striking hares, antelopes, florikin.

7. *The Merlin.*—Hypotriorchis œsalon, *Gm.*

8. *Turumti, or Redheaded Merlin.* — H. chicquera, *Daud.* Turumti, *female;* Chetwa, *male.* Europe, all India, and Sind.

Both these have been trained in Europe and Asia.

9. *The Hobby.*—Hypotriorchis subbuteo, *L.* Doureli, Regi. Native of Europe; a winter visitor to all parts of India.

10. *Indian Hobby.*—H. severus, *Horsf.* Dhuti, *female;* Dhuter, *male.* Inhabits the Himalaya, Malay Peninsula, Java, and the Philippines.

11. *The Kestrel.* — Tinnunculus alaudarius, *Briss.* Narzi, *female;* Narzanak, *male.* A native of Europe; a cold-weather visitor to India.

12. *Lesser Kestrel.* — Erythropus cenchris, *Naum.* Kashmir, Neilgherries.

13. *Red-legged Falcon.*—E. vespertinus, *L.* S. Europe, N. Africa, Western and Central Asia, India.

14. *Shikra.*—Micronisus badius, *Gm.* Shikra, *female;* Chipka, Chipak, *male.* Afghanistan, all India, Ceylon, Assam, Burma, Malayana.

15. *European Sparrow-hawk.* — Accipiter nisus, *L.* Basha, *female;* Bashin, *male.* Visits India, October to March.

16. *Besra Sparrow-hawk.*—A. virgatus, *Temm.* Besra, *female;* Dhoti, *male.* All the large forests of India, Assam, Burma, and Archipelago.

The Shikra and her tiercel the Chipak are flown at partridges, and by their swiftness and agility afford tolerable sport. At the same time they are opprobriously called dog-birds by the falconer, on account of their ignoble qualities, their want of stanchness, and their habit of carrying the game,—carrying being the technical word for flying away with the wounded bird. They could formerly be bought ready trained in most parts of Sind for a shilling or two.

The Shikra, Micronisus badius, is more commonly trained in India than any other hawk.

The European sparrow-hawk, Accipiter nisus, and the Besra sparrow-hawk, A. virgatus, are both largely trained.

The Bashah sparrow-hawk, A. nisus, and her mate the Bashin, a small, short-winged, low-flying bird with yellow eyes, and dark plumage in her first year, which afterwards changes to a light ash colour, marked with large grey bars, are very much valued on account of the rapid way in which they fill the pot, especially with partridges. As they remain in Sind during the cold weather, and retire in summer to the hills around, those trained are passage-hawks, or birds of the year. Their low price, 8s. or 10s., made it scarcely worth while to mew them, so they were let loose when the moulting season commenced.—*Jerdon's Birds; Burton's Falconry in the Valley of the Indus.*

HAWKINS, an English captain who landed at Surat in the year 1608, in the reign of the emperor Jahangir. He proceeded to Agra to the court of the emperor, where he was well received.

HAWKS, Kites, etc.

Faucon,	Fr.	Halcon,	Sp.
Habicht, Falke,	Ger.	Atmaja,	Turk.
Falcone,	It.		

Eagles, hawks, kites, etc., are all classed by naturalists under the sub-families Accipitrinæ or hawks, Aquilinæ or eagles, Buteoninæ or buzzards, Falconinæ or falcons, and Milvinæ or kites, etc., all of the family Falconidæ. They fly well, take their prey on the wing, feed on small mammals, birds, reptiles, fishes, and insects; almost all are solitary and monogamous. Many of them are common to Great Britain and the E. Indies, as the peregrine and other falcons, the merlins, and kestrel. Astur trivirgatus, the goshawk, occurs in the hilly parts of Nepal, India, and the Malay countries. A. palumbarius is a native of Europe and the Sub-Himalaya. The kestrel is occasionally observed in extraordinary abundance, and harriers (Circus) are often seen beating over the open ground. In Lower Bengal, kites quit Calcutta and neighbourhood during the rains and return in the cold weather. It is supposed that they go to the N.E. to breed. The kestrel, baza, and Indian hobby are most frequent in Bengal during the rains. In Bengal, the kites and Brahmany kites breed chiefly in January and February, and disappear during the rains; but adjutants appear as soon as the rains set in, and, becoming in fine plumage towards the close of the rains, depart at that time to breed in the eastern portion of the Sunderbuns, and along the eastern coast of the Bay of Bengal, upon lofty trees and rocks. In the island of Bombay, on the approach of the monsoon, nearly all the kites, hawks, vultures, and other carrion birds disappear from the sea-coast; but the crows begin to build their nests and hatch their young just at the season that seems most unsuitable for incubation, when the eggs are often shaken out, or the nests themselves are destroyed, by the violence and inclemency of rain and tempest. Carnivorous birds, as the rains approach, betake themselves to the comparatively dry air of the Dekhan, where they nestle and bring forth in comfort, and find food and shelter for their little ones. The scenes which follow the conclusion of the rains are curious enough. While the Mahomedans bury, and the Hindus burn their dead, the Parsee race expose their dead in large cylindrical roofless structures, called towers of silence, where birds of prey at all times find an abundant repast. Their family cares and anxieties over for the season, the carrion birds, which had left in May for the Dekhan, return in October to Bombay, and make at once for the usual scenes, now stored with a three months' supply of untasted food. As they appear in clouds approaching from the mainland, the crows, unwilling that their dominions should be invaded, hasten in flocks to meet them, and a battle ensues in the air, loud, fierce, and noisy; the fluttering of the wings, the screaming and cawing of the combatants, resounding over the island, till the larger birds succeed, and, having gained the victory, are suffered henceforth to live in peace.

In Ceylon, the beautiful peregrine falcon, Falco peregrinus, *Linn.*, is rare, but the kestrel, Tinnunculus alaudarius, *Briss.*, is everwhere found; and the bold and daring goshawk, Astur trivirgatus, *Temm.*, is seen wherever wild crags and precipices afford safe breeding places. In the district of Anaradhpura, where it is trained for hawking, it is usual, in lieu of a hood, to darken its eyes by means of a silken thread passed through holes in the eyelids. The ignoble birds of prey the kites,

Milvus govinda, *Sykes*, keep close by the shore, and hover round the returning boats of the fishermen, to feast on the fry rejected from their nets. Accipiter trinotatus is a beautiful hawk of Celebes, with elegant rows of large round white spots on the tail.—*Tennant's Ceylon*, p. 246; *Dr. Buist in Bombay Times; Mr. Blyth*, 'Z.,' *in Indian Field.* See Eagles.

Any kind of grass cut and dried for the food of horses, cattle, etc.—*M'Culloch; Faulkner.*

HAY, Lord ARTHUR, afterwards Marquess of Tweeddale, author of numerous contributions on the botany and natural history of India.

HAYOBANS, a Rajput tribe in the province of Benares, who once were dominant on the banks of the Nerbadda.—*W.*

HAYWARD, GEORGE W., a scientific explorer, who was endeavouring to reach the Pamir steppes and the country north of Peshawur, in the interest of the Royal Geographical Society of London, but was murdered, in A.D. 1870, in Chitral by Mir Wali, the nephew (sister's son) of Aman Malik, chief of Chitral, the valley north of Swat and Bajour and west of Gilghit. The Kashmir authorities urged him repeatedly to abandon the expedition, in which his life would not be safe. Mr. Hayward resolved to persevere, although he was aware that beyond the Gilghit frontier the Maharaja of Kashmir would be absolutely unable to protect him.

HAZAR. Arab. Present. Hence also Hūzūr, the presence, an appellation of royalty; also Hazrat, a respectful address; Hazari, breakfast.

HAZARA, according to Bellew, is from Hazār, a thousand; it means a division, a disposition by thousands, and is so applied by the Persians, by the mountaineers of Ghor, and by the Afghans, to the Mongol tribes occupying the mountain country of Ghor, lying between Kābul and Herat in one direction, and Kandahar and Balkh in another. He says (p. 205) it is the equivalent of the Tartar toman or tuman. Hazara tribes occupy the whole range of the Paropamisus, or the mountains extending between the Hindu Kush or Caucasus and the city of Herat, to within a few days' march of Kandahar. The Hazara districts between Kābul and Bamian are collectively called Bisut, and mallia or tribute is enforced from them by the authorities of Kābul. In the mountainous country between Kābul and Herat, the habitations of the Hazara tribes are at heights between 5000 and 10,000 feet above the sea. Some of them claim to be of Turk origin; others in appearance very much resemble the Gurkha. They have the same high cheek-bones, the same small eyes, very little beard, and these no doubt are of Tartar origin. Some profess the Sunni, others the Shiah form of Mahomedanism. A tribe inhabiting the country to the east of the Taemuri of Khaff, between it and the great range from Khairabad to Rosanak, are violent Sunni. These are of Tartar origin, and are predatory, selling their captives to the Turkoman, and plundering up to Herat. Of the Hazara between Kābul and Herat, some claim descent from Toghiani Turk.

The Deh Kundi Hazara assert their origin from a Koresh tribe of Arabs. The Deh Kundi muster 12,000 fighting men.

The Faoladi of Gujaristan are said to be so called from a daughter of Afrasiab.

The Deh Zangi Hazara, who were reduced by Murad Bey of Kunduz, are Shiahs, and from them most of the Hazara slaves are procured. They are rich in flocks, and their cavalry have been estimated at from 12,000 to 28,000.

The Jaguri Hazara, who can assemble 5000, occupy the country bounded north by Gujaristan and Gul-Koh, east by Karabagh, Mukur, and Resana, south by Arghandab and Warazan, and west by Mahstan, 60 miles by 40 miles of beautiful and fertile valleys, and number about 50,000 souls. They are a short but well-made race, beardless, with flat nose, and some of their tribes follow the custom called Kooroo-bistan, which consists in lending their wives to strangers for a night or a week.

The Faoladi Hazara number 1000 families. They dwell between Kābul and Bamian.

The Deh Chafran or Zard-alu, near Karabagh, are about 3000 families.

The Shaikh Ali, east of Bamian, from 3000 to 5000 families, occupy between Bamian, Ghorband, and the Helmand.

About forty other tribes are mentioned by Elphinstone, Burness, Wood, Leech, Lumsden, who estimate their numbers up to 300,000 souls.

The Hazara assume as their titles, Ikhtiar, Khan, Mehtar, Sadiq, Sultan, Turkhan, and Vali. Grain is scarce; their bread is tasteless; and their food consists of the flesh of their sheep, oxen, and horses, with cheese. In years of scarcity they voluntarily sell their children to the Uzbak slave dealers. The Shiah Hazara detest and persecute the Sunni Afghan, Aimak, and Uzbak, yet revere Ali and all Syuds. They speak a Persian dialect, and are friendly with the Kazzilbash and Parsivan. Almost every tribe is at war with their neighbours, and with the Aimak and Uzbak, and even the chiefs of their own race carry off many into slavery. Hazara do all the labouring work of Kābul. Their country yields lead and sulphur. They breed dumba (tailed) sheep and horses. Their animals have the fine shawl-wool with which they manufacture carpets and the fabric called Burrick. Hazara Zeidnat was a tribe in the fertile Kala Nao district, at the Murghab and Panjdeh rivers, who claim to be the original Hazara, and assume the title of Sar-i-khana. Their chief has jurisdiction over 28,000 tents. They are supposed to be Aimak. They had immense flocks and herds of sheep, goats, buffaloes, and camels. In 1847, Yar Muhammad marched against and defeated Karimdad, the chief of this tribe, and removed 10,000 families to Herat; and the Persians, after the capture of Herat in 1857, removed the whole tribe within Persian territory, and deprived them of all their baggage and cattle. They could assemble 4000 cavalry and 8000 infantry. Ferrier, in his Caravan Journeys (pp. 194–237), mentions that he fell among the Aimak Hazara on the Murghab river, and other tribes about Dev-Hissar, more to the north and east. He says their women take part in every war, manage the horse, the sword, and the fire-

lock. Their courage amounts to rashness, and they are more dreaded than the men for cruelty and fierceness. It is, and, so far as they know, has always been, a national custom. Here we have an intelligible explanation of the Amazons of Alexander, and the 'female hosts' of Nemuchi. In an attack by the Firoz Kohi on a Hazara tribe near Singlah, in which he was engaged, he says it was a remarkable sight to see brave and energetic Tartar women under fire amongst, and as forward as, the men; they fight also on horseback, and ride or act under any circumstances as well as the other sex. He says 'more than one of them would, I have no doubt, meet any European horseman on more than equal terms: the dexterity with which they manage their horse is extraordinary, and their courage is not less great. They take part in every war, and the vanquished dread their cruelty more than that of the men.' —*Cal. Rev.* No. 64, p. 433; *Vigne's Personal Narrative*, pp. 113–171; *Masson's Journeys*, ii. pp. 217–295; *E. I. Parl. Papers, Cabool and Afghanistan*, pp. 135, 136; *Yule's Cathay*, ii. p. 540; *Ferrier, Journeys*, pp. 194, 222, 237; *MacGregor; Bellew*, p. 205; *Campbell*, p. 54.

HAZARA, a British district in the Panjab, lying between lat. 33° 45′ and 35° 2′ N., and between long. 72° 35′ 30″ and 74° 9′ E.; area, 2771 square miles. It is bounded on the north by the Black Mountains, the Swati country, Kohistan, and Chilas, on the east by Kashmir, on the south by Rawal Pindi district, and on the west by the river Indus. It consists of a long and narrow valley, shut in on either side by lofty mountains, whose peaks rise to 17,000 feet above the sea. A group of ancient mounds, extending into the southern portion of this district from that of Rawal Pindi, have been identified by General Cunningham with the site of Taxila. Under the successors of Ranjit Singh, the Hazara people declared for independence, and Syud Akbar of Sitana was elected king by the assembled chieftains. Enumeration over a total area of 2835 square miles disclosed a total population of 367,218. The Hindus amount to 5·06 per cent. The Pathan tribes were—Jadun, 15,711; Swati, 21,334; 'others,' 16,748. Other Mahomedans are—Syuds, 11,700; Dhund, 14,412; Kharal, 10,734; Awan, 50,564; Gujar, 54,420. Hindus or Sikhs—Kshatriyas, 12,320; Brahmans, 3009. The Swati occupy the Khagan gorge; while the other tribes of Pathan origin inhabit the western frontier of the district. The Dhund and Kharal hold the south-eastern hills; the Awan and Gujar are scattered over the whole country, occupying inferior social positions. The Dhund, Kharal, and Swati in particular are of small stature, and deficient in strength.—*Imp. Gaz.*

HAZARIBAGH, a British district in Bengal, lying between lat. 23° 25′ and 24° 48′ N., and long. 84° 29′ and 86° 38′ E.; area, 7020 square miles; population in 1872, 771,875. A central plateau, about forty miles in length, has peaks rising from 2463 to 3445 feet above the sea. Its aboriginal tribes are—Santal, 35,306; Kol, 7307; Bhoi, 5835; Munda, 5664; Birhor, 132; Bhuiya, 73,824; Chamar, 26,112; Ghatwal, 31,134; Bhogta, 20,546. The agriculturists are —Kurmi, 40,538; Koeri, 27,550. The traders are—Banya, 13,669; and Teli, 29,876. The Rajputs, known as the Panwar or Ujjaini, formerly supplied the Bhojpuria sepoys to the native army; and the Nagbansi, who are peculiar to Chutia Nagpur, are Rajputs of pure blood. The Srawak or secular Jains are well-to-do merchants, and occupy a high social position. The religious Jains live at the foot of Parasnath Hill, and are custodians of the temples in the village of Madhuban, from which pilgrims ascend Parasnath. The Birhor of Hazaribagh and Lohardagga live in the jungles or hill-sides in huts made of branches of trees. They have hardly any cultivation, and never touch a plough. The men spend their time in snaring hares and monkeys, and also trade in various jungle products. They worship female deities and devils, and it is supposed that they at one time practised cannibalism. The wealthier Ghatwals are considerable landholders in the N.E. of Hazaribagh, and claim to be zamindars under the permanent settlement of 1793.—*Imp. Gaz.*

HAZAR KINIAN, or the Thousand Springs, are in Kurdistan, in the district of Aalan, an alpine spot where innumerable springs start from the ground.—*Rich's Kurdistan*, i. p. 262.

HAZEL NUT, Corylus avellana.

Bindik, ...	Beng.	Avellane, . . .	Lat.
Tsin, ...	Chin.	Fenduk, . . .	Pers.
Noisettes aveilenes,	Fr.	Avellaas, . . .	Port.
Haselnusse, . .	Ger.	Avellanas, . . .	Sp.
Naccinole, aveline, .	It.		

The fruit of different species of the Coryli or hazel trees. The kernels have a mild, farinaceous, oily taste, agreeable to most palates. A kind of chocolate has been prepared from them, and they have been sometimes made into bread. They are grown in Europe, are produced abundantly in China and in the Himalayas; and hazel nuts are imported into Bombay from the Persian Gulf.—*M'Culloch.*

HAZIRAT. Hind. In Mahomedan divination, in India, the flame of a charm-wick.

HAZIR ZAMIN. Hind. A personal bail.

HAZRAT. Arab. An honorific appellation, equivalent to lord, reverence, Mr., worship. Lord Jesus, Hazrat Isa. Hazrat Ali, the lord Ali.

HAZRAT IMAM, a town on the south bank of the Oxus, producing good silk.

HEAD.

Ras, ...	Arab.	Sar, . .	Hind., Pers.
Tête, ...	Fr.	Talle, . .	Tam., Tel.

The Mahomedan races of Arabia, Persia, and India, in acknowledging an order, stake their head on obeying it. The Arab will say, Dala rasi, On my head be it; and the Persian and Indian Mahomedan, Ba-sar-o-chashm, On my head and eyes be it. Horses are numbered by their head, as Bis ras asp, 20 head of horses.

Head cloths, or roomals, of cotton are manufactured in the Madras districts. They are always in squares of 5½ and 6 cubits, with lace borders, and are always red-coloured, printed with white spots. These are worn by Hindus as turbands, and are of value from Rs. 8 to 250.

Head-dress. The Turks of Turkey and of Egypt wear the turband and the red Fez cap. The Jews of Syria, Egypt, and Persia wear the turband (sar-band). All the Mahomedans and many Hindus of India use turbands. Many Persians wear caps. The Chinese history ascribes wing-like appendages to their emperor's cap. But wings attached to the cap are rather an ancient Hindu

feature, and are remarkably preserved in the state costume of the kings of Burma and the sultans of Java.—*Yule, Cathay*, i. p. lix.

HEAT. Poo hgying, BURM. The heat in S. Asia is sometimes very great. Major Sander's thermometer, on the Farrah-Rud in 1840, rose to 175° in the sun, a heat which enabled him to poach eggs in the burning sand. The mean heat at Bombay is 84°, at Madras 83°, Calcutta 79°, Delhi 72°. The gunpowder in the factory of Madras is dried on blackened platforms in the sun's rays, and the thermometer rises to 164° Fahr.

HEAVEN, the Assama, Al-Fardūs, and the Jannat of the Arab, Bihisht of the Persians, Himmel of the Germans, and Paridesh of the Hindus, with all is the place to which the souls of the virtuous dead are translated. Paridesh means the other world; Himmel is from Himalaya, the abode of snow. Mahomedans and Jews have seven heavens. The seven heavens of the Jews are—(1) the vellum or curtain, (2) the expanse or firmament, (3) the clouds of ether, (4) the habitation where the temple of Jerusalem and altar are situated, and (5) where Michael offers sacrifice; (6) fixed residence, (7) Araboth or special place of glory. The celestial place of the Saiva Hindus is Swerga, said to be on Kailasa, a mountain in the Himalayas north of Lake Manasa, also on Mount Meru. It is also called Sairibha, Misraka vana, Tavisha, Tridivam, Tripishtapam, and Urdhwa-loka. The heaven or paradise of Vishnu is Vaikuntha, also called Vaibhro, and sometimes described as on Mount Meru. The Saiva regards Vaikuntha, and the Vaishnava regards Kailas as merely a second Swerga. Each sect believes that the heaven of their opponents passes away with Indra's paradise at the Maha Prulay, but that their own heaven is not so much destroyed as re-created, Kailas merging into Maha Kailas, and Vaikuntha being elevated into Go Lok.

HEAVY SPAR or sulphate of baryta is found near the village of Pudoor, on the banks of the Tumbudra, about 7 miles from Kurnool, on the slope of a low range of hills. Dr. Royle found it near the convalescent depot at Landour.

HEBEL, the vanishing, Abel of the Bible.

HEBER. The passage. A historical term connected with the race of Arphaxad, indicating their passage near the Upper Tigris in a south-western direction.—*Bunsen.* See Joktan.

HEBER, REGINALD, bishop and metropolitan of India, an eminent writer. He was found dead in his bath at Trichinopoly on the 3d April 1826. He visited many parts of India, and consecrated most of the churchyards and churches, which led to after regulations. His narrative was published in London in 1828.

HEBREW. The language of Tyre and Sidon was pure old Hebrew. Abram was a Hebrew, who spoke Aramaic as his mother tongue, but migrated from the Trans-Euphrates country, and adopted the language of Canaan. His first-born son was Sidon. 1400 years after Joseph, Canaan was occupied by the Israelite, Edomite, and Canaanite as separate nations. In the Old Testament (Isaiah xix. 18) the language of the Bible is called the language of Canaan,—in no instance Hebrew. The Hebrew language is used by the small colony of Jews residing in Cochin and its neighbourhood. Hebrew is a branch of the Semitic family of languages. Yemen and Arabia are considered by Jewish mediæval tradition as the land of the Ten Tribes, where powerful Jewish kings fought against infidels; this belief exists even now among Eastern Jews. About the middle of the 19th century, Rabbi R. Jacob Saphir visited Yemen. After R. Jacob Saphir, Joseph Halévy was sent to Yemen by the French Government, in order to copy Himyaritic inscriptions, and brought back manuscripts, which were partly acquired by the Bodleian Library. Mr. Shapira of Jerusalem revisited the Jews in Yemen, and through him the British Museum now possesses a considerable number of manuscript Bibles, many of them provided with the superlinear punctuation (usually called the 'Assyrian' vowel-points, while the punctuation used in our Bibles is called the 'Palestinian'), as well as with the Massorah. The Yemen manuscripts also contain a collection of Agadic books, called Midrashim, which embody many lost passages, known only from quotations by Maimonides and others. In Persia the Jews have adopted in their writings the native language, though still using Hebrew characters, just as their brethren have done in the Arabic-speaking countries, in Greece, Spain, France, and Germany, and as the Karaitic Jews have done among the Tatars. The Persian translation of the Bible to be found in manuscripts of the National Library at Paris is, according to Solomon Munk, not earlier than the 13th century and not later than the 14th; but Bishop Theodorus in the 5th century mentions a Persian translation of the Bible. So does Maimonides in the 12th century, who refers to a translation of the Pentateuch made several centuries before Mahomed. If this translation is not based on an early translation, the Jews in Persia must have kept up the ancient Persian dialect, just as the German Jews still speak in the ghettos the pre-Lutheran German, or as the Spanish exiles in the East speak ancient Spanish,—in a word, the 'langue des exilés,' as Voltaire styles the French of the Huguenots at Berlin. We know, in fact, that in the time of the second temple the Pentateuch lessons read in the synagogues (Acts xv. 21) were interpreted by the Methurgeman in the vernacular; hence the origin of the Targum or Chaldee translation. In Persia this rule was observed as late as the 13th century, for it is stated on the margin of Genesis xxxv. 22, 'The translation of this verse ought not to be read publicly.' The same is said in the Talmud, 'The history of Reuben is read (in Hebrew), but not in the translation.' In the synagogues of the Greek rite, the practice of reading the translation of the Haftarah (section of the Prophets, Luke iv. 16; Acts xiii. 14) was still kept up in the 12th century, according to a ritual manuscript in the Bodleian Library, which contains the Greek translation of the book of Jonah in Hebrew characters with vowel points. This book forms the prophetical lesson of the afternoon service (called Minhah) on the Day of Atonement, and it is the oldest piece in prose written in modern Greek. Besides the Hebræo-Persian manuscripts in Paris, the Imperial Library of St. Petersburg possesses a fragment of a Hebræo-Talmudic dictionary, written at Djorjan in 1339, and the British Museum an astronomical treatise, transcribed in Hebrew characters from a Persian

manuscript. This is about all that is known of Jewish writing in Persia.

Recently, Mr. Neubauer acquired in Paris a Pentateuch and Psalms, written at Koom in the year 1483, to which a Jewish calendar in Persian is attached. Another manuscript contains a translation of the Psalms, which is missing in the *Paris collection*. The copyist states that it was written for the great king, Kibleh-i-Alam (the Kibleh of the world), possibly Kablai Khan, who was the great protector of art and science in that dark age, about 1294. Indeed, at that time, when Argun was the vassal king of Persia, the Jewish physician Saad-ud-Daula was his minister of finances, who not only restored order to the finances of the kingdom, and forced the Mongol generals to obey law and justice, but also attracted learned men and poets to the court of his master. The most curious of the manuscripts is a fragment of an epopee, which has for its subject the whole of the biblical history, and is simply an imitation of Firdausi; its author, however, remains at present unknown. 164

HEDERACEÆ, the ivy tribe of plants, the Araliaceæ of A. Rich. Species of the genera panax, paratrophia, and hedera occur in India. H. heterophylla occurs in Penang, P. palmata in Nepal and Arakan, P. terebinthacea in Penang, and H. exaltata, *Thw.*, is a large tree growing in the central province of Ceylon, at an elevation of 4000 to 6000 feet. H. umbellifera, the Sarura of Amboyna, has a shrubby, unarmed stem, and yields a blackish or dull-brown resin with a very powerful aromatic camphorated smell.—*Eng. Cyc.; Voigt; Thw.*

HEDERA HELIX, the ivy.

Lablab kussus, .	Arab.	Arbambal, . .	Jhelum,
Brumbrum of . .	Beas.	Karmora, Mandia,	Kaghan
Dakari, ...	,,	Parwatti,	Trans-Indus.
Kúral, Kuril of	Chenab.	Karur, ...	Ravi.
Harbambal of .	Jhelum.	Karbaru, Kaniuru,	Sutlej.

This ivy has a climbing stem, with root-like fibres. It is found between the Canaries and Europe on the west, and the northern parts of China on the east. In the north of India, and indeed occasionally in Italy, the berries, instead of being black as in Britain, are bright yellow, and it is supposed that this is more particularly the Hedera of the Roman poets. The flowers are yellowish, and appear late in the season, and, in consequence, are much resorted to by bees at seasons when little other food is to be had. It is common in the Panjab Himalaya, at places from 8200 to 8000 feet; occurs in the Salt Range and Trans-Indus; and Dr. Bellew got it at 9000 feet near the Safed Koh. It is stated to be a favourite food of goats, and in Kullu the leaves are said to be added to the beer of the country to make it strong.—*Dr. J. L. Stewart, Eng. Cyc.*

HEDGEHOG, the genus Erinaceus of the mammalia. There are in India two species, E. collaris and E. mentalis. E. dealbatus, *Swinhoe*, is Chinese.

HEDGES are not used for the cold-weather crops of India. For the garden crops, sugar-cane, betel vine, and others, the large species of saccharum are used. Quick hedges are formed in Japan of the Lycium Japonicum, Citrus trifoliata, Gardenia, species of Viburnum, Thuja, Spiræa; and arbours are made of the Dolichos polystachyos. Dr. Cleghorn gives the following as the wild and cultivated hedge plants of India:—

I. Plants adapted for field enclosures.

Opuntia Dillenii, *Haw.*	Epicarpurus orientalis, *Blume.*
Agave Americana, *L.*	Jatropha curcas, *L.*
Euphorbia tirucalli, *L.*	Pisonea aculeata, *Rox.*
E. antiquorum, *L.*	Capparis sepiaria, *L.*
E. nivulia, *Buch.*	C. aphylla, *Rox.*
Cæsalpinia sepiaria, *Rox.*	Scutia Indica, *Brong.*
C. sappan, *L.*	*Azima tetracantha, Lam.*
Pterolobium lacerans.	Gmelina Asiatica, *L.*
Guilandina bonduc, *L.*	Balsamodendron Berryi, *Arn.*
Parkinsonia aculeata, *L.*	Toddalea aculeata, *Pers.*
Poinciana pulcherrima, *L.*	Bambusa arundinacea.
Mimosa rubicaulis, *Lam.*	Bambusa spinosa, *Rox.*
Inga dulcis, *Willd.*	B. nana, *Rox.*
Acacia Arabica, *Willd.*	Dendrocalamus tulda, *Nees.*
A. concinna, *D. C.*	Pandanus odoratissimus.
Vachellia farnesiana, *W.*	
Hemicyclia sepiaria, *W.*	

II. Ornamental plants forming inner fences.

Lawsonia inermis, *Wall.*	Adhatoda vasica, *Nees.*
Lonicera ligustrina, *L.*	A. betonica, *Nees.*
Citrus limetta, *Riss.*	Graptophyllum hortense, *Nees.*
Morus Indica, *L.*	Gendarussa vulgaris, *Nees.*
Punica granatum, *L.*	Gardenia florida, *L.*
Phyllanthus reticulata.	Allamanda cathartica, *L.*
Hibiscus rosa Sinensis, *L.*	

III. Plants used for edging garden walks.

Pedilanthus tithymaloides, *Poit.*	Rosa semperflorens, *Curtis.*
Vinca rosea, *Willd.*	Heliotropium Curassavicum, *L.*
Rosa Indica, *L.*	

164

The Cacti, Agaveæ, and Euphorbiæ are adapted to the arid districts, their structure enabling them to exist, when refreshed with only occasional showers; the Mimoseæ and Cæsalpineæ seem to njoy the somewhat more cold and moist climate f the Balaghat districts; while the Bambuseæ and Pandaneæ luxuriate in the rich loamy soil of the Mulnad (*i.e.* rain country). Plants for railway fences ought to differ as the line is continued through various districts, in accordance with the conditions under which particular plants thrive best between certain limits of temperature and moisture.—*Thunberg's Tr.* iii. 8; *Cleghorn in Rep. Brit. Ass.* 1850, p. 311.

HEDUNG of Java, the chopping knife of the Tenger mountaineers.

HED-YA. Mahr. A drover or cattle-dealer.

HEDYCHIUM, a genus of plants belonging to the natural order Zingiberaceæ. 28 species occur in the East Indies, some of them with sweet-smelling flowers.

Hedychium coronarium, *Linn.*

Doolal champa, .	Beng.	Ganda suli, . .	Malay.
Khet-lan-thæ, .	Burm.		

The garland flower, much cultivated. The flowers are fragrant; colours, orange, scarlet, yellow, and white. The yellow and white varieties are both common. This is the most charming of all the plants of this natural order; the great length of time it continues to throw out a profusion of large, beautiful, fragrant blossoms, makes it particularly desirable. The plants are increased by dividing the roots.

Hedychium spicatum, *Royle.*

		Bazar Roots.	
Ban-haldi; Shlui of	Beas.	San-nai, San-lah,	Chin.
Sidhoul, ...	Hind.	Kapur kachri, .	Hind.
Ban-kela; Saki of	Ravi.	Kachur, Seer, Rutti,	,,
Khor; Shalwi, .	Sutlej.		

This grows throughout the East Indies, in Nepal, in the Panjab Himalaya, up to near the Jhelum, at least, at from 3500 to 7500 feet, and also in China. Its large broad leaves are twisted, and made into coarse mats for sleeping on, etc. The root is fragrant, warm, and aromatic; and Dr.

Royle thinks it may probably be the ritte, or lesser galangal of Ainslie. The root, capoor cutchery, in China, is cut into small pieces and dried for exportation; has internally a whitish colour, but externally it is rough and of a reddish colour; it has a pungent and bitterish taste, and a slightly aromatic smell. It is exported to Bombay, and from thence to Persia and Arabia; it is said to be used in perfumery and for medicinal purposes, and also to preserve clothes from insects. In Garhwal they are used in washing the newly married; and Madden states that they are pounded with tobacco for the hookah.—*O'Sh.; Marsden; Roxb.; Voigt; Stewart.*

HEDYOTIDEÆ, a section of plants of the natural order Cinchonaceæ, containing species of Wendlandia, Dentella, Hedyotis, etc. There are ten known species of Hedyotis.

Hedyotis Burmanniana, *R. Br.*
Oldenlandia biflora, *Lam.*
Gerontegea biflora, *Cham. and Schl.*

Khet-papra, . . BENG. | Purputi, Papra, . HIND.

Two-flowered Indian madder, is a plant of Ceylon, both Peninsulas of India, and Bengal. Appears in moist ground in the rainy season. The whole plant is used in infusion as an excellent tonic and febrifuge in chronic fever. Dose 1 to 2 drachms; price 8 annas per lb. Other species also occur, and are called Ganda badalee and Poonkha.

Hedyotis Heynei, *R. Br.*

H. herbacea, *Willde.* | Oldenlandia herbacea, *Rox.*
Tella nela vemu, ... TEL.

A plant of the Peninsula of India.—*Irvine.*

Hedyotis umbellata, *Lamarck.*

H. hispida, *Roth.* | Oldenlandia umbellata, *Linn.*
H. Indica, *Rœm. and Sch.*

Chay-root, ANGLO-TAM. | Saya, ... TAM.
Indian madder, . ENG. | Emburel cheddi, . ,,
Choya, ... SINGH. | Cherivelu, . . . TEL.
Sayan; Sayan mul, ,,

This dye plant grows in sandy soils on the Coromandel coast. The root of that which grows wild is reckoned the best, but it is also cultivated to some extent. For the cultivation of the plant the finest sandy soil is required, as being the most favourable to the free growth of the root, on the length of which the value of the article greatly depends. The cultivation commences in the end of May or beginning of June, with the first falls of the south-west monsoon. During the space of three months the sand is subjected to repeated ploughings, and is thoroughly cleaned from all weeds. Between each ploughing it is manured, and after the last ploughing it is levelled with a board, and formed into small beds of about six feet by three. The seed, which is extremely minute (so much so that it is impossible to gather it except by sweeping up the surface sand into which it has fallen, at the end of the harvest), is then sown by spreading a thin layer of sand over the prepared beds. They are then kept constantly moist, and are watered gently with a sieve made of palmyra fibres, five or six times a day; care being taken that the water is quite sweet and fresh, for which purpose it is obtained from wells newly dug in the field. At the end of a fortnight the seeds under this treatment will have germinated freely, after which the young plants are only watered once a day, in addition to which, liquid cow-dung, greatly diluted with water, is daily sprinkled over them. In about four months more, or at the end of six months from the time of sowing, provided the season has been good and the falls of rain regular, the plants will have reached maturity, and the roots be ready for digging. But no artificial irrigation will compensate for a failure of the natural rain; and when this happens, the plants must be left for three or even four months longer, in which case the produce will be deficient both in quantity and quality. But in an ordinary season the produce of a podu, or plot containing an acre and three-quarters, will yield from 5 to 10, averaging about 8, candies of 500 lbs. each.

The plants are dug up with a light wooden spade tipped with iron, and are tied into bundles of a handful each, without cutting off the stocks. They are then left to dry, the leaves wither and fall off, and the bundles are weighed and removed. Before the digging begins, the seeds, which have now ripened, are shed, and, being exceedingly minute, become inextricably mixed with the sand, the surface of which is therefore carefully scraped up, and reserved for future sowings.

It is largely used by the Indian dyer in the south of India. It furnishes a red dye similar to manjith. Experiments in Great Britain with the chay-root have hitherto failed, in consequence, it is supposed, of deterioration during the voyage. In the case of this and of some other Indian dye-stuffs, the colouring matter could be extracted similarly to indigo before it is exported.—*O'Sh.; Ains.; R. Mad. Ex.* 1857. See Chay-root; Dyes.

HEDYSARUM. Ti-yu, CHIN. Several occur in China, where the roots are employed as a styptic or vulnerary. The leaves are used as a vegetable, and as a substitute for the proper tea-leaf.

H. lineare is used in Cochin-China as a stomachic, and H. alpinum in Siberia for the same purpose.

H. junceum grows in vast quantities in Shekhawatti and elsewhere, near Jeypore; the small branches are sweet, and eaten by camels and other cattle. This becomes a considerable bush, and has no thorns.

H. edysarum tuberosum, *Roxb.*
Pueraria tuberosa.—*Bank's Ic. Kemp.* tab. 25.

Kudsumi, . . . HIND. | Darse goomodee, . . TEL.

A rare species, a native of the valleys far up amongst the mountains. It flowers during the hot season, at which time it is perfectly naked of leaves, being deciduous about the beginning of the cold season. The root, peeled and bruised into a cataplasm, is employed by the natives of the mountains where it grows to reduce swellings of the joints.—*Roxb.* ii. 863; *Gen. Med. Top.* p. 205; *Smith.*

HEEL. This part of the body is often alluded to by oriental nations. The only vulnerable part of Krishna's body was his heel, in which he was shot by a Bhil.

HEEMACHA. HIND. A bag made of the skin of a lamb, used by fakirs.

HEEN. Every Chinese province is divided into a certain number of districts, called Fu, Ting, Chow, or Heen. A Fu is a large portion or department of a province under the general control of a civil officer, immediately subordinate to the head of the provincial government.—*Sirr, Chinese.*

HEERA-KASSEES. HIND. Dry persulphate of iron, used in dyeing, in making ink, blacking

leather; also in medicine, and made into missi to apply to the teeth. To make—

Black missi.—Heera-kassees, chaipal harra, choonigond, lila tootiya, iron filings, kuth, equal parts, pounded and mixed; rubbed on the gums.

White missi.—Sufaid soorum (crystallized carbonate of lime, double refracting spar) and cinnamon pounded together; used as tooth-powder.

Sada-kassees.—Impure sulphate of iron, the refuse from the manufactory of the sulphate of copper; four seers for one rupee.

HEERA-KHOND, a place in Assam where diamonds occur. See Diamond.

HEERANA or Hirana, in E. Oudh, manuring a field by penning a herd of cattle or flock of sheep in it for several hours. K'hhutana is used in a similar sense in Rohilkhand. This practice is known in England under the name of fold-course or foldage, and formerly meant a privilege which several lords reserved to themselves of setting up folds within their manors for the better manurance of the same.—*Elliot, Supp. Gloss.*

HEGGADE. KARN. The headman of a town or village, but especially applied to one of the Jain religion. It is also used by certain castes as an affix to proper names, to intimate respectability, corresponding with Sahib or Mian in Hindustan. —*Wilson's Glossary.*

HEI-MIN, in Japan, all below the nobles; the commonalty.

HEJAZ, ARAB., is a large province of Arabia, containing the two sacred cities, Mecca and Medina. But geographers differ much as to its limits. Burton says that the Arab of the Hejaz still uses heathenish oaths and heathen names, few being Mahomedan. Their ordeal of licking red-hot iron, their practice of the salkh or scarification as a sign of manliness, and their blood revenge, their eating creatures which have not been made lawful by the usual formula, and their lending their wives to strangers, he indicates as showing how little Mahomedanism has influenced the uncivilised parts of the country.—*Burton's Mecca*, iii. 79.

HELA, a man of a low caste; an inferior division of the Bhangi, engaged in the lowest menial offices. The Hela pride themselves on eating the leavings of Hindus only.

HELEOCHARIS TUBEROSA, *Rœm. and Sch.*, the Ma-tai or Pe-tsi of the Chinese, is a rush which is cultivated in ponds for its edible tubers. H. fistulosa and H. plantaginea of Australia and India and H. sphacelata are allied plants.—*Smith.*

HELFER, DR., of the Bengal medical service, and a celebrated botanist, was murdered by the natives of the Andamans, in January 1839. See As. Jour. 1840, vol. xxxiii. Author of Notice of the Mergui Archipelago, ibid. vol. xxxiii.; Report on Tenasserim and the surrounding Nations, Bl. As. Trans. vol. viii. Along with Lieutenant Hutchinson, he reported on the new coal-field of Tenasserim in Bl. As. Trans. 1839, vol. viii. 385. Author of Researches on the Tenasserim Coast, in Friend of India, 165, 638.—*Dr. Buist, Catalogue.*

HELIANTHUS ANNUUS. *L.* Sun-flower.

Shooria mukti, . .	BENG.	Aditya bhakti chettu.	
Suraj mukhi, . .	HIND.	Poddu or Proddu tirugudda chettu,	TEL.
Suria mukhi, . .	SANSK.		

It is indigenous in Mexico and Peru; it was early introduced into Europe after the discovery of America. It is one of the cistaceæ, or rock-rose tribe. An acre has been known to yield 50 bushels of seed-like nutlets, from which 50 gallons of oil have been pressed, useful for the table, for machinery, soaps, and for painting. The seeds are valued for feeding fowls, also as a substitute for coffee. The large flower-heads yield much honey, the stalks a useful textile fibre, and the blossoms a brilliant, lasting yellow dye. The absorbing and exhaling powers of this plant are great, and it is valuable for raising quickly vegetation around fever morasses. A sun-flower, according to Laccupidan, will exhale 1½ lb. of water in a day. Its products are yielded in a few months.—*Roxb.; Von Mueller.*

HELIANTHUS TUBEROSUS. *Linn.*

Bheamoka, . . . BENG. | Jerusalem artichoke, ENG.

A native of Brazil, but the plant is cultivated throughout India as a vegetable in gardens. Jerusalem artichoke is a corruption of the Italian Girasole. It was introduced into Europe at the Farnese Garden at Rome, whence it was originally distributed. The roots are composed of a number of oblong tubercles, very large and fleshy, reddish outside and white within, resembling a potato; the stems are herbaceous, and upright. In France it is also known by the name of topinambour and poire de terre. According to Braconnot and Payen, the tubers do not contain fecula, but a vegetable principle called inulin or dahlin. These tubers, when cooked, form a good substitute for potatoes, and by some are even preferred. The foliage and tubers increase the milk of cows; the stem is rich in textile fibre. Its yield is as plentiful as potatoes, with less labour; and in fair land, rich in potash, continues uninterruptedly from year to year.—*Roxb.; Von Mueller.*

HELICIA ROBUSTA. *Wall.*

Rhopala robusta, *Roxb.* | H. Travancorica, *Bedd.*

A very handsome, good-sized tree, not uncommon on banks of streams on the Travancore and Tinnevelly mountains, above Panpanassam, at about 4000 feet elevation; it also inhabits Eastern Bengal and Burma.—*Beddome, Fl. Sylv.*

HELICIDÆ, a family of Gasteropodous molluscs, the land snails. See Mollusca.

HELICTERES ISORA. *Linn.* Screw-plant.

Isora corylifolia, *Sch. and End.*

Dhamni, . . .	DUKH.	Avurtunni, . . .	SANSK.
Murad sing?. . .	,,	Leeviya-gaha, . .	SINGH.
Kewun? Kewanni,	,,	Valambirikai, . .	TAM.
Maror-phalli, . .	HIND.	Syamali, . . .	TEL.
Kupaisi, Joa-ka-phal,	,,	Ada syamali, Kavanchi,	,,
Kisht, Bur-kisht, .	PERS.	Nooli-tudda, . .	,,

This plant has a singular-looking contorted capsule, consisting of five fibres closely twisted in the shape of a screw, of various lengths, from 1 to 2½ inches. A liniment is prepared from the powder of it, which is supposed to be a valuable application in cases of offensive sores inside of the ears. The Telugu name means that the juice of the root is a powerful stomachic. The powder of the fruit has also been used in griping pains of the bowels, but solely because the twisted fibres of the capsule were considered to stamp it as a remedy, according to the ancient doctrine of signatures. The fibre of the bark makes good ropes.—*Powell; Stewart; Ains. Mat. Med.* p. 118; *O'Sh.* p. 228.

HELICTIS. *Gray.* A genus of the mammalia, belonging to the order Carnivora and family Felidi. The species inhabit Eastern Asia, and have the general appearance and colouring of Mydaus, combined with a dentition resembling

that of Gulo or Mustela, but differing from both the latter genera in the large internal lobe of the upper carnivorous tooth. There are three species, —H. moschata of China, H. Nepalensis, the Nepal wolverine, and H. orientalis, *Horsfield*, from Malayana. They have long claws, adapted for burrowing.—*Jerdon, Mammals*, p. 80; *Eng. Cyc.*

HELILAH. ARAB., PERS. Myrobalan of Terminalia chebula, *Roxb.* Of these there are six kinds,—Helilah zirah, the young fruit, dried, of the size of cumin seed; Helilah jaoi, size of a barley-corn; Helilah zengi, size of a raisin, and black like a negro; Helilah chini, larger than Helilah zengi, and greenish; Helilah asfer, fruit near maturity and yellow; Helilah kabuli, the fruit at full maturity, called also Sarwarri hirda. Helilah-i-siah, PERS., Helilaj-ul-aswad, ARAB., Helileh-i-kalan, PERS., Helilaj-ul-kabuli, ARAB., Terminalia chebula, myrobalan.

HELIOPOLIS or Baalbec, the Baalith of Scripture, and Heliopolis or temple of the sun of the Greeks, is now a ruin. It is on the lower slopes of the Anti-Libanus, 43 miles north-west of Damascus, in lat. 34° 1′ 30″ N., and long. 36° 1′ E. The date of its origin is unknown; but Antoninus Pius built a great temple there. It was sacked in A.D. 748 by the Mahomedans, and finally pillaged in A.D. 1400 by Timur, and now contains about 100 Arab families, cultivators, and herdsmen, who reside in a quarter surrounded by a modern wall. The great temple of the sun and its buildings are at the western end, outside the modern walls. There were rows of pillars in the Corinthian order of architecture, almost all of which have now fallen, as also have the roofs of great courts, one of them 144 feet square, and vaulted passages. On the east is a court 230 feet by 118 feet, which had arches on its western and northern sides. See Baalbec.

HELIOS. The sun-god. See Aditya Ra; Heri.

HELIOTHIS ARMIGERA, an insect of the family Noctuidæ, which in innumerable hordes attacked the poppy crops of Shahabad and Patna in the season 1877–78; it is equally destructive to the cotton crops. It eats into the capsules of the poppy and cotton; careful hand-picking is the sole remedy. The pupæ become entrapped in the capsule. In February and March it attacks the coffee plant.

HELIOTROPE or Bloodstone, a quartzose mineral, which occurs abundantly in the trap rocks of the Dekhan.

HELIOTROPIUM, a genus of flowering plants of the natural order Boraginaceæ; several species are known in India. They should be grown in a soil more approaching to sand than clay. They are easily cultivated in pots, or the flower beds; propagated by cuttings in sand under glass. They require to be protected from the hot winds.—*Roxb.; Riddell.*

Heliotropium Brevifolium, *Wall.*

Chiti mirak, . DERAJAT. | Chittiphub, . . PANJ.

The herb is said to be laxative and diuretic; the seeds are emenagogue.—*Wallich; Powell.*

HELIX, a genus of land-snails very numerous in India.

HELL.

Enfer, ...	FR.	Narakam, . . .	SANSK.
Hölle, ...	GER.	Infierno, . . .	SP.
Inferno, ...	IT.	Jahännam, . .	TURK.

mongst Jews, Christians, Mahomedans, and Hindus, a place of after punishment, to which the souls of wicked people are sent. Mahomedans call it by the Hebrew and Arabic term, Jahanam, but also Dozakh; the Hindus, Narakam. Amongst the Japanese, Gokuja, or hell—or, as it is otherwise called, Roja—is their cage. By this they mean their prison, which stands about the middle of the town, at the corner of a descending street. The Hindus have seven or eight hells, named Atala, Nitala, Gabhastimat, Mahatala, Sutala, and Patala, each under a regent. The Siva Purana enumerates eight; other names not enumerated above, being Tala, Vidhi Patala, Sarkara-bhumi, and Vijaya.—*Hist. of Japan.*

HELLEBORUS NIGER, black hellebore.

Khertik, Kherbeck,	ARAB.	Kuddu, .	GUJ., HIND.
Kurbec-ul-aswad, .	,,	Helleboro, . . .	PORT.
Neiswurtel, . . .	DAN.	Kataka-rohini katuruni,	
Kalikutki,	DUK., HIND.		SANSK., TAM., TEL.
Schwartz Neiss-wargel, ...	GER.	Calurana, . . .	SINGH.

Under the native names, two kinds of hellebore are commonly met with in the Indian bazars, brought from Nepal and the Red Sea. The roots of both plants are used in medicine; they are much used by farriers, and occasionally by native practitioners, as a powerful cathartic in maniacal and dropsical cases. The roots of one kind occur in pieces of 4 to 6 inches, are black all through their substance, externally of a greyish colour, with numerous joints. The second variety is in similar pieces, but of a whiter colour internally. —*Faulk.; O'Sh.* p. 168.

HELL-WATER, a narcotic spirit, distilled in Java from the fleshy part of the fruit of Arenga saccharifera.

HELMAND RIVER is the Etymander of the classics, and the Hætumat of the Vendidad. It rises at Fazindaz, in the west slopes of the mountains of Paghman, about lat. 34° 40′ N., and long. 68° 2′ E., and, flowing generally to the S.W., after a course of 700 miles falls into the lake of Seistan. It is fordable at fourteen places. It is capable of being navigated by steamers. Its banks are fertile and well wooded, and an industrious population at one time occupied it, but left it, disgusted with the insecurity that prevails; and the accounts of it by travellers, writing at different times, have greatly varied.—*MacGregor*, p. 335; *Malcolm's Persia*, i. p. 3; *Pottinger's Tr.* p. 316; *Ferrier's Journey*, p. 428. See Aria Palus.

HELMSMAN, the Sikani, HIND., Jurumudi, MALAY. Sikani is from Sukhan, a helm. Sukhani, a helmsman.

HELOT. Modern India is largely inhabited by Hindus proper and Helot races, who have become completely or partially amalgamated into Hindu society. The superior Helot classes, all over Northern India, cultivate to a considerable extent either on their own account or as the servants of others. In the south of India are the Pariah, who are represented in the Canarese Karnatica by the Holar, and amongst the Mahrattas by the Mhar and Dher, and by the Malla in Telingana. The leather-workers, the Chakili of the Tamil people, are the Madiga of the Teling race, and the Mhang of the Mahrattas. In Northern India, the Dom, Dam, and Dumi; in Central India, the Kharwar or Kheroar, or ancient Santal, and the present Kheria. In the Panjab are the Chura serfs, descendants of the Chaura military Helots of the Mahabharata.

Throughout India are the Coolie or Kuli; and the Hadi is a Helot race in Bengal.—*Mr. Campbell.*

HELWINGIA, a very anomalous genus of Himalaya and Japan, having the unisexual flowers sessile upon the middle of the leaf, owing to the adhesion of the flower-stalk to the leaf-stalk and midrib. H. Himalaica, *Hook.*, grows at 7000 feet.

HEMA. SANSK. Gold. Hemadri, golden mountain, *i.e.* Meru. Hema-Kuta, golden peak, a range between the Himalaya and Meru.

HEMA CHANDRA, a great Jaina teacher who lived in the 12th century. He gained over to the Jaina faith the Hindu kings of Gujerat, shortly after which these princes disappeared before the Mahomedan conquests. Hema Chandra seems to have been the author of Abhidana Chintamani, a useful vocabulary, and of a life of Mahavira, printed under Mr. Colebrooke's superintendence.

HEMADRI, a Brahman of the Madhyandiniya Sakha, of the Sukla Yajur-Veda. He wrote several books, the Chaturvarga Chintamani on law, the Muktaphala on religion, and a Commentary on Wagbhata, called Ayur Veda-Rasiyana.

HEMBAKO, the Tibetan name of the territory in Ladakh which the Kashmirians call Dras.

HEMEROCALLIS, a genus of plants belonging to the natural order Liliaceæ, called day-lilies. H. flava is a native of Germany, and H. fulva of Italy; H. disticha from China; H. Sieboldii from Japan. H. speciosa and H. graminea are cultivated in gardens.

Hemerocallis fulva, *Willde.*, Nargas, Gool-nargas, HIND., the narcissus of India, cultivated as a flowering plant.

Hemerocallis graminea, *Tatarinov*, Hiuen-ts'au, CHIN. In China this is regarded as a charm for dispelling grief, and is worn in women's girdles to favour the birth of sons. The young leaves are eaten, and intoxicate slightly. The flowers of this day-lily, when dried, are called the Kin-tsin-ts'ai.—*Smith; Roxb.* ii. p. 168; *Gen. Med. Top.*

HEMICYCLIA, a genus of moderate-sized trees of Ceylon and the Peninsula of India. H. Gardneri, *Thw.*, not very abundant; H. lanceolata, *Thw.*, grows at Caltura, Ceylon; and H. sepiaria, *W. and A.*, Weera-gass, SINGH., is abundant in the hot, drier parts in the peninsula of the island.

H. Elata, *Bedd.*, is a lofty, straight, glabrous tree, very common in the dense moist forests of the Wynad (2000–4000 feet elevation), also in the Aninallays and Tinnevelly mountains. The leaves are less coriaceous than in H. venusta, but have exactly the venation and shape of that species, which is a small drooping tree with a different inflorescence. H. sepiaria has much more coriaceous, differently-shaped leaves, and is scarcely more than a shrub; the timber is strong, and much valued for building purposes.—*Thwaites; Wight, Icones; Beddome, Fl. Sylv.* p. 279.

HEMIDACTYLUS TRIEDRUS, a pretty little white and spotted lizard of Labuan. It is one of the Geckotidæ.

HEMIDESMUS INDICUS. *R. Brown.*

Tella Sugandhi-pala,

Indian Sarsaparilla, or Country Sarsaparilla, is a common plant all over the Indian Peninsula. The root is long and slender, with few ramifications, covered with rust-coloured very fragrant bark, the odour remaining after drying, and strongly resembling that of new-mown hay. The roots have long been employed in the Madras Presidency as a substitute for sarsaparilla, and have been also used in England, and very highly spoken of. It can be purchased of good quality at from 2 to 4 annas the seer. It occurs in bundles about a foot and a half long. Much of its virtues depend on a volatile principle; and it should not be employed in decoction, as long boiling dissipates the active ingredient. The infusion is a fragrant and highly effectual alterative and diuretic, of great service in secondary venereal affections and chronic rheumatism. It is in every respect a perfect substitute for sarsaparilla.—*O'Sh. Disp.*

HEMIGYMMA MACLEODII. *Griff.?*

Cordia Macleodii, *Hooker.*

Deyngan of . JUBBULPUR. | Botku, ... TEL.

This tree is abundant in the Godavery forests near Mahadeopur, and near Warangal, and it is also indigenous to the Jubbulpur forests, where it is called Deyngan. It yields a very beautiful wood, which would answer as a substitute for maple for picture frames, etc.—*Captain Beddome.*

HEMIGYROSA CANESCENS. *Roxb.*

Molinæa canescens, *Roxb.*
Cupania canescens, *W. A.*
Sapindus tetraphyllus, *D. C.*
Kurpa, ... MAHR.
Nekota, ... TAM.
Koriai, ... TEL.

A common tree in jungles on the eastern side of the Madras Presidency, Salem, Cuddapah, Mysore, etc.; also found in Bombay and Ceylon. It does not ascend the mountains much above 3000 feet. The wood is whitish, and is occasionally used by the natives for building purposes.—*Beddome, Fl. Sylv.* p. 151.

HEMIGYROSA DEFICIENS. *W. A.*

Sapindus deficiens, *W. A.*

A small or middling-sized tree of the Tinnevelly ghats, common at 2000 to 4000 feet elevation, Animallays (head of the ghat from Palghat up to the Neliampatty coffee estates) 2500 feet elevation, and towards the higher ranges at 5000 feet elevation. It appears to be in flower all the year round.—*Beddome, Fl. Sylv.* p. 231.

HEMIGYROSA TRICHOCARPA. *Thw.* A moderate-sized tree. One variety grows in the central province of Ceylon up to an elevation of 3000 feet, another in the hot, drier parts of the island.—*Thw. En. Pl. Zeyl.* i. p. 56.

HEMILEIA VASTATRIX, the coffee-leaf disease, or leaf-fungus, has for several years seriously affected the coffee trees of the island of Ceylon. Though requiring careful inspection for its detection, it was present upon all the coffee trees examined about 1879. With the help of the microscope, it is found at all times to pervade the greater part of the stems and older leaves, in the form of very fine branching filaments, its effects being apparent in numerous somewhat translucent spots, which may be observed when holding one of the older leaves against the light. The direct injury so caused to the coffee tree is, however, very slight, as compared with the effect produced when the fungus attacks the young leaves, causing them to fall prematurely. The presence of the fungus-filaments in such abundance on the outer

rface of the tree is quite sufficient to account or phenomena which it was first thought must e attributable to a poisoning of the juices of the ee, by an absorption of the fungus matter through s roots. The latter idea must therefore be given p, and the disease considered as external, except hen it appears within the tissue of the young aves. Subsequently, from these enclosed masses f filaments short branches are produced, which nerge from the pores, and bear the conspicuous ange-coloured spores or reproductive bodies. ome of these spores have been observed to erminate on the outside of the leaf, producing anched filaments of exceeding tenuity, which ow with marvellous rapidity all over the surface f the leaf, and beyond to the stems. The ends some of these filaments, too, have been observed enter the pores of the leaf, to form fresh disease- ots and fresh crops of spores. The true Liberian offee is said to be of hardy habit, and more able resist the ravages of this disease.

HEMIONITIS CORDIFOLIA. In Tenasserim, ear the sea-shore, this species of mule fern, with rdate fronds, is sometimes seen.—*Dr. Mason.*

HEMIPTERA, an order of insects; several nera occur in India; amongst them—

im. Pachycoridæ, *Dall.* Cantuo, *Bymot and Serv.;* Callidea, *Lap.*
im. Eurygasteridæ, *Dall.* Trigonosoma, *Lap.*
im. Plataspidæ, *Dall.* Coptosoma, *Lap.*

im. Nepidæ, *Leach.* Belostoma, *Latr.;* Nepa, *Linn.*
im. Notonectidæ, *Steph.* Notonceta, *Linn.;* Corixa, *Geoff.*

Of the aquatic species, the gigantic Belostoma dicum attains a size of nearly three inches. Some them are most attractive in colour. A green ie, often seen on leaves, is quite inoffensive if molested, but if irritated exhales an offensive lour. Insects known as coffee bugs have occaoned to the coffee planters great losses, against hich, seemingly, at present they have no means protecting themselves. The whole order emit powerful odour, and they present a very large oportion of gay-coloured and conspicuous sects. The ladybirds (Coccinellidæ) and their lies the Eumorphidæ are often brightly spotted if to attract attention, but they can both emit uids of a very disagreeable nature; they are rtainly rejected by some birds, and are probably ver eaten by any. The genera of Homoplerous emiptera, cicada, lystra, monophlebus, polyura, and cyrene have several species in the E. dies.—*Tennant.* See Insects.

HEMIRAMPHUS, a genus of fishes of the family Scombresocidæ, which includes the genera Belone, Scombresox, Hemiramphus, Arrhamphus, and Exoccetus.

Hemiramphus macrorhynchos of the Bay of Bengal, near Pondicherry, has an elongated body, and proboscis-like member proceeding from its mouth.

H. Russelli, *Cuv. and Val.*, Toda pendek (Pendek, short). The Malays thus denominate all the species of Hemiramphus, to distinguish them from those of Belone (Toda of the Malays). At Penang this species is numerous at all seasons, but larger individuals occur at irregular intervals. They appear at European tables under the appellation of guard fish.—*Cantor; Hartwig.*

HEMITRAGUS HYLOCRIUS. *Jerdon.*

Kemas hylocrius, *Ogilby.*	Capra warryato, *Gray.*
Ibex, ... ENG.	Warri-adu, . . . TAM.
Neilgherry wild goat, ,,	Warri-atu, . . . ,,

This is found on the Neilgherry and neighbouring hills, extending along the Western Ghats nearly to Cape Comorin; also on the Pulney Hills, and is called ibex by the Madras sportsmen. They are very wary, feed like a flock of sheep, and flee to the precipices when alarmed. Length, 4 ft. 2 in. to 4 ft. 8 in. to root of tail; tail, 6 or 7 in.; height at shoulder, 32 to 34 in.; horns occasionally 12 to 15 in.—*Jerdon*, pp. 288–90.

HEMITRAGUS JEMLAICUS. *Jerdon.*

Capra jharal, *Hodgs.* C. quadrimamis, *Hodgs.*	Capra jemlaicus, *H. Smith.*
Himalayan wild goat, ENG.	Kart of . . . . KULU.
Tehr, Tare, Tahir, HIND.	Jharal of . . . NEPAL.
Jhula (male), KANAWAR.	Jehr of . . . . SIMLA.
Thar, tharni (fem.), ,,	Esbu, Esbi of . . SUTLEJ.
Kras; Jagla, . KASHM.	

It is found throughout the whole of the Himalayas, generally in flocks, feeding on the grassy spots among the rocks. Length, 4 ft. 8 in. to root of tail; tail, 7 in.; height, 36 to 40 in.; horns 12 in. long, very thick at the base.

In the export commerce of India, hemp is a term applied to the fibres of several distinct plants, all valuable as cordage materials; and the Chinese terms, Ho-ma, Ta-ma, Ya-ma, and Hwang-ma, are fibres of urticaceous, malvaceous, and tiliaceous plants. But the true hemp of Europe is the fibre of the Cannabis sativa of botanists. It possesses a remarkably tough kind of woody tissue, capable of being manufactured into linen and cordage. It is an annual plant from 3 to 10 feet high, with the males and females on separate stems. It is difficult to say of what country the true hemp plant is a native,—Willdenow says Persia, Gmelin says Tartary, Thunberg found it in Japan; so that the varieties produced by climate have by some been thought to be distinct species, the European being called C. sativa, and the Indian C. Indica. Herodotus mentions it as a Scythian plant. Bieberstein met with it in Tauria and the Caucasian region. It is well known in Bokhara and Persia, and is grown everywhere throughout India, and in the Himalaya up to 10,000 feet. In European countries

it is cultivated only for its ligneous fibre, so extensively employed in the manufacture of ropes, and of coarse but strong kinds of cloth. It is cultivated in oriental countries to obtain the *intoxicating leaves, called Ganja, from which* bhang and subji or sidhi are produced, and for the resinous product called charras. The mode of cultivating is, however, different for each of its products. The plant requires exposure to light and air, and is therefore sown thin or transplanted out, when it is cultivated for its resinous and intoxicating secretion; while the growth of fibre is promoted by shade and moisture, which are procured by thick sowing.

In Arabia, Egypt, and Turkey, the leaves used as an intoxicant are known as Hashish, and Hashāsh is a term of obloquy; the plural Hashasin has been supposed by some writers to be the source of the word Assassin. For its fibre it is chiefly grown in Russia, and is sent to the other European countries for cordage, canvas, and towelling. The finest quality of hemp, and that which brings the highest price, being sold at 50s. per cwt. when the best Russia brings only 47s., comes from Italy; though French, English, and Irish hemps are much esteemed. The Russian hemp grows best in a friable soil of moderate richness. At St. Petersburg hemp is assorted into clean hemp, or firsts; outshot hemp, or seconds; half-cleaned hemp, or thirds; and hemp codilla. Riga hemp is classed as rein or clean, outshot, and pass hemp. Particular care is taken to ship hemp and flax in fine dry weather, and to preserve it from damp by packing with mats; for if either get wet, they are apt to heat, and to be totally spoiled.

The hemp imported into Great Britain from all countries, from 1877 to 1880, ranged from 1,204,036 to 1,320,731 cwt., of value from £1,684,377 to £2,072,040, almost all from Russia, Germany, Italy, and the Philippines; from India, between the years 1874–1879, the raw fibres exported under the commercial designation of hemp, in quantity and in value only ranged thus,—

	Cwt.	Rs.		Cwt.	Rs.
1874-5,	80,050	6,66,539	1877 8,	55,312	5,76,911
1875-6,	75,878	6,28,604	1878 9,	45,628	4,62,334
1876-7,	85,207	7,58,856	1879-80,	42,202	4,03,076

But during the same period the annual exports from India of coir, hemp, and jute averaged about 280,000 tons, value £3,500,000, the coir and hemp being valued about £20 a ton, and jute £12 the ton.

Sunn hemp (Crotalaria juncea), called also Brown hemp, Madras hemp, Indian hemp, Konkani hemp, Salsette hemp, Bombay hemp, Travancore flax, and by the vernacular names, Sana, Ghore-san, Sunn, Shanamoo, Kenna, Ambari, Taag, Wuckoo-nar, and Janapa-nar. It is the kind most generally cultivated all over India, on account of its fibre, and is that usually mentioned in the exports from Calcutta under the name of hemp, but also as sunn. The plant may be distinguished by its flowers being of a bright yellow colour, and of the form of the pea and of the laburnum, while the leaves are entire and lanceolate.

Ambari or Dekhani hemp (Hibiscus cannabinus), called in the languages of India, Mesta-pat, Nalkee, Pulooa, Sunni, Valaiti Sunn, Garnikura, Gongkura, Pooley-nammajii, Pundey, Pundrika, and Palungoo of Madras, is very generally cultivated all over India, and exported of very good quality from the west side. The fibre is like that of jute. It is often confounded with that of the sunn, as it is one of the brown hemps of Bombay, though the two plants differ much from each other.

Jubbulpur hemp is established as an article of *commerce in India, and highly esteemed by good* judges in Britain.

Manilla hemp is from the Musa textilis, grown in the Philippines, and introduced into S. India by Major (now Sir George) Balfour. It is being imported into Great Britain in increasing quantities and value.

1877, 332,304 cwt.	£488,069	1879, 337,687 cwt.	£434,037
1878, 421,160 ,,	551,856	1880, 407,431 ,,	622,776

A gigantic species of Cannabis hemp, growing from ten to fifteen feet in height, is in China a staple summer crop. This is chiefly used in making ropes and string of various sizes, such articles being in great demand for tracking the boats up rivers and in the canals of the country.

Jute is the fibre of Corchorus capsularis, and C. olitorius, and also known to the people as Pat, Koshta, Bhungee pat, Ghanalita pat, Putta, Singin-ganasha. It is now imported as jute, being largely used in Dundee.

Hemp seed and Oil, Ta-ma, Ho-ma-jin, Hwang-ma, CHIN. The small, shining, brittle achænia of the Cannabis sativa, are albuminous and oily, and entirely devoid of all narcotic properties. They are crushed for oil, the Ganja yennai, TAMIL, in many parts; in Russia, much used for burning in lamps.

HEMROO. HIND. A satin fabric of India, value two rupees the yard. See Kimkhab.

HENBANE SEED, Hyoscianus niger.

Bung, Buzir-ul-bung, AR.	Khorasani ajwain, HIND.
Sikran, Urmanikou,	Adas, Adas pedas, MALAY.
Jusquiame, ... FR.	Khorasani omam, TAM.
Bilsenkrout, . . GER.	

The seeds of the henbane plant have the odour of the plant, and an oily, bitter taste; an oil is obtained from them. See Hyoscianus.

HENDERSON, DR., a Bengal medical officer, who travelled in disguise as a Syud from Lodhiana in 1835, and passed by way of Mundi, Sanskar, or Lahul, to Ladakh and Iskardo, descending over the dangerous pass of Alunipilah, and by Burzel or Astor to Guryo and Kashmir. He again travelled to Dir and Bajwara, but was there plundered, and he returned to Lahore, where he died of fever in February 1836. He was the first projector of the Agra Bank.

HENERY, properly Ondari, one of the Bombay islets, $1\frac{3}{4}$ miles due E. of Kenery Island, and surrounded by reefs. It is joined on the N. to Trombay and Salsette, as these are united to each other by bridges and embankments.

HENLE. In 1844 there was issued at Berlin the Systembong der Plagiostomen by Dr. Henle, which included several of the genera and species of the fishes of the seas in the S. and E. of Asia.

HENNA, HIND., PERS., is the leaf of the Lawsonia alba, *Lam.*, the camphire of Scripture, the Yen-chi-kiah of China, and the Cyprus shrub of the Greeks and Romans. It is a fragrant plant when in flower. The fresh leaves, when beat up with catechu,

> 'Imbue
> The fingers' ends with a bright roseate hue,
> So bright that in the mirror's depths they seem
> Like tips of coral branches in the stream!'

This use of the leaves is as old as the era of the

Egyptian mummies, and is still followed by the Arabs, Persians, and people of British India, the last of whom know it as the mehndi. The leaves, beaten up into a soft mass with rice water, are applied to the nails, finger-ends, palms, and soles of the feet overnight; on being washed off the next morning, these parts are found stained a deep red colour. Men use it to stain their moustaches and beards, and for dyeing the manes and tails of their horses. In China, the leaves or flower of Lawsonia alba, of the Impatiens balsamina, and of the Terustrœmia Japonica are mixed with lime or alum, and applied to stain the fingers, the mane, tail, and hoofs of horses, red. Chinese children, especially girls, often have a circular spot of rouge or henna placed between the eyes. It is also used as an ordinary dye-stuff. A decoction of the leaves is used in skin diseases, lepra, etc. The flowers when distilled are used as a perfume.—*Smith.*

HENSLOWIA PANICULATA. *Migu.* Anambo, Burm. A reddish-coloured wood of British Burma, used occasionally for cart wheels. The average length of the trunk to the first branch is 50 feet.—*Dr. Brandis, Cal. Cat. Ex.*, 1862.

HENZA. Burm. A large golden figure of the sacred bird is in front of the throne of the king of Burma. The word is of Sanskrit origin,—Hanza, a goose. The Henza is regarded as the king of birds. It is perhaps a mysticized swan. Amongst the Burmese, the bayet, an emblem of nobility, is a pretty necklace of several strings or chains of filigree work joined together, and sewn with little figures, in red gold, of the Henza, which hangs low down on the breast.—*Yule's Embassy*, p. 85.

HENZADA, Myanoung, and Tharawaddy, three districts in the Pegu division of British Burma, with a population of about 500,000. The number of Burmese in the district in 1876 was greatly in excess of Talaings. On the conquest of the lower country by Aloungbhura (Alompra), every effort was made to destroy the Talaing nationality; and now it is said that scarcely any one of Talaing descent calls himself anything but a Burmese, so completely has the national spirit been extinguished.—*Imp. Gaz.*

HEPHÆSTUS MULCIBER, or Vulcan, the analogue of Visvakarma.

HEPTAPLEURUM RACEMOSUM. *Wight.*
Hedera racemosa, *W. Ic.*

A large tree, common on the Neilgherries and Animallays, etc., at elevations from 3000 to 7000 feet; grows also in Ceylon.—*Beddome, Fl. Sylv.*

HERA, a Babylonian goddess, the prototype of the Roman Juno and of the Egyptian Hora.

HERACLEUM, a genus of plants of which several species grow in the Himalaya; one of these, the padalli or poral, is collected for the winter fodder of goats, and is supposed to increase the milk. Wight, in Icones, gives H. pedatum.

HERAT is also called Heri; and the river on which it stands is called Hari-Rud. This river Hari is called by Ptolemy Αριος, by other writers Arius; and Aria was the name given to the country between Parthia (Parthuwa) in the west, Margiana (Marghush) in the north, Bactria (Bakhtrish) and Arachosia (Harauwatish) in the

It is the Haroya of the Vendidad, and is l to be the same as the Haraiva (Hariva) cuneiform inscriptions, though this is d. The importance of its situation is very and it has always exercised considerable influence over the affairs of Central Asia, and has endured more than forty sieges in ancient and modern times. It is one of the most ancient and most renowned of the cities of Central Asia. It gave its name to an extensive province at the time of the expedition of Alexander, and is supposed by some to be Alexandria in Ariis. Before the invasions of Chengiz Khan, the city could boast of 12,000 retail shops, 350 schools, 144,000 occupied houses, and 6000 baths, caravansaris, and water mills. It was for some time the capital of the empire which was transmitted by Timur to his sons. Under the mild and genial rule of his son, Shah Rukh Mirza, it recovered all it had lost. The restored prosperity continued till the beginning of the 16th century. Up to that period Herat was not only the richest city in Central Asia, but the resort of the greatest divines, philosophers, poets, and historians of the age. From the house of Timur it passed in the beginning of the 16th century to the Suffava lynasty of Persia, from whom it was taken by the Daurani in 1715. It was retaken by Nadir Shah in 1731, and it fell into the hands of Ahmad Shah in 1749. When the Daurani empire, created by Ahmad Shah, was lost by his grandsons, and parcelled out among the Barakzai brothers, Shah Kamran managed to maintain a precarious footing at Herat. He was the son of Mahmud, and therefore nephew of Zaman Shah, Shah Shuja-ul-Mulk, and Firoz-ud-Din, and

last remaining representative of the Saddozai princes in Afghanistan. Herat was all that remained to him of the empire of his family. Kamran was cruel and dissipated, and his minister, Yar Muhammad Khan, was even worse. Dost Muhammad was ruling at Kābul, and his half-brother, Kohun-dil Khan, ruled at Kandahar. Dost Muhammad was the son of Phound Khan, Barakzai. On the 23d November 1837, Muhammad Shah, king of Persia, laid siege to Herat, in pursuance of his ambitious policy for the reconquest of Afghanistan. It was on this occasion that Herat sustained a memorable ten months' siege, and all the efforts of the Persian king to capture it, aided by the advice and direction of Russian officers, were defeated, principally by the efforts of Lieutenant Pottinger, of the Bombay Artillery. Shah Kamran and his minister, however, continued intrigues with Persia, and the envoy, Major d'Arcy Todd, withdrew. On the occurrence of disasters in Kābul, Yar Muhammad was relieved of all apprehension of the interference of the British Government, and in 1842 strangled his sovereign, Shah Kamran, usurped the government of Herat, and professed himself a dependent of Persia. On his death in 1851, his son Syud Muhammad Khan succeeded him, only to be deposed in 1855, and succeeded by Muhammad Yusuf, grandson of Firoz, grand-nephew of Shah Zeman. Muhammad Yusuf was afterwards deposed, and Isa Khan succeeded; but under him Herat fell to the Persians, and he was murdered within a few weeks by a party of Persian soldiers. By the treaty of Paris, concluded between Britain and Persia on the 4th March 1857, the Persians were required to evacuate Herat. Before they withdrew, they installed Sultan Ahmed Khan, better known by the name of Sultan Jan, as ruler of Herat, and the British Government did not refuse to recognise him as *de facto* ruler. Shortly after,

Sultan Jan attacked and took Furrah, but the Amir of Kābul retook Furrah on the 29th June, *and on 28th of July laid siege to Herat. After a* siege of ten months, during which Sultan Jan died, the Amir Dost Muhammad took Herat by storm on 27th May 1863. He died eleven days afterwards, and was succeeded in the government of Kābul by his son, Sher Ali, who placed his own son, Muhammad Yakub, in charge of the captured city. Herat was thus again annexed to the Afghan dominions. Herat was visited by Mr. Forster in 1783, by Captain Christie in 1810, by Arthur Conolly in 1831, and by Eldred Pottinger in 1837. It is a city of great political importance; and in the strivings of the Persians and Afghans to obtain its possession, it has undergone great changes, but quickly recovers from the effects of war.

Herat is on the high road between India and Persia, the centre spot of an extensive and fertile valley, well watered by channels made from a perennial stream. The climate is the finest in Asia. There are two hot months in the year, but the thermometer even then rarely stands higher than 85 degrees (Fahrenheit) in the shade. The nights are always cool, often cold. The Heratis have a proverb, 'If the soil of Isfahan, the cool breezes of Herat, and the waters of Khwarizm were in the same place, there would be no such thing as death.' Herat is on the same level with the rest of the table-land of Western Afghanistan, and may be regarded as forming part of it, but it is just beyond the ridge which divides the waters that run to the south from those that flow northward to the Oxus. The winter is tolerably mild; on the plain the snow melts as it falls, and does not lie long even on the summits of the mountains.

The districts of Herat boast of extensive mines of iron and lead. The scimitars made at Herat are considered the best in Central Asia. The breed of Herati horses is scarcely less renowned; they are very cheap, and are exported in large numbers. Herat, too, is famous for its carpets, worked in silk and in wool, and in both combined, they are made of any size, and command large prices. Hitherto the difficulty in the way of transport has prevented their being so well known as they deserve. Silk is spun in large quantities in the districts. The districts likewise produce largely asafœtida, saffron, pistachio nuts, gum, and manna. These and horses constitute the principal exports. Of skins, only those of the sheep and the lamb are used in Herat. Sheep-skins are made up into coverings. The people are Mongol, Parsivan, Tajak, and Hazara.—*Bellew; Elphin. India*, 629; *East Ind. Parl. Papers*, 133; *Treaties, etc.* vii. 165; *Müller's Lectures*, 234.

HERBA BENGALO. Mention is made in several old works relating to India, of cloths having been made of a plant called Herba Bengalo, which appears to be now unknown as a material of manufacture. Linschoten, who visited Bengal in 1599, is one of the earliest travellers who notice it (vide Navigatio ac Itinerarium Johan. H. Linscotani, A.D. 1599). Mandelso speaks of it as 'a certain herb having on the top of its stalk (which is about the compass of a man's thumb) a great button like a tassel: this tassel is spun out, and there are excellent stuffs made of it. The Portuguese call it Herba Bengalo, and make of it hangings and coverlets, in which they represent all sorts of figures' (vide Mandelso's Travels, A.D. 1639, translated by J. Davies, book *ii. p. 94). A similar description is given of it* by the Abbé Guyon in his History of the East Indies:—'On trouve encore à Bengale une espèce singulière des toiles qui n'est ni fil ni coton, dont on fait des tapis et des couvertes. On les nomme simplement herbes. La tige de l'herbe, dont elles sont faites, a un pouce d'epaisseur et au haut une espèce de houppe qui contient une sorte de bourrée que les femmes du Paris filent on prendroit ces etoffes heure de loiser: mais elles sont sujettes a se couper dans les plis' (vide Histoire des Indes Orientales, par M. l'Abbé Guyon, A.D. 1744, iii. p. 19). Fitch, about the year 1586, and Hamilton in 1744, both refer to it in their accounts of Orissa. The latter calls it Herba, a sort of tough grass of which they make 'ginghams, pinascos, and several other goods for exportation' (New Account of the East Indies, by Captain A. Hamilton, A.D. 1744, i. 393).

HERBELOT, D', author of the Bibliotheque Orientale, or the Oriental Library, was born at Paris, 4th December 1625. He was Oriental Secretary and Interpreter to the court. He began the work at first in Arabic, but afterwards continued it in French. He died at 70 years of age, before the work was printed; but it was continued by Antoine Galland, the translator of the Arabian Nights Entertainments. D'Herbelot understood critically the Latin, Greek, Hebrew, Chaldaic, Syriac, Arabic, Persian, and Turkish. It was history arranged alphabetically.—*Oriental Herald.*

HERBERT, Captain J. D., wrote on the Mineral Productions of the Himalayas, in As. Res., 1833, viii., part 1, p. 216; Course and Levels of the Sutlej, ibid., 1825, xv. p. 339; Coal within the Indo-Gangetic Mountains, ibid., 1828, xvi. 397; Gypsum in the Indo-Gangetic Mountains, ibid., 1833, xviii. part 1, p. 216; Tour through Kumaon and Ghurwal, in Bl. As. Trans., 1844, xiii., part 2, p. 734; Geological Map of Himalaya Survey, ibid., 1844, xiii. part 1, p. 171. —*Dr. Buist.*

HERBERT, Sir THOMAS, a cadet of the Pembroke family, who travelled as secretary to the English embassy to Persia from 1627–29. In his book, entitled A Description of the Persian Monarchy now beinge, the Orientall Indyes, Isles, and other parts of the Greater Asia, and Afrik,' was published in 1634. He contends that Prince Madoc ap Owen Gwynedd discovered America 300 years before Columbus. The third edition, 1665, contains a beautiful etching of Persepolis by Hollar.

HERCULES is supposed by Colonel Tod to represent Baldeva, a prince of Mathura, nephew of Koonti, the mother of the Pandua, and who, as in the days of Alexander, is still worshipped at Buldeo in Vrij, his club a ploughshare, and a lion's skin his covering. Megasthenes (iii. pp. 525–531) mentions the Indian tradition of Hercules as reigning in India fifteen generations after Dyonysus; that he built Palibrotha and other cities; had numerous sons, to each of whom he left an Indian kingdom; and a daughter Pandæa, to whom he likewise bequeathed a realm. Bunsen, following Lassen, says he was chiefly worshipped in the Suras-Sen country, and identifies him with Krishna; says he founded Mathura. But there were many to whom this name was applied;

Varro enumerates forty-four, Diodorus says three, and Cicero six. Hercules Belus of Cicero is supposed to be the Osiris who invaded up to the Indus.—*Tod, Rajas.* i. 30; *Buns.* iii. 525, iv. 210.

HERDSMEN in Central Asia, and south to the Arabian Sea, are a large mass of the populations of their respective regions,—many of them in Arabia, Persia, Afghanistan, Baluchistan, being purely nomades, dwelling in tents, and migrating with the seasons; others of them in British India camping out only in the dry season. Numbers of Ahir or Gopa in Central India and Western Bengal cling to the nomade life of their ancestors, but Sad'h Gop, or pure Gopa, are settling down to husbandry. The Gareri herdsmen founded the Holkar dynasty. In the S. of the Peninsula are the Dhangar, the Kurumbar, also shepherds, who were once dominant, but now only pasture great flocks of sheep. Amongst the Hindus of Bengal, the Goali are numerous; after them, the Brahman and Kaist races, are the Bagdi, an aboriginal people, and a class of cultivators called Kyurto. See Ahir; Dhangar; Gadaria; Gaola; Gopa; Kurumbra.

HERI, a name of Krishna, familiarly Kaniya, as of the celebrated tribe of Yadu, the founder of the fifty-six tribes who obtained the sovereignty of India, and descended from Yayat, the third son of Swayambhuva Manu, or the man, lord of the earth, whose daughter Ella (Terra) was espoused by Budha (Mercury), son of Chandra (the moon), whence the Yadu are styled Chandravansi, or children of the moon, the Lunar race.

The coincidence between the epithets of the Apollos of Greece and India, as applied to the sun, are striking. Heri, as Bhan-nath, the lord of beams, is Phœbus, and his heaven is Heripur Heliopolis), or city of Heri. Helios, of Greece, was a title of Apollo, whence the Greeks had their Elysium; and the Heripur or Bhan-t'han (the abode of the sun) is the highest of the heavens of the Rajput. Hence the eagle (the emblem of Heri as the sun) was adopted by the western warrior as the symbol of victory.—*Tod's Rajasthan*, i. pp. 532–545.

HERI, a tribe of Mahomedan Rajputs, chiefly found in Jusper, a pargana of Moradabad.

HERI-RUD, written also Hari-Rud, a river of Afghanistan, which rises in lat. 34° 50′ N., and long. 66° 20′ E., at that point of the Koh-i-Baba range of mountains where it branches off into the Koh Siah and Safed Koh, at an elevation of 9500 feet. It flows west through Shahrek, Obeh, and Herat. After leaving Herat, it flows through Persian territory, dividing into two branches, the smallest of which runs towards Mashad. Its plains are harried by Hazara and Turkoman. It is said to have formerly joined the Murghab. The united stream is ultimately lost in the desert of Khorasan. At Herat it was formerly crossed by a brick bridge.—*MacGregor.*

HERITIERA LITTORALIS. *Ait., D. C.*

Balanopteris tothila, *Gært.* | Ka-na-zo, . . . BURM.
Sundri, ... BENG. | Kon-zo-za-loo, . . ,,

A species of the Sterculiaceæ. Grows in the Mauritius, the Peninsula of India, the Sunderbuns, is common in the Rangoon district, and along the sea-shores in the Mergui Archipelago and Amherst province. Its wood is used for boats, boxes, planks of houses, etc.; is very light, cemented, durable, and tough.—*Roxb.* i. p. 142; *Voigt; M'Clelland; Captain Dance.*

HERITIERA MINOR. *Lam.*

H. fomes, Willde. | Balanopteris minor, *Gærtn.*
Sundri, ... BENG. | Ka-na-za, . . . BURM.

A gloomy-looking tree, distinguishable from all others many miles distant. Wherever the tides occasionally rise and inundate the land, this tree is sure to be found, throughout the whole Tenasserim coast, but is never found at home, either on the high, dry lands on the one hand, or in the wet mangrove swamps on the other. It grows in the Sunderbuns, is used in Calcutta for firewood, furnishes the sundri wood so well known in Bengal for its strength and durable qualities, and gives its name, as Captain Munro thinks, to the Sunderbuns. When seasoned, it floats in water, and is the toughest wood that has been tested in India. When Rangoon teak broke with a weight of 870 lbs., sundri sustained 1312 lbs.

It is used for boats, piles of bridges, boxes? and many other purposes. It is recommended for helves, but should be killed a twelvemonth before being cut down, or otherwise should be seasoned by keeping, after it has been cut down. Dr. Wallich says it stands unrivalled for elasticity, hardness, and durability. He adds that the charcoal made from it is better than any other sort for the manufacture of gunpowder.—*M'Clelland, in Records, Foreign Dept.* ix. p. 43; *Dr. Mason; Captain Dance; Voigt.*

HERITIERA PAPILIO. *Bedd.* A very lofty evergreen tree, common in the dense moist forests above Courtallum (Tinnevelly) at about 3000 feet elevation, also about Peermede (Travancore), 3500 feet; in flower in August and September; it yields a very valuable, tough timber.—*Beddome, Fl. Sylv.* p. 218.

HERIYA RAYAT, or chief rayat, also called Buddhavant, the wise, in Mysore; a person of importance, who takes the lead in all affairs of the community.

HERMANN, PAUL, a medical man who furnished the materials of the Thesaurus Zeylanicus of the elder Burmann, published in Holland, and afterward of the Flora Zeylanica of Linnæus.—*H. et Th.* p. 46.

HERMES or Mercury, the analogue of Buddha. The worship of Hermes was established in Italy, Greece, Egypt, and Syria, and his ruined temple is 6 miles from Zahle, and a mile from Fursul.

HERMIPPUS, according to Pliny, translated the Zendavesta into Greek about the same time as the Septuagint translation of the Bible. Hermippus is supposed to have been the peripatetic philosopher, the pupil of Callimachus, and one of the most learned scholars of Alexandria.

HERMIT CRAB, the well-known Pagurus crustaceans that occupy the empty turbinated shells of testaceous molluscs. The fore part of the body is armed with claws, and covered with a shield, but it ends in a long, soft tail, provided with one or two small hooks. Some of them carry large shells to considerable heights and distances from the sea. The genus Cœnobita inhabits the land; and in Kandavu, one of the Fiji group, they climb the hills and go far inland, bearing their shells with them.—*Hartwig; Moseley*, p. 304.

HERMODACTYL. Pei-mu, CHIN. This medicinal plant of the later Greeks and Arabs forms the sweet and bitter Surinjan of the Arabs, and both are supposed to be species of the genus

Colchicum. The Persian name of the sweet is Surinjan shirin, and Surinjan talkh is the bitter. In India, the Surinjan talkh, or bitter, and Surinjan shirin, or mild, are both identical with the Hermodactyls of the ancient Arabian and Greek writers. The tasteless variety is about one inch long and the same in breadth, heart-shaped, rather flattened, grooved at one side, convex at the other. They are not wrinkled, are easily broken, and form a white powder. The bitter kind is smaller, and has a striped appearance. In some trials which Dr. O'Shaughnessy made with an acetous tincture of the Surinjan talkh, he was led to believe it possessed all the virtues of the dried Colchicum of Europe.—*O'Sh.* p. 661; *Irvine.*

HERNANDI, a martial branch of the Koresh tribe of Mecca. Many of them in Syria are employed as irregular horse.

HERNANDIA PELTATA. *D. C.* Palati, Singh. This is a large tree, common on the sea-coast in Ceylon between Galle and Colombo; also in Australia, and on the sea-coasts in the South Pacific and Eastern Archipelago, westward to the Mascarene Islands, and northward to the Philippines and Loo-Choo. Its wood is very light, and takes fire so readily from a flint and steel, that it might be used as tinder. The juice is a powerful depilatory, removing the hair without any pain; the bark, seed, and young leaves are cathartic.—*Beddome, Fl. Syl.* p. 300.

HERNANDIA SONORA. *Linn.* Bong-ko, Javan. A tall, erect tree of the Moluccas and the Fiji Islands; in the last, forming one of the sacred groves,—a complete bower. The genus was named after Hernandez, a naturalist sent out to Mexico by Philip II. of Spain, and obtained its name 'sonora' from the noise made by the wind in whistling through its persistent involucels. The bark, the seed, and the young leaves are slightly cathartic. Rumphius says that the fibrous roots, chewed, and applied to wounds infected with the Macassar poison, act as an effectual cure. The juice of the leaves is employed as a depilatory. It destroys the hair wherever it is applied, and this without producing pain. The wood of this species is very light; and Aublet says it takes fire readily from a flint and steel, and may be used as tinder.—*Ains.; O'Sh.; Voigt; Seeman's Fiji; Eng. Cyc.; W. Ic.; Thw. Zeyl.* p. 258.

HERODOTUS, a Greek historian who travelled in Egypt and Persia, and visited Tyre, B.C. 460. He never gives us to understand that he was able to converse in any but his own language. He is called the father of history. He relates that, after Cyrus had conquered a large portion of Asia, his third successor, Darius Hystaspes, extended his conquests towards the Indian Peninsula.—*Bjornstjerna,* p. 93.

HERONS are classed by naturalists in the family Ardeidæ, gen. Ardea, Ardeola, Herodias, Nycticorax. Those of the E. Indies are—

Ardea Goliath, *Temm.*, the great heron.
A. Sumatrana, *Raffles*, the dusky grey heron.
A. cinerea, *Linn.*, the blue heron.
A. purpurea, *Linn.*, the purple heron.
Nycticorax griseus, *Linn.*, night heron.
Ardeola leucoptera, *Bodd.*, pond heron.
Butorides Javanica, *Horsf.*, little green heron.
Herodias alba, the Ardea alba, large egret, or great white heron of Europe, Asia, N. Africa, very rare in Britain, is very common in India, though the race is considered different by some.
H. bubulous, the Ardea russata, or buff-backed heron or egret of Europe, Asia, N. Africa, exceedingly rare in Britain, is very common in India.
H. egrettoides, *Temm.*, the smaller egret, Patang-ka-bagla of India, Burma, and Malayana.
H. garzetta, the Ardea garzetta, or little egret of Europe, Asia, N. Africa, exceedingly rare in Britain, very common in India. Three specimens observed of an egret in winter dress seemed to differ only from ordinary Herodias garzetta in having black toes.

Herons are plentiful in Kashmir, and a heronry is protected in the Shalimar Gardens. About 50 miles S.E. from Madras, and 12 miles from Chingleput, is a small village called Vaden Thangul, which means literally Hunter's Rest, from Vaden, hunter, and Thangul, rest. To the south of the village lies one of the small tanks called Thangul by the Tamil ryots, implying a water-rest or temporary reservoir, with an area of about 4½ acres (30 cawnies). From the N.E. to the centre of the bed of the tank there are some 500 or 600 trees of the Barringtonia racemosa, from about 10 to 15 feet in height, with circular, regular, moderate-sized crowns, and when the tank fills during the monsoons, the tops only of the trees are visible above the level of the water. This place forms the breeding resort of an immense number of water-fowl; herons, storks, cranes, ibises, cormorants, darters, paddy birds, etc., make it their rendezvous on these occasions. From about the middle of October to the middle of November, small flocks of 20 or 30 of some of these birds are to be seen, coming from the north to settle here during the breeding season. By the beginning of December they have all settled down; each tribe knows its appointed time, and arrives year after year with the utmost regularity, within a fortnight later or earlier, depending partly on the seasons. They immediately commence building their nests or repairing the old ones. When they have fully settled down, the scene becomes one of great interest. During the day the majority are out feeding, and towards evening the various birds begin to arrive in parties of 10, 15, or more; and in a short time every part of the crown is hidden by its noisy occupants, who fight and struggle with each other for perches. Each tree appears like a moving mass of black, white, and grey; the snowy white plumage of the egrets and curlews contrasting with, and relieved by, the glossy black of the water-crows and darters, and by the grey and black plumage of the storks. The nests lie side by side, touching each other, those of the different species arranged in groups of 5 or 6, or even as many as 10 or 20, on each tree. The nests are shallow, and vary in inside diameter from 6 to 8 inches, according to the size of the bird. The curlews do not build separate nests, but raise a large mound of twigs and sticks, shelved into terraces as it were, and each terrace forms a separate nest; thus eight or ten run into each other. The storks sometimes adopt a similar plan. The whole of the nests are built of sticks and twigs, interwoven to the height of 8 or 10 inches, with an outside diameter of 18 to 24 inches; the inside is slightly hollowed out, in some more and in others less, and lined with grass; reeds and quantities of leaves are laid on the nests. In January the callow young are to be seen in the nests. During this time the parent birds are constantly on the wing in search for food, now returning to their young loaded with the spoil,

and again going off in search of a further supply. About the end of January or early in February, the young are able to leave their nests and scramble into those of others. They begin to perch about the trees; and by the end of February or the beginning of March those that were hatched first are able to take wing and accompany their parents on expeditions; and a week or two later, in consequence of the drying up of the tanks in the vicinity, they begin to emigrate towards the north with their friends. Thus, in succession, the different birds leave the place, so that it is completely deserted by the middle of April, by which time the tank also becomes dry, and the village cattle graze in its bed, or shelter themselves under the trees from the scorching heat of the midday sun, while the cow-boys find amusement in pulling down the deserted nests. The villagers hold an agreement from the Nawab's ancient government, which continues in force by a renewal from the British Government, that no one is to shoot over the tank, and this is strictly enforced. When the tank becomes dry, the silt of its bed is taken up to the depth of a foot, and spread over the rice-field.

Dr. Shortt visited the trees on the 8th March 1864, on a raft pushed along by two fishermen swimming one on either side, their heads only visible above. As he got near the birds rose *en masse* overhead, and, uttering piercing cries, some, with threatening gestures, rested a moment on the adjoining trees, and then took to their wings again. Although so crowded, they performed their evolutions with the greatest nicety and dexterity, never interfering with each other's movements. Some ascended to a great height, and were hardly perceptible in the air, while others gyrated immediately above their heads; many crowded on adjoining trees, and witnessed the intrusion with dismay.

The small grey and black stork, Leptoptilos Javanica, *Horsf.*,—Tamil name, Nutha cootee narai; literally, shell-fish (Ampullaria) picking crane,—were the most numerous. Their nests were 2 feet in diameter, and contained three eggs or young. The eggs were of a dirty white colour, of the same shape, but not quite so large, as those of the turkey. The flesh is eaten by Mahomedans and Pariahs. The bird keeps entirely to marshy fields, edges of tanks, etc. Some half-dozen or more may often be seen in the morning sunning themselves with outstretched wings in the dry fields. They nest early, and the young are firm on the wing in the month of February.

The ibis or curlew, Ibis falcinellus,—Tamil, Arroova mooken; literally, sickle-nosed, which name they take from their long curved beaks. The nests of this bird contain from three to five eggs, resembling in size and shape a medium-sized hen's egg, but are of a dirty white colour. The birds are white, with black head, feet, and neck, and have a long curved black bill. The young are fully fledged in March, and take to the wing in April.

The grey heron, Ardea cinerea, *Linn.*,—Tamil, Narai, sometimes Pamboo narai, or snake crane,—has a similar nest, built of twigs, containing sometimes two, sometimes three eggs. They are fledged from January to April, according to the time of depositing their eggs, which some do earlier than others. The eggs are of a light green colour; they are not so large in circumference as a large-sized hen's egg, but are longer, with the small end sharp.

The purple heron, Ardea purpurea,—Tamil, Cumbly narai, or blanket crane. Nest the same; deposits two to three eggs, of same size and colour as last; seems to rear only two young. The young are fully fledged in April.

Nycticorax griseus, *Linn.*,—Tamil, Wukka. Nests are built after the same fashion, but smaller in size, and contain five eggs the size of a bantam's, and of the same shape. The young are fledged in April.

The cormorant, Graculus Javanicus, *Horsf.*,—Tamil, Neer cakai, or water-crow. Nest built of sticks; rears three or four young, which are fledged and on the wing in January; eggs like those of a small-sized bantam's, rather sharp-pointed at small end, with a slight greenish tinge.

The large cormorant, Graculus Sinensis,—Tamil, Peroon neer cakai, or large water-crow,—builds a very rude nest, chiefly formed of sticks; lays four eggs the size of a medium-sized hen's egg, and have a slight greenish tinge; the young are fledged sometimes in January, sometimes in March. These birds, as well as G. pygmæus, are to be seen fishing in the tank itself; and the rapidity with which they find their prey, by diving, is wonderful.

The darter, Plotus melanogaster,—Tamil, Pamboo thalai neer cakai, or snake-headed water-crow. Nest same as last; three, sometimes four, eggs of same size and colour; young fledged and on the wing, some in January, others not till April.

The villagers of Vaden Thangul told Dr. Shortt that the pelican sometimes breeds here, as also the black curlew. Occasionally different kinds of teal, widgeons, etc., are said to nest in the rushes that bound the inner surface of the tank bund. The egrets, or Herodias garzetta, bubulcus, and intermedia, were congregated in very large numbers, and roosted on the trees at night; but they do not nest, which seems singular, for of all the birds that assemble here, these occur in the greatest number. Ardea alba, or Herodias alba, and H. intermedia are also found here; and the natives say that they breed.—*Dr. Shortt, in Linn. Soc. Jo.*

HERPESTES. *Illiger.* Mungoose, Mangouste.

Ichneumon, *Lacepede.* | Mangusta, *Oliver.*

The Herpestes is a genus of digitigrade carnivorous mammalia; and the Egyptian species, the ichneumon, has been noticed by writers from the earliest times, its combats with snakes and its alleged attacks on crocodiles having been mentioned by Aristotle, Diodorus Siculus, Pliny, Strabo, Ælian, and others. The mungoose of India and ichneumon of Egypt are frequently domesticated, and their search for snakes for food is continuous. Jerdon gives 12 species belonging to British India and the E. Archipelago, viz. H. brachyurus, exilis, fuscus, griseus, Javanicus, Jerdoni, Malaccensis, monticolus, Nipalensis, Smithii, and vitticollis, and retains as synonyms of other authors, Auro-punctatus, Elliotti, nyula, pallidus, pallipes, and rubiginosus.

Herpestes fuscus, *Waterhouse*, the Neilgherry brown mungoose, occurs in the Neilgherries.

Herpestes griseus, *Geoff.*, Madras mungoose.

H. pallidus, *Schinz.* | Mangusta mungos, *Elliot.*

Mungli, CAN. Newul, Newara

Koral, . . . GOND. nyul, ... HIND.

Mangus, HIND., MAHR. Yentawa, . . . TEL.

. Spread through most parts of S. India, in the open country, thickets, hedgerows. It eats eggs, and kills snakes, and their poison is believed not to affect the mungoose. It is very destructive to domestic fowls, pigeons. The plants Ophiorhizon mungos and O. serpentinum are said to be eaten by it when bitten by a snake.

Herpestes Malaccensis, *F. Cuv.*, Bengal mungoose.
H. nyula, *Hodgs.*

Nwal, Newara, Nyul, HIND. | Baji biji, . . . HIND.

Inhabits Bengal, N. India, Assam, Burma, and Malayana; lives in burrows made by themselves.

Herpestes monticolus, *W. Elliot.*

Long-tailed mungoose, ENG. | Konda yentawa, . TEL.

Its tail is long, and tip dark coloured; occurs in the E. Ghats.

Herpestes Nipalensis, *Gray.*

H. auro-punctatus, *Hodgs.* | H. pallipes, *Blyth.*

The gold-spotted mungoose is found in the Panjab, all over the Lower Himalaya from Sikkim to Kashmir and Afghanistan; also southwards in Bengal, Assam, Burma, and Malay Peninsula.

Herpestes Smithii, *Gray*, ruddy mungoose.

H. Elliotti, *Blyth.* | H. rubiginosus, *Kelaart.*

Occurs near Madras, at the foot of the E. Ghats and Neilgherries, also in Ceylon.

Herpestes vitticollis, *Bennet*, the stripe-necked mungoose of the W. Ghats, from near Dharwar to Cape Comorin.

HERPESTRIS MONNIERA. *H. Br.*

This creeping plant grows in many parts of India, near streams and tanks, in moist places; and the jointed root, stalks, leaves, and blue-bell flowers are all used in the medicines of the native physicians.—*Roxb.; Ainslie; Voigt; Useful Plants.*

HERRINGS.

Haringen, . . . DUT.	Arenques, . . . PORT.
Harengs, ... FR.	Seldi, ... RUS.
Haringe, Heringe, GER.	Arenques, ... SP.
Aringhe, ... IT.	Sill, ... SW.

A well-known fish, 8 to 12 inches in length, and about 5½ ounces. It dies almost the instant it is taken out of the water. Herrings are met with in three different forms. Fresh herrings are the condition in which they are taken from the sea; white or pickled herrings are merely salted, and put into barrels; and red herrings are gutted and salted, and afterwards hung up and fired with the smoke of green wood. On the Tenasserim coast are flat-bellied herrings, thryssa anchovies, Tenasserim sardines, bristle-finned sprats, shads, chatæsi, fresh-water herrings, flying fish, half-billed gar-fish, pikes, plagusia, soles and brachirus-turbots.—*Mas.*

HESSING, COLONEL. His tomb is a model of the taj. He was a Dutchman in Sindia's service, who rose from a common soldier to be the governor of Agra.—*Tr. of Hind.* i. p. 436.

HESTIA JASONIA, the sylph, floater, spectre, or silver-paper butterfly, is found only in the deep shades of the damp forests of Ceylon, in the vicinity of pools of water and cascades.—*Tennant*, i. p. 263.

HESUDRUS, the ancient name of the Sutlej river, the Hesydrus of Alexander, and the Satadru of the Vendidad. In the oldest hymns of the Veda, about 1500 B.C., we find a war-song referring to a battle fought on the banks of this river. —*Bunsen.*

HETEROPA ASAROIDES. Birthwort. The Si-sin plant of China; the dried root is used medicinally.

HETEROPANAX FRAGRANS. *Seem.* A tree of Lakhimpur in Assam. The cocoons and silk of the Eria silk-worm feed on its leaves.

HETEROPHRAGMA ROXBURGHII. *D. C.* A large timber tree of Chanda, the Godavery forests, and the Malabar coast. S. adenophylla, *Seem.*, and S. sulphurea, *Kurz*, occur in Burma.

HETEROPODA, a class of nucleobranch oceanic molluscs, of anomalous forms, with the foot variously modified for swimming. Amongst these, Pterosoma plana, *Less.*, is a transparent, delicately-tinted, winged animal, thick and gelatinous, and almost invisible in the water; it is found in the seas of the Eastern Archipelago. The Firola, of the same class, is a transparent creature, with a long proboscis, and swims by means of a fin below. The Sagitta, or arrow-fish, one of the same class, darts through the water by sudden instantaneous jerks; it resembles a minute arrow. Its body is so transparent that its whole organization may easily be observed. Atlanta, a pretty little curly shelled nucleobranch of this class, Heteropoda, has both its shell and body transparent. All these range through the Mediterranean, Atlantic, and Indian Oceans.—*Collingwood.*

HET-HER, a name of Aphrodite, called also Hather, Athyr, and Hathor, an Egyptian goddess, fabled to be the daughter of Ra or the sun.

HETKARI. MAHR. Signifying down; as applied to country, down the coast to the south, a native of the country southwards of the Savitri river; a native of the Southern Konkan, serving in the Mahratta infantry.—*Wils.*

HEUMA or Shendu tribe inhabiting the hills north of Arakan. They occupy the Yeoma-toung hills, on the watershed between the Meeyk-young and the drainage of the Manipur rivers. The Heuma are placed by Captain Tickell in the higher hills to the N. and N. E. of the Kun tribes, between lat. 21° and 22° N., and long. 93° and 94° E. Their chiefs are called Aben, and their villages have about 50 to 400 houses. They use the trap-bow for shooting the elephant, but fire-arms are superseding the ruder weapons. They regard the sun and moon as deities.

HEVEA BRAZILIENSIS yields the caoutchouc of commerce. H. Guianensis, the caoutchouc plant, its trunk 17 to 20 yards high, scaly like a pine-apple; very straight, branched at the summit. Incisions in the bark cause the discharge of a juice which concretes into the well-known and very valuable caoutchouc of commerce. This is a product, however, of many other trees in this and allied families,—for example, of Jatropha elastica, Ficus Indica, Artocarpus integrifolia, Urceola elastica, etc. The juice when first obtained is white and milky, sp. gr. 1·011; spread in thin layers, it quickly dries into a colourless and often transparent solid substance.—*O'Sh.* 560.

HEWANT. HIND. The autumn harvest of

orthern India, intermediate between rabi and including bajra and juar. Hemanta in is a rice crop growing in the months grahayana and Pausha (November—December), pening in December.

HEYNE, BENJAMIN, M.D., a Madras medical fficer, author of Mode of Manufacturing Catechu, l. As. Trans. vii. p. 108; Travels in India, ibid.; n Copper at Nellore, ibid.; Tracts, Historical nd Statistical, on India, with an Account of umatra, London 1814.

HEYNEA AFFINIS. *Juss.* H. trijuga, *Roxb.* his is a very ornamental middling-sized tree of epal, common in many localities on the western ountains of the Madras Presidency, from 2000 et upwards; at Conoor, 6000 feet, abundant; olampatty valley, 3000 feet, very abundant. H. uinquijuga, *R.*, is a native of the Moluccas, with ie perfect habit of a Melia.—*Roxb.; Bedd.*

HIAVIRA-PATI, *i.e.* resolute prince, also yled Shora-pati, lord of the oxen, a ruler who pposed Semiramis and drove her back across the dus. The whole country on the right bank of ie Upper Indus, the site of the present Peshawur, pposite Attok (Taxila) and still higher up, was ibutary to the Assyrians, as it afterwards was to ie Medes and Persians. Pliny tells us that emiramis capitulated here, on the Kophen (the abul river, the Kubha of the Rig Veda); and on ie black obelisk from Nineveh in the British Iuseum, which is at least of the 9th century B.C., ie Bactrian camel is found side by side with the idian rhinoceros and Indian elephant. Accordg to Diodorus (ii. 16–19), Semiramis fitted out an mament in Bactria, and between B.C. 1235 and 225 she crossed the Indus with a vast force. At rst she drove back the opposing maharaja from ie strong position that he had taken up with a ast force, especially of archers; but, rallying his treating forces, he soon drove back the Assyrians total disorder to the river, which they had reat difficulty of crossing, and only after immense ss. Semiramis concluded an armistice, made an change of prisoners, and retreated into Bactria ith a third of the army which she had brought gainst India. At that time there must have been supreme ruler in India, a sami raja, with a pital in the district to the south of the Saraswati, the Jumna and Ganges Doab.—*Bunsen*, iii. 549.

HIA, the first Chinese dynasty, descendants of u, from B.C. 1991 to 1559, ruled 432 years. Its rst emperor was Yu, beginning B.C. 1991.

HIATILLA, or the White Huns, a Tartar tribe ho issued from the plains near the north wall Chiina, and made themselves masters of the untry of Transoxiana. Some years afterwards, urkish tribes expelled the Hiatilla from the lands at they had taken from the Sacæ or Scythians. here is every ground to conclude that it was an my of the Hiatilla that invaded Persia in the ign of Bahram-Gor, and that it was to one of eir kings that Firoz fled.—*Malcolm's Persia.*

HIBAVINIA OIL. CANARESE. Under this ame there was exhibited at the Madras Exhibion of 1857 a solid oil from the Sampajey district, a clove-brown colour. A small phial priced at rupees.

HIBISCUS, a genus of plants belonging to the lvaceæ or mallow tribe; above 30 species of the are known in the E. Indies. Several furnish commercial products, and most of the Indian species might be employed for the same purposes as hemp, as the bark is tough, and may almost always be stripped off in long slips.

Hibiscus collinus, *Roxb.* (Eriocarpus of *D. C.*), a native of the mountainous parts of the Northern Circars and of Peninsular India, where it is called Kanda-gang, and where the natives use the bark as a substitute for hemp. Dr. Roxburgh states that there are three varieties of this plant, the double red, double yellow, and double flesh red.

Hibiscus ficifolius, *Roxb.* In the Moluccas, an annual, growing straight, very tall, often 12 to 14 feet high, with few branches. The fibres described as uncommonly beautiful, and rather stronger than the sunn fibre.

Hibiscus furcatus, *Roxb., W. and A.*

H. bifurcatus, *Roxb.* | H. aculeatus, *Roxb.*

Konda gongura, TEL.

A very prickly plant, growing in India to a height of from 6 to 8 feet. It yields abundance of strong, white, flaxy fibres, but from the prickliness of the plant it is very troublesome to handle. The stems are cut when in flower, and steeped immediately.—*Roxb.; W. and A.*

Hibiscus punctatus, *Dalz., Gibson*, an annual fibrous plant of Sind and Multan.—*Von Mueller.*

Hibiscus vesicarius, CAV., a plant of the Peninsula. Good samples of its fibre were exhibited as wild Ambari at the Madras Exhibition of 1855.

HIBISCUS CANNABINUS, *L.*, Dekhani hemp.

Hibiscus cannabinus is an erect growing plant, to about 4 to 6 feet. It is slightly prickly over the stem. There is a dark, purplish-coloured species. Both are grown all over India for the acidulous leaves, and also for the fibres of its bark, called one of the hemps of India, which are used as cordage; the cultivators sow a small quantity along the edges of the usual crops for their own use. In the beginning of the rains, and when it commences to flower, it is cut and treated exactly as the sunn hemp from Crotalaria juncea. The proportion of fibre is about half the weight of the plant. It is used for making rope, sackcloth, twine, paper, etc. The price of the prepared fibre is from 3 to 4 rupees per maund, according to its strength, length, and cleanliness. The fibre, like that of jute, is sometimes called Pät; also, in Bombay, Dekhani hemp, to distinguish it from Taag or Konkani hemp; also Indian hemp. Also, it is one of the brown hemps of Bombay, and is often confounded with the fibre of sunn, though the two plants greatly differ,—the sunn, Crotalaria juncea, being known in Bombay as Taag. The length of the fibres of carefully cultivated Ambari is from 5 to 6 feet; they are of a paler brown than ordinary brown hemp of the Crotalaria juncea, harsher in feel, and stick more together; but they are divisible into fine fibrils, possessed of considerable strength, well calculated for rope making, as also for coarse fabrics. Though esteemed by some of the natives of Western India, the hemp of the H. cannabinus is not, either in strength or durability, so good as the true hemp of Europe, or as the sunn or brown

hemp of the Crotalaria juncea. The strength o this fibre was tested by several scientific men, and breaking weight found to be—

Experiments of	H. cannabinus.	Crotalaria juncea.
Dr. Roxburgh, . .	110–115 lbs.	130–160 lbs.
Dr. Royle, ...	150 ,,	190 ,,
Dr. Wight, . . .	290 ,,	404 ,,

The exports of this fibre are not distinguished from other hemps. An excellent substitute for tow might be profitably supplied from it. The rope made of the fibre is used in the Karnatic as a substitute for the jute of Bengal, the produce of Corchorus capsularis, a plant comparatively unknown in the Peninsula. Dr. Riddell strongly recommended this fibre as a paper material.—*M. Ex. Jur. Rep.; Royle; Roxb.; Voigt; Stewart.*

HIBISCUS MUTABILIS. *L.*

Thalpadmo, . . Beng. | Gul-i-ajaib, . . Hind.
Fu-yung, Mu-fu-yung, Ch. |

The changeable rose is a large shrub, native of China, remarkable for the changes which occur in the colour of its flowers, bearing white flowers in the morning, but changing in the course of the day, and in the evening to red; easily propagated by cuttings. The flowers and leaves are used in China medicinally, and its fibre is there made into cloth.—*Drs. Roxb., Riddell, Mason, Stewart.*

HIBISCUS ROSA-SINENSIS. *L.* Shoe-flower.

Kambang saptu, ,,	

This plant is common in India; the leaves are used as emollients, anodyne, and gentle aperients; the flowers are deep scarlet, and yield a very mucilaginous juice, which turns rapidly to a dark purple. Applied to soft, unsized white paper, this colour is nearly as sensitive a test for acid as the celebrated litmus. Shoe flowers are sometimes employed for dyeing lilac colour, but it does not appear to be a permanent dye; they are also occasionally rubbed on leather for the purpose of blackening and polishing. The natives make pickles of the flowers, and they are used for giving a red tinge to spirituous liquors. The petals furnish a black liquid to dye the eyebrows. —*Roxb.* iii. p. 194.

HIBISCUS SABDARIFFA. *L.* Roselle.

Mesta, ... Beng.	Patwa, ... Panj.

Oseille, . . Mauritius.	Yerra gogu Tel.

There are five varieties, cultivated in most gardens for the calyces, which, as they ripen, become fleshy, are of a pleasantly acid taste, and are much employed for making palatable tarts, as well as an excellent jelly. The stem, if cut when in flower, and the bark stripped off and steeped immediately, displays a mass of fibres of a fine silky nature. The leaves are used as greens, alone or mixed with others; often cultivated in flower-beds for its very pretty flowers. In the French West India Islands, a kind of cider or wine is prepared from it, termed Vin de ozeille.—*Ains.; Roxb.; Von Mueller.*

HIBISCUS STRICTUS. *Roxb.* A native of the Rajmahal Hills, with a straight stem of from 6 to 14 feet in height, and a very smooth bark. It is in blossom about the termination of the rains, and the seed ripens in December and January, soon after which the plants perish. The bark abounds in flaxen fibres, beautiful, long, glossy, white, fine, and strong. Sow in the beginning of the rains in beds, and when about six inches high transplant out in rows about nine inches asunder, and about as much from each other in the rows. In 1801, 40 square yards planted in this manner yielded 33 pounds weight of very clean fibres. Dr. Roxburgh's original specimens are 9 and 10 feet in length, a fibrous mass apparently easily stripped off, and composed of fine and easily divisible fibres.—*Roxb.; Royle.*

HIBISCUS SURATTENSIS. *Linn., Roxb.*

Kashlikire, . . . Tam. | Mulu gogu, . . . Tel.

A herbaceous plant, with speckled prickly stems, and yellow flowers; the leaves are used as greens.—*Roxb.; Jaffrey.*

HIBISCUS SYRIACUS. *Linn.*

Muh-kin, . . . Chin. | Oodha godhul, . Hind.

There are four varieties of this plant cultivated for ornament in India, two purple, a single and a double; and two white, a single and a double. The flowers are used to blacken the eyebrows and shoe leather. It is a common hedge plant of Hupeh in China.—*Roxb.* iii. p. 195.

HICK. Singh. A Ceylon wood, very hard, fine, close, very uniformly grained; heavy, in colour resembling pencil cedar.

Hides and skins, raw, dressed, and tanned, form a large item of the exports from India, and since the year 1851 the quantities and values exported have largely increased, while amongst the millions of India they are largely used. In every part of S. India extensive tanneries have been established, chiefly by the Labbai Mahomedans. The value of the exports from India have been as under, for hides and skins, raw and dressed:—

1851–52,	£303,089	1860–61,	£656,629
1852–53,	337,849	1874–75,	2,677,765
1853–54,	402,365	1875–76,	2,943,573
1854–55,	402,386	1876–77,	2,991,022
1855–56,	431,729	1877–78,	3,756,887
1856–57,	572,530	1878–79,	3,186,845
1857–58,	639,702	1879–80,	3,733,005
1858–59,	544,680	1880–81,	3,733,565
1859–60,	444,537	1881–82,	3,948,792

About the year 1850, nearly 40,000 tons of leather, hides, and skins were annually imported into Britain; the total imports into Great Britain of hides and skins, in 1880, was 83,397 tons, value £6,910,847.

All untanned leather is classed under the denominations of hides, kips, and skins. From these there are various kinds of leather tanned. Butts and backs are selected from the stoutest and heaviest ox hides. The butt is formed by cutting off the skin of the head for glue, also the cheeks, the shoulder, and a strip of the belly on each side. In the back, the cheeks and belly are cut off, but the shoulder is retained. The butt or back of the ox hide forms the stoutest and heaviest leather, such as is used for the soles of boots and shoes, for most parts of harness and saddlery, for leather trunks and buckets, hose

for fire-engines, pump-valves, soldiers' belts, and gloves for cavalry. Hides consist of cow hides, or the lighter ox hides and buffalo hides; they are the same as butts with the bellies on. Hides are sometimes tanned whole, and are struck for sole leather, in which case they are called crop hides. Skins are used for all the lighter kinds of leather.

Bull hide is thicker, stronger, and coarser in its grain than cow hide. The hide of the bullock is intermediate between the two.

Calf-skin is thinner than cow's. It is tanned for the bookbinder, and tanned and curried for the upper part of shoes and boots.

Sheep-skins are tanned and employed for bookbinding, leathering for common bellows, whiplashes, bags, aprons, etc.; also for the cheaper kinds of wash-leather for breeches, gloves, and under-waistcoats; and are also coloured and dyed leathers and mock morocco, used for women's shoes, for covering writing-tables, stools, chairs, and sofas, lining carriages, etc.

Lamb-skins are dressed white or coloured, for gloves; are very extensively used with the hair on in the N.W. Himalaya, Afghanistan, Hazara, Kafiristan, Tartary, Tibet, China, and Persia, as articles of dress for the head, and for mantles.

Goat-skins form the best dyed morocco of all colours. Kid-skins supply the finest white and coloured leather for gloves and ladies' shoes.

Deer-skins are all shamoyed, or dressed in oil, chiefly for riding breeches. Shamoyed leather of sheep, goat, and deer-skins was formerly a lucrative branch of the leather trade, for breeches, white or dyed.

Horse hide is tanned and curried for harness work, for collars, etc. Enamelled horse hide, split or shaved thin, is used for ladies' shoes, in imitation of seal, but does not produce so good a leather as seal.

Dog-skin is thin, but tough, and makes good leather. Most of the dog-skin gloves are really made of lamb-skin.

Seal-skin makes a valuable leather, but a large proportion of seal-skins is used as fur.

Hog-skin affords a thin, porous leather, which is used for covering the seats of saddles.

Iguana skins can be tanned and dyed black, or left of their natural colour. They are thin, even, soft, tough, elastic, and granular or shagreen-like in external appearance. It bids fair to be a durable article for light slippers, and a good covering for the commoner kinds of instrument boxes, such as are still done over with shagreen. Python skin, when tanned, makes excellent boots, much prized for their strength, pliability, and great beauty, as they are handsomely marked. The skins of young alligators are tanned, converted into leather, and the leather manufactured into boots.

Wash-leather skins are prepared with oil, in imitation of chamois, for household purposes, such as cleaning plate, brasses, and harness.

Leather is made from the skin of salmon and other fish.

HIDIMBA, a wife of Bhima. Her brother was a cannibal, and was killed by Bhima.

HIERONIMO DI SANTO STEFANO, a Genoese; visited India about 1494–99 as a merchant adventurer. At Cairo he laid in a stock of coral beads and other wares, and passed down the Nile to Cane (Keneh), from which he travelled by land through the Egyptian desert for 7 days to Cosir (Cosseir) on the Red Sea, where he embarked on board a ship, which in 25 days carried him to Mazua (Massouah) 'off the country of Prester John;' and in 25 days more, during which he saw plenty of boats fishing for pearls, to Aden (Aden); and in 35 days more to Calicut. 'We found that pepper and ginger grew here, . . . and the nut of India' (cocoanuts). From Calicut he sailed in another ship, and in 26 days reached Ceylon, 'in which grow cinnamon trees, . . . many precious stones, such as garnets, jacinths, cats'-eyes, and other gems, . . . and trees of the sort which bears the nut of India.' Departing thence, after 12 days he arrived at a port on the coast of Coromandel, 'where the red sandal-wood grows;' and, after a long stay, departing thence in another ship, after 27 days reached Pegu in Lower India. 'This country (Pegu) is distant 15 days' journey by land from another, called Ava, in which grow rubies and many other precious stones.' From Pegu, where he suffered many and great troubles, he set sail to go to Malacca, and, after being at sea 25 days, one morning found himself in a port of Sumatra, 'where grows pepper in considerable quantities, silk, long pepper, benzoin, white sandal-wood, and many other articles.' After further and greater troubles suffered here, he took ship to Cambay, where, after 6 months' detention among the Maldives, and subsequent shipwreck, he at length arrived, but stripped of all his goods. He notices that Cambay produced lac and indigo. In his destitution he was assisted by a Moorish merchant of Alexandria and Damascus, and after a time proceeded in ship of a sharif of Damascus as supercargo to Ormuz, in sailing to which place from Cambay he was 60 days at sea. From Ormuz, 'in company with some Armenian and Azami (Irak-Ajemi) merchants,' he travelled by land to Shiraz, Isfahan, Kazan, Sultanieh, and to Tauris; whence he went on with a caravan, which was plundered by the way, to Aleppo, and finally to Tripoli.—*India in the 15th Century; Birdwood's India Office Records.*

HIE-SHAN, a group of three islands and eight rocks on the east coast of China, which extend 4 miles long. The southernmost is the largest, and the inhabitants are fishermen.

HIGH PLACES. Sacred edifices were often erected by the Hebrews, Greeks, and Romans upon elevated sites. The custom is of very high antiquity. Hector, according to Homer, sacrificed upon the top of Ida. Abraham was commanded to offer up Isaac on Mount Moriah; and Balak is represented as selecting three elevated stations, where he sacrificed with Balaam.—

First station.—Numbers xxii. 41: 'And brought him up into the high places of Baal.' 'And he led him to the high places of his god' (Chaldee and Samaritan). 'And he made him ascend Bemoth Baal' (Syriac). 'He made him ascend to the pillar or mound of Baal' (Greek). 'And he led him up to some temples of his god' (Arabic).

Second station.—Numbers xxiii. 14: 'And he brought him into the field of Zophim, to the top of Pisgah.' 'To the field of observation, to the top of the hill' (Chaldee). 'To the field of the watchers, to the top of the hill' (Syriac). 'To the field of the watchers, to the peak of observation' (Samaritan). 'To the field of observation,

on the summit of a levelled place' (Greek). 'To an high place, on the top of a citadel' (Arabic).

Third station.—Numbers xxiii. 28: 'And Balak brought Balaam unto the top of Peor.'

Numerous Hindu temples are erected on the summits and slopes of mountains, notably at Triputty and Srirangam, in the Madras Presidency.—*Archæologia; Milner's Seven Churches.*

HI-HYA, a tribe of the Lunar race, brave and valorous; their remnants exist in the line of the Nerbadda at the very top of the valley of Sohagpur in Baghelcund. See Schestra; Arjuna; Ha-Haya.

HIJILI, a small marshy district on the western side of the mouth of the Hoogly river. It is the sea-coast division of the Midnapur district of Bengal; a considerable quantity of salt is now produced by private persons under Government supervision.—*Imp. Gaz.*

HIJRAH. ARAB. A flight, but applied as relating to the flights of the disciples of Mahomed, and of Mahomed's own flight, to escape persecution. The first flight consisted of 15 disciples of Mahomed, who, at his recommendation, to avoid persecution, took refuge in Abyssinia. The Koresh wished them to be delivered up, but the Nagashy of Abyssinia refused. The second flight is that most generally known, and has given rise to the Mahomedan era of the Hijrah. It was the flight of Mahomed to Medina, which took place on the night of Thursday the 15th July, A.D. 622. In the khalifat of Omar, this was constituted the commencement of the Mahomedan era.

The Mahomedan Hijrah year consists of twelve lunar months, each of 29 days 12 hours and 44 minutes; and the year, 354 days 8 hours and 48 minutes.

The months of the Mahomedan year,—

The corresponding years of the Christian and Hijrah eras may easily be calculated by the following formula,—it being remembered that the Christian are solar and those of the Hijrah lunar years, and that 521 solar are equal to 537 lunar years:

Ex.—What is the year of Christ 1734, according to the Hijrah?

From 1734 A.D. subtract 621, the difference of the two eras; result, 1113 of the Hijrah in solar years.

Then, 521 : 537 : : 1113 : 1147 Hijrah.—*Playfair's Yemen.*

HILLAH, a town 54 miles from Baghdad, on the site of the ancient Babylon; about two-thirds of it is on the right bank of the Euphrates and the remainder on the left bank, the two parts being connected by a bridge of 28 boats, and 450 feet in length. It is inhabited by Arabs, Persians, Turks, and Jews. It has numerous gardens. Basket boats ply at the ferry.

Hillah lies in lat. 32° 31′ 18″ N. and W. of Baghdad. According to Turkish authorities, it was built in the fifth century of the Hijira, in the district of the Euphrates which the Arabs call El-arad-Babel, lying on a spot of the west site of Babylon. The ruins near Hillah are still by the Arabs designated Babel, and all historical records as well as traditions agree in representing these as the remains of the first city of Nimrud, the Babylon of Herodotus, Diodorus Siculus, and other historians.—*MacGregor.*

HILL STATES is a term by which the British designate several independent and feudatory kingdoms in the Himalayas. Nepal is the largest of these; it is independent, but has treaties with British India.

Sirmur or Nahan.—In recognition of the services rendered by raja Shamsher Purgass during the 1857 mutiny, he received a khillat of Rs. 5000, and a salute of 7 guns. The family is Rajput. Revenue of Sirmur, a lakh of rupees a year. The raja maintains a small force of drilled sepoys, numbering 250 men. Population, 75,595. The raja pays no tribute, but is bound to render feudal service. Gross revenue, Rs. 2,10,000.

The *Kahlur or Bilaspur* raja had estates on both sides of the Sutlej, but the sunnud given to raja Mooher Chand in 1815 confirmed to him the eastern portion only. The family is Rajput. In acknowledgment of his services during the mutinies of 1857, the raja received a dress of honour of Rs. 5000 value, and a salute of 7 guns. Revenue, Rs. 1,00,000; population, 66,848.

The *Hindur or Nalagarh* chief belongs to a Rajput family. A sunnud was granted in 1815. Population, 60,000; revenue, Rs. 90,000.

Bashahr, a tributary state, gave Rs. 3945 as tribute. *Rawaun*, on the left bank of the Pabur, was transferred to Keonthal. The thakuri of Kotgurh and Kumharsain were declared independent of Bashahr. The raja is of a Rajput family. Population (1872), 90,000; revenue, Rs. 70,000.

Keonthal.—After the Gurkha war, a portion of the territory of Keonthal was sold to the maharaja of Patiala. The chief claims a Rajput origin. He is bound to render feudal service. In 1858 the chief was created a raja, and received a dress of honour worth Rs. 1000 for his services during the mutinies. Revenue, Rs. 60,000, and population (1875), 50,000.

The *Baghal* family is Rajput. Revenue, Rs. 60,000; population, 22,305.

Jubbul.—Originally this Rajput state was tributary to Sirmur, but after the Gurkha war it was made independent, and the rana received a sunnud from Lord Moira on 18th November 1815. Revenue, Rs. 30,000; population, 40,000 souls. The rana pays Rs. 2520 tribute, and is bound to render feudal service.

Bhajji pays tribute, Rs. 1440. Revenue, Rs. 23,000; population, 19,000.

Kumharsain state, formerly a feudatory of Bashahr, was declared independent at the Nepal war; pays Rs. 2000 as tribute. Revenue, Rs. 10,000; population, 10,000. The family is Rajput, of not very high pretensions.

The *Kuthar* sunnud bears date the 3d September 1815, and confirms to rana Bhoop Singh and his heirs the hereditary possessions of his ancestors, subject to the performance of feudal service, and supplying a contingent of 40 begar, but subsequently commuted to a tributary payment of Rs. 1080. Revenue, Rs. 5000; population, 3990. The family is Rajput.

Dhami.—This old Rajput state became independent of Kahlur after the Gurkha war. The state was bound to supply 40 begar, but this was commuted to a tribute of Rs. 720. Revenue, Rs. 8000; population (1875), 5500.

Baghat, a hill state, the chief of which acted unfriendly during the Nepal war. He died without issue on 11th July 1839. The state was treated as a lapse, and pensions to the extent of Rs. 1282 were assigned to the family. Gazetteer says population, 10,000; revenue, Rs. 8000.

Balsan.—This state was originally a feudatory of Sirmur, but a separate sunnud was granted to it in September 1815. Its tribute payment is Rs. 1080. Its chief is of Rajput origin. Thakur Jograj was created a rana in 1858 for services rendered during the mutiny. Revenue, Rs. 6000; population, 4892.

Mailog.—The sunnud of this Rajput state is dated 4th September 1815. The tribute is Rs. 1450. Revenue, Rs. 9000; population, 1000.

Bija.—This petty state pays a tribute of Rs. 180. Revenue, Rs. 1000; population, 981.

Taroch.—Revenue, Rs. 6000; pop. 6000. It pays Rs. 280 in lieu of begar.

Kunhiar state pays Rs. 180 in lieu of begar. Revenue, Rs. 4000; population, 2500.

Mangal was an ancient dependency of Kahlur, but was declared independent on the expulsion of the Gurkha. Its tribute payment is Rs. 72. Revenue, Rs. 700; population, 917.

Darkuti.—This pretty chieftainship pays allegiance to the British Government, and is exempted from all pecuniary liability. Revenue, Rs. 600; population, 700.

In 1847 transit duties were abolished throughout these states. A yearly sum of Rs. 13,735 is paid in compensation by British India. To all the hill chiefs the right of adoption has been granted. —*Aitcheson, Treaties, etc.* p. 323.

HILL TRACTS of Arakan, or N.E. Arakan, are regarded as a revenue district, extending N.E. to Independent Burma and to Manipur, with an area of 4000 or 5000 square miles, and a population of 12,442 souls. The country, wild and beautiful, consists of parallel ridges of sandstone, clothed with dense forests; its chief river the Kuladan (Koladyn) or Yam Pang. The tribes are the—

Ra-Khaing or Khyoung-tha, or sons of the river; profess Buddhism, and have paper books.

Shandu are polygamic, and bury their dead.

Kha-mi, meaning man, homo, or Khwe-myi, meaning dog's tail, their dress hanging down behind like a tail. They trade.

Mro, 2162, live on the Mi, Anu, or Khoung-tso, dwell on the banks of the Tsala river.

Khyeng inhabit the Arakan Yoma Hills, E. of the Le-Mru; they are shy, and tattoo their women's faces.

Khyaw, in a village on the Tsala river, are a Kuki clan. They speak different dialects of the Arakanese and Kha-mi, but have many religious beliefs, domestic customs, and laws in common. Twice annually they worship the spirits of the dead, Ka-nie-hpa-law. Chastity before marriage is not required, and crimes are punished by fines.

HILL TRIBES is a general term by which the British designate collectively the numerous uncivilised tribes who inhabit the mountain ranges and higher hills in British India and along its borders. Most of them are wholly illiterate.

W. W. Hunter has mentioned that—

In the *North-West Provinces* there are wander- and wild tribes, named Bur, Damak, Kanjar, i, Kumboh, Nat, Saussee, Gond, and the Tharoo the Terai; the Pasi also occurring in Oudh.

The *Chinese Frontier and Tibet* have the Gyami, Gyarung, Takpa, Manyak, Thochu, Sokpa, Horpa.

Nepal (East to West) has the Serpa, Sunwar, Gurung, Murmi, Magar, Khaksya, Pakhya, Newar, Limbu.

Kiranti Group, East Nepal, have the Kiranti, Rodong, Rungchenbung, Chingtangya, Nachhereng, Waling, Yakha, Chourasya, Kulungya, Thulungya, Babingya, Lohorong, Limbichhong, Balali, Sang-pang, Duni, Khaling, Dungmali.

The *Broken Tribes of Nepal* are the Darhi, Denwar, Pahri, Chepang, Bhramu, Vayu, Kuswar, Kusunda, Tharu.

Lepcha of Sikkim.

Lhopa of Bhutan.

In *N. E. Bengal* are the Bodo, Dhimal, Kochh, Garo, Kachari.

In the *Eastern Frontier of Bengal* are the Munipuri, Mithan Naga, Tablung Naga, Khari Naga, Angami Naga, Namsang Naga, Nowgong Naga, Tengsa Naga, Abor Miri, Sibsagor Miri, Deoria Chutia, Singpho.

Mishmi, Chulikata Mishmi.

Abor group, viz. Padam and other Abor, Miri and Hill Miri, Dophla, Aka or Hrusso.

Naga of Upper Assam, the lower Naga group.

Naga west of the Doyang river.

Kuki, Manipur, and their neighbours Kouponi.

Mikir, Jaintia and Khassya.

Arakan and Burma, Khyeng or Shou, Ka-mi, Ku-mi; Mru or Toung, Sak.

Siam and Tenasserim, Karen, Toung-thu, Ahom, Kham-ti, Laos.

Central India, Ho (Kol); Kol; (Singbhum), Santal; Bhumij Rajmahali, Gond, Khond, Saora, Chentsu, Bhil, Patooa.

Broken Tribes, Cheroo, Kharwar, Parheya, Kisan or Nagesar, Bhuiher, Boyer, Nagbansi, Kaur or Kaurava, Mar.

Southern India, Toda, Kota; Badaga, Irular, Kurambar, Mali-Arasar, with many broken tribes in the plains, Yerkala, Pariah, Chakili, Mhar, Mhang, Okkalu, Holar.

Ceylon, Veddah.

HILL TROUT of Hindustan is no trout, but a large bony fish of a silver-grey spotted with black; will eat everything he can swallow; is often taken with an infant brother while spinning for his high-caste neighbours, with an artificial minnow of glass, with a piece of rag or newspaper, with bees, or dragon-flies caught off the bushes by the river, with a morsel of cabbage leaves boiled, but in general with the orthodox spinning, the minnow, or the artificial fly, made very large and showy. In Kashmir, five bags of these fish have been caught, some weighing 7 lbs. each. One seen in the market was 12 lbs. The Walur Lake, the Dhul Lake, and the Jhelum all swarm with them about the mulberry trees, the fallen fruits of which seem to afford them in legions a sweet and pleasant diet, if one may judge by the mighty rush ensuing on a shaking of the boughs. Boatmen avail themselves of this, cover a bent pin with a plump mulberry, and drop it amid the shoal. This fish is widely distributed; abundant in the backwaters of the Ganges, in the great rapids of that river far above Hurdwar, and in Dehra Doon, in lat. 27° 28′ N., in the upper branches of the Brahmaputra, and in the Mishmi and Abor backwaters, also in most

of the small rivers of the Panjab, in which latter locality it does not seem to grow very large, though plentifully, owing perhaps to its being the common food of numerous fish of prey. Is abundant, though small, in Central India, in Bundelkhand and Jhansi districts. That it is eatable, is all that can be said, but giving good sport in its way, and yielding subsistence to the monsters of the deep, and useful in diverting their attention from mischief to their own breed. The Europeans in Northern India apply the name of trout to three spotted carp, species of Barilius. B. bola, which takes a fly well, is said to attain 5 lbs. weight. It is found in Northern India, Assam, and Burma. B. tileo, smaller, is of Assam and Bengal; and B. bendilisis is a third small species. See Chiliva; Fish; Fisheries.

HILSHA or Ilisha, Clupea ilisha, shad, sable fish of Southern India.

Nga-tha-louk, .	BURM.	Palasa, ...	TAM.
Pulla, ...	SIND.	Ulumoolum, . . .	TEL.

This is a migratory sea fish of the herring tribe, which enters the Ganges and Irawadi and Indus rivers to deposit its eggs. It is the shad of Bengal and the sable fish of Trichinopoly. In one of them 1,023,645 eggs were counted. The females are more numerous than the males. It is best preserved in tamarinds or vinegar.—*Dr. F. Day.*

HIMALAYA MOUNTAINS comprise a system of stupendous ranges, with the loftiest peaks in the world. They extend continuously for a distance of 1500 miles along the northern frontier of British India, from the Indus to the gorge where the Dihong bursts through their main axis, thus embracing the meridians 75° to 95° E. On the west, the Himalaya, with the Kouen Lun, converge towards the Pamir table-land, whence the Tian Shan and the Hindu Kush radiate, and the Kouen Lun and the Himalaya form respectively the northern and southern escarpment of the lofty Tibetan plateau, which has an average level of 15,000 feet. The average breadth of the Himalaya is computed at 150 miles, with a mean elevation of 18,000 to 20,000 feet; but there are solitary mountains and peaks rising higher,—for instance, in the Western Himalaya, Jumnotri, 20,038 feet; Kedarnath, 22,790 feet; Badrinath, 23,210 feet; Nanda Devi, 25,661 feet;—and in the Eastern Himalaya, Dhawalgiri, 26,826 feet; Daya bang, 23,762 feet; Mount Everest, 29,002 feet; Kanchinjinga, 28,156 feet.

The Himalayan system is composed of a northern, a central, and a southern range.

The *northern* range is naturally divided into a western and an eastern section. Its western section is known as the Kara-korum or Mustagh, and it forms the water-parting between the basins of Lob-Nor and the Indus. The Kara-korum pass is on the real line of water-parting, and the streams north of it join the Tarim basin, while those on its southern slope discharge into the Indus.

Several of the peaks along this western section of the Himalaya attain a height of 25,000 feet, and the chief one, 'K. 2,' 28,265 feet, is second in altitude to Mount Everest. This section of the range extends from its junction with the Hindu Kush near the Baroghil pass to Mount Kailas, near Lake Manasarowar in Tibet, and the best known passes across it are the Kara-korum and the Changchenmo, exceeding 18,000 and 19,000 feet respectively in height. But there are also the Karambar pass, the Mustagh pass, and a pass on the road between Rudok and Kiria. The southern slopes of the Mustagh range in its northern portion are covered with enormous glaciers, one of them 35 miles long. These glaciers are the source of streams which flow southwards between bare craggy mountains and join the Indus or its tributary the Shayok. The collective name applied to the various districts which comprise the valleys of the Indus, Basha, Braldu, Shigar, Shayok, etc., is Baltistan. The inhabitants are Mahomedanized Tibetans of Turanian stock, and there is a small body of Aryans called Dards.

To the E. of Lake Manasarowar, a saddle which is crossed by the Mariam-la pass, connects the northern and central ranges of the Himalaya. On its eastern side rises the Tsan-pu (To-chok-tsang-pu), of which the northern range forms the northern watershed as far as to the south of the Sky Lake (Tengri-nur in Mongolian, and Nam-cho in Tibetan). Hence it appears to curve round the lake in a north-easterly direction for 150 miles, after which its further course is unknown.

The subsidiary chain between the northern and central ranges runs from Mount Kailas, near Lake Manasarowar, to the junction of the Indus and the Shayok. Major Cunningham called it the Kailas or Gangri range. It is 550 miles in length. Its peaks average between 16,000 and 20,000 feet in height, and it is crossed in its northern portion by a number of passes, which lead from the valley of the Indus into that of the Shayok. About lat. 33° 12′ N., the Indus deviates at right angles, and pierces right through this granite range to resume a north-westerly course beyond. The southern portion of this range lies in Tibetan territory, and has been crossed at four points by native explorers.

The *central* range has its commencement in the Nanga Parbat, 26,629 feet high. It towers conspicuously on the extreme verge of the Kashmir frontier above the Indus valley, and has been seen by General Cunningham from Rannagar, in the Panjab, a distance of 205 miles. Proceeding from this point towards the south-east, we find that for the first 50 or 60 miles the central range forms the water-parting between the Indus and the Jhelum. Two roads, joining the Kishenganga and Astor rivers, go over passes of upwards of 13,000 feet, and others lead into the Dras valley. At the point where the Dras pass (11,300 feet) affords access from the Kashmir valley to the high table-land of Ladakh, a minor range branches off and separates successively the Sind valley, the northern part of the vale of Kashmir, and the Jhelum valley, on the south, from the Kishenganga on the north. A little south of the same pass, another ridge branches off, and, running north and south, forms the eastern boundary of the vale, till, near Banihal, it joins itself to the Pir Panjal range, which again runs east and west for about 30 miles, then turns N.N.W., and continues for some 40 miles more till it dies off towards the valley of the Jhelum. This range completes the mountainous girdle which encircles the valley of Kashmir. About the vicinity of the Dras pass, the range increases in height, and the peaks are high enough to form glaciers, two of them, Nun and Kun, being each over 23,000 feet in height. The north-eastern slope of the range drains into

Indus, the Suru and Zanskar being the chief rivers. A little farther to the south, the Bara cha pass (16,200 feet) affords a route from hul and Kangra to Leh.

Farther to the south-east, the central range becomes broken by the precipitous gorge of the Sutlej (the classic Hesudrus), which, rising in the sacred lakes of Rakas Tal and Manasarowara on the southern side of the Tibetan Kailas, takes a north-westerly course for 280 miles, till, joined by the waters of the Spiti river, it turns and cleaves through the two outer ranges, emerging on the plains of India at Ropar, after a course of 560 miles. The junction of the Sutlej and Spiti rivers is marked by the Lio Porgyul peak, which rises sheer 22,183 feet high from the edge of the two streams, 13,000 feet below its summit. Further to the S. E., numerous passes lead from British territory over the central range into Hundes. The Niti pass (16,676 feet) leads across it to Khotan, by way of Totling, Gartokh, Rudokh, Noh, and Kiria, and is the best and easiest route between Eastern Turkestan and India. Eastward of this point, the central range is occupied by the Native States of Nepal, Sikkim, and Bhutan. On its northern side the range has enormous glaciers, which drain into the Tsan-pu river; while its southern slopes give rise to many large rivers, which burst through the southern range, and eventually discharge their waters into the Ganges or Brahmaputra. The source of the Ganges lies a few miles beyond Gangotri; and the Kali, Karnali, Narayani, Buri Gandak, Tirsuli Gandak, Bhutia Kosi, Arun, all flow through Nepal. To the east of the Mariam-la pass, only three Europeans have ever crossed the central range. An imposing view of the long line of glaciers and peaks of the central range was obtained by Dr. Hooker from the Donkia-la pass in Sikkim. Two of the most remarkable of the inland lakes are the Palti and Chomtodong. The former (14,700 feet above the sea) is about twenty miles long and sixteen broad, without an outlet. This lake is situated north of the Arun basin, and, like the Palti lake, is encircled by spurs from the central range. The Palti or Yam-dok-cho lake is also without an outlet, and is ring-shaped; it is supposed to be about 45 miles in circumference. An island in its centre rises into rounded hills from 2000 to 3000 feet high.

The *southern* range, at its north-western extremity, appears to spring from the southernmost point of the Pir Panjal range. At its outset it is pierced by the waters of the Chenab, the main stream of which rises in Lahul far to the south-east, under the name of Chandra-bhaga, and for 180 miles drains the south-western and north-eastern slopes of the central and southern ranges respectively. The peaks of the southern range gradually increase in height from 1300 to 20,000 feet, and its outer slopes are washed by the Ravi and Beas, the feeders of which rise on the southern side of the culminating range. Passing the Sutlej, the road up the gorge of which is connected with Simla by the great Hindustan and Tibet road, we meet the Bhagirathi, Alaknda, and a variety of rivers, which rise in the space between the two southern ranges.

The western terminal portion of the Himalaya chain comprises a number of great ranges, which is commonly known as the Mustagh or Karakorum, Ladakh, Zanskar or Baralacha, and Pir Panjal, all of which have a N.W. to S.E. direction. The Baralacha separates the Indus river from its first affluents, as the Eastern Himalaya separates the Tsan-pu from the Ganges. The average elevation of Kashmir valley is between 5000 and 6000 feet above the sea; Huramuk Mount, 13,000 feet; Pir Panjal, 15,000 feet; average of the valley of Indus (north of Kashmir valley), 6000 to 7000 feet.

Major Cunningham gave the following summary of the information he collected regarding the great mountain chains in the north of the Panjab:—

Name of Chain.			Snow line. North	Snow line. South
Kara-korum or Tr.-Tibetan,		24,000	20,000	18,000	18,500
Kailas or Gangri, or Mid-Tibetan,		20,700	20,000	18,500	19,000
Tr.-Himalaya or Tsho-moriri		21,000	19,300	19,500	20,000
W. Himalaya or Bara Lacha,		25,749	20,000	19,000	18,000
Mid-Himalaya or Pir Panjal,		21,786	17,000	17,000	16,000
Outer Himalaya, or Daola Dhar,		300	16,174	15,020	The snow disappeared annually.

Peaks.—Some of the peaks on the Kara-korum range, along which runs the boundary between Ladakh and Yarkand, are very high, the highest being 28,278 feet above the sea. This mountain is called K. 2, and towers above all the surrounding ranges, being probably the second highest in the world. The heights to the south of the Sutlej range from 20,103 feet to 25,749 feet, and the heights of the passes vary from 16,570 feet to 18,331 feet. In the Western Himalaya the snow limit ranges are from 17,500 to 20,106 feet. The highest peaks of the Western Himalaya are,—Nanda Devi or Jawahir, 25,749 feet; Gyu peak, 24,764 feet; Mono Mangli, 23,900 feet; Porgyal, 22,700 feet.

The Giant's Peak and the Eastern Dal-la are occasionally called Gemini by residents of Assam who have seen the Himalaya panorama from Nanklau in the Khassya Hills.

Eastern Dal-la, lat. 27° 52′ 1″ N., long. 92° 38′ 6″ E., in Bhutan, in the immediate vicinity of the Giant's Peak top of the peak, is 21,435 feet according to Herm. Schl., and 21,476 feet, Pemberton.

A line of high snow peaks can be traced running nearly parallel to the plains of India, and extending from the places of passage of the Indus on the west and Brahmaputra on the east. These snowy peaks are separated from each other by deep ravines, along which flow large and rapid rivers. Every pre-eminent elevation is not, however, so much a peak as a cluster of peaks, springing from a huge sustaining and connected base. Between lat. 27° 16′ 23″ and 31° 6′ 8″ N., and long. 78° 32′ 32″ and 89° 18′ 43″ E., are seventy-nine peaks, ranging from 14,518 feet, to that of Mount Everest, 29,002 feet above the sea. The Pir Panjal, a great snow-clad range, shuts in the valley of Kashmir on the south. With that exception, the ranges covered with perpetual snow are first met with on the southern slope of the great Indo-Tibetan table-land, along a line between 80 and 90 miles from the foot of the outer mountains, and 20 or 30 miles south of the Indian watershed; and from this line northward snowy peaks abound everywhere over the

summit of the table-land. The average elevation of the crest of the Indian watershed, between the points where the Indus and Brahmaputra cross it (1500 miles), probably exceeds 18,000 feet. The heights of the following peaks are given by Mr. Trelawney Saunders in Geog. Mag., July 1877:—

	Lat.	Long.	Ht., Ft.

Watershed.—The Himalayan watershed lies at a very considerable distance to the north of the great Himalayan peaks, which, from the side of Hindustan, seem to form the watershed. The greater part of the giant peaks, which rise to an elevation of 25,000 to 29,002 feet, are situated not on the central axis but to the south of it. Viewed from a distance of about 150 miles, these mountains present a long line of snow-white pinnacles, which on a nearer approach are seen towering above the dark line of lower but still lofty mountains. The steep face is toward the plain, and to the north the chain supports the lofty table-land of Tibet. Deep narrow valleys, separated by ranges running either parallel or at right angles with the main ridge, contain the numerous sources of the rivers flowing into the Ganges, the Indus, and the Brahmaputra.

Rivers.—The great rivers issuing from the Himalaya from west to east in succession, are the Jhelum, the Chenab, the Ravi, the Beas, the Sutlej, the Jumna, the Ganges, the Gogra, the Gandak, the Kosi, the Tista, the Monas, and the Subansiri. The Indus, the Kābul river, the Jhelum, the Chenab, the Ravi, the Beas, and the Sutlej form seven large rivers, which flow through fertile valleys. The Jhelum runs in the valley of Kashmir. The course of the Ravi and Chenab is short, and their valleys small. The Beas in its upper portion is in the Kulu valley, but lower down it becomes entangled amongst the lower ranges west of Mundi, whence it opens on the plains of the Sutlej. The Sutlej has a tortuous entangled course in its upper parts, but enters the valley west of Simla, in Sukeyt and Balaspur. The Brahmaputra, Indus, Sutlej, and Kurnali or Gogra are called by the Tibetans, Tam-jan-khamba, or Horse's Mouth; Shingh-gi-khamba, or Lion's Mouth; Langchan-khamba, or Bull's Mouth; and Mabja-khamba, or Peacock's Mouth. These four great rivers drain the Kailas group of mountains. They rise close to the great Kailas Purbut. Eastward of the meridian marked by the Sanpu falling into the plain of Assam, the rivers descending from the eastern part of the Tibetan highland cut up the plateau into a succession of lofty ranges and deep gorges running north to south. These rivers include the Dihong and other affluents of the Brahmaputra, also the great Yang-tze-kiang with its tributaries, which flows southwards to lat. 26° N., then turns eastward, to traverse the whole of China proper.

Passes.—The Himalaya present almost insurmountable obstacles to communication between the countries which they divide, thereby separating the Boti or people of Tibet from the Hindu family of India. The distinction of climate is not less positively marked, the ranges forming the lines of demarcation between the cold and dry climate of Tibet, with its dearth of trees, and the warm and humid climate of India, with its luxuriance of vegetable productions. There are, however, many passes. In Kanawar there are fifteen, at elevations varying from 15,000 to 17,000 feet. From the peak of Mono-mangli to the sources of the Gilghit and Kunar rivers, not less than 650 miles, the chain is pierced by the Sutlej and Para at the base of Porgyal, and by the Indus at the foot of Dyamur.

Between Gilghit and Chittagong there are a hundred passes; but of all these, the basins of the Ganges and its four great feeders, the Gogra, the Gandak, Kosi, and Tista, are the great mountain passes of the Himalaya.

The following are the heights of passes over the Outer Himalaya range:—

	Lat.	Long.	Ht., Ft.
Barga,	31° 16′	78° 19′	15,000
Ghusul,	31 21	78 8	15,851

Sub-Himalayas or *Sivalik.* Along the southern base of the Himalaya, and parallel with the general direction of the mountains, a series of comparatively low ridges extends, formed of tertiary rocks. In the Panjab, the transition from the plains to the outer hills is marked by a belt of dry, porous ground, seamed by numerous gullies or ravines, from 100 yards to a mile wide, partly covered with long, tufty jungle grass. To the east the Terai occupies the same position. This is a belt of waste, marshy ground, a malarious region

of varying breadth, lying below the level of the plains. This tract affords pasture to innumerable herds of cows and buffaloes. Beyond lies a dry belt of rising ground, called Bhavar, chiefly of a gravelly and sandy nature, with abundance of the sal tree (Vatica robusta). Next intervenes a range of fossiliferous sandstone; which almost uniformly edges the Himalaya from the Jhelum to Upper Assam. The space between these and the slope of the Himalayas themselves is occupied by the Duns, the Maris (in Nepal), and Dwars (in Bhutan), longitudinal valleys of rising ground, either cultivated or yielding a plentiful forest growth. Streams issuing from the Himalayan ranges lose a great part or the whole of their water by percolation through the gravel in the Bhavar region. At the base of the slope, much of the water that has percolated the gravel re-issues in the form of springs, the ground is marshy, and high grass replaces the forest. This tract is the Terai, a term not unfrequently applied to the whole forest-clad slope of the Himalayas, known also in Nepal as Morung.

Sivalaya (Sivalik) is the local name of the range separating the Dehra Doon from the plains east of the Jumna, and this has given the term Siwalik. It was in the Siwalik Hills that Lieut. (General Sir Proby) Cautley, in the early part of the 19th century, discovered the presence of fossils; and the collections made by him and Dr. Falconer were described by the latter in the Fauna Antiqua Sivalensis and Palæontological Memoirs. The great fossiliferous deposit of the Siwaliks is near the valley of Markanda, westward of the Jumna, and below Nahun. By the joint labours of Lieut. Cautley and Dr. Falconer, and of Lieutenants Baker and Durand, a sub-tropical mammalian fossil fauna was brought to light, unexampled for richness and extent in any other region then known. It included, amongst the Primates, species of macacus (2), and semnopithecus (2); of the Carnivora, species of felis, canis, ursus, hyæna, meles, mellivora, lutra, machærodus, enhydriodon, etc.; of the Proboscidea, elephas (7), euelephas loxodon (1), stegodon (5), mastodon (4), tetralophodon (6), trilophodon (7); of the Ungulata perissodactyla, rhinoceros, acerotherium, listridon, equus, hipparion; of Ungulata artiodactyla species, hippopotamus, hippopotamidon, tetraconodon, sus, cervus, cameloparadalis, sivatherium, bos, bison, bubalus, antilope, capra, ovis, camelus. Of the Rodents, species of mus (1), rhizomys and hystrix. Among the Reptilia, monitors and crocodiles of living and extinct species, the enormous tortoise, Colossochelys Atlas, with numerous species of emys and trionyx. And, along with fossil fish, Cyprinidæ and Siluridæ, no less than 25 species of shells were found, all of which but 4 are now extinct. The general facies of the extinct fauna exhibited a congregation of forms participating of European, African, and Asiatic types. They are beautifully arranged in the London Natural History Museum.

Himalaya, as a name, is from the Sanskrit words Hima, snow, and Alaya, an abode. The range is also called Himadri, and Himavat; also Himachala (snowy mountain), and also Himadaya, the place of appearance of snow (Adaya, appearance), whence the classic name Æmodus. Himavat, the Western Himalaya, where it bifurcates and embraces the country occupied of old by the Sakæ, was the Emaus of ancient geographers, the Himin of the Mœso-Gothic, the Hemel (Himmel) of the German, and the Heven of the Anglo-Saxon. Pliny was fully aware of the signification of the name, for he says (Hist. Nat. vi. p. 117), 'Imaus in colarum lingua, nivorum significans.' Hindus call all the high snowy peaks of the Himalaya by the generic name Kailasa; and, in the mythology of the Hindus, Mount Kailasa is the heaven of Siva and of Vishnu; another fabled Himalayan mountain, Meru or Su-meru, being the site of Swarga, the heaven of Indra; and in Hindu mythology the sacred Ganges is fabled to spring from the feet of Vishnu.

Races. — The habitable parts of the range are occupied by Mongoloid races, and to a small extent by tribes of Aryan descent; and many of the tribes are supposed to have occupied their present localities before the 4th or the 7th centuries A.D. A sparse Aryan population lies scattered among the valleys.

The Bhot area is bounded on the south by India and Kashmir, on the north by Chinese Tartary, and on the west by Little Bokhara and Kafiristan. Amongst them may be mentioned the Mahomedan Bhot of Baltistan or Little Tibet, of Rongdo, Skardo, Parkuta, and Khartakshi, of Shigar, Chorbad, etc.; (2) the Buddhist Bhot of Ladakh, Hungrung and Kanawar, the Bhot of the Chinese empire, the Tibetans of Rudok, Garo, Goga, etc., of Lhassa and Tishu-Lumbu, the Si-Fan, the Lhopa of Bhutan, the Tak, the Bhot of Garhwal, Kamaon, and Nepal; the Chepang, and probably the Rhondur, the Chak, the Drok, the Hor, the Kolo; and (3) in the further east are the Koch'h, the Dhimal, the western Bodo of Sikkim; and (4) still farther are the Bhutan frontier, and still farther are the eastern Bodo or Boro of Assam and Cachar, the Garo, the Khassya, and the Mikir. To the central region are similarly confined, each in their own province, from west to east, the Dunghar (west of Nepal), the Dardu, the Gakar, the Bamba, the Kakka, the Dogra, the Kanet, the Garhwali, the Kohli, the Kas or Khasia (in Nepal), the Magar, the Gurung, the Kusunda, the Chepang, the Sunwar, the Newar, the Murmi or Tamar, the Khombo or Kiranti, the Yakha, the Limbu or Yak-thumba, the Lepcha or Deunjongmaro (in Sikkim), the Lhopa (in Bhutan), the Dafla (east of Bhutan), the Abor and Bor, the Miri, and the Mishmi. The Cis-Himalayan Bhotia (called Palusen, Rongbo, Serpa, Kath-Bhotia, etc.), extend along the whole line of the ghats, and with the name have retained unchanged the lingual and physical characteristics, and even the manners, customs, and dress, of their transnivean brethren. The passes through the Snowy Range are occupied by the Bhoti, who have a monopoly of the trade across the Himalaya, are carriers, loading the goods on the backs of sheep. Most of the traders of the snow valleys have some members of their families residing at Daba or Gyani, on the Nunakhar lake.

The men of all races in the hills are short and of poor physique; they look worn, and get deep-lined on the face at a comparatively early age. The young women are often extremely pretty, those living in the higher and colder villages having, at 15 or 16, a complexion as fair as many Spaniards or Italians, and with very regular features. But they grow darker as

they advance in years, and become very plain. As a general description of the Mongoloid tribes there, the head and face is very broad, usually widest between the cheek-bones, sometimes as wide between the angles of the jaws; forehead broad, but low and somewhat receding; chin defective; mouth large and salient, but the teeth vertical, and the lips not tumid; gums thickened; eyes wide apart and oblique; nose long, pyramidal; hair of head copious and straight; of the face and body deficient; stature low, but muscular and strong; character phlegmatic, good-humoured, cheerful, and tractable. Polyandry yet exists partially, but is disappearing. Female chastity is little heeded before marriage. Crime rare, and they are truthful. They sacrifice, and are little Hinduized. Their craftsmen are stranger helot races, located amongst them from time immemorial, as smiths, carpenters, curriers, potters. The Newar alone have any literature, and that wholly exotic.

To the lower range, again, and to similarly malarious sites of the middle region, are exclusively confined the Koch'h, Bodo, Dhimal (Sikkim and east of it), the Kichak, Pallas, Hayu, Tharu, Dhenwar, Kumba, Bhramu, Dahi or Dari, Kuswar, the Bhotia (in Nepal), the Boksa (in Kamaon), the Khatir, the Awan, the Janjoh, the Chib, and the Bahoa (west of Kamaon to the Indus).

The Khas, Magar, Gurung, Newar, Murmi, Lepcha, and Bodpa, etc., are dominant unbroken tribes. The broken tribes are all the Awalia, the Chepang, Kusunda, and Hayu, and there are tribes of helot craftsmen, blacksmiths, carpenters, curriers, etc., who are regarded as unclean. The unbroken tribes are the more recent immigrants from the north; their languages are of the simpler Turanian type, whereas those of the broken tribes are of the complex or pronomenalized type, and the phenomena of ethnology in the Himalaya warrant the conclusions that they were peopled by successive swarms from the great Turanian hive, and that its tribes are still traceably akin alike to the Altaic branch of the north, and to the Dravidian of the south. The Khas, the Kanet, the Dogra, and several other tribes of the Western Himalaya, are clearly of mixed breed, descended from Tartar mothers and Aryan fathers.

The Himalayan mountains thus form the meeting-ground of the Aryan and Turanian races. The two stocks are in some places curiously intermingled, though generally distinguishable. To the extreme north-west are found the Dard, an Ayran race of mountaineers, abutting on the Pathans or Afghans on the west, and the Balti, a race of mahomedanized Tibetans of the Turanian stock, on the east. To this latter stock also belong the Champa, a race of hardy nomades, wandering about the high-level valleys of Rupshu, and the Ladakhi, a settled race, cultivating the valleys of their country. The other Aryan races are the Pahari or 'mountaineers,' the Kashmiri, the Dogra, and Chibhali, who inhabit the outer hills. In Garhwal and Kamaon we find the Kanawari (inhabitants of Bashahir), the Nilang people, who differ in no respect from those of Hundes, and the inhabitants of the Bhotia Mahals of Kamaon and Garhwal, who are of mixed Tartar and Indian origin.

A number of the hill-men are Rajputs, and there are a few villages of Brahmans. The Dom are hereditary bondsmen to the Rajputs. Basgi men and women are singers at the temples. From Kashmir eastwards, all the easily accessible portions of the Himalaya are occupied by Aryan Hindu as far as the eastern border of Kamaon and the Kali river, separating Kamaon from Nepal,—the Tibetans being here confined to the valleys about and beyond the snow. People of Tibetan blood have migrated into Nepal throughout its whole length, and have formed mixed tribes, whose appearance and language is more Tibetan than Indian, but whose religion and manners are Hindu. East of Nepal, in Sikkim and Bhutan, the Hindu element almost disappears, and the Tibetans are altogether dominant. Between the Kali and Dhansri, in Nepal, Sikkim, and Bhutan, the ordinary population consists of the following:—

1. Cis-Himalayan Bhotia or Tibetans, called Rongbo; Siena or Kath Bhotia; Palu-Sen.
2. Serpa. 3. Gurung. 4. Magar. 5. Murmi.
6. Newar. 7. Kiranti. 8. Limbu or Yak-thumba.
9. Lepcha or Deunjong Maro.
10. Bhutanese, or Lhopa, or Dukpa, or Brukpa.

Gurkha, Gurung, Magar.—In Nepal, in the west are the Gurung and Magar tribes, short, with features of an extreme Mongolian type, full of martial ardour and energy. They are famed as the Gurkha soldiers. They have considerable intellectual ability.

The *Newar* of the valley of Nepal are the cultivating peasantry, have Tibetan features, with a fair and ruddy complexion. The language of the Magar, Gurung, and Newar is chiefly Tibetan. Farther east are the Keranti, Murmi, and others. Some mixed races are found to the south of each chain, as the Lahuli and Kanawari in the west, and the Gurkha and Bhutani in the east.

Highest Permanently Inhabited Villages.

1. Bhutan, Sikkim, Nepal.		2. Kamaon and Garhwal.	
Yangma Guola,	9,279 feet.	Ussilla,	8,940 feet.

Sanatory stations and convalescent depots for British troops have been formed on spurs from the Himalayas, as well as on other of the hill ranges of British India, as on Mount Abu, Mahabaleshwar, Ramanmallay, the Neilgherries. In 1877 the mortality at the hill stations was only 6·49 per 1000; in Bengal proper, 9·11; in Meerut and Rohilkhand, 10·16; in the Panjab, 10·68; Gangetic provinces, 13·24; Agra and Central India, 14·36.

Almorah in Kamaon, ...	5300-5500 feet.

Subathu, 9 miles from Kussowlee .	4000

Languages.—In the Himalaya, according to Mr. Aitcheson, the various dialects are mixed together in great confusion. On the northern Assam frontier are found, in the following order from E. to W., the Aka, Abor, Dafla, Miri, and Mishmi; next to these is Bhutia, which carries us as far E. as the Tista; Sikkim, or the country between the Tista and the Singhaleela range, contains the Lepcha and Limbu dialects. The Sikkim Terai gives us the Dhimal, Bodo or Mechi, and Koch'h, which latter also occupy the plains of Koch-Bahar, and the northern parts of Runjpur, Dinajpur, and Purniah. In Nepal, according to Mr. Hodgson and Dr. Campbell's researches, we find a perfect maze of dialects. Beginning from the Singhaleela range, we find Limbu or Kiranta, which goes W. as far as the Dudkusi river, in long. 86° 44'. Sherwill found the Gurung in the higher parts of Singhaleela, closely connected with whom are the Murmi. Along the lower hills are the Magar, who extend to the W. as far as Palpa. Somewhere about here we should apparently place the Brahmu, Chepang, Hayu or Vayu, and Kusunda. In Central Nepal are the Newar, Pahri, and Brahmo, a dialect of Magar, also the Darahi or Dorhi, Danwar, and Paksya. The Tharu live in the Terai between Chumparum and the Khatmandu valley, as far W. as the river Gandak. These last four are classed among Indo-Germanic languages. The rest are Turanian, with more or less infusion of Hindi. The Parbatia or Paharia, a dialect of Hindi, is spoken all over Nepal, and is the court language. West of this again comes the Palpa, then the Thaksya, Sunwar, and Sarpa, the dialects of Kamaon and Garhwal, which carry us on to the Milchan of Kanawar, the Hundesi, and Tibarskad north of it. West of this come the Dogra dialects of the Panjab hills.

Valleys.—The Dehra Doon is a winter valley. Its length is about 45 miles and its breadth about half that. It is shut on the north by the Siwalik range, rising 3000 feet high. Off the E. are numerous mountains rising 7000 or 8000 feet, amongst them Mussoori and Landour; the Asun and the Sooswa rivers drain it. It is clear of jungle, and well cultivated. The tea-plant thrives, and the village of Dehra is large and thriving.

In the Kangra valley, some places like Bhagsu (Dharmsala), and the road from Kangra town, Haurabagh and Fouta-Kal, are beautiful, as also are the views of the Snowy Range. Kot Kangra or Kangra town was the capital of a powerful hill state, which was conquered by the Sikhs. It is 2500 feet above the level of the sea. Bhagsu, above Dharmsala, is 7000 feet above the sea. Haurabagh is 7000 feet, and Fouta-Kal 9000 feet above the sea. The Kangra people are sturdy, honest, and independent.

The Sutlej valley commences a few miles above Mundi, and continues up for about 40 miles, almost to Simla and Subathu, and has the sanatoria of Simla, Kussowlee, Nagkunda, and Chor. Mundi is the chief town of the Mundi state. The Sutlej people are amiable and gentle, free of low cunning, having the appearance of a mixed race between the Tartar and the common hillmen. They are fair, well made, and strong, but are filthy and indigent. The women have a toga fastened round the waist. Nagkunda is estimated at 9000 feet above the level of the sea. Chor is 12,000 feet.

The Beas valley exceeds in beauty that of Kashmir. It runs from the Bajaora mountain on the north, to the Snowy Range on the south, a length of about 60 miles, and its heights range from 4500 feet at the foot of the Bajaora pass, to 9000 feet at Ralha at the foot of the Rotang pass. Sultanpur is 4584 feet. It is the only town in the valley, and trades with Ladakh, Central Asia, Mundi, and Kangra. Polyandry prevails in the Beas valley, but the general immorality is ascribed to the large numbers of Yarkandi traders.

Kulu.—The poorer Kulu people wear only a blanket, wound around the waist, and one end flung across the shoulders and pinned across the chest; men and women often dress alike, but the long hair of the women is plaited in one tress.

Animal Life.—The partridge has been observed 16,080 feet above the sea, and crows and ravens 16,500. The Khalij pheasants never descend below 12,000 feet; and high over the Kinchinghow (22,756 feet), flocks of wild geese are seen to wing their flight. The wild yak, the existence of which in the wild state has been doubted, and the kiang, five to six species of wild sheep and goats, hares, and mice, are found as high as 16,000 to 17,000 feet. The highest permanent village occupied by man is at 11,746 feet (Darcke), but in summer the herdsmen go higher up the mountains. On the southern slope the cultivation has not risen higher than 10,000 feet; but on the north side are the cultivated valleys of the Baspa river at 11,400 feet, and advancing farther, the habitations of man are to be seen as high as 13,000 feet, and cultivation 13,600 feet. There are many shrines and sacred spots within the ranges to which Hindu pilgrims resort, and numbers of them perish amidst the perpetual snows. Amongst them is Badarinath, in Garhwal, a temple dedicated to an

incarnation of Vishnu, 10,294 feet above the sea. Kedarnath is another Vaishnava temple within the Himalayas, 11,794 feet above the sea; Gangotri also, in Garhwal, at 10,319 feet of elevation, is another shrine, its vicinity being sacred to Hindu thought, as near it, at 13,800 feet, the Bhagirathi issues, no puny stream, from beneath a glacier.

Flora. — If we commence with the bases of these mountains, and pass successively through the several belts, we first find a vegetation similar to that of the southern provinces of India: the agricultural products consist of rice, millet, amaranth, an esculent arum, ginger, turmeric, a little cotton, and sugar, at the season, succeeded by wheat, barley, and buckwheat, in the cold-weather months. Along with plantains, oleander, and some of the orange tribe, we meet also with some species which were long considered peculiar to China, as Marlea begonifolia and Houttuynia cordata, with species of Chloranthus, Incarvillea, and others. On ascending higher, we pass through different gradations of vegetation until reaching the regions of the oaks and rhododendrons, which is immediately succeeded by that of pines.

Trees grow very generally in the Himalaya up to heights of 11,800 feet, and in most parts there are extensive forests covering the sides of the mountains at but a little distance below this limit. In Western Tibet, however, there is nothing at all corresponding to a forest. Apricot trees, willows, and poplars are frequently cultivated on a large scale; poplars, indeed, are found at Mangnang in Gnari Khorsum at a height of 13,457 feet, but they are the objects of the greatest care and attention to the lamas. On the northern side of the Kouen Lun are no trees at all, owing to the considerable height of the valleys. In the Andes they end at about 12,130 feet; in the Alps, on an average, at 6400 feet, isolated specimens occurring above 7000 feet. The cultivation of grain coincides in most cases with the highest permanently inhabited villages; but the extremes of cultivated grain remain below the limit of permanent habitation. In the Himalaya, cultivation of grain does not exceed 11,800 feet, in Tibet 14,700 feet, and in the Kouen Lun 9700 feet. For the Andes the limit is 11,800 feet. In the Alps, some of the extremes are found near Findeler, at a height of 6630 feet, but the mean is about 5000 feet. The upper mean limit of grass vegetation in the Himalaya is at 15,400 feet; in Western Tibet, nearly the same level as for the highest pasture grounds, 16,500 feet, may be adopted. In the Kouen Lun grass is not found above 14,800 feet. Shrubs grow in the Himalaya up to 15,200 feet; in Western Tibet as high as 17,000 feet; and in one instance, at the Gunshankar, even to 17,313 feet. On the plateaux to the north of the Kara-korum, shrubs are found at 16,900 feet, and, which is more remarkable, they occasionally grow there in considerable quantities on spots entirely destitute of grass. As an example may be mentioned, amongst several others, the Vohab-Chilgane plateau (16,419 feet), and Δ Bashmalgun (14,207 feet). In the Kouen Lun the upper limit of shrubs does not exceed 12,700 feet. Above this height grass is still plentiful, and shrubs being here, as generally everywhere else, confined to a limit below the vegetation of grass, the range presents an essential contrast in this respect to the characteristic aspect of the Kara-korum. The number of species of plants, as well as the number of individuals, is exceedingly limited in the higher parts of the Kouen Lun. Lichens are completely wanting in the dry angular gravel covering the high plateau, and the slopes of the mountains in their neighbourhood.

Snow is a phenomenon which varies extremely with the latitude, longitude, humidity, and many local circumstances. In Ceylon and the Madras Peninsula, whose mountains attain 9000 feet, and where considerable tracts are elevated above 6000 to 8000 feet, snow has never been known to fall. On the Khassya mountains, which attain 7000 feet, and where a great extent of surface is above 5000 feet, snow seems to be unknown. In Sikkim snow annually falls at about 6000 feet elevation, in Nepal at 5000 feet, in Kamaon and Garhwal at 4000 feet, and in the extreme West Himalaya lower still. In the Sikkim Himalaya, the giant peaks of Donkiah, Kinchinghow (22,756 feet), and Kanchinjinga, the third greatest mountain of the world (28,156 feet), only surpassed in altitude by the Kara-korum (28,278 feet), and Mount Everest (29,002 feet), form the culminating points in this magnificently wooded region. The truly temperate vegetation supersedes the sub-tropical above 4000 to 6000 feet; and the elevation at which this change takes place corresponds roughly with that at which the winter is marked by an annual fall of snow.—*Outer Mountains of Kemaon, by Capt. Herbert, in Bl. As. Trans.* xi. xii.; *Royle, Ill. Him. Bot.; Herm. Schl.; MacG.; Campbell*, pp. 47, 147–8, 168; *Thomson's Travels; Hooker f. et Thom.* pp. 189, 190; *Hooker, Him. Jour.; Universal Review*, No. 3, p. 359; *Major Cunningham; Captain Strachey, Report, Brit. Association*, 1847; *Annals, Indian Administration; Medlicott and Blanford's Geology of India; Trelawney Saunders; Magnetic Survey of India*, p. 9; *Fraser's Himalaya Mountains; H. H. Wilson's Hindoo Sects; Imperial Gazetteer.*

HIMIS, a Buddhist monastery near Leh in Ladakh, 12,324 feet above the sea.

HIMMARGUJERATI, one of the eighty-four Gachchas of the Jaina sect.

HIMMAT BAHADAR, the pupil of Rajendra Gir, a Dasnami ascetic.

HIMYAR was the fifth monarch from Kahtan, and gave his name to a dynasty which ruled over Yemen for many centuries, with varying fortune and different degrees of magnificence. Himyar was the first of the descendants of Kahtan who reigned over the whole of Yemen. This dynasty terminated on the conquest of Yemen by the Abyssinians in A.D. 525; and Dthoo Nawaz, the last of them, was the tyrant who destroyed the Christians of Nejran by burning 20,000 in a pit, noticed in chapter 85 of the Koran as the martyrs the brethren of the pit. The dynasty had ruled in Yemen for 2000 years, and its downfall was accelerated by the intolerance of the Jewish Tobbas. For a short time prior to A.D. 595, assisted by the Persian monarchs, Nushirwan and Khusru Parwez, the dynasty again ruled over Yemen, but was ultimately put aside by Persia declaring Yemen to be a satrapy. The devotions of the Himyarites were addressed to a multitude of deities, of which the principal were the sun, the moon, and the planets. The most powerful of this dynasty was Abu Karib, commonly called Tobba. In A.D. 206 he covered the

Kaba with a tapestry of leather, and supplied its door with a lock of gold. The Beni Himyar of S. Arabia claim to be descendants of that dynasty. Himyaritic inscriptions were found by Lieutenant Cruttenden in the town of Senaa. They are likewise met with at Aden. The language appears to lean more to Hebrew than the Ethiopic, while the Gara language, called also Ekhili or Mahrah, is more akin to Ethiopic. — *Playfair's Yemen; Niebuhr's Tr.* ii. 178; *Wright's Christ. in Arabia.*

HINAYANA, a form of Buddhism which prevailed in India east of the Indus. It was put aside by Kanishka, who introduced the Mahayana schism. The Hinayana was the purer sect of the Buddhists, followers of the lesser vehicle.

HIND. The term India, by which this country, as far as it was known, is distinguished in the earliest Grecian histories, appears to be derived from Hind, the name given to it by the ancient Persians; through whom, doubtless, the knowledge both of the country and its name were transmitted to the Greeks. Mr. Wilkins says that no such word as Hindu or Hindustan are to be found in the Sanskrit dictionary. The people among whom the Sanskrit language was vernacular, styled their country Bharata.—*Rennell's Memoir.*

HINDI is a term used all over Northern India, to denote the vernacular tongue of the districts. Speaking generally, the whole of Upper India, including the Panjab, but exclusive of Bengal, may be said to be possessed by one language, the Hindi. This range, therefore, would include all the Rajput states, Jeysulmir, Ajmir or Rajasthan, Mewar, Marwar, Bikanir; and also the N. and E. in Lahore, Multan, Dehli, Agra, Malwa, Gujerat, Oudh, Allahabad, and Behar. Indeed, in the entire tracts lying between the Vindhya on the south, the Himalaya on the north, the Indus on the west, and Bengal and Assam on the east, are spoken what are called Hindi dialects, some of which contain Sanskrit words to the extent of nine-tenths of their entire vocables. The languages spoken in the north-western border of India, between it and Afghanistan, and those of India adjoining Afghanistan, are dialects of Hindi, but sufficiently distinct to be called Sindi, Panjabi, and Kashmiri. Lieut. Leech, indeed, has given vocabularies of seven languages spoken on the west of the Indus. According to Colebrooke, Hindi owes nine-tenths of its vocables to Sanskrit roots; but when it is spoken by Mahomedans, who added to it Arabic and Persian roots, it became converted into Hindustani or Urdu, literally the camp tongue. It is that which the Mahomedans generally, and the Indian army everywhere, speak, and has hitherto been the language employed in personal intercourse by the British in their communications with the people of the country, though only formed into a written tongue since the beginning of the nineteenth century by Dr. John Borthwick Gilchrist of the Bengal Medical Service. The learned and the great retain Persian for epistolatory correspondence. When, however, Hindi is spoken by Hindus, who draw on Sanskrit for enrichment or embellishment, it appropriately retains the name of Hindi. Modified in these various ways, it is found not only on the plains of Hindustan, but also on the southern slope of the Himalayas, for Mr. Trail informs us that the language of Kamaon and Garhwal is pure Hindi. Indeed, generally, along the Sub-Himalayan range as far as the Gogra river, the impure Hindi dialect introduced by the Gurkhas from the plains appears to be extirpating the vernacular Tibetan tongues of the aboriginal mountaineers. Mr. Masson made himself understood throughout the whole of Kohistan; and it will thus be seen that the term is used to bring under one common designation the various dialects of a language essentially one, but which has received no great cultivation in any of its forms. According to the Brahman pandits of Benares, there are hundreds of dialects equally entitled to the name. The Brij Basha (or Bhaka, as it is pronounced on the Ganges) and the Panjabi are the two most cultivated varieties of it; but the Panjabi passes into Multani, which a good philologist has shown to be a corrupted form of Panjabi; whilst Jataki, again, farther to the south, is a corrupted form of Multani; Sindi, according to Lieut. Burton, is a perfectly distinct dialect, though directly derived from Sanskrit. When the Mahrattas extended their conquests into Hindustan, they saw Hindi everywhere prevalent, from the limits of the desert to the frontiers of Bundelkhand, and, finding it different from their own tongue, they called it contemptuously Rangri Basha, quasi barbarous jargon. Sir John Malcolm extends the Rangri Bhaka as far west as the Indus, and east as far as the frontier of Bundelkhand, where, as in all the country to the Indus from the western frontier of Bengal, dialects of Hindi prevail. The Marwari and other dialects of Rajputana are evident varieties of Hindi introduced by the Rajput races.

The great variety of the Hindi dialects is doubtless owing to the absence or non-use of any common book, as the Bible or New Testament; and from the prolonged dominance of the Mahomedan rulers, and the encouragement given by them, by the ruling Hindu courts, and by the British, to the study of Persian, Hindi has been less studied than the Persian or modern Urdu. In 1872, in eight districts of the N.W. Provinces, the Urdu or Persian reading pupils in the Tahsili and Halkabandi schools largely exceeded the Hindi and Nagri reading scholars, ranging from $\frac{2}{3}$ths to $\frac{3}{4}$ths.

The people speaking these Hindi dialects are of different races. Amongst the races in this tract are the Mhairs of Ajmir, the Rajputs, the Hindus of the eastern counties, called Purbhiahs, and the descendants of the Aryan conquerors who have been residing there nigh two thousand years, men of large physical frame, proud, vain, self-reliant, and abstemious.

HINDIAN, a small town in Khuzistan, on the Tab river, 35 miles from its mouth, navigable to this town for bagla and boats.—*MacG.* p. 176.

HINDIKI, a name by which the Hindus are designated in Afghanistan and westwards to Russia. In Astracan there are about five hundred families. Mr. Mitchell says that the reputation of these Hindu colonists stands very high, and that they bear a preference over all the merchants of other nations settled in this great commercial city. The Hindiki in Afghanistan are described by Bellew as descendants of Arab fathers with Hindu mothers. The Indian born Habūsh, slaves of the Nawabs of the Karnatic, were styled Hindi.

HINDU is the ordinary name by which the

idol-worshipping people of British India are at present known, but the term is only of recent use. The races to whom it is applied are only now fusing, under the firm rule of the British, and never, hitherto, could have had one common designation. Bharata or Bharatavart'ha is an ancient Sanskrit name for part of the countries which Europeans include in the term India. Hindu for the people, and Hindustan for the country, now so generally applied by natives as well as foreigners, are possibly of Persian or W. Aryan origin, and may have relation to the seven rivers of the Panjab, the Sabp'ta-Sindhu, which the Aryans met with in their course to the south, the river Indus being still known as the Sind'hu or Sind'h (Hitopadesa, p. 333). With the Persians, Ind or Hind and Hindu, as synonymous with black, has long been applied to the dark-coloured populations in the territories which are now comprised in British India. The Arab, the Persian, the Afghan, and Sikh, when speaking of the people of India, only call them 'black men;' and even in India the Mahomedan descendants of the Arab, Persian, Moghul, and Afghan conquerors use the same designation. 'Kala Admi,' literally black man, is ever in their mouths; and Hindus themselves, in their various tongues, likewise so distinguish themselves from all the fair foreigners amongst them. The African races, who were formerly brought to India as the household slaves or guards of native princes, invariably, when alluding to such of their own people as are born in the country, style them Hindi; and the Hindu merchants trafficking throughout Afghanistan, Central Asia, and Russia, are known to the people as Hindiki. Therefore, though a large part of the idol-worshipping people now-a-days call themselves Hindu, in this they are merely following the names given to them by their Arab, Persian, Afghan, Turk, Moghul, Tartar, and British rulers. Even Europeans have only of late habitually used this term, for at the beginning of the 19th century Gentoo was the everyday name employed, though it has since gradually fallen into disuse. It, also, was derived from a foreign people, the Portuguese, and was applied to the idol-worshippers, like the Gens of the Romans and Gentile of the Scriptures. It never, perhaps, reached much beyond the seaport towns, and if the better educated amongst the natives ever employed it, their doing so was merely in imitation of Europeans. And now, too, similarly, Brahmans and others, when alluding to the Teling race of their own countrymen, likewise style them Hindus.

Hindu is thus almost entirely a European conventional term, and does not represent a nation, a race, or a religion. The great bulk of the people known by this appellation are the descendants of Turanian, Scythian, and even Aryan immigrants, who in bygone ages are supposed to have left the cold north, some offshoots moving westward, and others to the south; for remnants of Turanian languages are found in Baluchistan, and the seat of the great Sanskrit-speaking people was long in Kashmir, proving that one great highway to the south had been down the valley of the Indus, through Kashmir and the Panjab. But between the valley of the Indus and that of the Brahmaputra, there are 20 or 30 passes in the Himalaya through which the northern races could stream to the genial south. Amongst the first of these immigrants seemingly were Kolarian and Dravidian races, belonging to the Turanian family of mankind, bodies of whom seem to have spread themselves over the Peninsula. As to the date of their advent, however, history is silent, but there seems no doubt that great branches of the Scythic stock were occupants of India at the time that it was to a considerable extent conquered by the Sanskrit-speaking tribes of the Aryan family. In the north, the subjugation or ousting of the Turanians from all rank and power was so complete, that Sanskrit forms of speech became the languages of the country; and now, in the north, Kashmiri, Panjabi, Sindi, Gujerati, Mahrati, Hindustani, and the Bengali, all of them with a large admixture of Sanskrit, are sister tongues known as forms of Hindi. South of the Nerbadda, however, it is otherwise. Throughout the Peninsula the languages in use differ from the Sanskrit in grammar, and only admit Sanskrit words in the same way that the Anglo-Saxon admitted terms of law and civilisation from the Norman-French. At the present day, the south of India more largely represents the Turanian, and the north the Aryan race. The fair, yellow-coloured Aryans are, however, to be met with south even to Cape Comorin; but though mixing with the various Dravidian nations, races, and tribes for at least 3000 years, in physical form, complexion, intellect, and manners, the Brahmanical and other Aryan families are as distinct as when their forefathers first came from the north, it may be three or four thousand years ago. The great Aryan migration seems to have received its first check at the Vindhyan range, between the 14th and 8th centuries before the Christian era.

This powerful branch of the Aryans passed into Northern India between the 14th and 8th centuries before Christ. They brought with them the language of the Vedas; and as all Brahmans profess alike to recognise the authority of these sacred books, we witness the modern worshippers of Siva, Vishnu, and the maintainers of the Sankhya or Nyaya or Vedanta doctrines, all considering themselves and each other to be orthodox members of the Hindu community. It is this common recognition of that one set of religious books which is the sole bond of union amongst the descendants of the various races and tribes professing Hinduism or Brahmanism, who now people India. The Aryans seem to have brought with them a servile race, or to have had amongst them a social distinction between the noble and the common people, which has ever continued. As they conquered southwards, amongst the Turanian races whom they found in the country, they reduced the less civilised tribes to a state of predial slavery. They named them in fierce contempt, Dasa or slaves, and these formed the true servile race of Menu and other writers. Where the races who had preceded them retained their independence, these proud immigrants styled them M'hlecha, a term which even to the present day is intended to comprise everything that is hateful or vile. But the immigrant Aryans found along the coasts of India also other races, different alike from the Scythic tribes and from the Aryans of the Vedas,—earlier colonizers or immigrants, probably from the west,—who had a civilisation of their own, and with whom the Pharaohs, and Solomon and Hiram, and the Cushite Arabs of Yemen

and the people of E. Africa, carried on a lucrative trade by sea. This people had extended down the coast to Cape Comorin, had crossed over to Ceylon, and crept up the Coromandel coast, till stopped by the Godavery and Mahanadi. All the Bengal Presidency and Central India was at that time thinly inhabited by a Turanian, Sakyan, or Mongol race, coming down from Tibet and Nepal. But so sparse was the population whom the Aryans encountered, that, in the Vedas, Agni is represented as the general of Nahusha, the first settler, that is, they cleared the ground by burning the forests, and some fine descriptions are given of the grandeur and terror of the sight. Up to the present day the religions of the prior occupants have never been other than local cults, and many of them even yet continue very barbarous. The higher civilisation of the East Aryans has enabled them to propagate their changing views, but the phases of their religious beliefs have been marked by four great epochs:—

I. The Vedic age, which was characterized by the worship of the gods of the elements, Agni, Indra, Varuna, and appears to have been current in the Panjab prior to the disappearance of the Saraswati in the sand.

II. The Brahmanic age, characterized by the worship of Brahma, and which seems to have prevailed between the disappearance of the Saraswati and the advent of Sakhya.

III. The Buddhist age, which was characterized by the pursuit of Nirvana, and seemingly prevailed from about B.C. 600 to A.D. 800 or 1000.

IV. The Brahmanical revival, which is characterized by the worship of incarnations of deities, and has prevailed from about A.D. 800 till now.

Vedic Age.—Among the gods whom the Vedic Aryans worshipped were Indra and Agni. Indra was the firmament, with all its phenomena. He alone held the thunderbolt, and was king over gods and men. Agni was the element of fire. All the other gods were but manifestations or other forms of these two. The relationship is evident between Agni and the sun, the Surya or Sura Savitri of the Vedas, and a female divinity. But Indra also is frequently identified with the sun; indeed, the twelve great deities, or Aditya, are but other names of the same god as presiding over the twelve months of the year. The Aditya most frequently invoked are Mitra, Varuna, Aryaman, and, in a lesser degree, Ansa, Daksha, Pushan, Bhaga, Vishnu, and Twashtri. Pushan watches over roads and travellers; Twashtri is the Vulcan or smith of the gods. Slight mention is made of Vishnu; but we have the germ of the legendary three steps, being apparently simply the rise, culmination, and setting of the sun. Among the inferior deities, the Marut or winds hold the first place; and next to them the Aswini, apparently twins or brothers, and sons of the sea (Sindhu), so that the Vedic Aryans evidently had settlements near some water, which they called a sea. The Aswini are almost invariably represented as having a triangular car with three wheels, drawn by asses; while their name appears to be derived from Aswa, a horse, which would seem to identify them with the two horses of the sun. The sakta or hymns addressed to them are richest of all in legend. Their connection with Indra (Jupiter), their patronage of mariners, their twin brotherhood, the two horses and stars found on their coins, identify them with the Grecian Dioscuri. In the Vedas, heaven, earth (Aditi and Pritivi), and are rarely invoked, and the sun has comparatively few saktas. Occasional laudations are given to rivers, especially to the Saraswati; and this nature-worship extends to the cow, the wood used in the oblations, and even the vapa or sacrificial post. To Ushas, or the dawn, some of the most beautiful hymns in the Veda are addressed. All these deities are expressly declared to be 'the progeny of the heavens and the earth' (Wilson's Vedas, i. p. 276). No mention is made of the planets,—for Brihaspati is not a planet, but 'the lord of prayer,'—and the moon has not even a sakta.

The worship of the Vedic race is briefly but comprehensively described by themselves (Asht. I. Adhy. I. Sakta 6), where it is said the standers around associate with (Indra) the mighty (sun), the indestructive (fire), the moving (wind), and the lights that shine in the sky. The blessings they implore, says Professor Wilson, 'are for the most part of a temporal and personal description,—wealth, food, life, posterity, cattle, cows, and horses; protection against enemies, victory over them, and sometimes their destruction.' 'There are a few indications of a hope of immortality and of further happiness, but they are neither frequent, nor, in general, distinctly announced.' The only notice of an after life is found in the legend (for nothing is founded on it) of three brothers called Ribhus, who for their meritorious actions were made gods. Also, in one or two passages, Yama and his office of ruler of the dead are obscurely alluded to (Dr. Wilson, i. p. 25). Yama is usually connected with the Yamuna river. So monotonous and irreverent are the great bulk of their prayers (to Indra especially), that Professor Wilson could scarcely believe them to be in earnest. An instance of this is the hymn addressed to the goddess Anna (Anna devati, known in Bengal as Anna Purna), personified as Pitu, or material food, by the rishi Agastya (see Wilson's Veda, ii. p. 192; Calcutta Review, No. 64, p. 412); and in a similar strain the soma plant is addressed. This plant, the Sarcostemma brevistigma, is found all the way from the mountains of Mazenderan to the Coromandel coast, and Viswamitra is described as passing the Sutlej and Beas to gather it. Bruised between two stones, mixed with milk or barley juice, and fermented, it formed a strong inebriating spirit. 'The purifying soma, like the sea rolling its waves, has poured forth songs, and hymns, and thoughts.'

The *ritual* of these old Aryans, as described in Professor Wilson's epitome of the saktas, comprehended offerings, prayer, and praise. The former are chiefly oblations and libations of clarified butter poured on the fire, and the expressed and fermented juice of this soma plant, presented in ladles to the deities invoked. It seems to have been sometimes sprinkled on the fire, sometimes on the ground, or rather on the kusa sacred grass strewed on the floor; and in all cases the residue was drunk by the assistants. There is no mention of any temple, or any reference to a public place of worship; the sacrificial chamber was always in the house of the worshipper, and it is clear that the worship was entirely domestic. The worshipper himself does not appear to have taken any part personally in the ceremony; and it was by priests—seven and sometimes sixteen—by whom the different ceremonial rites are performed, and by whom the mantras, or prayer and hymns, were recited (i. p. 24). The soma juice was the obla-

tion or libation of the Vedic worship (the homa of the Parsee), and allusions to it are met with in almost every page.

The following tabular statement of the number of saktas in the 500 hymns translated by Professor Wilson, addressed to each deity, sets their actual and relative worship clearly before us:—

Indra,	178	Brihaspati,	2	Sarasvati,	
Agni,	147	Mitra,	17	Vishnu (none	
Aswini,	28	Varuna,	20	in the first	
Marut,	24	Usha,	11	Ashtaka),	
Vayu,	6	Surya or Savi-			
Rudra,	3	tri,	5		

This leaves less than sixty hymns for all the other members of the Vedic pantheon. Some of the divinities worshipped in Vedic times are not unknown to later systems, but at first perform very subordinate parts; whilst those deities who are the principal objects of worship of the present day are either wholly unnamed in the Veda, or are noticed in an inferior or different capacity. The names of Siva, of Durga, of Kali, of Rama, of Sita, of Krishna, of Radha, the present gods, so far as research has gone, do not occur in the Vedas. And the practice of the conquered races seems to have been to represent or regard local deities as identical with, or avatars or incarnations or other names of, the Vedic gods, who had already become objects of Aryan worship. The Vedas mention Rudra as the chief of the winds, collecting the clouds as a shepherd's dog does the sheep, and attending on his master Indra; in the Vedas he is the father of the winds; even in the Puranas he is of a very doubtful origin and identification; but in the present day everywhere amongst the Saiva Hindus he is identified with Siva. With the single exception of an epithet Kapardi, 'with braided hair,' of doubtful significance, and applied also to another divinity, no other name applicable to Siva occurs, and there is not the slightest allusion to the lingam or phallus form in which, for the last ten centuries at least, he seems to have been almost exclusively worshipped in India; neither is there the slightest hint of another important feature of later Hinduism, the trimurti, or triune combination of Brahma, Vishnu, and Siva, as typified by the mystical syllable O'm (a-u-m), although, according to Creuzer (i. p. 26), the trimurti was the first element in the faith of the Hindus, and the second was the lingam. In this view Creuzer must have intended the mixture of creeds now current in India, for the whole Vedic faith was essentially a sabaistic and nature worship.

Religious Books.—Aryan Hindus have been remarkable amongst civilised races as abstaining from all historical writings; and a knowledge of the changes that have occurred in their beliefs has been obtained from their books of religion, philosophy, and fiction.

The Rig-Veda Sanhita is a collection of hymns of the ancient Aryans, addressed to the elements and powers of nature. Their age is various, prior and subsequent to the 15th century B.C. The Rig-Veda is of primary importance in the Hindu religion and mythology. The Yajur and Sama Vedas consist of hymns derived from the Rig, but re-arranged for religious purposes; and the fourth Veda, the Atharva, is of later date. The Brahmana are ritualistic and liturgical compositions, chiefly in prose, and attached to the different mantras. They are later than the Vedic hymns, and recognise one Great Being as the soul of the universe. Of a still later age are the Aranyakas and Upanishads, which form part of the collective Brahmanas, and are principally philosophical. The Brahmanas recognise one Great Being as the soul of the universe. A golden egg was produced in the universal waters, from which in course of time came forth Prajapati, the progenitor, or the quiescent Universal Soul. Brahma took a creative form, as Brahma the Prajapati. From the Prajapati, or great progenitor, there was produced a daughter, and by her he was the father of the human race. The Upanishads, of which above 150 are known, are later, the oldest being about the 6th century B.C. They contain an examination of the mystic sense of the Vedas, and are free from Brahmanical exclusiveness. They have a monotheistic tendency.

The age of Menu was after that of the Brahmanas. Menu follows the golden egg theory, and he calls the active creator who was produced from it, Brahma, and Narayana. The latter name became subsequently exclusively applied to the Vishnu deity. The institutes of Menu show a great advancement of the Brahman caste.

The Mahabharata and the Ramayana are epic poems, which deal with the actions of men. Indra is mentioned; but Brahma, Siva, and Vishnu have become the gods, Brahma being but little mentioned; while in some passages Siva, in others Vishnu, is supreme, and the incarnations of Vishnu assume a permanent place. The Ramayana, by Valmiki, is supposed to be of the 5th century B.C., and its hero the royal Rama and his faithful wife Sita have been deified as incarnations of Vishnu and his consort. It is the older epic. The age of the Mahabharata is supposed to be in some of the six centuries B.C.; but it contains an interpolated episode, the Bhagavat Gita, which has been supposed to be of the 2d or 3d century A.D. In it Krishna is the Supreme, and bhakti or faith is enjoined.

These books belong to the Brahmana age. But a great reformer arose in the 6th century B.C., and the religious sects formed after him were prominent in India for about 1500 years, and are still the faiths of Burma, Tibet, Mongolia, Manchuria, Siam, Annam, and largely of Ceylon, China, and Japan. The reformer was Sakya Sinha, son of king Suddhodana of Magadha, and is known to history as Buddha.

Buddhism.—The valley of the Ganges was the cradle of Indian Buddhism, and Sakya Muni the founder of the new doctrines. As the champion of religious liberty and social equality, Sakya Muni attacked the Brahmans in their weakest and most vulnerable points,—in their impious assumption of all mediation between man and his Maker, and in their arrogant claims to hereditary priesthood. His boldness was successful, and before the end of his long career he had seen his principles zealously and successfully promulgated by his Brahman disciples, Sariputra, Mangalyana, Ananda, and Kasyapa, as well as by the Vaisya Katyayana and the Sudra Upali. At his death in B.C. 543, his doctrines had been firmly established, and the holiness of his mission was fully recognised by the eager claims preferred by kings and rulers for relics of their divine teacher. His ashes were distributed amongst eight cities, and the charcoal from the funeral pile was given to a ninth. He

had lived and preached from Champa and Rajagriha in the east, to Sravasti and Kausambi in the west. In the short space of 45 years, this wonderful man succeeded in establishing his own peculiar doctrines over the fairest districts of the Ganges, from the Delta to the neighbourhood of Agra and Cawnpur. This success was perhaps as much due to the early corrupt state of Brahmanism, as to the greater purity and more practical wisdom of his own system.

From his time until the end of the long reign of Ajatasatra, 519 B.C., the creed of Buddha advanced slowly but surely. This success was partly due to the politic admission of women, who in the east have always possessed much secret though not apparent influence over mankind. To most of them the words of Buddha preached comfort in this life, and hope in the next. To the young widow, the neglected wife, and the cast-off mistress, the Buddhist teachers offered an honourable career as nuns. Instead of the daily indignities to which they were subjected by grasping relatives, treacherous husbands, and faithless lords, the most miserable of the sex could now share, although still in a humble way, with the general respect accorded to all who had taken the vows. The Bhikshuni were indebted to Ananda's intercession with Sakya for their admission into the ranks of the Buddha community; and (see Csoma's Analysis of the Dulva, Res. As. Soc. Bengal, xx. p. 90; also Fo-kue-ki, chap. xvi. p. 101) the Pi-khieu-ni, or Bhikshuni, at Mathura, in token of their gratitude, paid their devotions chiefly to the stupa of Anan (Ananda), because he had besought Buddha that he would grant to women the liberty of embracing ascetic life. The observances required from the nuns are recorded in note 23, chap. xvi. of the Fo-kue-ki. The female ascetic even of a hundred years of age, however, was bound to respect a monk even in the first year of his ordination. It is related that Sakya's wife, after the first outburst of grief on seeing his return to her as an ascetic, herself became a Bhikshuni.

From its rise in the 6th century B.C., the doctrines of Buddha gradually spread over the whole of India. It was extended by Asoka to Kashmir and Kābul shortly after Alexander's invasion, and it was introduced into China about the beginning of the Christian era by 500 Kashmirian missionaries. In A.D. 400, when Fa Hian visited India, Buddhism was still the dominant religion, but the Vaishnava sect of modern Brahmanism, with a mixture of the old Aryan creed and the Buddhist faith, were already rising into consequence. In the middle of the 7th century, although the pilgrim Hiwen Thsang found numerous temples of the Saiva, whose doctrines had been embraced by Skanda Gupta and the later princes of Pataliputra, yet Buddhism was still the prevailing religion of the people. But though the faith of Sakya lingered about the holy cities of Benares and Gaya for two or three centuries later, it was no longer the honoured religion of kings and princes, protected by the strong arm of power, but the persecuted heresy of a weaker party, who were forced to hide their images under ground, and were ultimately expelled from their monasteries by fire. In 1835, Major Cunningham excavated numerous Buddhist images at Sarnath near Benares, all of which had evidently been purposely buried under ground. He found quantities of ashes also, and there could be no doubt that the buildings had been destroyed by fire; and Major Kittoe, who subsequently made further excavations, was of the same opinion. The Buddhist religion has long been extinct in British India. Its last remnants were extinguished, in blood and violence, about the 14th century, dying out about Trichinopoly and along the coast-line from Vizianagram to Masulipatam. But it still flourishes in its Hinayana and Mahayana forms, in the countries on its north and north-east borders, in Nepal and Tibet, in Mongolia and Manchuria, in Ava, Ceylon, and China, and amongst the Indo-Chinese nations of Annam, Siam, and Japan; and its followers far outnumber those of all other existing creeds except the Christian.

The Buddhist faith was pre-eminently a religion of mercy and peace, of charity and benevolence. In the topes dedicated to the celestial Buddha, Adinath, the invisible being who pervaded all space, no deposit was made; but the divine Spirit, who is 'Light,' was supposed to occupy the interior, and was typified on the outside by a pair of eyes, placed on each of the four sides either of the base or of the crown of the edifice. But in ages of strife and violence, of deifying mortals and of arrogant assumptions of an ignorant priesthood, a creed that taught gentleness and meekness and kindness to living creatures must have exercised a great influence over the community,—must early have gained many converts amongst the peaceable and good, and largely leavened the minds even of those who did not openly become converts; and amongst this class must be included the entire populations from the primeval land east of the Oxus to China and Japan in the farthest east, to Singapore and Ceylon in the extreme south. For ten centuries it had been the prevailing religion of India; but when the unwritten Tartar faith became corrupt and feeble, Brahmanism was revived, mixed with the worship of new gods, a Siva and a Vishnu, and every form of absurd fetishism gathered from local idolatries and superstitions. It is this mixture of several creeds which Europeans now style Hinduism, and its followers Hindus. It is found amongst the people in every variety of belief,—from the mildest spirit and demon worship and recognition of numerous forms of gods and their idols, to a distinct theism; from the grossest ignorance and superstition, to the most refined speculativeness; performed and associated with bloody and most inhuman rites, and again followed with the greatest tenderness for animal life.

Brahmanic Revival.—In the later hymns of the Vedas can be traced the origin of the Vishnu worship, and the setting aside of Indra. But the foreign Siva and Bhavani had come in with the Sakæ, and mingled in their worshippings, until the doctrines of Buddha, himself a Sakyan, were promulgated, and held their own for more than a thousand years, until, between the 5th and 12th centuries of the Christian era, a host of new divinities, Vishnu, Siva, Durga, Kali, Rama, Krishna, Ganesha, Kartikeya, prevailed over a better faith than their own, and up to the present day enslave and degrade the Hindu mind.

The Puranas, eighteen in number, are more recent books. Their age has been supposed to be from the 2d to the 16th century A.D., though their name means old. These are all in verse; give a

cosmogony, celebrate the powers and works of the gods, and give the history of the Solar and Lunar dynasties who ruled in Northern India; and to them have been appended 18 Upa Puranas. Later than these are the Tantras, which are religious and magical works, that give prominence to the female energy of the deity, his active nature being personified in the person of his sakti or wife, each of whom has a gentle and a fierce form, as Radha, Devi, Uma, Gauri, Durga, and Kali, and these are worshipped both symbolically and in the actual woman.

In the Puranas the Vedic deities are forgotten, and marvellous legends have gathered round the favourite divinities, full of wild imaginings, and evidencing a corrupt state of society and religion. Vishnu and Siva have obtained respective sects as followers. Krishna has become the object of a sensuous, joyous worship; the worship of Devi, the consort of Siva, has become established, and the foundation has been laid of the obscene and bloody rites afterwards developed in the Tantras. The Puranas and the Tantras are the religious books of the Hinduism of the present day. The Veda is a mere name: its gods, and rites, and language are only known to the learned, and the modern system is quite at variance with the Vedic writings,—the Puranas and later writings being the great authorities of modern Hinduism. Their mythology and legends fill the popular mind, and mould its thoughts. The great epic poems, the Mahabharata and the Ramayana, with their heroes, the Pandava, the Kaurava, Rama and his wife Sita, Hanuman, and Ravana, are listened to with delight; and the stories about Krishna, from his infancy till his death, are the never-ending source of joy to the young. The mild and gentle Rama, 'the husband of one wife,' pure in thought and noble in action, and his faithful wife Sita, are, however, objects of the devotion of many, and theirs is the least degrading of the many forms of Hindu worship.

Philosophies. — Concurrent with the ritualistic worship of the modern Hindu gods and goddesses, there are six schools of philosophy,—the Nyaya, the Vaiseshika, the Sankhya, the Yoga, the Purva mimansa, and Uttara mimansa. All of them have the same final object,—the emancipation of the soul from future birth and existence, and its absorption into the supreme soul of the universe. They are supposed to have had their origin between the 5th and 3d centuries B.C. The Nyaya and Vaiseshika recognise a Supreme Being; the Yoga is theistical; the Sankhya, atheistical; the two Mimansas are the Vedanta. The object of these two Vedanta schools is to teach the art of reasoning, with a view to aid in the interpretation of the Vedas. The Purva mimansa is generally known as the Mimansa, and the Uttara mimansa as the Vedanta; and the principal doctrines of the latter are that the Supreme Being is the omniscient and omnipotent cause of the existence, continuance, and dissolution of the universe. The Vedanta or Mimansa philosophy is treated as a scholastic philosophy, which, basing itself on the sacred books and the popular religion, seeks for unity of thought only as a means of introducing order amid the divine personages and legends, and has sought to give a spiritual import, a sort of new birth, to the gods of Brahmanism. In the Vedanta philosophy, Brahma is placed in the foreground as the soul of the universe, the primal being, which alone has true existence. To this school, not matter only was a semblance, even the soul was a transient phenomenon. The Sankhya philosophy is contrasted with it, as a purely pantheistic system. In this view this philosophy has broken completely with the popular creed, and with the doctrines of the Vedas and the Brahmanas. The Sankhya philosophy occupies itself more with life in manifestation, therefore especially with the life of the individual spirit connected by its body to the outward world. Both of these leave the Vedas unassailed, nay, the whole Brahmanic religion, in so far as it concerns rites and customs.

A census was taken of the people of British India in 1881, and the numbers following these creeds were found to be 187,957,450, out of a total population of 253,891,821 souls:—

Hindu Population, census 1881.

Christianity and Mahomedanism have modified the doctrines of the Aryan Hindus. Since Buddhism disappeared from India, its nations have been conquered by races professing creeds with followers nearly as numerous as Buddhism had ever acquired. Rapid as was the progress of Buddhism, the gentle but steady swell of its current shrinks into nothing before the sweeping flood of Mahomedanism, which in a few years spread over one-half of the civilised world, from the Atlantic Ocean to the swampy fens of the Oxus, to China, and to the Eastern Archipelago. From the 11th century, when the inroads into India of Mahomedans began, up to the present time, when they too, as a ruling race in India, have in their turn almost disappeared, Semitic Arabs, Aryan Persians, Scythic Tartars, Turk and Mongols, and Anglo-Saxons, have successively swayed the destinies of the Hindu races, and each of the new-comers has to some extent

modified the beliefs and social customs of the conquered. Legislation by the Mahomedan rulers, and after them by the British, has effected many changes. Repulsive forms of fanatical penance are phenomena seldom seen; the immolation of widows is a criminal occurrence; ghat murder, or the exposure of the sick and dying upon the banks of sacred rivers, is matter of past history; open infanticide has been in a great measure suppressed. Further changes have been retarded by the circumstance that the Mahomedan and the Christian came amongst them as soldiers, with all the licence to be found in camps, and the contempt for strange things which youth engenders. Nevertheless the great bulk of the 23 millions who follow Mahomedanism in Bengal and Assam, as also its followers who speak the Malay language, are descendants from idol-worshipping races; while in N.W. India many Rajput and Jat tribes have also embraced the faith of Islam; and the Hindu Nanak, the founder of the Sikh faith, and Kabir and other reformers, drew their views prominently from the Mahomedans. Christianity has been preached in India since the early years of the era, and there has lately been a belief that parts of the ritual of the worship of Krishna had been taken from Christian texts, but the Christians throughout the E. Indies, China, and the Archipelago may not as yet exceed three millions.

Since the 15th century, Christian missionaries of all sects have been labouring in their vocation, with some success. But this has been largely owing to the steady increase of schools for secular instruction, which have every year been on the increase, and, since the middle of the 19th century, are crowded with the youth of all races, sects, castes, and ranks. In this respect every teacher of English is a missionary, for it is impossible for the youth of India, if educated under Christian teachers by means of a Christian literature, to be otherwise than embued with the doctrines of Christians, whatever their professions may be. In the 19th century, the first reforming sect that arose was a theistic body in Calcutta, and many who have received the higher education have joined it, or have formed other sects with similar views. But even in the case of Hindus who have had no English education, and have never heard the voice of the missionary, such are receiving instruction from others of their own people who have been so taught; and the mass has been so leavened, that the great tendency amongst youthful inquiring minds is to accept some form of monotheism,—either to acknowledge one of their own deities, whether Vishnu or Siva, as the Lord of all, or adopt an ideal Supreme Being of their own creation, whom they clothe with attributes, purer, more just, and more worthy of reverence than any god which their religious books possess.

Hinduism as it is.—In approaching this part of the subject, it may be mentioned that the mythology of India has done much to explain that of Greece and Scandinavia, as will be seen by the following list of the more prominent Hindu deities of the present day and their principal analogues:—

Agni, . . .	Vulcan, fire, ignis.
Swaha, . .	Vesta, his wife.
Aswini-Kumara, .	Castor and Pollux.
Aruna, . .	Aurora.
Atadeva, . .	Diana.
Kuvera, . .	Plutus, the god of riches.
Indra, . .	God of firmament,—Jupiter.
Varuna, .	God of water,—Neptune, Ouranos.
Prithivi, .	Goddess of earth, — Cybele.
Viswakarma,	Architect of gods, — Vulcan.
Surya or Arka,	The sun, — Sol.
Heracula, .	A Hindu deity, — Hercules.
Asiculapa,	Æsculapius? — Genii.
Vayu, . .	Æolus.
Vaitarini, .	The river Styx.
Durga, .	Juno.
Narada, .	God of music, — Mercury.
Krishna, .	Apollo.
Bhawani, .	Venus or Minerva Musica.
Kali or Durga,	Proserpine.
Ganesha, .	A male Minerva.
Kartikeya or Skanda, .	God of war, — Mars.
Kama, . .	God of love, — Cupid.
Hanuman, son of Pavana, .	The monkey god, — Pan.
Rama, . .	The god of wine, — Bacchus.
Sri, Lakshmi,	Ceres.
Anna Purna,	Anna Perenna.

Sects.—The changes in the religions of the Aryan Hindus during the past nineteen centuries have been continuous. Perhaps the earliest indications of coming changes were given in the third division of the Vedas, known as the Upanishads, which discuss the nature of the deity, the nature of the soul, and the connection of mind and matter. They contain the beginnings of the metaphysical inquiry, which ended in the full development of Hindu philosophy. The oldest of these books is supposed to be about the 2d century B.C.

The great Saiva reformer was Sankaracharya, who lived in the 8th or 9th century. He was the teacher of the Vedanta philosophy; he founded the sect of Smartha Brahmans, and has been regarded as an incarnation of Siva. His follower, Anandagiri, wrote the Sankara Vijaya about the 10th century. The worshippers of Siva regard that deity as the Supreme; and his consort Parvati, in her numerous forms of Devi, Durga, Bhawani, etc., has many worshippers. These two are pre-eminently designated Mahadeo and Mahadevi.

Vishnu and his consort Lakshmi are equally regarded by their followers as Supreme, and might have the same designations, but neither under these names nor in any of their many incarnations are they so honoured. A few of the gods of the times prior to the Christian era continue to be invoked,—amongst them, Indra the god of the firmament, Agni the god of fire, Kama the god of love, and Kuvera the analogue of Pluto; but the Diti, Aditi, Aditya, Rakshasa, and others of the Vedas have become myths, and the chief deities of the modern Hindus are Siva and Vishnu with their consorts; Rama and Rama-Chandra, and Bala Rama, Ganesh, Garuda, Hanuman, Jaganatha, Kandoba, Krishna, Kartikeya, god of war, the phallic lingam, Nandi the bull, Virabadhra, and Vitoba.

Ramanuja was a Vaishnava philosopher, who put forward the Viseshtadwaita system, and the sect who follow his teachings worship Rama and Sita. The Adwaita is a monad doctrine, which acknowledges the reality of spiritual existence only. Dwaita, or the doctrine of duality, distinguishes two principles in creation, spirit and matter.

Ramanand (A.D. 1350?), the follower of Ramanuja, was the first to admit low caste people as his disciples, one of whom was Rai Das, another was Kabir, and the Kabir Panthi sect gave rise to the Nanak Shahi about A.D. 1449.

Chaitanya, a Vaishnava reformer in Bengal in the 16th century, was deemed an incarnation of Krishna. He too admitted all classes as his disciples.

Charandas, a merchant of Dehli, lived in the time of the 2d Alamgir (A.D. 1757). His first disciple was his sister, Sahaji Bai, who was a distinguished writer. The sect worship Krishna and Radha.

Mira Bai, wife of Lakha, rana of Udaipur in the reign of Akbar, was of the Vaishnava sect, and a distinguished writer.

Jayadeva, of the 12th or 13th centuries, wrote the Gita Govinda, an erotic poem on the early life of Krishna.

Five great sects exclusively worship a single deity, and one recognises the five divinities these are—

1. *Saiva*, worshippers of Siva in his numerous forms, who, however, worship Siva and Parvati or Bhawani conjointly.
2. *Vaishnava*, who worship Vishnu.
3. *Surya*, who worship Surya or the sun.
4. *Ganapatya*, who worship Ganesha.
5. *Sakta*, who exclusively worship Bhawani or Parvati, the sakti or female energy of Siva.
6. *Bhagavata*, who recognise all divinities equally.

The fourth and fifth are subdivisions or ramifications of the first, or Saiva, of which may be traced these distinctions:—1. Saiva proper, meaning the worshippers of Siva and Parvati conjointly. 2. Lingi or Lingaet, the adorers of Siva or his phallic type separately, and these are a very strict and rigid sect. 3. Sacta, the adorers of the yoni of Bhawani or her symbol separately. 3. The Ganapatya, the exclusive worshippers of Ganesha, the first-born of Mahadeva and Parvati.

The second grand sect, or Vaishnava, is variously divided and subdivided. First, or division f Gocalast'ha, or worshippers of Gocal Krishna, is subdivided into three:—

1. Exclusively worship Krishna as Vishnu himself: this is generally deemed the true and orthodox Vaishnava.
2. Exclusively worship Radha, as the sakti of Krishna or Vishnu: this sect is called Radha Valabhi.
3. Worship Krishna and Radha conjointly.

Second, or division of Ramanuj, or worshippers of Ramachandra, is in like manner subdivided into three:—

1. Worship Rama only.
2. Worship Sita only as his sakti.
3. Worship both Rama and Sita conjointly.

The Vaishnava of the present day, though nominally worshippers of Vishnu, are thus in fact votaries of deified heroes. The Gocalast'ha (one branch of the sect) adore Krishna, while the followers of Ramanuja worship Ramachandra. Both have again branched into three sects; one consists in the exclusive worshippers of Krishna, and those only are deemed true and orthodox Vaishnava; another joins Krishna's favourite, Radha, with the hero; a third, called Radhavalabhi, adores Radha only, considering her as the sakti or active power of Vishnu. The followers of these last-mentioned sects are said to have adopted the singular practice of presenting to their own wives the oblations intended for the goddess; and those among them who follow the left-handed path are said to require their wives to be naked when attending them at their devotions.

Among the Ramanuj some worship Rama only, and others both Rama and Sita; none of them practise any indecent mode of worship. And they all, like the Gocalast'ha, as well as the followers of the Bhagavata, delineate on their foreheads a double upright line with chalk, or with sandal-wood, and a red circlet with red sanders wood, or with turmeric and lime; but the Ramanuj add an upright red line in the middle of the double white one.

The Saiva sect are all worshippers of Siva and Bhawani conjointly; and they adore the linga or compound type of this god and goddess, as the Vaishnava do the image of Lakshmi-Narayana. The exclusive adorers of the goddess Bhawani are the Sakta sect. In this last-mentioned sect there is said to be a right-handed and decent path, and left-handed and indecent mode of worship; and both Major Moor and Professor Wilson allude to the licentious character of the latter form, a feature certainly quite unknown in the Southern India of the present day. The left-handed form of worship of the several sects, especially that of the Sakta, is founded on the Tantras, which are for this reason held in disesteem.

Sectarian Differences.—The great point of difference amongst the sectaries is as to the claims of respective deities to be regarded as the first cause. Few Brahmans of learning, if they have any religion at all, will acknowledge themselves to belong to any of the popular divisions of the Hindu faith, although, as a matter of simple preference, they more especially worship some individual deity as their chosen or Ishta Devata. They refer also to the Vedas, the books of law, the Puranas, and Tantras, as containing the only ritual which they recognise, and regard all practices not derived from those sources as irregular and profane. These deities have their different avatars or incarnations, in all of which, except that of the sakti themselves, they have their sakti (wives) or energies of their attributes. These have again ramified into numerous names and forms. The following is an enumeration of the several sectaries of each class, and to them we refer for separate notices of their origin and tenets:—

Vaishnava Sects.

1. Ramanuja, or Sri Sampradayi, or Sri Vaishnava.
2. Ramanandi or Ramawat.
3. Kabir Panthi.
4. Khaki.
5. Maluk Dasi.
6. Dadhu Panthi.
7. Raya Dasi or Rai Dasi.
8. Senai or Sena Panthi.
9. Valabhachari or Rudra Sampradayi.
10. Mira Bai.
11. Madhavachari or Brahma Sampradayi.
12. Nimawat or Sanakadi Sampradayi.
13. Vaishnava of Bengal.
14. Radha Valabhi.
15. Sak'hi Bhava.
16. Charan Dasi.
17. Harischandi.
18. Sadhna Panthi.
19. Madhavi.
20. Sanyasi, Vairagi, Naga.

Saiva Sects.

1. Dandi and Dasnami.
2. Jogi or Yogi.
3. Jungama or Sri Saiva.
4. Paramahansa.
5. Urdhaba'hu, Akas Muk'hi and Nak'hi.
6. Gudara.
7. Ruk'hara, Suk'hara, and Uk'hara.
8. Kara Lingi.
9. Sanyasi, Brahmachari, Avadhuta Naga.

Sakta Sects.

1. Dakshini or Bhakta.
2. Vami or Vamachari.
3. Kanchuliya.
4. Karari.

Miscellaneous Sects.

Ganapatya.
Saurapatya or Saura.
3. Nanik Shahi, of seven classes, viz.:
a. Udasi.
b. Ganjbakshi.
c. Ramrayi.
d. Suthra Shahi.
e. Govind Sinhi.
f. Nirmala.
g. Naga.
4. Jaina.
a. Digambara.
b. Swetambara.
c. Yati.
d. Sravaka.
5. Baba Lali.
6. Pran Nathi.
7. Sadh.
8. Satnami.
9. Siva Narayani.
10. Sunyavadi.

Most of these comprise a number of subdivisions, and, besides acknowledged classifications, many individual ascetics are to be found all over India, who can scarcely be included within the limits of any of them, exercising a sort of independence both in thought and act, and attached very loosely if at all to any of the popular schismatical sects. Some of the popular works of the Hindus adopt a different classification, and allude to 96 prashada or heresies, which are thus arranged, viz.:—Amongst the Brahmans, 24; Sanyasi, 12; Viragi, 12; Saura, 18; Jangama, 18; Jogi, 12. Also, new gods or objects of worship are in constant formation, and are believed in by great masses of the people, though only a bit of paper, a cart-wheel, and other oddities. There is a temple of the goddess Elamma about a mile distant from the town of Jat, in the Jat jaghir. An annual fair is held in honour of this idol, at which about 10,000 people assemble. About the year 1860, a Mali or gardener set up the idol, stating that it had appeared there of its own accord. Both men and women visit the temple and worship the idol. The worshippers, before commencing the worship, strip naked, apply powdered sandal-wood to their whole bodies, put on the ornaments they may have, hold a small branch of the nim tree in their folded hands, and leave their places of residence to visit the idol. After visiting the idol, they go round the temple for a certain number of times. They then leave the temple to bathe in a neighbouring tank. After bathing, they return to the temple, worship the idol, and return home. When Mr. Chapman was collector of Satara, he punished some of the naked worshippers.

Sakti.—The Hindu goddesses are uniformly represented as the subordinate powers of their respective lords. The term is from the Sanskrit, meaning power, strength; thus Lakshmi, the consort of Vishnu, the preserver, is the goddess of abundance and prosperity; Bhawani, the wife of Siva, is the general power of fecundity; and Saraswati, whose husband was the creator, Brahma, possesses the powers of imagination and invention, which may justly be termed creative. She is therefore adored as the patroness of the fine arts, especially of music and rhetoric; as the inventress of the Sanskrit language, of the Devanagri writing characters, and of the sciences which writing perpetuates; so that her attributes correspond with those of Minerva Musica of Greece or Italy, who invented the flute, and presided over literature.

Mixings.—Saivaism and Vaishnaism described above are the common everyday religions of the bulk of the Hindu populations. But the internal beliefs of the worshippers have no such community, and their various tenets must be sought for under the history of their several sects. A Siva sect, the Satnami, profess to adore the true One, the one God; but they nevertheless recognise the whole Hindu pantheon, and pay reverence to what they consider manifestations of his nature visible in the avatars, particularly Rama and Krishna. The Sadh, on the other hand, utterly reject all kinds of idolatry; are pure deists, with a simple worship. Between these unitarian sects and such as adore every deity, there is the utmost diversity of theory and practice; and the fusing of their creeds, doctrines, and customs is continually going on. Major Moor tells of a Mahomedan butcher at Poona, who occasionally supplied the Residency with meat. Being asked if he would kill a calf, he started back with horror at the proposal, ejaculating a prayer to be forgiven for having even heard it. Many Mahomedans of India borrow from the Hindus ceremonies that are celebrated with festivity. They take an active part in the gambols of the Holi, and even solicit the favours of the Indian Plutus at the Diwali. Many Hindus, on the other hand, join in the festival of the Maharram. The bridal procession of the Mahomedans on the fourth day, with all the sport and gambols of the Chauth'hi, is evidently copied from the similar custom of the Hindus. The Mahomedans have adopted the premature marriage of infants, and Hindus largely imitate the Mahomedan seclusion of their wives (Colebroke, As. Res. vii. p. 307). A Mahomedan is forbidden to eat meat which has not been killed by one of the faithful, who is directed to 'halal' or sanctify the animal by turning its face toward Mecca, and, while the blood is ejected, to repeat a short prayer. Many Mahrattas and other Hindus, pleased with the ceremony, bring their sheep, fowls, etc., to Mahomedans to be made 'halal,' and then eat them with increased satisfaction.

Vahan or Vehicles.—Several animals are appropriated as the vahan or vehicles to the mythological personages of modern Hinduism. The swan, the eagle, and the bull appertain respectively to Brahma, Vishnu, and Siva, and are severally denominated Hanasa, Garuda, and Nandi. Ganesha, eldest son of Siva and Parvati, the elephant-headed god of prudence and policy, rides a rat, supposed to be a very sagacious animal; Kartika, their second son, generalissimo of the celestial armies, mounts on a peacock. Indra, the powerful regent of the firmament, the Jupiter Pluvius of the Hindus, rides the elephant Airavata, symbolical of might. Varuna, genius of the waters, bestrides a fish; as doth also Ganga, the prime goddess of rivers. Kama Deva, the god of love, is carried by a lory or parrot; Agni, god of fire, by an ardent ram.

Village Deities.—Every hamlet has its own object of adoration, always supposed to be a goddess, and the idol is generally a black stone or piece of wood. Amongst names given to it in Southern India are—

Ai.
Ankal-Amma.
Poni-Amma, gold mother.
Kani-Amma.
Yegatal.
Mutialamma, pearl mother.
Tripura-sundari, the beautiful of three cities.
Paleri-Amma, or Periya-Amma, or great goddess.
Dandumari,
Mallamma.
Chinnamma.
Ammannamma.
Osuramma.
Sellamma.
Yellamma.
Padavettu-Amma.
Tulukan-Amma.
Muttumari.
Mari-Amman.
Potearamma
Karikatta.
Tanthoniamma.
Choundeswari.
Vadivatta.
Nagattamma.

A pujali or pujari, a worshipping priest of the Sudra caste, is appointed for her daily worship. He anoints her daily, and puts ashes on her head, —really on the top of the stone, for it is not an image, being entirely without shape, a mere stone from the neighbouring brook or river. In a small pot he cooks rice, which he collects from the villagers in turn, presents it to the idol, and then takes it to his own home. He breaks a cocoanut in front of the idol, to which he offers it. But the one half he keeps for himself, and gives the other to the families from whom he collected the fruit. The villagers make vows to their goddess to offer up to her fowls and sheep in sacrifice, if she will fulfil their desires. Once a-year they collect money by subscription, and celebrate a feast in honour of their goddess, during which sheep and fowls are largely sacrificed. The Sudra Hindus and the entire servile and predial tribes in the south of India have the fullest faith in their respective village goddesses. When they or their children are overtaken by sickness, they seek the idol and consult the pujari, who sings hymns, affects to hear the Amman's voice, and then announces to the worshipper the offering that must be presented. If cholera break out, it is not unusual for some neighbouring village deity suddenly to rise into great importance, and the sacrificial rite is then almost unceasingly performed. The Hindus, too, have even personified this pestilence into a goddess, whom they name Maha-Kali, and believe that if they neglect her worship she destroys them by the disease. Indeed, gods are everywhere in process of establishment, and small-pox as well as cholera have thus been personified. Maha-Kali of Ujjain is a cholera goddess, and Mari-Amman or Amur of the Tamils is a small-pox deity. When a person is attacked with small-pox, they believe that the goddess has taken possession of the sick man. While in the house, the sexes remain apart until the sick person has recovered, and been purified by ablution. They place the leaves of the margosa tree beside the sick person, because the goddess is supposed to delight in this tree. They give cooling food, but employ neither internal nor external remedies, in reverence for the divinity. The women of the household offer rice-flour mixed with jagari or coarse sugar and black gram (Pairu, TAM.; Pesalu, TEL.) before the patient in honour of the goddess, and afterwards distribute offerings to Sudras and others. On the seventh day, *i.e.* what medical men call the fifteenth day, the invalid is bathed in cold water, and the whole body rubbed with a pasty mixture of leaves of the margosa (melia and azadirachta) mixed with turmeric, and on the same day rice mixed with curds are distributed to Sudras. If in the virulence of the disease an eye be lost, it is attributed to something having been done displeasing to the goddess. The goddess, indeed, is supposed to appear in three forms,—as Tatta amavaru or Chinnamavaru, *i.e.* small goddess or measles; Peddamavaru, or great goddess or smallpox; and Pairamavaru, or goddess of green gram (Phaseolus mungo),—the two first of which are most feared.

Devil and Spirit Worship.—Every Hindu work containing allusions to native life, says Dr. Caldwell, and the dictionaries of all the Hindu tongues, prove the general prevalence of a belief in the existence of malicious or mischievous demons, in demoniacal inflictions and possessions, and in the power of exorcisms. Spirit houses of Mysore are little sheds erected over white-ant hills. In Berar, when the Gonds fell a wood on a hill-side, they leave a little clump to serve as a refuge for the elf or spirit whom they have dislodged. The Brahmanic worship of the spirit of the dead is shown by their bringing back to the house the dead person's soul, supposed to have lost its home by the body's death. A stone or some such object is picked up at the grave, and carried reverentially back to the house, where it is worshipped for a few days, and then decently disposed of. The demons worshipped are multitudinous. Chand Khan of the Dekhan is one of them. His tomb is worshipped on one bastion of every mud fort. The legend regarding him is to the effect that there was a difficulty encountered in the erection of a bastion, and he was sacrificed and buried to appease the obstructing demon. See Demon; Devil; Shanar.

Unions of any sort, especially of waters, are held sacred by Hindus, and above all the union of the Ganga and Jumna near Allahabad,—the latter river having previously received the Saraswati below Dehli, so that in fact all three unite at this famed sangam or confluence. But the Hindu poet feigns a subterrane flow of the Saraswati, and a mystical union at the sacred point, where bathing is deemed peculiarly efficacious. Major Moor once saw (p. 429) at Poona a well-modelled group in clay, where Radha's locks, tripartite, were plaited into the mystical Triveni by the amorous Krishna, who sat rapturously admiring the work of his hands. The Triveni, or three-plaited locks, in Hindu mythology, is the mystical union of these three sacred rivers, the Ganges, Jumna, and Saraswati, severally the consorts or energies of the three great powers. Coleman also says (pp. 394, 398) that the Triveni, or three-plaited locks, is allegorical of the holy rivers Ganga (or Ganges), Yamuna (or Jumna), which join near Allahabad, the Saraswati being supposed to join the other two under ground. A Hindu dying near the imagined confluence of the three streams, or even of those of the Ganga and Yamuna, attains immediate beatitude; consequently self or self-permitted immolation, sati, etc., were meritorious on this peculiarly holy spot, and multitudes of pilgrims annually resort there to bathe. Other rivers are held sacred by Hindus, viz. the Godavery, the Sindhu or Indus, the Krishna or Kistna, the Cauvery, and the Brahmaputra. It is, however, the Ganges that is most revered. The Hindu longs to perform his ablutions in its streams; its waters are carried to remote distances, to be sold to persons who wish to perform with it their sacred rites; many men and women formerly drowned themselves in the sacred stream, hoping by that means to reach their heavenly abode; the bodies of those dying far and near are sent to be committed to its bosom; and from still greater distances Hindus send incremated bones of deceased relatives to be cast into the waters.

The union of the palmyra and the Urostigma religiosa is deemed holy, and their orchard is married to its adjacent well before its fruit can be partaken of.

The Hindus also reverence the impressions of feet. On the top of Adam's Peak in Ceylon is a natural hollow, artificially enlarged, said to be the impression of a foot of Buddha, as Buddhists

say, but called by the Hindus, Sripada or Sripad, meaning the divine footstep, Vishnu having, they say, alighted on that spot in his avatara of Rama; although Mahomedans and Christians have also claimed that footmark as of their religious relics. Hindus make pilgrimages to the Sripad in Ceylon, and in other places where similar proofs of an avatar or descent have been discovered.

The Mahrattas make images in honour of deceased ancestors, and of their guru or spiritual instructors, as Lares, or Penates, or Lemures. Nat and Vira (Nat'ha, lord; Vira, brave) and Bharava are epithets applied to such domestic images.

Their leaf-platters, used as plates, are usually made of the leaves of the mango, the jamoon, Syzygium jambolanum, the banyan, and pipal trees. Part of the ceremony of a vow of friendship, amongst Hindus, consists in dividing a bel or larger wood-apple, half of which is kept by each party, and from this compact is called bel bandar. Every Hindu, whatever his avocation, on his new year's day worships the object or implement by which he obtains his living, or, in western phrase, blesses and consecrates it. During the Durga puja, Durga is worshipped in the form of a water-pot. It is called Ghita-puja, also Ghatasthapana. The water-pot being placed after certain invocations, Durga is supposed to enter it, and she is then worshipped. The bamboo is worshipped by the Tiperah people, the Cachari, and the Garo. They stick a bamboo in the ground during one of their religious festivals, and worship it. The Kol of Central India worship the sal tree (Vatica robusta).

trees are held to be sacred, some to Siva, some to Vishnu, some to both.

To both are the Artemisia austriaca, Calophyllum inophyllum, Chrysanthemum Indicum, Euonymus tingens, Gracillara spinosa, Guettarda speciosa, Ixora bandhuca, Jasminum undulatum, Nerium odorum, Origanum marjorana, Sarcostemma brevistigma.

Sacred to Vishnu, Azaderachta Indica, Ocimum sanctum.

Sacred to Lakshmi, Nelumbium speciosum.

Sacred to Siva, Bauhinia parviflora, Azaderachta Indica, Cæsalpinia pulcherrima, Crataeva religiosa, Jonesia asoca, Phyllanthus emblica.

Kama Deva, god of love, tips his arrows with the flowers of the Mangifera Indica, Michelia champaca, Mesua ferrea, Pandanus odoratissimus, and Pavonia odorata.

The Ægle marmelos leaf represents Brahma, Siva, and Vishnu. The Euphorbia ligularia is sacred to Manesha, the snake goddess, and is worshipped by an Assam tribe.

The Cow.—Hindus regard the cow as sacred. Every morning the Hindu wife or maid-servant spreads the floor with cow-dung mixed with water, partly as a religious duty, partly for cleanliness. She sprinkles the urine of the cow over her head, and sprinkles it about the house in purification, when anything has occurred to make it, in their religion, unclean. Every morning, on rising from bed, every Hindu is enjoined to cast a glance on the objects mentioned in the following slokam:—Sabalam (brindled) cow, a mirror, the sun, a high man, a king, a priest, a giver of rice (in purity), and a chaste woman. It is not, however, the cow's face, but its tail, on which they cast their look. Protecting the cow is meritorious. When a Hindu is dying, his relations give a cow to a Brahman, and repeat the gift on the 11th day after the demise. When a Brahman is married, the father of the bride always gives a cow, Surabhi, to his son-in-law, along with other presents. Every Friday the Hindu wife washes her cow. She smears its face with turmeric, and ornaments the animal's forehead with a round mark from the red powder prepared from lime and turmeric. Some Hindus call the cow Kama-duh, or Kama-dhenu, the servant of Indra; other Hindus believe that the cow is Lakshmi, the goddess of prosperity, whom they thus propitiate by their worship. Those who do not possess a cow will buy some grass and give it to that of their neighbour. Amongst the five deadly sins is that of killing a cow; the other four are killing a Brahman, a pregnant woman, a child, and killing one's mother.

The Bull is not reverenced equal to the cow, but it is the vahan or vehicle of Siva. In all saiva temples may be seen the image of this animal, called Nandi, made of black stone, kneeling before the lingam and yoni, the symbols of Siva and Parvati. In pictures, Siva is invariably represented riding on his vahan or vehicle, a bull. A bull, both in the saiva and vaishnava temples, carries the kettle-drums which are sounded for worship three times daily. When a cow or bull falls sick, Hindus will vow that if the animal recover, it shall be left in the temple; and every Friday the Brahmans employed in the services of the temple, when they lave Siva's symbol and the Nandi with milk, in the ceremony called Palu Abhishekam, the devoted bullocks are likewise thus washed.

Daily Life of the Hindus.—Having briefly sketched some of the various rites now forming the religion called in Europe Hindu, and the differences in the forms of idol-worshipping which are to be found, it may be interesting to conduct one of this faith from the cradle to the grave.

Childhood and Adolescence.—The ceremonials observed on the birth of children, at the commencement of their education, on investiture with the sacred thread, communication of a gayatri or initiatory sentence, in their marriage ceremonies, and those adhered to on the occurrence of a death in a family, have now a general resemblance among, or are more or less imitated by, all castes, classes, and ranks. On the birth of a Brahman child, the ceremony called Putrotsavam is performed, and on this occasion the father presents sugar and sugar-candy to relatives and friends. On the 11th day the mother is anointed with the oil of the oriental sesamum. On the same day (11th) the Punyahavachanam, or the purification rite for the mother and house, is performed. It is then that the child receives its name—that of some one of its grand or great-grand parents—by the father writing it three times with a golden ring, in unhusked rice, spread on a plate. This naming is called Namakaranam, and is followed by the guests bestowing blessings on the young one, as they scatter rice, coloured with turmeric, over it and the mother, who are seated in the midst of the assembly. The father then distributes money to the poor, and entertains relatives and friends. On this night, for the first time, the child is put into the cradle by the female guests, some of whom sing religious songs, while others rock the little one, and at the close the assembly are dismissed, after being presented with betel-nut, plantains, and boiled pigeon-pea (Cajanus Indicus). The birth of a girl is less a source of rejoicing, because of that part of the Hindu creed which

HINDU.

lays down that parents and other ancestors attain Swarga-locum or Indra's heaven through a son's efforts. Each new moon, as also on the occurrence of an eclipse, either of the sun or moon, also at the summer and winter solstices, their Utrayanam and Datchanayanam, every caste Hindu, whether Brahman, Kshatriya, Vaisya, or Sudra, offers the Tharpanam, or water sacrifice, in the names of his deceased father, grandfathers, great-grandfathers, and their wives, consisting of seeds of the oriental sesamum mixed with the water. It is as a means of continuing this ceremony that Hindus long to have a son born to them, as in their creed-books it is taught that the manes of ancestors are gratified by the Tharpanam. At five months of age, the Choulam ceremony occurs, and the lobes of the ears are pierced with a small, thin gold ring. When six months old, Anaprasanam, or giving the child rice for the first time, is a social and sacred rite, at which, as also at the Choulam, relatives and friends are entertained. On the first occurrence of the birthday, the child is anointed and decorated with jewels, relatives and friends are entertained; and in the evening the child is carried to a temple, and presented to the deity of their sect. As the second anniversary draws near, or about that time, the boy's head is shaved on a propitious day, which affords another opportunity for feasting friends.

Boyhood.—When five years old, the father ascertains an auspicious day, and entrusts his son to a teacher. The instructor engraves the alphabet with an iron style, sometimes set in silver or gold, on a leaf of the palmyra tree, which is then coloured with turmeric. The leaf is placed on unhusked rice spread over the floor, and the teacher, whatever the sect or caste of the pupil be, invokes the god Vigneswara to smooth the difficulties in the way of the child's studies. Then, holding the boy's forefinger, he thrice traces with it the forms of the vowels in the rice, teaching the boy their sounds. The pedagogue is presented with a new cloth and some money, and dismissed, after which relatives and friends are entertained. On the seventh or ninth year, the Upanayanam is performed, on which occasion the family priest—Upad'hay-ya, SANSK., Upa-dhialu, TEL.—causes the boy to offer a burnt-offering, Homan, to the entire pantheon of gods, by pouring ghi (clarified butter) over the fire. He then invests the youth with the zandiyam, the zonar or sacred cord, letting it fall from over the left shoulder to the right side. He subsequently teaches the gayatri to the boy, if he be of the Brahmanical order, as also the morning, noontide, and evening prayers, the due attention to which is considered sufficient to remove all sins committed during the day and night. The gayatri or gayatri mantrum of the Brahmanical or priestly order is never pronounced aloud, and it is exceedingly rare that any Brahman can be induced to divulge it. Its literal translation is: 'O'm! earth, air, heaven, O'm! Let us meditate on the supreme splendour of the divine sun; may he illuminate our minds.' It is considered the most sacred text of the Vedas; and the common belief in and reverence for it is the bond of union amongst the entire Brahmanical order. With this ceremony the boy is considered to be born again, and he is of the Punar Janma, or twice born. This is the spiritual birth of the Hindu, or his regeneration, for until this time the uninitiated youth, though of the Brahmanical class, so far as his right to perform religious ceremonies is concerned, is only regarded in the light of a Sudra. If the Vaishnava youth, who has now been initiated into the mysteries of the Brahmanical order, be set apart for the sacerdotal office of the priesthood, he is further marked, by being branded on the muscular part of both arms with the sanku or chank, and the chakram or disc of Vishnu. This is called the Chakrankitam. From this time he is ranked as a Brahmachari, or of the order of bachelors, for he has now entered on his religious life,—the whole of the days of a spiritual Brahman being apportioned into four religious stages, viz. that of the Brahmacharyam, or bachelorhood; Grahastasramam, or the married state; Vanaprastam, the living in solitude with his family; and Sanyasam, or the abandonment of all worldly matters. A bachelor's dress differs from that of a married man, in so far as he does not wear the dhoti, but only a wrapper round the lower part of the body; he is prohibited from eating betel, and continence is enjoined. Among other Hindu castes, the Brahmachari ceremony is performed at any time prior to the celebration of marriage, but their gayatri is from the Puranas, not the Vedas.

Marriage.—There is no time fixed for the marriage of sons. It is performed at any time from infancy, as the parents may please. But amongst the priestly and mercantile orders, the Brahmans and Vaisya, as also among the goldsmiths, girls must be married before they attain puberty. The Brahmans believe that they would be as if guilty of murder if they allowed a girl to grow up before being married. This is founded on correct physiological knowledge. And in Southern India, they, as also the goldsmith tribe or race or caste, regard such a possible occurrence with so great horror, that they say it would be incumbent on them if it happened, but which is invariably guarded against, for all the family to drown themselves. Children have no voice in the matter of their marriage. When parents are desirous of having their sons married, they institute inquiries amongst their relatives or friends not of their own gotram or tribe. They visit the girl's parents in a propitious hour, and request their daughter in marriage for their son. The parents of the girl make inquiries as to the character of the boy, and if satisfied, they promise their daughter for him. It is not customary for a girl's parents to go seeking for a husband for their daughter. When so far arranged, if the girl's parents be poor, they may perhaps stipulate that jewels and money shall be presented to their daughter at the marriage time. But this practice, which is a remnant of the ancient custom of purchasing a wife, is gradually dying out with all but the humbler people. Now-a-days, a rich Hindu would disdain to receive money from the parents of their son-in-law for giving their daughter to him, and many tribes—for India contains the descendants of numerous distinct races—repel with disdain any insinuation of their readiness to sell their daughters. Indeed, sons-in-law do now occasionally receive some dower of money or property with their brides. In a recent instance, so much as five lakhs of rupees (£50,000) are said to have been given to a son-in-law who had already four wives. But the former practice of disposal of their female children is clearly marked in their marriage law, in which a girl, who quits her father's

house for her husband in another family, ceases to be an heir of her own parents, though she acquires rights in the property of her new home.

Marriage Ceremonies.—When all the preliminary arrangements are settled, a day is fixed for the performance of the marriage; preparations are made by the father of the girl, who invites relatives and friends to be present on the occasion, the invitations being usually communicated verbally, but sometimes by letter. On the day preceding that of the marriage, by the Snat'haka Varattam, the youth is relieved of his bachelorhood, the ceremony on this occasion consisting in the homa or fire-sacrifice, and giving of charity. On the marriage eve, the bridegroom, accompanied by his parents, relatives, and friends, goes in procession to the bride's house, and presents her with a new cloth of some value, with any jewels that may have been before agreed on; betel-nut is handed to the guests, and friends and relations are entertained. The poor Brahmans, too, are remembered on the occasion, the money-gifts to whom are called Datchana. The wedding-day at length arrives, but with emotions very different from those of the principal actors in ancient Hindu times, for now-a-days both bride and bridegroom are usually quite infants,—and if not both, the bride with most tribes certainly is so. Tribes of Sudras, however, and a fair, intellectual literary race called Kait or Kayasth, who claim their origin from a deified mortal called Chatr-gopūtr, also many of the Pariah tribes, allow their girls to grow up and remain in their father's house, without any feeling of shame being associated with the practice. And the Vedas teach us that in their times virtuous maidens remained unmarried in their father's house long after they had grown up. On the wedding-day, the bride and bridegroom are anointed with oil (the Abhiangana-s'nanam), are dressed in their best, and decorated with jewels. The father of the bride has erected a temporary canopy in the court of his house, beneath which she is seated beside her groom, and the family priest commences the ceremony by causing them to make a burnt-offering, by the homa sacrifice of pouring ghi into the fire, whilst the priest utters a mantra. At the same instant, by the Navagraha Aratanam and Asht'ha dik palaka Aratanam, a series of incantations, they bring Indra, Varuna, Agni, Yama, etc., from Swarga-locum and locate them in any casual article, in some part of the house.

When seated, the girl is formally given to the husband (Kania-danam, literally spinster-giving); a priest blesses some water in a small vessel, and the father of the girl, taking this and his daughter's right hand, places them together in the bridegroom's right hand, saying, 'I do this, that my father, grandfathers, and great-grandfathers may attain Swarga' (heaven). The bridegroom then rising, and standing before the bride, amidst the deafening din of tom-toms, ties round her neck the mangala sutram, a thread coloured with turmeric, to which a golden jewel called Bottu or Tala is attached. Sandal-wood paste, perfume, and flowers are presented to the guests, betel-nut is offered to all relatives and friends, and money-presents are made. The married couple receive Asir-vadam (benedictions congratulations) from the assembly, and as prostrate themselves at their parents' feet parents bless them. The prostrations are also occasionally made at the feet of other near relatives, who likewise bestow a blessing. Amongst the Brahmans, the ceremonials of the marriage are continued for five successive days, and for three days, or one day, or seven days, with other castes. On the fifth or last day, the gods who were brought from Swarga into the bride's home, and have been daily worshipped there, are released. Four earthenware pots, placed beneath the pandal or canopy, are filled with rice highly coloured with turmeric, and a Brahman sitting near, by motions from his hands, affects to feed the located gods (Navediam), and then to release them. This is the Naka balli, or offering of victims, to the gods of Swarga-locum. And now the parents of the newly-married couple, as also relatives and friends, interchange presents, and make gifts to the young people. In the evening of that day the bridegroom takes his wife home. This is done in a procession, in which parents and relations join, and is treated as a religious ceremony, called Grahapravesam, or house-entering, immediately after which the bride and bridegroom are seated in the middle of the floor, the father of the girl presents them with new clothes, and the relations and friends are feasted. After remaining three days in her husband's home, the girl-wife is taken back to the house of her parents, with whom she lives, making only occasional visits to her husband's residence, until puberty. On this event her father sends word to her husband, who presents gifts to the bearer of the happy tidings, fixes on an auspicious day to bring his wife home, and intimates the date to his father-in-law. The latter prepares a cot or bed, candlestick, cooking utensils, chairs, boxes, and other household fittings, also buys new clothes for his daughter, whom they convey to her husband's house for good, and an entertainment is given to all relatives and friends. Her parents remain in the house with their daughter and son-in-law for two or three days, and before taking leave of them they give them some advice for their guidance.

Married Life.—From this time the young wife lives with her husband, in subservience to her mother-in-law or sister-in-law, whichever be the head woman in her new home. As a young thing she cannot have much to say; but her little ways and tiny talk are at an end, and it is even, on many occasions, considered highly indecorous for her to speak at all. She cannot speak to her husband in the presence of his father or mother or other people, and partly from shamefacedness, partly from fear of them, her husband rarely speaks to his wife in their presence. This intense reserve goes off greatly as they grow older; but in no instance, perhaps, does the Hindu wife ever attain to the same freedom of speech with her husband as marks the intercourse with the young wife in a Mahomedan family, where they are sometimes married equally young, and where their innocent prattle is the very life of the household. At home, however long she be a wife, a Hindu woman never eats till her husband finishes his meal; she rises and stands in a respectful attitude if her husband or his parents or brothers enter the house, and at all times addresses them in a low tone of voice, and speaks slowly. And so long as the husband's mother or his sister is the head of the house, the husband communicates his wishes as to what he wants his wife to do, not to her

directly, but through his mother or sister. Abroad from home, the Hindu husbands and wives may at all times be seen walking along the roads, but the wife never presumes to walk at the side of her partner. She is always a pace or so behind, and a little at the side. If they be out on matters of business, the wife continues, all along the road, to prompt her husband as to what he is to say or do, but the instant that the place of business is reached, she falls off to a distance, and never presumes to take any part in the discussion. In a poor family, the wife, as in all countries, has to perform the entire domestic duties of the household, but with richer people who keep servants the wife's labours are restricted to superintendence, attention to her children, sewing, and other female occupations. They are in this social respect much in the position that Europe was a few hundred years ago; but there is this difference, that scarcely a Hindu wife is able to read or write, or even permitted to learn. Since the middle of the 19th century, in the presidency towns, a few female schools have been established by the better-educated Hindus, who are desirous that the next generation shall receive educated partners in their homes. But in all India, out of a population of nearly 200,000,000 of Hindus, there are not, perhaps, in 1883, 3000 girls of the higher Hindu castes under tuition. The younger men are averse to the continuance of the intense restraint hitherto imposed on their homes, and are breaking through it, but these are almost solitary exceptions to the vast mass. Brahman girls are forbidden to be educated at all; and those who urge education on them are opposed by the women themselves, who will exclaim, 'What! would you make us as dancing-girls!' the educational efforts having only hitherto been directed to such unfortunate sisters, from the fear—and it is shared with many men of the Hindus and Mahomedans—that education may tempt, by giving facilities, to vice. In this they evidence a great ignorance of human nature, a more enlarged knowledge of which would convince them that only the training of the moral faculties can uproot vice, which, where the evil desire prevails, no restrictions can restrain. The utmost that a Brahman woman learns, are the songs and hymns sung by women in their own houses during marriages and other festivals. The Hindu wife—bred from her childhood in the strictest seclusion, consigned at an early age to the care of a husband of whom she can have previously known little or nothing, and who is often as dependent upon others as herself—leads a life of mysterious quietude, varied only by the rites of religion and the ordinary events of the family. Of the world around her she knows nothing. All her thoughts and feelings, joys and sorrows, desires and affections, are imprisoned within the little circle of her own household. Her mental faculties are either altogether undeveloped, or wasted upon toys, ornaments, idle tales, family gossip, or similar frivolities. Her moral powers, too, are overlaid by superstition and prejudice. Yet these ladies are the mothers of the rising generation, who are acquiring the language and the literature of Europe, and fondly imagining that its members are as capable of exercising the rights of self-government and self-control as those who have sprung from the free and independent women of the western world, whose mothers in the warlike ages took part in the counsels of their nations, and accompanied their warriors to the field. Hindu wives are only allowed to speak to their nearest relations, fathers, brothers, etc., and are never trusted from home alone. Married women, when at the daily bath, smear their bodies with turmeric, and place on their foreheads the round mark with the red colouring matter from the turmeric? and, like many other orientals, paint their eyelashes with lamp-black. Married women also wear a bodice. Though their religious books (Shastras) permit the Hindu widow to re-marry, custom, which is more rigorous, forbids it; and once widows, except with a few tribes,—the Jat, the Gujar, and others,—they ever after remain single. See Marriage Customs.

Death and Future State.—When a Hindu dies there are the inevitable tokens of grief amongst relatives; but women evince their emotion with great demonstrations and noise, proclaiming aloud the good qualities of the deceased, as they beat their breasts and mouths. The death-wail is heard far distant, and once heard is never forgotten. 'Naked he came, and naked has gone; this dwelling-place belongs neither to you nor to me.' Relatives and friends, on learning the melancholy tidings, go to the house of mourning to condole with the bereaved family, and the women join in the death-wail, which rises loud above all the other sounds of the busy world around. As death is drawing near, however, the attendants, after purifying the house with cow-dung, perform the Jiva Praias-chittam, by laving the dying man's body with water, placing in his mouth or causing him to drink a little milk, buttermilk, honey, treacle, and plantains (panchakavia), and then releasing a cow. Such an ordeal few men in weak health could withstand, and it may not be doubted that it is never performed without hastening the fatal event, for the attendants force the five things into the dying man's mouth. After demise the corpse is washed and dressed. The family priest pronounces certain mantra of purification over it, for every household has its own Brahman teacher. It is borne on a bier to the burning ground by four men, and followed by relatives and friends, both men and women. A large heap of firewood and dried cow-dung cakes has been already gathered together there, which are stacked up over the remains, and the son sets the pile on fire. It is their belief that as death parts the soul from the body, the god of justice, Yama, sends two angels with an invisible form to receive into it the flitting spirit, and convey it to Yama-locum, his hall of justice, to be tried there, and awarded its sentence of future punishment or reward. The secretary, Chatr-gopūtr, records the decree, and the disembodied spirit takes up its abode in Swarga, or in Narika, or revisits earth to be re-born, and afforded another opportunity of gaining release from mortality. The day following the demise and incremation, they revisit the spot. They pour milk or water, or milk and water, over the ashes, and make an offering of rice to the Preta, the departed soul. On the second, third, or fifth day, the son selects any small black stone, or three back stones, which he places against a pipal tree, Ficus religiosa, on the bank of a pond or tank. This represents the deceased, or rather his Preta is supposed to be located in the stone, and where three stones are used, those also of his grandfather or great-grand-

father; and each day, for ten days, the son offers to the stone or stones a water-sacrifice to quench the thirst of the departed. He also cooks rice there, and offers it to a crow, to satisfy the hunger of the deceased; he continues this every morning till the tenth day, because it is the Hindu belief that the soul of the departed hovers about the house for ten or twelve days, and then takes up that future habitation which, according to their view of the transmigration of souls, may be its lot. On the tenth day the stone is thrown into the water. The object of all this is their belief that the shade of the departed is occupying five separate beings and places,—one descends upon his son, a second rests on the place of incremation, a third in the house he has left, a fourth in the stones that are raised to represent him, and the fifth in the crow to which the food is thrown. And if the crow refuse the food, the beholders deem it an augury of the ill life of the departed, or that some object of his life remained incomplete.

Widowed State.—If the deceased was a married man, the mangala sutram, or sacred thread, which was tied round the neck of his bride on the wedding day, is now broken by other widows of the family. She ceases to wear a bodice or jewels, or flowers in her hair. She discontinues the use of turmeric when at the bath; the red mark is no longer placed on her forehead, and in many cases the long black tresses are removed, for some classes of Brahman women have their head shaved. From this time their lives are one continued scene of misery. Restricted to the meanest of the household avocations, they are treated by their nearest relatives with contumely and neglect. Their very loneliness and bereavement, instead of being occasion for sympathy and endearment, only calls forth harsh, often brutal, treatment. Their very condition is a term of abuse; and, denied it on earth, many a Hindu widow seeks peace in the grave, for there the wicked cease from troubling, and there the weary be at rest.

After-Death Ceremonies.—On the 11th day, among Brahmans, the son of the deceased selects two or three relatives, or several Brahmans, to be in the place, or representatives, of his parent. They are anointed with the oil of the oriental sesamum. The son presents them with flowers, the sandal perfume, and new cloths, and then entertains them. Until they finish their meal, no member of the household is allowed to partake of food. So soon as they rise, however, a morsel of rice is thrown to the crows, and the representatives of the deceased are dismissed with betel-nut, new cloths, and presents of money, according to the son's means. All other relatives present are then entertained. For one year from this time this becomes a monthly ceremonial on the day of the deceased's demise. On the first anniversary of the deceased person's samvatsarikam, a Hindu, however poor, must, with much display, perform the ceremonies which are then required. This necessity is a great tax to all of them; but where several deaths have occurred in a family, it is a ainous burden, for the rules of their faith compel eir performance, and if a person have not money f his own with which to perform this, he must eg for it or borrow it for the purpose. The eligious importance to the deceased of the performnce of this anniversary rite is considered very reat, and it is this which occasions the great desire to have a son. If the family be what in law is called a united Hindu family, the ceremonial is conducted by the eldest son, but where they have separated, each son must perform it separately. For those who have no sons, the widow can perform it, and the widower husband can do the same for his wife. On the future anniversaries the sradha only is performed.

Burial and Burning.—Before the body is taken to be burnt, it is anointed with ghi, or clarified butter. Arrived at the side of the water, the nearest relation sets fire to the pile, which is soon in a blaze. It takes three cwt. of wood to consume the body of an adult. At the present day, the general practice of the Vaishnava Hindus is to burn their dead, but they also launch the bodies into the stream of the Ganges, or expose them on the open plains. After the incremation, using a branch of sami, and another of palasa (Butea frondosa), instead of tongs, the son or nearest relative first draws out from the ashes the bones of the head, and afterwards the other bones successively, sprinkles them with perfumed liquids and with clarified butter (ghi) made of cow's milk, and puts them into a casket made of the leaves of the palasa (Butea frondosa). This he places in a new earthen vessel, covers it with a lid, and ties it up with a thread. Selecting some clear spot where encroachments of the river are not to be apprehended, he digs a very deep hole, and at the bottom spreads the cusa grass (poa), and over the grass a piece of yellow cloth. He places thereon the earthen vessel containing the bones of the deceased, covers it with a lump of mud, moss, and thorns, and plants a tree in the excavation, or raises a mound of masonry. Subsequently, the son or nearest relative repairs to the cemetery, carrying eight vessels filled with various flowers, roots, and similar things; he walks round the enclosure containing the funeral pile, with his right hand towards it, successively depositing at its four gates or entrances, beginning at the north gate, two vessels containing eight different things, with this prayer: 'May the adorable and eternal gods, who are present in the cemetery, accept from us this eight-fold imperishable oblation. May they convey the deceased to pleasing and eternal abodes, and grant to us life, health, and perfect ease. This eight-fold oblation is offered to Siva and other deities; salutation to them.'

In the south of India, the ascetic followers of both Siva and Vishnu bury their dead; so do the Vaishnava, Vairagi, and Sanyasi in the north of India, and the Saiva Jogi. The class of Hindu weavers called Yogi have adopted a similar practice, as also have all the castes in Southern India who wear the lingam. All infants and unmarried persons are interred, as also all the artisan tribes. At the Sanyasi devotee's interment no wailings or expressions of grief are allowed. The corpse, seated in a litter, is borne to the grave, preceded by musicians, and attended by persons who cast rose-coloured powder into the air, or demonstrate in other modes their joy. It is placed in the earth in a sitting posture, instead of being consumed on the pile. A small platform raised over the spot, and exhibiting the sculptured feet of the deceased, commemorates his sanctity.

Ceremonials of Worship.—A Brahman who attends to his religious duties, bathes before sunrise in cold water, and offers a water sacrifice

or libation from his hand. He prays in this wise:

'He who meditates on Pundri kachă (he with the *lotus eye*), *though a very great sinner, will be forgiven.*

'If he sprinkle over his head water which is pure and holy, he will be purified and strengthened.

'All sins committed during the night, by word, deed, mind, mouth, hands, feet, belly, organs, or in anger, will be forgiven by Surić jotishi' (the light of the sun).

The next part of the ritual is the ceremony called Arg'hiam, which is performed to free the sun from the Rakshasa, who is striving to hinder its appearance. This consists in offering, four times, a water sacrifice or libation, by taking water in the hands and pouring it on the ground, as he four times pronounces the Vedic Gaitri, viz. 'O'm! Bhūrbhuvā ssuvâhā, O'm! Tatsa vit'hru varēmyâm, B'hargo devâsyâ dhimahi dhiyo yonaha pracho dayath.'—'O'm! earth, air, heaven, O'm! Let us meditate on the supreme splendour of the divine sun. May he illuminate our minds.' After this he prays, at length or briefly at will, in the form of a commenting or expounding of the above Gaitra.

He then prostrates himself (to Vasu deva or to Krishna, or to Vishnu if a Vaishnava) to Sarvantariami, a god who pervades all creatures, and prays him to bless all the Brahmans and cows within the four seas, mentioning his own name, his got'hram or tribe rishis. At the close he offers to Narayana his deeds by body, mouth, heart, and senses.

At noon, prayers are repeated, and he prays to Suria (the sun).

In the evening, prayers recur, and he implores Varuna (the god of the sky and regent of the west) in sacred words.

Hindu Society.—Hindus are classed as Vaidikam and Laokalam or Lao-kikam, clergy and laity. It is a common notion that the Brahmans of India are the priests of the Hindus, but this is not correct. Though of the priestly or sacred order, the vast bulk of this class are employed in lay pursuits, as soldiers, merchants, lawyers, clerks, perhaps in every avocation of daily life except such as involve manual labour, though they are even agriculturists in Northern India and Orissa. Various sects of Hindus have priests of the Sudra caste, and many aboriginal races employ members of their particular tribe or race. Speaking in a general way, it may be stated that where the people of India are followers of the Puranas and Vedas, their priests are invariably Brahmans; but the extensive Lingaet sect, and the Jain, and all the sects or tribes who worship the village deities, or adhere to spirit or devil worship, select priests from their own classes. Also the Kansallar, or artificer tribes of Sudras, all of whom wear the sacred cord, select an ascetic member of their own caste as their priest, and have also family priests from their own circle. Indeed, they claim for themselves a superiority to the entire Brahmanical order, asserting their origin to be older; and no one of the Kansallar would accept of water from a Brahman. But, in the usual discrepant character of the Hindu people, although the Kansallar claim that their caste possess this superiority, and though they possess the Brahmanical Vedas, yet their manner of conversing and dressing, and their women's clothes and ornaments, resemble those of non-Brahmanical castes. In paying respect to Brahmans, they say and use the Dandam, and not, as from an inferior to a superior, the Namaskaram, as one Brahman will to another. Amongst the Saiva sect, who have Brahman priests, the guru is styled Sankarachari, and is invariably a Sanyasi or ascetic. He resides in a matham or monastery along with other Brahmans, to whom he imparts religious instruction or preaches. He is greatly reverenced by his disciples, who regard him as almost equal to a god. The monastery is supported by the disciples' gifts. The members of these monasteries are charitable to all the poor, and erect temples out of surplus receipts. But the head of the establishment, the Mat'hadi-padi, when he travels to superintend his followers, does so with vast pomp and display, in a litter of a peculiar form, often richly ornamented, and accompanied by a great concourse of people, with elephants, horses, and conveyances for his property. Like all Sanyasi and Brahmans engaged in religious duties, the members of the matham bathe thrice daily. Twice daily the chief worships the Saligrama, a fossil ammonite from the Gogra or Gandak, or a gold, silver, or copper idol of Krishna or of Siva. After washing the idol with water, he decorates it with the sectarian mark, and worships it with offerings of flowers and tulsi leaves; he sips a little of the water used in the worship, and the rest is carefully preserved in a silver cup along with tulsi leaves, and dropped from a small spoon, 'Voodharni,' into the hands of disciples, who esteem the gift as cleansing from all sin. The head monk only eats once a-day, and before taking his meal he invariably presents it to the deity. Disciples, when they approach the head monk, prostrate themselves before him. Their mode of caring for the idol is in all its forms identical with that of caring for a living human being,—bathing and anointing it, offering it food, offering it praise and reverence in song, in dancing, and in prayer, and periodical, in some cases daily, and seasonal airings and processions. In exploring the great theatre in Ephesus, Mr. Wood discovered an inscription containing information as to the endowments and worship of the temple of Diana, and laying down the route by which, on the birthday of the goddess, her silver shrines and other treasures were to be carried in procession from the temple to the great theatre through one city gate, and back to the temple through another city gate, which was called the Magnesian. And this is a perfect representation of the customs of the Hindus of the present day, and precisely as noticed in Isaiah xlvi. 7: 'They bear him upon the shoulder; they carry him, and set him in his place.'

Position and Religion of Hindu Women.—A great defect in their social system seems to be the unequal conditions of the sexes. In European households there is almost as little real mixing of different grades of society, as occurs amongst the different castes of India. But among the Hindus, although their creed permits the women to attain heaven on their demise, so long as they are here on earth, whatever secret influence a wife may have, it is not shown to the community. Speculative as are the entire Brahmanical populations, and to a large extent also all the races called Hindus,

many of them diving into the mysteries of their theology, except a Vedantist occasionally make a remark to the women of his household as to the inutility of worshipping their ordinary images, the Hindu wife has little or no instruction in religion, and takes no part in all that array of ceremonial which occupies so much of the daily time of a Hindu, particularly if religious. The Hindu prays morning, noon, and night a somewhat long prayer. The wife's prayer, if she pray at all, is very short, a Saiva woman merely mentioning the name of her deity in the three words—'O'm! nama Saiva!' —'Hail! name of Siva!' Amongst the Smart'ha Brahmans and Mad'hava sect of Vaishnavas, each household keeps a tulsi plant in the middle of its little parterre or courtyard. A small pedestal is erected, in the hollowed centre of which the plant is placed. Daily the women of the house resort to it, circle, 'pradatchanam,' and prostrate themselves six times before it, pour water over, and then, standing before it, pray to Lakshmi. A similar worship to the pipal tree, with a sculptured cobra at its foot, is offered both by men and women to whom offspring have not been given. This pipal tree is always on the bank of a tank, in which the devotees bathe, dressed in a silk garment used only when performing sacred rites. Places where cobra snakes have formed colonies are largely resorted to by women longing for children, and they make to the cobras offerings of sugar and milk, for the cobra is deemed an *αγαθος Δεμον*, guarding the symbol of the reproductive organ. The prayer of the Brahman of every caste and sect includes the Gaitri invocation to the sun.

Legal Rights of Husband and Wife.—A girl is accounted by law marriageable at the age of eight. Girls are, however, given in marriage at the age of two and upwards, till they attain their maturity. A Brahman girl attaining maturity without having contracted marriage, forfeits her caste. The girl, when married, remains with her own family until she reach maturity, when her husband can claim her and remove her to his house. The right of choosing a husband for the girl rests first with her father. Should he have demised, it devolves in succession upon her paternal grandfather, brother, paternal uncle, male paternal cousins, and lastly upon her mother. If these relatives should have neglected the duty of choosing a husband for the girl up to three years after she may have attained the age of eight, she is at liberty to choose for herself. The lads of the three superior classes, namely, the Brahman or the sacerdotal order, the Kshatriya or the military tribe; and the Vaisya or the mercantile body, may not contract marriage until they have completed the stage of studentship (Menu, iii. 4), the opening of which period is marked by performance of the Upianayanam, or investiture with the sacred thread, and the close by a ceremony termed Samavasthana. For the Sudras or the servile class, who have no stage of studentship, there is no limitation as to the time for marriage. There are eight recognised kinds of marriage, viz. Brahma, Daiva, Arsha, and Prajapatya, which are appropriate for Brahmans, and are based upon disinterested motives; the Gandharva and Rakshasa, which are appropriate for Kshatriyas, and are founded, the former on reciprocal desire, and the latter on conquest; the Asura, which is practised by Vaisya and Sudras, wherein the consent of the party giving away the girl is obtained by a pecuniary consideration; and the Paishacha, where the marriage may have been effected through fraud or force practised upon the girl, and which is reprobated for all classes. Though each class has its characteristic description of marriage, there is nothing to bind them to the rites appropriate to them. A Brahman, for example, may contract an Asura marriage, and a Sudra a Brahma one. The Brahma and Asura are the most usual forms of marriage. The former is an approved one, and the latter, as a sordid proceeding, is discouraged (i. 42, 43; Macnaughten junr. i. 60). The binding circumstances essential to the completion of a marriage are gift and acceptance of the girl, and the ceremony termed Saptapathi, or the seven steps. This is performed by the bridegroom placing the bride's foot successively on seven lines drawn on rice in a platter. From this observance has followed the practice of any two persons pledging mutual friendship by taking seven steps together, so that the term Saptapathinam has come to be synonymous with friendship. The ceremonial in question accomplishes the marriage. The other ceremonies observed, including sacrifice by fire (homam), are of minor significance. The tying the tali or nuptial token by the bridegroom round the neck of the bride, is a practice sanctioned by usage, but not prescribed in the Shastras. The above matrimonial contract in itself fixes the condition of the parties as married, irrespective of the consummation of the marriage, when the girl, on reaching maturity, is taken home by the husband. It brings the girl, should her husband die, to the state of widowhood, with its attendant consequence, and gives her right of inheritance in her husband's family. When either party incurs forfeiture of caste, intercourse between them ceases; and should the loss of caste be on the side of the woman, and she be sonless, she is accounted as dead, and funeral rites are performed for her (Smruti chandrika, on text of Vasista and Yajna vulkia). If she have a son, he is bound to maintain her; and in this way, under such circumstances, her existence is recognised notwithstanding her loss of caste. Infidelity in the female, save in certain of the lowest classes, occasions forfeiture of caste, and puts an end to the marriage (Smruti chandrika). The husband, however, is not entitled to damages from the adulterer,—the Hindu law not providing for discretionary damages upon any account. Impotence in the man, and confirmed barrenness in the woman, as also loathsome or incurable disease in either, justify separation (i. 47), but will not sever the marriage.

Akbar, emperor of India, forbade marriages before puberty, and sanctioned the re-marriage of widows. The British Indian Government in 1856 by an Act sanctioned this, but up to this time (1883) very few Aryan Hindus of the higher castes have dared the superstitious dread of the gods, and the anger of their caste-fellows, which hinder this act of justice towards their widows.

Murli; Basava. — Many young women all through India are married to their gods, and thenceforward are allowed to associate with the temple attendants or others. Girls of the Virasaiva sect and of some of the aboriginal races are married to a knife or other object, and become common. With some of the Hindu sects a

widower cannot re-marry, but such a bridegroom with his bride are each married to a tree with all the customary ceremonies of a wedding, each clasping their respective trees, and they then live together as husband and wife. The weaver castes near Madras devote their eldest daughter to the gods to serve in the temple; and instances occur of temple girls being educated in Christian mission schools.

Hindu Inheritance.—Adoption is legal with the Hindus, and sons are often adopted. If a son be adopted, he succeeds to his adopted father; he loses all claim on the inheritance of his original father, and is entitled to a sixth of the property of his adoptive one, even if after his adoption sons of the body should be born. In Hindu law there are ten descriptions of sons,—one of them the son of a man's wife by an uncertain father, begotten when he himself has been long absent. When a Hindu dies, the sons may either continue to live together with the property united, or they may divide it according to certain rules. If they remain united, the eldest brother takes possession of the property, and the others live under him as they did under their father. In this case the acquisitions of all the sons (who have not formally withdrawn) go to augment the common stock. If they divide, the eldest takes 1-20th; the youngest, 1-80th; and the intermediate sons, 1-40th. Unmarried sisters live with their brothers.

Sectarian Marks.—Amongst the peculiarities which first attract the eye of a stranger on seeing the Hindu religionists, are the red and white marks on their foreheads. Their prominence is often so glaring as to be unseemly. When the theistical Sikh religionists hastened from the Panjab in 1857 and 1858 to aid in quelling the mutiny and rebellion in India, in their wild enthusiasm they named all the Hindus contemptuously 'Matha Din,' literally, carrying their faiths on their foreheads; and a more expressive term could not perhaps have been coined, for all that ordinary Hindus know of their religion are the differences in these marks, which indicate differences of religious sects, not of castes, and the sectaries have a superstitious regard for such distinctions. It is held necessary, where convenient, or no especial objection or difficulty exists, for these marks to be daily renewed. A Brahman cannot perform any of his daily sacrifices, etc., without the completion or contemplation of this distinction; and it is irreverent in one of an inferior tribe to approach a holy man, or to ask his blessing, or to partake in the benefit of any religious rite, without or in view to this sectarial decoration. The Saiva, worshippers of Siva, called Siva-bakht, and the Vaishnava, otherwise Vishnu-bakht, worshippers of Vishnu, are to be known, the former by the horizontal position of their forehead lines, and the latter by their perpendicularity. One perpendicular mark, centrally between the eyes, is generally referable to one of Vishnu's sectaries; it is not common. Two upright parallel lines, with a black or open circlet between or under them, are the commonest distinction of Vaishnavas, whether seen on pictures of Vishnu himself, or on Rama and Krishna, or others of his avatars. In general, perpendicular lines appertain to Vaishnava sects, and horizontal lines appertain to Saiva sects. The marks on the forehead are ordinarily called nāmam; the customary substances used are earths, tirumannu, or white ashes from a sacred fire, saffron, sanders wood, sandal-wood, white clay, etc. It is a very ancient mode of distinguishing religious sects, and is alluded to in Ezekiel ix. 4. The Sakta sect, when they avow themselves, mark either with saffron or with turmeric and borax. The Saura or Suria are true worshippers of the sun; and some of them adore the dormant and active energies of the planet conjointly. This sect, which is not very numerous, is distinguished by the use of red sanders for the horizontal triple line, as well as for the circlet on their foreheads.

Superstitions.—Hindus believe in omens, good and bad, and look for them as encouragements or warnings on most occasions, such as in journeying from one place to another, or when a marriage is on the tapis. It is considered a favourable omen, if, when proceeding on business, a crow fly from left to right; or the traveller meet two Brahmans, or a married woman, or a Sudra with a stick in his hand, or a jackal be seen. If these good omens occur, they believe that they will certainly succeed in the object of their journey. It is a bad omen to meet a single Brahman, or a widow, or if a crow fly from right to left, or a cat cross their path. On seeing any of these evil omens, almost every Hindu will postpone his journey, however emergent; though in this latter case he may return home for a little and start again. It is a good omen, if, when a marriage is under discussion, the toll of a bell be heard or the neigh of horse; but a person sneezing or the sudden extinguishing of a light are bad omens.

No Hindu ever takes any important step without first consulting the stars, by referring to a Brahman astrologer or to the astrological almanac. If business will not admit of delay, he will consult the Sivagyanmut or Advices of Siva, or the buchuns or sayings of Khona, wife of the great astronomer Varahamira, to ascertain whether the time be auspicious. With many Hindu and aboriginal races, the snake is reverenced; and if a cobra be killed, they inter it or burn it with all the ceremonies usual for a human being.

When an epidemic disease seems to be approaching a village, the village tutelary divinity is carried in procession to meet the god of the pestilence, and with shouts, execrations, and defiant gestures they deter the advance.

The names, both of men and women, and of their towns, are frequently those of their gods and their avatars, or of their deified heroes,—as Siva, Ananda, Eswara, Gopala, Narayana, Rama, Bhawani, for men; Durga, Kali, Ganga, Lakshmi, Radha, Saraswati, for women; and Bhima, Yudishtra, Draupadi, Kunti, their ancient heroes and heroines.

Charity and Alms.—Almsgiving is expressly enjoined by the Brahmanical religion, as conferring merit and power over the unseen world, not for compassion or brotherly love, or for doing as we would be done by. Hindu charities consist in feeding Brahmans and pilgrims; building choultries, and houses, and temples, and bridges; in planting trees, and groves, and gardens; making roads; in supplying water to travellers; in digging wells or tanks. It is, however, an oriental idiosyncrasy for every man to desire, not to found a family or restore an old

ancestral residence, but rather to leave some residence exclusively commemorative of himself, and to repair nothing which his predecessors have left, lest they should have the credit of it with posterity. If they give alms, it is to persons of their own or of a higher caste. For a Hindu to bestow alms on a Pariah, however urgently in need the latter may be, is almost an unknown act.

Food, and Cooking, and Hospitality.—Like that of the bulk of the human race, the food of the Hindu is obtained almost wholly from the vegetable kingdom. But with the Hindu the adherence to this kind of diet forms part of their religious belief. Unlike the Hebrews (Deut. xiv.; Leviticus xi.) or the Mahomedans, to whom only certain creatures were forbidden, several Brahmanical tribes do not touch animal food at all, and no Hindu of the four great castes can partake of the flesh of the cow, much less avow that he had so done. They also require their food to be prepared by people of their own or a higher caste, or, in their dread of pollution, even by their own hands. With some sects this dread is carried to such an extent, that they do not permit any unconverted eye to see them cooking, and if accidentally overlooked, will bury or give away the materials under preparation, however hungry they be. Many Hindus likewise cook within a sacred circle, and if any lower caste or no-caste person enter it, the cooking is suspended, and the article destroyed. Many Hindus eat their meals dressed in silk clothes used only for sacred rites, and waited on by their wives or female relations, who do not presume to eat until their husbands have finished. They eat off metal dishes, of gold, or silver, or brass; but the ordinary platter is made of leaves of the plantain, banyan, lotus, or palasa, pinned together with grass stalks in the form of a dish. These are sold in every bazar. They are employed to ensure safety from pollution, being thrown away after the meal. The custom mentioned in John ii. 8, of appointing a governor of the feast, is one followed by Hindus at a large feast. There is a continued stream of their hospitality, such as it is, but castes will rarely eat with one another; and at meals each Brahman sits with his own leafy platter apart from his neighbour, to prevent the possibility of even accidental pollution by his own food touching that of another, or *vice versa*. Where such stringency exists as regards people of their own faith, their associating at meals with people of other creeds is of course an impossibility. These remarks apply to the Brahmanical Hindus in general; but the members of many of their reformed sects eat with each other, without regard to former caste distinctions. In like manner, as followers of one faith, all individuals are equally entitled to the prasad'ham, or food which has been previously presented to a deity; and it is probably the distribution of this in all temples, and, for instance, annually at Jaganath, that has given rise to the idea prevalent in Europe, that at this place all castes of Hindus eat together. A Hindu in general eats twice daily, in the forenoon and after sunset; but a Brahman widow eats only once daily, at noon. The food of the Hindus along the seaboard of India is rice,—when they can afford it,—partaken of with vegetable curries or pickles and condiments. In the higher lands of the interior, and in the more northern portions of India, the pulses and millets, with wheat and maize, are the articles in common use, in the form of cakes. The prior processes which in Europe fall to the miller and the baker, are got through in the Hindu household. The pestle and mortar is with Hindu families a very important domestic implement, and few are without it. The mortar is generally of stone, but often a block of wood, the lower part shaped like an hourglass stand, and in the upper is a conical cavity of the contents of about two gallons. The pestle is of hard wood, about four feet long, and two inches in diameter, with the ends tipped or ferruled with iron, to prevent their splitting or wearing. It is usual for two women, to whose lot beating rice out of the husks and similar domestic operations generally fall, to work together. The pestle is raised perpendicularly by the right hand of one, and as it falls is caught by the right hand of the other, she who raised it quitting it in its fall; when tired with their right hands, they use the left, relieving them. A song is frequently chanted during the work. The stone mill, so often alluded to in the Old and New Testament, consisting of two flat stones worked by one or two women, is in use in every house. The religious restriction to vegetable diet is doubtless of Buddhist origin. Buddhism had the effect of inspiring a great respect for life; and all orthodox Hindus regard the inviolability of animal life as the most sacred of laws. In whatever degree sanguinary rites may be practised by any portion of these people, such are directly opposed not only to the influence and example of almost all the Brahmans, but to the practice of the immense majority of the more cultivated and the higher castes. Myriads of Hindus have lived and died without ever partaking of animal food; and amongst the Jains, every precaution is taken to prevent themselves involuntarily destroying or swallowing even insect life. Their priests never partake of stale food, lest living creatures should have been generated in it, keeping a cloth over their mouths lest an insect unconsciously enter; and they walk with a small soft broom in hand, with which they gently sweep the ground on which they are to tread or sit. With all this, there is occasionally witnessed amongst some one or other of the races following Hinduism an apathy and indifference as to the preservation of the lives of their fellow-creatures which Europeans fail to understand. An instance of this occurred in 1820 at the fair at Hardwar, in which 700 persons are stated to have lost their lives. It was calculated that not less than two millions of people had assembled on the occasion, when, at the opening of the fair, the rush was so great towards the steps of the bathing-place as to cause this melancholy catastrophe. Dreadful as it was, the exertions of the British officers only prevented its being infinitely greater. An eye-witness remarked that the Brahmans looked on not only with apathy, but with joy depicted in their countenances; and women at a short distance were bathing in other parts of the sacred water, with as much indifference as if the utmost serenity prevailed around them. After the fair, the roads for miles round Hardwar were strewed with dead bodies of men, women, horses, camels, and dogs.

Dress and Clothing.—The dress of Hindu men is of white muslin or cotton cloth, and their upper coat is now generally sewed. The under

garment for the lower part of the body, the dowati or dhoti, is a loose, unsewed wrapper. Women of all classes wear unsewed wrappers of green, red, or yellow coloured cotton, edged with silk or gold embroidery, and a bodice of cotton or silk.

Scalp-lock. — All Hindu men retain only the tuft of hair on the crown of their heads, which is familiar to Europeans from the pictures and descriptions of the Indians of North America as the scalp-tuft, the most glorious trophy, if not the sole reward, of their victor. The Hindu practice of wearing this scalping tuft (Shik'ha, SANSK.; d'Zutu, TEL.; Kudimai, TAM.) was doubtless brought with them from Central High Asia; for, like the Indians of N. America, the Scythians cleaned the scalps they took, and hung them to their horses' bridles. The Decalvare of the ancient Germans was nothing other than the scalping mentioned in the laws of the Visigoths, *capillos et cutem detrahere.* According to the annals of Flude, the Franks still scalped about the year 879, and also the Anglo-Saxons; and head-hunting is only now being suppressed among the Khassya and Garo races of the N.E. frontier, and amongst the Dyaks of Borneo.

Titles. — One amongst the honorific social distinctions of the Hindus is that of Acharya, a religious teacher, properly a Brahman who instructs religious students of the Vedas, of the Brahman, Kshatriya, and Vaisya castes, but is in use as relating to any religious instructor. In the south of India the term is applied to the head of a religious society, equivalent to the Mahant of Hindustan, and the Panda or head priest of a temple. But it is assumed also by Brahmans engaged in secular pursuits, by carpenters and other artisans, and amongst the Mahrattas by cooks.

Caste.—A great object with Hindus in general is to preserve their social position in caste. The divisions and subdivisions of their different castes are very numerous,—the Sudra are said to have nearly fifty; but with all Hindus purity of caste is held of the highest consequence, and its loss may occur from various causes.

The division into castes or sects of the Aryan races whom we style Hindus, was known to the Greeks, and seems to have been early known to the Arabs. The Grecian authors, on the authority of Megasthenes, divided the tribes into seven, and Ibn Khurdadba (obiit A.D. 912), an officer of the khalifs, also arranges them into seven classes, but the occupations differ which these authors attributed to them:—

	Greek Authors.			Arab.
Cl.	Strabo.	Diodorus.	Arrian.	Ibn Khurdadba
1.	Philosophers.	Philosophers.	Sophists.	Sab kufria.
2.	Husbandmen.	Husbandmen.	Husbandmen.	Brahma.
3.	Shepherds and Hunters.	Shepherds and Cowherds.	Shepherds and Cowherds.	Kataria.
4.	Artificers and Merchants.	Artificers.	Artificers, Merchants, and Boatmen.	Sudaria.
5.	Warriors.	Warriors.	Warriors.	Baisura.
6.	Inspectors.	Inspectors.	Inspectors.	Sandalia.
7.	Counsellors & Assessors.	Counsellors & Assessors.	Assessors.	Lahud.

Ibn Khurdadba's first name is unknown. By the others he seems to indicate the Brahman, Kshatriya, Sudra, Vaisya, the Chandala, and jugglers.

Dr. Caldwell tells us that in all ordinary cases where illegitimate children are born, if there be no great disparity in rank or caste between the parents, the child takes that of the two parents which is the lower. Where considerable disparity exists, and particularly when the woman is of the higher rank,—as, for instance, when a high caste woman, or even a woman belonging to the middling castes, has formed an intimacy with a Pariah man,—the mother either procures abortion or commits suicide. The child never sees the light. Caste has its chief relations with race descent. There are historical instances of sovereigns creating Brahmans in great numbers from amongst other races; the Mahratta Brahmans are said to have been so made from amongst fishermen; and a great body of Rajputs were consecrated of the Kshatriya caste.

To escape possible defilement, the servile races —Pariah, Mhar, Mhang, Chamar—are compelled to dwell outside the village walls, and in the larger towns Christians have their own quarters; and the higher Aryan castes require the predial races not even to approach their dwellings, but to stand at a distance and call aloud what they wish to communicate. A Hindu may lose or be expelled from his caste for many social acts, but no meritorious deed can raise a Hindu from one caste to another, nor does immorality or crime degrade him from his caste. Many castes eat and drink together, but intermarriages of persons of different castes are almost prohibited in the higher castes, and are rare even in the very lowest. It is a hedge over which many persons desire to leap. Chaitanya and other reformers have founded sects which have abandoned caste distinctions; and the lower tribes, as the Chamar or shoemaker, the Dhobi or washerman, have largely joined anti-Brahmanical sects, as the Kabir panthi, Satnami, etc. The aboriginal races, of Turanian descent, as a rule, by origin and nature are averse to caste distinctions and Brahmanism.

Avocations.—The races following Hinduism, and the converts from amongst them to Mahomedanism and the Sikh faith, are, almost exclusively, the owners and tillers of the soil of India; and as agriculturists in Northern India are in village proprietory communities, those of Central India are village proprietors, and those of Western and Southern India are joint holders under Government. The entire banking interests in India, moneyed men and capitalist class, smaller merchants, traders, and carriers, are Hindus; and Hindus are settled for merchandise in Arabia, in Afghanistan, all through Persia and Turkestan; they are in Astracan, in the southern provinces of Russia, even as far as Moscow; also in Further India, throughout Burma, Tenasserim, southwards to Singapore; and, from unknown antiquity, one Hindu tribe of the north-west of the Peninsula have been located on the east coast of Africa southwards to Mozambique, and have been the willing agents of slave-dealers.

A knowledge of reading and writing is very widely diffused, but those who cannot write use trade-marks as their sign-manual, of which the following may be mentioned:—

Mang, ...	A daffra.
Dher, ...	A staff.
Carpenter, . .	Chisel or kikra.
Barber, . . .	Looking-glass.
Shopkeeper or Bakal,	A balance.
Dhangar, . . .	Scissors.
Gardener, . .	Kurpi.
Banjara, . . .	Spear.
Koli, Ramusi, Bhil,	Bow and arrow.
Attar and Rangrez, .	Joli.
Kassar (brazier), .	Tulai.
Kunbi, .	A plough.
Goldsmith,	A hammer.
Blacksmith,	Anvil.
Chamar, .	Leather knife or rapi.
Tailor, .	Yard-measure.
Soldier, .	Dagger.
Teli, .	Subbal pur.
Byragi, .	Forceps.
Maniar, .	Churi or bracelets.

Religious Liberty.—From the oldest times, succeeding rulers of Travancore and Cochin, and smingly those of Gujerat, have ruled their lominions with the most entire religious liberty; nd Arab races, Jews, Parsees, Romans, Africans, Egyptians, Portuguese, Dutch, and British have raded and settled there. At Patna, the little hristian church, or Mut'h, as it is inserted in the illage dufturs, was endowed its portion of land xactly as any other religious establishment.

In the changes between Buddhism and Hinduism, and with the occasional forcible proselytizing y the Mahomedans to their faith and by the ortuguese at Goa to their views, there has been nuch cruelty; and, generally speaking, Hindu and Mahomedan sovereigns favoured those of their ubjects who were of the rulers' faiths. But, by an Act passed in 1840, a discontinuance was put to all nterference on the part of British functionaries the interior management of native temples; in he customs, habits, and religious proceedings their priests and attendants; in the arrangent of their ceremonies, rites, and festivals; l generally in the conduct of their interior onomy; the tax on pilgrims was abolished;

and in 1841, salutes and the attendance of troops or military bands were forbidden at such festivals.

Hindu Morality.—Major Moor remarks that it is some comparative, though negative, praise to the Hindus, that the emblems under which they everywhere exhibit the elements and operations of nature are not externally indecorous. Unlike the abominable realities of Egypt and Greece, we see the phallic emblem in the Hindu pantheon without offence, and know not, until the information be furnished, that we are contemplating a symbol whose prototype is indelicate. The external decency of the symbols, and the difficulty with which their recondite allusions are discovered, both offer evidence favourable to the moral delicacy of the Hindu character. Temples are nevertheless commonly to be seen, on which are represented, in statues even of life size, figures which only the mind of man in all its corruptness and wickedness could conceive. However recently erected, these are perhaps but remnants of the period succeeding the asceticism and austerities of Buddhism. Books then came to be written about heroes whom they deified, some of whose lives, as painted, are a continuous outrage of decency. But the people generally never followed such licence. To have done so, society must have ended. At the present day, undoubtedly, the morality of the Hindus is far above the stories in their books, the statues on their shrines, or the licence which prevails amongst the few who associate with the Devadasa at their temples; and it is only their patience under such grossness, their not rising in wrath to reform it, their worship of fire and the elements, of the sun and moon, of the lingam and yoni, of the saligrama, the binlang, the tulsi, and the poa; their reverence for, almost worship of, the cow, the kite, and the cobra; their worship of Nandi, of idols with unnatural or hideous forms, of shapeless blocks of wood or stone, in which the educated have no faith, and which are often treated with irreverence by all; their respect for books of the contents of which they are ignorant, and which are not worthy of their present civilisation,—it is their adherence to all these confused amalgamations of the coarse Vedic creed, Scythic worship, fetishism, the austerities and sacredness of life of Buddhism, and the licence of Vishnu as Krishna, which excites the wonder and the contempt of all educated men. And their indifference is the more remarkable, because two thousand years ago they had a religion 'less disgraced by idolatrous worship than most of those which prevailed in early times. They had a copious and cultivated language, and an extensive and diversified literature; they had made great progress in the mathematical sciences, they speculated profoundly in the mysteries of man and nature, and they had acquired remarkable proficiency in many of the ornamental and useful arts of life. In short, whatever defects may be justly attributed to their religion, their government, their laws, their literature, their sciences, their arts, as contrasted with the same proofs of civilisation in modern Europe, the Aryan Hindus were in all these respects quite as civilised as any of the most civilised nations of the ancient world, and in as early times as any of which records or tradition remain.' In the re-ascendency of Brahmanism after the overthrow of Buddhism, the prime defect

of which was a want of knowledge of the true God, and to which was subsequently added a relic worship, and an over-fondness for asceticism, the writers who are now regarded by the Hindus as authorities, introduced the outrageous matters which at the present day are the shame and degradation of the followers of this extraordinary faith. Major Moor observes that, with a little alteration, the first part of Juvenal's fifteenth satire, beginning 'Quis nescit,' might be applied to the teachers of Hinduism as now seen, as happily as to the Egyptians, the objects of Juvenal's severity. It is a picture of the Hinduism of the present day:—

'Who knows not that there's nothing vile nor odd,
Which brain-sick *Brahmans* turn not to a god?
Some of those blockheads bulls and cows adore;
Fish, reptiles, birds, and snakes, as many more;
A long-tail'd ape some suppliants admire,
Or man-like elephant, a god the sire;
One race a god, half-man half-fish, revere,
Others to unsightly moieties adhere;
Hosts to a stone's high deity bend down,
While others sticks with adoration crown;
Nay, vegetables here hold rank divine,—
On leeks or mushrooms 'tis profane to dine.
O holy nation, where the gardens bear
A crop of gods throughout the tedious year!'

It has been remarked that the characters of many of the Hindu deities are faintly indicated by the term immoral. Everything that is gross and sensual and wrong is to be found as ordinary acts of their deities; and the followers of these faiths present the extraordinary spectacle of a people with purer lives than is to be found in the idolatrous or demonolatrous systems of religion which they follow. They have a proverb amongst themselves,—'Yatha devas, Tatha bhaktah,' *i.e.* As is the god, so is the worshipper,—happily not applicable to their own conduct. For in their domestic lives they are gentle, not aggressive; modest, reverent, respecters of authority, temporal and spiritual; desirous of knowledge, seekers of the truth, patient under mental or bodily labour; diligent in their callings, frugal, temperate, and chaste; living with one wife, though Hindu law permits a plurality; amongst the entire Hindu races offences against the person are rare, and it is only amidst the licence of the temples that gross polygamy is common, and is even there confined to the habitues of the shrines.

In all these remarks, however, it is necessary to bear in mind that the Hindus comprise many races, and dwell in many different climates. Amongst some of the races, and particularly amongst the non-Aryan tribes, there is much drinking of alcoholic fluids, which with other of their races is almost unknown. Mountstuart Elphinstone says their most prominent vice is want of veracity. They do not even resent the imputation of falsehood. The same man would calmly answer to a doubt by saying, 'Why should I tell a lie?' who would shed blood for what he regarded as the slightest infringement of his honour. Hindus are not ill fitted by nature for intrigue and cunning, when their situation calls forth those qualities. Patient, supple, and insinuating, they penetrate the views of the persons with whom they have to deal. Like all that are slow to actual conflict, they are very litigious, and much addicted to verbal altercation. 'The manner in which often,' Dr. Chevers writes at p. 451, 'a crowd of Bengalis fall upon a victim of their displeasure, and beat and tear him into pieces with sticks, fists, feet, hands, and any weapon which may happen to have been brought or caught up, until the body lies in the midst of them a mere bloody, featureless, disjointed, broken mass, is scarcely characteristic of the reputed mildness of the national character.'—*Abbé Domenech's Deserts of N. HINDUSTAN is a term which the people of Europe apply to British India generally. To the people of India, however, and to Europeans residing there, the name is restricted to that part of the country which lies between the Himalaya and the Vindhya mountains, and from the Panjab in the N.W. to Bengal in the S.E. This was the Aryavartha or Aryan country of the Sanskrit writers, who also called it Punya bhumi, or the Sacred Land. Jutting to the south of this portion is a triangular promontory or peninsula, known to the Hindus as the Dekhan (Deccan), meaning the south; and these two portions form the region which is briefly to be noticed here.

Rivers and Mountains.—The northern portion is watered by the Ganges and the Indus and their tributaries, and it is known as the Indo-Gangetic plain. It is an immense extent of flat country, stretching from sea to sea, is entirely composed of alluvial deposits of very late geological age, and it separates the hilly ground of the Peninsula from the mountain ranges of Sind, the Panjab, the Himalaya, Assam, and Burma. Several of the southern rivers are large,—the Nerbadda, Tapti, Mahanadi, Godavery, Kistna, and Cauvery; but none of them equals in importance the Ganges, or the Indus, or the Brahmaputra, which, with the Irawadi of Further India, are the only rivers navigated by steam flotillas, though the Godavery has boats trafficking on it. The marine lagoons, on the east and west coasts, connected by canals, are available for inland navigation, and most of the rivers and their affluents are utilized for irrigation. The east coast of the Peninsula is washed by the Bay of Bengal, and its west coast by the Arabian Sea; but the great Indo-Gangetic plain is mountain girt. To the west are the Khirtari, the Suliman, and the maze of mountains separating India from Afghanistan; to the south are the Vindhya; and on all the north Hindustan proper is bounded by the stupendous Himalayas.

The *Aravalli* hills are connected by lower ranges with the western extremity of the Vindhya mountains, on the borders of Gujerat, and stretch northwards to a considerable distance beyond Ajmir, in the direction of Dehli, forming the

division between the desert on the west and the central table-land. It would be more correct to say the level of the desert, for the south-eastern portion, including Jodhpur, is a fertile country.

Amarkantak, a great plateau, forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nerbadda. These rivers, though large and full of water even half-way from their mouths, are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that, owing to these impediments, increased still further by the rocky character of the river beds or their banks, navigation is limited for the most part to the lower portions of their course.

Central India is a table-land of unequal surface, from 1500 to 2500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the Vindhya on the south, supported on the east by a lower range in Bundelkhand, and sloping gradually on the north-east into the basin of the Ganges. It is a diversified but fertile tract. The plateau is known as the Patar, and many parts are covered with jungle. The Aravalli hills have afforded protection to the most ancient sovereign race in the east or west,—the ancient stock of the Suryavansa, the Heliadæ of India, or children of the sun, the princes of Mewar, who, when pressed, were wont to retire to its fastnesses, only to issue again when occasion offered.

The *Vindhya* mountains north of the Nerbadda river, and the Satpura range south of that river, run east and west, and separate Hindustan proper from the Dekhan.

In that peninsular Dekhan or southern portion are two mountain ranges, known as the Eastern and Western Ghats. These ghats run in wavy lines southwards towards Cape Comorin, approaching and receding from the coast, and leaving, between them and the sea, low, alluvial, fertile tracts from 50 to 100 miles broad. The region enclosed within the ghats has several extensive plateaus, rising 1200 to 3000 feet above the sea, as in the Ceded Districts, Coimbatore, Hyderabad, and Mysore; and in the more southern parts are spurs rising higher, with particular names. For instance, to the north of Coimbatore the chain rises abruptly to 8000 feet, as the *Neilgherry* range, and continues northward as the mountains of Coorg. The rainfall, which is great on the western coast, less on the Neilgherries, being 82 inches at Dodabetta, and 48 inches at Ootacamund. Farther north, in the Nagar district of Mysore, where are many rounded or table-topped hills 4500 feet high, often cultivated to that height, and rising in some places to upwards of 6000 feet, the climate of the western part is very humid, and particularly so at the town of Nagar or Bednur, 4000 feet high, on a spur of the western chain, where inclement rain is said to last for months.

The *Travancore* group presents a striking analogy to the island of Ceylon. The hills are loftiest at the extreme north of that district, where they stretch east and west for 60 or 70 miles, separating the districts of Dindigul and Madura.

The *Pulney* mountains are west of the Dindigul, the Animallay south of Coimbatore, and the Shevaroi south-west of Madura.

Climate and Seasons.—A country with such varied features, and extending through 28 degrees of latitude (8° 8′ to 36° N.), has climates and products commensurately varied. In Hindustan the people usually arrange the year into three periods,—the Choumasa or Burk'ha, which is the rainy season of four months' duration; after which is the Seeala, or Jhara, or Mohasa, the cold season; followed by the Dhubkala or K'hursa, or hot season. This division indicates generally the course of the seasons in all Hindustan, though in one locality or another the rains or the hot or cold seasons may be somewhat more or less prolonged.

Winds and Rains.—The S.W. monsoon blows from the Southern Ocean, and is loaded with vapour. This is deposited largely along the sea-face of the Western Ghats, and between them and the sea, from 70 to 100 inches at the sea-level, and as much as 250 inches on the mountain face. At Mahabaleshwar it amounts to 260 inches annually. In the Southern Konkan, especially in the Sawantwari district, the rains are as heavy as in Canara. At Bombay the rains last from June till the end of September, and the fall is only 71 inches, which is considerably less than at any point farther south on the west coast. At Tanna, however, the average fall is more than 100 inches. This monsoon wind passes over the plains of Bengal, and strikes on the Khassya mountains and the whole length of the Himalaya, discharging itself in heavy rains. From April till August it blows from the east of south, in August S.S.E., and in September more easterly, lowering the temperature of Bengal and of the northern plains, though the plains of the Panjab continue excessively heated.

From the vernal till the autumnal equinox, the heat of a great part of India continues great; but after the autumnal equinox, the great mass of the Himalaya becomes intensely cold, and the plains of India generally become cool. Where the N.E. monsoon prevails, it is everywhere a land wind, except on the east coast of the Karnatic, the Malay Peninsula, and the Archipelago. In Malaya it blows over a great extent of sea, and is therefore very rainy; but in the Karnatic the width of sea is not great, so that the rainfall, though well marked, is less, and terminates long before the end of the monsoon, probably from the wind acquiring a more directly southerly direction, after the sun has reached the southern tropic. The amount of rain varies prodigiously in different parts of India, from almost none to 555 inches at Cherrapunji; but the rainfall affords no direct criterion of the humidity of any climate, for the atmosphere may be saturated with moisture without any precipitation taking place. Thus, while in Sikkim 1° for 300 feet is the proportion for elevations below 7000 feet, on the Neilgherry Hills it is about 1° for 340 feet; in Khassya, 1° for 380 feet; and the elevations of Nagpur and Ambala produce no perceptible diminution in their mean temperature, which is as great as that which would normally be assigned to them were they at the level of the sea. The chief fall occurs during the S.W. monsoon, between May and October. On the more southerly part of the Coromandel coast, on the east of the Peninsula, heavy rain falls in the months October to December, at the opening of the N.E. monsoon; and in all the more northerly provinces, a well-marked season of winter rains occur, commencing about Christmas, and extending to February. At this season, in the south of India, showers occur, but they have little effect on agricultural operations,—often, indeed, are injurious to cotton when

HINDUSTAN.

grown as a cold-weather crop. Subject to these exceptions, it may be said generally that the portion of India east of the 80th meridian has a rainfall of more than 40 inches, while the portion west of the same meridian has less than 40 inches. The region in which the fall is less than 30 inches includes almost the whole of the Panjab, a considerable part of the N.W. Provinces, a large part of Rajputana and Kattyawar, as well as almost the whole of the Dekhan and Mysore. In Sind, and in the southern portion of the Panjab, the rainfall is less than 15 inches, and is extremely irregular; but in Sind the agriculture almost wholly depends on artificial irrigation from the Indus. The parts of the country most subject to droughts are—(1) the W. and S. parts of the N.W. Provinces, the Panjab E. of the Sutlej; (2) the W. and N. States of Rujputana and of the Central Plateau, which border on the N.W. Provinces; (3) the districts of Bombay and Madras above the ghats, together with the southern and western regions of Hyderabad and all Mysore, except the strip lying close along the Western Ghats; and (4) the Madras districts along the east coast, and at the southern extremity of the Peninsula.

Dr. Royle gives the following arrangement of the countries of which the plants will grow in the different parts of India:—

Tropical and East Indian islands, tropical Africa, Brazil, Guiana, West Indies, and Florida.	Travancore, Cochin, Malabar, Ceylon, Malay Peninsula, Chittagong, Bengal, Lower Assam.
East and west coast of Africa.	Coromandel coast, Northern Circars, Konkan.
S. States of N. America, Egypt, N. of Africa, Syria.	Gujerat, Behar, Doab, Dehli, Malwa.
Mexican highlands, lower mountains of Spain.	Mysore, hilly ranges in Dekhan, Rajputana.
S. of Africa, extra-tropical New Holland, S. America beyond 23½° S. lat.	Saharunpur and Northern Doab.
Mediterranean region.	Dehra Doon, and Himalayan valleys to moderate elevations.
Chino-Japanese region, Middle Andes, Peru, and mountains of Brazil.	Neilgherries, Upper Assam, Himalayan mountains.
North of Europe, north of Asia, & North America.	Himalayan mountains, regions of oaks and pines.
Arctic regions, mountains of Europe, Elevated Andes.	Himalayas above region of forest.

Crops.—Many parts, alike of the northern and southern districts, have two crops during the year,—one called the kharif or rain crop, sown in June, and reaped in October; the other, sown in October, and reaped in March and April, called the rabi or spring or cold-weather crop. The latter, embracing the months which approximate in temperature to those of the season of cultivation in colder countries, corresponds with them also in the nature of the plants cultivated, as for instance wheat, barley, sorghum, oats, and millet, peas, beans, vetch, tares, chick-pea, pigeon-pea, and lentils; tobacco, safflower, and chicory; flax, and plants allied to mustard and rape, as oil-seeds; carrot, coriander, and cummin, and other seeds of a similar kind, as ajwain, sonf, soya, and anison. In the rainy season, a totally different set of plants engages the agriculturist's attention, as rice, cotton, indigo, and maize, with sorghum, pulse, paspalum, most of the tropical legumes, as well as several of the cucumber and gourd tribes, together with the sesamum for oil, and the varieties of the egg plant as a vegetable. The sunn and sunni species of Corchorus and Crotalaria cordage plants are also cultivated at this season. In the extreme N.W. countries, as, for instance, throughout Afghanistan, the climate is excessive. The cold of the winter is intense, the spring is damp and raw, and the summer, during which hot west winds prevail, is intensely hot at all elevations. The crops are chiefly wheat and barley, even up to 10,000 feet elevation. Rice is cultivated in great quantity at Jalalabad, 2000 feet; at Kābul, 6400 feet; and to a considerable extent at Ghazni, 7730 feet. Poplars, willows, and date-palm trees are extensively planted, as well as mulberry, walnut, apricot, apple, pear, and peach trees, and also the Elæagnus orientalis, which bears an eatable fruit. The vine abounds as in all warm and dry temperate climates. The majority of the Afghan and Tibetan plants are also, on the one side, natives respectively of the Caspian steppes and N. Persia, and of Siberia on the other.

The date is cultivated in Baluchistan up to 4500 feet; and a dwarf palm, Chamærops Ritchieana, *Griffith*, occurs abundantly in many places, but with a somewhat local distribution.

The area of the entire region under notice is 1,308,332 square miles, and its population 253,891,821. Excluding Assam and British Burma, both of which are beyond Hindustan in Further India, the British administer 876,972 sq. miles of territory, with a population of 193,270,700 souls; and the states in alliance, feudatory and mediated, have an area of 573,772 square miles, with a population of 52,002,924.

Races.—The British territory is chiefly in the plains, and its population at the census of 1871 comprised 73½ per cent. of Hindus and Sikhs, 21½ per cent. of Mahomedans, and 5 per cent. of all others, including under this title Buddhists, Jains, Christians, Jews, Parsees, Bramhoes, and Hillmen. As this page is passing through the press, portions only of the 1881 census have been made public, and the figures are to some extent not up to date. Under the designation Hindu are included almost all who profess, in some form, the Brahmanic religions, or who are worshippers of local deities, of whom about 10⅛ millions are Brahmans, 5⅝ millions are Kshatriyas and Rajputs, 105¼ millions of other castes; 8¾ millions do not recognise caste; and 17¾ millions are aboriginal tribes or semi-Hinduized aboriginals. In 1881 the numbers were as under:—

Hindus, . .	187,937,450	Jains,	1,221,896
Sikhs, . . .	1,853,426	Christians,	1,862,634
Mahomedans,	50,121,585	Aborigines,	6,426,511
Buddhists, .	3,418,884	Others, . .	1,049,435

The Buddhists are almost all inhabitants of Burma, and not of Hindustan, but with the incomplete census reports the residence respectively cannot be distinguished.

The ancestors of the present inhabitants, during the bygone ages, either as immigrants or as conquerors, have been entering India from the north and west. How little these have amalgamated, may be judged of by mentioning that out of 1030 villages lying here and there between the Jumna and Sutlej, and which were under British management in 1844, there were found to be 41 different tribes of agriculturists. And as a characteristic of the rebellion of 1857 and 1858,

Rajput, Hindu, and Mahomedan rule. The principal of the allied states are those ruled over by Hindu sovereigns, and the Rajput families of Udaipur or Mewar, of Jodhpur or Marwar, of Jeypore in Rajputana, by the Rao of Cutch, and the Hindu sovereigns of Mysore, Travancore, and Cochin. The Mahratta rulers are of Kolhapur, the Gaekwar, Sindia, and Holkar; the Mahomedan states are Bhopal and Hyderabad. The French have possessions in Hindustan, with an area of 178 square miles, and 271,460 souls; and the area of the Portuguese possessions is 1086 square miles, with 407,712 souls, chiefly in towns or suburban.

The chieftains of Rajputana have about 93,000 armed retainers, mostly undisciplined.

The Hyderabad state is composed of portions of Telingana, Karnatica, Maharasthra, and Gondwana. Its ruler, styled the Nizam, is a Mahomedan, and most of its territorial nobility and its soldiery are of the same sect. The area, including Berar, is about 98,000 square miles, and its population 11,226,496.

In the Hyderabad state there are three large armed forces,—one body, the subsidiary force, at Secunderabad, of about 5000 of all arms; the other, the contingent, also of all arms, about 5000, at Ellichpur, Bolarum, Aurangabad, Hingoli, and Mominabad; and the Nizam has a large body of disciplined and undisciplined troops, stated in 1879 at 38,000 infantry, 8200 cavalry, and 725 guns.

The dominions of the Maharaja Sindia are 33,119 square miles in extent, with a population of 2,500,000, and revenue, 1 million.

The Maharaja Sindia can, under treaty agreements, maintain a regular force of 5000 men, and 36 guns. The fortress overlooking the town of Gwalior is held by British troops, who occupy also the neighbouring cantonment of Morar.

The Maharaja Holkar of Indore and Malwa rules over about 8400 square miles of straggling territory in Central India, with a population of about 750,000.

Bhopal adjoins Holkar's dominions to the eastward. Its ruler and the court are Mahomedans, of Pathan descent, as are likewise a large number of the population of the chief town. The territory contains 6760 square miles, and nearly 700,000 inhabitants. The number of armed retainers maintained is about 6000, with 39 guns of sorts. Bhopal has, from the earliest times, displayed an unswerving friendship for and loyalty to the British. In the most trying times of the Mutiny, when other states wavered, Bhopal stood true. The dynasty which rules it has never shown any love for aggression. A small colony of Mahomedans planted in the midst of a large Hindu community at the time of the break up of the Moghul empire, the descendants of that colony have been satisfied to maintain the dominion of their fathers. Pathans in Central India are as much foreigners to the Hindu population as are the British. The present and preceding ruler have been ladies, eminently just and devout.

The Native States of India can dispose of 64,172 cavalry, 241,063 foot soldiers, and 9390 trained artillerymen, working 5252 guns.

The *Mewar* state, of 11,614 square miles, and a population of 1,161,400 souls, was founded about A.D. 144. It is also called Udaipur from its capital. It is ruled over by a family of Suryavansa or Solar descent, Sissodia Rajputs, the Heliadæ of India, the highest in social rank and dignity of all the Rajput chiefs of India, descendants from Rama, king of Ayodhya.

The states of Doongurpur, Sirohi, and Partabgurh are offshoots from it; and Sivaji, the founder of the Mahratta power, was descended from the Udaipur family. By treaty in 1818, the British Indian Government undertook to protect this state.

The *Jeypore* state, of 15,000 square miles, and a population of 1,900,000 souls, is ruled by Cuchwaha Rajputs (Kachwaha), who also claim descent from Rama. It was founded amongst the Meena race, A.D. 967. The family furnished to the Moghul emperors some of their most illustrious generals; and Jey Singh II. (A.D. 1699) was a distinguished mathematician and astronomer. In 1803 the state entered into a treaty of alliance with the British.

The *Marwar* or Jodhpur state was founded about A.D. 1459 by Jodha, a descendant of the Rahtor Rajput kings of Kanouj. Among the Rajput states it ranks next to Mewar and Jeypore. Its area is 35,672 square miles, and population, 1,783,600.

Bundi is ruled by a family of the Hara tribe of Rajputs. Its area is 2291 square miles, and population, 220,000; revenue, Rs. 5,00,000. Raja Omeda, in 1804, gave efficient assistance to Colonel Monson when retreating before Holkar; and in 1818, Maha Rao Bishen Singh concluded a treaty with the British, acknowledging the British supremacy.

The *Kotah* principality was formed in the beginning of the 17th century by the chief of Bundi, who was forced by the Maharana of Udaipur to cede half his territory to his younger brother. Its treaty with the British is in 1817, and this was the first of the Rajput states to cooperate with the British in suppressing the Pindaris. During the mutiny of 1857, however, the Maha Rao made no attempt to assist the Political Agent, who with his two sons was murdered. Area, 5000 square miles; population, 433,000; revenue, Rs. 25,00,000; tribute, Rs. 1,84,720.

Jhallawar was formed in 1838, when the Kotah principality was dismembered, and (8th April) British supremacy was acknowledged by Raj Rana Mudun Singh undertaking to pay Rs. 80,000 annually as tribute. Its area is 2500 sq. miles; population, 220,000; and revenue, Rs. 14,50,000.

Tonk is ruled by a Mahomedan ruler with the title of Nawab, descendant of Amir Khan, a famous predatory leader. Its area, 1800 square miles; population, 182,000; revenue, Rs. 8,00,000.

Kerrowlee is a Hindu state, with an area of 1878 square miles; population, 188,600; revenue, Rs. 3,00,000. Its maharaja, Muddun Pal, did good service during the mutinies.

Kishengarh is an offshoot of Marwar. Its area, 720 square miles; population, 70,000 souls; and revenue, Rs. 6,00,000.

Dholpur is ruled by a Jat family. Its chief in 1803 co-operated with the British during the second Mahratta war, and its chief in 1857 aided the fugitives from Gwalior. Its area, 1626 square miles; population, 500,000; and revenue, Rs. 6,00,000.

Bhurtpur is also a Jat principality. It was founded by Birj, a freebooter, and was largely extended in 1763 by his grandson, Suraj Mull.

In 1803, Ranjit Singh was ruling when Holkar, after the battle of Deeg, pursued by Lord Lake, took refuge in the fort. Ranjit Singh refused to surrender Holkar, and withstood four assaults before capitulating, and a new treaty was then formed. On the occurrence of a disputed succession, the fort was stormed by the British, 18th January 1826, and the young maharajah settled on the throne. Area, 1974 square miles; population, 650,000; revenue, Rs. 21,00,000.

The *Ulwar* chiefship in Rajputana is under British protection, has an area of 3300 square miles; population, 1,000,000; and revenue, 16 lakhs. The state in 1771-1776 was carved out amongst the Meo and Rajputs by Pratap Singh, a Naruka Rajput.

Bikanir was founded about the close of the 15th century amongst small tribes of Jat, Bhatti, and others, by Bika Singh, son of Raja Jodh Singh of Jodhpur. He died A.D. 1505. In 1857, his successor greatly aided the British, and 41 villages were bestowed on him. Its area is 17,676 square miles; population, 539,000; revenue, 6 lakhs.

Jeysulmir, a Rajput state, entered into alliance with the British in 1818. Its chief's name was Moolraja. Area, 16,447 square miles; population, 73,700; revenue, Rs. 5,00,000. The people are chiefly Yadu Bhatti Rajputs, who claim a very ancient descent, and its ruler, the Maharawal, is head of the clan. Like the Rahtor Rajputs, they are supposed to be descended from one of the Indo-Scythic tribes who penetrated into India at very remote times.

Dungurpur chiefship, formed by an offshoot from the Mewar family. Area, 1000 square miles; population, 100,000; revenue, Rs. 75,000.

Sirohi, a state in Rajputana, is ruled over by the Deora, a branch of the Chauhan clan. They claim direct descent from Deo Raj, a descendant of Prithivi Raj, the Chauhan king of Dehli. The earliest inhabitants were Bhils, succeeded by Rajputs of the Gehlot Pramara, and the present Deora Chauhan. Area, 3000 square miles; population, 153,000. Its ruler in 1845 transferred Mount Abu to the British as a sanatorium. During them utiny of 1857-58, its ruler, Rao Sheo Singh, did good service.

Baroda is a Native State in alliance with British India. It includes all the territories of the Maharaja the Gaekwar in different parts of Gujerat, lying between lat. 21° 51′ and 22° 49′ N., and long. 72° 53′ and 73° 55′ E., with an area of 4399 square miles, and population, 2,000,225. Its chief rivers are the Nerbadda, Mahi, Sabarmati, and Saraswati. Its people are Hindus, Jains, Parsees, and Mohamedans. Revenue, Rs. 1,02,64,820.

Cutch is a Native State in political relation with the Bombay Presidency, ruled over by a Jhareja Rajput prince. Population, 512,084; but there are many broken tribes amongst them.

Kolhapur is ruled by the representatives of the younger branch of the family of Sivaji, as the rajas of Satara were of the elder. The Kolhapur family long struggled to head the Mahratta power, until, in 1731, Sahoji by treaty recognised Kolhapur as an independent principality. In 1760, the descendants of Sambaji became extinct, and one of the Bhonsla family was adopted. In the mutiny of 1857 the raja remained faithful, but his younger brother, Chimma Sahib, joined the rebels. Area, 3184 square miles; population, 546,156; revenue, 10 lakhs.

Mysore is a Hindu state in the southern part of the Peninsula, with an area of 27,078 square miles, and, in 1881, a population of 4,186,188. Its Mulnād or hill country adjoins the Western Ghats; its plain country is well cultivated, but the rainfall is not abundant and is irregular, and in 1876-77 it failed, and above a million of the inhabitants were lost. Its aboriginal tribes are Bedar, Kurubar or Kurumba, Lambani, Koracha, and Pariahs. The languages are three dialects of Canarese.

The *Cochin Rajas* claim descent from an ancient dynasty who once ruled from N. Canara to Cape Comorin. The state was conquered by Hyder Ali, and retained by Tipu, until, in 1792, it was released by the British. In 1809, the family rebelled against the British, and, by a treaty then made, a subsidy of Rs. 2,76,037 per annum was exacted. Area, 1131 square miles; population, 399,060; revenue, Rs. 10,57,497.

The *Travancore* rulers are of the Kshatriya race, and of the Hindu religion, but, with many of their subjects, Nairs and others, they follow the descent by the female line. At the commencement of the 18th century, the territory now known as Travancore had a number of chiefs, who were constantly at war, but they were gradually brought under the authority of the Raja of Travancore, Wauji Baula Perumal, 1758 to 1799. He was a stedfast ally of the British, who aided him in return; and in 1789, being attacked by Tipu, the British declared war, and, on the conclusion of peace in 1792, Tipu restored all the territory he had wrested from Travancore. A treaty was agreed to in 1795. Any failure in the direct female descent requires the selection and adoption of two or more females from the immediate relatives of the family, who reside at certain places in Travancore. The maidens adopted for this purpose become Tumbruttis, and are styled Ranis of Attingah on certain ceremonies performed publicly at Attingah, and in the chief temple of Trevandrum. Area, 6653 square miles; population, 1,262,647; reuenue, Rs. 42,85,000.

The family of the Zamorin of Calicut and the Bibi of Cananore also follow uterine descent.

The *Puducottah* chieftain is styled the Raja Tondaman Bahadur. At the siege of Trichinopoly in 1753, the British army greatly depended on the Tondamans' fidelity and exertions for provisions. They and most of their subjects are of the Kollar race. Area, 1037 square miles; population, 268,750; and revenue, Rs. 3,24,136.

The *Sundur* Raja is a Mahratta of the Ghorpara family. The territory is small, in a valley between two hills, 35 miles west of Bellary. In 1817, the chief Shevo Rao submitted to Brigadier-Genl. Munro, but his state was restored to him in June 1818, and a formal sunnud issued in 1826.

Banaganapilly is a jaghir held by a Syud family with the title of Nawab. Its area, 500 square miles; population, 35,200; revenue, Rs. 1,66,175. It has been in the family under successive grants from Mysore and Hyderabad, and formed part of the territories ceded to the British by the Nizam under the treaty of 1798, and it was confirmed by sunnuds in 1849 and 1862 in perpetuity for all legitimate successors.

Bengal is an administrative division of British

India, comprising Bengal proper, Behar, Orissa, including the Tributary Mahals, Assam, Chutia Nagpur, and the Native States of Hill Tiperah and Koch-Bahar. It extends from the meridian 82° to 97° E. long., and lies within the parallels of 19° 40′ and 28° 10′ N. lat. On its N.W. is the Native State of Rewa in Central India, also the districts of Mirzapur, Ghazipur, and Gorakhpur, belonging to the N.W. Provinces. On the north of Bengal, from the Chumparun district as far east as the Bhutan Doars, the Himalaya range, running through the Independent States of Nepal, Sikkim, Tibet, and Bhutan, forms its northern boundary. Farther east, along the northern frontier boundary of Assam, lies a tract inhabited by the Akka, Dofla, Miri, Mishmi, Naga, and other wild tribes. Along its eastern frontier lies a part of Independent Burma; below that is the Munipur state; still farther south are various hill tribes,—the Naga, Lushai, Khyen, Mikir, etc.; and at the extreme south-east (south of Chittagong, which is the south-eastern district of the Bengal Province) is the Akyab district of Arakan.

On the south-west of Orissa is Ganjam in the Madras Presidency; on its west are the Tributary Mahal estates, and also the Sumbulpur and Balaspur districts of the Central Provinces.

In 1881, the population of *Bengal* was 69,536,861. About two-thirds of its population profess Hinduism in various forms, and about one-third are Mahomedans, with a small number of Christians. It is ruled by a Lieutenant-Governor. Many of the higher caste Hindus are recognised as former immigrants, but the origin of the vast bulk of the Mahomedans is obscure.

Assam is a province of British India, with an area of 41,798 square miles, and a population, in 1881, of 4,881,420. It is the valley of the Brahmaputra, but is east of the Ganges, and beyond the bounds of Hindustan.

Madras city is built on the western shore of the Bay of Bengal. It is the chief town of a British province of same name, with an area of 138,318 square miles, and a population, in 1881, of 31,170,631, comprising several distinct ethnic divisions of races speaking Canarese, Tamil, Telugu, Uria, and Tulu, with several uncultivated tongues of scarcely civilised aboriginal tribes.

The *Bombay* Presidency embraces an area of 197,876 square miles, and a population, inclusive of Feudatory States, of 23,395,663. The Feudatory States of this presidency have an area of 73,753 square miles, and, in 1881, a population of 6,941,249. Their names are Khairpur, Cutch, Cambay, Mahikanta, Narukot, Palanpur, Kattyawar, Rewakanta, and Surat. In the Konkan are Janjira, Jauhar, and Sawantwari; and in the Dekhan, Akalkote, the Dangs, Satara Jaghirs, Kolhapur, S. Mahratta Jaghirs, and Savanur. The languages spoken are Canarese, Mahrati, Gujerati, Konkani, and Sindi, and denoting distinct races. The more prominent of the aborigines are the Bhil, Koli, Ramusi, Mhar, and Mang.

Central Provinces, a British district lying between lat. 17° 50′ and 24° 27′ N., and long. 76° and 85° 15′, with an area of 112,912 square miles, and 11,548,511 inhabitants. The British districts comprise Ch'hattisgarh, Jubbulpur, Nagpore, and Nerbadda; and there are thirty native principalities, viz. fifteen in Chutia Nagpur, with Bamra, Bastar, Kankar, Karond, Kawarda, Khairagarh, Khondka, Makrai, Nandgaon, Patna, Raigarh Bargarh, Rairakhol, Sakti, Sarangarh, and Sonpur. It lies south of the Vindhya mountains, and the Nerbadda river flows through it. Its aboriginal peoples are chiefly Gond, Bhil, and Kol tribes.

Coorg, a British province, in lat. 11° 56′ to 12° 50′ N., was conquered in 1833. Its dominant race are brave mountaineers, 27,033 in number, the total population, in 1881, being 178,302. They are demon-worshippers. Canarese, Kodaga, Malealam, and Tulu are spoken.

Ajmir and Mairwara form a British province in Rajputana, of 2,710,680 square miles, and a population of 460,722. The chief aboriginal races are Mair and Gujar, the languages Hindi and Urdu. Mairwara is inhabited by Mair, Gujar, and other aborigines.

The *North-West Provinces and Oudh* are in the centre of Hindustan, in the valleys of the Ganges and the Jumna, and their affluents. They are ruled over by an officer, who is Lieutenant-Governor of the N.W. Provinces and Commissioner of Oudh. The combined territory has an area of 105,395 square miles, and a population of 44,849,619. The N.W. Provinces part is the Hindustan proper of the Mahomedan classification, and three-fourths of its inhabitants are Hindus.

The *Panjab* province, in the extreme N.W., is ruled over by a Lieutenant-Governor. Its population, including the feudatories, number 22,712,120 souls, in an area of 219,714 square miles. The Hindus, Mahomedans, and Sikhs form the bulk of the population.

Central India is a political division, under the superintendence of a Political Agent. It has an area of 81,140 square miles, with a population of 7,699,502. In this political division there are 71 feudatory or mediated rulers, of whom 4 are Mahratta, 7 are Mahomedans, 17 are Bundela, 33 are Rajput, 6 are Brahman, and 4 belong to other races. The 6 feudatory states are Gwalior, Indore, Bhopal, Dhar, Dewas, and Jowrah.

The Native States under the political agencies for Central India, Bhopal, Baghelcund, and Western Malwa, are given in detail at page 458, British India.

This Feudatory Territory has three grand divisions. The N.E. division comprises the Native States of Bundelkhand and Rewa. The northern division consists of the northern and central districts of the Gwalior States. The S.W. division comprises the table-land known in modern times as Malwa, though far within the ancient limits of the province of that name, and the submontane territory between it and the Nerbadda, as also a considerable tract south of that river, extending to the Kandesh frontier. The 1st or N.E. division, extending from the Bengal Presidency in the E. to the Gwalior State in the W., includes Rewa and 35 other states and petty chiefships. Its area is about 22,400 square miles, its population about 3,170,000 souls, and its public revenues aggregate about Rs. 63,58,000. The 2d or N. division extends from Bundelkhand and the Saugor district, and has an area of about 19,505 square miles; its population is about 1,180,000 souls, and its public revenue about Rs. 67,65,000. The 3d or S.W. division goes on westward to the Bombay Presidency, and contains the remainder of Gwalior, Holkar's States, Bhopal, Dhar, Dewas, and other small

states. The area of this division is about 41,700 square miles, its population about 3,320,000 souls, and its public revenues about Rs. 1,30,00,000.

Bhil.—The desolate wilds and jungles of the western Satpura range, and parts of the country which extend from them to the Vindhya Hills, are occupied by Bhil tribes, who abhor field labour or manual labour of any kind.

Malwa.—Adjoining this are the richly-cultivated plains of Malwa, with occasionally intervening tracts of hill and jungle, from the Myhee on the west to Bhilsa on the east,—a stretch of nearly 200 miles, and from the crest of the line of the Vindhya to Mundissore and Oomutwarra, a distance of 100 to 120 miles, and occupied by a thrifty agricultural people.

Hilly Tract.—This is succeeded by the more hilly and jungly tracts of Oomutwarra, Seronje, and Keechiwarra, with a scanty population.

Gwalior.—Northwards towards Gwalior the country becomes more open, except on the wild border tracts of Kotah and of Bundelkhand, till we come to the carefully-cultivated plain of Gwalior, stretching for a distance of 140 miles between the Chambal, Pahuj, and Sind rivers.

Bundelkhand is ruled by the Bundela race. A vast portion of Bundelkhand is hilly and unproductive, forming the northern slope of the table-land of the Vindhya.

Rewa is ruled by the Baghela race. The plains of Rewa are fertile, but the valley on the Sone to the south of the Kymore range is desolate. The people are indolent and untrustworthy. Though widely different in other respects, there is one characteristic common to the Baghel of Rewa, the Bundela of Bundelkhand, and the Rajput of Gwalior and Malwa,—a dislike to labour or service away from their homes. They generally leave tilling of the soil to the inferior and servile classes, and are regarded as the heads of the local society. Many of the Rajputs in the states of Central India give themselves up to sloth and the immoderate use of opium.

Malwa and Gwalior are great centres of trade. In Malwa, the towns of Indore, Bhopal, Ujjain, Mundipur, Rutlam, Dhar, Jowra, Augur, Nemuch, Shujawulpur, and Bhilsa are the principal marts. Indore is the capital of the Maharaja Holkar. Gwalior is the capital of the Maharaja Sindia.

Rajputana Agency.—Rajputana stretches from lat. 23° 15′ to 30° N., and from long. 69° 30′ to 78° 15′ E., containing an area of 123,000 square miles, with a population estimated at 10,268,392, and includes twenty principalities, viz.:—

15 Rajput, viz.—

Mewar (Udaipur).	Bikanir.	Sirohi.
Jeypore.	Kotah.	Dungurpur.
Marwar (Jodhpur).	Kerrowlee.	Banswara.
Bundi.	Kishenghur.	Partabgurh.
Lawa.	Jeysulmir.	Jhallawar.
Shahpura.	Ulwar.	

2 Jat, viz. Bhurtpur, Dholpur.
1 Mahomedan, viz. Tonk.

In 1881, there were in Rajputana 8,839,243 Hindus, 861,747 Muhomedans, and 378,672 Jains, the aboriginal races being Ahir, Balal, Bhil, Chamar, Dhakur, Gujar, Jat, Kanta, Mina, and Sondhia. The Bhils are—in Dungurpur, 66,952; Udaipur, 51,076; Banswara, 48,045; and Partabgurh, 270.

Frontiers.—Around the borders of Hindustan are many independent states, republics, theocracies, and democracies, with most of which the British Government, as a paramount power, have treaties or agreements. Commencing in the S.W. on the shores of the Arabian Sea, and enumerating the states in succession northwards, and again turning to the S.E., are—

Lus Beila, Baluchistan, Sewistan.

Near the *Dehra Ghazi Khan* district are the Bugti, Murree, Gurchani, Lughari, Kosah, and Khutran.

Near the *Dehra Ismail Khan* district are the Bozdar, Kusrani, Oshterani, Sheorani, and Waziri.

Near the *Kohat* district are Turi, Zymukht, Orakzai, Sepah, Buzoti, and Afridi.

Near *Peshawur* are the Momund, Usman-Khel, Ranizai, Swati, Bunurwal, and Judun.

Near the *Hazara* district, the Husanzai.

On the north are Ruka, Nari-Khorsam, Garhwal, Hundes, Nepal, Sikkim, Bhutan, Towang. Beyond Hindustan, in Further India, many tribes on the Assam borders, Manipur, Tiperah, and numerous Shan, Karen, etc., tribes in native Burma, Chittagong, and Arakan, with Burmese and Talaing in British Burma.

People.—Several civilised nations are found within the above space, in the Indian plains, but differing from each other, in manners and language, even more than those inhabiting any corresponding portion of Europe. The inhabitants of the dry countries in the north of Hindustan, which in winter are cold, are comparatively manly and active. The Mahratta, inhabiting a mountainous and fertile region, are hardy and laborious; while the Bengali, with their moist climate and their double crops of rice, where the cocoanut tree and the bamboo furnish all the materials for the construction of their houses unwrought, are more effeminate than any other people in India, and a love of repose, though not sufficient to extinguish industry or repress occasional exertions, may be taken as a characteristic of the whole people of the Bengal Province. Akin to their indolence is their timidity, which arises more from the dread of being involved in trouble and difficulties than from want of physical courage; and from these two radical influences almost all their vices are derived.

The men of *Hindustan* on the Ganges are the tallest, fairest, and most warlike and manly of the natives of Hindustan proper; they wear the turban, and a dress resembling that of the Mahomedans; their houses are tiled, and built in compact villages in open tracts; their food is unleavened wheaten bread.

Food.—Along the lowlands of the southern Peninsula, as in similar districts of Further India and China, rice is the favourite article of food with all whose means afford it; but the multitudes use it only as an occasional meal, and subsist on the pulses and millets and wheat. They are skilled cultivators of the soil, and by irrigation channels, canals, and tanks of every size, have supplemented the natural rains, producing largely for domestic use and for export, cinchona, cotton, coffee, hemps, indigo, jute, lac, opium, salt, silk, saltpetre, tea, and wheat; and, since the arrival of the British, coal has been largely worked, and tea and coffee have become great industries. Their domestic animals are the oxen and buffalo horned cattle, with camels, horses, asses, mules,

goats, and sheep, and they have domesticated the elephant and the yak, and have trained the various hawks used in falconry; they are brave and skilful fishers, and the sea could supply millions with food if the salt laws could be framed to permit its use for curing. Much loss of human life and domestic animals is caused by crocodiles, snakes, leopard, panther, bear, and tiger. Hindustan yields alum, gold, silver, iron, lead, precious stones, in which, as also in the copper and brass wares, they are skilled workers, and in much of their art they continue unrivalled. *The raw materials for glass-making* are abundant, and they produce beautifully-tinted bangles for the wrist. Their weavers supply the whole labouring community with the useful cotton and woollen cloths; though Europe and America have been sending to Hindustan the cotton fabrics now used by the well-to-do classes, the strong cottons of the labouring classes are still holding their own. The British have introduced spinning mills, they are weaving by steam-power. In the finest muslins, they still surpass all other nations; and in their silks, silk and cotton fabrics, carpets, mushru, kimkhab, and shawls are producing articles the admiration of the world.

Languages.—There are two learned languages, Sanskrit and Pali, in which the religious books of the Hindus and the Buddhists are written. The Buddhist Scriptures of Tibet, Mongolia, Pegu, Ava, Siam, Kambogia, Cochin-China, and Ceylon, are all in the Pali, and the Vedas of the Hindus are in a form of the Sanskrit tongue. The Koran and the Hadis are religious books of the Mahomedans. Though the Koran has been translated into most languages, it is still retained in the Arabic by most of the people of that religion, but neither Arabic, Sanskrit, nor Pali are vernacular, and are understood only by the very learned. Throughout Northern Hindustan, the Hindi is the language of the people, but it has numerous dialects, designated by the names of the districts in which they are spoken, Panjabi, Multani, etc. One of these, the Brij-Basha or Brij-Bhaka, is the form spoken near Mathura, and takes its name from Brij, the tract about Mathura and Brindaban, where, in the Hindu mythologies, Krishna sported with the Gopin. The Rangari or Rangri dialect is bounded by the Indus on the west, Bundelkhand on the east, the Satpura Hills on the south, and Jeypore, Jodhpur, and Jeysulmir on the north. A language of mixed origin is in use amongst the Mahomedans of India, and employed by all races as the ordinary lingua franca in their intercourse with the people of the country. It was first reduced to writing and grammar by Dr. John B. Gilchrist of the Bengal Medical Department. It is called Hindustani, also Urdu, and is essentially Hindi, with large admixtures of words of Sanskrit origin or of Persian and Arabic, according as the speakers or writers are Hindu or Mahomedan. At present the Hindustani or Urdu, the Panjabi, and the Persian are written and printed in the same character; but the Arabic, Bengali, Burmese, Canarese, Chinese, Gujerati, Hindi, Mahrati, Malealam, Malay, Siamese, Singhalese, Tamil, and Telugu are all distinct tongues, each written and printed in a separate character. In the south of India, the Arabic numerals as used in Europe have been generally introduced into Government accounts. This was on the recommendation of Sir Erskine Perry; and it has been supposed possible to use the Roman and Italian character for the other tongues.

Religion.—In Hindustan, amongst races ordinarily classed as Hindus, including 20 millions of non-Aryan aborigines, there is practised every form of idol-worship, nature-worship, spirit-worship, fetishism, and demon-worship; but the great mass follow what Europeans designate as Brahmanism, which is a reverence for deities described in the Vedas, Puranas, Tantras, religious books written by the Brahman teachers. The ancient history of India shows that there were four great religious eras. The Vedic, in which Agni, Indra, and other personifications of spiritual existences were propitiated with feasts and invoked in the hymns of the Rig Veda, and in which maidens selected their husbands in the Swayamvara, and monarchs sacrificed in the Aswa Medha. In the Brahmanic period the Kshatriya feasts were converted into sacrifices for the atonement of sins against Brahmanical law, and divine worship was reduced to a system of austerities and meditations upon the Supreme Spirit as Brahma. It was in this era that the Brahmans assumed the character of a great ecclesiastical hierarchy, and established that priestly dominion which still extends over the minds and senses of the Hindus of India. Thirdly, the Buddhist period, in which Sakya Muni appeared; and fourthly, the Brahmanical revival, during which Brahmans abandoned the worship of their god Brahma, and, with books styled the Puranas, reverted to the old national gods and heroes of the Vedic Aryans. In this era Vishnu came to be regarded as the Supreme Being, and Rama and Krishna as his incarnations. Followers of this form of belief are known as the Vaishnava, of whom there are numerous sects. Another deity, Siva, of whose origin nothing definite is known, is now largely worshipped by the Saiva religionists, of whom also there are many sects; and there are besides these, many smaller, active monotheistic sects. Mahomedans of Hindustan, 50,121,585 in number, are mostly of the Sunni sect, the Shiah sectarians being few in number. Christians, of all sects and denominations, do not number two millions; Jains, fire-worshippers or Zoroastrians, known as Parsees and Sikhs, are over three millions, and aboriginal races, with local cults and others, are 7,575,946 souls.—*Treaties, Engagements, Sunnuds, etc.; Annals of Indian Administration; Census Reports for* 1871 *and* 1881; *Elphinstone's History of India; Hooker and Thompson's Flora Indica; Royle's Productive Resources of India; Wils. Gloss.*

HINDYAN, a town in the province of Fars, at the mouth of the Kheirabad river, the Ab-i-Shereen of Timur's expedition, and perhaps the Arosis of Nearchus. It is navigable from the sea up to Zeitun, which latter town is only a day's journey (five farsangs) to Behbehan.—*De Bode.*

HINGINGHAT, a town in Wardha District, Central Provinces of British India, 21 miles south-east of Wardha, in lat. 20° 33′ 30″ N., long. 78° 52′ 30″ E.; population (1877), 9415. The cotton grown in the Wardha valley is esteemed one of the best indigenous staples of India.—*Imp. Gaz.*

HINGLAZ, a town in Makran, 12 miles inland from the Arabian Sea, and about 80 miles W. from the mouth of the Indus. It is a place of

Hindu pilgrimage, but is little visited, from the difficulties which attend the journey when made from most parts of Hindustan. It is at the end of the range of mountains dividing Lus from Makran. A small temple on the summit of a mountain is dedicated to Nani or Maha Mari, a form of Kali. Hinglaj Devi or Hingula Devi is the red goddess.—*Postans' Western India.*

HINGOLI, lat. 19° 43′ N., long. 77° 11′ E., in the Dekhan, south-east of Aurangabad, and 185 miles north-west of Hyderabad; the mean height of the village is 1495 feet according to Scott, and 1478 feet according to Wilson. It is a military station of the Hyderabad contingent.

HINNOM. At the union of the vales of Hinnom and Jehoshaphat, there is a basin of water where the fire of the Hebrew temple was preserved; and beyond it, where a clear stream runs through a very narrow inlet between the Mount of Olives, and that where Aceldama and the other sepulchres stand, are many olive trees.—*Skinner's Overland Journey*, i. p. 218.

HIOUNG-NU, the Hun. De Guignes places Attila and the greater part of his army among the Turk race.

HIPPALUS, a Greek of Alexandria, the commander of a trading vessel in the Red Sea, some time prior to or during the reign of the Emperor Claudius, or about A.D. 47. He took advantage of the steady blowing of the monsoon winds, and sailed direct to the coast of India, at which he arrived at Musiris or Barace, somewhere between Goa and Tellicherry. His name was given to the S.W. monsoon. A few years before this, as a freedman of Annius Plocamus was collecting tribute on the coast of Sabæa, he was carried out to sea, and across the Arabian Sea to the port of Hipporos in the island of Ceylon, where he was kindly treated, was presented with a larger ship, and on his return the king of the country sent four ambassadors to the Roman emperor, and a raja or chief to be the captain to manage the ship. Mr. Roberts supposes the port of Hipporos to be the Greek words Hippos and Oros, or horse mountain, a Greek translation of Kuthri-Malei, a hill on the N.W. coast of Ceylon.—*Roberts*, p. 81; *India in the 15th Century*. See Musiris.

HIPPOBOSCA EQUINA. *Linn.* Horse-fly.

HIPPOCAMPUS, a genus of fishes of the family Syngnathidæ. H. mystulus and H. comes of the Indian Seas, when flying, assume the figure of a horse's head, and are known to all as the sea-horse, which the name Kuda in Malay implies. The body is tapering and curled near the tail.

HIPPOCRATEA ARBOREA. *Roxb.* Kathapahariya, HIND. A tree of Assam, Chittagong, Tiperah, and Morung, also of the Kotah jungles. H. Indica, obtusifolia, Grahamii, and viminea are also known in India.

HIPPOCRATES, B.C. 460–361, the Bu-krat of the Arabs, was a learned physician, born B.C. 460 at Cos, an island in the Ægean Sea. He was the son of Heraclides and Phænarete, of the Asclepiadæ family. He travelled in Greece, Scythia, Colchis, and Asia Minor; also, it is supposed, in Egypt and Asia. It is to him that Galen attributes the theory of the four elements in the body, air, earth, fire, and water. He wrote 'On the Nature of Man,' and to him is due the important doctrine of crises. Hippocrates, and after him Galen, held a knowledge of astronomy to be essential to physicians. He is supposed to be the Charaka of the Hindus.

HIPPOGLOSSUS, a genus of fishes of the family Pleuronectidæ. H. olivaceus is the Japanese halibut.

HIPPOLYTE, a genus of the crustaceæ of the tribe Palemoniens, of Milne Edwards, as under:—

H. ventricosus, *Edw.*, Asiatic Seas.
H. quoyanus, *Edw.*, New Guinea.
H. spinifrons, *Edw.*, New Zealand.
H. spinicaudus, *Edw.*, New Holland.
H. gibberosus, *Edw.*, New Holland.
H. marmoratus, *Edw.*, Oceanica.

HIPPOLYTUS, a Christian bishop who resided in Arabia, and is supposed to have written the treatise concerning the Peregrinations of the Apostles.

HIPPOPHAE RHAMNOIDES. *Linn.* A spiny shrub of the Panjab and N.W. Himalaya, in Kangra, Lahore, and Ladakh, with many vernacular names. Its stem is sometimes 5 or 6 feet in girth, with dicœcious flowers, small, round, orange-coloured, acid berries, and narrow leaves like those of rosemary. Its acid fruit makes a good jelly with half its weight of sugar. Its stem gives a good fuel and charcoal.—*Stewart; Cleghorn.*

HIPPOPHAE SALICIFOLIA.

Lhala, ...	BHOT.	Buckthorn, . . .	ENG.
Tarwa, ...	CHUK.	Tser-khar, Soorch,	PANJ.

A willow-leaved shrub of the N.W. Himalaya. It is found in the Sutlej valley between Rampur, and at an elevation of 10,000 feet. Near the Chenab it is a stout shrub with spinous branches, and frequent in the valleys. The small yellow berries are extremely acid, but when ripe and boiled with sugar form an agreeable and wholesome preserve. The people use the branches for dry hedges and fuel, and they are considered village property. A species of Prunus, Litsi, ripens here in September, with a tolerably sweet fruit, something like the cherry. A gooseberry, Bilitsi, with small, woolly, sour berries, is common here also. A black-fruited Ribes, Rasta, resembling in taste the European red currant, is largely eaten by the people.—*Clegh. Pan. Rep.* pp. 67, 150; *Dr. J. L. Stewart.*

HIPPOPOTAMUS, the Behemoth of the Old Testament, is found in Africa in great numbers, and the existence of two species is suspected. The natives kill it with spears after enticing it into a pitfall. The flesh is delicate and succulent; the layer of fat next the skin makes excellent bacon, technically denominated hippopotamus speck at the Cape. The curbaj whip (hence the Spanish Corvacho and French Cravache) is made of the hide. The ivory of the great canine teeth is highly valued by dentists for making artificial teeth. No other ivory keeps its colour equally well; and the canine teeth are imported into England for this purpose, and fetch about 30s. per pound. One of the specific distinctions pointed out by M. Desmoulins is the comparative abrasion of the canines in the supposed two species.

The people of Rome several times had opportunities of witnessing hippopotami, amongst other wild beasts, collected for the triumphal exhibitions of their emperors. But for 1500 years, until 25th May 1850, Europe had not seen one. The Zoological Society of London then obtained a male, and afterwards a female, which bred. That received in 1850 was the first living seen in Great Britain since the Triassic age of the world.

The hippopotamus has been discovered in a fossil state in Ava and in the Sub-Himalaya, where there is an admixture of extinct and existing forms, well preserved,—remains of hippopotamus, rhinoceros, mastodon, peculiar forms of elephas, and very remarkable bovines, dissimilar from those now in India; also, of animals still existing in India, are found the fossil Emys (*Pangshura*) *tecta*. *The embedded shells are all* of species still living in the valley, and indicate that the changes have been gradual from the time that the hippopotami wallowed in the muds, and rhinoceros roamed in the swampy forests, of the country where mastodons abounded, and where the strange forms of the sivatherium, dinotherium, and camelopardis existed.—*Eng. Cyc.; Hamilton's Sinai*, p. 339.

HIPPOSIDEROS, a genus of the mammalia of the order Cheiroptera. The following Indian species may be named:—

H. apiculatus.	H. fulvus.	H. murinus.
H. armiger.	H. galeritis.	H. nobilis.
H. ator.	H. insignis.	H. speoris.
H. bicolor.	H. Lankadiva.	H. penicillatus.
H. diadema.	H. larvatus.	H. Templetoni.

H. cineraceus, *Blyth*, the ashy horseshoe bat, has only been found in the Panjab Salt Range.

H. murinus, *Jerdon*.

Rhinolophus murinus, *Ell.* | Rhinolophus fulgens, *Ell.*

The little horseshoe bat is of a mouse colour. It inhabits S. India, Ceylon, Nicobars, Burma, and Malayana.

H. speoris, *Jerdon*.

Rhinolophus speoris, *Schn., Blyth, Ell.* H. apiculatus, *Gray.* H. penicillatus, *Gray.*
R. Dukhanensis, *Sykes*.

The Indian horseshoe bat has a variably coloured body. It inhabits all India, Ceylon, and the Archipelago east to Timor.

Voulha is the Singhalese word applied to all bats.—*Mr. Blyth's Report.*

HIPTAGE MADABLOTA. *Gærtn.*

Gærtnera racemosa, *Roxb.*

Benkar, Khumb,	BEAS.	Ati muktamu,	TEL.
Endra,	CHENAB.	Madhavitige,	,,
Bokhi or Utimukta,	DUK.	Potu-vadla,	,,
Madmalti,	PANJ.	Vadlaya rala,	,,
Chabuk, Churi,	,,		

Delight of the woods, is a large climbing shrub, with very beautiful white and yellow flowers in terminal racemes; petals fringed, four white, one yellow; one of the stamens is much longer than the rest; fruit unequally three-winged. The bark is a good sub-aromatic bitter. H. obtusifolia, *D.C.*, is a plant of China. It grows over all India, and is cultivated at Lahore.—*Riddell.*

HIRACLIUS, successor of Phocas, was taken prisoner by Khusru.

HIRAM, king of Tyre, was contemporary with Solomon, whom he assisted in building the temple of Jerusalem. He received from Solomon 20 villages of Galilee, and was a partner with Solomon in the Indian trade. He reigned B.C. 1025 to 992.

HIRANYA. SANSK. Gold or golden; hence—

Hiranya or Svarna, supposed to be Ireland.

Hiranya-Garbha, from Hiranya and Garbha, the womb.

Hiranyabaha, the river Sone. Its E. branch is also called Gujjhabate or Cohi.

Hiranya Kasipa, in Hindu mythology, Adaitya, an enemy of the Hindu gods, a king destroyed by Vishnu as Narasimha. He is the same with Vijaga, son of Kasyapa and Diti.—*As.Res.* iii. p. 393.

Hiranyaksha, from Akshi, the eye.

HIRLO. MAHR. Any warrior slain in battle. Cairns are accumulated over their remains.

HIRNEOLA AURICULA JUDÆ. FR. Jew's-ear, a fungus of Britain, and widely distributed. It is the Teria iore of Tahiti, and is known at Singapore as an article of commerce used as food.

HIRN PARDI, also Hirn-Shikari, a fowler race of the Peninsula of India, who call themselves Bhaora.

HIRUDO, the leech, one of the class Annelidæ, many of which occur in the south and east of Asia; they were early employed therapeutically by the Hindus, and the Arabs adopted their practice (Royle, Hindu Med. p. 38; and Wise, Hindu Medicine, p. 177). Herodotus alludes to one kind, Bdella Nilotica. Dr. Pereira infers that Sanguisuga Ægyptiaca, the species from which the French soldiers in Egypt suffered, is that referred to in the Bible (Proverbs xxx. 15) by the name of Olukch or Aluka. The latter, or Aluk, is also the Arabic name for leech. Six kinds of useful and six venomous leeches are mentioned in Susruta, and by Avicenna. But Aristotle makes no mention of them, and they do not appear to have been used in Greek medicine in the time of Hippocrates. Pliny, however, describes them very clearly, under the name of Hirudines and Sanguisugæ, and distinguishes two species. Eight species of medicinal leeches have been enumerated; the most common is the Sanguisuga medicinalis, Hirudo medicinalis, *Linn.*, which is a native of all the stagnant fresh waters. H. officinalis is distinguished by its unspotted olive-green belly and by the dark-green back. H. medicinalis is the kind usually employed in Britain. Its belly is of a yellowish-green colour, but covered with black spots, which vary in number and size, forming almost the prevailing tint of the belly, the intervening spaces appearing like yellow spots. On the back are six longitudinal reddish or yellowish-red bands, spotted with black, and placed on an olive-green or greenish-brown ground. Other species, figured by Brandt, are H. provincialis, H. verbana, H. obscura, and H. interrupta. In the United States they use H. decora. In India, leeches are extremely abundant, procurable in the tanks. Hirudo tagalla, also called H. Ceylonica, a land leech, lives in the thickets and woods of Ceylon, the Philippine Islands, and at elevations of 11,000 in the Himalayas.—*Eng. Cyc.* p. 212.

HIRUNDINIDÆ, a family of birds of the order Insessores, tribe Fissirostres, comprising the sub-family Hirundininæ, with the genera Hirundo, Cotyle, and Chelidon, and the sub-family Cypselinæ, with the genera Cypselus, Acanthylis, Collocalia, and Dendrochelidon.

Hirundo rustica, the rustic swallow of Europe, Asia, Africa; is migratory, and common in the plains of India during the cold season; chiefly seen over water.

H. domicola, *Jerdon*, is the Neilgherry house swallow of S. India, Ceylon, Penang, Malacca, and Java.

H. filifera. This is a beautiful wire-tailed swallow, with prolonged middle tail feathers, and is found throughout India, N.W. Himalaya, and Kashmir.

H. daurica, mosque swallow or red-rump swallow, is found in N. and Central Asia, over all India from Nepal to Ceylon, and N. China.

H. flavicolla, *Blyth*, belongs to the group of republican swallows (Petrochelidon of the prince of Canino), and has similar habits to the H. fulva of N. America.
H. Japonica, H. striolata, occur in Japan.
H. hyperythra, *Layard*, Ceylon.
Cotyle Sinensis, the ordinary Indian sand martin, occurs together with H. riparia.
C. urbica, the martin of Europe, Africa, Asia, and Siberia, is somewhat rare or local? in India, and migratory.
C. riparia, the sand martin of Europe, Asia, Africa, N. America, is migratory in India, and local, and mostly replaced by H. Sinensis.
C. rupestris of S. Europe, is common in the high mountains of India, and there is a diminutive of it also in the H. concolor of Sykes.
C. subsoccata, *Hodgs.*, the dusky martin of Kashmir, Ladakh, Nepal, and in the cold weather, Panjab.
C. concolor, *Sykes*, the dusky crag martin of all India.
Chelidon urbica, *Linn.*, the English house martin, has been found in the Neilgherries.
Ch. Cashmiriensis, *Gould*, the house martin of Kashmir, where it is abundant.
Ch. Nipalensis, *Hodgs.*, the little Himalayan martin.
Ch. dasypus, *Bonap.*, of Borneo.

Sub-Fam. Cypselinæ, Swifts.

Acanthylis sylvatica, *Tickell*, the white-rumped spine-tail of all India, inhabits the jungles.
A. leucopygialis, *Blyth*, of Japan.
A. coracinus, *Mull.*, of Borneo.
A. gigantea, *Temm.*, brown-necked spine-tail of Neilgherries, Wynad, Malabar, and Ceylon. It is a magnificent swift.
A. caudacuta, *Lath.*, white-necked spine-tail, a splendid powerful swift of the Himalaya, Nepal, Sikkim and Bhutan, and China.
Cypselus melba, *Linn.*, the alpine swift of Southern India.
Cy. apus, *Linn.*, the European swift, is found throughout W. Asia, N. Africa, and Europe; is common in Afghanistan, Kashmir, and visits the Panjab in the rains.
Cy. affinis, *Gray*, the common Indian swift of the Panjab, Sind, all India; breeding in colonies.
Cy. leuconyx, *Blyth*, the white-clawed swift of all India, but rare.
Cy. vittatus, *Jard. and Selby*, of all China, Malayan.
Cy. Batassiensis, *Gray*, the palm swift, abounds in all the districts of India, Ceylon, Assam, Burma, wherever the palmyra and cocoanut palms grow; nest very small, and always placed on the leaf of the palmyra.
Cy. Sinensis, *Bonaparte*, of China.
Collocalia nidifica, *Lath.*
Hirundo nidifica, *Lath.*, *Blyth.*, *Horsf.* H. unicolor, *Jerdon.* Cypselus unicolor, *Jerdon.*
H. brevirostres, *M'Clell.* C. concolor, *Blyth.*
This, the Indian edible nest swiftlet, is found in the Neilgherries, Ceylon, Western Ghats, Coorg, Wynad, Malabar, Sikkim, Himalaya, Assam, Java, Malay Peninsula, Andamans, Siam, Cochin-China, and other islands of the Archipelago. The nest, when pure and of the first make, is composed entirely of inspissated mucus from the large salivary glands of the birds. It is very small. When these first make nests are removed, the second make are inferior.
Co. linchi, *Jerdon*, C. fuciphaga, Hirundo fuciphaga, edible nest swift of the Nicobars, on the rocky coast of the Bay of Bengal from Arakan south to Java. Its nest is more valuable than that of the C. nidifica.

Other species of Collocalia are found in the Eastern Archipelago as far as New Guinea, one from the Mauritius, and one or more from the Pacific islands.—*Jerdon*, pp. 155–185.

HISLOP, REV. STEPHEN, born 8th September 1817, at Dunse, Berwickshire. He joined the Free Church in 1844, and a munificent donation of Rs. 25,000 having been offered by Captain (General Sir William, K.C.B.) Hill, on condition of founding a mission at Nagpur, Mr. Hislop went to it. He devoted his spare time to examination of the geology of Nagpur, and his writings appeared in the Journals of the Bombay As. Society for July 1853, the Royal Geological Society for 1855, on the Connection of the Plant-bearing Sandstone of Nagpur with the Coal Beds of Central India and Western Bengal; and the Bengal Asiatic Society's Journal, No. iv. 1855, contains another on the Age of the Carbonaceous Strata just referred to. In those papers Mr. Hislop described some of the numerous fossils which had been found in the tertiary deposit, and the sandstone, coal, and shells of the province of Nagpur. He employed his leisure in making a geological collection of the antiquities of the provinces around him; they now form the nucleus of the collection in the museum at Nagpur. He was drowned crossing a river.

HISSAR, municipal town and administrative headquarters of Hissar district, Panjab, lat. 29° 9′ 51″ N., long. 75° 45′ 55″ E.; population (1868), 14,133. The district, lying between lat. 28° 36′ and 29° 49′ N., and long. 75° 16′ and 27° 22′ E.; area, 353,973 square miles; population, 484,681. Hissar forms the western border district of the great Bikanir (Bickaneer) desert. It consists for the most part of sandy plains dotted with scrub and brushwood, and broken by undulations towards the south, which rise into hills of 800 feet, like islands out of a sea of sand. The soil is in places hard and clayey, difficult to till, but when sufficiently irrigated, highly productive. In these spots water is only reached at a depth of from 100 to 130 feet; the cost of a masonry well is seldom below £150. The sandy tracts are not unfrequently swept by storms, which greatly alter the face of the country. The jhul (Salvadora oleoides), the kavi or leafless caper (Capparis aphylla), and the jharberi (Zizyphus napeca) abound; their berries serve as food in times of scarcity. It has been much harried. After Nadir Shah ravaged the land, the Sikhs began their inroads; the Bhatti of Bhattiana struggled for superiority; and from 1795–1802, George Thomas, an Irishman, fought for dominion. Early in the mutiny of 1857, the local levies at Hansi and Hissar revolted, and all Europeans were either murdered or compelled to fly. The Bhatti rose under their hereditary chiefs, and the majority of the Mahomedan population followed their example, but were suppressed by a force of Panjab levies, aided by contingents from Patiala and Bikanir, under General Van Courtlandt.

The Tuar Rajputs (13,921) possess five or six villages. The Bhatti, now Mahomedans (22,008), trace their descent from Jesal, of the Yadubansi stock. Both Tuar and Bhatti were marauding desert tribes. The Pachada, or men of the west, now Mahomedans, are also of Rajput descent. A religious sect known as Bishno worship their founder, Jambhaji, as an incarnation of Vishnu, and bury their dead in a sitting posture, in the floors of their houses or cattle-sheds. They consider even the touch of tobacco polluting. At their marriages, passages from the Mahomedan Koran and the Hindu Shastras are indiscriminately recited. They avoid destroying life, and inter any animal accidentally killed. The decayed town of Agroha is interesting, as being the original seat of the great mercantile class of Agarwala.

There are rock-cut inscriptions at Tosham.—*Imp. Gaz.*

HISSAR, a hill state north of Badakhshan, whose chief claims a Grecian origin. It yields copper ore, micaceous sandstone, inferior marble.

HISTA, a Malay measure of arbitrary length, the fourth of the dippa, about half a yard.—Simmonds' Dict.

HISTIOPHORUS, the sword-fish or fan-fish, is the Ikan-layer of Amboyna, the Dutch Zeyl-fish or Sail-fish, and the Sailor-fish of seamen. It is from 10 to 14 feet long, and is said to raise its dorsal fin and use it as a sail.—*Bennett.*

HIT, in lat. 33° 43′ N., and long. 42° 27′ E., is on the right bank of the Euphrates, has 1500 houses. It has bitumen springs on the left bank at Gasar Sadi. The people are boat-builders, prepare salt, bitumen, and naphtha, and burn lime. There is a bridge of boats here. It is the usual place where caravans cross the Euphrates between Baghdad and Damascus. With the smell of bitumen and naphtha outside the town the whole water and air is infected. It is undoubtedly the place mentioned by Herodotus under the name of Is, as furnishing bitumen for the building of Babylon. Near this, on the Euphrates, and a little below Samara on the Tigris, the country is mere alluvium. The works of salt and bitumen around Hit give a singular appearance to the country. The Euphrates near Hit has an average width of 350 yards, with a depth of 16 feet, and a current of three knots per hour in the season of the floods, when there are fourteen islands, on some of which are small towns. See Irak; Karej.

HITOPADESA, Sansk., from Hita, good, and Upadesha, teaching,—Good Advice, is the title of an ancient Sanskrit work, though it is but a rearrangement of an older one, called Pancha Tantra, or the Five Books, which itself has been translated several times and printed. But it has never attained the fame of its offspring, the Hitopadesa, and there are few, if any, of the vernacular languages of India into which the Hitopadesa has not been translated. It is classed by Hindu writers as a work on Niti, or polity, and it was designed for the instruction of princes, to prepare them for the duties of their future lives. The scene of the Hitopadesa is the ancient city of Pataliputra, situated at or near the present Patna. The king of that place, deploring aloud the wild and heedless lives of his sons, was overheard by a pandit named Vishnu-sarma, who undertook to make his sons versed in the principles of polity within the space of six months. To accomplish this he prepared the Hitopadesa, and accomplished his task of instructing and training the princes. The book consists of a series of fables, story within story, according to an oriental fashion. But the greater part of the work is occupied by verses cited from ancient writers in illustration and proof of the positions maintained by the interlocutors.

The Hitopadesa is divided into four books, entitled Mitra-labha (Acquisition of Friends), Suhrid-bheda (Separation of Friends), Vigraha (War), and Sandhi (Peace). The first two have a general interest, and are applicable to all classes of people. The last two books apply especially to kings and ministers. The stories are mostly concerned with animals, but there are a few in which human beings are concerned. These are not edifying, and display a contempt for chastity, and a disposition to make merry over the misfortunes of easy-tempered husbands with intriguing wives. The nature of them may be inferred from such titles as *The Old Man and his Young Wife*, and The Farmer's Wife and her Two Gallants.

In the 6th century of A.D. era it was translated into Old Persian, by order of the emperor Nushirwan. From the Persian it was translated into Arabic in the ninth century, under the title of Kalila o Damna, a work which obtained great celebrity, and is still popular, Kalila o Damna being the Arabic representations of the Sanskrit names Karataka and Damanaka, two wily jackals who appear in the work, and are proverbial throughout the east for their craft and cunning. It was afterwards translated into Hebrew, Syriac, and Greek. The Hebrew version was made by John of Capua, towards the end of the fifteenth century, and from his work translations were made into the chief modern languages of Europe, and it became familiar to British youth under the designation of Pilpay's Fables. Two versions of the work were made into modern Persian by authors whose names are known, but their translations have been eclipsed, and their productions are obsolete. There is also a translation in Turkish. The most celebrated Persian translation is that of the renowned rhetorician, Husain Vaiz Kashifi, whose work, Anwar-i-Suhaili (Lights of Canopus), is famous throughout the Mahomedan world, and is scarcely less famous among the orientalists of Europe. Elegant versions of it were printed by Messrs. Eastwick and Woollaston, and that of the latter is published in an ornamental style. The Anwar-i-Suhaili has borrowed some stories from the Hitopadesa, but has greatly added to their number. The identity of the borrowed stories is palpable enough when pointed out; but nothing can well be more dissimilar than the two works, the one all plain and terse simplicity, the other florid, fanciful, ornate, and abounding with far-fetched hyperbole. The stately sententious roll of the verse of the Hitopadesa and the light and airy couplets of the Anwar-i-Suhaili are at the very opposite extremes of composition. Yet another distinguished Persian author bestowed his labours upon the Arabic edition of the work. Abul Fazl, the celebrated minister of the Emperor Akbar, made a new translation. Though a professed rhetorician himself, and the author of several important works in the high style, he considered Husain Vaiz's version too florid and difficult for such a work; and he made a more simple translation in an easy narrative style, which became popular under the title of Iyar-i-Danish, Touchstone of Wisdom. This has again been translated into Hindustani, under the title Khiradafroz, Enlightenment of the Understanding. The Hindus have thus had brought back to them, first in a Persian, and then in a modern Urdu form, the stories told by their ancestors in ages long gone by.

The text has been frequently printed in Europe, but the most esteemed edition is that of Professor Francis Johnson of Haileybury.

HITTITE, a dominant race mentioned in 1 Kings x. 29 and 2 Kings vii. 6. They held mastery in Syria in the era of the Hebrew judges and earlier kings. They were called Kheta

by the Egyptians, and Khatta by the Assyrians. In B.C. 835, Shalmaneser received tribute from all the kings of the Hittites. Their last monarch, Pirsiris (Pisiri), was defeated and slain B.C. 717, and Carchemish was made the seat of an Assyrian governor. But at one time the Hittite empire stretched from the Euphrates to the Dardanelles, and they disputed for several centuries the sway of Central Asia with Ramesside Pharaohs on the one side, and with Assyria's mightiest monarchs on the other. The Hittites were defeated, and their city Ketesh destroyed, by an Egyptian king (Rameses II. of Egypt?), about 1340 B.C. A great battle, figured in Sir G. Wilkinson's Ancient Egyptians, was fought between Rameses II. and the Hittites, near their sacred city of Kadash, which is shown as a city with a double moat, crossed by bridges beside a broad stream running into a lake. The lake has been generally identified with the Baheiret Homs, through which the Orontes passes south of Homs. The site of the city, as important in Hittite records as the northern capital of Carchemish, Lieutenant Conder has identified with the ruins known as the Tell Neby Mendeh. They lie on the left bank of the Orontes, four English miles south of the lake. The modern name belongs to a sacred shrine on the highest part of the hill on which the ruins lie, and the name of Kadesh still survives, an instance of the vitality of prior names lingering in the minds of the people long after they have forgotten the Roman, Greek, or Crusaders' names. Lieut. Conder writes,—'Looking down from the summit of the Tell, we appeared to see the very double moat of the Egyptian picture; for while the stream of the Orontes is dammed up so as to form a small lake 50 yards across on the S.E. of the site, a fresh brook flows in the W. and N. to join the river, and an outer line of moat is formed by earthen banks, which flank a sort of aqueduct parallel with the main stream.' He gives a full account of the ruins, the position of the place, and the disposition of the Egyptian forces before the battle.

Their writing character was displaced by the Assyrian cuneiform. The Assyrian King Sargon (B.C. 722–705) is mentioned in the Hebrew Bible. It was in the time of Sargon that Assyrian culture first gained a permanent footing in the W.; while the overthrow of Carchemish and the last relics of Hittite power in B.C. 717 naturally led to the disuse of the Hittite mode of writing, and the spread of the cuneiform characters employed by the Assyrian conquerors. The well-known passage in Pliny (H. N. vii. 57), 'Literas semper fuisse Assyrias; sed alii apud Ægyptios Mercurio ut Gellius; alii apud Syros repertas volunt.' Mr. Sayce sees in this an allusion to the Hittite graphic system. In this case, he remarked, the passage in Pliny would be a record of the three independent modes of writing which the east invented, and would contain a half-forgotten tradition of that strange system of hieroglyphics from which in all probability the syllabary of Asia Minor and Cyprus was derived. Hittite monuments have been found at Kiz Hissar, which is supposed to represent the Dana' or Tyana of Xenophon, built, according to Strabo, on the sub of Semiramis.

HI-UL or Hi-el, the grand festival of the Germ tribes of the Baltic.

HIUNRA of the Byansi, an avalanche.

HIWEN THSANG, a Chinese traveller who passed 17 years (from A.D. 629 to 645) in travelling through the countries lying to the W. of China, and especially in India, through countries which few had visited before him, and he describes some parts of them which no one has since explored. His chief object was to study the religion of Buddha, but his observations, geographical, statistical, and historical, are characterized by great minuteness and precision. He started from Pekin, and made his way, amidst hardships and difficulties, through Chinese Tartary to the region where Buddha had laboured. Near Talas, on his way to India, he fell in with the Great Khan of the Turks, a successor of Dizabulus, whom the Chinese traveller calls Shehu. His account is very like that of Zamarchus. The Khan occupied a great tent adorned with gold flowers of dazzling richness. The officers of the court sat in two long rows on mats before the Khan, brilliantly attired in embroidered silk, the Khan's guard standing behind them. Although he was but a barbarian prince under a tent of felt, one could not look on him without respect and admiration. He appears to have regarded the Wakhsh branch as the main Postu or Oxus.—*Stanislas Julien, Histoire de la vie de Hiuen Thsang*, pp. 55, 56; *Yule, Cathay*, i. pp. 165 and 234.

HLAINE, an elongated valley of Pegu.

HLA-PET. BURM. Literally, wet-tea. To the eastward of Bamo and Koung-tuno, hills are visible, peopled by cateran Kakhyen, and by breeches-wearing Paloung, employed peaceably in growing tea for pickling. This is the hla-pet, which is made up with a little oil, salt, garlic or asafœtida, etc., into a sort of pickle, and is essential to the comfort of every Burman, being partaken of on all ceremonial occasions. It is floated to Ava on bamboo rafts, so as to be retained always partially wet. It is eaten by the Burmese in small quantities after dinner, as Europeans eat cheese. They say it promotes digestion, and they cannot live in comfort without it. Colonel Burney mentions that the Burmese Resident, proceeding to Calcutta in 1830, took a large supply of hla-pet with him, as a necessary of life, not to be had where he was going. Hla-pet is partaken of on many ceremonial occasions; and on the conclusion of law-suits, the bill of costs is always rounded off with a charge for pickled tea, as European agents' accounts are still rounded off with a charge for postages.—*Fytche*, p. 270; *Mason's Burma*; *Yule's Embassy*, p. 101.

H'LWOT-DAU. BURM. The cabinet and high court of the realm of Burma, in which there are four woon-gyè or chief ministers, assisted by as many woondouk.—*Yule's Embassy*, p. 3.

HNAU. BURM. A boat of Burma.

HNAU-BEN. BURM. A large tree, of pale yellow wood, preferred for making combs. It bears a large fragrant fruit, but worthless.—*Crawfurd*, i. p. 192.

HO, a Chinese measure of capacity, about $7\frac{3}{4}$ gallons.—*Simmonds' Dict.*

HO. ARAB. He, He is; the name of God. Ho ul Aziz, He is glorious.

HO, Hore, Horo, in the Kol tongue, a man. In the mountains S.W. of Calcutta are the Dhangar, Oraon, the Kol, the Larka Kol or Ho, and the Khond. The Ho are a comparatively small tribe

of the Kol race. Their country proper is the part of the Singbhum district called Kolehan, a series of fair and fertile plains studded with hills. It is about 64 miles from N. to S. and 124 from E. to W., and has to the S. and S.E. the tributary estates Mohurbhun, Keonjur, Bonai, and Gangpur, inhabited by Uriya-speaking Hindus; to the east and north the Bengali pargana of Dhulbhum and district of Manbhum, and to the N. and N.E. the Hindi district of Lohardaggah.

The Ho is the most compact, the purest, most powerful and interesting and best-looking division of the whole Munda nation. The more civilised Ho have an erect carriage, and dignified, fine manly bearing, with figures often models of beauty. The occupants of the less reclaimed parts are more savage-looking. Their tradition is that they came from Chutia Nagpur, and that they brought with them their system of confederate governments of Purha, which they call Pirhi or Pir. The Ho have a tradition that they once wore leaves only, as the Juanga women till 1871 did, and not long since threatened to revert to them unless cloth-sellers lowered their prices. The Ho of the border-land have probably much intermixed with the Uriya. They are agricultural, but change their localities. A Ho bridegroom buys his bride, or rather his father buys her for him, the price being so many head of cattle. The Kol and Larka Kol are cognate with the Khond. The Ho language differs so little in phonology and glossary from the Munda, Bhumij, and Santal, that Captain Tickell's account of its grammar may be taken as that of the Kol language generally. The Ho are addicted to suicide; they have no endearing epithets. They erect menhir or slabs, and dolmen or tablets, over the graves of their dead. The dance of the Ho and Santal is not that of the Munda, though the last have something resembling it, and it can be made to assume a mournful cadence, as the same step and drum-beat is used at their funeral ceremonies. Colonel Dalton says (p. 106) the youths and maidens of the Ho mourn as they revolve, and lock up, keeping admirable time both in the movements of the feet and undulations of the head to the monotonous beat of the drums. They believe that the souls of the dead become bhoots (spirits), but no thought of reward or punishment is connected with the change.—*Captain Tickell, As. Soc. Jour.* ix. pp. 783, 997, 1063; *Lubbock, Origin of Civil*, p. 268; *Dalton's Ethnology of Bengal*, pp. 106, 184.

HOANG-HO, a great river in China, 3040 miles long, in lat. 39° 40′ N., and long. 98° E., undoubtedly one of the finest rivers in the world. It takes its rise in the mountains of Tibet, and, after traversing the Koukou-Noor, enters China at the water province of Kan-su; it leaves it again to the sandy plains at the foot of the Alechan mountains, surrounds the country of Ortous, and, after having watered China from south to north, and then from west to east, throws itself into the Yellow Sea. The waters only assume their yellow tint after passing the Alechan and the Ortous. The river rises almost always to the level of the country through which it flows; and to this is to be attributed the disastrous inundations which it occasions, which are so fatal to China, but are of little consequence to the nomadic Tartars, who have only to strike their tents and move off elsewhere. In ancient times its mouth is said to have been in lat. 39° N.; at present it is in 34°. The Chinese Government is obliged annually to expend enormous sums to keep the river within its bed. In the year 1799 it cost £1,682,000. — *Huc's Journey.*

HOANG-TI is the first historical Chinese emperor (B.C. 2698); and the Chinese historians allege that in his reign the inventors of sundry arts and sciences arrived from the western kingdoms in the neighbourhood of the Kouen Lun mountains. —*Yule, Cathay*, i. p. 35.

HOCKEY. A game of Tibet resembling hockey, and called Chaughan, is played on horseback, on a plain about 60 yards broad and 350 long, with a stone pillar at each end as the goal. The ball is somewhat larger than a cricket ball, and in Tibetan is called Pulu. The stick or Byntu is of the strong and straight bough of the almond tree, about 4 feet long, and let in at the top and passed quite through to the other end of a curved piece of solid birch-wood, about the size and shape of a drenching horn. The game is mentioned by Baber. It is played in every valley in Little Tibet, Ladakh, Yessen, Chitral. The Persians, who wanted to play on horseback, were the first who found a long stick necessary. This stick they called Chugan, hence the Byzantine τζυκανίζειν, and the French Chicane, in which lawyers bandy about the unlucky clients. From the Chugan came the croquet-mallet, the golf-club, with all the family of spoons, drivers, clecks, bunker-irons, putters, and niblicks; came also the hockey-stick, and probably the bat, which was at first a thick club with a curved foot, a terrible weapon in the hands of a 'slogger.' The Chugan may have been the father of the racquet. In Byzantine descriptions of the game, a staff ending in a broad bend, filled in with a network of gut-strings, is mentioned. The Munipuri call it Kango-jai. They select a turfy piece of ground 400 yards in length by 200 in breadth. The ponies used are small, swift for their size, and obedient mouths. The club consists of a rattan as thick as an ordinary-sized walking-stick, and 5 feet long, and its lower end has attached, at an angle of 45 degrees, a cylindrical piece of hard oak-wood, 1 foot in length, and 1 or 1¼ inch in diameter. The whole weighs about 1 lb. 10 oz. The ball is a globe 3 to 4 inches in diameter, cut out of the light bulbous root of the bamboo. The suppleness of the cane, the weight of the club, and the elasticity of the ball is such, that a well-delivered stroke will lift the latter about a hundred yards. Two sides are formed, 5 to 7 to a side. The ball is thrown up in the centre of the ground, and each party strives to drive it to the opposite goals. The club is held in the right hand and the reins in the left. All the skill of horsemanship and dexterity in the use of the club are called into full play. It is beautiful to see the game played by men expert in the exercise, and by ponies well trained, for the animals in the course of time acquire a perfect knowledge of the play, and enter into the excitement of it as well as the riders.

HOCOMLIA MONTANA. *Gibson.*

Sampga, ... CAN. | Kudkee, ... MAHR.
Tambut, . . . MAHR. |

Grows in Canara and Sunda, on and close to the head of the ghats. Wood seldom runs large; is white, hard, and tough; used for agricultural implements.—*Dr. Gibson.*

HODADIN, a peaceable shepherd tribe of Bedouins.

HODAIDA, on the east coast of the Red Sea, in lat. 14° 47′ N., and long. 42° 53′ E., a town of Yemen, with lofty buildings. It is on the N.E. side of a sandy bay, and sheltered by a point of land running N.W. About A.D. 1836 it was made the seat of government of that part of Yemen.

HODGSON, CAPTAIN J. A., author of Journey to the Source of the Jumna, Hot Springs at Jumnotri, etc., in As. Res. xiv. p. 128; On a New Form of the Hog Kind in Sind, in Bl. As. Soc. Trans. xiv. p. 423; Journey to the Head of the Ganges, in As. Res. xiv. p. 60; Survey to the Heads of the Ganges and Jumna, ibid.; Latitudes of Places in Hindoostan, ibid. p. 153; Heights and Positions of the Himalaya Peaks, ibid. p. 187; Route from Katmandu to the Chinese Frontier, ibid., 1832, xiii. p. 513. Captain Hodgson and Lieutenant Herbert published Astronomical Observations in Hindustan, with a Journal of the Survey of the Sources of the Rivers Ganges and Jumna, and an Account of the Positions and Heights of the Principal Peaks of the Himalaya Mountains.—*Dr. Buist's Catalogue.*

HODGSON, BRYAN H., of the Bengal civil service, widely known for his researches into the natural history of the Eastern Himalayas, and the ethnology of the races and tribes dwelling in British India and its bordering countries. He was appointed Resident at the court of Nepal in 1821. He wrote on the Sheep inhabiting the Himalayan Region, in Bl. As. Trans., 1841, x. p. 320; On the Literature and Religion of the Buddhists, Serampore 1841; On the Buddha Literature of Nepaul, As. Res. xvi. p. 409; Route from Katmundu to Tazedo, ibid. xvii. p. 513; On a New Species of Buceros, ibid. xviii. p. 178; Description of the Aquila Nepalensis, ibid. part ii. p. 13; Description of the Circaetus Nepalensis, ibid. p. 21; Migration of the Natatores and Grallatores in Nepaul, ibid. p. 122; On the Wild Goat and Wild Sheep in Nepaul, ibid. p. 127; Description of the Ratwa Deer, ibid. p. 170; Of the Buceros Homrai, ibid. p. 139; Of the Wild Dog of the Himalayas, ibid. p. 221; On the Antelope of the Himalayas, Gleanings in Science, iii. p. 152; On a Species of Felis, ibid. p. 177; On Scolopacidæ, ibid. p. 233; On the Musk Deer, ibid. p. 329; On the Cervus Jaral, the Ratwa Deer, and the Tharai Goat, ibid, p. 371; On the Chiru, ibid. p. 387; On the Mammalia of Nepaul, ibid. p. 442; On the Manufacture of Nepaul Paper, Bl. As. Trans. i. p. 8; On the Nepaul Military Tribes, ibid. ii. p. 217; On the Aborigines of Nepaul Proper, ibid. iii. p. 215; On European Speculations on Buddhism, ibid. pp. 382, 425, 499; Synopsis of Mammalia of the Himalayas, ibid. v. p. 231; On Nepaul Ornithology, ibid. p. 358; On the Language of Buddhist Scriptures, ibid. ii. p. 682; On the Cuckoo of the Himalayas, ibid. viii. p. 136; On the Thibetan Type of Mankind, ibid. xvii. p. 222; On the Aborigines of Central India, ibid. p. 550; Relics of the Catholic Mission in Thibet, ibid. p. 225; Route from Katmandu to Darjeeling, ibid. p. 634; On the Aborigines of Southern India, ibid. xviii. p. 350; On the Aborigines of North-Eastern India, ibid. 451; Note on Indian Ethnology, ibid. p. 238; n the Aborigines of the North-Eastern Frontier, id. xix. p. 309; Aborigines of the South, ibid. p. 461; On the Law of Legal Practice and Police of Nepaul, Lond. As. Trans. i. pp. 45, 258. It was his opinion that the Tamulian, Tibetan, Indo-Chinese, Tangus, Chinese, Mongol, and Turk are so many branches of the Turanian family.—*Dr. Buist's Catalogue.*

HODGSONIA HETEROCLITA. *Hooker.* Trichosanthes het., *Roxb.*, is the most magnificent plant of the jungles in the valley of the Tista in Sikkim. It is a gigantic climber, allied to the gourd, bearing immense yellowish-white pendulous blossoms, whose petals have a fringe of buff-coloured curling threads several inches long. The fruit is of a rich brown, like a small melon in form, and contains six large nuts, whose kernels (called Katior-pot by the Lepcha) are eaten. The stem when cut discharges water profusely, from whichever end is held downwards. It is a new cucurbitaceous genus, found in the Terai, clinging in profusion to the trees, and also 5000 feet up the mountains. It grows also in the forests east of Chittagong. The long stem, like almost all woody climbers, is full of large vessels; the juice does not, however, exude from these great tubes, which hold air, but from the close woody fibres.—*Hook. H. J.* i. p. 395, ii. p. 350.

HODHAD, king of Yemen, father of Balkees, queen of Sheba; lived about the beginning of the Christian era. See Balkees.

HOD'HU, an ancient name of India.

HOE, a secret society of the Chinese, into which the members are initiated. The concluding ceremony consists in pricking the middle finger of the right hand, dropping the blood into a bowl of arrack, from which each of the candidates drink, and are then saluted as brethren.

HOE is the digging implement of the labourers of India; its forms are called in Hindi, hat'hia, kalpi, kharpa, mamati, rambha, and ramp.

HOEI-HOEI. The Chinese and Manchu call by the name of Hoei-hoei all the Mahomedan tribes who live under Chinese dominion. This word, therefore, has ceased to designate a nation. As the Uigur Hoei-hoei, called simply Hoei-hoei under the Mongol dynasty of Yuan, were Mahomedans, this name is applied by the Chinese to all those of the same religion, in the same manner as the Russians are often called Greeks, because they are of the Greek Church. The inhabitants of the towns of Little Bokhara are in part descendants of the ancient Uigur or Hoei-hoei, and consequently Turk; in part Sarti, or Bokharians, who are scattered as merchants all over Central Asia, and who are Iranians. There are many of them at Pekin, Hang-chu-fu, Canton, and other commercial cities of China. Their mother-tongue is Persian, but they also speak the oriental Turki, which is the general language of Turkestan, and the most diffused in Little Bokhara.

HOEI KING, a Chinese Buddhist traveller in India, Khotan (Yu-than), and Tibet, in A.D. 399-400, along with Fa Hian, the Fo-kue-ki of Remusat, Klaproth, and Landresse. Fa Hian, with Hoei King and other Chinese pilgrims, reached Yu-than or Khotan in A.D. 399-400. Fa Hian then travelled by Tsu-bo and Yu-hoei and over the Tsu-Ling mountains southwards to Kie-Chha, the modern Ladakh, where he rejoined Hoei King. From Kie-Chha the pilgrims proceeded westward to Tho-ly, which they reached in one month. They came to India overland by way of Tartary

and Kābul, visited Ceylon, and sailed thence to Java. On his return, Fa Hian left behind him an account of his travels, called Fo-kue-ki, or an account of the Buddhist countries. At the time of his visit Buddhism was still the dominant religion, though Vaishnava doctrines were gaining ground.—*Cunningham, Ladakh; Cal. Rev.*

HOFFMEISTER, author of Travels in Ceylon and Parts of the Himalayas to the Borders of Thibet.

HOG, Indian wild boar, Sus Indicus.

Khanzir,	Arab.	Porco,	It., Port.
Varaha,	Beng., Sansk.	Sus, Porcus,	Lat.
Handi, Mikka,	Can.	Babi, Babi alas,	Malay.
Jewadi,	,,	Babi utan,	,,

Schwein,	Ger.	Svin,	Sw.
Paddi,	Gond.	Pandi,	Tel.
Choiros,	Gr.	Hweh-hweh,	Welsh.
Jangli soor, Soor,	Hind.		

The wild hog abounds in many parts of India, and the males attain to a very large size. It is generally believed that there is no specific difference between the wild hog of Europe and India. The adult males dwell apart from the herd. The wild boar is constantly hunted by Europeans on horseback, with the spear; natives of India hunt the boar with dogs. Spearing the wild hog is one of the favourite sports of British officers in India.

All the wild hogs in the Archipelago are small animals compared with the wild boar of Europe, or even with that of continental India.

Sus verrucosus, so called from the fleshy excrescence on the sides of the cheeks, has a grotesque and a formidable appearance, but is in reality a timid animal. Their number in Java is immense in particular districts.

Sus Andamanensis, Blyth, a small race in the Andamans.

Sus Zeylanensis, Blyth. Mr. Blyth distinguished this from the hog common in India. The skull approaches in form that of a species from Borneo, the *Sus barbatus* of S. Muller.

The genus Babirussa of F. Cuvier takes its name from two Malay words, Babi, hog, and Rusa, a deer. It is the *Sus babyrussa* of Linnæus, and the *B. alfurus* of Lesson, and occurs in the island of Buru or Bourou, one of the Moluccas, also in Celebes and Ternate.

Sus Papuensis is a New Guinea hog.

Porcula sylvania, Hodg., the pigmy hog of the sal forests of N. India, is the Sano banel and Chota sur of the natives of India, and confines itself to the deep recesses of primeval forest. The adult males abide constantly with the herd, and are its habitual and resolute defenders.—*Sykes' Cat. Dec. Mam.* p. 11; *Crawfurd, Dict.* p. 152; *Tennant's Ceylon*, p. 59; *Catalogue of Mammalia in the India House Museum.*

HOG-DEER.

Hyelaphus porcinus, *Sund.*	Axis niger, *B. Ham.*
Cervus porcinus, *Zimmerm.*	Cervus niger, *B. Ham.*
C. dodur, *Royle.*	C. oryzeus, *Kelaart.*
Axis porcinus, *Jerd.*	

Para,	Hind.	Sugoria,	Hind.
Khar, Laguna,		Nuthrin hara	

The hog-deer inhabits Central India, Bengal, the Gangetic valley, Panjab, Sind, Assam, Sylhet, Burma. It frequents chiefly long grass and tamarisk jungles, grassy grounds and open glades in forest openings, rarely seeking the forest shade. It is not gregarious, both sexes living solitary in general. The young are beautifully spotted. The buck drops his horns in April, and ruts in September.—*Jerdon*, p. 263.

HOGENDORP. Le Compte C. S. W. de Hogendorp, author of Coup d'Œil sur l'île de Java et les autres possessions Neerlandaises dans l'Archipel des Indes, 1830.

HOGG, Sir JAMES WEIR, Bart., took a prominent part in discussions relating to Indian affairs in Parliament. He was a Director of the East India Company, and twice was Chairman. He was born at Stoneyford, in the county Antrim, in 1790, and was called to the bar in Ireland. At Calcutta he held the office of Administrator-General. He returned to England in June 1833. At the abolition of the old Court of Directors he was named one of the Political Military Committee. He was raised to the baronetcy in 1846.

HOG-GUM, a resin abundantly afforded by Moronobæa coccinea, *Aubl.*, a fine tree of Jamaica. Negroes dig it from among the roots of old trees. It is used in medicine, and is inflammable, burning with an agreeable odour. This might be introduced into India. The false hog-gum of Jamaica is yielded by Rhus metopium, *Linn.*

HOGLA. Beng. Typha angustifolia, Typha elephantina, *Roxb.*, elephant grass, cat's-tail grass.

HOG'S LARD.

Sur-ki-charbi, . . Hind. | Adeps suillus, . . . Lat.

This is the fat about the loins of the hog, Sus scrofa. It is purified by melting and straining. Its melting point is from 78 to 88 degrees Fahr. In Europe, hog's lard is much employed in ointments, but in India it is desirable to exclude it from all pharmaceutical preparations.—*O'Sh.*

HOISALA BELLALA, a dynasty who had supreme sway in Mysore from A.D. 1000 to 1300. They built three groups of temples, one at Somnathpur, S. of Mysore, by Vinaditya Bellala (1043), another at Baillur by Vishnu Verddhana (1114), and the greatest at Dwara Samudra or Hullabid (1145) by Vijaya Narsinha, the building of which was stopped by the Mahomedan invasion in A.D. 1310–1311.

Some of the Hoisala Bellala kings were Jains; but their buildings at Somnathpur, Bellur, or Hullabid belong to the Vaishnava or Saiva faiths. The Basti temples of the southern Jains, like the Jaina temples of Northern India, always have a tirthankara as the object of worship. The Bettu temples of Southern India are open courtyards, containing images of Gomati, who possibly may be Gautama Buddha. There are two hills at the village of Sravana Belgola, 33 miles N. by W. from Seringapatam. On one of these, a mass of syenite 500 feet high, a Jaina image, 70 feet 3 inches high, has been carved out of the solid rock. The expression of its features is pleasing, with curly hair; and at Karkala, the image, 41 feet 5 inches, and weight 80 tons, has been moved to its present site, and was erected A.D. 1432. The third, and supposed oldest, at Yannur, is 35 feet high. They belong to the Digambara sect of the Jains, being entirely naked, but with twigs of the Bo Tree twisted round their legs and arms, with serpents at their feet. In the Jaina cave at Badami, the figure has two snakes twisted around its legs and arms, and the Bo Tree is placed behind. On a shoulder of the other hill at Sravana Belgola, called Chandragiri, are the Basti temples, fifteen

in number, all of the Dravidian style, raised into storeys. The Jaina temple at Moodbidri, and all others in Canara, resemble the temples of Nepal, and many of them are built of wood. The interiors are richly and variedly carved, with massive pillars. A large number of the tombs of the priests, some of them five to seven storeys in height, each with a sloping roof, like the temples of Khatmandu, Tibet, and China. The stambhas or free-standing pillars of the Jainas in Canara, are very graceful.—*Fergusson*, p. 393. See Architecture.

HOLAR, also Holiar or Holaru, in the Canarese districts of the Peninsula, the Pariah or Dher race. Professor Wilson describes the Holar as a man of a low or out-caste tribe, by profession a musician, which answers to the Mhang race, but there is no doubt but that the Holar is the Dher. The Morassi Holiyar are the same as the Halle Makkalu, old adopted sons of the Morasi Wakaliga. They are labourers and weavers. See Holiyar.

HOLARRHENA ANTIDYSENTERICA. *Wall.*

Echites antid., *Roxb.*	Chonemorpha antid., *Don.*
Kogar of . . . CHENAB.	Keor (seed) . . . PANJ.
Kyur of . . . KANGRA.	Kawar of . RAVI, BEAS.
Kura (seed) of . . PANJ.	Istaraku pala, . . TEL.
Indarjao ,, . . ,,	

A large shrub or small tree of Malabar, Siwalik Hills, up to the Chenab in the N.W. Himalaya, Sylhet, and Chittagong. It bears a white flower. Its bark (Tellicherry bark) is used in medicine as an astringent. The leaves are used as fodder or as litter. The wood is white, light, and close-grained, and is used by carvers.

HOLARRHENA CODAGA. *W. I.* Kooda palli maram, TAM. A small-sized white wood, very fine grained, employed in cabinet-making. Dr. Wight gives also H. Malaccensis in Icones, 1298.

HOLARRHENA MITIS. *R. Br.* Kirri-wallagass, SINGH. A moderate-sized tree of Ceylon, not uncommon up to an elevation of 1500 feet.

HOLARRHENA PUBESCENS. *O'Sh.* Reora, HIND. Wood light. This species and the H. antidysenterica yield the Indurjuo talkh of the bazar.—*O'Sh.*; *Roxb.*; *Voigt*; *Thw. Zeyl.* p. 194.

HOLDNA. HIND. In Kangra, the process of destroying weeds in a rice crop.

HOLI, a popular Hindu festival, called in Sanskrit Holikha, or Phal gotsava, or Hutasham, or Hutasavi, also Dola or Dolavatra, or the Swinging Festival. It is supposed to relate to the vernal equinox, and to be similar to the Persian New Year's day. It is held about the 19th March, or ten days before the full moon of Phalgun. It is in honour of Krishna, and is quite a saturnalia, red powders being thrown and red fluids squirted at passers-by, and licentious songs sung. At the close of the festival, a pile is lighted, and a wheaten cake or Poli offered on it. The analogy between the goddess of the spring, Saturnalia, Phalguni, and the Phagesia of the Greeks, will be recognised. The word is not derived from eating, with the Rajput votaries of Holica as with those of the Dionysia of the Greeks, but from Phalguni, compounded of Guna, quality, virtue, or characteristic, and Phala, fruit,—in short, the fructifier. The Egyptian Phallica is the Holica of the Hindus. Phula and Phala, flower and fruit, are the roots of all Floralia and Phalaria,—the phallus of Osiris, the thyrsus of Bacchus, or lingam of Iswara, symbolized by the Sriphala, or Ananas, the food of the gods, or the Sitaphala of Sita, the Helen of Ayodhia. It is much observed by the cowherd castes of Orissa.

HOLIDAYS of the several races dwelling in India chiefly occur at seasonal changes, but also at the anniversaries of certain occurrences connected with their religions or historical events. The dates of the public holidays vary with the lunar months, and those below are approximate :—

Christian.

New Year's day, Jan. 1.	Easter holidays, March.
Good Friday, April.	Ascension day, May.
Christmas day, Dec. 25.	Pentecost holidays, June.

Hindu.

Makar Sankranti, about January 11.	Janm Ashtami, about Aug. 14.
Maha Shivaratri, about February 24.	Ganesh Chaturthi, about August 25.
Huli, about March 10-11.	Dasara, about September 30.
Ram Naomi, about April 4.	Diwali, about Oct. 18-19.
Shravani purnima, Cocoanut day, about August 6.	

Parsee—Rasami or Shahanshahi.

Jamshidi navroz, about March 21.	Gatha Gahanbars, about September 19-21.
Aban feast, about end of April.	Pateti or New Year's day, about September 23.
Adar feast, about June 8.	Kurdad feast and valava, about September 28-29.
Farvardin Jasan, about June 8.	Atishbehram Salgeri, about November 8.

Parsee—Kadmi.

Aban feast, about end of March.	Pateti or New Year's day, about September 24.
Farvardin Jasan, about May.	Kurdad feast and valava, about August 29-30.
Gatha Gahanbars, about August 20-22.	Atishbehram Salgeri, about September 9.

Mahomedan—Sani (lunar months).

Shab-i-Burat.	Ashura.
Lailat-ul-Kadar.	Bari Wafat.
Ramadhan 'Id.	Ghilan.
Bakr 'Id, or 'Id Kurban.	Miraj-i-Mahomed.

Mahomedan—Shiah (lunar months).

Katl-i-Imam Ali.	'Id Gadir.
Shaha Kadir.	Ashura.
Ramadhan 'Id.	Chahlam.
Bakr 'Id.	'Id Maolud.

Jewish.

Purim, or day of Queen Esther, March 13.
Pesach or Passover, April 11-17.
Shabuoth, or the Delivery of the Law, May 31.
Tishabaiab, or the day of Lamentation, August 1.
Rosh Hosana, or New Year's day, September 21-22.
Kipur, or the days of Atonement, September 29-30.
Succoth, or the Feast of Tabernacles, October 5-13.

Hindus have many other festivals. Their names differ in the several languages; but there may be named here Bali-Pratipada, Basant'h-Panchami, Nag-Panchami, Kartiki Ekadasi, and others.

Mahomedans have also the Maharram, Akhiri-Char Shamba, Chiraghan-i-Banda Nawaz, and Zinda Shah Madar, Pir Dastagir, and Urūs-i-Kadar Wali.

Parsees have in addition, the Amardad, Jamshidi-Naoroz, Ardibehesht-Jasan, Meher-Jasan, and others.

HOLIGARNA LONGIFOLIA. *Roxb.*

Kagira, Biba-biba, CAN.	Katu-jeru, . . MALEAL.
Holgeri, . . . MAHR.	

One of the trees yielding the well-known black lacquer varnish. It grows in Travancore, in Malabar, in Canara, and Sunda, mostly above the ghats at Nilgund, in the Konkan, Assam, Chittagong, and in the forests of Tenasserim. Wood good for houses and beams. Its danger-

ously acrid exudation is used by the natives to varnish shields and for other purposes. A fine black varnish from its fruit is brought from Manipur. This turns of a beautiful black colour when applied to a surface, owing, according to Sir D. Brewster, to the fresh varnish consisting of a congeries of minute organized particles, which disperse the rays of light in all directions; the organic structure is destroyed when the varnish dries, and the rays of light are consequently transmitted. There is brought also from Manipur a varnish made from the Semecarpus anacardium (marking nut), and a remarkable black pigment resembling that from Melanorrhœa usitatissima, which is white when fresh, and requires to be kept under water.—*Roxb.; Voigt; Gibson; O'Sh.; Mason; Hooker's H. J.* ii. p. 331; *Beddome.*

HOLIGARNA RACEMOSA. *Roxb.* A tree of Assam, Sylhet. Leaves alternate, linear-oblong. Flowers racemed, juice of the wood acrid.—*Roxb.*

HOLIYA or Holayar, in the Canarese-speaking country, in Mysore, and in Coorg, an agricultural labourer. In the Canarese-speaking country, like the Pariah or Dher; in Coorg he is one of three principal classes of slaves, Holayaru, Yewaru, and Paleru. Their subdivisions are the Mari, Byr, Murtha, Bulgi, Baday, Rookh, and Kembatta Holayaru. The last is a native of Coorg. The Mari Holayaru follow the custom of descent through the female line, the descensus ab utero. The Holeya race of labourers in Coorg, ill-favoured, with coarse, stupid features, short in stature, but strong built, with dark and black skin, and black, straight hair. They practise demonology, and are said to have no guru.—*Wils.* See Holar.

HOLKAR, the family name of the Mahratta rulers at Indore and its territories. The family name is taken from the village of Hull, on the Nira river in the Dekhan, where they were shepherds and farmers. Mulhar Rao Holkar, son of Khùndaji Holkar, was born about the year 1693, and his mother, in consequence of some dispute, took him to Kandesh to his uncle Narainji, where, as a lad, he herded his uncle's sheep. When grown up he took service, and distinguished himself under Kudum Bande, a Mahratta leader, but subsequently (1724) under Baji Rao Peshwa as a commander of 500; and in 1728 was sent to administer Malwa, where he died A.D. 1769. Mulhar Rao was present at the battle of Panipat, and shared in the common overthrow of the Mahratta armies. Sindia's forces were almost annihilated, and Madhaji Sindia was lamed for life; but Holkar's division alone drew off with serried ranks and little loss, and Sindia thought that he had not been well supported by Holkar. He was succeeded by his grandson, Mali Rao, who died insane, nine months after his ascension. The pious Ahalya Bai, the mother of Mali Rao, then took the management of affairs, and appointed as the commander of the army, Tukaji Rao Holkar, a chief of the same tribe, but in no way related to Mulhar Rao. This chief for many years served Ahalya Bai with the most devoted fidelity. Ahalya Bai died in 1795, and was not long survived by Tukaji Rao Holkar, after whose death the power of the house of Holkar was nearly extinguished by quarrels in the family and amid the dissensions which distracted the Mahratta confederacy at the close of the eighteenth century. The fortunes of the family, however, were restored by Jeswunt Rao, an illegitimate son of Tukaji Rao Holkar, who in 1802 defeated the united forces of Sindia and the Peshwa near Poona. The conclusion of the treaty of Bassein, between the Peshwa and the British Government, defeated Jeswunt Rao's hopes of possessing himself of the person of the Peshwa. In the following year, when Sindia and the raja of Berar combined against the British, Jeswunt Rao Holkar promised to join the confederacy, but on the actual outbreak of hostilities he kept aloof, and apparently intended to take advantage of the war to aggrandize himself at Sindia's expense. His schemes, however, were rendered hopeless by the treaty of Surji Anjengaum; and Jeswunt Rao Holkar, after making a series of inadmissible proposals for an alliance, seems then to have hastily determined, unaided and alone, to provoke hostilities with the British. In the war which followed, Holkar was completely overthrown. He was pursued by Lord Lake across the Sutlej, whither he retired in the hopes of forming a combination with the Sikhs against the British Government; and on 24th December 1805 he signed a treaty on the banks of the Beas, by which he was stripped of a large portion of his territories. Soon after the conclusion of the treaty, Jeswunt Rao Holkar became in 1805 insane. He died in 1811, leaving an illegitimate son, named Mulhar Rao Holkar, during whose minority the state was torn by the most violent dissensions. The lad's mother, Toolsi Bai, the favourite concubine of the late ruler, secured herself in the regency. She was, however, subsequently barbarously murdered, and Holkar's army having sustained a complete defeat at Mehidpore, on 6th January 1818 the treaty of Mundisore was concluded, by which the supremacy over the Rajput princes of Udaipur, Jeypore, etc., was transferred to the British Government, the engagement between the British Government and Amir Khan was confirmed, four districts rented by Zalim Singh of Kotah were ceded to him. Holkar lost all his possessions within and to the south of the Satpura Hills, and his remaining territories came under the protection of the British Government. Mulhar Rao Holkar died in October 1833, at the age of 28. He left no issue, but his widow and his mother adopted Martand Rao Holkar, a child between three and four years of age, who was said to be of the same tribe and lineage as Mulhar Rao Holkar. The child was publicly installed on 17th January 1834, under the name of Martand Rao Holkar. The adoption of Martand Rao, however, proved to be a device of the mother of Mulhar Rao Holkar, for the purpose of keeping the power in her own hands during a long minority. It was not acceptable to the people, who were in favour of the succession of Hari Rao Holkar, a cousin of the late Maharaja. Hari Rao since 1819 had been kept in rigorous confinement, but he was released on the night of 2d February 1834, by a powerful body of his partisans, and received a ready welcome from the troops and people. The policy of non-interference prevented the Resident from giving active support to Martand Rao, although the installation of Martand Rao had been formally acknowledged by the British Government. This indifference on the part of the British Government as to who should rule, gave rise to most serious disturbances. The wealthy merchants fled from Indore, trade

was suspended, and Bhil tribes infested the roads and destroyed many villages. Martand Rao was banished from the country, and granted an allowance of 500 rupees a-month, on condition of his resigning all claims to the succession. On 8th September 1835, an attack was made on the palace for the purpose of assassinating the Maharaja and his minister. The attempt was unsuccessful, and resulted in the slaughter of the whole of the assailants. Martand Rao Holkar died without issue at Poona, on 2d June 1849, and with his death ended the intrigues which from time to time endangered the peace of the country, both during the rule of Hari Rao Holkar and his successor. When the attack was made on his person in 1835, Hari Rao applied to the British Government for aid, but it was refused, on the ground that the engagement to maintain the internal tranquillity of the country depended on the condition that the measures of its government were not directly or indirectly the cause of disturbance; and because the grant of assistance would require a continual interference in the internal affairs of the state, inconsistent with the position of Holkar and the policy of the British Government.

In 1841, Maharaja Hari Rao adopted as his heir and successor, Khundi Rao, a boy of 13 years of age, son of an obscure zamindar, and very distantly related to the reigning family; and Hari Rao died on the 24th October 1843, aged 48. Warned by the evils which resulted from the vacillating policy pursued on the accession of Martand Rao, the British Government took immediate measures to proclaim Khundi Rao as the acknowledged successor, and to make it known that no other claims would be recognised. But Khundi Rao died on 17th February in the following year. He was never married. On this, Sir Robert Hamilton selected and installed the younger son of Bhao Holkar, who took the title of Tukaji Rao Holkar. In a letter to the young chief, the Governor-General laid down the conditions on which the state was conferred on him. This letter (No. lxxvii.) was declared to have the force of a sunnud, and the Maharaja was required to present a nuzzer of 101 gold mohurs on its delivery.

The young chief, Tukaji Rao Holkar, attained his majority in 1852, and was entrusted with the entire management of the affairs of the state, and was granted a sunnud guaranteeing to him the right of adoption.

An annual payment of 30,000 rupees is made to Holkar by the British Government as compensation for his share of the district of Patan, which was made over to Bundi in 1818. The Maharaja also receives through the British Government a tribute of 72,700 Salim Sahi rupees, on account of Partabgurh, but he has no feudal supremacy over that state. He receives credit for this tribute as part of his contribution towards the Malwa contingent, and it is realized from Partabgurh one year in arrears.

In the war with Jeswunt Rao Holkar, Lord Lake gave many lessons how to deal with the less coherent forces of Asiatic rulers. Jeswunt Rao Holkar, when he opposed the British in 1803, had 0,000 regular troops, amongst whom were ,000 light horse, and 130 guns, with the forsses of Chandore and Galingurh. From the tics he adopted, this moveable force baffled the British commanders and all the military power of India, from April 1804 till the 15th February 1805. But on the 2d April 1805, Lord Lake marched all night, and at daybreak entered Holkar's camp, which he completely broke up; in this, in going and coming, Lord Lake marched 50 miles. Lord Lake subsequently, in December 1805, marched in his pursuit 405 miles in 48 days, from Secundra to the Beas river at the Rajghat. In Jeswunt Rao Holkar's final overthrow, Lord Lake marched 350 miles in a fortnight. Sir D. Ouchterlony was defending Dehli against the Mahrattas; but, on their abandonment of Dehli on the 14th or 15th October 1803, Lord Lake followed them, and at length, with a small body of 3000 British horse and artillery, amongst which were the 8th and 27th Dragoons, made a forced march of about 48 miles, defeated the forces of the Mahrattas, about 60,000, near Farrakhabad, followed 10 miles in pursuit, and returned to camp, making a journey of about 70 miles in 24 hours, with a loss of 22 dragoons killed, and 20 Europeans and natives wounded.

At that time, Amir Khan, the Rohilla chieftain of Rohilkhand, forsook the Bhurtpur raja, but was followed by General Smith, whom Lord Lake sent in pursuit. After a march of 700 miles in 43 days, Amir Khan's army was overtaken, and defeated at Afzalghur, at the foot of the Himalayas, on the 2d March 1804, and Amir Khan was conveyed across the Ganges and Jumna in March, but he rejoined Holkar's camp under Bhurtpur. At Laswari, in Central India, in 1803, Lord Lake and General Fraser fought and won a battle against the battalions of Sindia and Perron.

The Indore State maintains 3300 cavalry, 5250 infantry, and 340 artillery, with 24 field guns.

In 1832, the Maharaja (1883) Tukaji Rao Holkar was born, and in 1843 he was placed on the throne by the intervention of the British. He has displayed much capacity as a ruler. His estates are somewhat scattered, and he has wished to connect them. Area, 8075 square miles, and population in 1878 was 635,000. He has earnestly encouraged all commercial and trading transactions. The aboriginal race is the Bhil.—*Treaties and Sunnuds.*

HOLLAND, a country in Europe with great possessions in the Eastern Archipelago, which are designated Netherland India, also the Dutch Possessions in India; and Holland formerly held parts of Ceylon, also parts of what is now British India, and likewise Malacca in the Malay Peninsula. Holland is situated along the south-eastern coast of the North Sea, and extends in its greatest length, from N.E. to S.W., about 190 English miles. Its greatest breadth, from E. to W., is about 123 English miles. The superficial area is 7,614,252 English acres, or 11,897 English square miles. Holland has had a severe contest with the ocean, which has ended in the country being brought into a high state of cultivation and comparative safety. The canals are very numerous, and of the greatest utility in draining off the waters, and in facilitating the internal trade. They are lined with trees, which tend greatly to improve the country, in itself so flat, that to those approaching it along the rivers and some part of the coast the trees and spires seem to rise out of the water. Along the coast of the North Sea there is a line of broad sand-hills and downs, in some parts so very high as to

shut out the view of the sea even from the tops of the spires. In some parts of Zealand and of North Holland the defensive war against the encroachments of the sea is kept up with great difficulty and at an immense expense. The province of Friesland, which has no sandhills, is protected against the sea by stupendous dykes and palisadoes, the repair of which costs upwards of half a million sterling yearly. The industry of the people has multiplied cattle and pasture-grounds. Laws passed in 1857 and 1863, and based on a system of religious equality, and a total separation of church and state, ensure for every child in the country an education in the simple branches of secular knowledge. The three universities of Leyden, Utrecht, and Groningen contain upwards of 1400 students. The population in 1865 was 3,529,108. Protestants, 1,942,387; Catholics, 1,234,486; the remainder are Jews. Several dialects are spoken in Holland. The Dutch, which is an offspring of the Low German or Nieder Deutsch, is the language of two-thirds of the inhabitants. Flemish is spoken on the Belgian frontier. See Dutch.

HOLLY, Ilex aquifolium, *Linn.*, a favourite European evergreen. Its hard white wood is used in making Tunbridge ware, for the stringing or lines in cabinet work, calico-printers' blocks, etc. Birdlime is the juice of holly bark extracted by boiling, mixed with a third part of nut-oil. 21 species are known as natives of the Himalayas, Nepal, Southern India, Khassia Hills, and Burma. Several species of holly—Kau-kuh and Tsz'-shu—grow in China; Ilex cornutum, near Ningpo; I. agnifolium, near Canton. The berried holly tree, called Miau rh-tsze and Luh koh-tsze, grows along the valley of the Yang-tse; a tea, called Luh koh-ch'a, is made from the leaves, and the wax insect sometimes feeds on them. The wood is turned into small boxes, and the bark is boiled to produce birdlime.—*Smith, M. M.* See Ilex.

HOLLYHOCK is a plant of the genus Althea, and its varieties well worth cultivating on the plains during the cold months of India.—*Jaffrey.*

HOLOCANTHUS INSPERATOR, *C. and V.*, Kulloo koli min, Tam., is a fish frequently taken at Madras. H. semicircularis, *C. and V.*, also a Madras fish.

HOLOCENTRUS ARGENTEUS is the Poo-koorowah, a very delicious fish of Ceylon and the Bay of Bengal. H. ruber, a beautiful red fish of the New Hebrides, is poisonous at certain seasons.—*Bennett.*

HOLONG. Hind.? A tree of Chutia Nagpur, furnishing a hard red timber.—*Cal. Cat.*

HOLOSTEMMA RHEEDIANUM. *Spr.*

Holostemma adakodien, *R. et Sc.*
Asclepias annularia, *Roxb.*
A. convolvulacea, *Herb., Heyne.*
Sarcostemma annulare, *Roth.*

Apoong, . .	. Kol.	Istara'kula palem,	Tel.
Ada modien,	Maleal.	Vistara'kula pala,	
Palla-gurgi, .	. Tel.	Palagurugu, . .	

This plant grows throughout India. It has large flowers of a red, green, and white colour; is very abundant in the hills about Purulea, and is also found in the neighbouring plains of Chutia Nagpur. The fibre is said to attain its best condition after the rains.—*Royle, Fib. Pl.* p. 306.

HOLOTHURIA.

Hoy-shun, . . .	Chin.	Swala, . . .	Japan.
Sea cucumber, . .	Eng.	Holothurion, . .	Lat.
Sea slug, . . .	,,	Trepang,	Malay, Japan.
Cornechu, . . .	Fr.	Biche-da-mar, . .	Sp.
Beche-de-mer, . .	,,		

There are thirty-three species or varieties, and several of them are used as food. They are found in the Mediterranean, in the Eastern Archipelago, Australia, Mauritius, Ceylon, Zanzibar, etc., and are occasionally brought to Bombay from the latter place, and re-exported to China. The great sea cucumber of Europe is the largest of all the known species, and is probably a foot in diameter.

H. oceania, *Lesson*, is about 40 inches long, and secretes from the surface of its body a fluid which causes an intolerable itching.

H. lutea, *Quoy and Gaimard*, is the Stychopus luteus, *Brandt.*

H. tubulosa, *Blainville*, of the Mediterranean. The Fierasfer Fontanesii, a parasite fish, dwells within it. It is eaten at Naples.

In the Ladrones, H. Guamensis, *Quoy and Gaimard*, is preferred as food.

H. edulis, the trepang of the Malay, is black. It is found in all the islands from New Holland to Sumatra, and also on most of those in the Pacific; but is produced in the greatest abundance on small coral islands, especially those to the south of the Sulu group. The Chinese at Canton call it Hoy-shun, which means sea ginseng.

The holothuria of Raffles Bay is about 6 inches long and 2 inches thick. There are six sorts, the best lying about 12 feet deep. It is an unseemly-looking mollusc. Upwards of 8000 cwt. are yearly sent to China from Macassar; about 9000 cwt. are exported from Java. It is fished for in April and May, and is relished in China and in Malay countries. They are boiled in water, then flattened by stones, dried on mats in the sun, and then smoked. It is for the most part caught by the hand, for it has little power of locomotion; but in deep water, sometimes by diving or by harpoons. It sells at Singapore at 8 to 115 dollars per pikul of 133⅓ lbs. Trepang, although an article of considerable importance in the trade of the Indian islands, is seldom dealt in by Europeans, which arises from nice or rather capricious distinctions in their quality, which no European is competent to appreciate.

New Caledonia exports annually, to the value of £4000, the white bellied, red bellied, small black, large black, and brown, with teats, selling at £12, £15, £20, £25, and £30 the ton. In China the first quality sells at £90 to £200 the ton. In 1871, 2742 pikuls were received at six Chinese ports. H. scabra, of the Philippine Islands, regularly lodges in its interior, species of fierasfer and of pinnotheres.

Many of the Holothuridæ have anchor-shaped spicules embedded in their skin, as the Synapta; while others (Cuviera squamata) are covered with a hard calcareous pavement. Many of these are of a bright red or purple colour, and are very conspicuous; while the trepang which is not armed with any such defensive weapons, is of a dull sand or mud colour, so as hardly to be distinguished from the sea-bed on which it reposes. See Fierasfer.

HOLU. Can. Pollution. See Holar; Holayar.

HOLWAN. In A.H. 16, when the Arabs had

taken this city, 300 horsemen returning from this enterprise, under the command of Fadhilah, towards the end of the day encamped between two mountains in Syria. Fadhilah (Fazl Allah) having intimated that it was time for evening prayer, began to repeat with a loud voice the usual form, 'God is great,' etc., when he heard his words repeated by another voice, which continued to follow him to the end of his prayer.—*Rich's Kurdistan*, i. 51.

HOLWELL, Mr., the chief of the settlement of Calcutta, when, on the 18th June 1756, it was taken by Suraj-ud-Dowla. Mr. Holwell and 146 of his people were thrust into a guard-room 20 feet square, from which in the morning only 23 re-issued alive. This guard-room was known in Indian history as the Black Hole of Calcutta. It was in the corner of Tank Square, near where, in 1834, was Messrs. Lyell, Mackintosh, & Co.'s office, but it was removed about the beginning of this century. See Black Hole; Calcutta.

HOLY FIG-TREE, Urostigma religiosum, *Mig.* Holy Grail or Sangreal, see Jataka. Holy Star Anise, Illicium anisatum.

HOM, of the Zendavesta, is the Soma of the Vedas, and supposed to be the Sarcostemma brevistigma; but possibly is the vine of Bacchus, the ampelos, and identical with the Gaogird tree, which enlightened the eyes.

HOMA, a sacrificial burnt-offering of the Hindus. It consists of clarified butter or ghi, presented to the fire in sacrificial ladles. The word is Sanskrit from Hoo, to offer. The devout of all eastern races have offered to the deity articles of the foods by which life is sustained. The Hom or burnt-offering of Abel was of the first of the flock. The modern Rajput tenders the first portion of the repast to Anadeva, the nourisher, the goddess of food; and all Hindus make similar oblations. The Homa burnt-offering can be made only by Brahmans. While prayers (mantra) are being said, five kinds of consecrated wood, together with the dhurba grass, rice, and butter, are kindled and burnt, and the fire is fed so long as the ceremony lasts.

HOMAGE is shown in Rajputana by offering of water. The kallas is a household utensil of brass. A female of each family, filling one of these with water, repairs to the house of the head of the village, when, being all convened, they proceed in a body to meet the person to whom they render honour, singing the suhailea, or song of joy. The presenting of water as a token of homage and regard is especially common in Mewar.—*Tod's Rajasthan*, ii. p. 98.

HOMALIUM CEYLANICUM. *Gardn.*

Blackwellia Ceylanica, *Gardn.*; B. tetrandra, *W. Ic.*

This large tree, the Lee-yang of the Singhalese, is not uncommon throughout the western forests of the Peninsula up to 4000 feet; is also found on the N. Arcot Hills, near Madras, also in Ceylon. The timber is very strong, and in use for building and various other purposes.

Homalium tomentosum? Myouk-kyan of the Burmese, a tree of Moulmein, with a strong wood.

Travancoricum, *Bedd.*, is a very handsome middle-sized tree of Travancore and Tinnevelly.

Griffithianum, minutifolium, Nepalense, proliquum, and Schlichii are also known, large trees.—*Cal. Cat. Ex.*, 1862; *Beddome, Fl. Sylv.*

HOMALONEMA AROMATICUM. *Schott.*

Calla aromatica, *Roxb.* | Zantedeschia arom., *Spr.*

Kuchu gundubi, Beng.

A perennial plant, native of Chittagong; tubers covered with the dried sheaths of the leaves, with long white fibres proceeding from every part. When cut they exhale an aromatic scent like ginger. As a stimulant it is highly esteemed in India. Dr. Wight figures also H. calyptratrum and H. rubescens.—*Roxb.* iii. 513; *W. Ic.*; *O'Sh.*

HOMALOPSIDÆ, a family of harmless fresh-water snakes, order Ophidia, sub-order Serpentes colubrinæ nonvenenati, species as under:—

Fordonia unicolor, *Gray*, Penang.
Cantoria elongata, *Othr.*, Singapore.
Cerberus rhynchops, *Schneid.*, from Ceylon to Siam.
Hypsirhina plumbea, *Boie*, Eastern India.
H. enhydris, *Schneid.*, Bengal, Eastern India.
H. Jagorii, *Peters*, Siam.
H. Bennettii, *Gray*, China.
H. Chinensis, *Gray*, China.
Ferania Sieboldii, *Schleg.*, Bengal, Province Wellesley.
Homalopsis buccata, *L.*, Malayan Peninsula, Gamboja.
Hipistes hydrinus, *Cant.*, Penang.
Herpeton tentaculatum, *Lacep.*, Siam.

HOMARARI, a Baluch tribe who occupy Tambu. See Kalat.

HOMERITÆ of Ptolemy; the Himyar of Arabia.

HOMONOYA SYMPHYLLIÆFOLIA. *Kurz.* A timber tree of Darjiling Terai.

HOMOPTERA, an order of insects. Amongst them, in the East Indies, sec. Trimera; family Fulgoridæ:—

Fulgora (Hotina) clavata, *Westw.*, Assam.
F. gemmata, *Westw.*, Himalaya.
F. guttulata, *Westw.*, N. India.
F. virescens, *Westw.*, Sylhet.
F. viridirostris, *Westw.*, Assam.
F. spinolæ, *Westw.*, Mysore, Assam.
F. oculata, *Westw.*, Malabar, Penang.
Aphæna scutellaris, *White*, Java.
A. imperialis, *White*, Sylhet.
Ancyra appendiculata, *White*, Moulmein.

HONAIN-bin-ISHAQ, a Christian, a native of Hira, who lived in the 9th century. He was one of the most ancient of the Arabian medical writers. After travelling in Greece and Persia, he settled in Baghdad, where he translated into Arabic the elements of Euclid, the Almagest of Ptolemy, and the works of Hippocrates and Aristotle. He appears to have commented on the works of Galen. One of his treatises is on the eyes, and another on sleep and vision.

HO-NAN is bounded on the N. by Peh-chi-li, on the S. by Hu-peh, on the E. by Ngan-hoei, and on the W. by Shen-si; it is also called by the Chinese, Tong-hoa. The capital is situated on the south bank of the Hoang-ho, which flows through the whole breadth of the province. Its population is turbulent, and generally found inimical to foreign travellers. Ho-nan means south of the river.—*Sirr's Chinese*, i. p. 431.

HONAWAR, a seaport town in the N. Canara district of the Bombay Presidency; situated in lat. 14° 16′ 30″ N., and long. 74° 29′ E. On the decay of the Portuguese power in India, Honawar was acquired by the sovereigns of Bednor; and, on the conquest of Bednor by Hyder Ali, this town also submitted to him. In 1783 it was taken by assault by a British force, despatched from Bombay, under the command of General Matthews; and in 1784 successfully defended by

Captain Torriano against Tipu Sultan, to whom, however, in the same year, it was ceded by the treaty of Mangalore. On the overthrow of that prince in 1799, it again came into the possession of the British. It is the Honor and Onor of Deb and Cesar Frederici; Hinawar, Hannaur of Abulfada; Hanor and Hunawur of Abd-ur-Razzaq; and probably the Nandor of the Catatan map; Abul Fazl describes it as a fine place, with pleasant gardens and a Mahomedan population, with a great export trade of rice, and much frequented by shipping. It was long a nest of pirates.—*Imp. Gaz.; Cathay*, ii. p. 451.

HONE, a stone used for sharpening or setting cutlery. The best is of a greenish colour, inclining to yellow, often marked with thin dendrical lines, and is moderately hard, having a fine close texture, resembling indurated clay. Hones of good quality are obtainable in the Cuddapah and Kurnool districts of India.—*Waterston; M. Ex.*

Mele, Miele,	IT.	Tayn, Teyna,	TAM., TEL.

Honey is obtained from the honeycomb of the Apis mellifica, *Linn.*, and other species of honey-bee, of the order Hymenoptera, *Linn.* Honey is secreted by the nectaries of flowers, sucked by the bee into its crop, where it undergoes some slight changes, and is then stored up in the comb for the food of its community. The finest honey is that which is allowed to drain from the comb; and if obtained from hives which have never swarmed, it is called virgin honey. In some localities it is poisonous, owing to the deleterious nature of the plants from which it is collected. Dr. Hooker has stated that in some parts of Sikkim the honey of rhododendron flowers is believed to be poisonous. Azalea pontica, the Anabasis informs us, poisoned the soldiers of Xenophon in the retreat of the ten thousand. Honey diluted with water undergoes the vinous fermentation, and hydromel or mead is produced. A wild shrub, jeneda, appears to intoxicate the bees. The aborigines take a piece in their hand, and, biting through the bark, they get the pungent white juice into their mouths; this they spit out at the bees, which either fly away or become intoxicated. The honey of the Eastern Archipelago is a thin syrup, very inferior in flavour to that of temperate climates. The comb is chiefly sought on account of the wax, which forms a large article of exportation to Europe, India, and China. The honeys of the Aravalli and of Kashmir are praised, selling at tenpence the pound. There are wild bees in the woods of Kashmir, but the zamindars have also hives in the walls of their houses. The bees are quite domesticated. In the Shevaroy Hills honey is largely collected by the Mallaiali race, and is seemingly the product of three species of bees. Mr. Fischer had some hives of bees from Europe, but by day the bee-eater birds and king-crows largely destroyed them, and moths at night stole the honey. Once, on examining the hive, he found a moth had succeeded in forcing its way into the hive. The bees had killed it there, but as they could not cast it out, they enclosed it in a wax tomb.

The honey-yielding Apis dorsata, A. bicolor, A. Indica, A. nigripennis, and A. socialis, occur in the south of India and Ceylon.

Sir Samuel Baker, in his book, Eight Years in Ceylon, refers to the Bambera (A. dorsata) as follows:—'The largest and most extensive honey-maker is the Bambera. This is nearly as large as a hornet, and it forms its nest upon the bough of a tree, from which the comb hangs like a Cheshire cheese, being about the same thickness, but five or six inches greater in diameter. The honey from this bee is not so much esteemed as that from the smaller varieties, as the flavour partakes too strongly of the particular flower which the bee has frequented; thus in different seasons the honey varies in flavour, and is sometimes so highly aperient that it must be used with much caution. The wax of the comb is the purest and whitest of any kind produced in Ceylon.' It is supposed to range the Archipelago, Siam. A. dorsata and A. Indica have been introduced into Europe, and the Cyprian bee into Ceylon. In Europe, the gold-banded Ligurian is prized.

HONEY DEW, a secretion on plants, from species of Aphides.

HONEY-EATERS of the South Sea Islands, are species of Melithreptes, in Australia and neighbouring islands, of the family Melliphagidæ.

HONEY-GUIDE, birds of the sub-family Indicatorinæ, genus Indicator, of Sikkim and the Malayana.

HONEY OF RAISINS is the Sher of the Persians. It is the juice of the unripe grape, boiled to a syrup and formed into a solid mass, like congealed honey out of the comb. It is supposed to be this honey to which Ezekiel, writing of Tyre, alludes (xxvii. 17): 'Judah and the land of Israel traded with thee; corn of Minnith, honey of raisins, and (in some editions honey alone) oil, and balm gave they to thee for thy wares.' It is made in Syria, and is exported to Egypt.—*De Bode's Tr.* ii. p. 146.

HONEY-SUCKERS, the name of a family of birds, the Nectarinidæ or Cinnyridæ, of which several species are common to India and the Archipelago. They are also called the sun-birds, and they take the place in the E. Indies of the humming-birds of S. America. Humming-birds have straight bills, while the bill of the sun-bird is curved. The species are all of small size, with some feathers of a bright metallic lustre. They hover over flowers, and extract the honey with their tongues. Dr. Jerdon notices the Arachnothera magna and A. pusilla, the large and little spider-hunter, Æthopyga miles, Æ. Vigorsi, Æ. Gouldiæ, Æ. ignicauda, Æ. Nipalensis, Æ. Horsfieldii, and Æ. saturata; Leptocoma Zeylanica and L. minima; Arachnechthra Asiatica and A. lotenia. The sub-family Dicæinæ, flower-peckers, has Dicæum coccineum, D. chrysorhæum, D. minimum, D. concolor, Piprisoma agile, Myzanthe ignipectus, Pachyglossa melanoxantha. In the Moluccas, in Bouru and Ceram and Timor, and Australia, species occur of Tropidorhynchus and Mimita.—*Jerdon; Tennant.*

HONEYSUCKLE. Jin-tung and Kin-yin-hwa, CHINESE, species of the genus Caprifolium, with few exceptions natives of cold countries; require rich vegetable soil.—*Jaffrey.*

HONG, a word used in Malay invocations, unhallowed, of great power, and so panas (hot), that if any man use a Hong invocation three times, nothing that he undertakes for himself will succeed, and he will live powerful but miserable, able to afflict or assist others, but unable to assist himself. It is perhaps the Sanskrit Hom. It appears to be considered as a recognition of an essence or first principle beyond God, and an appeal to it for power which God has not granted to man. It is used in Javanese invocations; and a Javanese explains it to mean embryo of being, primeval essence; so that Sir T. S. Raffles' conjecture, that it is the Buddhist and Hindu O'm (Amm), is probably correct.—*Jour. Ind. Arch.*

HONG. CHIN. A united firm, a mercantile corporation.

HONGAY. CAN.

Hip-pe, ... CAN.	Moha, . HIND., MAHR.
Kuranj, . HIND., MAHR.	Nella kalavalu, . TEL.

Under these names are known two different trees growing in the woods of Mysore. Oil is obtained from the seeds of both. Hip-pe trees are extensively planted in topes in front of villages, for the purpose of obtaining oil. They seem to be species of Bassia, or perhaps Pongamia glabra.—*M. Ex. of* 1857.

HONG-KONG, a large island at the entrance of the Canton river, about 22 miles in circumference, but very mountainous and generally barren. The highest peak has 1825 feet of elevation. The island was ceded to the British in the beginning of 1841, and Victoria Town is on the north side of the island. The houses of the European residents are built terrace-like, on the face of the hill. Hong-Kong is the Heang-Keang of the Chinese, and the name signifies the valley of fragrant waters. It is one of the group of islands which lie north of the estuary leading to Canton, in lat. 22° 17′ N., and long. 114° 12′ E., and is distant from Macao 42 miles, and from Canton 105 miles. Hong-Kong is about 10 miles in length, and 4½ in breadth; the noble harbour is nearly 4 miles in length, and rather more than 1¾ in width. Hong-Kong is one of that cluster of islands called by the Portuguese the Ladrones, or piratical islands.—*Lay's Chinese as they are*, p. 280.

HONHAR. HIND. Fate; that which is to be.

HONIGBERGER, DR., a German physician at the court of Ranjit Singh; author of a work on the medicinal products of the Panjab.

HONOVER, the most sacred prayer of the Parsees. It is very ancient, and has been translated from the Zend into German by Professor F. Spiegel, and into French by J. Oppert. D. Framjee of Bombay sent its words to the editor in 1871. He considers it to be a theistic prayer to the Supreme Being. Its words are,—

'Yathā ahū vairyō
Athā ratus ashāt chit hachā
Varihens dazdā mananhō shyaothénanām
Arihens Mazdāi, Khshathremch Ahurāi
Ayim darigubyō dadhat Vaçtārem.'

—*Bunsen's God in History.*

HOODED, in natural history, a term applied to describe several animals. The hooded chameleon is he Chamæleo cucullatus; the Corvus cornix is the ooded crow of Europe, Asia Minor, Afghanistan, apan, and Barbary; and the hooded presbytes is ne of the Simiadæ.

HOOKAH. HIND. The Indian pipe and apparatus for smoking. In Bengal generally, and in Persia, pure tobacco is rarely smoked; but various compounds are made and smoked in hookahs of various forms, the ghalyun of Arabia, nargyle of Persia, hubble-bubble of British India generally, and the highly ornamental hookah. The nargyle is doubtless a word derived from Narel, a cocoanut, for the primitive form of hookah is the narel, a hollow cocoanut shell half-filled with water. On one side of the shell is inserted a pipe, which is connected with the fire-pan and tobacco-holder (chillam), and on the other side is inserted another tube, which goes into the mouth of the smoker. When the smoker draws, the smoke from the first pipe (the end of which is under water), is drawn up with a bubbling noise through the water (hence the term hubble-bubble), and is thus cooled and purified. The flexible tube (necha) of the more elaborate hookah is made of a long coil of iron wire covered with cloth and ornamented. This was invented in Akbar's time. A hookah for smoking madhan (opium), with a peculiar shaped chillam, is called Madhaki. In Lower Bengal the lower orders frequently smoke in companies, with one hubble-bubble or narel or kalli, which are the most ordinary and cheap forms. All sitting round in a ring, the pipe passes from one to another, each taking a few whiffs as it passes. This is never done by the higher orders, nor is it done in Hindustan. The Sulfah form of hookah is the commonest in Kābul and Peshawur. The hookah has almost ceased to be used by Europeans in India, but natives continue to use it with gurako or prepared tobacco. Some hookah-snake tubes are very costly, the precious metals and precious gems being largely employed in their manufacture. The snake or pliable ornamental tubing lengthens out into several coils, and the smoke passes through a water-vase, while the mouthpiece is of amber, silver, etc.—*Simmonds' Dict.; Robinson's Travels*, ii. p. 226.

HOOKER. Sir Joseph Dalton Hooker, K.C.S.I., M.D., F.R.S., D.C.L., LL.D., was born 30th June 1817. In 1839 he entered the navy as Assistant-Surgeon, and up till 1843 he was Botanist of the antarctic voyage of exploration by the *Erebus* and *Terror* under Captain (Sir) James Clark Ross; and between that year and 1860 he published the Flora Antarctica, Flora Novæ Zelandiæ, and the Flora Tasmanica, in six quarto volumes. Between 1847 and 1853 he visited the N.E. of India, and published in two volumes a journal of his travels in the Nepal and Sikkim Himalayas. When on the frontier with Dr. Campbell, the raja of Sikkim seized and imprisoned both of them for some weeks. He published in a folio volume the Rhododendrons of the Sikkim Himalayas, and several communications in the journal of the Bengal Asiatic Society; and he and Dr. Thomas Thomson commenced a Flora Indica, of which one volume appeared; but later on he renewed the publication of the Flora of British India, and up to 1883 three volumes were completed. He also wrote On the Structure of the Balanophoreæ, On the Origin of the Pitchers of Nepenthes, On the Distribution of Arctic Plants, in 1860; Essay on the Flora Tasmanica, A Memoir on the Welwitschia Mirabilis; also Students' Flora of the British Islands, and Primer of Botany for the use of Beginners; and along with Mr. Bentham, Genera Plantarum ad exemplaria imprimis in Herbariis

Kewensibus servata definita. On the death in 1865 of his father, Sir William Hooker, he succeeded to the office of Director of the Royal Gardens, Kew.

HOOLOCK GIBBON, Hylobates hoolock, the white-handed gibbon (H. lar.). The long-armed apes or gibbons constitute a very distinct section of quadrumanous animals, confined to the Malay countries of Southern Asia and the adjacent islands. They do not usually bear captivity well.

HOOLOOGOO, grandson of Chengiz Khan. See Hulaku.

HOOLY, a Hindu festival in honour of Krishna, which takes place in the month Phalgun, February—March, at the commencement of the joyous spring. The amusements on this occasion consist in dancing, singing, and play. Their songs are called Kavir, or extempore stanzas, principally in allusion to the charms of Krishna and his amours with the Gopia, and are not marked by an excess of delicacy. One of the dances is the favourite Tipri dance, or Rasa mandala, in which 20, 30, or more form a ring, each having a short stick in the hand, with which the dancer strikes alternately those of the persons before and behind him, keeping time with it and his foot; the circle moves round, keeps time to a drum and shepherd's pipe of three or four sweet and plaintive notes. In Major Moor's Hindu Pantheon is a beautiful plate on this subject, in which Krishna (with Radha) in the centre is described as the sun, and the circle of dancers as the heavenly bodies moving round him. In the hooly, the players throw a red powder, sometimes mixed with powdered talc to make it glitter, into the eyes, mouth, and nose, or over the persons of those who are objects of the sport, splashing them well at the same time with an orange-coloured water. The powder is sometimes thrown from a syringe, and sometimes put into small globules, which break as soon as they strike the object at which they are aimed. The Hindu women are expert in throwing these. The hooly among the Hindus reminds one strongly of the Saturnalia of the Romans: people of humble condition take liberties with their superiors in a manner not admissible on other occasions. The chief fun in public is throwing the coloured powders above alluded to on the clothes of persons passing in the streets, and squirting about the tinted waters. Dignified personages avoid as much as they can appearing abroad while these jocularities are passing, unless with the view of gaining popularity they condescend to partake in them; in general they confine themselves to their houses, and amuse themselves with their families. In pictures, belonging to a series illustrating the domestic occupations of the Indians, the family diversions of the hooly appear like those more publicly exhibited,—scattering yellow and red powders, and squirting coloured water. Sending simpletons on idle errands contributes also to the delights of the hooly; this is performed exactly similar to our ceremony of making April fools on the first of that month, and is common to all ranks of Hindus; and Mahomedans, indeed, join in this, as well as in other items of hooly fun and humour. Another opportunity of merriment, similar to the May-day gambols of England, is afforded to the Hindus in a festival in honour of Bhawani, that always falls on or near that day.—*Cole. Myth. Hind.* p. 382; *Moor's Hindu Pantheon.* See Holi.

HOOPOE, birds of the genus Upupa, of which in India are U. epops, *Linn.*, U. nigripennis, *Gould.*, U. longirostris, *Jerdon.* U. epops is common in Southern Asia during the cold season, and on the table-lands at all seasons. It is to all appearance a bird of fluttering and feeble flight, but has repeatedly been observed, during the seasons of migration, at altitudes considerably above the limits of vegetation. On the western side of the Lanak pass, about 16,500 feet, Major Cunningham saw a hoopoe; also at Momay (14,000 to 15,000 feet elevation), under the lofty Donkia pass in Northern Sikkim.

HOORMUZ, the name of one of those Parthian kings known to the Romans as Artabanus. There were five of the name Artabanus, the first in B.C. 216, and the last about A.D. 235, and with whom ended the Arsacidæ, he having been slain by one of his officers, Ardeshir Babegan (Artaxerxes) who became the first of the Sassanidæ. It is supposed by Malcolm that Artabanus III. was the Shahpur of the Greeks. His son Vonones reigned for a short period. His name is sometimes written Pollas. He was the Volageses of the Greeks, whose war with the emperor Nero and embassy to Vespasian are related in the Roman history. Hoormuz appears to have been Artabanus IV. of the Romans.—*Malcolm's Persia*, i. p. 85.

HOPEA, a genus of plants of the natural order Dipterocarpaceæ. The Thin-ga-do of the Burmese, a species of Hopea, is a large tree which abounds in the same localities of British Burma as H. odorata, but the wood is not equally valued. A cubic foot weighs 52 lbs. It sells at 12 annas per cubic foot. H. decandra, *Buch.*, called Ooroopa in Malayala, is a tree which the natives of Canara prefer to teak for building ships, being more durable and close grained. H. discolor, *Thw.*, is a large tree of Ceylon, growing in the Saffragam and Ambagamowa districts at no great elevation. The under sides of the leaves are of a rich brown colour. H. faginea, *Wall.*, is a tree of Penang. H. floribunda? The-ah, also Tan-the-ya of the Burmese, is a very large tree of Tavoy.—*Thw. Zeyl.*

HOPEA ODORATA. *Roxb.*

Then-gan, . . . , BURM. | Then-gan-pha-yung, BURM.

This species grows in Chittagong and Burma, and is considered the most valuable indigenous timber tree in the southern provinces of Tenasserim, and at Tavoy and Mergui is sawn up for building purposes. The then-gan trees grow to a height of 250 feet; they are found near Moulmein in laterite and sandstone chiefly. The best canoes are made of it, and it is used extensively in native boat-building. It is a light-brown wood, is used extensively by the Burmese in the construction of boats carrying 3 or 4 tons, formed from the trunks of these magnificent trees. The trunk is scooped or burnt out, and stretched in the centre, whilst warm, by means of cross pieces of wood. When the required breadth is obtained, the sides are built up to obtain a greater capacity. These tree-boats, if they may be so called, are from 7 to 8 feet beam. The breaking weight of H. odorata may be stated at 800 lbs., with a specific gravity of 45 to 46 lbs.—*Drs. Mason, M'Clelland, Roxb.*

HOPEA PARVIFLORA. *Bedd.*

Kiral boghi, Ghats of S. CAN. | Iru-bogum, . MALABAR.
Tirpu, . Plains ,, |

A large, handsome tree, common both in the moist and dry forests in Malabar and S. Canara, up to an elevation of 3500 feet. The

wood is hardly known commercially as yet, but it is much valued by the natives in S. Canara; and Colonel Beddome believes it will be of great value for gun-carriage purposes, and will also answer well for sleepers. In S. Canara it is much valued for temple-building purposes.—*Beddome.*

HOPEA SUAVA. *Wall.* Engyin, BURM. A valuable tree found in the Eng forests of British Burma, but large trees are not common in Pegu. Wood tough and hard, but heavy, used in house-building, for boats, and a variety of other purposes, and said to be as durable as teak. A cubic foot weighs 55 lbs. In a full-grown tree, on good soil, the average length of the trunk to the first branch is 60 feet, and average girth measured at 6 feet from the ground is 7 feet.—*Dr. Brandis.*

HOPEA WIGHTIANA. *Wall.* A variety of this tree is the H. glabra, *W. and A.*, very common in many of the western Madras forests. The timber is very valuable, and very similar to that of Hopea parviflora. One variety, the Kong of Tinnevelly, is par excellence the timber of that district. Another variety is abundant in the S. Canara district, where it is called Kalbow and Hiral bogi; it is a first-rate coppice firewood, and large tracts in this state are met with in the plains of that district, never apparently flowering, but abundantly covered with the abortive fruit-like echinate excrescence, much like the young fruit of a Spanish chesnut; it is probably the formation of some insect in the bud of the panicle. A somewhat similar formation occurs in Hopea parviflora. —*Wall.; Beddome, Fl. Sylv.* p. 96.

HOPPER, the Appa of the Singhalese, and Apum of the Tamils. In Southern India, cakes made of wheaten flour and cocoanut milk. The Appas of the Bombay Presidency are made from the Sorghum vulgare, and are of rice-flour in Ceylon.

HOPS.

Humle, . .	DA., SW.	Luppoli, ...	IT.
Hoppe, . .	. DUT.	Humulus lupulus, .	LAT.
Houblon, . .	. . FR.	Chmel, ...	RUS.
Hopfen, . .	. GER.	Oblon, ...	SP.
Bruscandoli, .	. . IT.	Lupulo, . .	SP., PORT.

The hop plant has been introduced into India, grows well at Kaolagir in the Doon, but flowers sparingly. It has yielded enormously in Australian colonies, in Victoria, along the valleys of Gippsland, and other localities, to the extent of 1500 lbs. an acre. The properties of hops, of giving the bitter to beer and preventing acetous fermentation, enable it to be kept much longer. To it, no doubt, is owing a portion of the stomachic properties of malt liquor, as we see exemplified in the bitter, often called Indian, ales. Hops are hypnotic, especially when stuffed into a pillow, but they should be first moistened with spirits, to prevent the rustling noise. Fomentations also have been used. Hops are thought to be diuretic (as is also the root), and to be useful in correcting lithic acid deposits.—*Royle; Von Mueller.*

HOR or Hor-pa. TIBETAN. Kao-tsze, CHIN. This race call themselves Ighur. They seem to be Bhot. They dwell on the north-western frontier of Tibet, on the confines of the Turk districts of Little Bokhara. Some of them are Mahomedans, and Mr. Hogdson considers them to be Turks.—*Latham's Ethnology.*

HORA. SANSK., LAT. The 1-24th part of a natural day, answering to a European hour. The Vara or solar day in Hindu almanacs is reckoned from sunrise to sunrise, and is divided into 24 hora or hours, and each hora of the day is ruled by one of the planets in turns, the rotation being the Sun, Venus, Mercury, Moon, Saturn, Jupiter, and Mars.—*Kala Sankalita.* See Tithi; Vara.

HORA, a goddess of Byblus, worshipped at Babylon as Hea, the equivalent of Juno. Her name in Tyre was Itea.—*Bunsen.*

HORA-ALIA. SINGH. A rogue or must elephant.

HORA-BORA, a tank, now in ruins, in the Bintenne district of Ceylon. Its length is 8 or 10 miles, and breadth 3 or 4. The embankment is from 50 to 70 feet high, and its base is 200 feet broad.—*Tennant's Ceylon.*

HORANAWA, a shrill musical pipe in use with the Kandians. Its tones have some resemblance to those of the bagpipe. Its mouthpiece is made from the talipot leaf, and its other parts of jack-wood and brass.—*Sirr's Ceylon.*

HORDE, an introduced English word from the Turkoman word Urdu, a camp.

HORDEUM, a genus of plants of the natural order Panicaceæ, furnishing the barley so much used by the more northern nations of the world.

H. distichon, *Linn.*, 2-rowed barley.
H. deficiens, *Stendel*, of Red Sea, 2-rowed barley.
H. hexastichon, *Linn.*, 6-rowed barley.
H. vulgare, *Linn.*, 4-rowed barley.
H. zeocriton, *Linn.*, 2-rowed barley.

To this species belong the sprat, battledore, Fulham, Pultney rice, and Turkish barley, and the Dinkel.

English barley is that with 2-rowed ears, and its botanical name is *Hordeum vulgare distichon.* The Scotch *bere* or *bigg* is the *Hordeum vulgare hexastichon.* It has two rows of ears, but three corns come from the same point, so that it seems to be 6-eared. The grains of *bigg* are smaller than those of barley, and the husk thinner. The kinds of barley especially cultivated for making pearled barley or malt, are *Hordeum perlatum, H. distichon B., Zeocriton commune, Hordeum mundatum.* These are technically known as *Scotch* and *French pearl barley, battledore barley, German rice, sprat barley. Fero de ozzo* is made from sprat barley.

Professor Einhof analyzed 1000 parts of barley flour, and found it to contain 720 of starch, 56 sugar, 50 mucilage, 36·6 gluten, 12·3 vegetable albumen, 100 water, 2·5 phosphate of lime, and 68·0 of fibrous or ligneous matter.

The specific gravity of English barley varies from 1·25 to 1·33; of bigg, from 1·227 to 1·265. The weight of the husk of barley is 1/6, that of bigg 2/9. Professor Ure states 'specific gravity of barley is 1·235 by my trials.'

H. ægiceras, *Royle, MSS.*, has ears cylindrical; florets arranged in a confused manner, not in rows; awns soft, short, hooded, and bent downwards; grains loose in the husk. It is found in the northern parts of India, and probably in Tartary, as its grains have been sent to England under the name of 'Tartarian wheat.' Its appearance is more that of wheat than of barley, and its naked grains assist the resemblance. It is, however, a genuine species of Hordeum. It appears to be a productive plant, but little is as yet known of its quality in the climate of England.

H. gymnodistichum has the ear cylindrical;

awns almost parallel with the ear; grains loose in the husk. *Naked barley*, a species but little cultivated now, is of unknown origin. It is said to have been introduced into England in the year 1768; but it is reported to have preserved its characters unaltered from time immemorial in some parts of Europe.

H. gymno-hexastichon has the ear cylindrical; awns very long, rough, and rigid, rather spreading away from the ear; grains loose in the husk. The original of this, the naked 6-rowed barley, is unknown. It is extemely productive, and in some parts of Europe it is reckoned the most valuable of all. The French call it, on account of its good qualities, Orge celeste.

HORDEUM CŒLESTE.

Chama, ... BHOT.	Elo, ... CHENAB.
Grimnas (husked), . ,,	Ua-jo, Ua, KHAS, SUTLEJ.

This is found in the Sutlej valley between Rampur and Sungnam up to 15,000 feet. The beardless variety is most esteemed. Barley ripens in the end of May, several weeks before wheat. The dough made of it is called 'ampe' in Ladakh.

HORDEUM DISTICHON. *Linn.*

Zeocritum distichon, *Beauv.*

Shair, ... ARAB.	Shoreh, ... HEB.
Mu-yau, ... BURM.	Jao, . . HIND., PERS.
Krithe of Dioscorides, GR.	Barley arisi, . . . TAM.

Barley of Exodus ix. 31, the summer barley of England. This is commonly stated to be a native of Tartary. Colonel Chesney found it wild in Mesopotamia, upon the banks of the Euphrates. It is much cultivated in Europe, and is the common summer barley of England, and that which cultivators seem to prefer. Its ears are not so large as those of H. hexastichon, but the grains are heavier. Ear cylindrical; awns almost parallel with the ear; grains adhering to the husk.

HORDEUM HEXASTICHON. *Linn.*

Common or winter barley is grown in N. India. It is frequently cultivated as a cold-weather crop in the plains of the Panjab, as it requires less labour and gives more produce than wheat even in inferior soils, and where the water is deep below the surface. Above 8000 feet of elevation it is much more common than wheat, while at lower heights it is less grown. In Lahoul and Ladakh it is abundantly cultivated with Fagopyrum up to 13,000 feet in Ladakh. Some kinds of barley may be seen up to 14,000 feet about Hanle, near the Tsomoriri lake, and this is found in the Sutlej valley between Rampur and Sungnam at an elevation of highest limit 15,000 feet, and much cultivated. Barley is cultivated much in the same way as wheat, but is ready for cutting somewhat sooner; it is grown much on 'sailaba' and 'barani' lands. In the Panjab it is much less esteemed than wheat, and sells much cheaper, though it produces much more, and requires worse lands and less watering than wheat. The varieties are Jau-desi (common country barley) and Jau-paighambri. Ghoni jau is barley that has scarcely any husk at all, but only a fine skin. Barley is one of the cheapest of the grains found in the bazars of Kaira, in Gujerat.—*Powell; Cleg. Pany. Rep.; Stewart*, p. 256; *Eng. Cyc., quoting Lowe's Elements of Agriculture*, p. 238; *Voigt.*

HOREB and Mount Sinai are part of the Jabl-ul-Tur range, with Hor or Seir, now called Jabl Harun, or Aaron's mountain.

HOREHOUND, BLACK, Ballota nigra; white, patch leaves.

Horehound, *white*: Marrubium vulgare, *Linn.*

Pucha pat, . . . BENG. | Marrubium Indicum, LAT.

This plant grows at elevations of 2000 to 7000 feet in the N.W. Himalaya, in Kashmir, the Salt Range, on the Chenab and Trans-Indus. The leaves are of a whitish-grey colour, having a woolly appearance, and possessing a faint agreeable odour, and a sharp, bitter taste. That met with in Bombay is imported from Singapore, and is used in various ways by the natives, but chiefly as an ingredient in Guraku, and, when combined with other herbs, for scenting the hair of women. The essential oil is in great request among the superior classes of natives, for imparting the peculiar fragrance of the leaf to clothes.—*Faulkner; J. L. Stewart.*

HORINGHATA, one of the mouths of the Ganges.

HORMARA, a section of Baluchistan, adjoining the Arabian Sea. The Hormara tribe say they came originally from Sind.

HORN.

Cornu, ...	LAT.	Kommu, ...	TEL.

The horns of animals are largely utilized in the manufactures of the south and east of Asia; and those of the bison, buffalo, elk, ibex, goat, antelope, deer, oxen, and rhinoceros are largely imported or re-exported. Horn of kinds is extensively used in the manufacture of handles for knives, walking-sticks, spoons, combs, lanterns, snuff-boxes, powder-flasks, buttons, hairpins, etc. In China, buffalo horns are worked into lanterns, some of which are highly elegant. Chessboards, work and knitting boxes, tea-chests and tea-caddies, inkstands, baskets, etc., which are lined with sandal-wood, are generally very neatly made at Vizagapatam. But they are far surpassed, both in cheapness and workmanship, by articles of a similar description, the produce of German industry, which are largely imported into England.

In China, lanterns made of horn shavings are largely used. Horn is softened by very intense heat, and then extended into thin laminæ of any shape. The best sort of rhinoceros horns come from Cochin-China, and sell at times for 300 dollars a-piece; an inferior sort is imported into China from India, of which some probably are from Southern Africa, which are sold for 30 dollars and upwards a-piece. The Chinese work the finest of these horns into elegant cups and other articles, but the most of the importation is used as a medicine. It also forms an article of commerce in the Chinese junks trading to Japan. The deer-horns and antlers exported from India are the dense antlers of the sambur (Cervus hippalephus), of the barking deer (Cervus muntjac.), of the axis (Cervus axis), the nil-gai

(Damalis rusa), and other species; also the horns of the thar, gural, and yak. Horns exported from India,—

Horn-bows are sometimes used in the armament of some Chinese troops.

HORNBEAM, Carpinus viminea.

Shirash of . . . BEAS. | Imar of . . . SUTLEJ.
Charkre of . . . RAVI. |

A moderate-sized tree growing in the N.W. Himalaya, at from 5500 to 6000 feet up to the Ravi. Its wood is esteemed by carpenters.—*Dr. J. L. Stewart.*

HORNBILL, birds of the family Bucerotidæ, genera anorhinus, berenicornis, buceros, homraius, hydrocissa, meniceros, tockus, aceros, cranorhinus, rhyticeros, and rhinoplax, the shapes of whose bills arrest attention. Their food consists of fruits, berries, flesh, and even carrion.

B. cavatus, body and wings black, greater coverts and quill-feathers tipped with white; thighs, upper and under tail coverts, white. It is a native of India, the Himalaya mountains, Java, and most of the islands of the Archipelago.

B. pica, *Scopoli*, is the B. coronata, *Boddært.* The female is built up in the nest and fed by the male during incubation. This hornbill abounds in Cuttack, and bears there the name of Kuchila-khai, or Kuchila-eater, from its partiality for the fruit of the Strychnos nux vomica.

B. rhinoceros, the rhinoceros hornbill. The bill about 10 inches long, and of a yellowish-white; the upper mandible red at the base, the lower black; the horn or casque varied with black and white; the body black, of a dirty white below and posteriorly; tail about 12 inches, the feathers white at the base and tip, black in the middle. It is a native of India and the Indian islands.—*Eng. Cyc.; Goold; Tennant's Ceylon.* See Birds; Buceros.

HORNED HOG, the babirussa, inhabits the woods of Java, Celebes, and others of the larger Sunda isles. Its upper tusks are of great length and curved form, and grow upwards and backwards like the horns of the Ruminantia. It is probably the Sus tetraceros of Ælian.—*Eng. Cyc.* 359.

HORNET, Tsireah, HEB.; Crabo, LAT.

HORPA, Turkish tribes, so called by the Tibetans, and known to the Mongols as Bada Hor.

HORRE. SINGH. A hard, though coarse, open-grained, heavy Ceylon wood, Dipterocarpus lævis.

HORSBURGH, JAMES, whose name is indissolubly connected with the history of the Marine Surveys of India, was a native of Scotland. He began life as a cabin boy, but soon rose to the command of a vessel in the eastern seas, and gave rein to his innate love of surveying. After many years, he returned to England, and a set of his charts, engraved by Walker, placed him at once in the first rank of hydrographers. About 1804 he published the first edition of his East Indian Directory, and on the 10th November 1810 he was appointed to examine the journals of the East India Company's ships, and became Hydrographer. He held that office till his death in 1836, all charts published under his superintendence. Fourteen charts were actually compiled by himself, were published by the East India Company, from the N. and S. Atlantic to the Archipelago. His Directory went through six editions, in 1809, 1836, 1841. After the middle of the 19th century, Mr. Findlay printed one on that of Horsburgh, and in 1871 Captain Taylor printed another.

In his honour a lighthouse was erected on Pulo Aor, near Pedra Branca. His sailing directions are reckoned indispensable in navigation. The island of Pedra Branca is called Batu Putih by the Malays, both these terms signifying white rock. Prior to the quarrying operations on it, it was covered by the dung of the numerous sea-birds that frequented it as a resting-place. The rock is situated at the extremity of the Straits of Singapore, nearly in mid channel; and as it advances beyond the mouth of the Straits considerably into the China Sea, it has for ages served as the principal leading mark to vessels passing out of, or into, the Straits.—*Dr. Buist's Catalogue; Journ. Ind. Archipelago*, 1852; *E. I. Marine Surveys, P. P.*, 1871.

The king Sesonchosus of Egypt is supposed to have been the tamer of the horse. But, from time immemorial, the horse has been domesticated and subservient to man, and been largely used in war. An ancient eastern prince (Job xxxix. 19-25) describes the horse as a creature which

> 'Mocketh at fear, and is not affrighted;
> He saith among the trumpets, Ha! ha!
> And he smelleth the battle afar off,
> The thunder of the captains and the shouting.'

Judging by its varied names, the horse seems to have been very generally diffused over the central parts of the old world, some of the terms being derived from its neigh. Amongst every nation of the old world its use and beauty have made it a favourite. Supernatural powers have even been attributed to it by some nations. It was sometimes considered the most acceptable sacrifice that could be offered to heathen deities; and we read in 2 Kings xxiii. 11 that Josiah took away the horses that the kings of Judah had given to the sun. According to Herodotus, the horse was the most appropriate offering that could be made to the sun, on account of its great swiftness. The Persians dedicated horses to the sun; and Sextus Pompeius sacrificed to Neptune by throwing horses into the sea.

During the Hindu rule in Hindustan, prior to the advent of the Mahomedans, the horse was offered in sacrifice by sovereigns claiming paramount power. See Aswa Medha.

The sacred horses of the Germans were white, and the device of the Saxons was a white horse. Marco Polo tells us that 100,000 white horses were presented to the Great Khan on New Year's

day; and the Tartar chiefs continued at least to the time of Kan-ghi to present a tribute of white horses to the emperor. Native princes in all parts of India continue fond of white horses, and generally have one or more favourites of this colour in their stud. A favourite colour for state occasions is cream-colour. The royal carriage of Britain on state occasions is drawn by six cream-coloured horses. The horse represented on Greek and Roman bas-reliefs was a small, compact, and spirited-looking little animal, not larger than what we would call a pony, but he must have been perfectly trained, for neither bridle nor bit nor saddle was used by his rider, who guided him by a small stick, tapping him on either side of the neck as he wished to turn.

Naturalists generally believe that the varieties of all horses have descended from one species, but there are at present numerous varieties, presenting great differences in size, shape of ears, length of mane, proportions of the body, form of the withers and hind quarters, and especially of the head, and the pedigree of a racehorse is generally more to be relied on in judging of its probable success, than its appearance.

The horse can bear both intense heat and intense cold. In Siberia are wild horses in lat. 56° N., and he comes to the highest perfection in Africa and Arabia. Much humidity seems more unfavourable to the horse than heat or cold; and this, perhaps, will explain why, to the eastward of the Bay of Bengal, over a humid area of enormous extent, in Burma, Siam, Malayan Archipelago, the Loo-Choo Islands, and a large part of China, full-sized horses do not occur. In Japan, farther east, they recur. The range of colour in horses is very great. The English racehorse is said never to be dappled; cream-coloured, light and mouse-coloured duns are occasionally dappled. Horses of varied colours, of diverse breeds, and from various parts of the world, have a tendency to become streaked, and racehorses often have the spinal stripes, the stripe being generally darker than the other parts of the body; they occur across the shoulder and on the legs. Darwin considers the whole horse genus to have had for a progenitor an animal striped like a zebra (but perhaps otherwise very differently constructed), the common parent of our domestic horse, whether or not it be descended from one or more wild stocks of the ass, the hemionus, quagga, and zebra. He says that the spinal stripe in the English racehorse is more common in the foal than in the grown animal. The ass not rarely has distinct transverse bands on its legs, like those on the legs of the zebra. The spinal stripe occurs on horses of all colours, but on the mouse duns and on duns the transverse bands occur on the legs, and sometimes also a faint shoulder stripe. In the Kattyawar breed, a horse without stripes is not considered purely bred. The spine is always striped and the legs barred, and a shoulder stripe is common, and sometimes is double or treble. The ass has almost always a dark stripe or band on the shoulder, which is sometimes even double, but is always variable in length and breadth. The koulan of Pallas has been seen with a double shoulder stripe. The hemionus has no shoulder stripe, but their foals' legs are generally striped.

The prevailing belief amongst the Europeans in India, is that the native breeds of horses have decreased under British rule. Up to the beginning of the 19th century, there were several horse fairs in Rajputana, especially those of Bhalotra and Poshkur, to which the horses of Cutch and Kattyawar, the Lakhi jungle, and Multan, were brought in great numbers. Valuable horses were then bred on the western frontier, on the Looni, those of Rardurro being in high estimation. But after the successes of the British over the Mahrattas and the Pindara, the breeding studs of Rardurro, Cutch, and the jungle became almost extinct, and the horses from the west of the Indus were carried to the Sikhs. The destruction of the predatory system, which had created a constant demand, lessened the supply. The Lakhi jungle was well known in India for its once celebrated breed of horses, which became extinct in the early part of the 19th century.

Colonel Henry Shakespeare thinks that the cause of the decline of the native horse in India, arises from the fact that Government has encouraged the supply of a larger description of animal than the country naturally produced, and the hardy small breeds of native horses have thus been neglected. Perhaps, however, the chief causes of the decline in their numbers, is their non-requirement for the predatory bands and Parthian-like cavalry, since the contentions of the princes of India have been suppressed; also cultivation has been extending over grazing lands; and as the former governments of India and their military servants were the largest buyers of horses, though the British continue to buy extensively, the soldiers and the guns of the British Indian army are larger than those in use by former native powers, and the British admit only horses into the ranks of their armies, and even in their equipage a mare is rarely seen.

Panjab.—Under native rule, the Panjab maintained an enormous cavalry force, mounted chiefly, if not entirely, on horses bred in the country, but that territory is now unable to meet the demands of its irregular force, which is numerically insignificant compared with that kept up by the Sikh Government. The reasons assigned for this are three in number:—1st. Large numbers of brood mares were withdrawn from the Panjab at the time of the annexation; 2d. Extensive demands were made on the province for both horses and mares during the mutiny; and 3d. A large proportion of the re-mounts of the Sikh army were mares, which were regularly bred from; but under the British system, which requires re-mounts to be available for service at all times of the year, this cannot be done. It has therefore occurred that mares introduced into irregular cavalry corps, on account of their tractable nature, are not permitted to breed; and the result is that every one bought up for military purposes, and even every one bought up by the European community, may be regarded as a brood mare lost to the country. It has also been ascertained that breeders are parting with their best mares. The Dhunni caste, of the Rawal Pindi districts, the best in the province, is almost extinct from this cause. Yet many excellent brood mares were left, especially in the Rawal Pindi, Jhelum, Gujerat, Gugaira, and Lahore districts. There were also very good mares in the frontier districts, such as Bunnu, Kohat, Dehra Ismail Khan, and Dehra Ghazi

Khan. Although small, they possess good blood and great powers of endurance, which is everything in the horse.

Palanpur has a really good breed, the mares of which are justly and highly esteemed, and command considerable prices even among natives.

In *Rajputana*, few of the princes have generally good horses in their territories. The Marwar horse contains apparently much Kattyawar blood, and, bred with great care in many places throughout the country by the thakurs and others, is a valuable animal in every respect. Good mares are also scattered, but the generality of horses met with are inferior animals in every respect.

The breed of horses in *Jeypore* is exceedingly poor, as little care has been taken to improve the country animal in any way. Some few of the thakurs possess and breed good animals. The horses of Shikawutti are said to be good.

Bunni Singh, raja of Ulwar, founded a fine breeding stud, consisting of well-selected Arabs and Kattyawar horses, and in Ulwar the troopers were better mounted than native cavalry generally, and a better stamp of horses was met with than in any other Rajput state. The finest of his cavalry were, however, almost annihilated on meeting with the rebels in superior numbers in 1857.

In *Bhurtpur*, also, some attention was given to the breed of horses, but they are inferior to those of the Ulwar district.

The *Dekhan* breed of horses was highly improved about the beginning of the 19th century by crosses with the Arab horse. The small blood-horse of the Bhima valley or Terai are of this breed, and the mares are beautiful. The horse very rarely grows above 14 to 14·1 hands in height, but has the fine limbs, broad forehead, and much of the docility and all the enduring properties of the Arabs, and has been mistaken for them. He is not so fiery as the small and blood Arab, and more manageable in the ranks. Malligaum, about 75 miles from Ganga Kheir, on the Godavery, is a great mart for the Dekhan horse, and purchasers from all parts of the Peninsula annually resort to the fair. Some of the horses are really very fine. In the Dekhan, the larger horses are bred about the Gor river and Aligaum, between Poona and Ahmadnaggur.

The *Hyderabad* territory in the Dekhan can breed about 2000 horses a-year, and 500 good colts could be purchased at lower rates there than are paid for Arabs or Cape or Australian horses.

The low-statured horses of the *Bhima* and Man rivers, the Bhima Terai and Man Terai, are good. The Bhima horse has all the best points of the high-bred Arab, without his very fine skin, irritable temper, and rather long pasterns, and was generally better feet. The marches of the Mahratta and Pindari horsemen during the early part of the present century are well known, and the Mahratta pony to this day, when of the proper breed, commands a high price in the Indian markets. The little ponies used in Madras for the Jatka carriages, are brought from Poona, Sholapur, Hubli, and Dharwar. A few are bought from Kangayam in the south of the Peninsula. A good pony costs 150 rupees.

The *Tattu*, or pony of the Dekhan, is a wonderful animal, often with great speed, or great strength and much endurance. Their colours are generally bay or brown, or chesnut; grey seldom, and dun still more so. They are generally taught to amble four or five miles an hour.

The *Kathi* or *Kattyawar* horse is a large and powerful blood animal. They have fine lean heads, and make admirable cavalry chargers; commonly of a dun colour, with black points and black manes and tails. All have the shoulder stripe. It has been said, but not seemingly with correctness, that few of the Kattyawar horses of the present day are of the real Kattyawar breed, being much crossed with Arabs and half-bred horses of sorts. The pure bred Kathi are fine powerful horses, with one great deficiency in shape,—a want of bone below the knee, and a fiery screaming temperament. This breed is specially preferred by native chiefs, who give very large sums for handsome Kattyawars.

The *Ghoont* or *Khund* is a breed of the Himalaya mountains, generally small, strongly made, hard-mouthed, and sometimes almost unmanageable. In ascending hill faces, or passing along the declivities of mountains, it is best to let them have their own way, for in an intricate passage they often show more sagacity than the rider. Their common pace is a kind of amble, and they stop every now and then to breathe, when no application of the whip will move them. They are sure-footed, and sometimes halt at the edge of a precipice, to the terror of the rider; they are not so quick in ascending hills as the low-country horses, but they descend with double the speed, and endure great fatigue. The ghoont, though a useful animal, seldom carries any burden but a man. In Spiti they are bred chiefly for sale. They have two breeds, one a small ghoont, never above 12 hands high, peculiar to the country; and the other, a large breed from 13 to 13¼ hands high, is bought from the Chinese, and usually comes from Choomoortee; for a Chinese ghoont two years old they give a Spiti ghoont four years old. All are equally hardy, and are kept out the whole winter, except the yearlings, which are housed. During winter the ghoont live on the roots of the stunted bushes, and are very expert at scraping the snow from off them with their fore feet. The breed of ghoont might be improved with a little care. Many are killed during winter by wolves and leopards.

The *Yarkand* pony is a hardy little animal, and fetches a high price, being in request for the hill-stations in the North-Western Provinces of India. The variety called the Tangun piebald is common. They are shy and timid at first, and evince a strange dislike to Europeans, but soon get accustomed to their new masters; and for their strength, endurance, and sure-footedness, are well adapted for alpine travelling. While crossing the Karakorum mountains, whole caravans are sometimes overwhelmed by snowstorms; and Billah Shah, a chief merchant of Leh, mentioned that in many places the route to Yarkand was only traceable by the bones of horses.

The *Tangun* of Tibet are wonderfully strong and enduring. They are never shod, and the hoof often cracks, and they become pigeon-toed. They are frequently blind of one eye, when they are called Zemik (blind ones), but this is thought no great defect. They average £5 to £10 for a good animal in Tibet, and the best fetch £40 to £50 in the plains of India, where they become acclimated and thrive well. Giantchi (Jhansi-

jeung of Turner) is the best mart for them in the eastern part of Tibet, where some breeds fetch very high prices. The Tibetans give the foals of value messes of pigs' blood and raw liver, which they devour greedily, and it is said to strengthen them wonderfully; the custom, Dr. Hooker believes, is general in Central Asia. Humboldt (Per. Nar. iv. p. 320) described the horses of Caraccas as occasionally eating salt meat. In India, sheep's head is often given in mesalih. The *Tibetan* pony, though born and bred 10,000 to 14,000 feet above the sea, is one of the most active and useful animals in the plains of Bengal, powerful and hardy, and when well trained early, docile, although by nature vicious and obstinate.

In *China*, the horse commonly seen is not much larger than the Shetland pony. It is bony and strong, but is kept with little care, and presents a worse appearance than it would if its hair were trimmed, its fetlocks shorn, and its tail untied. This custom of knotting the tail is an ancient practice, and the sculptures at Persepolis show that the same fashion prevailed among the Persians. The Chinese language possesses a great variety of terms to designate the horse. The differences of age, sex, colour, and disposition are all denoted by particular characters. They are chiefly reared in the province of Kiang-si.

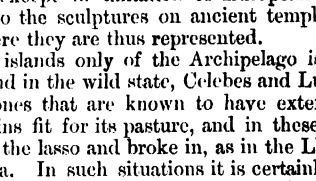
In the north also, in the vast plains, the Mongol, Tartar, and Manchurians rear horses, a docile, handsome, and intelligent breed, but do not generally exceed 10 or 12 hands; usually chesnut, bay, and grey. These are generally bred in a wild state, the stallions and mares being allowed to form herds in the plains at their will. Piebald or skewbald horses marked with patches of white and bay are to be seen. Horseflesh is eaten both by the Chinese and Mongolians, as also the flesh of mules and asses in many parts of China.

The horses of *Japan* average only 13 hands.

In the *Archipelago*, the horse has been immemorially domesticated by most of the more advanced nations, wherever it could be made use of. The chief exceptions are the Malay Peninsula, the eastern seaboard of Sumatra, and nearly the whole of Borneo,—countries in which the people dwell on the marshy banks of rivers, in which there is not even a bridle-path, and fit, therefore, only for the boat and the buffalo. The native horse is always a mere pony, seldom reaching 13 hands high, and more generally of about 12 hands. There are many different breeds, every island having at least one peculiar to itself, and the large islands several.

Sumatra has at least two distinct races,—the Acheen and Batubara, both small and spirited, but better adapted to draught than the saddle. The small but excellent breed of horses reared in Acheen excel all those of the Archipelago, excepting those of Bhima in Sumbawa. Those of Acheen have fine crests and good strong shoulders; in which latter particular, as also in height of wither, they differ very much from the horses of Java and the islands to the eastward, which are generally deficient in these points. They are exported to Penang and Singapore, and are driven in small carriages. They are occasionally sent to British India.

Of all the countries of the Archipelago, *Java* is that in which the horse most abounds, and here we find several different breeds, as those of the hill countries, and those of the plains. Generally, the Java horse is larger than that of Sumatra, but, in the language of the turf, has less blood and bottom. The lowland horses, the great majority, are somewhat coarse and sluggish, but the upland are spirited, smaller, and handsomer.



The horse, although of a very inferior breed, is found in the islands of *Bali* and *Lombok;* but the next island to these eastward, *Sumbawa*, produces the handsomest breeds of the whole Archipelago. They are the Arab of the Archipelago; yet the blood is not the same as the Arab, for the small horse of Sumbawa, although very handsome, wants the fine coat and the blood head of the Arabian. There are in this island and adjacent islets three different races, that of Tambora, of Bhima, and of Gunong Api, the last being most esteemed.

Next to Java, horses are most abundant in *Celebes*. These are inferior in beauty to those of Sumbawa, but excel all others of the Malayan portion of the Archipelago, in combining the qualities of size, strength, speed, and bottom.

A very good breed is produced in *Sumba*, called in the maps Sandal-wood Island.

But perhaps the best breed of the whole Archipelago, although still but a pony, is that of the *Philippines*. It is superior in size to any of the breeds of the western islands, which it may owe to the superior pastures of the Philippines, and possibly to a small admixture of the Spanish horses of America, although this last is by no means an ascertained point.

Generally, the horses of the Archipelago are hardy, sure-footed, and docile. The horses are all entire, and the mares used only to breed and as beasts of burden. By the natives of the Archipelago, the horse is only used for the saddle or to carry burdens, and never for draught, either for plough or wheel-carriage. To see horses drawing a native carriage, except in imitation of Europeans, we must go to the sculptures on ancient temples in Java, where they are thus represented.

In two islands only of the Archipelago is the horse found in the wild state, Celebes and Luzon, the only ones that are known to have extensive grassy plains fit for its pasture, and in these it is caught by the lasso and broke in, as in the Llanos of America. In such situations it is certainly far more likely to have become wild from the domestic state than to be indigenous. In so far as Celebes is concerned, this view is rendered probable by the name being a corruption to the Javanese from one language of that island, the Wugi; while in another, the Macassar, the horse is called the 'buffalo' of Java. In the Philippines it is not even alleged that the wild horses are anything else than domesticated ones become so. In Pigafetta's enumeration of the domestic animals of Cebu, he makes no mention of the horse. In the city of Manilla, a pair of good riding horses cost from 100 to 120 dollars, and a pair of carriage horses from 120 to 130. Of course they are much cheaper in the provinces where they are reared. The horses of Sumbawa, Celebes, and Sumba are largely exported to Java, to the British settlements in the Straits of Malacca, and even as far as the Mauritius. In Batavia, a good Bhima or Batak horse is worth from £10 to £15.

The *Barb*, so famed in Europe, was never brought to India; reared by the Moors of Barbary and Morocco, during their dominion in that country,

HORSE.

ıe barb was introduced into Spain, where, however, it has been suffered to degenerate greatly ince their expulsion. The noble barbs are of rare ccurrence even in their own country. The common orse of Barbary is a very inferior animal. In the eauty and symmetry of their forms, however, ven the barbs are far from excelling; their valuble qualities—and in these they are perhaps unqualled by any other breed in existence—are nrivalled speed, surprising bottom, abstinence, atience, and endurance under fatigue, and gentleess of temper.

Arabian horses are now-a-days comparatively ttle seen in India. A larger horse, with greater ower, has been needed, to meet the wants of the 3ritish Government for its heavier ordnance and eavier soldiers, and for the larger carriages now n use by Europeans and the wealthier natives. Also, the prices demanded for the Arab horses are eyond the means of ordinary purchasers, and the Arab never was in great request in India, except s a riding horse. The chief, Abd-el-Kadir, speakng of Arab horses, said, 'A thoroughbred horse s one that has three things long, three things hort, three things broad, and three things clean. The three things long are the ears, the neck, and he fore legs; the three things short are the dock, he hind legs, and the back; the three things road are the forehead, the chest, and the croup; he three things clean are the skin, the eyes, and he hoof. He ought to have the withers high and he flanks hollow, and without any superfluous lesh.' These are very nearly the words which vriters use in describing perfection in horses, and n these matters, therefore, they seem to have orrowed their ideas from Arabian writers.

The best Arab horses are bred in the desert by he Anazah tribe, in whose territory, before the onquest of the Wahabees, the district of Nejd as included, where the richest pasture of Arabia found. That name, in India, used to procure a gh price at all times for a horse. The Anazah one of the largest and most extensively subvided of the Bedouin tribes. They have the st horses. They visit Nejd as well as Syria. me of the Anazah Arabs have a great promince in the foreheads. The marks at the base of ears of the Anazah and other horses, have their gin in the custom of the Bedouin, of stitching new-born foal's ears together, to make them e what is thought the proper shape. Purveyors the Indian market, knowing that the Indian chasers look for such marks, frequently counter- them on the baser born breeds which they buy India, by branding them in the right place h the firing-iron.

In the Arab horse, says Colonel Shakespeare, favourite colours in India are greys of kinds. e nila, *i.e.* a grey with a blue skin, is generally re hardy that the sabza, a grey with a lightoured skin, and the feet of the nila are more nerally black than the sabza. The other colours bay and brown of different shades, and chess. Black is very rare. Arab roans are common. e high-caste Arab is phlegmatic and wearisome ide when unexcited; trips in his walk, and does step out; but when roused by emulation in hunt or race, will go at full speed over rock stone, when the soil is not visible, or up and the sides of a precipice, and, if properly led, never make a mistake.

The Arab people do not keep any long pedigrees of their thoroughbred horses. The certificates which they furnish merely give the names of the clans, under the assumption that the purity of blood is notorious throughout the tribe. Of all their domestic animals, Arabs put the greatest value on their horses.

The time to see the horses and horsemen of *Damascus* in their glory, is about sunset on the Merj and the neighbouring road, where they are regularly exercised. If the master does not ride, a groom is sent out, and the young foals gambol loose by their dam's side, till they are old enough to be ridden, which is at an early age. Their education begins often with learning the rahwan pace, which is much esteemed. It is generally taught by tying the feet on the right and left side together, each to each,—the right front to the right hind, and so with the left. An animal who excels in this kind of amble is worth a large sum, be he ever so ill-bred or poor in appearance. The value of the accomplishment lies in its comfort to rider and ridden, for so smooth is the pace, that a brimming cup of water may be held at full speed without spilling; and so easy is it for the horse, that a well-trained one is supposed to cover the distance between Damascus and Beyrout in eight or nine hours. When we consider that the actual length of road is 72 miles, twice ascending and descending several thousand feet in crossing the ranges of Lebanon and Anti-Lebanon, the performance is certainly creditable.

The pedigree of one of their horses of the blue blood is as well known throughout the districts traversed by the tribe he belongs to, as that of any royal family of Europe. The Bedouins of Syria have five principal breeds, known as the Khamsa, or five,—(1) The Kehilan (fem. Kehileh or Kehilet) is the fastest, but not the hardiest. They are bred chiefly by the Bedouins settled between Basra, Merdin, and Syria. That of Dsjulfa seems to be the most numerous. They are highly esteemed, and consequently are very dear. (2) The Seglawi (fem. Seglawieh), of which the Seglawi Jedran is considered the best in all the desert. (3) Abeyan (fem. Abeyeh) is a small, but generally the handsomest breed. (4) The Hamdani (fem. Hamdanieh), not a common breed. (5) The Hadban (fem. Hadbeh), not common.

Mr. Robinson says these five principal races diverge into many ramifications. Every mare particularly swift and handsome, belonging to any one of the chief races, may give origin to a new breed, the descendants of which are called after her, so that the names of different Arab breeds in the desert are innumerable. The horses of the Bedouin of Syria are mostly small, seldom exceeding fourteen hands. They ride, almost exclusively, their mares, having the advantage over the horses in speed and good temper. The latter they sell to the town's people, or to the fellahs. They object to them, not only because they are more vicious than the mares, but because they neigh, which in an expedition by night might be the means of betraying them. They are first mounted after the second year, from which time the saddle is seldom taken off their backs. They are kept in the open air during the whole year, never entering the tent, even in the rainy season. In summer they stand exposed to the mid-day sun. In winter a sackcloth is thrown over the saddle. Like his master,

with very little attention to his health, he is seldom ill. Burning is the most general remedy, and as this is done with a hot iron, it has given rise to the erroneous notion that the Arabs mark all their horses.

More than half of the Arab horses exported to Bombay are shipped from the seaport of Koweyt. Palgrave says they are generally brought from the north of Arabia or the Syrian desert. There are good horses of this kind at Hayel and Jabl Shomer. Those of Shomer or Anazah breed are high blooded, and often very perfect in all their points. The best of the Nejd horses are small, few reaching fifteen hands, and fourteen being about the average, but their small stature is not observed in their excellent shape. The genuine Nejd breed is obtainable only in Nejd; and the distinctive points of the Nejd horse are, the full rounded haunch, the slope of the shoulder, and the extreme cleanness of the shank. In Nejd breeding, care is taken to select a good stallion and good mare. The total number is about 5000; and horses are kept only for war or parade, all travelling and other drudgery being performed on camels, or on asses. The Nejd horses are esteemed for their great speed and endurance; and in the latter quality, indeed, they are unequalled, bearing up through abstinence and labour for 48 hours, under an Arab sky. They are often ridden without bit or bridle, saddle, rein, or stirrup, but they yield to the pressure of the knee or thigh, and to the voice; can be wheeled and turned and brought to a dead stand in mid career of full gallop. Mares are never parted with, and good stallions rarely so. Those of Hayel and Jabl Shomer are a fine breed, and horses from them often find their way to Europe, where they are sold at high prices. These are generally the produce of a Jabl Shomer mare with Nejd stallion, or the reverse. Their height varies from 14 to over 16 hands; but their shape is less elegant than the Nejd, and often indicates some defect, such as a heavy shoulder, small rump, shelly or contracted hoof, or small eye.

To the east and south of Toweyk, the Arab horse loses in beauty and perfection, in size and strength; and in Oman they resemble the tattu of India.

In the south of Arabia, the horses are mere rats, short and stunted, ragged and fleshless, with rough coats and a slouching walk, but with fine snake-like head, ears like reeds, wide and projecting nostrils, large eyes, fiery and soft alternately, broad brow, deep base of skull, wide chest, crooked tail, limbs padded with muscle, and long elastic pasterns. It was told to Captain Burton (Pilgrimage, iii. p. 269) that the Zu Mahomed and the Zu Husayan, sub-families of the Beni Yam, a large tribe living around and north of Sanaa in Yemen, have a fine large breed, called El Jaufi, and that the clan El Aulaki rear animals celebrated for swiftness and endurance. The other races are stunted; and some Arabs declare that the air of Yemen causes degeneracy in the first generation. In Solomon's time the Egyptian horse cost 150 silver shekels, which, if the greater shekel be meant, would still be about the average price £18; and Wellsted tells us (i. p. 306) that several of the Imam's horses in his time were of the noblest breed in Nejd, some of his mares being valued at from 1500 to 2000 dollars.

Persia.—The *Bakhtiari* have a hardy race of horses, of a middle stature, about the usual size of the Arab horse, and a good deal of the blood of the latter runs in their veins. They are exceedingly fleet, sure-footed, and soft-mouthed, very manageable also, and capable of climbing up mountains with the agility and fearlessness of mountain goats. Among the richer Bakhtiari are many Chab-Arab horses, which are taller than the Nejd-Arab, and resemble more those of the island of Bahrein. The Chab-Arab horse is justly prized in Persia; and Baron de Bode never witnessed a greater display of beautiful Arab blood horses, than on the plains of Mal-Amir, at the camp of the Bakhtiari chief, Muhammad Taghi-Khan, for at the court of the Shah of Persia the Turkoman horses are preferred to the Arab; and among the former, the Tekke breed is the most esteemed for its size, power, and faculties of endurance.

Arabian horses are not very common in the north of Persia; but the breed between them and a Persian mare is all elegance and elasticity, being of a rather stronger mould than the Arab of Nejd, the best race of the country. The Persian horses never exceed 14 or 14½ hands, yet certainly on the whole are taller than the Arabs, and have been much improved of late. Although neither so swift nor so beautiful as those of Arabia, they are larger, more powerful, and, all things considered, better calculated for cavalry. Of the several breeds of horses in use in Persia, the most valuable is that called the Turkoman. In the eyes of an English jockey, however, these horses would hardly seem to possess a single good point. They are from 14½ to 16 hands high, have long legs and little bone under the knee, spare carcases, and large heads. But what renders the Turkoman horses so valuable to the natives, is their size and extraordinary powers of supporting fatigue; for they have been known to travel 900 miles in 11 successive days. The Arabian blood has also been introduced into Persia, and some horses bred in Dashtistan, in point of speed and symmetry, emulate the most admired coursers of Nejd. Their usual food is chopped straw and barley; the bed is made of dung, which is dried and beat into powder, and regularly every morning exposed to the sun. No people are fonder or take more care of their horses than the Persians. They are clothed with the greatest attention, according to the climate and season of the year, and in the warm weather are put into the stable during the day, but taken out at night. The horses in Persia are not so subject to internal disorders as in England, but their heels are invariably contracted, from badness of shoeing.

Persian horses brought to Bombay from Basrah and Bushahr, and those bred on the shores of the Gulf, are in use with the British Government, and some are of great power, strong, and enduring. The Gulf horses are out of Persian mares by Arab horses.

Turkoman horses, of excellent breed, are found amongst the Turkomans, who export the finest to Afghanistan, Persia, and India. The Akhal and Yomut horse is little inferior to the Arab in swiftness, endurance, and beauty of form. The Turkoman horse is a fine animal, between fifteen and sixteen hands high. He is bred from the Arabian, but the cross of the breed of the country, and the fine pasture, have given him great size and strength. There are probably no horses in

the world that can endure so much fatigue. Sir J. Malcolm ascertained, after minute examination of the fact, that the small parties of Turkoman who ventured several hundred miles into Persia, used both to advance and retreat at the average of nearly one hundred miles a-day. They train their horses for these expeditions as sportsmen train for a race; and the expression they use to describe a horse in condition for a chapao or forage is, that 'his flesh is marble.' The Turkoman horse stands high, and the reports as to his feats show him to be a very superior animal, but they are almost unknown in India.

The Turkoman horse around the Hindu Kush is carefully reared. It is a large bony animal, more remarkable for strength and bottom than symmetry and beauty. Its crest is nobly erect; its head is not so small, or its coat so sleek, as the brood of Arabia, and the length of its body is greater. They will perform six hundred miles in 7 or even 6 days. Those that reach India are reared about Balkh, and Andkhu, and Maimana.

The horses of the *Turko-Tartar* races are,—

The Turkoman horse, or Argomak, chiefly in the western and southern parts of the khanate.

The Uzbak horse, more especially in the north of Bokhara, and in Miankale; and lastly,

The Khokand horse, in the neighbourhood of Samarcand and the east of it. There are two more, which are, however, inferior to the former; these breeds are the following,—the Kirghiz horse and the Karab Airi, the latter being a cross-breed from the Turkoman stallion and an Uzbak mare, and *vice versa*. All these breeds differ from each other by their coat, as well as by other qualities.

The Argomak is usually tall, well-shaped, with slender legs and a swan-like neck, carrying its head proudly and with ease aloft. But its great beauty consists in the peculiar lustre of its coat, which is especially observable in the bay-coloured Argomak. Their defects are, a narrow chest, and a scanty tail and mane, in addition to which, some have the defect of being saddle-backed. These defects incapacitate the Argomak for undertaking long journeys; and it would be above all things unadvisable to make use of them in travelling over the steppes of the Kirghiz, because they are so much spoiled by the excessive care which is taken f them, that they are almost incapable of finding ood for themselves, not only in winter, but even n summer.

The *Uzbak* horses, which are smaller than the mak, and inferior to them in point of external eauty, have nevertheless many redeeming quali- s, of which the principal is their strength. Some their defects arise in consequence of their being ly broken in by the Uzbaks. With these rses the pace is neither a walk nor a proper t, but what the Cossacks term a grana or short t. Baron de Bode here seems to mean the ble. The second defect is that the Uzbaks ver geld their horses, which renders it impos- le to picket them together, but each horse is iged to be attached to a separate stake,—a cir- tance which, although trivial at first sight, one of the reasons why the Uzbak camps take much room, and are therefore more exposed to lden attacks.

he strongest race of the Turko-Tartar horses ndoubtedly that of *Khokand;* hence they are ly employed by carriers for transporting goods from one place to another. Five batman is the usual weight of a loaded cart, although they increase the weight sometimes to seven and eight batman from Bokhara to Samarcand. The power of these horses becomes still more apparent when they are used as pack horses. Baron de Bode had seen a horse loaded with two large tents, some kettles flung over the back, and a man sitting astride. It accompanied him in this fashion the whole way from Samarcand to Karshi, and from thence to Bokhara.

The *Karab-airi* is a very handsome race of horses, in size equal to the Uzbak horse, but in the shape of the head and legs resembling the Argomak. They are reckoned good racing horses in Bokhara, but as they are trained for the game of kukbari, in which, after running a certain distance, the riders rest, these horses cannot hold out a protracted race, especially as they exhaust their strength from the very outset.

The horses of the *Kirghiz Kazak* are trained to run races, in distances sometimes from twenty-five and thirty to forty and fifty versts. Every Kirghiz, in setting out on a journey, fastens to his saddle a bag of kurut or curd made from sour milk. He soaks some of it in water, and thus appeases his hunger and thirst together.

Two wild horses are found in the Russian steppes, the *Tarpan* and the *Musin*. The latter is supposed to be a steppe horse run wild; but the younger Gmelin, Pallas, and Middendorff think that the tarpan is a descendant of the pristine wild stock. Darwin and Wallace, however, are of opinion that the tarpan also is a steppe horse run wild.—*Rolleston*, p. 50.

The *Muss* of the Kirghiz is the wild horse of the Asiatic plains. This animal is not like the wild horse of S. America, which undoubtedly sprang from those taken into the country by the Spaniards. He is of a distinct race from the Asiatic horse, very small (not so large as an ass), beautiful in form, having a small head and short ears, and varying in colour from black, bay, grey, and white, the latter being the most rare. His sense of smell is very acute, which renders him most difficult to approach. He is exceedingly fleet, and few horses can run him down. In hunting him, a great number of Kirghiz assemble, and when the scouts have found the herd, the horsemen form an extended line at a considerable distance towards the steppe. When so much has been accomplished, they gradually ride up, forcing the herd towards a pass in the mountains. As they approach near to the ravine, the hunters draw closer, forming a crescent, and proceed with extreme caution till the stallions enter the pass. While this has been going on, another party of hunters have made their way into the pass, taking their stand in the narrowest part, and waiting till the herd appears. Having signalled to the hunters on the plain that the pass is secured, the whole body close up, and the wild animals are in a trap. They are now driven onward till stopped by the hunters above, when the work of slaughter begins, and vast numbers of these beautiful creatures are killed by their battle-axes. The Kirghiz consider their flesh the greatest delicacy the steppe affords.

Dr. Jerdon, however, says wild horses of a truly feral type are at present unknown. The Gor Khar, Equus onager, *Pallas*, is the wild ass of Cutch; the Kyang or Dzightai, or wild ass of Tibet, is

Equus hemionus, *Pallas;* the E. hemippus, *Is. Geoffroy*, which inhabits Syria, Mesopotamia, N. Arabia, is the wild ass of Scripture; and E. asinus is of N.E. Africa and S. Arabia.

Since 1840, British India has received small batches from the Cape of Good Hope, of good figure and good temper, suitable for riding horses and for draught, but, like the Arab horse, higher priced than can easily be afforded. Australia has since taken a hold on the Madras and Calcutta markets, and its imports are termed Walers. What number of new horses of all sorts are needed for British India annually, is not known. The imports have been—

HORSE CHESNUT, Æsculus hippocastanum. An Asiatic tree, long planted for shade and ornament on the Continent and in Britain. The wood is soft, and not durable. The fruits are used in Switzerland and Turkey for feeding sheep, horses, etc.

HORSE-FLY, Hippobosca equina, *Linn.*, attacks horses and man. Its bite, like the scorpion sting, affects individuals variously.

HORSE GRAM, Dolichos uniflorus. This pulse, Madras gram, is largely used in the Peninsula of India for feeding horses. In Northern India, Chenna, or Bengal gram, Cicer arietinum, is the pulse used. The composition of horse gram in 100 parts is,—moisture, 11·40; nitrogenous matter, 23·25; starchy matter, 61·43; fatty or oily matter, 0·81; ash, 3·10.

HORSE HIDE is tanned and curried for harness work, for collars, etc. It has of late years been substituted for seal-skin, but does not produce so good a leather. Enamelled horse hide, split or shaved thin, is used for ladies' shoes, in imitation of seal.

HORSE LEECH is the Shwui-chih and Mahwang of the Chinese. Horse-mango, Mangifera fœtida. Horse-almond, Sterculia fœtida. Horse-cassia, Cathartocarpus Javanicus. Horse-cat, civet.

HORSE-RADISH, Lah-kan, CHIN.

Moringa pterygosperma,	L.	Munaga veru,	TEL.

This tree grows easily from seeds, in gardens, only requiring watering for the first few months. The scraped roots are very like horse-radish, and are served up as a substitute. The long pods are boiled and used as a vegetable, also made into curry. The flowers and leaves are used as a vegetable, and its gum is used medicinally.—*Faulkner.*

HORSE TAIL. The tails of the horse and of the yak are used as standards. Tupha, Tugh, or Tau, according to Remusat, is the Turki name of the horse-tail standard, but is applied also by the Chinese to the yak tail, which, respectively with those nations, mark the supreme military command. —*Rech. sur les langues Tartares*, p. 303; *D'Ohsson*, i. p. 40, *in Yule, Cathay*, i. p. clxxiv.

HORSFIELD. Dr. Thomas Horsfield and Mr. Moore's Catalogue of Birds, in the India House Museum, appeared in 1856 and 1858. Dr. Horsfield was one of the earliest naturalists labouring in the East Indies, though the extent of his labours in Java and Sumatra is but little known. His researches in Java and the neighbouring islands began in 1802, and were continued till 1819. During that time he collected upwards of two thousand species, the most copious and interesting of which have been published by Messrs. Brown and Bennett in the Plantæ Javanicæ Rariores, one of the most profound and accurate botanical works, and one most important for the Indian botanist to study with attention. He wrote Zoological Researches in Java and the Neighbouring Islands, 1824; Descriptive Catalogue of the Lepidopterous Insects in the Museum of the East India Company, 1828-9; with Bennett and Brown, Plantæ Javanicæ Rariores, descriptæ Iconibusque illustratæ, 1838-44; and an Essay on the Cultivation and Manufacture of Tea in Java, 1841.

HORTON PLAIN, a few miles from Newara Elia, in Ceylon, is the highest table-land in that island. The pitcher plant, Nepenthis distillatoria, grows in great luxuriance on it.

HORTUS MALABARICUS, a botanical work undertaken at the suggestion of Henry van Rheede, a Dutch Governor of Malabar. The specimens were collected in 1674 and 1675 by Brahmans, and sent to Cochin, where drawings of them were executed by Mathæus, a Carmelite missionary; corresponding descriptions were at the same time made in the Malabar language, which were afterwards translated into Portuguese by Emanuel Carneiro, a Cochin interpreter, and from that into Latin by Hermann van Douep, the secretary to the city of Cochin; the whole was under the superintendence of Casearius, a missionary there. The work was at length published at Amsterdam between 1686 and 1703, in 12 volumes folio, with 794 plates, and was edited by Commelyn, who has occasionally added remarks on the plants.—*Wight's Prod.* i. p. 7.

HORUS, a god of the Egyptians. One of the most remarkable fictions in the Egyptian and Syrian mythologies, is that of the annual disappearance and resurrection of Horus, or the solar Osiris, and the lamentations for Adonis and the

joy at his restoration. These, as well as the Deot'han of India, bear evident reference to the sun's annual motion.—*Elliot, Supp. Gloss.*

HOSHANGABAD, a town in the Central Provinces of India, in the Sagur and Nerbadda territories, lat. 20° 45′ 30″ N., and long. 77° 46′ E., its district forming a portion of the Nerbadda valley, lying entirely on the left bank of the river, and including some large tracts in the Satpura Hills. The district is bounded on the north by the territories of Bhopal, Sindia, and Holkar, from which it is separated by the Nerbadda, the Central Provinces lying between lat. 21° 40′ and 22° 59′ N., and long. 76° 38′ 30″ and 78° 45′ 30″ E. Population in 1872, 440,186; area (1877), 4376 square miles. Four Gond rajas, in 1870, held the eastern portion of the district. The aboriginal tribes number 89,029; Hindus, 364,676; Mahomedans, 21,765; Buddhists and Jains, 1132. The most numerous of the aboriginal tribes are the Gond (57,946 in 1872), and Kurku (19,295); the remainder consisting of Bharia, Maria, etc. Among the Hindus, the Brahmans 1872 numbered 25,393, and the Rajputs, 28,689; the mass of the Hindu population consisting of Dhers or Mhars, 39,173; Kunbis, 17,215; Lodhis, 13,323; Gujars, 24,759; Chamars, 15,117, and others inferior castes.—*Imp. Gaz.*

HOSHIARPUR, in lat. 31° 32′ 13″ N., long. 75° 57′ 17″ E., a large civil and military station, in the Panjab, N. of Ludhiana, 1066 feet above the sea. It gives its name to a British revenue district, lying between lat. 30° 58′ and 32° 5′ N., and between long. 75° 31′ and 76° 41′ 15″ E. Area, 2086 square miles, pop. (1868) 938,890. Brahmans numbered 76,821; Rajputs, 47,464; Kshatriyas, 21,784; Banya, 1493; Arora, 386; Jat, 112,789; Gujar, 21,543: 3977 Sayyids, 843 Moghuls, 8733 Pathans, 145 Baluch, 37,522 Mahomedan Rajputs, 31,262 Jats, and 45,893 Gujars. The Jats form the most numerous tribe in the district, composing 42 per cent. of the proprietary body, and paying 38 per cent. of the land revenue.—*Imp. Gaz.*

HOSPITAL. There was an hospital at Rai and another at Baghdad, of which Rhazes, A.D. 923 or 932, was the superintendent; and about the same time, between A.D. 905 and 920, the first European hospital was founded by the Saracens at Salerno in Italy. Hospitals existed in China during the Sung dynasty, between A.D. 960 and 1278. The pinjrapol of Bombay and of Surat are hospitals for sick and lame animals, established by Hindus. The East India Company established many civil hospitals throughout India, and Hindu nd Native States have followed in this line.

HOTA, SANSK., or Hotri, the priest who directs the Homa or burnt-offering, from Hu, SANSK. to offer. The Hota pours the clarified butter on the fire in the burnt-offering, repeating the proper formulas. Hutsava or fire-food is the name of the oblation.—*Ward's Hindoos; Wilson, Glossary.*

HO-TSING, the artesian fire-springs of the Chinese, which are sunk to obtain a carburetted hydrogen gas for salt-boiling, far exceed the European artesian springs in depth. These fire-springs are very commonly more than 2000 feet deep; and a spring of continued flow was found to 8197 feet deep. This natural gas has been used in the Chinese province Sze-chuen for several housand years; and portable gas, in bamboo canes, has for ages been used in the city of Khiung-tscheu. More recently, in the village of Fredonia, in the United States, such gas has been used both for cooking and for illumination.—*Curiosities of Science*, p. 118; *Imbert.*

HOT SPRINGS and sulphurous springs are numerous on the shores of the Dead Sea, and also in its basin, and in other parts of the Jordan valley. The hot springs of Callirhoe were the favourite resort of Herod. There are others at Um Keis (Gadara), where are the ruins of baths; and the hot springs of Tiberias have been famous ever since the time of Joshua (B.C. 1426), when they gave name to the place. Most of these are strongly mineral. The hot water of Elisha's Fountain is sweet.

The hot springs of Bosher and Ghullas in Oman are inland from Muttra, situated at the foot of rocks. Their temperature ranges from 83° to 112°.

Hot springs occur also at Maculla in Arabia, likewise 1½ miles inland from Muscat.

In Shoa, hot springs occur at the village of Gossamee in Morabeitee; at Kowut, in the province of Gidem; at Korari, about 10 miles S.E. of Alioamba; at Makfood, in the bed of the Jowahah river; at Metak, about 3 miles S. of Ankober; at Finfinni, in the Germama plain; in the bed of the river Kassam, in the district of Aden, and in the neighbourhood of the extinct volcano of Fontali.

Hot springs occur at Jumnotri, Gungootri, Kedarnath, and Badrinath, in Garhwal; also near Nutpa, Bukti, and Jauri, in the valley of Sutlej (Gerard), opposite Soni banks of Sutlej (Prinsep). Hot spring at Silol, Kangra (G. T. Survey). Kulat in Kullu (Gerard). Munnikarn, in Kullu, and a hot spring farther up the Parbati. Mr. Edgeworth informs us that the water where it issues from its source is of the temperature of 207° Fahr. It is therefore one of the hottest known springs. Some of the hottest of these are the Geysers 180°, Surajkund 190°, the Petersquelle in the Caucasus 195°, spring on Paluk river 196°, and what Humboldt discovered and describes as the hottest spring in the world, Guanaxuata in Mexico, 207°. The boiling point of water at the elevation of Munnikarn is much below that point. Rice is cooked in the spring at Jumnotri 194°, at about 11,000 feet above the sea, and in many others of inferior temperature. Munnikarn is on the right bank of the Parbati (or Parub) river. There is a large village here, and high mountains covered with snow environ the place. There are several hot springs, three or four of which boil furiously. The latter issue out of rocks near the edge of the river, and dense steam rises out of them in considerable volumes, heating the air all round, absolutely darkening the path for a few yards, and the heat is very distressing. All the inhabitants of Munnikarn cook their food in these boiling springs, and wood is never used by them for culinary purposes.

In Ladakh many hot springs occur, but the best known are those of Nubra, Puga, and Chushul; the two first have clear water, and a temperature of 167°, with beds of soda below the springs. Those at Puga occur in the bed of a rivulet, where they bubble out at temperatures from 80° to 140°. The hottest contain chloride of sodium and sulphuretted hydrogen in solution; and those of low temperature chloride and borate of sodium.

The hot spring of Chushul has a temperature of 96°, without taste or smell, but is said to have medicinal properties.

A hot spring occurs at Behitsil in the Basha valley in Little Tibet, from which a deposit of sulphur occurs. Two hot springs, sulphureous and chalybeate, also occur near the village of Duchin, in Little Tibet. The temperature of one visited by Mr. Vigne was 154° Fahr. One occurs 12 miles east of Rajawur, the temperature about 140°. It is sulphureous, and deposits sulphur in its course.

Between U and Tsang, in Tibet, are some hot springs, which are also numerous in the mountains lying east of the Ma-p'ham lake, and at one place hot water is thrown twelve feet high. Hot springs issue from the flats near a stream at Chung-leng, 16,170 feet above the sea, the temperature 122° to 130°. The hot springs of India are resorted to by the people for the cure of lingering ailments.

The hot spring at Ab-i-Garm at Chitral, in Afghanistan, is also called Talab-i-Nil, also Chattiboi. Lower range of Suliman mountains.

In Baluchistan a hot spring occurs at Basman, in the Kohistan of Baluchistan, 44 miles N.W. of Banpur. Lieutenant Pottinger halted at Basman, and found the hot well upwards of twelve yards in circumference, and two or three feet in depth; in the centre of it was a circular pipe built of red burnt brick, about eight inches in diameter, and within as many of being level with the water, which boiled out of it as thick as a man's thigh, with considerable violence, and at noon so heated that he could not venture to put his hand into the ebullition. One side of the well had been gradually worn away by the incessant gushing of water over it, and thence a limpid brook flows past the village, and suffices the husbandmen for the irrigation of their grounds. He bathed in this stream, about five yards from its source, and found the water pleasantly tepid, with a strong sulphureous smell and taste, which unfit it for culinary purposes; but the Baluchi regard it as aperient in its effects, and an excellent specific in cutaneous disorders.

Pir Muggen, Alligator Tank, is 13 miles from Kurachee (Carless). Juggen and Deyrah, N. Sind (Kirk). Springs at the base of the Halla mountains, Sind (A. Young).

The following means of temperature of the hot springs at Pir Mangal, or Munga, or Mungear, were taken in September 1844 by Major Baker and Lieutenant Maclagan:—

1st spring, 4th Sept.,	11.30 A.M.,	Water, 119°	Air, 89·25°
	4.45 P.M.,	118·29	86
	9.5 P.M.,	117	86
5th Sept.,	5.45 A.M.,	119	78
	9.5 A.M.,	119	83
2d spring, 4th Sept.,	11.45 A.M.,	127·5	91
,,	4.55 P.M.,	126·25	86·7
,,	9.25 P.M.,	126·05	80
,,	5.50 A.M.,	128·25	78
5th Sept.,	9.15 A.M.,	128	83

3d and principal spring, which is the saint's shrine, and which feeds the Alligator Ponds.

4th Sept.,	5.30 P.M.,	Water, 99°	Air, 85·5°

The water of these springs, where it first issues, has a slightly sulphureous smell and taste, but, after a short exposure to the air, becomes perfectly sweet and pure; it leaves a slightly blackish deposit on the pebbles. The rocks in the vicinity consist of an upper cap of coarse limestone, overlaying coarse soft sandstone.

HOT SPRINGS.

The other hot springs of Sind are the Lukki and Gazi Pir springs. Of the latter, Lieutenant Maclagan gave the following account:—'There is a hot spring on a considerable elevated plateau upon the hill called Bhil, above Gazi Pir, a saint's shrine, a few miles west of Shah Hasan, on the Meunchar Lake. I could not hold my hand in the spring for any length of time. The water fills a small reservoir under a clump of trees, then escapes in a narrow stream which flows along to the edge of the plateau, and throws itself over the rock in a white cascade.' The sulphur springs near the village of Lukki, like the springs at Mangal Pir, are three in number, but are much more highly impregnated with sulphur, though their temperature, as under, is not so great,—

1st spring, at 12 A.M., water 102° Fahr.; air in the shade, 82° Fahr.
2d spring, at 12.12 A.M., water 103° Fahr.; air in sun, 86° Fahr.
3d spring, at 2 P.M., water 105°, in shade 68° Fahr.
Water boiled at third spring by thermometer at 212° 75', and at Kurachee by same thermometer at 214°; difference, 1° 25'.

At Devakl Unci is 50 miles S.E. from Surat, at the foot of some hills, the temperature being 111° to 120°.

One at Oonai or Oonari, in the jungle between Bansda and Boharee, in Gujerat, has a temperature of 120° to 124°; but it is said to vary at seasons (Dr. A. Gibson). Oonai is a small hamlet in the territory of the raja of Bansda, near the hills east of the Surat district. Also one at Tooee, near Ruttenpur, on the Mhye river, in Gujerat, between lat. 22° 49' N., and long. 73° 30' E. There is a sulphurous hot spring at Tulsiram, in the centre of Geer, in Kattyawar.

A line of thermal springs traverses the Southern Konkan; and there are hot wells at Veijrabhoy, 48 miles N. of Bombay.

Hot springs occur between Dasgaon and Southern Rajapur, between the Ghats and the sea, generally from 16 to 24 miles inland from the sea. At Rajapur there is one spring; near Mhar, on the Bancoot or Fort Victoria river, 75 miles S. of Bombay, there are several, their temperatures being 98°, 105°, and 109°. They are midway between Dasgaon and Mhar, and about 75 yards from the river.

There are ten places with hot spring between Rajapur and Saksee, viz. in the Viziadrug taluk, village Oonglee (Oonale) near Rajpur, about 20 miles from the Ghats and 12 miles from the sea. It is largely used. There are three in the taluk Ratnagherry and in the mahal Sangameshwar, at the villages Rajwari, Tooril, and Sungmairi, about 14 to 16 miles from the Ghats and 26 miles from the sea. That at Tooril is exceedingly hot. One at the village Arowli, in the Konedewri mahal; one said to increase the appetite, at the village of Mat in the Hatkumbe mahal. Three at Oonari village in the Severndrug taluk and the Natoe Palwan mahal. One at the village Oonari, in the Jafferabad mahal. One at the village of Savi, in the Ryeghur taluk and Mhar pargana, between Mhar and Dasgaon; and one at the village Oonari, taluk Sankse and Pali mahal. Oonali or Oonari is the Mahratta term for hot springs, which will explain why so many villages bear this name.

Hot springs, about 150 in number, occur near Wujerabaee, in the Bhewnday taluka of the Tanna

collectorate. The district in which they occur borders upon the river Tansa, on the Duganel side of the Bhewnday taluk, and is seemingly confined to the villages of Akulkolee, Ganeshpuri, Gorad, and Nimbawullee, in a tract about 3 miles long and a mile broad. The Argurd Kund spring, which is the hottest, has a temperature of 130·60°. Hot springs, having a temperature of 87°, rise through the limestone near the Pindi hills, and globules of gas escape from round holes in the debris and mud covering the bottom of the ravine. About five miles north of the hot springs of Urjunah, and four miles south of those of Kair, sandstone caps a gently rising ground covered with basaltic soil. Near the last-mentioned town many hot springs rise in the argillaceous limestone, which has been remarkably broken up and altered by the globular basalt protruding through it in different places. The principal springs issue at the foot of the rising ground, where the rock is most remarkably altered. Their temperature (87°) was the same as that of Urjunah, on the other side of the Pindi Hills, and it did not vary during the hot and cold months of 1831 and 1833.

Hot springs occur in the Satpura Hills, at Nizardeo, also at its sister spring at Unabdeo, about 3 miles to the north of Adawad, right under the Satpura Hills. Here the hot water issues from an oblong aperture in what appears to be a solid block of masonry, forming the lower part of an old Hindu temple, and flows into a tank 25 feet square. Four miles west of the Unabdeo spring is another hot spring, called Ram talao, or Sunabdeo. It is in a narrow gorge or glen formed by two low projecting spurs of the Satpura; the temperature, 140°. It contains 8·4 per cent. of silica and iron. There is another hot spring at Nizardeo, at Wirwada.

Near Bagin river in Pana district, Bundelkhand (Franklin). Two hot springs in Alwar country, one 15 miles W. by S. from Alwar, one 20 miles N.E of Jeypore (Capt. Bellew's Survey). Mineral springs at Machery? (Col. Tod). At Sitabari, in Harowtee; also cold springs (Col. Tod).

Birbhum.—Hot springs occur at Buklesur in Birbhum. There are about eight of these, each being enclosed by little walls of sandstone in the form of wells, and known by different names, taken from those of the Hindu gods. The spring that has the highest temperature is the Surajkund, in which, says a Hindu traveller, we could not dip our hand, and in which an egg may be boiled, but not rice, of which we threw in a handful to try the experiment. A few paces from the Surajkund is a cold spring. There are springs n the bed of the Paphara, the washer-of-sins. The water of the Satgunga has a milky whiteness, whence the origin of its name.

Confervæ abound in the hot springs of Surajkund; and two species, one ochreous brown and he other green, occur on the margin of the tanks themselves, and in the hottest water; the brown is capable of bearing the greatest heat, and forms a belt in deeper water than the green. Both appear in broad luxuriant strata, wherever the temperature is cooled down to 168°, and as low as 90°.

The water of one hot spring at Pachete near he Damuda is 190° Fahr. in the cold weather. he spring is chalybeate. Hot springs near onghir, on the Ganges, are known as the Seeta

Kund; temperature, 163°. Hot springs at Rishi Kondah and Bhimband, in the trap mountains of Rajmahal. A thermal spring occurs in trap rock between lat. 23° and 24° N., and long. 86° and 87° E.

Kaljhurni, Maharu, Hatbulleah, Noubhil, between Rajmahal and Suri (Sherwill). Lacarakunda, 21 miles S.W. of Suri, in Birbhum (Sherwill). Tantlooee, 16 miles N.W. of Suri, on Sidh nullah, (Sherwill). Springs at Katkamsandi, Old Benares road (Everest). Pinarkun, Ramgur (Breton). Paharpur, Kurruckpore Hills (Sherwill). Rajgir and Guriuk, N. by E. of Gyah (Sherwill). Utteer, 30 miles from Puri (Brander).

There are two warm springs in the bed of the Godavery, one in the middle of the river near Badrachellum, about one hundred miles west from Rajamundry. At Kair and Urjunah, Dekhan (Malcomson). At Byorah (Malcomson).

Bum Buklesir is a pretty and curious spot, easily accessible, in a well-cultivated country, with a little jungle to its south. It is one mile from the large town of Tantipara, on the banks of the Buklesir, a small nullah. There are five or six hot springs, the whole group called Bum Buklesir. The hot wells have been surrounded with masonry walls, and are immediately on the north or right bank of the nullah. There are numerous hot springs in the bed of the nullah, only to be seen in the dry season, giving out sulphuretted hydrogen, with which the air is tainted. Near the hot springs are several cold ones, all flowing from a tough gneiss rock. The hot and cold springs are only separated by a few feet from each other. The body of water ejected from the hottest well is very considerable, being about 120 cubic feet per minute; it runs from innumerable small orifices in an accumulation of mud and dirt, the rock being nowhere visible within the masonry of the tank. In the hottest water, 162°, a green shining conferva thrives. Another spring is 128°, and the coolest 83°. Some 300 or 400 feet from the bank of the river, among the dilapidated temples, there is a large built tank, which is supplied by two springs, one hot and the other cold, so that at one end the water is warm, at the other cold, and in the centre tepid. The stream of the nullah is about 50 yards across, with a brisk current, and it retains its heat below the springs for a considerable distance; its temperature was 83° in the month of December, when the temperature of the air was in the shade 77°. The sand of the stream some little way from the spring, and at the depth of six inches, is intolerably hot to the hand. Extending for about 200 yards along the right bank of the stream, are 320 small brick and mortar vihara or temples, built by various pilgrims, each containing a lingam or emblem of Mahadeo. Only one temple has any pretension to architectural elegance. Numerous attendant Brahmans, most importunate beggars, loiter about the temples, engaged in bathing in the hot stream, or watching the cremation of dead bodies, which operation is constantly being carried on. Tantipara is a fine substantial village, with most of its inhabitants engaged in preparing silk for the Calcutta market. There is an indigo factory, besides a police choki and abkari station. A short way off is the large town of Dobrajpore, offering a good market for English piece-goods, and producing a large supply of fish from its

numerous tanks. Between it and Bum Buklesir, and in the town of Dobrajpore, large naked and picturesque masses of granite and gneiss protrude through the soil, occupying altogether about a mile square. The scene is a very curious one. In the opposite direction, but farther away, is Nagpore, or Jye Nuggur, a large town; the greater part of it has gone to decay, as is shown by its falling mosques, half-filled and weed-choked masonry tanks, and ruined buildings which almost approach to palaces in extent. The famous Nagore wall or entrenchment extends in an irregular and broken figure round the town of Nagore, at a distance of about 4 miles; its length is about 32 miles. At Lakarakunda, about 5 miles off, is a warm spring, temperature 85°. Near the feeble stream which carries away its waters is a curious cut stone Hindu temple.

The hot springs of Momay (temp. 110°), at 16,000 feet, produce a golden-brown Cœnocoleus, representing a small form of C. cirrhosus, and a very delicate Sphœrozyga, an Anabaina, and Tolypothrix; and at 17,000 feet, a delicate green Conferva, with long even articulations. With the latter is an Odontidium, allied to or identical with O. turgidulum; and with the former a fine species of Epithemia, resembling in form, but not in marking, E. faba (E. zebra); a fine Navicula, perhaps the same with N. major and Fragilaria virescens. In mud from one of the Momay springs there was Epithemia Broomeii, *n. s.*, and two small Naviculæ; and in the spring two other species of Epithemia.

In the hot springs of Surajkund, and on their banks, at temperatures varying from 80° to 158°, at which point vegetation entirely ceases, a minute Leptothrix abounds everywhere, varying a little in the regularity of the threads in different specimens, but scarcely presenting two species. Between 84° and 112° there is an imperfect Zygnema, with very long articulations; and where the green scum passes into brown, there is sometimes an Oscillatoria, or a very minute stellate Scytonema, probably in an imperfect state. Epithemia ocellata also contributes often to produce the tint. An Anabaina occurs at a temperature of 125°, but the same species was found also in the stream from the springs, where the water had become cold, as was also the case with the Zygnema. Mr. Thomas Brightwell found in a portion of the same specimen, Epithemia alpestris. The Diatomaceæ consisted of—

Epithemia Broomeii, *n. sp.*	E. inæqualis, *n. sp.*
E. thermalis, *n. sp.*	Novicula Beharensis, *n. sp.*

The vegetation in the three sets of springs was very different. As regards the Confervæ, taking the word in its older sense, the species in the three are quite different, and even in respect of genera there is little identity; but amongst the Diatomaceæ there is no striking difference, except in those of the Behar springs, where three out of the four did not occur elsewhere. In the Pugha and Momay springs, the species were either identical with, or nearly allied to, those found in neighbouring localities, where the water did not exceed the ordinary temperature.

In Ceylon, hot springs occur in two places in the Kandyan province, at Badulla, at Kitool near Bintenne, near Yaviutu in the Veddah country, and a fourth at Kannea, 7 miles beyond Trincomalee; and there are two in the province of Uva, and one at Batticaloa. Their waters are considered efficacious in cutaneous ailments and rheumatism. A fifth is said to exist near the Patipal Aar, south of Batticaloa. The water in each is sufficiently pure to be used by the natives for domestic purposes.

In the hot springs of Kannea, the water flows at a temperature varying at different seasons from 85° to 115°. In the stream formed by these wells, M. Reynaud found and forwarded to Cuvier two fishes, which he took from the water at a time when his thermometer indicated a temperature of 37° Reaumur, equal to 115° of Fahrenheit. The one was an apogon, the other an ambassis; and to each, from the heat of its habitat, he assigned the specific name of Thermalis. Also a loche, Cobitis thermalis, and a carp, Nuria thermoicos, were found in the hot springs of Kannea at a heat of 40° cent., 114° Fahr.; and a roach, Leuciscus thermalis, when the thermometer indicated 50° cent., 122° Fahr.

Fish have been taken from a hot spring at Puri when the thermometer stood at 112° Fahr., and as they belonged to a carnivorous genus, they must have found prey living in the same high temperature.

Fishes have been observed in a hot spring at Manilla, which raises the thermometer to 187°, and in another in Barbary, the usual temperature of which is 172°; and Humboldt and Bonpland, when travelling in South America, saw fishes thrown up alive from a volcano, in water that raised the temperature to 210°, being two degrees below the boiling point. The springs of Kannea are situated in low ground abounding in quartz, surrounded by low jungle, in an unhealthy country.

Of the two warm springs in the province of Ouva, one is at Badalla, in Upper Ouva, about 1861 feet above the level of the sea, where the mean annual heat is about 69°; the other is about a mile and a half from Aliputa, in Lower Ouva, near the path on the way to Kotahowa, about 1061 feet above the level of the sea, where the mean annual temperature is probably about 76°.

Hot springs also occur as under:—

On Ranjit river.—*Darjeeling Guide.*
Between Meeaday and the Arakan Hills.—*Phayre.*
Sitacund, near Chittagong.
Springs at Numyan, near Prome.
Hot-water fountain at Tavoy; at Lunkyen, in Tavoy; and at Sienli in Martaban.—*Prinsep.*
Near Kaline Aurig, Martaban.—*Low.*
Hot spring on Attaran river, Tenasserim.—*Piddington.*
Hot springs on the Palouk river and at Pee, between Mergui and Tavoy, some sulphuretted.—*Major W. M'Leod.*

There is a hot spring near Chirana Puteh, and another at Salanama in Rambu. Tin has been procured near Taba, and also near Chirana Puteh.

Ayarpanas (hot water) spring near Malacca; its water, 115°, is said to be useful in rheumatism.

Hot springs, some of interest, exist at Yommack, in lat. 22° 24′ N., long. 113° 28′ E., about 15 miles N.W. of Macao, with a temperature from 132° to 190° Fahr. The springs are three in number, and are near a rivulet, 100 yards from the river.

Hot springs occur in the Shan-tung province of China at Ai-shan, about 12 miles from Chefoo; also at Loong-chwen, 60 li E. of Ning-hai; at Wun-shih-ting, 70 li S. of Tung-chow; near Yi-chow-foo, and at Chau-yuen, 60 li W. of Whang-

hien. The water is sulphurous, and baths have been established there.—*Forbes, Ceylon*, ii. p. 49; *Bengal As. Soc. Journal*, 1848; *Mrs. Hervey's Tartary*, i. p. 94; *Patterson's Zoology*, part ii. p. 211; *Yarrell's British Fishes*, i. part xvi.; *Tennant's Ceylon*, p. 59; *Davy's Ceylon*, pp. 42–46; *Carter's Western India*, p. 21; *Pottinger's Beluchistan*, p. 179; *Hooker, Him. HOTTENTOT, a race occupying a part of the extreme south of Africa, near the Cape of Good Hope.

HOUGH, Major W., author of A Narrative of the March and Operations of the Army of the Indus in the Expedition to Afghanistan in 1838–39, and History of the Doorance Empire to the Present Time, London 1841.

HOURI. In Mahomedan belief, a woman in paradise. It is translated in Sale's Koran, chap. lv., 'beauteous damsels, having fine black eyes.'

HOUSE.

Bait, ...	Arab.	Casa, ...	It., Sp.
Maison, ...	Fr.	Oor, ...	Tam.
Haus, ...	Ger.	Illu, ...	Tel.
Khana, .	Hind., Pers.	Ev, Konak, . . .	Turk.

In the granitic country of Telingana, the houses are usually built of adhesive earth or clay, of a square or rectangular form, smeared often with red earth, and picked out with perpendicular bands of slaked lime, with a pyramidal roof of palmyra leaves or grass. Houses in the Karnatic are of mud walls, with roofs thatched with grass or palm leaves. Houses on the banks of the Kistna, near its debouchure, have circular walls of adhesive earth.

In the Tamil and Telugu country, the walls are usually of mud, with thatch or tiles for the roof. The humbler races have circular houses; their houses in Telingana are detached from each other, outside the gharri or fort. In the Canarese tract about Hurryhur, the back of the house is formed by raising a very high wall, on which a long sloping roof rests.

In Arabia and Mahomedan countries of Persia and India, houses have a common courtyard, with numerous rooms leading from it.

The circular form of hut is the only style of architecture adopted among all the tribes of Central Africa, and also among the Arabs of Upper Egypt; and although these differ more or less in the form of the roof, no tribe has ever yet sufficiently advanced to construct a window. Their houses are circular and conical, with only one opening for a doorway.

The Yezdy, a Kurd race settled near Aleppo, build a stone wall, and erect over it a goat-hair roof.

In Persia, the cottages of the villagers and peasantry are of mud, or rough stones cemented with mud, and mostly consist of two rooms. The walls, which are usually about seven feet high, are very thick, and full of niches and recesses, which serve as cupboards for depositing all manner of miscellaneous articles. The roofs of the larger Persian houses are flat, and many have tall bad-gir or wind towers rising high above. The bad-gir is a large square tower, covered on the top, but opening below into the apartment above which it is erected. The four sides are laid open in long perpendicular apertures like narrow windows, and within these are partitions or walls intersecting each other, so as to form four channels in the tower. By this contrivance, from whatever quarter the wind blows, it is caught in the tower and conveyed into the room below, so that a constant current of air is kept up, except when it happens to be a dead calm.

The cottage of Bengal, with its trim, curved, thatched roof, and cane or bamboo walls, is the best looking in India.

The houses of Hindustan are built of clay or unburnt bricks, and tiled.

In the greenstone tract of the Dekhan, Berar, and the Mahratta country, where wood is scarce and of high price, the walls are mostly of mud, with flat roofs. The houses are huddled close together, surrounded by a wall, often with a central gharri or fort.

Houses with a flat roof have a parapet (Deuteronomy xxii. 8) to prevent any one falling into the street.

Acts x. 9 tells us that 'Peter went upon the housetop to pray.' All the flat-roofed houses of India would admit of this; but some of the rich Hindus have a room on the top of the house, in which they perform worship daily.

2 Samuel xi. 2 says, 'And it came to pass in an evening-tide, that David arose from off his bed, and walked upon the roof of the king's house.' It is common in India with Mahomedans and Hindus to sleep in the afternoon. The roofs of houses are flat, and it is a pleasing recreation in an evening to walk on the flat roofs.

In Tibet, the peasant's house much resembles a brick kiln in shape and size. It is built of rough stones, without cement, and has two or three small apertures for ventilation. The roof is flat.

Houses in Burma, Arakan, the Straits Settlements, and all through the Archipelago, are raised on piles; some on the river side are built over the river on piles several feet high, with wooden or bamboo matting walls. The whole frontage on the left bank of the Moulmein river is built over, as also in Mergui. Some of the tribes of Further India live in great houses, communicating in their entire length. This is for defence.

Houses in many eastern countries are built as a quadrangle, the four outer walls being dead, or pierced with loopholes; in one of the halls is the entrance to an open unroofed courtyard, surrounded by chambers or open verandahs. This arrangement explains the circumstances of the letting down of the paralytic into the presence of our Lord, in order that he might heal him (Mark ii. 4, Luke v. 19). The paralytic was carried by some of his neighbours to the top of the house, either by forcing their way through the crowd by the gateway and passages up the stairs, or else by conveying him over some of the neighbouring terraces; and there, after they had drawn away the awning, 'they let him down along the side of the roof, through the opening or impluvium, into the midst of the court before Jesus.'

Matthew x. 12–14 says, 'And when ye come into an house, salute it. And whosoever shall not receive you,' etc. It is the custom amongst Hindus of a stranger to go to a house, and as he enters it to say, 'Sir, I am a guest with you to-night.' If the person cannot receive him, he

apologizes to the stranger.—*Horn's Critical Study of the Scriptures*, i. p. 385; *Shaw's Travels*, i. pp. 374–376; *Hartley's Researches in Greece*, ii. p. 240; *Robinson's Tr.* ii. p. 351; *Ward's Hindoos.*

HOUSE-LEEKS, King-t'ien, CHIN. The plants Umbilicus malacophyllus, Sedum acre, and Sempervivum tectorum, are grown on Chinese housetops, with the idea that they ward off fires. —*Smith, M. M. C.*

HOUSHA, in Bengal, a village authority.

HOUTMAN, CORNELIS, in A.D. 1595, as supercargo, was entrusted with the cargo of four ships to sail by the Cape of Good Hope to the East Indies, a company having been formed, entitled 'Het Maatschappy van verre Landen,' to carry out the Dutch enterprises in the east. He left the Texel 2d February 1595, crossed the line 14th June, doubled the Cape 2d August, landed at Sumatra 11th July 1596, and entered the harbour of Bantam 22d July. He purchased pepper and spices in the Sunda Islands and Java, and returned to the Texel in 1597.

A second expedition, in which he was slain, went out in 1598, and returned in 1600–1601. This seems to have been commanded by Admiral Vanneck, who formed an establishment at Java and in the Molucca Islands; and he was followed by Admiral Warwyk, who fortified the factory at Java, and formed alliances in Bengal. In 1624 the Dutch settled on Formosa, which soon attained a high degree of prosperity, but was ultimately wrested from them by a Chinese patriot. They have had a factory in Japan since 1640, where they submitted to very degrading treatment. The Dutch subsequently expelled the Portuguese and Spaniards from Malacca and from the Moluccas, and afterwards formed settlements at Timur, Celebes, Macassar, and Sumatra.

Spielbergen was the first Dutch navigator who touched at Batticaloa in Ceylon, in March 1602. He went to Kandy, where he was well received, entered into alliances with the king of Kandy in the year 1638, and for the next twenty years their wars with the Portuguese were incessant. The Portuguese finally departed on the 24th June 1658.

HOVA. The tombs of the Hova race of Madagascar consist of stone vaults, made of immense slabs of stones, flat inside, forming a subterranean grotto. They also erect stone pillars similar to menhir. The supposed aborigines of Madagascar were the Vasimba, whose tombs are small tumuli or cairns, surmounted by an upright stone pillar.

HOVENIA DULCIS. *Thunb.*

Chih-ku, Ki-ku-tsze, CHIN.	Sieka, ... HIND.
Coral, Honey, and White stone tree, ENG.	Kempokonass, . JAPAN.
	Ken, Kimponass, . ,,

This tree grows in India, Nepal, China, and Japan. Its fruit are small, dry, and pea-like, pendent upon the fleshy peduncles, like the cashew nut. They greatly increase in size at the time of their maturation. The fruit-like thickened branches are of a russet colour, and filled with a pleasant, yellowish, pear-like pulp. The fleshly peduncles are said to counteract the immediate and after effects of wine. — *Smith, M. M. C.; Roxb.* i. p. 630; *Von Mueller.*

HOWA. ARAB. Eve, the mother of the human race.

HOWDAH, a seat, pad, or open litter fixed on the back of an elephant.

HOWLER, a name given to the Gulshaniyeh darvesh. See Darvesh.

HOWRAH or Haura, sub-district of Hoogly district, Bengal, with independent magisterial jurisdiction, lying between lat. 22° 13′ 15″ and 22° 47′ N., and between long. 87° 47′ and 88° 24′ 15″ E.—*Imp. Gaz.*

HOW-TSAO. CHIN. A bezoar stone, used in China for the treatment of Cynanche tonsillaris.

HOYA, a genus of plants of the natural order Asclepiaceæ. The species in Southern Asia are, —H. carnosa, fusca, lanceolata, linearis, ovalifolia, pallida, parasitica, Pottsii, pauciflora, pendula, and viridiflora. Several of the species, under the name of wax plants, are cultivated on account of their elegant flowers. H. imperialis, *Lindl.*, of Borneo, is highly beautiful, its large and rich purple flowers being relieved by the white, ivory-like centre; it is epiphytal. H. carnosa, *R. Br.*, the flesh-coloured wax plant, is a native of China.—*Voigt; Wight; Eng. Cyc.; Low's Sarawak*, p. 67.

HOYA PENDULA. *Wight and Arnott.*

Asclepias pendula, *Roxb.*	Hoya revoluta, *Wight.*
A. Rheedii, *W. and A.*	Nasjera patsja, MALEAL.

This plant grows in the Circar mountains, Malabar, and Neilgherry Hills, and is used in medicine. Its flowers are middle sized, white, and fragrant.—*Voigt.*

HOYA VIRIDIFLORA. *R. Br.* Asclepias viridiflora of Roxburgh. A native of Coromandel, Sylhet, and the Neilgherry Hills. The root and tender stalks produce nausea, and promote expectoration. The leaves, peeled and dipped in oil, are used by the natives of India as a discutient in the early stages of boils, and in the more advanced stages to promote suppuration.

HSU SHEN, author of the Shuo Wen, a Chinese dictionary. It consisted of 10,000 separate characters, in the tablet and stylus form. Commonly called the 'Lesser Seal.' He lived in the time of the Han dynasty.

H'TEE. BURM., is the umbrella or canopy of gilt iron filigree which crowns every pagoda in Burma. Now-a-days, generally, a bottle is put on the H'tee, and a similar practice is said to be pursued in Ceylon, originating, as it is surmised, from the knowledge that glass is a non-conductor. The H'tee of the Shooay Dagon pagoda at Rangoon was renewed by the king of Burma in 1871 at a cost of £62,000, and about 50,000 people assembled to assist in putting it up. It was 47 feet high and 13 in diameter. Kings of Burma in 1755, and again in 1774, had asserted their sovereignty over Rangoon by thus crowning the great pagoda.—*Yule's Embassy.*

HUAKI. MAORI. A fabric of New Zealand used in clothing.

HUC and GABET, two French missionaries, who, by a route till then quite unexplored by any European, passed among the mountains north of Bhutan and Ava, and so made their way due east to the plains of China (Central Flowery Land). M. Huc wrote an account of his travels.

HUD. At Hasek is the tomb of the prophet Hud, the fourth in descent from Shem.

HUDDART. Captain Joseph Huddart, F.R.S., author of the Oriental Navigator, which first appeared in 1785, with an atlas of 108 charts. A second edition of it appeared in 1797, a third in 1801, and a fourth in 1808, of 755 pages. Its plan was adhered to by Captain James Horsburgh

(obiit May 1836), under the title of India Directory, the first part of which appeared in 1809, the second part in 1811, and it has since gone through several editions. Its place has now been largely taken by two similar works, one under the editorship of Mr. Findlay, and another by Captain Taylor of the Indian navy.

HUDDEEAROO. HIND. A kind of ring used at Mahomedan marriages.

HUDIGAR. KARN. A low caste in Mysore.

HUE or Fue. CHIN. A secret society.

HUGEL. Baron Charles F. von Hugel, author of Kaschmir und das Reich der Sick, Stuttgart 1840, describing his visit to the Himalaya mountains and the valley of Kashmir. The Fische aus Caschemir were described by MM. von Hugel and von Heckel. Baron Hugel met other two travellers in Kashmir, and they agreed to carve the following inscription on a black marble tablet, and set it up in the little building on the Char Chunar island:—'Three travellers in Kashmir on the 18th November 1835, the Baron Ch. Hugel from Jamu, Th. G. Vigne from Iskardu, and Dr. John Henderson from Ladakh, have caused the names of all the travellers who have preceded them in Kashmir to be engraven on this stone. Bernier 1663; Forster, 1786; Moorcroft, Guthrie, and Trebeck, 1823; Victor Jacquemont, 1831; Joseph Wolff, 1832.' Two only of these, the first and the last, ever returned to their native country. In the list they did not include Catholic missionaries. Forster did, strictly speaking, return home, but he came out again and died at Madras. When Char Chunar island was visited by Dr. Adams in 1854, the tablet had been removed.—*Hugel's Tr.* p. 144; *Buist's Cat.*; *Adams' Naturalist in India.*

HUGH LINDSAY was the name of the first steamer that conveyed an overland mail from Bombay to Suez. She was the first steamer that entered the Persian Gulf. She was lost coming out of the roads of Bassidore, a port on the island of Kishm, in the Persian Gulf.

HUGLI or Hoogly, a town in Bengal, in lat. 22° 54′ 44″ N., long. 88° 26′ 28″ E. It has the town of Chinsurah adjoining it on its south, and their joint population in 1872 was 34,761. A fort is said to have been built here by the Portuguese in 1537, and a population gathered around it. About the year 1629 it was taken by storm, under the order of the emperor Shah Jahan; but in 1640 the English East India Company, under a firman granted to Dr. Boughton, opened a factory here, and two years afterwards another at Balasor. Between 1685 and 1688, disputes arose between the Nawab of Bengal and the Company's servants; but peace was restored, and in the treaty permission was given to build a factory at Sutanati, the present site of Calcutta. Hoogly is the head station of a British revenue district, with an area of 1467 square miles, and a population in 1872 of 1,488,556 souls, the most numerous Hindu castes being the Bagdi, Kaibartta, Brahmans, Rajputs; and Mahomedans, 299,025. When Hoogly fort was taken by the troops of Shah Jahan by assault, after a siege of 3½ months, more than 1000 Portuguese were slaughtered, and 4400 men, women, and children were made prisoners of war. The best-looking young persons were sent to Agra, and circumcised and made Mahomedans. The girls were distributed among the harams of the emperor and his nobility. In Hoogly the first press was set up in India in 1778, by Messrs. Halhed and Wilkins, on the occasion of the publication of a Bengali grammar by Halhed. The Bandel church is the oldest Christian church in Bengal, built, according to the inscribed date, in 1599. Prior to Hoogly, the royal port of Bengal was Satgaon. The Ganges formerly flowed by this place, and came out near Andool, and the remains of wrecked vessels have been turned out beneath the earth, which has overlaid the bed of the deserted channel. Satgaon is of great antiquity, having been known to the Romans under the name of Ganges Regia.

The Hoogly river is formed by the junction of the Bhagirathi and Jelinghi, two branches of the Ganges. It runs into the sea at Saugor roadstead, by an estuary 15 miles wide. Its length is 160 miles by winding of stream. It receives the Damodah, 350 miles; Dalkissore, 170 miles; Cossy, 240 miles; Mor, 130 miles; and about 49,000 square miles are drained. The river has on its banks Calcutta, Serampur, Chandernuggur, Hoogly, and Murshidabad. The rivers forming it are offsets from the western branch of the Ganges delta. The eastern or Saugor channel is the principal entrance. From Middleton Point light to Fort William at Calcutta is 83½ miles in length, following the windings of the river. It is the most westerly, and, for commercial purposes, the most important channel by which the Ganges enters the Bay of Bengal. Proceeding south and a little east from Santipur, the Hoogly river divides Murshidabad from Hoogly district, until it touches the district of the Twenty-four Parganas in lat. 22° 57′ 30″ N., and long. 88° 27′ 15″ E., close to the village of Bagherkhal. It then proceeds almost due south to Calcutta, next inclines to the south-west, and finally turns south, entering the Bay of Bengal in lat. 21° 41′ N., and long. 88° E.

The Saraswati, now a muddy channel, enters the Hoogly at Satgaon, about 30 miles above Calcutta, and the Adi Ganga, now little more than a series of pools, which diverges south-east from it just below Calcutta, are both rivers of great sanctity. They are supposed to represent the original Ganges, Holy Mother Ganga, who takes her divine source in the Himalayas, and pours her waters into the Bay of Bengal at Sagor (Saugor) island. In August 1856, neap tide rose 15¼ feet above the datum sill of the Kidderpore dock; and upon the 18th August 1856, spring tide rose to 22¼ feet above the same datum, the greatest rise of the salt lakes being 12 feet. This is on the western side of the delta. On the eastern side the tides rise from 40 to 80 feet. The silt held in solution, earthy matter, carbonate of lime, magnesia, sulphates of lime and iron, at 3 feet of depth, varies at Calcutta and in the Gasper Channel from 7·34 to 18·92.

The Hoogly is difficult to navigate. The tides run rapidly. The James and Mary Sands, 30 miles below Calcutta, used to be reckoned so perilous, that until well into the nineteenth century East Indiamen lay at Diamond harbour, just below their dangerous currents. A minute supervision of the channels, with steady dredging and a constant readjustment of the buoys, now renders the Hoogly a safe waterway to Calcutta for ships of the largest modern tonnage, drawing up to 26 feet. These sands are shallows formed

at the entrance into the Hoogly, from its western bank, of the Damodar and Rupnarayan rivers, which bring down the drainage of South-Western Bengal. These rivers discharge at sharp angles into the Hoogly, at a distance of only a few miles apart, nearly opposite Falta, which lies 27 miles by water from Calcutta. Their waters check the flow of the Hoogly, and lead to the deposit of vast quantities of the silt with which the Hoogly, Damodar, and Rupnarayan are loaded. If a ship touch the bottom of the sands, she is immediately pushed over by the current; and cases are known in which only the yards of a great three-masted ship have remained above water within half-an-hour after the accident; vessels become covered over with the sand if not promptly blown up. The sands extend upwards from Hoogly Point, 33¼ miles from Calcutta, opposite the mouth of the Rupnarayan, to about Falta, 27 miles from Calcutta, opposite the mouth of the Damodar.

Fishermen, who have sea-going boats, inhabit villages near the entrance of the Hoogly.

A bore is caused by the head-wave of the advancing tide becoming hemmed in where the estuary narrows suddenly into the river, and often exceeds 7 feet in height. It is felt as high up as Calcutta, and frequently sinks small boats or dashes them to pieces on the bank. The tide itself runs as high up as Hoogly town.—*Tr. of Hind.* i. pp. 13, 15.

HUGONIA MYSTAX. *Linn.* Modera kanni, MALEAL.; Agur, TAM. A shrub growing in Malabar, the Coromandel coast, and Ceylon, with large blossoms of golden-yellow colour. It is employed in native medicine.—*W. Ill.; Voigt.*

HUJERI. ARAB. A term applied to one of the servile races of Arabia. Qu. Khijra?

HUJRA. PERS. A place of assembly, a chamber. In Afghanistan, a house set apart for the accommodation of travellers, and where, in the evenings, the old and the young assemble to converse and smoke the chillam.—*Masson's Journeys*, i. p. 119.

HUJRA, a small town of 3000 inhabitants in the Montgomery district of the Panjab; residence of a branch of the Bedi Sikhs, descendants of guru Baba Nanak. It was conquered by Bedi Sahib Singh during the reign of Ranjit Singh, and held by him in jaghir from the Maharaja. His descendants still hold extensive revenue grants in the neighbourhood, and exercise considerable local influence.—*Imp. Gaz.*

HUJULOHA. HIND. An epithalamium.

HUKKA. HIND. A pipe used in India, in which smoke is made to pass through water. Hukka bardar, a pipe-bearer. Hukko charsee Pattani, used by Patans for smoking charras, resin of hemp, or Cannabis sativa.

HUKMCHIS. HIND. A dark-coloured gum obtained from the date palm.

HUKUM or Hukung, a valley in Assam, about 1000 feet above the level of the sea. It is surrounded on the north and east by mountains elevated 5000 and 6000 feet, and is traversed by numerous ranges of low hills.

HULAETA. HIND. In Hindustan, the first ploughing of the season, which is generally preceded by the taking of omens, and other superstitious ceremonies. The note of the koel bird, amongst other auguries, is considered very favourable, and its utterance is of such authority as to enable the cultivator to dispense with a formal application to a Brahman.—*Ell.* See Hal; Har.

HULARI, a mountainous district near Shiraz, with fine vineyards, from which the choicest Persian wine is prepared, both red and white. This wine has much body; it resembles the strong Cape wines, and is fit to be exported.

HULASWAR, a division of the Holeyar of the Canarese-speaking race.

HULDI or Haldi. HIND. Turmeric; Curcuma longa, *Roxb.* It takes an important place in many of the customs of the people of India. Haldi mehndi is a Mahomedan betrothal ceremonial, as also are Haldi or Munja baithna, Haldi chor, and Haldi saoo. The Hindu races use it largely for smearing their bodies, and to dye with it portions of their new clothes to avert the evil eye.

HULKA-BUNDI or Halka-bandi. HIND. A system of schooling, embracing those of the circle of villages in which they were established.

HULL. E. C. P. Hull, author of Coffee Planting in Southern India and Ceylon, London 1877.

HULLAH or Nimboli. HIND. A neck ornament worn by Mahomedans.

HULLAR or Hulla, a district which forms the chief part of the southern shores of the Gulf of Cutch. The land near the sea is low, but all well watered. Nowanagar is the principal place of the district. The Roje temple is in lat. 22° 32 50″ N., and long. 70° 1′ 30″ E.

HULLE MUKKALU, a caste in Mysore who live by begging, and by fees from goldsmiths' shops, blacksmiths' shops, and at marriage ceremonies.

HULUGU, grandson of Chengiz Khan, founded the Mongol dynasty of Persia. On the 22d of January 1258, he appeared with his army before Baghdad. On the first of February he took the city by storm, and put an end to the power of the khalifs. He had made the khalif Mostassim believe that he was willing to give his daughter in marriage to the khalif's son. But when the principal people were thus all got together, the Tartars set on them, and put them all to death. Baghdad, the city of science, learning, and pleasure, was given up to pillage and slaughter, and more than 800,000 persons were mercilessly destroyed. Sanut declares that Hulugu killed the khalif by pouring molten gold down his throat. Whilst the Mongol were covering Poland with blood and ruins, Hulugu, in the east, was completing the conquest of Syria. After the capture of Baghdad, he entered Mesopotamia, seized on Merdin and Harran, passed the Euphrates, and made himself master of Aleppo and Damascus. The Tartar general had sent orders to Nasir, the sultan of Aleppo, to submit at once, and come in person to meet him. Not being complied with, Hulugu laid siege to Aleppo. Twenty catapults played for five days against the town, and it was taken by assault on the 18th January 1260. An incredible amount of treasure was found in it, and the carnage was still more horrible than at Baghdad. The streets were choked up with corpses, and it is stated that 100,000 women and children were sold for slaves in Little Armenia or in the territories of Europeans. He was succeeded by his son Abaka, who married a daughter of Michael Palæologus, the Greek emperor. His brother Nicolas, who succeeded him, became a Mahomedan; but Arghun Khan, son of Nicolas, was hostile to the people of that creed. Arghun sent embassies, conducted by a Genoese named

Buscarelli, to the Pope, and to the kings of France and England, proposing an alliance against the Saracens and Turks; and in 1290 Edward I. of England sent Geoffrey de Langley on a return mission to him. Arghun having lost his favourite wife in 1286, sent Kublai Khan to select another for him, and the Polo relatives were commissioned by Kublai Khan to escort the new bride he had chosen for his nephew, to the Persian court. —*Huc's Christianity*, i. p. 268.

HUMA, a fabulous bird, the phœnix of classical writers, also the hoopoe, Upupa epo.

HUMAYUN, emperor of India, twice reigned in that country, viz. from the death of his father Baber, 26th December 1530, till he abdicated on the 9th July 1543, and again from re-accession, A.D. 1555, till his death. Humayun was the eldest of four sons of Baber. Of these, Kamran was governor of Kābul and Kandahar at the time of their father's death, but Hindal and Mirza Akbari were unemployed in India. Humayun on accession ceded the Panjab and the country on the Indus to Kamran, in addition to his former territories; gave the government of Sambal to Hindal, and that of Mewat to Mirza Askari. Humayun's first operations were against Bahadur Shah, king of Gujerat, and he was one of three hundred chosen men who, at night, in August 1535, scaled the almost perpendicular rock on which the hill fort of Champaner is built. Sher Shah's revolt, however, recalled him to Hindustan and the banks of the Ganges; but, after gaining temporary advantages, in a general action in April 1840, near Canouj, Humayun's forces were defeated and driven into the Ganges, Humayun himself escaping to the other side with great difficulty. He sought protection from Kamran at Lahore, then, failing in an invasion of Sind, he sought and found an asylum with Maldeo, raja of Marwar, but finding Maldeo likely to deliver him up to his enemies, he moved to Amerkot, a fort in the desert not far from the Indus. The journey through the desert was calamitous; many of his companions died miserably from thirst; Humayun, with only seven mounted attendants, entered Amerkot, and was received kindly by the chief, Rana Parshad. Here, on the 14th October 1542, was born his son Akbar. His fortunes still varied, and he sought protection with Shah Thamasp, king of Persia. He sent his confidential officer, Bahram Khan, to meet the king, and followed afterwards on a visit, but found himself a prisoner, was compelled to accept the Shiah doctrines and forms, and promised to introduce it into India, to wear the Kazzilbash cap, and to cede the kingdom of Kandahar. At length he was allowed to depart, and, arriving at Seistan, he found 14,000 horse awaiting his arrival, under the command of Morad Mirza, king Thamasp's son.

He took Bast on the Helmand, besieged and took Kandanar, March 1545. Mirza Askari took Kābul, and recovered Akbar, but only again to sustain reverses in Balkh, during which he fled with only eleven attendants to Badakhshan. Recovering somewhat, he overthrew Kamran (1547), and all the brothers (1548) were reconciled, and took food together; only again for Humayun to meet with further reverses, for Humayun marched against the Khalil, but in a night attack he was defeated by these mountaineers, and his brother Hindal killed. Humayun again took the field, defeated the Afghans, and compelled Kamran to fly to India, where he took refuge with Sultan Selim, and afterwards with the Sultan of the Ghakkar, who in September 1553 betrayed him to Humayun. He was blinded, and allowed to proceed to Mecca, where he soon after died. Humayun passed a year at Kābul and Kandahar; and on the death of Selim Shah he set out from Kābul with 15,000 horse in January 1555, to Lahore, overthrew Sikander Shah at Sirhind, and took possession of Dehli and Agra. In less than six months after his return to the capital, when descending the stairs from his library, hearing the muazzan's call to prayers, he repeated the creed, and sat down on the steps till the azan was finished. As he rose with the help of his staff, it slipped on the polished marble step, and he fell over the parapet, and was stunned. On the fourth day of the accident he expired, A.D. 1556, A.H. 963, in the 49th year of his age and 26th of his reign, including the 16 years of his banishment from his capital. He was succeeded by his son Akbar, then thirteen years and four months old; and in Akbar's reign India was formed into one empire. Humayun in all his military operations had shown no want of personal courage, but great deficiency in enterprise, and he had gone through his subsequent calamities with cheerfulness that approached to magnanimity.—*Elphin.* pp. 384-413.

HUMBOLDTIA UNIJUGA. *Bedd. Ic.* A handsome middling-sized tree, growing abundantly on the Travancore Ghats, in the dense forests a little below the Attraymallay, 3000 to 4000 feet elevation; timber very hard and durable. Wight gives also H. Brunonia, laurifolia, and Vahliana. —*W. Ic.; Beddome, Fl. Sylv.*

HUME, ALLEN OCTAVIUS, C.B., a civil servant of the Bengal Presidency, and author of The Game Birds of India. While magistrate of Etawa, by force of will and mild obstinacy of purpose, he overcame much resistance from the natives, and for years continued toiling at schools and Christianity, and all that elevates the human heart. He was an instance how much can be done in India by the influence of one man. It is in India where such influence attains its highest sway. A place more desert-looking and hopeless of growth for any European seed could hardly be selected; yet this one pale Englishman, of slender frame and ascetic habits, developed upon that fiery soil a caste of natives unsurpassed in firm allegiance and educational distinction.—*T. J. Horell-Thurlow, The Company and the Crown*, p. 89.

HUMEA ELATA. *Roxb.* Masjot, BENG. A tree of Chittagong which attains a great size. Humea elegans is an ornamental plant of N. S. Wales, grows to the height of 5 or 6 feet; colour of the flower red, and well adapted for borders; it requires a good soil. —*Roxburgh*, ii. p. 640; *Riddell.*

HUMEANA. HIND. A waist-belt to carry money.

HUMPI, a ruined city in the Bellary district of the Madras Presidency, known formerly as Bijanagar, also written Vijayanagar and Vijianuggur, properly Vidianuggur, or the town of learning. There is a tradition that there was a town here about A.D. 1100, but it first acquired a name from being occupied or founded by two fugitives from Telingana, or, according to Prinsep,

in 1338 by Bilal Deo of Karnata, who resisted Muhammad Taghalaq, and founded Vijayanagar. In 1347, Krishna Rai ruled there; in 1425, Deva Rai; in 1478, Siva Rai. Vijayanagar sovereigns claimed to be of the Yadu race. Towards the 15th century, the city had become the capital of a great Hindu power, which ruled over the Hindu chiefs to the south of the territories of the Adal Shahi, Nizam Shahi, and Kutub Shahi, kings of the Dekhan. In the middle of the 16th century, these three Mahomedan kings, fearing the growing power of Ramaraja, the sovereign, made war against him. Rama was then in his 70th year. He met the confederates at Talicottah, on the 25th January 1565, with a great army of 70,000 horse, 90,000 foot, 2000 elephants, and 1000 pieces of cannon; but he was defeated with a loss of 100,000 men, and was taken prisoner. The authors Khafi Khan and Shahab-ud-Din state that the elephant on which he was mounted ran away with him into the confederates' camp. He was beheaded at Kala Chabutra, in the Raichore Doab, and his head remained for 200 years at Bijapur as a trophy. Vijayanagar sank into an insignificant place, and is now known as the ruins of Humpi. The raja's brother, however, took refuge in Peniconda, and subsequently at Chandragiri, whence the English merchants obtained the grant of the ground on which Madras was built, and engraved on a gold plate, which was lost in 1746, when Madras was captured by the French under Labourdonnais. The descendant of Ramaraja is the raja of Anagundi, whose title is Sri Mudrajadhi Raja, Raja Parameswara, Sri Virapratapa, Sri Vira Terumala, Sri Viravenkata Ramarawya, Dava Maharawya Sumstan Vedaya Nagarum.—*Wh. H. I.* p. 459.

HUMULUS LUPULUS. *Linn.* The hop plant; has been extensively distributed in the Himalayas. At 2500 feet, in the Dehra Doon, it grows well, and at an altitude of 6000 feet in the Government gardens, Mussoori, but in those regions the highest limit appears to be 4000 or 4500 feet. It has been successfully cultivated in Dehra Doon for many years, so far as mere growth is concerned; but heavy rain at the flowering period prevents the flower from reaching perfection as to quantity and quality of the powder on which its value depends, and the results have, on the whole, been unsatisfactory.—*Stewart, P. Pl.* p. 217. See Hops.

HUN. HIND. A gold coin of S. India, worth 31½ rupees, called pagoda by the British. It is about 50 grains weight.

HUN, a race who have secured for themselves a niche with the 36 races of India. D'Anville, quoting Csoma de Koros, informs us that the White Hun occupied the north of India; and it is on the eastern bank of the Chambal, at the ancient Barolli, that tradition assigns a residence to the Hun; and one of the celebrated temples at that place, called the Sengar Chaori, is the marriage hall of the Hun prince, who is also declared to have been possessed of a lordship on the opposite bank, occupying the site of the present town of Bhynsror. In the 12th century the Hun must have possessed consequence, to occupy the place they hold in the chronicle of the princes of Gujerat. The race is not extinct. One of the bards pointed out to Colonel Tod the residence of some in a village on the estuary of the Myhie, though degraded and mixed with other classes. There are also two tribes in the Himalaya who have preserved this designation,—the one in Gnari Khorsum, who call themselves Hunia; the other being the Limbu in Nepal and Sikkim, a large division of whom are called Hung. Arrian, Strabo, and Ptolemy state that a race known as the White Hun were established in the Panjab and along the Indus about the beginning of the Christian era. They are mentioned in the Mahabharata and Markandea Purana; Dr. Fergusson says (p. 39) the White Hun or Ephthalites are the Jat.

The Hun are known in Chinese history as Heung-noo, meaning boisterous slaves. The Hiatilla or White Hun issued from the plains near the north wall of China, made themselves masters of the country of Transoxiana and Khorasan, and anticipated the irruption of those Turkish tribes who afterwards expelled the Hiatilla from the lands that they had taken from the Sacæ or Scythians. There is every ground to conclude that it was an army of the Hiatilla that invaded Persia in the reign of Bahram-Gor, A.D. 420, and that it was to one of their kings that Firoz fled, A.D. 475.

The Hun who appeared in the west, dated their empire from one of the princes of the Hia (Hya) dynasty. Their country was of great extent, situated on the west of Shen-si, of which they possessed the western parts; and their posterity still inhabit a part of that territory, the present Ele or Ili. They were one of those extensive tribes which the ancients comprised under the name of Scythians.

It was from Ili valley and town in Central Asia that Lassen supposes the Szu Tartars were expelled by the Yue-tchi or White Huns, B.C. 150. The Szu Tartars he supposed to be the Sacæ, and the Yue-tchi to be the Tochari. After occupying Tahia or Sogdiana for a time, they are stated by the Chinese to have been driven thence by the Yen ger some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Kophen valley in the Kohistan. The great Kirghiz horde is adjacent to Ili and Tarbagatai. It is under the dominion of China, and exchanges large quantities of cattle on the frontier for silk goods.

HUNDE. KARN. A name of the Kuru-baru, Mysore shepherds.

HUNDES or Gnari Khorsum is a part of Chinese Tibet comprising the upper basin of the Sutlej and headwaters of the Kamali river. For the name, Professor Wilson gave Hiun, snow, and Des, country; but Captain H. Strachey derives the name from the Sanskrit Hun, meaning the aborigines of the country north of the Himalaya, who are mentioned in the Mahabharata and the Markandeya Purana. This latter explanation commended itself to the Hungarian scholar, Csoma de Koros, who thought that he might find in these parts the origin of his own people. Mr. Ryall's derivation is from a Sanskrit word meaning gold, Hun-des being the gold country. The Hunia people of Hundes are chiefly nomades, owning large flocks of sheep, and herds of cattle and goats. They are a good-natured race; ugly, simple, and, like most dwellers in cold regions, extremely dirty. They practise polyandry, and in their customs are like the Bhot of Ladakh described by Cunningham. There are five principal passes leading into Hundes from British

territory. The traffic is only open between the 15th of June and 15th October, and not even then without the express permission of the Chinese authorities at Lhassa, who carefully satisfy themselves that no epidemic prevails in the Ghats in British territory. The gold-fields of Hundes lie chiefly in the neighbourhood of Thok Jalang, 100 miles N.E. of Gartok. Washing operations are carried on under the supervision of a gold commissioner, who is called Sarpan, and takes a royalty of $\frac{3}{4}$ths of an ounce yearly from each digger. At Gartok, fine gold-dust sells at Rs. 1$\frac{1}{2}$ in weight for Rs. 16. The greatest demand for gold is at Lhassa. In the early part of the 19th century, the gold-fields round Lake Manasarowar were worked rather extensively; but an epidemic breaking out amongst the miners, the authorities at Lhassa interposed, and the operations were stopped. The Hunia all drink tea, and travel great distances, living on it and sattu, the flour of a parched grain. The Hunia only grow small patches of uwa, a kind of barley, and obtain their other grains from the hill territories of British India. They keep three years' supply of grain in store, to obviate the stoppage of the roads. Their villages are mere tents.—*Tod's Rajasthan; Gutzlaff's Chinese History; Malcolm's Persia; Chatfield's Hindustan; Ritchie's British World.*

HUNDI, an Indian draft or bill of exchange, drawn by or upon a native banker or sirraf, commonly written shrof.—*Simmonds' Dict.*

HUNGARY, a kingdom of Europe, divided by the river Danube into Upper and Lower Hungary, and subdivided into 46 counties. The Hungarian, Lapponian, and Finish dialects are now classed as members of the great Turanian or Tartar family of tongues, which is spoken by all the tribes from the Himalaya to Okotsk and to Lapland, and includes the Hungarian, Crimean, and Turkish tongues.

HUNG KIAO. CHIN. The Red Church, also known as Brug-pa, the designations of the Sakya priesthood of Tibet.

HUNGRUNG, a district adjoining Ladakh, belongs to the raja of Bisatun, its villages lying from 9500 to 12,000 feet above the sea.

HUNG SING-WONG, with the Chinese, the god of the Southern Ocean, and a state deity of China.

HUNSUR, a town in Mysore, on the right bank of the Lakshmantirtha, in lat. 12° 17′ 40″ N., long. 76° 19′ 5″ E.; population (1871), 4293. It has the breeding establishment of the Amrita mahal, a select breed of draught cattle, said to have been formed by Hyder Ali for military purposes, and still kept up by the British Government.

HUNTER, ALEXANDER, M.D., a medical officer of the Madras army, who about A.D. 1851 founded the first school of industrial arts seen in India, and, with much devotion and self-sacrifice, by the year 1871 he had taught one or other branch of art—drawing, pottery, etc.—to upwards of two thousand young men, all of whom had found ready employment. His success led to the formation of several other schools of art in other parts of India. He devoted much of his attention to the manufacture of fibres from the plants of south of India, and to the discovery of minerals ful in the arts.

HUNTER, DR. W. W., LL.D., C.I.E., a Bengal il servant, author of Rural Life in Bengal, Comparative Dictionary of the Non-Aryan Languages of India, London 1868. He was Statistical Officer to the Government of India, compiled in 18 volumes the Statistical Report of Bengal, and, after years of labour, issued the Imperial Gazetteer of India, in 9 volumes. The work is one of administration, and is the necessary complement of the transfer of India from the Company to the Crown. During the E. I. Company's rule it had several times been projected. Dr. Hunter in his preface names ten persons who were his assistants. He wrote also Orissa in 2 volumes, and also a life of Lord Mayo. His varied talents were utilized by being nominated a member of the Council of the Governor-General of India, and was employed in 1882 to ascertain the state of education amongst the people.

HUNTERIA CORYMBOSA. *Roxb.* A tree of Penang. This and H. Zeylanica, *Thw.* (Maddeya, SINGH., the Cameraria Zeylanica of Retz), are supposed by Colonel Beddome to be the same. The timber is very fine and close-grained, and very similar to boxwood; it answers well for engraving.—*Beddome, Fl. Sylv.* part xxiii. p. 265.

HUNTING LEOPARD, or Hunting Cheeta, Felis jubata. These animals live mostly in the plains, where they hunt deer or antelope in parties of four or five together, in the same manner as the wolves do, secreting themselves in bushes at different points, while one of their number chases the buck. On its passing the ambuscade, they pounce out on the little gazelle, or take up the running in turns as it races past them.

HUNZA-NAGER are two adjoining towns, and include a small tract of country on the upper course of a large feeder of the Gilghit river, having an area of 1672 square miles.

HU-PEH is the northern division of the ancient province of Hu-kwang, and is bounded on the N.W. by Shen-si, on the S.E. by Ho-nan, on the E. by Ngan-hoei, and the W. by Sze-chuen. Its population is about 27 millions. Hu-nan is the southern division of Hu-kwang, and is larger than the northern portion just described, but it is not so thickly populated.

HURA CREPITANS. *Linn.* The sand box-tree, a middle-sized tree of rapid growth, native of tropical America. The trunk is strongly armed, the wood light and useless. The sap of the leaves and trunk is so very poisonous, as to produce blindness in a few days after touching the eye. Seeds a violent, drastic, dangerous purgative.—*M. E. J. R.; Voigt.*

HURALA. CAN. Four sorts of Hurala, lamp-oil seed, are grown in Mysore.—*M. E. of* 1857.

HURDAH. HIND. A parasitic fungus in the form of an orange-coloured rust. It is of the genus Trichobasis; it attacks growing wheat and barley.

HURDI-MURDI, in Persia, is a term employed to designate all the trifling but necessary articles which travellers fling in small bags, and carry across the saddle on a journey, in order to have them at hand.

HURDOUR or Hardaur is the name given in Hindustan to the oblong mounds raised in villages, and studded with flags, for the purpose of averting epidemic diseases, and especially the cholera morbus. It is called after Hurdoul Lala, the son of Bursing Deo, from whom are descended the rajas of Duttea. The natives have a firm persua-

sion that the cholera broke out in Lord Hastings' camp, in consequence of beef having been killed for the European soldiers within the grove where repose the ashes of this Bundelkhand chief. His worship prevails throughout the Upper and Central Doab, a great part of Rohilkhand, and to the banks of the Sutlej. To the eastward the worship of Hoolka Devi (the goddess of vomiting) has been prevalent since the same period.—*Elliot.*

HUREE-HARA. SANSK. Both words are derived from Rhree, to take away, possibly the source of the English word to harry.

HURINGATTAH, an entrance to the Ganges, on the west of Rabnadab Island.

HUR KI PAIRI, sacred steps leading down to the Ganges.

HURMUL SEED, Lahuri hurmul, HIND. The Harmalæ semina are seeds of Peganum harmala, grey, small, pyramidal, and triangular, and used as rue.—*O'Sh.*

HUR-PUJA or Har-puja, amongst the agricultural races of India, the worship of the plough. This takes place on the day which closes the season of ploughing and sowing. It generally occurs in the month of Kartik, but in some places is held both after the kharif and rabi sowing, *i.e.* in the months of Sawun and Kartik. The plough is washed and decorated with garlands, and to use it or lend it after this day is deemed unlucky. The practice reminds of the Fool-plough in England, a ceremony observed on the Monday after Twelfth Day, which is therefore called Plough-Monday, on which occasion a plough adorned with ribbons is carried about, and the peasants meet together to feast themselves, as well as wish themselves a plentiful harvest from the great corn sown (as they call wheat and rye), as well as to wish a God-speed to the plough, as soon as they begin to break the ground to sow barley and other corn.—*Br. Ap.* ii. No. 92, *Elliot's Sup. Gloss.*

HURRICANES.

Hurricanes have been investigated by Colonel Capper, Quartermaster-General of the Madras army, Mr. W. C. Redfield of New York, Dr. Thom of the British army, Colonel Reid, Mr. G. T. Taylor of Madras Observatory, and Captain Piddington of Calcutta. A hurricane means a turning storm of wind blowing with great violence, and shifting more or less suddenly, so as to blow half or entirely round the compass in a few hours. The present state of our knowledge seems to show that, for the West Indies, the Bay of Bengal, and the China Sea, the wind in a hurricane has two motions, the one a turning or veering round upon a centre, and the other a straight or curved motion forward, so that it is both turning round and rolling forward at the same time. It appears also that, when it occurs on the north side of the equator, it turns from the east, or the right hand, by the north towards the west, or contrary to the hands of a watch; and in the southern hemisphere, that its motion is the contrary way, or with the hands of a watch. Piddington's first memoir, with the charts and diagrams, showed that this rule held good for the storm of June 1839 off the Sandheads, and that the wind was really blowing in great circles in a direction as described, *i.e.* against that of the hands of a watch. He assumed, then, that the hurricanes in the Bay of Biscay always follow this law.

The tyfoons and storms of the China Sea and eastern coast of Asia appear to be similar in character to the hurricane of the West Indies and the storms of the United States coast, when prevailing in the same latitudes. A tyfoon which occurred in the China Sea in 1831, affords probable grounds for connecting the hurricane at Manilla, October 23-24, with that of October 31 at Balasor, on the shores of the Bay of Bengal.

Of 61 hurricanes that occurred north of the equator, from 1830 to 1854, their numbers were—in the month of October, 12; May and November, 9; September, 8; April, August, and December, each 5; July, 4; June, 2; and March, 1. In the Bay of Bengal the hurricanes usually occur at the changes of the monsoons, in April and May, and in October, November, and December.

The S.W. monsoon prevails north of the equator, and when it prevails, the S.E. trade-wind acquires additional strength from the demand made upon it to supply the S.W. monsoon, these two winds being apparently one system under the influence of the earth's rotation and the high temperature which prevails in the northern hemisphere.

Gales and hurricanes occur in the Indian Ocean south of the equator. Trade-wind gales occur at all seasons, but chiefly in June, July, and August. In these the wind veers but little. In the extra-tropical gales, between lat. 30° and 45° S., the wind veers much, and in the tropical hurricanes the winds veer and shift.

South of the equator, hurricanes occur in November and May, and travel to the W.S.W., and afterwards, but not always, to the S. and S.E., the wind invariably moving round a central space (which is usually characterized by a calm) from left to right, or with the hands of a watch; while the storm, which has a diameter of 1 to 1500 miles, moves onwards at the rate of 1 to 20 miles, but more frequently 4 to 7 miles an hour, for a period varying from a few hours to ten days, attended with torrents of rain, and its northern half often with lightning. Dr. Thom showed that south of the equator these rotatory storms are always generated between the N.W. monsoon and S.E. trade-wind. They occur only during the S.W. monsoon months, and their rise and progress are intimately connected with the S.E. trade-wind and N.W. monsoon, two opposing winds. With ships, the safest course is to lie to and watch the barometer and wind, till the bearing of the centre be known with some certainty.

Of those who have resided at Mauritius, who have earnestly studied and discussed the laws which govern these storms, may be mentioned Dr. Thom, Lieutenant Fryers, Royal Engineers, Mr. Sedgewick, who published a little work, which he called The True Principle, and Mr. Bosquett, of the Observatory at Mauritius, who translated into French Piddington's Hornbook, with annotations of his own, and who claimed to be able, by careful and constant meteorological observations, to foretell the occurrence of hurricanes in the Indian Ocean, and to describe the course they will take. The chart in Piddington's Hornbook shows that these cyclones never extend to the northward of 10° or 12° south latitude in the meridian of Mauritius. Therefore vessels leaving the island in the

urricane season for any part of India, should steer to the northward, passing well to the westward of the Cargades, a most dangerous group, hus keeping a clear sea open to the westward, hat there may be nothing in the way should it be desirable to run to the northward and westward, which would be the true course to take in ase of encountering the south-western or northwestern quadrants of a cyclone (of which in the urricane season a vessel from Mauritius is in langer), and this course she should keep until she s sufficiently far north to be beyond its influence.

Of the more remarkable occurrences, that at he mouth of the Ganges, on the 7th October 1737, was attended by a violent earthquake, and extended 60 miles up the river; 20,000 craft of all descriptions were destroyed,—amongst them, 8 English ships and all their crews,—and 300,000 souls are said to have perished in Lower Bengal, or in the bay. The river rose 40 feet above its usual level. An English church and steeple sank into the earth the next morning.

On 4th October 1739, a cyclone occurred at Ganges mouth, in which 30,000 lives were lost.

Madras has been subjected to severe hurricanes, generally in the early part of May or the end of October. They seem to travel up from the E.S.E., and progress rapidly in a W.N.W. direction till they touch the land, and then they assume a westerly or sometimes W.S.W. course. Their centres generally come right on to the port of Madras. A hurricane has seldom been known to extend south of Porto Novo, 120 miles from Madras (out at sea they are met with as far south as Ceylon), or north of Nellore, 100 miles from Madras. Their diameters are about 150 miles, and they revolve in a direction contrary to the hands of a watch. When the hurricane's centre comes right on to Madras, and there takes a west course, the wind is first at N., increasing in violence for a few hours, and then a lull or perfect calm for half an hour or so, when the hurricane recommences furiously from the exactly opposite quarter, south. This is in accordance with the theory of cyclones. Usually the gale commences about N.N.W., showing that the vortex of the cyclone bears about E.N.E. Vessels, therefore, warned by the barometer, the hollow breaking surf, the threatening sky, and the signals of the master attendant, should at once put to sea (having previously close-reefed and sent down top-hamper). The course to steer, and fortunately it is one which the wind assists, is S.S.E. to S.E. In a few hours the vessel will probably have the wind moderate at west, and may—in fact it has been done—sail round the cyclone, the wind veering to south and then to east. Vessels at first steering east to get away from the land have run right into the vortex of the hurricane. The only danger in a southerly course is from the storm-wave setting the ship on shore. If the lead give notice of this, the ship must be hauled up more to the eastward.

If the gale commence N.N.W. at Madras, and end at S.E., as has often happened, it shows that the centre has taken a W.S.W. course, and passed little to the south of the town; but if it end at N.W., it shows that the centre has taken a W.N.W. course, and the vortex passed to the north of Madras.

The earliest notices that we have of hurricanes on the Madras coast,—at least of those of which we have any record,—was that of the 3d October 1746, twenty-three days after the surrender of Madras to M. de la Bourdonnais. On the 2d of October the weather was remarkably mild during the whole of the day, but about midnight a most furious tempest arose, which continued with great violence till noon of the following day. When it began there were six large French ships in the Madras roads, and some smaller ones. The *Duc d'Orleans*, *Phœnix*, and *Lys* put to sea and foundered, and in them upwards of twelve hundred men were lost. The *Mermaid* and *Advice*, prizes, shared the same fate. The *Achille* (the flag-ship of M. de la Bourdonnais) and two other vessels of war were dismasted; and they had shipped so much water that the people on board expected them to go down every minute, notwithstanding they had thrown overboard the lower tier of guns. Of twenty other vessels belonging to different nations in the Madras roads when the storm began, not one escaped, being either wrecked or lost at sea. The ships which were at anchor in the road of Pondicherry felt nothing of this hurricane.

Another hurricane occurred off Cuddalore on the 13th April 1749. (It is rare to meet with hurricanes before May.) The English army were then on their march to Tanjore, to set Sahoji on the musnud and depose Pretaub Singh. Admiral Boscawen had agreed to send some ships to escort the troops, cannon, and stores to the place at which they designed to disembark them, which was at Devicottah, south of the Colerun river. A dreadful hurricane at N.N.W. came on on the night of the 12th of April, and continued all the next day. Its greatest violence was between eight at night of the 13th, and at two the next morning, shifting round from the northward to the east, till it came to the south, where it ended. In this storm H.M. ship the *Pembroke* (one of those appointed for the above service) was driven ashore and wrecked on the Colerun shoal, a little off Porto Novo. The captain, all the officers (except the captain of marines and purser, who were ashore on leave), and 330 men were drowned, only 12 men being saved. In the same storm the 74 gun ship *Namur* (Boscawen's flag-ship) foundered in shoal water, not far from Devicottah. The first, second, and fourth lieutenants, master, gunner, two lieutenants of marines, and 520 men were drowned; only two midshipmen and 24 men were saved. The admiral, captain, and some other officers were on shore. The *Lincoln* and *Winchelsea*, E.I.C. ships, were likewise wrecked off Fort St. David, but the crews were saved. Almost all the small vessels that were near Fort St. David were lost. H.M. ships *Tartar* and *Deal Castle*, together with the *Swallow* sloop, being at sea, and more to the southward, did not feel the tempest in that violent degree with which it raged near the coast, but they were all dismasted. The rest of the fleet were fortunately at Trincomalee. The English camp was at that time some miles from Porto Novo, and was so devastated that the army were obliged to march to Porto Novo for equipage.

Orme mentions a hurricane on the 31st October 1752, as the most violent that had been remembered on the coast.

The new year of 1761 was ushered in with a most violent hurricane at Pondicherry. At this

time the British were laying siege to that town, and the fleet were in the roads intercepting all succour by sea. When the storm began, Admiral Stevens had with him eight sail of the line, two frigates, a fire-ship, and a ship with stores. From 8 P.M. of the 31st December, till 10 P.M., there was a constant succession of very heavy squalls. About 10 P.M., Admiral Stevens, in the *Norfolk* (having for his captain the gallant and unfortunate Kempenfelt), was forced to cut his cable, and made the signal for the squadron to do the same But the noise and violence of the gale was such that no guns could be heard or signals observed. The other commanders accordingly obeyed previous orders, and continued at anchor, till at length their vessels parted, and then with the greatest difficulty they got their ships before the wind with scarce any sail set. The gale continued to increase until midnight, by which time the wind had veered from N.N.W., where it began, to the N.E., and in an instant it was succeeded by a calm, attended by a thick haze. This was of short duration, for in the space of a few minutes the storm burst from the S.S.E., and raged with redoubled fury. Had the squadron got under sail and proceeded to sea early, they would have had an opportunity of gaining sufficient sea-room before the storm came from the S.E. The first gust of this fresh hurricane laid the *Panther* on her beam-ends, when, the sea breaking over her, Captain Affleck ordered the mizzen-mast to be cut away. This not relieving the ship, he ordered the main-mast to be cut away likewise; it broke below the upper deck with such force that it tore it up, and the mast and rigging hanging over the side, continued to encumber the ship for a considerable time, until a heavy sea cleared them. The ship then righted, and, the reefed foresail having withstood the violence of the gale, by means of it they got back in fourteen fathoms water, and there let go the sheet anchor; but not bringing up, they cut away the fore-mast, the fall of which carried away the bowsprit, when the ship came round, and in this manner rode out the storm. The *America*, *Medway*, and *Falmouth* were dismasted, and, after much distress, came to an anchor near the *Panther*. But it did not fare so well with the *Newcastle*, the *Queenborough* frigate, and the *Protector* fire-ship, who, scudding before the S.E. gale, mistook their soundings, and drove towards the shore without endeavouring to come to an anchor. The roaring of the wind prevented them from hearing the noise of the surf till it was too late. All three came ashore about two miles south of Pondicherry. Of their crews only seven perished, who were dashed overboard by the violence with which the ship struck when they took the ground. A more miserable fate attended the *Duc d'Acquitaine*, the *Sunderland*, and the *Duke* store-ship. Their masts withstood both hurricanes, but they were driven back by the S.E. tempest, and were under the necessity of anchoring; when, bringing up with all their masts standing, they broached to, and either capsized or foundered. The crews, in number eleven hundred, perished, except seven Europeans and as many lascars, who were next day picked up floating on pieces of wreck.

On 21st October 1763, a cyclone occurred at Madras, which lasted 14 hours; all the ships driven on shore were stranded.

On the 21st October 1773, a violent hurricane visited Madras. It began at N.W., and ended with the wind easterly. (It must have travelled S.W., and the vortex passed south of Madras.) The men-of-war put to sea early, but all the vessels that remained at anchor were lost, with the crews.

The next hurricane of which we have to notice, is that of 1782. The weather had been threatening, and when it came on to blow, on the 20th October, the boats belonging to Sir E. Hughes' squadron (then in the roads) were on shore with their crews, on duty. The gale commenced at N.W., and every vessel that could bear canvas, put to sea. Most of the men-of-war boats put off to their ships, which were getting under weigh, and were reached with difficulty by the larger boats, and some of the smaller; but some boats were unable to reach their vessels, and were lost. The *Superb* was dismasted, and the *Exeter* was almost rendered a wreck. Sir Edward Hughes was obliged to shift his flag to the *Sultan*. Both the *Superb* and the *Exeter* got to Bombay with jury-masts. The *Neckar* (a country vessel) lost her main-mast, and some vessels foundered at their anchors. The morning following the hurricane presented a sad spectacle,—upwards of a hundred small country vessels stranded on the beach, the whole remaining stock of rice in the warehouses washed away, famine raging, and pestilence threatening! For the ravages of Hyder had driven thousands from the country to Madras, where already there had been great suffering for want of food. Upwards of 1000 corpses were buried every week for several weeks, in large trenches outside the town. The Governor (Lord Macartney) used noble endeavours to mitigate the calamity, and set an example by sending away all his own horses and servants. Hyder was at Pondicherry, and the admiral's fleet gone! Ships, however, came in laden with grain from Bengal; Hyder Ali died in December, and the hopes of the British revived.

The records of the Madras Observatory notice a heavy gale on the 27th October 1797. The barometer did not fall below 29·465.

A hurricane occurred at Coringa and Masulipatam on the 28th October 1800.

On the 4th December 1803, H.M.S. *Centurion* (of 50 guns, bearing the flag of Admiral Rainier), on her passage from Trincomalee to Madras, experienced a violent hurricane, which left her with nothing standing but the bowsprit, and had nearly proved her destruction. The gale commenced about midnight; at 11 A.M. on the 5th, the wind flew round in a violent gust to the southward, and till 6 P.M. it was blowing a hurricane. H.M.S. was so severely strained, that she had 8 feet of water in her hold, and her upper-deck guns were obliged to be hove overboard. Jury-masts were rigged, and on the 11th the *Centurion* anchored in the Madras roads. H.M.S. *Albatross* was dismasted in the same storm, and put in at Negapatam to refit.

Madras suffered from another hurricane on the 10th December 1807. Fortunately there was only one vessel in the roads when the storm commenced, and she put to sea. To show the effect of the storm-waves, it may be mentioned, from the testimony of an eye-witness (Captain Biden) that the bottom of a ship of 800 tons, supposed to

have been burnt in the roads about ten years before (in 1797), was washed high and dry on the beach near Parry's office; the whole of her floor was perfect, with a large quantity of her ballast, (pigs of iron kentledge). The devastation along the beach and in the town and suburbs of Madras was very great. It was during this hurricane that there occurred an extraordinary rise of the tide, which inundated the whole of Black Town.

Another very disastrous hurricane occurred on the 2d of May 1811. Providentially the fleet, with the troops for the attack of Java, had just sailed. The *Dover* frigate and *Chichester* storeship remained in the roads; they parted, and were lost. Ninety country vessels went down at their anchors. Only two vessels that were in the roads when the hurricane set in, were saved, and these put to sea. During this hurricane the surf broke in 9 fathoms of water, four miles from shore!

On the 24th October 1818, Madras again suffered. The wind commenced at north, and, after increasing in violence, suddenly lulled, and as suddenly flew round furiously to south. This hurricane travelled west, and its vortex passed over the town. The barometer fell to 28·78.

On the 9th October 1820, there was a hurricane commencing at N.W., veering to W. and S.W. The barometer fell to 28·50. Here the cyclone travelled west, and passed to the north of Madras.

On the 30th October 1836, a gale set in from north. At 4 P.M. it blew a regular hurricane from N.N.W. and N. After an ominous lull of half an hour, it flew round with redoubled violence from the south, at half-past seven P.M. At this time the barometer was 28·285.

On the 29th October, at noon, it had been	30·050
,, 30th October, at 6 A.M., ...	29·940
,, 30th October, at noon, ...	29·707
,, 30th October, at 5 P.M., ...	28·891
,, 30th October, at 7.30 P.M., . . .	28·285
At midnight, when the gale broke, . . .	29·415

A storm causing great loss occurred at Bombay n the 15th June 1837.

In November 1839, a hurricane occurred off oringa, when a storm-wave laid the shore 8 et under water. 70 ships and 700 people were st at sea, and 6000 perished on shore.

In October 1842, there was a heavy gale at adras, but hardly considered a hurricane.

In May 1843, another hurricane occurred at adras. On this occasion the brunt of it was felt it at sea, and several vessels were lost. Those iat remained at their anchors rode it out.

The next hurricane at Madras took place on the 5th November 1846; during it the pressure-late of the Observatory anemometer broke, at a ressure of 40 lbs. registered; and the force of ne heavy gust was computed at 57 lbs. per square ot! The large iron wind-vane of the Observa-ry was bent to a right-angle; and one of the at piers on the Elphinstone bridge blown over. hese formed the data for computation. The revious month there had been an unprecedented ll of rain (20¾ inches in 24 hours). Had the urricane set in before the soil had dried, not a ngle building or tree in Madras would have mained upright.

On 19th April 1847, a violent hurricane extended from the equator to Sind. It was severe at Nagpur, Ratnagherry; the Maldives were submerged, followed by severe famine. The *Cleopatra* was lost in this.

A destructive storm occurred at Bombay on the 2d November 1854.

In July 1780, during a tyfoon in the China Sea, about 100,000 people perished.

A tremendous hurricane, with an inundation caused by a storm-wave, occurred at Cuttack and around Calcutta, on the 30th November 1831.

On the 31st October 1831, 300 villages and 11,000 people were swept away in Lower Bengal by inundations, followed by a famine; and the loss of life was estimated at 50,000 souls.

On the 21st May 1832, 8000 to 10,000 people perished in the delta of the Ganges.

On the 8th October 1832, a furious storm and disastrous inundation occurred around Calcutta, followed by great sufferings at Balasore.—*Mr. Meldrum in Pro. Brit. Assoc.*, 1867; *Pharoah's Gazetteer of S. India; Dr. Buist in Bo. Geo. Tr.*, 1856; *Piddington, Law of Storms*, p. 524; *American Expedition to Japan*, p. 137. See Cyclone.

HURTAL. Persulphuret of arsenic, orpiment. There are two kinds, viz. gobhari hurtal, in yellow flakes, used in oil-painting; one seer costs Rs. 1¼. Tabki hurtal, greenish, crystallized, given by fakirs in fumigation. One ruttee of it is wrapped up in a leaf of muggar-bel, and smoked in a hookah. It is evident that the smoker only escapes dangerous consequences, owing to the heat volatilizing most of the arsenic; as it is, the little inhaled often makes the person senseless. Salt is then given to restore the senses. Thus employed, tabki hurtal is considered a most powerful aphrodisiac. It is also used in ointment; costs three rupees for one seer.—*Genl. Med. Top.* p. 137.

HURUT or Harat, a Persian wheel for drawing water from a well; a corruption of Ruhut or Arhut.—*Elliot, Supp. Gloss.*

HUSAIN ALI KHAN, KIRMANI, author of History of the Reign of Tipu Sultan, translated by Colonel W. Miles, London 1844.

HUSAIN - bin - ALI - ul - VAIZ, surnamed Kashifi. He translated the fables of Bedpai from the Arabic of Ibn Makaffa, and named them Anwar-i-Sohaili, or Lights of Canopus.

HUSAIN GORI, the first of the Gori dynasty, succeeded to the throne of India in A.D. 1157 (other authorities say 1151 or 1155), by deposing Khusru Shah, the 13th and last of the Ghaznavi kings. Mahmud, the nephew and successor of Shahab-ud-Din, was the fifth and last of the Gori dynasty. He imparted little influence on India. He had attacked the king of Kharasm at Takash, and subdued the Ghikar tribe; but in A.D. 1206, while returning to Ghazni, he was assassinated by two of his own tribe,—according to Orme in 1212, and another authority gives 1214.

HUSAINI. HIND. A kind of grape, the large sweet kind that are packed in boxes, and sent from Kabul in the cold season.

HUSAINI BULBUL, also called the Shah-bulbul, is of the sub-family Myagrinæ, and is known also as the paradise fly-catcher. It is of a chesnut colour for many months, but becomes white in the breeding season, in its plumage de noces. It is a very graceful bird, with very long tail feathers, and it is a pretty sight to see it flitting from tree to tree; how the birds prevent the long tail feathers from becoming entangled in the thorny trees, is difficult to understand.

In Ceylon, the bird in its chesnut dress is called the fire-thief, and the white bird the cotton-thief; it is also called the sultana bulbul. Its colouring is chaste. Mr. Layard has often watched them, when seeking their insect prey, turn suddenly on their perch and whisk their long tails with a jerk over the bough, as if to protect them from injury. It is common about Madras. It is the Tchitrea paradisi, *Linn.*; and Europeans call it also the bird of paradise.—*Tennant's Ceylon*, p. 249.

HUSAN YUSUF of Lahore is the silicious frustule of one of the Diatomaceæ. It is of a pyramidal form with a convex base, and on each triangular face is a prominent rounded knot; these markings are not affected by acids, and remain after heating to redness. When heated in a reduction tube, it gives off a peculiar smell and combustible gas, showing that it is quite in a fresh state, otherwise it appears somewhat similar to a fossil. Husan Yusuf is collected in lakes and ponds in the hills around Srinuggur in Kashmir. It floats on the surface, and is skimmed off and dried.—*Powell's Handbook*, p. 320.

HUSANZAI. Between the extreme northern frontier of the Hazara district and the Indus, there lies a somewhat narrow strip of rugged and mountainous territory; this is inhabited by the Husanzai, who therefore dwell in Cis-Indus, that is, on the left bank of the river. They could number, perhaps, 2000 fighting men. The principal hill is known as the Black Mountain, from its dark and gloomy aspect. In the adjoining tract, within the Hazara border, lies Western Tournouli, the fief of a chief politically dependent on the British.

HUSBANDRY, Agriculture, Tillage.

Zarāat; Fallahat, ARAB. | Kheti bari, BENG.

Amongst the Chinese, and with several of the races in India, husbandry is considered an honourable avocation; but Rajputs, Brahmans, and Mahomedans in India deem manual labour derogatory. Husbandry and silk-weaving were the earliest of the arts cultivated by the Chinese people. The former was introduced by Shin-nong, the immediate successor of Fo-hi, and the silk-weaving by an empress; and to both of these benefactors the Chinese perform annual sacrifices on their festival days. With them, husbandry is still highly honoured; and annually, at a grand festival in honour of the spring, the emperor ploughs and sows part of a field. The ancient Egyptians, Persians, and Greeks held games and festivals, mingled with religious ceremonies, at seed-sowing; and in England, formerly, the festival of Plough Monday was held, during which the plough-light was set up before the image of the patron saint of the village.

The Chinese annual ceremony at Pekin consists in ploughing a sacred field with a highly ornamental plough kept for the purpose, the emperor holding it while turning over three furrows, the princes five, and the high ministers nine. These furrows were, however, so short, that the monarchs of the present dynasty altered the ancient rule, ploughing four furrows, and returning again over the ground. The ceremony finished, the emperor and his ministers repair to the terrace, and remain till the whole field has been ploughed. The ground belongs to the temples of heaven and earth, on the south of the city, and the crop of wheat is used in religious services. The rank of the actors renders the ceremony more imposing at Pekin, and the people of the capital make more of it than they do in the provinces. A clay image of a cow is carried to the spot, containing or accompanied by hundreds of little similar images; after the field is ploughed it is broken up, and the pieces and small images are carried off by the crowd, to scatter the powder on their own fields, in the hope of thereby ensuring a good crop. The heads of the provincial governments, the prefects and district magistrates, go through a similar ceremony on the same day. In Ningpo, the principal features of the ceremony consist in a solemn worship, by all the local officers, of a clay image of a buffalo, and image of a cowherd. The prefect then ploughs a small piece of ground, and he and his associates disperse on the morrow. They come together in another temple at dawn, where a series of prostrations and recitals of prayers are performed by the fathers of the people in their presence. So soon as this is over, the clay ox is brought out, and all the officers pass around it repeatedly in procession, striking the body at a given signal, and concluding the ceremony by a heavy blow on the head. The crowd then rush in and tear the effigy to pieces, each one carrying off a portion to strew on his fields.

In British India, until after the middle of the 19th century, the Kandh race sacrificed human beings to the earth goddess, with ceremonies identical with those practised by the Chinese and their clay bullock.

Most races have had some religious ceremonies at seed-time or harvest; and to the present day, amongst most of the Hindu races of British India, at the close of the ploughing and sowing season, either in the spring or autumn, the plough is worshipped. It is their Har-puja.

The Kuur-mundla of the Hindus in Northern India, meaning the closing of the furrows, is a name given to the day on which the sowing is completed, but also called Kuur-boji and Hariur, and in the north-west Dulia jhar or Pulia jhar, meaning the cleaning out of the sowing basket,—Kuur-boji meaning the filling of furrows. The day is a festival. The plough is decorated; the residue of the seed-corn is made into a cake, which is partaken of in the open field, and part of it given to Brahmans and beggars. It is the seed-cake of the farmers of England, mentioned by Tusser:—

'Wife, some time this weeke, if the wether hold cleare,
An end of wheat sowing we make for this yeare:
Remember you, therefore, though I do it not,
The seed-cake, the pasties, the fermenty pot.'

The plough, the hoe, and from time immemorial the drill, have been the chief agricultural implements of the Hindus, of whom about 70 per cent. are engaged in husbandry. Their ploughs for breaking up new ground are very heavy, and are drawn by two to eight team of bullocks, as the nature of the soil demands; but one pair of bullocks, with a very light plough, suffices for cultivated land. In rice-fields buffaloes are used.

The plough of the Hindus for their lighter soils is a naturally crooked branch of a tree, with an iron plate as a share or coulter. The cow is never put to labour by the agricultural Hindu, the only race who so employ it being the homeless wandering

Brinjari. In Malay countries the plough is usually drawn by one or two buffaloes, which are peculiarly adapted for the wet land culture of rice, to which the use of the plough is almost exclusively confined, the chunkal or large hoe being employed in turning up the soil in plantation culture. When the light plough of the Hindu farmer is used, there is a mere scratching of the soil, but it is finely pulverized by repeated cross traversing. This form of cultivation has been denounced by most of the Europeans who have written on the subject; and Mr. Robertson, of the experimental farm near Madras, constructed a light plough of the shape in use in Britain, to be substituted for that of wood which is now in use. But in all such substitutions the point which presents itself as difficult to meet, is the feebleness of the draught cattle. The plough of India is doubtless defective, but it is suited to the draught cattle at their command; and by going over and over the ground and making repeated stirrings, they eventually get down to a depth of 4½ inches, or about half an inch less than an average lea ploughing in Britain.

The Chinese have a machine which cuts up both the soil and the trefoil roots. It consists of a strong wooden frame with three cross bars, into which are fixed two rows of strong concave knives. A bullock is yoked to the machine, and, with the driver standing upon it, it is urged through the soil in all directions.

The drill husbandry of Mysore cannot be excelled. Their drilling-machine sows thirteen rows at a time, with the greatest regularity; and their bullock hoe, with blades which pass between the drills, eradicates weeds when the plants are a few inches high, and freely and effectually stirs the soil.

In British India, the arable land is held by three distinct tenures. Sir William Muir has described three broad distinctions in the title under which land was found by the British originally, to be owned or managed throughout various parts of India, viz. ryot occupancy or proprietorship, official zamindarship, and village proprietorship.

The first signifies that the ryot is the hereditary occupant or owner of his own individual holding. The last, village proprietorship, signifies that one or more persons, or a body of coparceners, possess proprietary rights over all the lands (including waste) contained within the boundaries of their village or estate; village proprietors may be either talukdars, zamindars, pattidars, or members of a proprietary and cultivating brotherhood. At the time that the British assumed supremacy, ryot proprietorship prevailed in the south of India, official zamindarship in Bengal, and village proprietorship in the N.W. Provinces.

It may be added, that on the N.W. Frontier are tribal tenures; and in Hazara, Peshawur, and partly in Dehra Ismail Khan, there is a periodical redistribution of the holdings amongst the tribes, known as Waish or Vaish. In Bannu, the island is held in tals, the area of the tribe; in darra, the holding of a group of families; and lich'h, one family holding. In Dehra Ghazi Khan, each member of the tribe holds his own share.

From the time of the census of 1871, husbandry of India has been attracting great attention, because the population has been increasing re rapidly than the means of subsistence. Also, o-fifths of the revenue of British India are ived from the land; and as the Governments of India and the cultivating tillers of the soil are to a great extent joint proprietors of the land, it is felt to be the duty of the state to instruct their partners, and within their state rights to prevent exhaustion of the soil. So far as experience of a century teaches, there are, taking the entire country, two bad years to every seven good ones; the average population affected in each instance is about twenty millions; and the result may accordingly be said to be equivalent to a famine over the whole country nearly twice in a century. Each of the great provinces, except Bengal, is visited with drought at intervals averaging eleven or twelve years, and with famines of exceptional magnitude at intervals of about fifty years. Bengal enjoys far longer periods of immunity, and, except in one or two localities, is wholly exempt from this visitation. Judging from the past, the largest population ever likely to be simultaneously famine-stricken is about thirty millions; and of these, 4½ millions will need assistance during the months of greatest distress, and an average of 2½ millions for an entire year.

How to prevent the soils of India being exhausted, is becoming an increasing subject of thought. With the exception of irrigated lands, little manure is employed in India. The principal food-crops are neither manured nor irrigated, and so long as moderately good soils were being tilled, a rude system of husbandry sufficed to meet the wants of cultivators; but now that by the pressure of population inferior soils are being taken up, it is necessary that an improved system of agriculture should be adopted. At present the farm cattle not at work are rarely if ever fed; the cows and calves are half-starved, and little milk is obtained. Draught bullocks are partially fed. But fodder grasses are never cultivated; and the want of power in the draught cattle is a great cause of defective tilling. It is acknowledged that with care produce can be greatly increased. Messrs. Lawes and Gilbert at Rothamsted, for 24 years grew wheat on unmanured and manured land. Unmanured land yielded only 12·4 bushels per acre, weighing 57·4 lbs. the bushel; land receiving yearly 14 tons of farm-yard manure yielded 34·1 bushels per acre, weighing 59·3 lbs. But the average produce per acre, on a series of observations extending over ten years, in several districts of the Bombay Presidency, was found to be as follows:—Wheat, 9 bushels, 585 lbs.; juari, 10 bushels, 650 lbs.; bajri, 6 bushels, 390 lbs.

In the Dehra Doon the produce from wheat cultivation was found to average 1260 lbs. per acre; and at the Sind experimental farm, bajri (Penicillaria spicata) has yielded as much as 1420 lbs. per acre.

In the Nile valley the yield of wheat is from 8 to 20 fold; barley, 4 to 18 fold; maize, 14 to 20 fold; Sorghum vulgare, 36 to 48 fold.

The Famine Commissioners in their report (ii. p. 72) give the following as the produce of food-grains per acre in several parts of British India:—

Panjab, . . .	11 bushels,	or 0·29 of a ton per acre.
N.W. Provinces and Oudh, and Bengal,	13	0·36
Central Provinces, .	8	0·21
Berar, ...	6	0·16
Bombay, excl. Sind and N. Canara, .	7	0·19
Madras and Mysore,	11	0·3

Mr. Morris, Chief Commissioner of the Central Provinces, in his report for 1872-73 (p. 6), gives the following as the average produce per acre:—

Rice.	lbs.	Wheat.	lbs.	Cotton.	lbs.
Raipur,	602	Sagar,	324	Raipur,	52
Bilaspur,	426	Hoshangabad,	267	Wardha,	40
Balaghat,	360	Jubbulpur,	600	Nagpur,	21
Chanda,	675	Narsingpur,	400		
Bhandara,	448	Raipur,	432		
Seoni,	654				

The area under cultivated crops in India is equal to one acre per head of the population, which increases at the rate of 1 per cent. per annum, equal to two millions yearly. To provide for this increase of numbers, two methods of increasing the production present themselves, viz. progressively to increase the area of cultivated land, and gradually to increase the produce from the land at present cultivated. The equivalent of the two methods are an extension of cultivation by two millions of acres annually, or an increased produce by one-tenth of a bushel annually from the present acreage. In coming to a decision over these two methods, it is necessary to remark that in British India, the best and most available land has long been occupied. The cultivable area still untouched is great, but is in places remote from population, and requiring much beyond the ordinary capital of an Indian cultivator to bring it into a state of production. The second method has therefore to be chiefly relied on. One bushel of increase per acre obtained gradually in ten years from millions of people. The actual increased area, would then have gradually risen from 10 to 20 bushels an acre.

The population in British India is at present one part with another and one year with another barely raising more than sufficient food for their requirement, and the Indian Government, in 1883 arranged with the railways to carry grain from one district to another at the lowest remunerative rates; because from certain districts it was being exported, while the population in some parts is even now pressing on the means of subsistence, and is increasing at a rate which is causing anxiety. The increase in Great Britain from 1851 to 1861 was 0·56 per cent. In India it has been stated at from 0·52 in the N.W. Provinces, 0·54 in Bombay, and 0·74 in Madras, and it has been supposed that the normal may be 0·5 and 0·6.—*P. P.* 1880, p. 29.

The population per square mile has been given as under:—

Oudh,	468	Berar,	129
Bengal,	397	Ajmir,	119
N.W. Provinces,	378	Assam,	99
Madras,	226	Central Provinces,	91
Mysore,	187	Coorg,	84
Panjab,	173	Burma,	31
Bombay,	131		

On the average, in all British India, 211 to the square mile,—agricultural, 56 per cent.; traders, 18 per cent.; labourers, 16 per cent.; professional and service, 10 per cent., the labourers being mostly employed on the land.

Between 1850 and 1880, 18 millions of acres of waste land had been brought under cultivation in the Madras and Bombay Presidencies, a quantity amounting to 80 per cent. of the area under cultivation in 1850. In the N.W. Provinces, from 1840 to 1880 there was an increase of 6 millions of acres, or 30 per cent. of the area under cultivation in 1840. In British India, the cultivated area for food-crops is a little more than one acre for each individual; in the Panjab, 0·76 of an acre; in the N.W. Provinces and Oudh, and in Bengal, 0·81; in Central Provinces, 1·8; in Berar, 1·75; in Bombay, 1·4; in Madras, 0·93; in Mysore and Burma, each 1 acre.—*F. Rep.* p. 73.

The Famine Commissioners, in their report of 1880 (i. p. 50), assuming the population of British India at 181,350,000, estimated the area under food-crop at 166,250,000 acres, yielding an outturn of 51,530,000 tons of food. The ordinary consumption is estimated at 47,165,000 tons, leaving a surplus of 5,165,000 tons. The estimated consumption includes food, 37,980,000 tons; seed, 3,450,000 tons; cattle food, 309,000 tons; and wastage, 2,555,000 tons.

The famine of 1876-77 affected a population of 36 millions in the Peninsula of India, and in that year the crop in Bombay was short of the average by 1½ million tons, in Madras by 3½ millions, and in Mysore by 1 million tons.

The subject of Indian husbandry is one of much difficulty. The climates, the rains, and the soils of British India widely differ, and demand from the husbandman the most varied treatment. The lands in the deltas of the Ganges and Indus are annually strewed over with the fine silt which the floods of these rivers bring down in their course [illegible] are grown with little labour, and the great the crops, the soil in those districts is made to yield three crops in the year. The great volcanic tract of the Dekhan, in provinces reached by the moist winds and rains of the south-west monsoon, and covered for ten and twenty feet deep with the regur or black cotton soil, from unknown times, has yielded once a-year, without manure, one luxuriant crop of wheat, sorghum, or cotton, grown in the open fields, without other care than the ploughing, sowing, and reaping.

The earth nowhere else yields agricultural produce in return for so little labour as in Lower Egypt, and gives back the seed so plentifully. In the lands which the Nile overflows, when the water is partially withdrawn, the fellah, without previous labour, throws the seed from his boat into the wet mud. Their present yield of wheat is from 8 to 20 fold; of barley, from 4 to 18; of maize, from 14 to 20; of Sorghum vulgare (durrah), from 36 to 48 fold. A like fertility is repeated in the flats of the deltas of the Indus and the Ganges, where rice crops are grown defying the inundations.

In India, crops known as the kharif are sown from the latter part of May and beginning of June to the early part of August, and are reaped from the latter part of October to the early part of December. And in districts watered by the N.E. monsoon and winter rains, rabi crops are sown from the latter part of August to the early part of November, and are gathered in the spring from the end of February—March to the beginning of April, being brought on by the heavy dews and cool nights and winter showers that prevail during the cold-weather months of India.

The *Rice* varieties of the Peninsula of India are sown and ripen at different periods. Some of them are sown in July, but most in August. Some

ripen in four months in November, some in five months in December, and some in six months in January or February.

Of the *Oil-seeds*, Sesamum orientale is sown in May and gathered in August, and Arachis hypogea is sown in September and gathered in February.

Of the *Pulses*, Lablab vulgaris, Cajanus Indicus, Phaseolus radiatus, and Dolichos catiang are generally grown on lands depending on the natural rains, and their seeds are sown along with the millets. Phaseolus mungo and Ph. max. are sown in July and gathered in January. Cicer arietinum is sown in October and gathered in March. Dolichos cultratus, Phaseolus aconitifolius, and Pisum sativum are sown in December and gathered in February.

For *Millets*, the ground is ploughed up, and the seeds sown broadcast, in July or August, and reaped in November or December,—

Panicum miliaceum, *Willde.*, or varagoo, in six months;

Penicillaria spicata, or cumboo, in four months;

Panicum miliare, or shama, in three months;

Sorghum vulgare and its allies ripen in five months;

Setaria Italica, or tennay, in four or five months.

In Kandahar, the spring or rabi harvest produces wheat, barley, pulses, beans, lentils, madder, etc. The autumn or kharif harvest crops are maize, pulse, rice, beans, carrots, turnips, eggfruit, beetroot, love-apple, tobacco.

In most parts of Afghanistan and in the extreme N.W. of India the crop sown in the end of autumn, and reaped in spring, consists of wheat, barley, Ervum lens (addus), Cicer arietinum (nukhud), with some peas and beans. The other crop is sown at the end of spring, and reaped in autumn, and consists of rice, Panicum Italicum, and P. miliaceum, Sorghum vulgare, Penicillaria spicata Zea mays, and Phaseolus mungo.

The former, the spring harvest, is the most important in the countries west of the Suliman range. The latter, the autumn harvest, called by the Afghans Paniyeh or Tirmani, is on the whole the most considerable. But there are modifications, according to climate. In the Hazara country, and also in all the coldest parts of Afghanistan and the neighbouring states, they sow their only harvest in spring, and reap it in the end of autumn.

In the Kharaoti (Karoti), the Kattiwaz, and some other elevated countries in that neighbourhood, they sow their only crops at the end of one autumn, and reap it the beginning of another.

In Bajawar, Panjkora, in the country of the Upper Momunds and that of the Utman Khel, wheat is the principal grain sown, and their most important harvest is that which is reaped in summer.

In Peshawur, the Bangash, Jaji, Daman, and Afridi Khel countries, the harvests are nearly equal; but in the eastern countries, that which is reaped in autumn is the more important. Wheat is the chief food of the people, though in several parts the millets, Panicum, Sorghum, and Penicillaria spicata are also made into bread. Indian corn heads are eaten roasted as a luxury.

About towns the food-grains mentioned are largely supplemented by their pālez harvest, of musk melons, water melons, various kinds of cucumbers, pumpkins, gourds, grown everywhere in open fields like grain. And in the gardens are grown carrots, turnips, beetroot, lettuce, onions, garlic, egg-plant, spinage, and greens of all kinds, cabbage, cauliflower. Barley is given to horses, and turnips are sown for cattle.

Rice is grown in most parts of Afghanistan, but in very different quantities. In Swat and Peshawur it is most abundant.

Berar is a province in the centre of the Peninsula, which receives the rains of the S.W. monsoon from June to August, and the winter rains of December and January, and its seed times and harvest times are as under. The plants with an asterisk (*) are irrigated:—

In India, diseases and wild beasts cause heavy losses to the agriculturists. On this form of loss the Mysore Administration Reports for 1873-74 to 1875-76, have shown the losses in cattle sustained by their owners,—

	1874-1875.		1875-1876.	
	From Sickness.	By Wild Beasts.	From Sickness.	By Wild Beasts.
Cows,	33,440	1,522	42,343	1,299
Bulls or bullocks,	24,555	1,041	33,089	921
Male buffaloes,	5,450	279	8,971	246
Female ,,	12,575	414	16,979	381
Sheep and goats,	67,129	1,681	55,181	1,685
Horses,	826	45	666	66
Asses,	1,797	43	1,396	31
Total,	145,772	5,025	158,625	4,629

In 1873-74, the cattle of all kinds numbered 2,911,684, and the deaths 138,759. In 1874-75, the respective numbers were 2,921,962 and 150,797, the increase of 12,038 deaths having been due to cattle disease in the Mysore and Hassan districts.

Irrigation.—The crops are liable to great injuries from insects and fungi, which will be found mentioned under Insects. Rats, locusts, hyænas, elephants, also cause losses; but that which is most dreaded is droughts, for the rainfall fluctuates from year to year as much as 50 per cent. on either

side of the average, and failure of the rains results in scarcity and famine. The rains on the seaward sides of the Western Ghats and of the Arakan Hills never fail, the inundations and the canals of Sind and Lower Bengal protect the crops from all fear of drought; but in Mysore, the Ceded Districts, Ongole, Orissa, Hyderabad, Rajputana, Oudh, N.W. Provinces, and the Panjab, the rains have often failed, and millions of the inhabitants and their cattle have perished. The Tamil, Teling, and Gond races have evinced much ingenuity in constructing tanks wherever the slope of the ground admitted, and the races along both banks of the Lower Indus have laboriously formed inundation canals. With water, in tropical countries, plants of some kind may be grown. But much injury results from profuse supply of canal water swamping the lands. Land is destroyed unless there be perfect drainage made before the irrigation is adopted. The water must be able to get out of the land as well as to get into it with equal facility. Of all the supplies, river water is the best, as it brings with it a large proportion of silt; after that comes water from tanks, then the natural rains; and worst of all are the waters of wells and canals, for they contain much saline matter in solution, and chiefly soda. Salts in undue proportion render soils sterile. Mr. Robertson of the Sydapet farm says that soil which contains more than a half per cent. of salts, capable of being washed out by water, cannot possibly be productive. Mr. E. C. Schrottky says that the remedy for this is subsoil drainage.

Manure.—Next to water in agricultural value comes manure. The Chinese, of all the eastern races, are the most successful appliers of manures, utilizing them from the animal, vegetable, and mineral kingdoms, and applying them in a skilful manner, growing green crops for manure, which they plough down into their fields, and using recent animal refuse in a greatly diluted state. Throughout British India, the husbandmen are thoroughly acquainted with the value of manures, both fresh and decomposed, but the quantity obtainable is barely sufficient for their garden cultivation. Even if all the cattle refuse could be had, it would still be insufficient; but in most parts, owing to the scarcity of firewood, dried cow-dung cakes are the chief fuel. Also, with every increase of irrigation, manure is necessarily more and more needed, the soluble parts of the soils being more easily taken up, and are more frequently so by the more frequent cropping. The soils of many parts of British India are thus in danger of becoming utterly barren. Learned men from ancient times have been warning agriculturists on this point. In the first century of the Christian era, L. Junius M. Columella, in a letter to Publius Silvinus, pointed out that the sterility of their fields is to be attributed to their own doings. Mr. H. C. Carey of Philadelphia has shown that in the States, in the beginning of the 19th century, 25 to 30 bushels of wheat per acre were to be got, but latterly only 12 bushels. In Virginia and Kentucky, tobacco was grown until the soil was completely exhausted, and had to be abandoned. In a late Settlement Report in the Hoshangabad district, it was stated that in the Nerbadda valley, fifty years before, the rate of produce had been tenfold, but only sixfold at the date of the report. Liebig, in his letters on Modern Agriculture (pp. 176-77), remarks that 'there are fields that may yield without manuring, for 6, 12, 50, or 100 years successively, crops of cereals, potatoes, vetches, clover, or any other plants, and the whole produce can be carried away from the land, but the inevitable result is at last the same: the soil loses its fertility, the fields will ultimately be brought to a state of exhaustion, the corn will only yield an amount equal to the seed, the potatoes will no longer produce tubers, and the veteches or clover will die away after barely appearing above the ground.'

These remarks are admonitory to the cultivators, the State, and the people. If the land be only half tilled, and be starved as regards manure, the share of the produce falling to the State will appear large; but the more produce it can be made to yield, the more easily will the land-tax be paid. Throughout India the ground around the village site is always resorted to by the inhabitants, and tobacco is there the most frequent crop. It is almost the only open field that receives animal refuse, four-fifths of the cattle droppings being dried and used as fuel. The average daily weight of cows' droppings is 4 or 5 lbs. daily, equal to 15 cwt. per annum; two-thirds are consumed as fuel, excepting during the rains. How little the fields receive, is known from the fact that there is one head of horned cattle to every two cultivated acres,—plough cattle, milch cattle, and buffaloes. Even the small portion retained for manure is wasted, no care being taken to prevent loss by drainage or evaporation. Mr. Buck mentions that at Farrakhabad night-soil has been utilized for ages past, as much as Rs. 15,000 to 20,000 being paid there by the cultivators to the sweepers.

In the general non-use of manure, the prevailing practice has been to throw the exhausted fields out of cultivation for periods of years, after which it is again broken up into great masses by iron bars. Full crops are not immediately obtained. In the Chanda district, it has been observed that where fresh soil is broken up for rice cultivation, the ground can never be got into proper order during the first year, and the yield is less than in the old fields. In the second year the return rises to about an eighth above that of the old fields, and increases gradually year by year until the fifth, when it reaches 50 per cent. above the yield of the old fields. It then commences to decline, and in about another five years has subsided to the level of the old fields. Land yielding dry crops seems also to reach its highest point of fertility in the fifth year of cultivation, but it falls more slowly to the condition of old fields than is the case with rice lands, and in a field twenty years old will be more productive than one which has been twenty years under the plough. When a cultivator sees a field becoming sterile, he allows it to be fallow for from two to five years, in the meanwhile pasturing his cattle thereon; and when the land is again sown, it is found to give a yield equal to its neighbours.

Green manure, ploughed in, has several advantages. It saves transport, rapidly decomposes, saves all the constituents of the manure; while decomposing, raises the temperature of the soil, protects the soil from the effect of solar heat, prevents evaporation, retains fertilizing gases, and

pulverizes the soil. The jute and cassia leaves and exhausted indigo plants are largely utilized in this way. Bone-dust is only employed in places superintended by Europeans.

Progress.—The British have been very desirous of improving the husbandry of the people, and have succeeded to a small extent. Millions sterling were expended in experiments to improve the staple of cotton; much encouragement was given to the silk and lac industries; unsparing and successful efforts have been made to establish tea, tobacco, cinchona, hop, and caoutchouc plants; opium cultivation has been brought to the highest pitch of perfection; the indigo manufacture has attracted many Europeans, though the manufacture of the last two products has been left entirely to native skill; tobacco varieties have been introduced; an attempt was made to introduce the fine cochineal insect; a little has been done to introduce improved breeds of cattle and sheep; much has been done for fibrous plants; and by agricultural exhibitions, agri-horticultural societies, farms, fairs, and agricultural banks, forests have been protected, planting of trees encouraged; great canals constructed for irrigation; loans have been made for well-digging; while railways, harbours, and improved ocean steamers have aided in the distribution, and emigrants have been encouraged and protected. These have been regarded by the British rulers as their duties.

Ninety per cent. of Indian exports are raw products, and steady efforts have been made to improve the means of transit and distribution on rivers, canals, ocean ships, roads, and railways. In scarcities and famines, perhaps, no efforts can stave off the destruction of the cattle needed for carriage, and a meteorological department has been formed to watch and give warning of climatic changes. The countries adjoining Further India, still sparsely inhabited, can be looked to for years to come as food granaries, but early effort should be made to encourage and develope the arts. Railway workshops, spinning and weaving companies, tea, cotton, coffee, and cinchona planters have done much, but the fishermen need to have facilities afforded for salting their fish captures, which is the sole animal food that almost all the races eat; and the climates of the western coast of India and of Burma are inimical to cattle and sheep.

Much is still capable of being accomplished in the way of improving existing and adding new varieties of fruit and timber trees, root plants, vegetables, cereals, pulses, and millets, condiment plants, truffles, mushrooms, with herbage and fodder plants for cattle.

Trees should be planted in groves and lines, to afford shelter from drying hot winds. They are a powerful engine in the production of coolness and moisture, and their leaves furnish manure. Prizes and payments should be made to persons who successfully raise trees in exposed situations, for a tree cannot be raised by Government employés under three to five rupees. Sir George Campbell, when in the Panjab, issued an order that every man who cut down a tree should plant five in its place. The breed of stock, cattle, sheep, and goats could be further improved, and better varieties imported; and they may be persuaded to rear fowls of kinds, and to add to their stock by domesticating bees.

preservation of fodder crops by ensillage ht be introduced, and greater care taken, in storing manure, to arrange for the preservation of its fluid parts, under-draining being adopted to bring fresh soil under tillage.—*Sir Henry Elliot's Supplement; Mr. R. H. Elliot and Mr. F. C. Danvers in Jo. Soc. of Arts; Carnegy's Kachahri Technicalities; B. H. Baden Powell, Econom. Prod. of the Panjab; Manual of the Land Revenue Systems of India; E. C. Schrottky, Rational Agriculture; Mr. F. N. Wright, Agriculture in Cawnpore; Mysore and Central Provinces Administration Reports; Baron von Mueller's Select Plants; MacGregor*, pp. 35, 36; *Wils. Gloss.; Williams' Middle Kingdom*, ii. p. 109; *Ward*, p. 101; *Peschel on Man*, p. 492.

HUSE, a transparent fabric of Manilla, of which the shirts of the coloured population are made. It is made from the fibre of the Musa textilis.—*Oliphant.*

HUSKS, on which the prodigal son desired to appease his hunger, were the pods of the Ceratonia siliqua.

HUSN and HASN, pl. Hasnein, sons of Ali, a cousin of Mahomed, by Fatima, Mahomed's daughter. Husni Syud, a descendant of Hasnein.

HUSN-ABDUL is a town between Rawal Pindi and Peshawur. It has a sacred tank, supplied by many rivulets, and crowded with fish. A stone there has a rude bas-relief, said to be an impression of a foot.

HUT or Hoth, a small Baluch tribe in the Dehra Ghazi Khan district.

HUT-GAR or Hat-gar, a weaver caste in the Canarese-speaking country about Belgaum.

HUT'HEELE or Hat'hile, one of the Panchpiri, or five noted saints of the lower orders of Hindustan. He is said to have been the sister's son of Ghazi Meean, and lies buried at Bahraich, near the tomb of that celebrated martyr.

HUT-HU, Sansk., in Hindu asceticism, signifies the external means used to fix the mind upon the One Spirit. These means are, sitting in a particular posture, keeping the eyes fixed on the end of the nose, repeating a particular name, and many other practices equally ridiculous.

HUTTON, Major, author of Note on the Culture of Silk at Kandahar; on the Wool and Woollen Manufactures of Afghanistan; Zoology of Kandahar.

HUTTON, Dr., a Bombay medical officer, author of a History of the Kooria Mooria Islands in the Royal and Bombay Geographical Society's Journal; East Indian Marine Survey.—*P. P.*

HUWANA, Can., the flower fish, occurs in a curious small lake of fresh water close to the sea, near Cundapur in N. Canara. They are considered a delicacy, and used to be sent by runners to Tipu Sultan. They are caught by a number of boatmen moving from one end of the lake.

HUZUR. Hind. A respectful form of address to persons of rank, equivalent to 'presence,'—the presence, the royal presence.

HUZURASH, name of the translation of the Zendavesta into Pehlavi, a mixture of Semitic and Iranian, made in the time of the Sassanidæ. Pehlavi was the language used by the Sassanian dynasty.—*Bunsen; Max Muller.* See Honover.

HWA-KEA-TSZE, the Chinese cycle of 60 years. The Chinese year commences from the conjunction of the sun and moon, or from the nearest new moon to the 15th degree of Aquarius. It has 12 lunar months, some of 29, some of 30

days. To adjust the lunations with the course of the sun, they insert, when necessary, an intercalary month. Day and night are divided into 12 periods, each of 2 hours.—*Gutzlaff's Chinese History*, p. 73.

HWANG-te-wang, and Teen-tsze, are titles which have been held by Chinese emperors. Wang is commonly translated king; the other emperor. See China, 684.

HWOH-FU, Chinese living Buddhas.

HWUI-HWUI KEAOU. CHIN. The Mahomedan religion.

HYACINTH, a mineral used as a precious stone, consisting of silica and zirconia, transparent, and of a red colour.

HYÆNINA, a sub-family of the Felidæ, digitigrade carnivorous mammalia, distinguished by having their fore legs longer than their hind legs, by their rough tongue, great and conical molar, or rather cutting-and-crushing, teeth, projecting eyes, large ears, and a deep and glandular pouch beneath the anus. In general form, hyænas resemble dogs more than cats; and Linnæus classed them with the former, to which they appear united by the Lycaon pictus of S. Africa. There is one species in India,—

Hyæna striata, *Zimmer.*, H. vulgaris, *Demarest.*

Naukra-bagh, . .	BENG.	Taras; Hundar, .	HIND.
Har-vagh, . . .	,,	Lakhar-baghar, .	,,
Kirba; Kat-kirba,	CAN.	Lakar-bag'h, . .	,,
Korna-gandu, . .	,,	Lakra-bag'h, . .	,,
Rera of	CENTRAL INDIA.	Jhirak of .	HURRIANA.

The striped hyæna is of a pale, yellowish-grey colour, with transverse tawny stripes, neck and back maned, and ordinary length is 3 feet 6 inches to root of tail; tail 17 inches. It prefers open country, and generally digs a hole for its den on the side of a hill or mountain, or lurks amongst ruins. It is quite a nocturnal animal, sallying forth after dark and hunting for carcases, the bones of which it gnaws, occasionally catching some prowling dog or stray sheep. It generally returns to its den before sunrise. Its call is very unpleasant, almost unearthly. The young are easily tamed, and show much attachment to their keepers or masters, uttering sounds not unlike human laughter.

The spotted hyæna (H. crocuta) and the brown hyæna, which is a third species of the genus, are restricted to Africa. Their jaws are enormously strong, and when they bite they hold on obstinately, and can with difficulty be made to let go their hold. The voice of the spotted hyæna when excited resembles a laugh, whence it is commonly known as the laughing hyæna. The hyæna and lion are eaten by the Arabs.—*Jerdon's Mammals.*

HYALÆA TRIDENTATA, *Lam.*, of the seas of the E. Archipelago, has the power of expanding its keel appendices into the form of large, oval, semi-transparent leaves of a light green colour.—*Collingwood.*

HYALONEMA LUSITANICUM, the glass-rope; a vitreous sponge of the Japanese seas. It is small and cup-shaped, pierced through the centre by a number of clear glass fibres, twisted together into a column 8 or 12 inches long. It roots itself in the mud by a twisted wisp of strong flint needles, somewhat on the principle of a screw pile. So long as there were only Japanese specimens to study, which was top and which bottom, which the thing itself and which parasites growing on it, whether it was a sponge or a zoophyte, or something else,—could not be settled. But the discovery of the same or a closely-allied species in abundance, from the Butt of Lewis down to Setubal on the coast of Portugal, where the shark fishers call it sea-whip, has given savans specimens enough on which to make up their minds, and has added another form to the list of those common, strangely enough, to European seas and to those of Japan.—*Capt. St. John*, p. 77.

HYAT. ARAB. Life, said by Mahomedans to have been created on the 10th day of Maharram.

HYAT QALANDAR, also Baba Booden, or Bawa Booden, a Mahomedan devotee, who settled on the Baba Booden Hills, on the Nuggur district of Mysore. On his arrival or return from Arabia he brought with him some coffee berries, since which time the plant has continued to be grown in that district.

HYDASPES or Bedaspes, the ancient Greek names of a river of the Panjab, called in Sanskrit the Vitasta; it is the Jhelum or Behut of the present day.

HYDERABAD, in lat. 17° 21′ 45″ N., and long. 78° 30′ 10″ E., on the right bank of the river Musa, is the capital of an independent inland kingdom of the same name, in the centre of the Peninsula of India. The territory lies between lat. 15° 10′ and 21° 41′ N., and long. 74° 40′ to 81° 31′ E., and has an area of 98,000 square miles, with a population of 11,250,000; and since the 15th century, it has been under Mahomedan rulers of the Bahmani, Kutub Shahi, and Azof Jahi dynasties, the second of whom ruled from the adjacent fortress of Golconda, and was overthrown by Aurangzeb, 1687. The Hyderabad country is in the table-land of the Dekhan, from 1250 to 1800 feet above the sea, and is surrounded by British provinces. It has been formed by the preceding and present dynasties out of several nationalities, viz. part of Gondwana on the N.E., Telingana on the E. and S.E., Maharastra on the N.W., and the Canarese or Karnatica speaking country on the S.W. and S.; and the four languages of these races are current in their respective limits, that of the dominant Mahomedan race being the Urdu or Hindustani, with Persian as the epistolary language of the court.

It comprehends the seats of some of the greatest and most powerful ancient sovereignties of the Dekhan: — Kalyan, the capital of the western Chalukya and Bijala Raya dynasties; Devagiri or Deoghur, the capital of the Yadava; Warangal, that of the Kakateya; and the great Mahomedan principality of Kulburga, which subsequently split into the subordinate powers of Bijapur (the Adil Shahi), Ahmadnaggur (Nizam Shahi), Golconda (Kutub Shahi), Berar (Imad Shahi), and of Beder (Birud Shahi). In the tract lying between the Mysore, Hyderabad, and the Mahratta country, were several smaller chieftaincies, such as that of the Nawab of Banaganapilly, a Syud family in the east of the Ceded Districts; the Pathan nawabs of Kurnool, on the right bank of the Tumbudra river; farther west, the Reddi chief of Gadwal; the Mahratta ruler of Sundur, one of the Ghorpara family; the Kshatriya raja, Narapati of Anagunda, the representative descend-

ant of the great king Rama of Vijayanagar, who was overthrown by the combination of the Mahomedan kings of Golconda, Kulburga, Bijapur, and Ahmadnaggur; the Pathan nawab of Shahpur, the Ghorpara chieftains of Ganjandergarh and Akalkote; and at Ghurguntah and Beder Sholapur are the descendants of Pid Naik, a Beder soldier, to whom Aurangzeb granted a small territory in the Raichore Doab, for the aid given at the siege of Bijapur.

The rulers of the reigning Asof Jahi dynasty have been:—

1.	Kamr-ud-Din, styled Asof Jah, Nizam-ul-Mulk, subahdar of the Dekhan.	1713-1748
2.	Nasir Jang, eldest son of Asof Jah, murdered by Pathans.	...
3.	Muzafar Jang, grandson of Asof Jah, and nephew of Nasir Jang, killed during a mutiny of his troops.	...
4.	Salabat Jang, third son of Asof Jah, deposed by his younger brother in 1761, and died in prison two years afterwards.	1761
5.	Nizam Ali, younger son of Asof Jah, .	1761-1803
6.	Secunder Jah, son of Nizam Ali, . .	1803-1829
7.	Nasir-ud-Dowla, son of Secunder Jah, .	1829-1857
8.	Afzal-ud-Dowla, son of Nasir-ud-Dowla,	1857-1869
9.	Mir Mahbub Ali Khan, Br., infant son (2½ years) of Afzal-ud-Dowla.	1869-

The founder of the present dynasty was a distinguished officer of Aurangzeb. He was a Turani noble, whose name was Chin Kilich Khan. He succeeded Daoud Khan in the government of the Dekhan. After various intrigues during the weak reigns of Ferokhsir and of the Syuds, Mir Hasan Ali and Mir Abdallah, after the assassination of Ferokhsir in 1718, in the reign of Muhammad Shah, Asof Jah, in 1720, when governor of Gujerat, revolted, overran Kandesh, and captured Asirgarh. He was subsequently appointed vizir, but, disgusted with the vicious courses of the emperor, he returned to the Dekhan, defeated Mubaraz-ud-Dowla, and in 1724 re-established the Hyderabad kingdom near Golconda, where the Kutub Shahi family had ruled till overthrown by Aurangzeb.

In 1748, Nizam-ul-Mulk died, aged 104 years. His second son, Nasir Jang, assumed the government; but Muzafar Jang, a grandson of Nizam-ul-Mulk, took the lead, declared himself subahdar of the Dekhan, and joined Chanda Sahib and Dupleix, and in 1749 fought and won the battle of mbur. Various intrigues occurred, in which asir Jang formed friendships with the three athan chiefs of Cuddapah, Kurnool, and Savaore; but he was attacked by the French before injic, where one of the Pathan chiefs shot him. n this Muzafar Jang was released from prison id declared Nizam. He joined Chanda Sahib id the French under Dupleix, but he was assassiated by the Nawab of Kurnool on his way to yderabad, in 1751, when M. Bussy declared alabat Jang, the youngest uncle of the deceased, be the Nawab of Arcot.

Salabat Jang alternately combined with and pposed M. Bussy, was deposed in July 1761, and as shortly after assassinated by his brother, izam Ali.

In 1763, Nizam Ali met the army of Madhava o, Peshwa, under Raghoba, on the banks of ie Godavery, and was completely routed. From lat time till the beginning of the 19th century French and British influence alternated, until, de- treaty of date the 1st September 1798,

the British surrounded and disbanded the French battalions. Since the treaty of the 1st September 1798, under renewed treaties, the Hyderabad Government has subsidized a brigade of the British Indian army. It has consisted of all arms, and has varied in strength from above 4000 to over 15,000. In 1798 they numbered 6801; in 1820, 15,489; in 1867, 4494; and in 1882, 5683. To provide for their pay by the treaty of the 12th October 1800, the Nizam ceded all the territories he had acquired by the Mysore treaties of 1792 and 1799, yielding about 17,58,000 pagodas. These Ceded Territories comprise the collectorates of Bellary, Cuddapah, and Kurnool; and from 1800–1 to 1880–81, the receipts have been Rs. 47,47,53,951, and charges Rs. 16,24,65,997, net Rs. 31,22,87,954 in the 81 years, or annually Rs. 38,55,406. In addition to the subsidiary force, the Hyderabad Government has, since 1811, kept up another armed force, known as the Hyderabad Contingent. It had its origin in the inefficiency of the Nizam's troops, and has been commanded by European officers, some of whom were lent from the Indian army; but, after the treaty of 21st May 1853, the officers became entirely of the latter class, and until that change it was styled the Nizam's army. In 1811, the strength of its cavalry was 9000, and of the infantry and artillery 8000, with 25 guns and 20 European officers. From 1815, there has been a gradual reduction of the Contingent. In 1853–54, when the change to the present system was made, the strength was 9799, with 37 guns and 881 camp followers; and in 1880–81 the artillery and infantry numbered 5432, cavalry 2200, with 69 European officers, 20 warrant and non-commissioned officers, 16 guns, and 1040 camp followers. The total military force of the Nizam has been returned as consisting of 71 field and 654 other guns, 551 artillerymen, 1400 cavalry, and 12,775 infantry, besides a large body of irregulars. The state is entirely enclosed within British territory, and, with its good police, a very small armed force is needed. After the third decade of the 19th century, from the want partly of financial skill on the part of Chandoo Lal, Peshkar-i-Dewan, and partly from his general extravagance and retention of large bodies of foreign mercenaries, the pay of the Nizam's Contingent fell into arrears, and the Nizam assigned the Raichore Doab and Berar valley to provide funds for the pay. Raichore was early restored, but during all the minority of Mir Mahbub Ali Khan, the Dewan Regent, Sir Salar Jung, Bahadur, strove to recover Berar. This province was administrated by Commissioners, under the Resident of Hyderabad. In 1871, it had 17,334 square miles, with a population of 2,231,565. In 1881, the population of Berar was 2,672,673 persons, and the population of the remainder of Hyderabad territory is estimated in the same table at 9,000,000.

Berar is, in the main, a broad valley running east and west, lying between the Satpura range on the north and the Ajunta range on the south. The area of Berar may be reckoned at a little more than 17,711 square miles. The principal rivers are the Tapti, the Purna, the Wardha, and the Pain-Ganga or Pranhita.

Of the Berar towns, Ellichpur is the largest, Oomrawati, Akola, and Akote (in the Akola district) follow.

The principal divisions of the people of Berar as to creed and caste were:—

Christians,	1,335	Mahar,	307,994
Brahmans,	65,754	Other Hindu castes,	871,457
Rajput,	44,133	Aborigines,	163,519
Kunbi,	834,174	Jains,	20,020
Wani,	67,071	Mahomedans,	187,555
Mali,	195,981		

The chief numbers of the other Hindu castes in 1881 were as follows:—

Teli,	75,552	Gopal,	4,904
Dhangar,	74,559	Khatik,	4,487
Banjara,	60,511	Dhor,	4,477
Mang,	46,366	Jakinkar,	4,347
Mahali (Hajam),	33,517	Manbhao,	4,111
Koli,	30,398	Kaikari,	3,103
Gaoli,	30,159	Bhat,	2,520
Wanjari,	27,495	Lodhi,	1,773
Chumar,	26,885	Bhamti,	1,693
Bari,	23,690	Madhaga,	1,595
Bhoi,	22,961	Bedar,	1,273
Gosawi,	13,013	Burud,	1,201
Rangari,	12,471	Berad,	330
Vidur,	11,747	Gujar,	967
Beldar,	11,494	Galak,	356
Gurao,	9,234	Kapu,	340
Nath,	9,113	Pasi,	256
Hatkar,	8,605	Kahar,	247
Waddar,	7,596	Mang-garodi,	218
Pardhi,	5,834	Ramusi,	118

The Aborigines are detailed as under:—

Andh,	37,010	Koilabhute,	43
Arakh,	371	Korku,	28,450
Balai,	803	Lajar,	1,825
Bhil,	4,183	Moghe,	344
Gond,	64,817	Nihal,	2,483
Kolam,	12,163	Pardhan,	11,023

The Hindu religious mendicants are,—Byragi, Bharadi, Dangat, Gondhali, Gosain, Manbhao, Nath, Sanyasi, and Vasudi. The Mahomedan fakirs are of the tribes Kadari, Banawa, Madari, Chisti, Nakshbandi.

All of the *Bhil* race who live along the skirts of the Satpura range appear to have embraced Mahomedanism, though they do not intermarry with the purer Mahomedans.

The *Kshatriya* class contains mostly a set of very dubious pretenders to the honour of Rajput descent. Mahrattas of no particular family usually call themselves *Thakur*; even a Kunbi will occasionally try to elevate himself thereby; while the Purbho, Kayasth, and other castes of mixed origin and good social status are constantly invading the Kshatriya military order. The distinction is also claimed by the rajas of the Satpura Hills, who assert that they are Rajputs depressed by the necessities of mountain life, whereas they are Gond or Kurku elevated by generations of highland chieftainship.

The *Sudra* caste in Berar, as in Mysore, all eat together, although they do not intermarry. The Kunbi and Mali eat flesh, drink liquor moderately, and their widows may always re-marry if they choose, excepting the widows of Deshmukhs, who ape high caste prejudices. The Koshti is a weaving caste. The Banjara are comparatively numerous in Berar; their occupation as carriers is gone, and during their transitional stage they gave a good deal of trouble to the police. The Dhangar are sheep farmers, and the Hatkar, one of their clans, still hold much land on the border of the Nizam's territory, and were until A.D. 1853 notorious for pugnacity and rebellion. The Bhoi has recently been supposed to belong to a

widely-spread primitive tribe; the Garpagari live by the profession of conjuring away hailstorms. Any one who has watched the medicine man at work has witnessed a relic of pure fetishism, possibly handed down from the pre-Aryan races and their earliest liturgies. The Vidur and Krishnapakshi are the same; they are descendants of Brahmans by women of inferior caste; and Krishnapakshi is only an astronomical metaphor for describing a half-breed, the term meaning literally 'dark-fortnight,' and referring to the half-darkened orb of the moon. The Mhar have been taken to be the same with the Dher, a very useful and active tribe. The Mang appear to be the lowest of all in the social scale. The paucity of the Khakrob or Bhangi, who are so numerous in Northern India, is a serious sanitary difficulty. The Kaikari are a tribe formerly well known for their thieving habits. Of the aborigines, the Gond, Korku, and Bhil are the only completely preserved specimens of tribes. The two first retain their languages, while the Bhil tongue seems to have become extinct very recently in Berar, its disuse being probably expedited by their general conversion to Mahomedanism. The Ramosi, a predatory race, speak Telugu in their families, and are doubtless from Telingana. The original Pardhan among the Gond answered to the Bhat among the Hindus, but many seem to have settled in the plains as a separate class of Gond.

The chief towns are Hyderabad, Secunderabad, Aurangabad, Beder, Mominabad or Amba Jogi, Ellichpur, Warangal, Oomrawati, and Nandeir.

Mahomedans, though of the dominant class, are not numerous in any district of the Hyderabad dominions. They dwell in considerable numbers in Hyderabad, Beder, Kulburga, Aurangabad, Karinjah, and Ellichpur,—places where rulers formerly resided; but in other places they are few, and everywhere they look to state employ. They have no lands, but several of them have the state revenues in jaghir. Out of 158,721 of these religionists in Berar, only 1296 are professional. The Syuds of Kulburga and Gogi and Hyderabad seem impoverized; the Pathan, Moghul, Arab, Persian, and Habshi Mahomedans are soldiers, and those of Berar are noted for their idleness and profligacy, seldom taking to the plough.

The Godavery, rising on the eastern declivity of the Western Ghats, disembogues in the Bay of Bengal. The total length of this great river, along the Hyderabad border and through the territory, is about 600 miles, for about 200 of which it is navigable from June to February. The Wardha rises in the hills of Betul and Ch'hindwara. Near the junction of the Pain-Ganga with the Wardha, and in the valley of the latter river, there are coal-fields. Those which have been examined over a small area near Sasti and Paoni show an average of 40 feet in thickness.

Except in the city of Hyderabad itself, no effort or attempt had been made to educate the people of the Hyderabad Territories, though education is making enormous strides in Berar and in British Maharastra. There was no proper school met with in all the Editor's journeys, in 1866–70, amounting to about 7000 miles, and only occasionally a few lads, children of foreigners, were to be seen learning in a verandah the elements of the Hindi or Mahrati.

The Dewan, Sir Salar Jung, in 1868, made changes in the administrative machinery, and five Sudder Talukdars or Divisional Commissioners were appointed, for Aurangabad, Bir, and Purbhani; for Nandeir, Naldrug, and Beder; for Nulgonda, Khummum; for Lingsugur and Raichore; and for Indore, Meduck, Yelgundul, and Surapur. The first three commissioners on Rs. 1500 a month, and last two on Rs. 1000.

The people in the first two divisions speak Mahrati, the next two the Telugu, and the last are the Canarése districts of the Nizam's Territories. Each of the above fourteen districts is presided over by a talukdar on from 400 to 600 rupees a month, assisted by deputy talukdars, who control and superintend the work of naibs or tahsildars of talukas. The commissioners go on circuit within their respective jurisdictions during eight months of the year, spending the remaining four at some central locality. The commissioners communicate with the Minister through the Malguzari or Civil Secretariat. There is a separate department of police, with a Suddur Mohtamim or inspector-general. Immediately under his orders are placed five naib mohtamim or deputy inspector-generals, to whom the Zillah Mohtamim or the district superintendents are directly subordinate. Each district has its Zillah engineer. There is a Conservator of Forests, and chief inspector of the medical department.

HYDERABAD, in Sind, in lat. 25° 23′ 5″ N., and long. 68° 24′ 51″ E., was built in 1768 on the site of the ancient Patala or Patalene by Ghulam Shah, Kalhora. It was the chief town of the territories ruled by the Talpur dynasty, until 14th February 1843, when, after the battle of Miani (Mecanee), it surrendered to the British, and the capital was transferred to Karachi (Kurachee). The Hyderabad country was conquered from the Talpur dynasty, Amirs of Sind, by a British Indian army under Sir Charles Napier. The ancient name of Hyderabad was Neroon or Nirun, and Abulfada described it as almost equidistant between Dabul (Dewul or Tatta) and Mansura, Sehwan, or Minagara, the latitude of which is 26° 11′. Its territory is of great ethnic interest, having been a refuge of Aryan, Baluch, Jat, Moghul, Pathan, and Rajput races for centuries before the birth of Christ; and Assyrians, Bactrians, Greeks, Arabs, and Rajputs have ruled up to and within its borders. The territory is now a British revenue district, under the Commissioner of Sind, between lat. 24° 13′ and 27° 15′ N., and long. 67° 51′ and 69° 22′ E. The population consists of Mahomedans, 560,349; Hindus, 118,652; with other creeds and tribes, 44,882; total, 723,883. Of the Mahomedans, more than three-fifths, or 373,705, are Sindi, chiefly Sunni of the Halpotra, Junijo, Dul, Powar, Thebo, Sumro, Sand, Katiyar, and other clans, descendants of the original population converted to Islam during the Ummayid dynasty of Khalifas.

The Baluchi Mahomedans (128,785) are in a great number of tribes, the chief being the Rind, Bhugti, Chang, Talpur, Jatoi, Laghari, Chandio, Kaloi, Khaso, Jakrani, Lashari.

Pathans are found chiefly about Hyderabad and Upper Sind, along with Bokhari, Matari, Shirazi, and Lekhiraji Syuds. Together they number 815 persons.

Memons, were formerly Kachhi Hindus, who emigrated to Sind under the Kalhora rule, and devoted themselves to agriculture and cattle-breeding. The Khwaja are descendants of fugitives from Persia when their creed (the Ismailyeh heresy) was persecuted by Hulaku Khan. The Memons and Khwajas aggregate 13,000. Sidi, natives of Maskat (Muscat), Zanzibar, and Abyssinia, who until the British conquest were bought and sold as slaves. The Shikaris or Daphers of Tanda number 1353. They are Mahomedans, but they eat carrion, and are excluded from the mosques. Among Hindus the most numerous caste is the Vaisya or Baniya, aggregating about 85,000, and of these nearly four-fifths belong to the Lohano tribe, and the majority of Hindu shopkeepers and traders also belong to the Lohano caste. In their complex subdivisions, they are mixed up with the Mahomedans. Although wearing the thread, they become the disciples of Mahomedan teachers, assume their dress, eat meat, drink spirits, and disregard all the customs of orthodox Hindus with regard to receiving food from inferiors, etc. Their marriage ceremonies are so expensive that many of them remain single till late in life.

The canals begin to fill about May, in proportion to the annual rise of the Indus, and are again dry by October. None are perennial in the Tando deputy collectorate, and in Hala only one,—the Mahmuda.—*Imp. Gaz.* See India.

HYDER ALI, an officer of the Mysore Hindu sovereigns, whom he set aside and then ruled over the country as an independent prince. His great-grandfather, Muhammad Bahlol, came from the Panjab, and settled in the district of Kulburga, about 110 miles S.W. of Hyderabad. He was accompanied by two sons, Muhammad Ali and Muhammad Wali, who both married in the Kulburga district, but left it for Seera, in Mysore, where they were employed as revenue peons; and here Fatteh Muhammad, son of Muhammad Ali and the father of Hyder Ali, was born, A.D. 1702. Fatteh Muhammad fell in battle, leaving two sons, Shahbaz and Hyder, at the age of nine and seven years respectively. Hyder grew up wholly illiterate, but was a brave soldier, and, after the fall of Devanahully, he was promoted to the command of 50 horse and 200 foot. Hyder shared in all the wars in which Nunj Raj and Deo Raj were involved; and when Muhammad Ali and Chanda Sahib were striving for the sovereignty of the Karnatic, he assumed the Mysore Government, A.D. 1761, the raja Nunj Raj taking a jaghir of three lakhs of pagodas. Hyder Ali's great success was the taking of Bednore or Nuggur in 1763, in which he is said to have found twelve kror of rupees. Raja Nunj Raj died childless, and a distant relative named Cham Raj was selected by Hyder. Bartolomeo (p. 8) mentions that Hyder Ali in early life stood sentry at the west gate of Pondicherry.

Hyder Ali was severely curbed by the Mahrattas, and entered into an alliance with Nizam Ali to attack the British, but the allies were defeated at Changama in August 1767, and again at Trincomalee. The war continued, however, and Hyder Ali, in March 1769, arrived within ten miles of Madras, but on the 4th April a treaty was concluded. Hyder Ali conquered Coorg in 1772, and in 1773 and 1774 he recovered all the territories which the Mahrattas had seized. In 1775 he captured Bellary from Bassalut Jang. In

1776 he extinguished the power of Morari Rao and the independence of Savanore; and in 1779 he annexed all the dominions of the Nawab of Cuddapah. On the 21st July 1780 he invaded the Karnatic, plundered Porto-Novo, laid siege to Arcot, and on the 10th September 1780 totally destroyed the force of Colonel Baillie at Perambaukum. Sir Eyre Coote arrived from Calcutta on the 5th November 1781. While Hyder was surrounding five forts, Coote captured Carungally and overthrew Hyder's forces in a general battle at Porto-Novo, on the 1st July 1781, on which Hyder's investment of Trichinopoly, and that of Wandiwash by his son Tipu, were abandoned. Coote met Hyder at Pollilore, but again, on the 27th September 1781, at Sholingur, Coote completely defeated Hyder, and compelled him to raise the siege of Vellore. Hyder Ali died, aged 80, on the 7th December 1782. His death took place in camp at Chittore, near Arcot, but was concealed until his son Tipu could arrive. At his father's demise, at the close of a virtual reign of thirty years, the army consisted of a hundred thousand well-trained men, with about five millions sterling of money in the treasury. He left at his death a compact kingdom, and was succeeded by his son Tipu, known as Tipu Sultan. He was interred at Seringapatam, and a dome was erected over the tomb.

HYDER MIRZA, DOGHLAT, author of the Tarikh-i-Rashidi, an active, bold, adventurous officer, who held high commands under the emperor Babar; and his book, the Tarikh-i-Rashidi, a history of Central Asia, shows that he was a learned and accomplished man. He was the son of Muhammad Husain Mirza, who was the eldest son of Hyder Mirza, Doghlat, Amir of Kashgar. Muhammad Husain Mirza married the younger sister of Baber's mother, and he was put to death at Herat, A.H. 914 (A.D. 1508), under the orders of Shaibani Khan.

HYDNOCARPUS ALPINUS. *W. Ic.* tab. 942. One of the natural order Pangiaceæ, the Maratatti of the Neilgherries, a very handsome tree with a beautiful foliage, common on the Neilgherries up to nearly 6000 feet, and at 1500 feet on Calcad Hills, Tinnevelly, and in Ceylon. On the Neilgherries the wood is much used as beams and rafters for native houses; it answers as deal for general purposes, packing-cases, etc.; it splits readily, and is a good firewood. The tree flowers in July and August.—*Beddome, Fl. Sylv.* p. 77.

HYDNOCARPUS INEBRIANS. *Vahl.*

H. venenata, *Gærtner.*

Kowtee, . . . MAHR. | Makulu, . . . SINGH.
Moratti, . . MALEAL. | Marra vattay, . . TAM.

A large tree, growing in Ceylon on the banks of rivers up to an elevation of 2000 feet, also in Malabar, in Tinnevelly, and Travancore. It is a common tree on the west coast, not so in the Coimbatore jungles. The tree is hardly found in the Bombay northern jungles on the coast; more frequently in those south of the Savitri river. The wood is not used for any purpose. Flowers small, white. Fruit used for poisoning fish. The seeds of the fruit afford the Thortay oil of Canara, called also Neeradimutu oil. It is a very valuable vegetable solid oil, of the consistence of ordinary hard salt butter, and is used as a remedy in scabies and ulcers of the feet, also internally.—*Thwaites; Voigt; Gibson; Wight.*

HYDNUM CORALLOIDES. *Scopoli.* A mushroom, called the Koho khur in Kashmir. It grows in the hollow trunks of Pinus Webbiana. When cooked, its taste is excellent. There are many European species.—*Von Mueller.*

HYDRANGEA, a genus of hardy shrubs. One species commonly cultivated for the sake of its beautiful flowers, is a native of China and Japan. Loureiro took it for a primrose, and called it Primula mutabilis; and Commerson subsequently named it Hortensia, in compliment to Madame Hortense Lepleante. H. hortensis is the Guelder rose. It is from 'Udor, water, and Aggion, a vessel, in allusion to some of the species growing in water, and the resemblance the capsule bears to a cup.

H. paniculata is the Nori-nori of Japan; a gummy matter is obtained from its bark, by decoction, used in sizing paper.

H. Thunbergii, *Siebold.* Yan-siu-kiu, CHIN.; Amats-ja, JAPAN. A shrub of E. China, Japan, and Java, is used as tea, and called in Java tea of heaven.—*Sir J. E. Reed*, p. 43.

HYDRAOTES, the ancient Greek name of a river in the Panjab, the modern Ravi; known also as the Rhoas. Two separate words forming the Greek name are 'Udor and Raotes; its Sanskrit name is Airavati.

HYDRAULIC CEMENT, the finer kinds of lime and cement on the coast of the Peninsula of India are made from shells. A piece of ground about ten feet square is laid down even and floored over with clay; an upright pole is placed at each end of this, and a sheet stretched out with back stays spread between the poles, which are steadied with strings. On the floor a bed of shells and rice-chaff alternately, about ten inches thick and eight feet by six, is spread neatly out. Some firewood is placed along the windward side of this, and when the sea-breeze sets in the wood is kindled. As the heat extends to leeward, and the shells become calcined, the lime-burners draw off the fore parts of them with a stick, and so soon as they have cooled on the floor sufficiently to allow them to be handled, they are placed in a scoop basket, and the dirt and epidermis winnowed from them. The shells, now white and pearly, are next thrown into a small-sized vat partially filled with water; here they for some time boil from the effects of the heat and slaking. The whole in a short time settles down into a fine semi-fluid mass, which is taken out and slightly dried, and is now ready for use. A good hydraulic cement is formed of the blue clay of Madras and shell-lime. Bitumen or asphalte seems to have been employed in Babylon as a cement.

HYDROCERA TRIFLORA. *W. and A.* Water oleander. This is the Domuti of Bengal, the Noli me tangere, one of the Balsaminaceæ. It expels its seed at a mere touch. The Turks regard it as a symbol of ardent love.

HYDROCHARACEÆ, a natural order of floating or water plants; six genera with eleven species occur in the East Indies, viz. species of Ottelia, Vallisneria, Hydrilla, Blyxa, Enhalus, Boottia, and Hydrocharis. Hydrilla verticillata, along with similar plants, is employed by sugar refiners for covering the surface of their sugars, to permit the slow percolation of water. Enhalus acoroides has a sulphurous smell. Its fruit is eatable, raw, boiled, or roasted; if boiled, the nuts acquire the taste of boiled chesnuts. The natives

of the Moluccas make nets of the tough threads which remain after the putrified leaves; these nets are said to be very durable in sea water. Blyxa octandra, *Rich*, grows all over India; Boottia cordata, *Wall.*, a plant of Prome and Taong-Dong. Enhalus acoroides, *Linn.* (Acorus marinus, *Rumph.*, Stratiotes acoroides, *Linn.*), grows in the Konkans and Moluccas.

Hydrilla verticillata, *Linn.*

Serpicula verticillata, *L. f.*	Udora verticillata, *Spreng.*
Vallisneria verticillata, *R.*	Hottonia serrata, *Willde.*
Kurelee, . . . HIND.	Jhangh, ... PANJ.
Jala, ... PANJ.	Punachu, ... TEL.

This, with other aquatic plants, is used by the sugar-refiners of Saharunpur for covering the surface of sugar, in order to allow the slow percolation of water when refining it. It is common in water in parts of the Panjab plains up to Peshawur. It is used east of Sutlej for refining sugar, but at Multan, west of that river, it is not obtainable.—*Stewart, Panj. Plants*, p. 241.

Hydrocharis cellulosa, *H. B.*

Ottelia alismoides, *Pers.*

Stratiotes alismoides, *Linn.*	Damasonium Indicum, *Willde.*
Hymenotheca laxifolia, *Salis.*	D. alismoides, *R. Br.*

It is the Panee-kula of Bengal, and grows in most parts of India.

Vallisneria alternifolia, *Roxb.*, the Rusnojhangi of Bengal, grows there and in the Konkans and Coromandel. V. physicum, *Juss.*, is a plant of Cochin-China.

Vallisneria spiralis, *Linn.*

V. spiraloides, *Roxb.*	V. Jacquiniana, *Spreng.*

A plant of Europe, America, and India.

HYDROCOTYLE ASIATICA. *L.* Pennywort.
Hydrocotyle rotundifolia, *Wall.*

Thulkuri, . . . BENG.	Munduka brummi, TEL.
Kodagam, . . MALEAL.	Bokkudu, ... ,,
Munduka purni, . SANSK.	Pinna yelaki chettu, . ,,
Heen-gotu kola, . SINGH.	Babbasai elaka, . . ,,
Vullari kire, . . TAM.	Elika chavi kura, . . ,,

A small herbaceous creeping plant with little purplish red flowers, a native of Africa and America, and in moist shady places all over Southern Asia. It has long been employed in medicine, its leaves applied to bruises, and its virtue in leprosy has been latterly again much lauded. An infusion of the toasted leaves is given to children in fever and bowel complaints.—*Ainsl.*

HYDROCYANIC ACID, Prussic acid. Several species of the rose order of plants contain a considerable amount of Prussic (hydrocyanic) acid; the oil of the common laurel and bitter almond is, owing to its presence, a virulent poison.

HYDROLEA ZEYLANICA. *Vahl.*

Nama Zeylanica, *Linn.*	Steris aquatica, *Burm.*

A herbaceous plant, grows in water and marshy ground in the East Indies. The leaves beaten into a pulp and applied as a poultice are deemed useful in cleaning and healing ill-conditioned ulcers in which maggots have formed.—*Voigt.*

HYDROPHIDÆ, the family of sea-snakes. A principal habitat of sea-snakes is the ocean between the southern shores of China and the northern coast of New Holland. They frequent the seas that separate the islands of the Pacific, but they have never yet been found in the Atlantic. They are found on all the coasts of the East Indies within soundings, and are supposed to live -weed. Sir J. E. Tennant says he has sailed through large shoals of them in the Gulf of Manaar, close to the pearl banks of Aripo. The fishermen of Calpentyn, on the west of Ceylon, live in perpetual dread of them, and believe their bite to be fatal. In the course of an attempt to place a lighthouse on the great rocks of the south-east coast, known by seamen as the Basses or Baxos, the workmen who first landed found that portion of their surface liable to be covered by the tides, honeycombed and hollowed into deep holes filled with water, in which were abundance of fishes and some molluscs. Some of these cavities also contained sea-snakes from four to five feet long, which were described as having the head hooded like the cobra di capello, and of a light grey colour, slightly speckled. They coiled themselves, like serpents on land, and darted at poles thrust in among them. The Singhalese who accompanied the party said that they not only bit venomously, but crushed in their coils the limb of any intruder. About the year 1834, a midshipman, the boatswain, and a seaman of one of H.M. war ships at Madras were all bitten by a sea-snake, and died.—*Tennant's Ceylon.*

HYDROPHOBIA. Dr. A. Gibson says the Notonia corymbosa, native name Wandur Rotee, is useful as a prophylactic in hydrophobia. It grows rather plentifully on the stony parts of the high hills near Jooner, and also in some parts of the Northern Dekhan, Kandesh, etc.

HYDROPHYLAX MARITIMA. *Linn.* A straggling herbaceous plant, native of the shores of Coromandel and Malabar, where it shows its pale lilac blossoms a great part of the year. The branches run over the sand, sometimes under the surface, and strike root at the joints. It answers well as a sand-binding plant where the sand is moist.—*Roxb.* i. p. 373.

HYDROSAURI, or water lizards, live on the margins of springs and on low river banks. Hydrosaurus salvator, *Lour.*, occurs in Bengal, Assam, Ceylon, Malacca. Tail compressed, fingers long, nostrils near the extremity of the snout. A black band on each temple, round yellow spots disposed in transverse series on the back; teeth with the crown compressed and notched. H. marmoratus, a huge lizard of the Philippines.—*Tennant.*

HYKSOS, or shepherd kings, were Semitic tribes from the N.E. of Egypt, that is Canaanites, associated with Bedouin tribes of Northern Arabia and the peninsula of Sinai. They held Memphis, but their stronghold was a fortified camp on the border of the Syrian desert.

HYLOBATES AGILIS, the gibbon, one of the Simiadæ, occurs in the Malay Peninsula, and several other species in the Archipelago.

Hylobates Hoolook, the Simia Hoolook, *Harlan;* H. seyrites and H. coromandus, *Ogilby;* H. Houloch, *Lesson*, a native of Assam, Sylhet, Cachar, and Khassya Hills. Its howlings are very extraordinary.

Hylobates Lar, Homo lar, *Linn.;* Simia longimana, *Schreb.;* S. albimana, *Vigors* and *Hors.;* Le grand gibbon of *Buffon.* A native of Tenasserim and Malacca, where it is known as the white-handed gibbon. The contrast which this animal offers with H. hoolook is very remarkable. The body is proportionally much shorter, and it is quite incapable of walking in the erect attitude commonly assumed by H. hoolook, always creeping forward when on the ground in a crouching position.

Hylobates Leuciscus, the silvery gibbon, the Wow-Wow or Wa-Wa, Simia leucisca, *Schreb.*, Moloch, *Audeb.*, native of Malacca. The Wa-Wa, or long-armed ape, is the most beautiful of all the monkey tribe. The fur of this gentle little animal is grey; its face, hands, and feet are jet black; in features it more resembles those of the human race than the orang-outang.—*Low's Sarawak*, p. 80-; *Jerdon.*

HYLOBII, a sect of ascetics mentioned by Megasthenes as living in the woods, clothed with the bark of trees, and living on fruits and leaves. Hylobios is a literal translation into Greek of Vanaprashtha, SANSK., dweller in the woods, which is the usual designation of a Brahman in the third stage of his life.

HYMENÆA COURBARIL. *Linn.* The locust tree, gum-anime tree, or courbaril locust tree, is a fine colossal spreading tree, growing in the tropical parts of America, in Jamaica, and in Tenasserim, where it was introduced by Major Macfarquhar. The tree is easily propagated. The timber of the old trees is very hard and tough, and is in great request for wheel-work, particularly for cogs. The wood is so heavy that a cubic foot is said to weigh a hundred pounds; it takes a fine polish, and is used by cabinet-makers. When in a sickly state, the resin called Western anime, also W. Indian copal, exudes from between the principal roots. It is fine and transparent, of a red or yellowish-red colour, and in large lumps. It resembles amber, is very hard, and sometimes contains leaves, insects, or other objects imbedded in it. It burns readily, emitting a very fragrant smell. Dissolved in rectified spirits of wine, it makes one of the finest kinds of varnish.—*Eng. Cyc.; O'Sh.; Mason's Ten.; Voigt; Von Mueller.*

HYMENODYCTION EXCELSUM. *Wall.*

Cinchona excelsa, *Roxb.* Cedar wood.

Kala bachnak, DUK., HIND.	Burja; Burija, . TEL.
Barthoa; Thab, . PANJ.	Chetippa, . . .
Sagapu maram, . TAM.	Bandaru, Pandaru?

A very large tree belonging to the Cinchonaceæ, common all round the foot of the Neilgherries, and in the mountainous parts of the Circars, but chiefly in the valleys. The wood is firm, close-grained, of a pale mahogany colour, and very useful for many purposes; much used and esteemed for inside work, such as drawers, etc. The bark, Dr. Roxburgh informs us, possesses both the bitterness and astringency of the Peruvian bark, and, when fresh, even in a stronger degree. The two inner leaves of the bark possess great bitterness and astringency; the bark is used by the tanners, and also as a medicine among the Hindus, in cases requiring astringents. Dr. O'Shaughnessy analyzed the bark from the Botanic Garden of Calcutta, but could detect no alkaline ingredient. Nevertheless the trees of hilly regions may furnish the valuable desideratum. The stamina being contained within the tube, affords much ground for expecting the discovery of a febrifuge alkaline in this species.—*Roxb.; O'Sh.*

HYMENODYCTION OBOVATUM. *Wall.*

Karwai; Karwye, MAHR.	Malay tanah, . . TAM.
Yella mala, . . . TAM.	

This large, beautiful tree is not uncommon in the sub-Alpine forests from Canara down to South Travancore, up to elevations of 4000 feet. It is less common, however, than the H. utile, *Wight.* Dr. Gibson says this and H. utile grow on the Bombay side of India, but that the wood of neither is fit for anything but fuel. Colonel Beddome says the timber is used by the natives for a variety of purposes, and is probably equal to that of H. excelsum.—*Wight; Gibson; Beddome.*

H. thyrsiflorum, *Wall.*, grows at Rajmahal, Chittagong, and at Rangoon.—*Drs. Wight, Gibson, and Voigt.*

HYMENODYCTION UTILE. *W. Ic.* 1159.

Kurwye, . . . MAHR.	Pirunjolay maram, TAM.

This tree attains a large size, and the heart-wood is red. Dr. Wight was informed that it furnished the wood called bastard cedar, and he afterwards found two other trees similarly reported. Dr. Gibson says the wood of this tree is never used in Bombay except for firewood. The tree is common enough, in rocky slopes, mostly in or near thick forests. It does not stretch inland beyond the limits of the ghat ravines.—*Wight; Gibson.*

HYMENOPTERA, an order of insects characterized by the majority of them having stings. See Insects.

HYOBANS. The raja of Huldee or Hurdee in Ghazipur is of this conspicuous clan, which once held large dominions on the banks of the Nerbadda.—*Elliot, Supp. Gloss.; Jour. Beng. A. S.*

HYOSCIAMUS NIGER. *Linn.* Henbane.

Bunj, . .	ARAB., PERS.	Sapht, . . .	EGYPT.

Yang-chih-chuh,	CHIN.	Khorasani omum, .	TAM.
Nau-yang-hwa, .			

The Seed.

Khurasani ajwain,	HIND.	Tukhm-i-bunj-i-Rumi,	
Bazr-ul-Bunj, . .	PERS.		PERS.

The henbane plant is a native of Europe and of Asia Minor, and in the Panjab Himalaya is frequent in waste ground near houses from 5000 to 10,000 feet. The seeds are officinal in India for their narcotic effects, and it is cultivated in several parts of India. In physiological action this plant and its preparations seem intermediate between belladonna and opium, combining great soothing and anodyne power with the property of dilating the pupil. An alkali has been obtained termed hyosciamia, which differs little, if at all, from atropia. A dry inspissated juice of the leaf was prepared by exposing the juice in thin layers on a shallow earthen vessel to the intense heat of the sun in April and May. Dr. O'Shaughnessy deemed this extract far superior to any imported from Europe or prepared in India by other processes. In three-grain doses its soporific and anodyne effects were most decisive, and its use rarely if ever followed by any headache or other unpleasant symptoms.—*O'Sh.; Stewart; Spry.*

HYPERICUM CHINENSE. *Smith.* Kin-sze-ts'au or Kin-sze-t'au, CHIN. A beautiful flowering plant of China.

HYPERICUM PERFORATUM. *Linn.* St. John's wort. Bassant of Ravi, Bassant dendlu of Beas. Common in the Kashmir mountains. In Arabian medicine it is recommended to expel intestinal worms and to cure piles, prolapsus uteri et ani. In European practice St. John's wort was regarded as a mild stimulant tonic, diuretic, emenagogue, etc. The dried herb boiled in alum water communicates a yellow or yellowish-red colour to wool, silk, etc. St. John's wort plants

all bear yellow flowers, with one exception from Cochin-China.—*Riddell; Stewart; Honigb.*

HYPHÆNE, a genus of dicotomous palms of Africa, but growing in India. H. argun, *Martins*, grows in Nubia. H. coriacea, *Gærtn.*, the Doum palm of equatorial E. Africa and Upper Egypt, attains a height of 80 feet. It is common at Multan. H. crinita, *Gærtn.*, of Egypt and Abyssinia. H. thebaica, *Mart.*, the Doum palm, or gingerbread tree of Egypt, grows at Okamundel and on Diu Island. Exceptional in the palm order from its branching trunk.

HYPHANTIDIUM SERICARIUM. *Bennett.* A lepidopterous insect of Australia. Its larvæ weave a beautiful silken web.

HYPHASIS, the ancient Greek name of the river of the Panjab, called in Sanskrit Vipasa. It is the modern Gharra.

HYPOLITE DESIDERI, a traveller who set out from Goa on the 27th November 1713, and reached Lahore in October the following year.

HYRCANIA, the hilly region south of the Caspian Sea, the country about Mazenderan, which has much forest. It is the Greek corruption of the word Korken or Gorghen, the name of a river which rises in the Kurdish mountains, traverses this region, and falls into the Caspian Sea.—*Ouseley's Trav.* i. p. 188, ii. p. 59.

HYSSOPUS OFFICINALIS. *W.* Hyssop.

Zufaiy yeabus, . . ARAB.	Hyssope, ... FR.
Zufæ yabis, . . . ,,	Isop, ... GER.
Ushnaz Daoud, . ,,	

Used, in infusion, for coughs and asthma; also in toothache, uterine or vesicle affections, and indurations of the liver or spleen. Hyssop that cometh out of the wall, alluded to in 1 Kings iv. 33, was probably a lichen or moss, probably the Gymnostomum fasciculare, a moss common in the Holy Land.—*Powell*, i. p. 365.

HYSTRICIDÆ, a family of mammals of the order Rodentia. The sub-family Hystricinæ embraces the animals familiarly known as porcupines, of the genus hystrix of Linnæus. They are rodents, whose covering consists for the most part of offensive and defensive armour, in the shape of spines or quills, instead of hairs.

Hystrix Bengalensis, *Blyth.*

H. Malabarica, *Sclater.* | Bengal porcupine, . ENG.

This is smaller than H. leucurus, the head and body being about 28 inches, and tail 8 inches. It is found in South Malabar, Lower Bengal, Assam, and Arakan; doubts, however, exist as to the identity of H. Bengalensis and H. Malabarica. Dr. Day states that he procured specimens of the brange porcupine from various parts of the ghats of Cochin and Travancore, and that the flesh of this kind is more highly esteemed for food than the common variety. The native sportsmen declare that the aroma from these burrows is quite sufficient to distinguish the two species.

Hystrix Leucura, *Sykes.* Indian porcupine.

H. hirsuti-rostris, *Brandt.*	H. Zeylanensis, *Blyth.*
H. cristata Indica, *Gray.*	H. cauda-alba, *Sykes.*
Sejru, ... BENG.	Sahi, Sayal, Sarsel, HIND.
Yed, ... CAN.	Salendra, ... MAHR.
Hoigu, ... GOND.	Dumsi, . . . NEPAL.
Saori, ... GUJ.	Yeddu pandi, . . TEL.

The white-tailed or Indian porcupine is found over a great part of India. It forms extensive burrows, often in societies, in the sides of hills, banks of rivers, nullahs, and tanks, or old mud walls. Its length is about 32 inches, tail 7 inches. In some parts of the country they never issue forth till dark; dogs take up the scent readily. The porcupine charges backwards on its assailants, with erected spines, and dogs frequently get severe wounds, the strong spines being driven deeply into them. The meat of the porcupine is white, tasting something between pork and veal, and is not bad eating.

Hystrix Longicauda, *Marsden.*

H. alophus, *Hodgson.*	Acanthion Javanicum,
H. Hodgsonii, *Gray.*	*F. Cuv.*
Crestless porcupine, ENG.	O'e of . . . . . LIMBU.
Sathung of . . LEPCHA.	Achotia dumsi, . NEPAL.

The crestless porcupine is found in Sikkim, in Nepal, at Darjiling, up to 4000 and 5000 feet. In the Eastern Himalaya it is about 24 inches long, tail 4 and quills 5½ inches. They are very numerous and very mischievous, committing great depredations in the edible root crops.

Atherura fasciculata is of the Tiperah Hills and southwards to the Malay Peninsula. The tail is much longer than in the true porcupines, and ends in a tuft of long bristles, and the spines of the back are less elevated.—*Jerdon; Mason.*

HYSUDRUS, the name by which the Greeks designated the Sutlej river.

HYTA-BASHI, a leader of the Hyta troops, Turkish irregular cavalry, called Hyta along the valley of the Tigris and at Mosul, and Bashi-bazouk in Roumelia and Anatolia. They are collected from all classes and provinces. A man known for his courage and daring is named Hyta-Bashi or chief of the Hyta, and is furnished with tazkara or orders for pay and provisions for so many horsemen, from four to five hundred to a thousand or more. He collects all the vagrants and freebooters he can find to make up his number. They find their own arms and horses, although sometimes they are furnished by the Hyta-Bashi, who deducts a part of their pay until he reimburses himself. The best Hyta are Albanians and Lazes, and they form a very effective body of irregular cavalry. Their pay at Mosul is small, amounting to about eight shillings a month; they are quartered on the villages, and are the terror of the inhabitants, whom they plunder and ill-treat as they think fit. When a Hyta-Bashi has established a reputation for himself, his followers are numerous and devoted. He wanders about the provinces, and, like a condottiere of the middle ages, sells his services and those of his troops.

HYUGOR. BHOT. A mantle of sheep-skin or goat-skin.

HYUL or Jiul, of the northern European nations, is the Hindu sacranta, and is supposed in Tod's Rajasthan (i. p. 24) to be derived from Hya, SANSK., a horse, El, sun, whence ἵππος and ἥλιος. Hλ appears to have been a term of Scythic origin for the sun; and Heri, the Indian Apollo, is addressed as the sun. Hyul may be the Noel of France.—*Tod's Raj.* i. p. 24.

I

I. This letter of the English alphabet has, in England, four sounds. As an initial and medial letter, it has a long sound, as in iron, fine, isinglass; a second is short and acute, as in sit, infant, indigent; a third sound is that of the letter u, as in stir; and the fourth sound is close and slender, though long, like ee, as in fatigue, intrigue. The three first sounds are peculiar to the English language, but the last long sound, as of ee, is represented in all the tongues of the south-east of Asia.

IANTHINA, the violet snail, a genus of molluscs, of the family Haliotidæ. There are six recent species, widely distributed in the four quarters of the globe. They are seen floating on the ocean, but are often driven on the shores by tempests. The beach at Madras is strewn with them after a gale. The Ianthina has occurred on the coasts of Britain. In warm climates it is very plentiful.—*Eng. Cyc.*

IARVINI. Tam.?

Crawn, . . Dut., Port. | Yarvaney, ... Tam.

A Ceylon tree which grows tall and straight, from 20 to 45 feet high, and from 12 to 30 inches in diameter. It answers many purposes in ship and house work.—*Edye, Timber of Ceylon.*

IBADIYAH, a Shiah sect of Mahomedans which was founded in Oman by Abdullah-ibn-Abad. They elect their own imam.

IBERIA. This ancient kingdom is the modern province of Kartelania in Georgia. Ptolemy describes it as bordered on the north by the Sarmatian mountains, to the south by a part of Armenia, to the east by Albania, and to the west by Colchis, the present Immeretia. He mentions many of its towns and villages. Strabo, who travelled in these countries, speaks of this being a flourishing and even luxurious state. In western emigration, the Iberians and Cantabrians preceded the Celts, and their language is preserved in the Basque (Biscayan).—*Porter's Tr.* i. p. 110; *Latham in Brit. Assoc. Journ.*, 1845, pp. 77, 78.

IBEX. This name is given in India to several animals of the genus Capra or goat. C. Sibirica (I. Himalayana, *Blyth*) is the Himalayan Ibex, the Skeen, Skyn, Sakeen or Sikeen of the Himalaya, the Kyl of Kashmir, *Jerdon.* These are the names of the male; that of the female, in Tibet, is L'danmo. It inhabits Ladakh and Kashmir east to Nepal. It is agile and graceful in its movements. They are hunted and shot in the winter for the sake of the soft under-fleece, which in Kashmir is called Asali tus, and is used for lining shawls, also for stockings, gloves, and is woven into a fine cloth called Tusi. No wool is so rich, so soft, and so full. The hair is manufactured into coarse blanketing for tents, and twisted into hair ropes. The sportsmen of Southern India give the name of Ibex to the Neilgherry wild goat, Hemitragus hylocrius. See Goat.

IBI-GAMIN, a glacier in Eastern Tibet, in height 22,260 feet English = 20,886 French feet.

IBIS, a familiar name applied to species of birds of the tribe Cultirostres; the Pelican Ibis is Tantalus leucocephalus, extremely common throughout India, Ceylon, and Burma. The Shell Ibis is the Anastoma oscitans, *Boddaert*, very abundant in the lake and river districts. The Ibisinæ or true ibis, of which three species occur in India, and are there called curlews, from which, however, they differ in breeding on trees, and feeding their young till full grown.

The White Ibis is the Threskiornis melanocephalus, *Linn.*, and is found throughout India; the Warty Black Ibis, Geronticus papillosus, *Temm.*, also of all India, feeds chiefly on dry land; and the Glossy Ibis, the Falcinellus igneus, *Gmelin*, occurs in vast numbers in India in the cold weather. It occurs throughout the whole world, and is very common in India. It is called in Tamil, Arroova mooken, literally sickle-nosed, from its long curved beak. The nest contains from three to five eggs, which resemble in size and shape a medium-sized hen's egg, but are of a dirty-white colour. The birds are white, with black head, feet, and neck, and have a long curved black bill. The head and neck are naked, and the tail-feathers of rather a rusty-brown colour; the lower sides of the wings, from the axillæ to the extremities, are naked, and the skin in the old birds is of a deep scarlet colour; in the young this is absent, although the part is naked. The young are fully fledged in March, and take to the wing in April.

The Sacred Ibis, Ibis religiosa, had great honours paid to it by the ancient Egyptians. It extends across the whole African continent in the same latitude, and is found on the west coast also.—*Jerd.*

IBLIS. Arab. The devil, one who despairs of God's mercy.

IBN ASIR, author of the Kámil-ut-Tuarikh, a general history of the Ghaznavites.

IBN BATUTA, born A.D. 1304, died 1377-78, was one of the great travellers of the Arab race. He spent 24 years (from 1325-49) in travelling throughout the east, from Tangiers across Africa to Alexandria, and in Palestine, Syria, and Arabia; down the east coast of Africa to Quiloa; across the Indian Ocean to Muscat, Ormuz, Kish, Bahrein, and El Catif; through Central Arabia to Mecca and Jiddah; and again in Egypt and Asia Minor, and across the Black Sea to Caffa or Theodosia, and by Azov or Tanna, on past the hills of the Russians, to Bolgar on the Volga,—but not daring to penetrate farther northwards into the 'Land of Darkness.' Returning south to Haj-Tarkhan (Astracan), he proceeded, in the suite of the wife of the Khan of Kipchak, the daughter of the Greek Emperor Andronicus, westward to Soldaia and Costantiniah (Constantinople; he mentions Istambul as a part of the city); whence, returning to Bolgar, he travelled on eastward to Bokhara, and through Khorasan to Kábul, Multan, and Dehli, where he remained eight years, 1334-42. Being sent by the Sultan Muhammad Taghalaq on an embassy to China, he embarked from Kinbaiat (Cambay), and, after many adventures at Calicut (where he was honourably received by the Samari or Zamorin) and Hunawar (Onore), and in the Maldive Islands, and Ceylon and Bengal, he at last took his passage toward China in a junk bound for Java, as he calls it, but in fact Sumatra. Returning from China, he sailed direct from the coast of Malabar to Muscat and Ormuz; and, travelling by Shiraz, Isfahan, Bussora, Baghdad, Tadmor, Damascus, Aleppo, Jerusalem, and (for the fourth time) Mecca, Egypt, and Tunis, at last reached Fez again, after an absence from Morocco of half his

lifetime. Subsequently he spent six years in visiting Spain and Central Africa, where he was the guest of the brother of a countryman of his own from Ceuta, whose guest he had been in China. 'What an enormous distance lay between these two!' he exclaims. He says that in his time Cairo was the greatest city in the world out of China, and that the finest trading ports he had seen were Alexandria in Egypt, Soldaia or Sudak in the Crimea, Koulam (Quilon) and Calicut in India, and Zayton (Chinchau) in China. He also describes Aden as a place of great trade, to which merchant ships of large burden resorted from Cambay, Tanna, and all the ports of Gujerat and Malabar. Among the productions of the Indian Archipelago, he describes gum-benjamin, aloes-wood, cloves, camphor, and sandal-wood; and enumerates also cocoanut palms, areca-nut palms, jack trees, orange trees, mangoes, and jamuns (Eugenia jambolana). Porcelain, he says, is made in China nowhere except in the cities of Zayton and Sinkalan (Canton). It was exported to India and elsewhere, passing from country to country until it reaches Morocco. The first detailed account of his travels was published in Europe in 1808. They were translated from the Arabic, with Notes by S. Lee, London 1829. He enumerates many large and populous towns, and gives a high opinion of the state of the country. He speaks of Madura as a city like Dehli, and that through the whole of Malabar, for two months' journey, there was not a span free from cultivation; everybody had a garden, with his house placed in the middle of it, and all surrounded by a wooden fence. And the ports were frequented by ships from China, Persia, and Arabia, and other neighbouring countries.—*Lee's Ibn Batuta; Birdwood's Report; India in the 15th Century; Tr. of a Hindoo; Yule's Cathay.*

IBN HAUKAL, an Arab traveller who visited India a short time after Masudi. He wrote the Ashkal-ul-Balad, or Kitab-ul-Masalik-o-ul-Mamalik, or descriptions of countries, in which occur notices of most of the Mahomedan kingdoms of his day. His real name was Muhammad Abu-l-Kasim, and he was a native of Baghdad. He left Baghdad A.D. 943 (A.H. 331), and he continued travelling till A.D. 968. He notices his obligations to Ibn Khurdadbah, and he copied likewise from Istakhri. He finished his book A.D. 976, and it was translated in 1800 by Sir William Ouseley.—*Ind. in 15th Cent.; Elliot; Hist. of India.*

IBN HISHAM, A.D. 833 (A.H. 218), author of Sirat-ur-Rasul, translated by G. Weil, Stuttgard 1864. It contains the earliest and most authentic history of Mahomed, and was founded on a book by Ibn Ishaq.

IBN ISHAQ, died A.D. 768 (A.H. 151). He wrote traditions of Mahomed.

IBN KHALLIKAN. This well-known work has formed the basis of almost all that has been written on the personal history of remarkable men of Islam.

IBN KHURDADBAH, died A.D. 912 (A.H. 300), wrote a work on roads and kingdoms. He obtained high office under the khalifs. He was a Zoroastrian. He is the first who makes mention of Bangal and kamala, and he also mentions cain, sugar-cane, pepper, aloes-wood, cassia, and musk.—*Elliot.*

IBN SAAD, A.D. 844 (A.H. 130), secretary of Waqidi (Katib-ul-Wakidi), died A.H. 130-114. He wrote a life of Mahomed.

IBN-ZAIN-ul-TABARI, a physician of Baghdad of the early part of the 10th century.

IBN ZOHAR, the name of two distinguished Arab physicians, father and son, who flourished in Spain during the 11th and 12th centuries, and who are known to Western Europe by the name of Avanzoar. They were Jews by descent and profession. The father was born at Seville about A.D. 1072-73, and died there A.D. 1162. He was physician at the court of Cordova, and had charge of an hospital. His most celebrated book, the Tasir, is one of the most valuable in the possession of the Arabian physicians. It displays much originality and discrimination. It contains a compendium of medical practice, including many facts and observations not found in preceding writers. He also wrote on Calculus and on Regimen, and some of his books were translated into Hebrew and Latin. He was the teacher of Averhoes. The son, 1114-99, also wrote several medical works, one of them on Diseases of the Eye. He died at Morocco, A.D. 1199.

IBRAHIM, founder of the Roushenai sect of Mahomedans; died at Cairo, A.D. 1529.

IBRAHIM KHAN of Gour had 7000 families of Taymuni under his rule; but about the year 1838 Yar Muhammad of Herat completely devastated the country which they occupied, and removed them to Herat, where he established some of them in the city, and some in the suburbs. In 1846, however, they took advantage of Yar Muhammad's absence on the Murghab, to decamp into the Persian territory.

IBRAHIM LODI, king of Dehli, was defeated at Panipat by Baber.

ICE.

Iis,	DAN.	Glacies,	LAT.
Ijs,	DUT.	Gelo, Caramelo,	PORT.
Glace,	FR.	Teodt,	RUS.
Eis,	GER.	Hielo,	SP.
Yakh,	HIND.	Is,	SWED.
Ghiaccio,	IT.		

In many countries, the command of a proper supply of ice or snow for cooling water or other liquids in summer, has long been regarded as one of the necessaries of life. There are even allusions to it in the Proverbs of Solomon:—'As the cold of snow in the time of harvest, so is a faithful messenger to them that sent him; for he refresheth the soul of his masters' (xxv. 13).

The Chinese in the north of their country form ice-houses, about Ningpo, 60 feet long, 42 feet broad, and 12 feet high.

Ice is of great importance to the Chinese, who depend much for their food upon the fish which are caught in their waters. They are enabled by its means to keep their fish during the hottest weather for a considerable time, and transmit them in this way to different parts of the country. Ice has become an article of commerce. This traffic commenced in Wenham Lake, about 18 miles from Boston, in the United States of America, and subsequently some of the Norwegian lakes have furnished abundant supplies.

Between 1874 and 1880, the imports into India ranged from 147,360 to 268,011 cwt., and value Rs. 2,11,675 to 12,51,902, from all quarters. The Rubattino Company tried to convey Alpine ice from Genoa to Bombay.

Ice is now largely made in India by machines. The Peninsular and Oriental Ice Company at Bombay, in 1868 made five tons at a cost of five pie the lb. Private manufacturers sell it at two annas a lb. at a profit. The smaller machines turn it out in cylinders, the larger machines in slabs. On the recommendation of Colonel (Sir George) Balfour, C.B., the Indian Government sanctioned an ice machine, value Rs. 7000, for each European regiment.—*Tomlinson; Fortune.*

ICELAND MOSS is the lichen (Cetraria Islandica), *Ach.*, common in the north of Europe and North America. It yields a nutritive starchy substance, sometimes employed to make bread and gruel.—*Waterston; Faulkner.*

ICELAND SPAR, a variety of calcareous spar found in rocks near Kābul, and is extracted and broken into crystalline rhombohedral fragments, more or less opaque. It is employed by the natives as an astringent in ophthalmia, gonorrhœa, and other fluxes, in doses, internally, of 7 grains, and also externally as a local application. It is called Surma safed, or white antimony, from being thought to be similar to black antimony, the common tersulphide of that metal. Price 3d. per lb.—*Cat. Ex.*, 1862.

ICHNEUMON, a genus of insects which belong to the order Hymenoptera, section Terebrantia, and family Pupivora, in the classification of Latreille.

The species are many. They have a slender shape. The female, by means of its ovipositor, deposits its eggs into the body of a caterpillar, previously stupefied, so that the larvæ find food as soon as they are hatched, and devour the interior bit by bit. They are also often deposited into the larvæ of coleoptera, hemiptera, aphides, and weevils. The ichneumon forms small nests of clay, into which they deposit the infected insect. —*Eng. Cyc.*

ICHNEUMONS, a group of carnivora, spread over Africa and Southern and Eastern Asia. The Egyptian ichneumon very closely resembles the European species. It was one of the animals held sacred in ancient Egypt. It is of common occurrence throughout North Africa, and particularly abundant on the Nile, where it is said to attack the crocodiles, and where, without doubt, it destroys great numbers of eggs. The Ichneumons are all extremely fond of eggs, whether of reptiles or of birds. They break them very cleverly, by tapping one end on the ground; and through the small aperture thus effected they suck out the whole of the contents. There are several species of Herpestes in India, called Mongoose or Mungus; H. Javanicus of Java and Sumatra; H. griseus, *Geoff.*, of continental India and neighbouring countries; H. Nipalensis, *Gray*, of Nepal; H. neyula, *Hodgson*, of the Terai; H. Malaccensis, *Jerd.*, of Bengal; H. monticolus, *Jerd.*, hills of Eastern Ghats; H. fuscus, *Jerd.*, of Neilgherries; H. vitticollis, *Jerd.*, of Western Ghats; H. brachyurus and H. exitis of Malay Archipelago. The Egyptian species, Herpestes ichneumon, celebrated for destroying serpents and crocodiles, was called Ichneumon Pharaonis. See Mongoos.

ICHNOCARPUS, a genus of plants belonging to the order Apocynaceæ. I. fragrans, *Wall.*, is grown in Nepal and Kamaon. It has large handsome flowers; I. Loureirii is a native of Zanzibar.

ICHNOCARPUS FRUTESCENS. *R. Br.*

Echites frutescens, *Roxb.*	Apocynum frutescens, *L.*

Grows all over India. According to Royle, it is sometimes used in India as a substitute for sarsaparilla; 12 annas per lb.—*O'Sh.* p. 442; *Cal. Cat. Ex.*, 1862; *Don; Lindley.*

ICHTHYOCOLLA, a named derived from ἰχθυς, a fish, and κολλα, glue, is translated isinglass, a word derived from the German Hausenblase, from Hausen, the great sturgeon, and Blase, a bladder, being one of the coats of the swimming-bladder of fishes, chiefly of the genus Acipenser or sturgeon, and of which the best qualities are exported from the rivers of Russia, flowing into the Black and Caspian Seas, but also from the Sea of Ural and the Lake Baikal.—*Royle.* See Air-bladder; Fish-maws; Isinglass; Sounds.

ICHTHYOPHAGI, a fisher race of the ancients, on the coasts of Persia, the Sir Matsya or Sermahi. Fish to this day is the staple article of food of the inhabitants on the sea-coast of Baluchistan. In the Shatt-ul-Arab, fish are caught and cured, and sold at one shilling the cwt.; for six months the people of Basra live on almost nothing else, and also from Basra to Hormuz, the sea-coast people principally live on fish; and manuscript dictionaries describe the bread or food called Mahi-abah or Mahi-ashnah, used chiefly among the people of Lar, as prepared from fish (more particularly a small kind found near Hormuz), dried by exposing it to the sun. Strabo and Arrian relate that the ancient Ichthyophagi made into bread the fishes, which they had dried and roasted in a similar manner. The region of the Ichthyophagi commenced at Malana, near Cape Arabah, and ended between the ancient Dagasira and the place now called Cape Jask, or more properly Jashk. Churchill's Collection of Voyages mentions that 'the coastes of Persia as they sailed in this sea, seemed as a parched wildernesse, without tree or grass; those few people that dwell there, and in the islands of Lar and Cailon, live on fish, being in manner themselves transformed into the nature of fishes. So excellent swimmers are they, that, seeing a vessel in the seas, though stormie and tempestuous, they will swimme to it 5 or 6 miles to begge almes. They eate their fish with rice, having no bread; their eats, hennes, dogges, and other creatures which they keepe have no other dyet.' Nieuhoff, who travelled in 1662, says that about Gambroon 'the common people make use of dates instead of bread or rice; for it is observable that the ordinary food of the Indians all along the coast from Basora to Sind is dates and fish dried in the air; the heads and guts of the fishes they mix with date-stones, and boil it all together with a little salt water, which they give at night to the cows after they come out of the field, where they meet with very little herbage.'—*As. Res.* ix. p. 68; *MacGregor; Taylor's Travels from England to India*, i. p. 266; *Churchill's Collection of Voyages*, ii. p. 230 (*first ed.*); *Ouseley's Tr.* i. p. 228; *Townsend's Outram and Havelock*, p. 297.

ICHTHYOPHIS GLUTINOSUS, an immense earth-worm, common in Sikkim. It is a native of the Khassya mountains, Singapore, Ceylon, and Java.—*Hook. Jour.* p. 26. See Reptiles.

ICICA INDICA. *W. and A.*

Bursera serrata, *Wall.*	Schinus saheria, *H. B.*
Schinus Bengalensis, *H. B.*	S. Niara, „

The Nayor tree of Assam and Chittagong, growing 70 feet high; timber close-grained and hard, as tough as oak, but heavier, and used for furniture by the natives. In South America are several species of Icica, all of which yield a transparent fluid, resembling turpentine in many of its properties, and they might be introduced into India. In Guyana, I. altissima, I. heptaphylla, I. heterophylla, I. decandra; and I. icecariba in Brazil.

'ID, ARAB., written Eed, a religious holiday of the Mahomedans. Of these, two Eidein are farz or absolute, being enjoined by texts in the Koran; these are the 'Id-ul-Fitr and the 'Id-us-Zoha. The 'Id-ul-Fitr, called also the 'Id-us-Saghir and Ramazan-ki-'id, is held on the 1st day of the month Shawal, in commemoration of breaking the thirty days' fast of the Ramazan. It is held with prayers and rejoicings and distribution of alms to the poor.

The 'Id-us-Zoha, or 'Id-ul-Kurban, or Bakr-eed, the meanings being the festival of the forenoon, of sacrifice, or the bull-festival, is observed in commemoration of Abraham's sacrifice of his son, whom the Jews and Christians say was Isaac, but Mahomedans say was Ishmael. It begins on the 9th of the 12th month, Zulhijja, with prayers and offerings, and is continued on the morning of the 10th with public prayers, after which a sheep, an ox, or a camel is sacrificed, and the meat of the sheep and oxen eaten by the offerers, or distributed to their friends and the poor.

IDA, one of the daughters of Daksha, who was married to Kasyapa.

IDAAN, called also Merut or Murut, a race in Borneo who inhabit the more hilly districts towards the north, in the vicinity of Kina Balou. They resemble the Kadyan, some of their tribes are near the capital; they are said to have sacrificed human victims, like the Kyans. The Idaan of different places go under different denominations and have different languages, but in their manners and customs they seem to be nearly alike. The name Idaan is in some measure peculiar to those of the north part of Borneo; the inland people of Passir are called Darat; those of Benjar, Biajoos; the Subano of Magindanao appear to be the same people. The Idaan are reckoned fairer than the inhabitants of the coast; this has given rise to an opinion, seemingly wholly unfounded, that they are the descendants of the Chinese. The custom obtained of arranging human skulls about the houses of the Idaan as a mark of importance.—*Journal Indian Archipelago*, 1849, p. 557.

IDA CHETTU. TEL. A very small variety of orange, growing in all the hilly country of the Circars, both cultivated and wild. Perhaps the original of the Citrus aurantium, *Linn.*, C. variatro, *Heyne*, p. 57, musk orange, Chota kichili, HIND., Kiri kittali, CAN.—*Fl. Andh.*

IDAIN, Idankai or Iddakai, TAM., Idagai, KARN., the left side; the left-hand castes of the Hindus.

IDAIYAN. TAM. Cowkeeper. The cowherd race in the southern districts of the Peninsula of India. They have as their tribal titles, Khone, Kone, or Konar, meaning king, also Karialan meaning landlord, and Servakaren meaning captain; but those in the northern districts adopt that of Pillai. The race are very numerous, but take a lower place in social life than the agricultural Vellaler, who generally take the title of Mudali.

IDIGA. KARN. A toddy-drawer; a caste who sell toddy, the fermented palm wine, etc., also employed as palanquin bearers.—*Wils.*

The idols of the Hindus are made of gold, silver, and copper, or their alloys,—one alloy of frequent use being that called panchalaka, of gold, silver, copper, tin, and lead; but iron, brass, crystal, stone, earth, cow-dung, and wood are also often employed, the red sanders wood and the woods of the Cupressus torulosa, Macrotomia euchroma, and Melia azedarach. Many of the idols in India are monsters, many are mere shapeless masses of stone with a smearing of red lead, or a log of wood without shape or form, or a stone from the river-bed; others, like the bull Nandi or Basava, the vahan of Siva, are beautifully-formed models of that quadruped. The forms of Siva and of his wife Parvati and of the cobra serpent are usually well portrayed, as also of the peacock in the Saiva temples. The horse is formed of wood, plated with silver and gilded; occasionally well-made figures of the elephant are to be seen.

The images made of gold are generally those of Durga, Lakshmi, Radha, Krishna, and Saraswati; they are kept in private houses, and worshipped daily, and weigh from one to four tolas.

The image of Sheetula, of 10 or 12 tolas, is often made of silver, kept in the house, and worshipped daily. Ward mentions that at Kidderpur, adjoining to Calcutta, was a golden image of Puti-tupavuni, 2 cubits high. Near Sarampur was a golden image of Jagadhatri, about 1½ cubits high. Very small copper images of Surya, and of Siva riding on a bull, are preserved in private houses, and worshipped daily.

The images of all the gods and goddesses may be made of stone, generally of a black, but some of a white colour; the greater number are placed in temples; a few small ones are found in private houses. All images of stone are worshipped daily; the greater number are of the lingam, or the various forms of Vishnu. A few exist of the lingam, nine or twelve cubits high. Throughout Lower Bengal and all the south of India, every village has its guardian idol, generally one or more rough stones smeared with red lead, and placed under an aged banyan or pipal tree. In one single street of Calcutta there are more images of Krishna and emblems of Siva than perhaps in the whole length of the Doab. A lingam at Benares requires six men to encircle it. The clay and composition images made in the vicinity of Calcutta for the annual festivals (some of which have a very splendid appearance, and are of large dimensions), after the ceremonies are over are cast into the river. The modern manufacturers of the deities are artisans in gold, silver, and other metals, stone-cutters, and potters. Some of the modern casts are handsome, but the modern sculptures are commonly contemptible. Some of the ancient Hindu sculptures are magnificent, and in minute ornamental and floral decorations almost unrivalled.

In Burma the images of Gaudama are made of wood, marble, and the precious metals. In Siam, Japan, etc., images are made of the ornaments, precious metals, etc., collected from the ashes of the funeral pile of a deceased person; and others again from the pulverized fragments of the bones kneaded with water into a paste, baked, and afterwards gilded.

Images of snakes are common. The idea of their curative virtues is very old in India: a Hindu attacked by fever or other diseases, makes a serpent of brass or clay, and performs certain ceremonies to its honour, in furtherance of his recovery. Such ceremonies are particularly efficacious when the moon is in the Nakshatra (mansion, sign, or asterism) called Sarpa or the serpent, called also Ashlesha. Dhanwantari is the Esculapius of the Hindus, but has not an attendant serpent like his brother of Greece; the health-bestowing Dhanwantari arose from the sea when churned for the beverage of immortality. He is generally represented as a venerable man with a book in his hand.

Every Hindu house has at least a picture; many have idols; and every man of the Vira Saiva or Jangam sect, of whom there are many millions in India, always wears the lingam in a silver or gold casket, suspended from his neck or tied round his arm. The lingam inside is a small stone cylinder embedded in the yoni. The ordinary lingam, of which there are millions in India, is a stone cylinder rising from the yoni, a stone platform marked with circular markings; usually in front of it is a figure of the bull Nandi in stone. Ganapati or Ganesa, with the head of an elephant and the body of a fat man, is an idol frequently to be seen. As the god of wisdom, he is worshipped at the beginning of every undertaking by almost all Hindus. When a Hindu boy or girl begins to read, they make a Ganesa in the form of a small cone of cow-dung, which they place on a purified spot, and ornament it with flowers and naragam and red kanganu, and offer a sacrifice by burning camphor and frankincense, also offering betel-nuts and plantains, cocoanuts and jagari, then bow reverentially and pray for the god's aid. The pyramidal figure is then kept for a time or thrown into the water. Any person may see them.

In a Hindu temple, the idol is kept in the centre of the temple, called Sanadi. Daily the Brahman servants anoint it with oil, cleanse it with sikaia, wash it with water, then with curds, milk, lime-juice and honey, and cocoanut water. Before it the dancing girls of the temple, the devadasa, dance and sing to music morning and evening. On certain festivals, the idol is taken from the temple in a palanquin or on a car, and made to perambulate the squares and the streets.

Idols are frequently objects of litigation, and sacrifices of human beings are occasionally made to them. In a village called Kishnagur, some 30 miles from Bikanir, there lived one Maya Ram, a Jat by birth, in whose house was an image of stone, which Maya Ram and his family used to worship. It was a tradition in the village that the idol had been kept formerly in several other houses, one after the other, but that all who worshipped it had come to a violent end; and Maya Ram one day was seen behaving very strangely before the idol, dancing frantically, says the report. He then forbade the other villagers to enter the house. He seemed under the influence of some religious homicidal mania, attacking his kinsmen, and threatening to kill them unless they conformed to his worship of the stone image. He killed the child of his elder brother. Suddenly the contagion of madness seemed to seize the whole family: Maya Ram, with two male kinsmen and seven women, threw themselves into a well all together, and shouting 'Swarga chalo!'—Come to heaven!—the whole ten were drowned.

The Jain idols are usually naked figures of men and women, of gigantic proportions, often erect, but in every attitude. The Buddhist idol is usually Buddha or Gaudama, reclining, or sitting in the attitude of preaching. Some of the figures of Gaudama at the great Shooay dagon temple at Rangoon are of vast dimensions.—*Moor; Ward's Hindus; Tr. of a Hind.; Coleman.*

IDRISI or Al-Idrisi, the surname of Abu Abdullah Muhammad, author of the geographical work Nuzhat-ul-Mushtak-fi-Ikhtirak-ul-Afak. He was born at Ceuta, in Morocco, towards the latter part of the 11th century. He travelled in Europe, and eventually settled in Sicily at the court of Roger II. He describes the countries in the S. and E. of Asia.—*Elliot.*

IFTAH. ARAB. The evening meal of the Mahomedans during the Maharram.

IGHIR. ARAB. Acorus calamus.

IGNATIA AMARA. *Linn.* The K'u-shih-pa-tau of the Chinese. Ignatius bean, syn. of Strychnos sancti ignoti.

IGUANA.

Zib, ... ARAB.	Manawak, Manuwak, MAL.
Iguana or Inguana, ENG.	Ghoda-sala, . . SANSK.
Lizard, ... ,,	Talla-goya, . . . SINGH.
Ghorepore, HIND., DUK.	Udumu, ... TAM.
Biyawak, Bewak, MALAY.	Udumbu, . . . TEL.

Iguana is the popular name for species of reptiles of the genus Varanus, family Varanidæ, order Sauria, of the section of scaled reptiles. Baron Cuvier classed them under his Iguaniens; others have arranged them under the Agamidæ. Varanus flavescens, *Gray*, inhabits Bengal; V. dracæna, *Linn.*, Bengal and Agra, and also V. nebulosus, *Dum. et Bib.*

Varanus Dumerilii attains a length of 7 feet; it frequents the neighbourhood of houses, to rob hen roosts.

The Basilisk of the Eastern Archipelago is the Basaliscus Amboiensis, *Daudin*, one of the Iguanidæ. Messrs. Dumeril and Bibron, in their Erpetologie (1837), treat of these reptiles under the name of Lizards, Iguaniens, or Sauriens Eunotes. In the catalogue of the specimens of lizards in the British Museum, the Iguanidæ with the Agamidæ constitute the tribe Strobilosaura.

The Iguana of India, generally found about old walls and ruinous buildings, is about two feet long; tail long, round, and tapering; back, tail, and throat are serrated; and its whole surface is covered with shining scales. The flesh is eaten by the Mahomedans of India, and in the West Indies it is salted and barrelled for exportation. In India the body of the dried Iguana is made into an electuary, with a certain portion of ghi, and used as a strengthening medicine in consumptive complaints. An animal oil is obtained from it. The Iguana of the Europeans of Ceylon, the Talla-goya of the Singhalese, is the Monitor bracæna, *Linn.* It is 4 to 5 feet long. The Singhalese and

Tamil races of Ceylon believe the tongue of the Iguana to be a specific for consumption, if plucked from the living animal and swallowed whole.—*Tennant's Ceylon; Faulkner; Eng. Cyc.*

IHRAM. ARAB. The dress worn by Mahomedan pilgrims at Mecca. See Harm. Lane says (Mod. Egypt, i. p. 131), during his performance of the required ceremonies in Mecca, and also during his journey to Arafat, and until his completion of the pilgrimage, the Muslim pilgrim wears a peculiar dress called Ehram (vulgarly Heram), consisting generally of two simple pieces of cotton or linen or woollen cloth, without seam or ornament, one of which is wrapped round the loins, and the other thrown over the shoulders; the instep and heel of each foot and the head must be bare. After the recitation (a Khutbah on Mount Arafat), the sacrifice, and other ceremonies on the return journey to Mecca, in the valley of Mena, every one resumes his usual dress, or puts on a new one, if provided with such.

I.H.S. This sacred monogram, arranged in cypher, is the Chinese Buddhist's sacred symbol of Buddha.

IJARA. HIND. A contract. Ijaradar, a contractor.—*W.*

IJMA. ARAB. Lit. collecting or assembling, in Mahomedan theology, means the unanimous consent of the Mujtahadin or learned doctors. See Jama.

IJTIHAD. ARAB. Carrying on war against non-Mahomedans and infidels. See Jahad.

IJU, also written Eju, the horschair-like substance which grows on the gomuto tree, the Arenga saccharifera, *Labill.* This substance is also called gomuto; part of it is a stiff bristle, but the bulk more resembles horschair, and it is largely made into cordage. See Arenga; Gomuto.

IKAN. MALAY. A fish; also a crab. The word is always prefixed or added to the specific name of the fish, as ikan-bawal, the pomfret; tulor-ikan, fish-roe; sirip-ikan, fish-fins; sisek-ikan, fish scales.

Ikan dori, a small dark-coloured fish, of about a pound weight. Great caution is necessary in handling it, because it is armed with poisonous spikes under the pectoral and dorsal fins, the wounds from which are extremely painful. It is not much esteemed.

Ikan mimi, the king-crab.

Ikan saladu and Ikan surdudu, Arius Arius.

Ikan sambilang, literally fish of nine, from the nine barbs on its head. It is found in the ponds of the Malay Peninsula, and is largely eaten.—*Earl; Cantor; M'Nair*, p. 83; *Simmonds.*

IKAUNA, a pargana in Bahraich district, Oudh. The Brahmans, 13,986, are the most numerous caste; the Ahirs and Kurmis coming next, with 9740 and 7615 respectively. The village of Tandwa is identified by General Cunningham with the Tu-wei of Fa Hian and Hiwen Thsang, where Kasyapa Buddha was born and lies buried; while a statue of the mother of Sakya Buddha is now worshipped in the village as Sita.—*Imp. Gaz.*

IKRAR. ARAB. A promise, an agreement. Ikrar-namah, a deed of settlement.

IKSHWA'CU, one of the ten sons of Manu Vaivasvata, considered to have been the first of the Solar dynasty, offspring of the sun. He reigned at Ayodhya, the capital of Kosala, in the second or Treta Yuga. As the offspring of the sun, his posterity was called the dynasty of the Solar princes, in the same manner as Budha was reputed the head of the Lunar line. Modern commentators bring the time of his accession down to the year 1320 before Christ. A passage in the Agni Purana indicates that the line of Surya, of which Ikshwa'cu was the head, was the first colony which entered India from Central Asia. But the patriarch Budha was his contemporary, he being stated to have come from a distant region, and to have been married to Ila (Ella), the sister of Ikshwa'cu. Max Müller says this name is mentioned only once in the Rig Veda, and he and others suppose it is the name not of a king, but of a race occupying the northern or north-western part of India.

The lineal descent from Brahma Bharata was Bramha, Marichi, Vaviswat, Manu, Ikshwa'cu, Kukshi, Vikukshi, Vanu, Anaranya, Prithu, Trisanku, Dhundumar, Yuvaneswa, Mandhata, Susandhi, Dhruvasandi, Bharata.

Nimi, one of Ikshwa'cu's hundred sons, founded the Mithila dynasty.—*Dowson.*

IL pronounced also Ilhat or Iliat, a term applied to the nomade tribes of Persia. It is also a Semitic for m of God. See Iliyat.

ILA, sister of Ikshwa'cu, of the Solar race, was married to Budha of the Lunar race, and these were the ancestors of the Lunar line of kings. In Hindu mythology, Budha, son of Atri, son of Brahma, was husband of Ila, the earth, daughter of Spatembas. Budha was Mercury, son of the moon.

ILA or Ilita, mentioned in the Vedas as a goddess, may possibly be the same as the Babylonian goddess Ili or Bilat Ili, queen of gods.

ILA, in the Rig Veda, is food personified as the goddess of speech. According to Sayana, she is the goddess presiding over the earth. The Satapatha Brahmana represents her as springing from a sacrifice which Manu performed to obtain offspring, and she had offspring to Manu. According to the Puranas, she was the daughter of Manu Vaivaswata, wife of Budha (Mercury), and mother of Pururavas; but, through the favour of the gods, her sex was changed to a man, but again became a woman, and she married Budha, to whom she bore Pururavas.—*Dowson.*

ILACHI. HIND. A generic term for the fruits of several plants producing cardamom, viz.:

Bari-ilachi or Ilachi-kalan, Amomum cardamomum, the large rough-shelled variety.

Choti or Khurd-ilachi, Elettaria cardamomum, the small cardamom.

ILAH, the name of an old Arabian deity, and is more properly and more usually applied to a pagan god, than to Allah, God supreme over all, —composed of Al, the, and Ilah, God. Hence the Mahomedan profession of faith says, La Ilah il-Allah, etc., which in the ordinary translation of 'There is no god but God,' conveys no precise meaning, and involves an obvious truism, which Mahomed would never have enunciated. The true reading would be, 'There is no deity but God.' From some passages in the early Indian historians, it would appear that they supposed the famous Somnat to be the Arabian Ilah or Ilat. Notices of it occur in the Rauzat-us-Safa, Habib-us-Sair, and Ferishta, the passage quoted from Farid-ud-Din Attar; Sale's Koran, i. p. 23, ii. p. 390; Hyde, de Rel. Vet. Pers. p. 130; Pococke,

Spec. Hist. Arab. pp. 4, 92, 110; Bird's Gujerat, p. 39; D'Herbelot, Voce Lat.; Al-Makkari, Mahomedan Dynasties in Spain, i. p. 346; and Herod, iii. Alihat, the gods; Ilahat, a goddess; Ilahi, divine.—*Elliot.*

ILAHABAD or Allahabad, a city of the N.W. Provinces of British India. Before Akbar's time, this place was known as Preag or Prayag; by him it was denominated Allahabas, which subsequently became Allahabad. The name is more correctly Ilhabad or Ilahabad, but the usual practice of writing it is Allahabad. The article 'al' coalesces with the substantive in Allah, and represents the Almighty.—*Elliot.*

ILAHI. ARAB. The title of an era, now obsolete, invented by the emperor Akbar, commencing with the first year of his reign, A.H. 963 or A.D. 1556. It was on his coins. The Ilahi gaz is the standard gaz, or yard, of forty-one fingers, instituted by Akbar. After much controversy respecting its length, it was authoritatively declared by the British Indian Government to be 33 inches long; and the declaration has been attended with considerable convenience to revenue officers, as a bigha measured by this yard constitutes exactly five-eighths of an acre.—*Elliot.*

ILAKA. ARAB. A dependency. Ilaka-dar, a person in possession.

ILAKA-BAND. HIND. A silk fringe, silk girdle, and tassel maker. Ilaki, a square scarf of Multan.

ILA KURA. TEL. Salsola Indica, *Willd.* This is occasionally used as a vegetable, and, being naturally salt, has given rise to the Teling saying, 'The carping husband (finding fault without cause) says to his wife, There is no salt in the Ila kura.'

ILAM, said by some authors to be the Tamil name of Ceylon, and to signify gold; but gold in Tamil is Ponnu.

ILAMBADI. TAM. Corruption of Lambady, the Banjara race, so called in the south of India.

ILA-PANANKI JANGU MAVU. TEL. A farina is obtained from this root by treating it the same as in manufacturing manioc. It is very nourishing.

ILAVRATA. In an ancient Hindu geography, one of the divisions of the known world; its mountains are called Tien-chan, Kiloman, Tangrah or Tangla.—*As. Res.* viii. p. 311.

ILCHI, a town in High Asia, with 40,000 inhabitants.

ILEX, the holly genus of plants. Dr. Wight mentions I. Gardneriana and I. Wightiana. Mr. Thwaites names, as growing in Ceylon, I. denticulata, a large, and I. Walkeri, a small tree. Mr. Hodgson, in his Nagasaki, mentions eight species in Japan, viz. crenata, *Thbg.*, microphylla, *Bl.*, integra, *Thbg.*, latifolia, *Thbg.*, rotunda, *Thbg.*, serrata, *Thbg.*, aquifolium, *L.*, var. heterophylla.

Ilex denticulata, *Wall.*, is a very large timber tree, not uncommon on the higher ranges of the Neilgherries and Animallays at 6000 to 8000 feet, and at similar elevations in Ceylon; its timber is much valued, and is said not to warp or crack; it has serrated leaves.—*Bedd. Fl. Sylv.*

Ilex dipyrena, *Wall.* Himalayan holly.

Dodru, Dinsa, . .	BEAS.	Kanjru, Karelu, .	RAVI.
Krucho, ...	,,	Drunda, ...	,,
Kimelu, . . .	CHAMBA.	Kalucho, . .	SUTLEJ.
Shangala, . .	CHENAB.		

This moderate-sized tree grows at Mussoori and everywhere in the Himalayas to 5000 or 9500 feet. The wood is heavy, hard, and fine grained, much like common holly, and used for various purposes of carpentry. It bears a very close resemblance to the holly, especially in November and December, when it is covered with clusters of scarlet berries.—*Stewart.*

Ilex Malabarica, *Bedd.*, a large species growing in the Wynad.—*Bedd. Fl. Sylv.*

Ilex serrata is a lofty species found in Mussoori, and I. excelsa in Nepal.—*Royle, Ill.* p. 167; *O'S.*

Ilex Walkeri, *Wight, Gardn.*, is a small tree in the Central Province of Ceylon, growing at an elevation of 5000 to 8000 feet.

Ilex Wightiana, *Wall.*, is a large umbrageous tree, with small white flowers and red berries, growing in the Neilgherries and in the southern and central parts of the island of Ceylon up to an elevation of 4000 feet.—*Thw. Zeyl.* p. 183.

ILI, a valley and town in Central Asia, from which Lassen supposes the Szu Tartars were expelled by the Yue-tchi or White Huns, B.C. 150. He supposes the Szu Tartars to be the Sacæ, and the Yue-tchi to be the Tochari. After occupying Tahia or Sogdiana for a time, they are stated by the Chinese to have been driven thence, also, by the Yengar, some years afterwards, and to have established themselves in Kipen, in which name Lassen recognises the Kophen valley in the Kohistan. The great Kirghiz horde is adjacent to Ili and Tarbagatai. It is under the dominion of China, and exchanges large quantities of cattle on the frontier for silk goods. The Tsiankiun has authority over the Eluth and Chahar of his own central province of Ili, who have also Chinese ministers; also over the Eluth, Chahar, and Hassack, under the Tsantsan minister resident at Tarbagatai, and over the Mahomedans of the eight cities in Ili, south of the Tien-shan, who are under resident ministers of different degrees.

ILIYAT are tribes in Persia and Khiva, some of whom are nomade, dwelling in tents, and others reside in towns. The word Iliyat is derived from Il, a Turki word signifying tribe, equivalent to the Arabic Kabilat, to which 'aut,' an Arabic termination of the plural, was added,—a combination not uncommon. The Iliyat tribes in Persia are mostly of Arab, Kurd, and Turkoman descent; along with tribes from the Bakhtiara mountains, who are of a race totally distinct from the northern hordes, and probably something more indigenous to the soil than any of the other wanderers, but all lead the same manner of life, and bear the common name of Iliyat, their pastoral habits little distinguishing them from the Bedouin Arab or the nomade Tartar. The subjects of the Persian empire therefore appear to consist of the stationary inhabitants of towns and cities, and the wandering dwellers in tents and temporary villages. The Iliyat comprise a very large portion of the population of the country, though their actual numbers are not well known. They are Mahomedans of the Sunni sect. Many of the best families in Persia are of Iliyat origin. The present royal family is of the Kajar tribe, a Turkish Il, which came into Persia with Timur. The principal Iliyat tribes are said by Morier and MacGregor to be—

Afshar.	Bayat.	Kurd Buchel.
Aimak.	Feili.	Lak.
Arab.	Hazara.	Mama Senni.
Bajiban.	Kajar.	Shah Sevan.
Bakhtiari.	Khuda Bandi.	Shekagi.
Baluch.	Kurd.	

Frazer mentions that in his time 195,000 Iliyat families were tributary to Khiva, viz.:—

Yamut, ...	15,000	Kazak, ...	40,000
Goklan, ...	20,000	Ikdar, ...	15,000
Chudar, ...	2,000	Sarokh, ...	15,000
Kalpak, ...	30,000	Uzbak, ...	40,000

The Chudar are said to have been brought from the farther borders of the Oxus by Muhammad Rahim Khan. In the 10th century, they are said to have comprised 500,000 families within the province of Fars alone. Although much inferior in numbers, many of the present Iliyat tribes are very considerable; and since the destruction of Rai, and the decay of Isfahan, Shiraz, and all the other great cities throughout the empire, they constitute a principal source of population, and the best nursery of its soldiers. Some of their chiefs are men so powerful that the king attaches them to his court by honourable and lucrative employments, or detains them about his person as hostages for the loyalty and good conduct of their respective clans. We find them, as they were 800 years ago, unmixed with the Persians who inhabit cities; retaining their pastoral and erratic habits, and using among themselves a dialect different from the language of the country, which, however, most of them can speak and understand. They are an independent and hardy race, inclined to hospitality. Two or three families in little groups, preparing or enjoying their simple meal by the roadside, or proceeding on their journey, the wife carrying one child, two or three others packed in baskets on an ass, which the husband drives before him, are usual pictures to be seen.

Iliyat tribes have each their own history. They change their places of encampment with the season and climate, going in the summer to the Ailak, or quarters where pasturage and water are to be found in abundance; and when the cold of winter sets in, adjourning to the Kishlak or warmer region, in which their flocks and herds, as well as themselves, are better sheltered. The tribes adhere to their respective districts, but the distances that some of the tribes have to perform in their annual migrations are really wonderful. From the southern shores of Fars, the Kashgoi arrive in spring on the grazing grounds of Isfahan, where they are met by the wandering Bakhtiari from their warm pastures of Arabistan, near the head of the Persian Gulf. At the approach of winter both these tribes return to their respective Kishlak or Garm-sair. In each province of Persia there are two chiefs, elders, acknowledged by all the tribes who roam in that province. In their conduct and morals the Iliyat women are vastly superior to those of the towns and settlements. They are chaste and correct in their lives, and faithful to their husbands. They are Sunni Mahomedans, but are by no means particular in their religious observances, and are not ruled or influenced by the maula as townsmen are. They are all, in a greater or less degree, professional robbers,—some tribes living solely by rapine and plunder, and others resorting only occasionally to such means. They have large flocks and herds, which they often augment by taking possession of their neighbours'. The civilised population hold them in great dread on this account. The Il-khani of Fars is the chief of the Kashgoi tribe.

The nomades breed camels, cattle, and horses, mules and asses. Their tents are made of goats' hair. Often on approaching an Iliyat encampment, the stranger is met by the women of the tribe, who burn aromatic herbs in honour of the guest, and as a token that he is welcome to their hearth. Mr. Bickmer observed a similar practice among the Kuldi in Kurdistan. This custom must be very ancient, for we find Fardusi alluding to it in his descriptions of the early heroic ages of Iran.

The usual drink of the Luristan Iliyat consists of buttermilk weakened with water; a little salt is added to it, and it is then called Ab-i-dhung. It is generally sour. There is nothing so efficacious for the purpose of slaking thirst on a hot summer's day as this ab-i-dhung.—*De Bode's Travels; Ouseley's Travels; Rich's Kurdistan; Frazer's Travels; Morier; MacGregor.*

ILLAM. MALEAL. A house, a dwelling, a household.

ILLANUN, also Lanun, a maritime race of the Archipelago, formerly addicted to piracy. In the year 1837, the schooner *Maria Frederica*, Captain Gregory, was cut off in Ampanam roads; and in 1840, the English whaler *Mary*, Captain Blosse, while at anchor at the North Islands, near the N.W. point of Lombok, was surprised and taken by a fleet of Lanun prahus (See Moniteur des Indes for 1847–48, pp. 17–21); but the vessel and crew were soon afterwards ransomed for a large sum in Spanish dollars by Mr. King, who subsequently, finding that the pirates still remained there, fitted out an English merchant brig, that was then loading rice for England, with guns and men supplied by the king of Lombok, and succeeded in driving them away for a time. Traders visiting any of the ports east of Java should take every precaution to prevent surprise. Their course along the north-west coast of Borneo to the coasts of Sumatra and the Malay Peninsula is now obstructed by the settlement of Labuan, which they cannot pass without some intelligence being received of their motions, and this being conveyed speedily to Singapore, would inevitably lead to their being sought out and destroyed.

ILLECEBRACEÆ, the knot-grass tribe of plants, comprises thirty-nine genera. Of these, three species are found in Arabia, one in Persia, one in China and in continental India. Seventeen forms have been discovered in the E. Indies of Herniaria, Hapalosia, Illecebrum, Polycarpœa, Drymaria, Mollugo.

ILLICIUM, a genus of plants belonging to the order Winteraceæ of Lindley. The order contains four genera and twelve species, shrubs or small trees; one of them, the Illicium anisatum, grows in Japan and China; one on the Khassya mountains, and one in New Zealand. The general properties of the order are stimulant and aromatic.—*Voigt*, p. 13.

ILLICIUM ANISATUM. *L.* Star anise tree.

Badian-i-khatai, . ARAB.	Chinese anise, . . ENG.
Hwai-hiang, . . CHIN.	Skimmi, . . . JAPAN.
Ta-hwui-hiang, . . ,,	San-ki, . . MANILLA.
Pah-koh-hwui-hiang, ,,	Anasi pu, ... TAM.
Anas phal, DUKH., HIND.	Marati mogga, . . TEL.
Aniseed tree, . . ENG.	

The star anise tree is a native of the countries extending from lat. 23½° to 35° N., or from Canton to Japan. The designation star is applied to the fruit from the manner in which they grow, the pods being in small clusters, joined together at one end, and diverging in five rays. They are prized for the volatile oil obtained from them, and for their aromatic taste. The barks have a more aromatic flavour than the seeds, but they are not so sweet. In China, their most common use is to season sweet dishes. In Japan they are placed on the tombs of friends, and presented as offerings in the temples. They are chiefly exported direct to India, England, and the north of Europe, at the average value of 8½ dollars per pikul. In India they are used in seasoning curries and flavouring native dishes; and large quantities are used in Europe in the preparation of liqueurs. The capsules constitute in India a rather important article of commerce, and are sold in all the bazars. Both capsules and seeds evolve a powerful odour of anise; the taste is similar, very mild, sweet, and somewhat acidulous. The capsules and seeds abound in an essential oil, easily procured by distillation with water; this oil is rather brown, lighter than water, more difficultly congealed than the true aniseed oil, but in other respects exactly of the same properties. The powdered capsules are used by the Mahomedan practitioners as stimulant carminatives. For the colics of children, the essential oil is given with advantage. The tree might be introduced into India.—*O'Shaugh.*; *Thunberg's Tr.* iii. p. 227; *Morrison's Comp. Summ.*; *Simmonds*; *Faulkner*; *O'Sh. Beng. Phar.* p. 412; *Royle, Il. B.* p. 58.

ILOCO, one of the languages spoken in the island of Luçon. In the Philippines are many separate nations or tribes, speaking distinct languages, unintelligible to each other. The principal tongues of Luçon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000 people; while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people. Mr. Crawfurd says that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language, or languages sprung from a common parent, and only diversified by the effects of time and distance, and that an examination of the Bisaya dictionary gives different results. See India.

ILOL, a native state within the political agency of Mahikanta, in the province of Gujerat, Bombay. Pop. (1872), 5511.

IMAD SHAHI, a dynasty of Berar, founded by Fattah Ullah, a descendant of a Hindu convert.

IMAM. ARAB. A leader; the president of a mosque; the person who leads the daily prayer and is in receipt of the revenues of the mosque; also the title of the four great doctors of the four orthodox Sunni sects; also the title of the twelve great leaders of the Shiah sects; but it is also given to any great religious leader, head, or chief in religious matters, whether the head of all Mahomedans as the khalif, or the priest of a mosque, or the leader in the prayers of the congregation. Imam answers to the Latin Antistes. In the Koran (chap. ii. vers. 118-20), 'God said unto him, Abraham, I constitute thee Imam unto men,' that is, a model of religion.

After the death of Mahomed, his successors, the khalifs, became his delegates or lieutenants, and were also termed Imam or leader. When Mahomedans meet together for prayer, an Imam is chosen who leads the prayer, and the congregation regulate their attitudes by his, prostrating themselves when he does so, and rising when he rises. In like manner the khalif is set up on high as the Imam or leader of the faithful in all the business of life. He must be a scrupulous observer of the law himself, and diligent in enforcing it upon others. The election of an Imam is imperative (p. 229). The fourth Sura says, 'Obey God and his prophet and those of your people who exercise government over you.' The qualities of an Imam are knowledge, integrity, mental and physical soundness.

Imam is a sacred title with the Shiahs, and is given only to Ali and the immediate successors of the Prophet, who were twelve in number, their Bara-Imam. The last of these, the Imam Mahdi, is supposed by them to be concealed (not dead), and the title which belongs to him cannot, they conceive, be given to another. Among the Sunni Mahomedans, however, it is a dogma, that there must be always a visible Imam or father of the church. It was long maintained that the Imam must be descended from the Arabian tribe of Koresh; but the emperors of Constantinople (who are of a Turk family) have assumed the sacred title, which they claim on the ground of the formal renunciation of it by Muhammad the twelfth, the last khalif of the race of Abbas, in favour of Selim the first. The acknowledgment of this title renders the emperor of Turkey the spiritual head of all orthodox Mahomedans.

The sect of Mahomedans who believe that the Imam Mahdi has come and gone, are the Mahdavi, or, as others call them, Ghair Mahdavi, *i.e.* people without Mahdi. About the year 657 A.D., or some twenty-five years after the death of Mahomed, his son-in-law Ali met Muavia, and fought the battle of Siffin. Displeased at the conduct of Ali on that occasion, about twelve thousand men deserted him. Some years after, they were nearly all destroyed by Ali; but a few survivors fled to various parts. Two men settled in Oman, and there preached their distinctive doctrine of the Imamat, that is, they taught that the office of 'Head of the Faithful' was elective, and not hereditary. They thus differed from the ordinary Shiahs, who hold the doctrine of divine right in its entirety, and never can acknowledge any khalif or chief who is not descended from Ali. Some fifty years after this, one Abdullah-ibn-Abad vigorously preached the doctrine of the right of the people to elect the khalif, or, as they would call their head, the Imam. It is from him that the sect of the Ibadiyah, an offshoot of the Shiahs proper, takes its rise. They elected their own Imam, and thus arose the jurisdiction of the Imam of Oman. From

this potentate came the Sultan of Zanzibar. This shows how entirely free they are from any allegiance to the Sunni khalif. No Ibadiyah ever acknowledged the khalif of Baghdad as his spiritual chief, much less is he likely to recognise one in such a doubtful successor to the office as the Ottoman Sultan. It is not known that the ruler at Muscat has ever laid claim to the title of Imam, though Europeans invariably confer it on him. Imam is, however, said to be now adopted as a royal or dignatory title by several Arab and African sovereigns. The successors of Mahomed continued to exercise their religious functions in proof that they enjoyed spiritual as well as temporal power, and took the title of khalif; but various Arab princes, who dared not aspire to the title of khalif, took that of Imam, to which they frequently added that of Amir-ul-Mominin, or prince of the faithful, and, like the khalifs, observed the precaution of changing their name when they ascended the throne. The custom seemed to typify that their whole nature underwent a change, on being invested with an office to which a certain amount of sanctity was attached.

Of the twelve Imams of the Shiah sect, one was Imam-Ali, cousin and son-in-law of Mahomed, who married Fatima, Mahomed's daughter; the two sons of Ali, the Imam Husain and Imam Hasan, neither of whom were successful leaders, though since their deaths they have by some sects been deified and believed to be incarnate (Ali, Ilahi).

In every Sunni mosque, at the appointed prayers, there is a leader of the devotions, who is called the Pesh-Imam, because he remains in front (Pesh) of the worshippers, leading them in the successive parts of their worship.

The four learned doctors of the faith were Malik ibn Anas, Imam Abu Hanifa, Imam us Shafi, and Imam Ahmad bin Hanbal.

Malik ibn Anas, a native of Medina, born A.D. 713-14, A.H. 95, died A.D. 795, A.H. 179, in his 84th year. He wrote the treatise called Muwatta, the Beaten Path, classifying the oral traditions. It formed a system of jurisprudence which prevailed throughout Spain and Northern Africa, its extension in Spain having been aided by Yahia ibn Yahia, a Berber, who had visited Medina to sit under the teaching of Malik ibn Anas. He returned to Spain, where he had much influence.

Imam Abu Hanifa, a Noman of Persian origin, was born at Basra, in the Hijira year 80 (A.D. 699-700). He was a learned and devout man, humble in spirit. He passed most of his life in Kufa, and was famous as a lawyer. He refused to be kadi of Kufa, on which Ibn Omar ibn Hobaira, governor of the two Iraks, ordered him to be daily flogged until he consented. Ten strokes of a whip were consequently inflicted daily for twelve days, and, being still a recusant, he was set at liberty. He died in prison A.H. 150, A.D. 767.

Imam us Shafi, of the tribe of Koresh, was born A.H. 150, A.D. 767-68, and was brought up in Mecca, but at the age of 45 went to Baghdad, and afterwards to Old Cairo, where he remained till his death in A.H. 204, A.D. 820. He was an eclectic. His doctrines were taught in the schools of Cairo, Irak, Khorasan, and in the regions beyond the Oxus. Between the Hanifa and Shafi sects there were controversies and animosities, and when the Mongols of Chengiz Khan appeared before Rhe, the Shafi sect offered to deliver up the city on the condition that all the Hanifi were slain. This was acted on, but a few days afterwards the Mongol slew also all the Shafi, and the bodies of the members of the two sects were thrown together.

Imam Ahmad bin Hanbal was the fourth and last of the great orthodox Imams. He was born A.H. 164, A.D. 780, at Merou or Baghdad. His teachings differed from those of Shafi in that he did not allow the principle of deductions. His system never extended beyond Baghdad, and is now obsolete.—*Osborn's Islam; Pottinger's Travels, Burton's Scinde; Malcolm's Persia*, ii. p. 345.

IMAM ALI, a town in the vicinity of the Shatt ul Arab, in Ur of the Chaldees.

IMAM BARA. HIND. A building in which are conducted the ceremonies of the Maharram, in commemoration of the deaths of Ali and his sons Hasan and Husain. The Tazias or shrines are sometimes retained in it.

Imam-bari, a building over an imam or Mahomedan saint, or other holy Mahomedan. The imam-bari at Lucknow is a magnificent palace. Its most remarkable part is an immense hall, containing the tomb of Asof-ud-Dowla, the great-grandfather of the last king of Oudh.

IMAMI. HIND. A kind of Kābul silk.

IMAM MASHUDI, the religious guide of Akbar. His tomb is to the west of the Masjid-i-Kutub-ul-Islam.—*Tr. Hind.* ii. p. 201.

IMAM RAZA is buried at Mashid. In his name whole bazars and streets have been bestowed in Mashid, and outside that town, as also in other parts of Khorasan, fields, vineyards, and caravansaris. He is styled Hazrat, also Sultan-ul-Ghriba, king of the poor, and is always mentioned as if still living; a poor person applying at his shrine receives three days' provisions.—*Vambery*, p. 286.

IMAM-ul-MUWAKKAF. See Hasan ibn Sabbah.

IMAMZADAH means the descendants of an imam; but, it is said, generally applied in Persia to the mausoleums built over the bodies of such descendants, which are to be found scattered in great abundance all over the country.—*Fraser's Khorasan*, p. 303.

IMAN. ARAB. Faith. In Mahomedanism, the belief of the heart and the confession of the mouth.

IMAUS, a name by which part of the Himalaya was known to the Greeks and Romans. Pliny was fully aware of the signification of the name, for he says (Hist. Nat. vi. p. 117), 'Imaus in colarum lingua, nivorum significans.' A great part of the mountains N.W. from India was also called the Paropamisus or Hindu Kush; and Imaus and Hindu Kush seem to have been identical. The true Imaus, however, is the ridge which separates Kashmir from Little Tibet. It appears to incline in its northern course towards the continuation of the Hindu Koh, and even to join it. The term Hindu Koh or Hindu Kush is not applied to this ridge in its whole extent, but seems confined to that part of it which forms the N.W. boundary of Kābul; and this is the Indian Caucasus of Alexander. There is, however, much confusion from the Tibetan, Chinese, and Persian names of that great mountain mass.—*As. Res.* iii. p. 389. See Himalaya.

IMMOLATION. Self-immolation is not uncommon in India. It is generally performed by persons lingering under incurable disorders. It is

done by leaping into fire, by burying alive, by plunging into a river, or by wading into the river with earthen pots at the side, and filling them until they sink, dragging the victim down with them. —*Elphin.* p. 191. See Sati.

IMPATIENS, Balsams.

Fung-sien,	. CHIN.	Tatura, . . .	KANGRA.
Kih-sing-taze,	. ,,	Pallu, Tilphar,	. RAVI.
Bantil,	JHELUM.	Hulu, Juk, .	SUTLEJ.

A genus of plants belonging to the East Indies. Single species extend into Europe, Siberia, and North America. Not less than 100 species are known, and almost entirely from the mountains of the Peninsula of India or the Himalaya, from Sylhet as far north as the Sutlej, and in lat. 30° N., at as great elevations as 7000 feet, but chiefly at elevations of 4000 and 4500 feet, where there is moisture combined with a moderate but equal temperature. They are abundant on the mountains of the Western Ghats, but absent from the plains of India, though some are found on the Malabar coast, little elevated above the sea, but only during the monsoon. They are largely cultivated in Indian gardens as handsome flowering plants; colours—rose-pink, white, blue, and variegated. In the middle of the rains, the whole line of the Western Ghats is covered with them. The ripe capsules, on being touched, fly open and scatter their seeds, whence they get the name of Noli me tangere.

albida.	Goughii.	ornata.	sylvestris.
bracteata.	inconspicua.	oppositifolia.	trilobata.
campanulata.	insignis.	Rheedii.	tomentosa.
cuspidata.	Jerdoniæ.	rivalis.	tripetala.
dasysperma.	Kleinii.	rosmarinifolia.	triphylla.
fasciculata.	latifolia.	rufescens.	umbellata.
filiformis.	Loschenaultii.	scabrida.	uncinata.
fomentosia.	modesta.	scapiflora.	verticillata.
fruticosa.	Munronii.	setacea.	viscida.
Gardneriana.	Mysorensis.		

IMPERATA ARUNDINACEA, *Cyrillo*, of S. and E. Asia, the lalong grass of India, almost a sugar-cane in miniature; valuable for binding sand, especially in wet localities.—*Mueller.*

IMPERATA CYLINDRICA. *Beauv.*

I. arundinacea, *Cyril.*	Saccharum cylindricum,
Lagurus arundinaceus, *L.*	*Lam.*

The Ooloo plant of all India, Ceylon, Moluccas, and Australia. Much used as thatch.—*Voigt.*

IMPERATA KŒNIGII. *Beauv.*

Sir, Sil, Bharwi, . PANJ. | Alang-alang, . . MALAY.

A silky-headed small grass, abundant at low spots in many parts of the Panjab plains.

IMPHI, the Chinese sugar-cane, Sorghum saccharatum, *Pers.*, is said to have long been grown in India, but was re-introduced in 1860 by Surgeon-Major Balfour, of the Madras medical department. With careful cultivation in a rich, well-watered cotton soil, it attains the height of eight feet, and it yields in three months a crop of plants very similar to sorghum, except in the appearance of the heads. The natives consider it a variety of sorghum, and are favourably impressed with the plant, as it yields a large quantity of sweet juice which produces good jagari, and the crushed stalk is excellent food for cattle.

INAM. ARAB. A gift, a grant, of which there are many kinds. Inamdar, a holder of a rent-free grant of land. A revenue term introduced by the Mahomedans. Hindus have no word to denote rent-free lands, or freehold property, except Suwusthan, one's own place; but with them that is never found in less quantities than a whole village. Rent-free lands under the Hindus were merely designated by terms signifying the purposes to which devoted, as Dewasthan, the idols' place; Pasodi, a shawl, the Patel's grant; Choli, 'a bodice' for the Patel's wife; Hadola, a row or collection of bones; Hadki, a little bone; Domni, a dish,—the last three being grants to the Mhar tribe. Deo Shet, a grant to a person who has been successful in a trial by ordeal, such as that of determining a village boundary. In Mahomedan countries, it is customary to call inam grants to religious orders grants of land, although they include only the rents thereof; for there is no seising of the land itself, which is the proprietary right of the cultivator only. In the tamba-patra, copperplate patent (by which such grants are designated in Rajputana) of Yasovarma, the Pramara prince of Ujjain, about the 12th century, commanded the crown tenants of the two villages assigned to the temple to pay all dues as they arise, money-rent, first share of produce. In India, where the cultivating proprietor has always paid a feu-duty to the state, the grant of an inam is, like the grant of a jaghir, merely the transfer of the state dues. According to practice, a jaghir is a reward for past or a retaining fee for future services, or a means of support, and is resumable at pleasure. The inam for religious purposes has been a more permanent alienation; but even the Madras Government about the middle of the nineteenth century re-examined all the inam grants, and up to a late date decisions had been given on 396,815 cases.

Under the Mahomedan sway, inam became a revenue term, which the British adopted, but was inquired into when peace permitted the examination of the inams. The religious merit attached among Hindus to the grant of land to the Brahmanical class, the facility afforded by the period of anarchy which followed the overthrow of the native dynasties for irregular alienations by inferior authorities, the acceptance by the Mahomedan rulers of the existing condition of things, the further opportunity for irregular grants which was given under the political confusion occasioned by the struggle between the British and French for Indian supremacy during the latter half of the 18th century, and the system of rewarding meritorious service by alienations of Government revenue, either in perpetuity or for a stated number of lives, which was in force during the earlier years of British rule in the Madras Presidency, from the enormous sacrifice of state revenue involved, attracted the attention of the administration at a very early period, and caused a recognition of the importance of a general inquiry into titles to rent-free lands.

Inam tenures were found divisible into nine general classes. The first three classes are inams for religious and public service. They consist of grants for the support of pagodas, muttums, village headmen, mosques, and durgas, kazis, Christian churches, chuttrums, water pandals, topes, tanks, wells, anicuts, schools, and miscellaneous works of utility.

In the Madras Presidency the basis of Sir Charles Trevelyan's inquiry was that possession for fifty years was to give a good title, no matter what the origin of the possession might have been. This being established, religious service inams were all to be confirmed on existing tenures, and

to be resumed only when the object for which they were held had ceased to exist. Other service inams were to be continued on the same terms when such services were still required; but when they could not be made available for any useful public purpose, the value of the public claim upon the land was to be added to any existing quit-rent payable thereon, the owner being thus enfranchised from service. All other inams held for personal benefit were either to be retained on existing tenure, subject to liability to lapse and without power of alienation, or were, at the option of the holder, to be converted into an absolute property by the imposition of a quit-rent representing the annual value of the reversionary right of Government in the property. This reversionary right was estimated in terms particularly favourable to the inamdars, in order to induce them to take advantage of the privilege offered.—*W.*

INCENSE-WOOD, eagle-wood. Incense was burnt in ancient heathen temples to neutralize the offensive odour arising from animal sacrifice.

INDERABIA, of some English navigators, is also written in different charts, Andervia, Anderipe, Indervea. Dr. Vincent (Ncarch. p. 375) thinks it the Caicandrus of Arrian, but a corresponding name is not found in oriental manuscripts.—*Ouseley's Travels*, i. p. 174.

INDERJAO. Hind. Wrightia antidysenterica. Its seeds are very largely used medicinally, being boiled in milk, and given in hæmorrhoids and dysentery, and in decoction in fever and gout; also used as an anthelmintic. Dose, gr. v to ℈j. Price 5 annas per lb. The bark of the root is astringent and febrifuge, and is used as a specific in dysentery and bowel complaints. Dose, ʒj to ʒiij in decoction.

Inderjao-i-Sherin is Wrightia antidysenterica. Inderjao-i-Talq is Holarrhena antidysenterica, also H. pubescens.

INDIA is supposed to have obtained its name from the Indus, the Sin, Sinda, or Hinda, the Abu-Sin of the Arabs, the first great river met in the routes from Western and Central Asia. It is true that so far back as the reign of Darius Hystaspes, B.C. 521, writers placed Indians on both sides of the Indus, and made India extend westward to Kandahar (Gandhara), embracing perhaps the fourteen Iranian provinces or nations enumerated on the Naksh-i-Rustum as lying between Sogdiana and the Panjab, and subject to Darius. But eastward of the Indus, the country was always India. But this term seems to have been chiefly used in the south of Asia, for it first occurs in the book of Esther (i. 1, viii. 9) as the limit of the territories of the king Ahasuerus in the east, as Ethiopia was on the west, and the names are similarly connected by Herodotus (vii. 9). The term Hoddu, used by the Hebrews, is an abbreviation of Honadu, which is identical with the names of the river Indus, for to the present day all along the course of that river the letters s and h are interchanged. In the Vendidad, the Panjab is described as the Hapta-Hindu, and the other native form, Sindus, is noticed by Pliny (vi. 23). The India of the book of Esther is not, however, the Peninsula of Hindustan, but the country surrounding the Indus,—the Panjab, and perhaps Sind,—the India which Herodotus describes (iii. 98) as forming part of the Persian empire under Darius, and the India which at a later period was conquered by Alexander the Great. The name occurs in the inscriptions of Persepolis and Naksh-i-Rustum, but not in those of Behistun. Masudi mentions that at the time of the Muhammadan conquest, the country about Basrah was called Arz-ul-Hind, the Land of India.

There were other three names by which India was known to the western Asiatics. One of them originated from most of the traffic with India having at one time been by way of the Persian Gulf and the Red Sea. The Tyrians established depôts on the shores of the Persian Gulf, and the course of trade being through the land of the Cushdi, the races in India came to be included under the ethnological title of Cush (Genesis x. 6); and hence the Persian, Chaldæan, and Arabic versions of the Bible frequently render that term by India (Isaiah xi. 11).

Another ancient but local term for India is stated to have been Kolaria, and numerous Kol tribes are scattered through the country to the present day. Bharata or Bharata-varsha is likewise mentioned as an ancient local appellation.

In recent times success in wars and diplomacy has placed under the dominion of the United Kingdom of Great Britain, or in alliance, nearly all the territories lying between the Indus and the Himalaya on the N.W., to Cape Comorin and Singapore on the S.E., and that part of Southern Asia has come to be spoken of as British India, and the British Empire in India also as Her Majesty's Eastern Empire. But British India, Netherland India, the Spanish Indies, Portuguese and French India, are but portions of the region in Eastern and Southern Asia known to Europe as the East Indies, and which include all the countries from Arabia and Persia eastwards through Baluchistan, Hindustan, the Malay Peninsula, Siam, the Indian Archipelago to New Guinea, China, and Japan. With the Portuguese, the northern part of Hindustan held by the Moghul sovereigns was styled Mogor, and Goa and the western coast of the Peninsula was to them India. With the Dutch, India means Java, Sumatra, and other Netherland possessions in the Archipelago. French India is in the Western Peninsula, and in Annam and Tonquin in Ultra-India; and the Spanish Indies are in the Philippine Islands in the far east.

The ancients termed the Ultra-Indian region India beyond the Ganges. Leyden included it and the Indian Archipelago under the name of the Hindu-Chinese countries. Malte Brun calls it Chin-India. Ritter, the greatest of geographers, prefers the German name Hinter-Indies. But instead of Further India, Trans-Gangetic India, the Eastern Peninsula of India, etc., the single words Ultra-India and Trans-India have been proposed by Mr. Logan, as they admit of the ethnic and adjective forms of Ultra-Indian or Trans-Indian; and for the insular region of the Eastern or Indian Archipelago, Mr. Logan proposed the term Indonesia. Mr. Logan's names are well chosen, because several of the islands have been occupied by Indian races. Java was long under a race from Hindustan, and Bali still professes Hinduism. The whole of the East Indies, therefore, consisting of the continental portions bisected by the Bay of Bengal, and the eastern islands, may be comprised under the three names of India Proper, Ultra-India or Trans-India, and Indonesia.

Populations.—The regions thus defined are occupied by races of Negroid, Mongoloid, Aryan, Turanian, and Semitic descent, and this article is restricted to the ethnic relations of the populations.

It is generally accepted that a great part of the inhabitants of Hindustan and the Peninsula are of Scythic, Mongoloid, or Turanian race, and were the earlier occupants of the country. This conclusion has been come to from their linguistic and physical affinities. Some of them seem to have been pastoral tribes from the north and north-west, who were subsequently pushed aside or pressed farther on by races in possession of a higher civilisation and a knowledge of agriculture. The successive arrivals have been supposed by Dr. Caldwell to have been—first and earliest, the Kol, Santal, Bhil, etc., who, he supposes, may have entered British India from the north-east. After them, but from the north-west, came the Dravidian races, who now occupy the south of the Peninsula, into which they voluntarily migrated or were driven by the pressure of subsequent hordes. Then there came Scythian or non-Aryan immigrants, also from the north-west, whose language afterwards united with the Sanskrit to form the Prakrit dialect of Northern India; and lastly came the Aryans.

From time immemorial the region between the Euphrates and the Indus has been held by successive Turanian, Iranian, and Semitic conquerors. In historic times Scythic tribes have invaded India,—Getæ, Takshak, Sakæ, Su, Yu-chi, Naga, Ghakar, Jat, Asi, Kathi, Rajpali, Hun, and Kamari. They seem to have brought with them a worship, out of which ultimately was formed the Buddhist religion as promulgated by Sakya Muni. These Indo-Scythic tribes also brought with them their northern custom of using tribal designations, taken from the names of animals,—Varaha, the hog; Numri or Lumri, the fox; Takshak, the snake; Langaha, the wolf; Cutchwaha, the tortoise; Aswa or Asi, the horse; Sisodya, from Sisoo, the hare, etc.,—and several of them still hold large possessions in the western parts of Central India, Sind, and Baluchistan. Some of them even carried their names into Europe. Asi was the term by which the Getæ, Yeut, or Jat were known when they invaded Scandinavia and founded Yeutland or Jatland; and the Asi and other nomades who took Bactria from the Greeks, Mr. Prinsep considers to have been Scythians of Azes, who overpowered the Greek dynasties in Sogdiana and Northern Bactria, between 140 and 130 B.C. And Asia seems to have been so called in ancient times from this great Asi race, whose name is said by Remusat to have been applied by the Chinese almost promiscuously to the nations between the Jaxartes and Oxus, as far south as Samarcand. In one of his quotations it is applied to the people of Khokand, and in another to the people of Bokhara. Kanishka, B.C. 40, formed a powerful Scythic dynasty in the N.W. But Vikramaditya, king of Ujjain, B.C. 57, stemmed one Scythic invasion, and in A.D. 78 Salivahana checked another inroad; yet during the next seven centuries the Sah, the Gupta, and Valabhi established dynasties in Northern and Western Indies.

The Dravidian race preceded the Ultra-Indian, Tibetan, and Aryan, and their language prevailed everywhere to the southward of the Himalayas. Their route seems to have been from the north-west, where, Chevalier Bunsen says, the two great nations once centred, the one in the Altai and the pasture land towards the Himalaya, the other having its centre in the Ural mountains, and now appear in Asia as the subdued or primary element, as the subdued substratum of Iranian civilisation; and the aboriginal languages of India which attained their full development in the Dekhan dialects belong to that stock. Also Dr. W. W. Hunter's philological investigations permit the conclusion that the fragmentary peoples still to be seen in India, who have preserved their ethnical identity in sequestered wilds, or have merged as helots or low castes into the lowland Hindus, form the débris of a widely spread primitive race; and from the northern shores of the Indian Ocean and the China Sea, traces have been exhumed by him of ethnical evolutions, and the ebb and flow of human speech far more ancient, and on a grander scale, than the pre-historic migrations of the Indo-Germanic stock.

Successive Turanian and Irano-Semitic races have in turn influenced all the great outlying southern provinces in Africa, India, and Ultra-India; but from the formation of the language, the older intrusive people, the Scythico-Semitic and pastoral, found India less Scythic and more African than it became under their influence. And the land routes from the north-east, north, and north-west were not the only highways to the East Indies. Mr. Logan is of opinion that several of the races now dwelling in the south and east of Asia, in British India, Ultra-India, and Indonesia, reached their present localities by sea. Certainly, amongst all the foreign influences acting on the south of India proper, of which the presence can be clearly traced, two are of the widest extent. The first is entirely African and Indo-African in its character. It embraced the whole Indian Archipelago, Australia, and Papuanesia, and the races to which it must be referred appear to have prevailed along the shores and islands of the Indian Ocean from Africa to Polynesia, their limits being those of the monsoons.

There was prolonged commercial intercourse between the western and eastern parts of the Indian Ocean, from the Arabian Sea, Persian Gulf, Red Sea, and Africa, to the Mozambique channel on the west, to the Indo-Australian seas on the east. And when they were spreading over E. Africa, India, and the Indian Archipelago, there could have been no civilised Semitic, Iranian, Burmese, or Siamese races to hinder them. The strong Africanism observable in some of the lower South Indian castes is seemingly the remnant of an archaic formation of a more decided African character. India proper lies between two great Negro countries, that on the west being still mainly Negro, even in most of its improved races, and that on the east preserving the Negro basis so near India proper as the Andamans and Kidah. It is therefore highly probable that the African element in the population of the Western Peninsula has been transmitted from an archaic period, before the Semitic, Turanian, and Iranian races entered India, and when the Indian Ocean had Negro tribes along its northern as well as its eastern and western shores.

In the southern parts of the Western Peninsula, amongst the races speaking the Tamil language, are many who have African features in all their

variety. The mixed Labbi and Moplah races of the extreme south of the Peninsula may be of African and of Arabian descent. But the Sidi of Janjirah are recent arrivals; the Negroes of the Dandilli Hills of N. Canara are of unknown origin; the African slaves of the Muhammadans of Baluchistan, Sind, the Dekhan, and Karnatic are classes regarding whose African and Arabian origin there are no differences of opinion; also the Kader of the Animallay Hills file their teeth to a point like some African tribes; the Mincopi of the Andamán Islands, the Semang of the Eastern Peninsula, the Negrito and Papuan races of Indonesia and Papuanesia are recognised branches of the Negro race; while farther to the north, the Kisan or Nagesar, a broken tribe in the Jashpur highlands, have Negroid features; and the Bhuiher of Palamau and Jashpur reminded Colonel Dalton of the representations he had seen of the Andamanese.

The vernacular of a people can only be taken as a test of descent along with their physical characteristics. The languages of conquered races, and of such conquering races as become associated with a higher civilisation, are liable to disappear. There cannot be any doubt that physically the Tamil Pariah, the Mhair of the Mahratta country, the Dher of the Dekhan, the Holiar of the Canarese, the Paravan of the Malealam territory, and the Malla of Telingana, are of the same Dravidian stock, though they now speak five different tongues. Some broken tribes of Bengal speak a dialect of Hindi; but their physical characteristics, some of their customs, the remnants they have preserved of their primitive paganism, and in some cases their traditions, lead to the conclusion that they are the residue of a people who, together with the Kolarian races, occupied India proper prior to the appearance of the first Aryan invaders. It is now known that there are many Oraon villages in Chutia Nagpur in which the Oraon language is quite lost, but the inhabitants nevertheless speak two tongues, Munda and Hindi. The languages of the Hinduized aborigines of Chutia Nagpur appear to have followed their religion. All the tribes that have became Hindu in faith have lost their old language, and speak a rude dialect of Hindi. The Oraon in Chutia Nagpur follow the Munda paganism, and adopt the Munda languages; while the Munda, Ho, Santal, and other Kolarian tribes, who adhere to their ancient faith, have preserved their old language, or at all events a pre-Aryan tongue. Alaung Phra (Alompra) subdued the Mon or Talaing race in 1757-58, from which time the Burmese strongly discouraged the Mon language; and after the first war between the British and the Burmese in 1824-26, the Burmese forbade the Mon to be taught in the monasteries or elsewhere. The result has been that in little more than a century, the language of a million people has become extinct. In 1870, there were not one hundred families in Pegu in which it was used as their vernacular tongue, though still spoken in Martaban and in Mamlam-yang by the descendants of immigrants who reappeared there when the British became supreme. But it is not merely the language that is disappearing,—the Talaing people themselves are being absorbed by the more powerful Burmese race.

History.—No one of the races who were occupying India and South-Eastern Asia prior to the Muhammadan invasions, retain any strictly historical record of the routes by which they reached their present localities, or of the date of their respective advent. From the geographical distribution of the Kol and Dravidian languages, Mr. Hislop formed the opinion that while the stream of Dravidian population, as evidenced by the Brahui in Baluchistan, entered India by the north-west, that of the Kol family seemed to have found admission by the north-east; and as the one flowed south towards Cape Kumari (Comorin), and the other in the same direction towards Cape Roumania, a part of each appears to have met and crossed in Central India. The Karen of Ultra-India have a tradition of crossing a sea of sand, which is supposed to mean the desert of Gobi; but they have no knowledge as to the date of their migration. That the Mongoloid races have made great efforts to reach more hospitable climates, is shown by the presence of many tribes wedged into the mountainous region on the frontiers of India. On both sides of the Indus, in Baluchistan, Lower Sind, in Nepal, Bhutan, and Sikkim, are many hundred tribes, some of almost similar origin, yet forming distinct nations and using dialects unintelligible to each other, though of the same family of languages.

The linguistic affinity of many of the non-Aryan peoples of India, is shown by the fact that they take their tribal designations from their word for man in their respective dialects,—thus Bala-li, Mola-li, Dhima-li, Santa-li, Banga-li, the people of Bala, Dhima, Banga, etc.; and the very general term Mi (man) supplies the basis of the race name to not less than forty ascertained tribes,—thus the Du-mi, Ka-mi, Anga-mi, Mi-than.

The prior immigrants from the north have been termed Scythic, Turanian, Mongolian, Kolarian, Tamulian, and Dravidian. All these designations distinguish them from that branch of the Aryan races (Iranian, Indo-Atlantic, Caucasian, Mediterranean) now dispersed through India proper, called by Humboldt East Aryans or Brahmanic Indians. The West Aryans or Persians had separated and migrated into the northern country of the Zend, where they combined a belief in Ormuzd and Ahriman with a spiritualized veneration of nature. But the East Aryans came through the Panjab into India proper, and they have continued up to the present time to exert a great influence on the people. It was an immigration on the borders of historic times. Much connected with this people remains in obscurity, for they have been a non-recording race. Chevalier Bunsen supposes that they reached the land of the Five Rivers some time between 4000 and 3000 B.C.; but we have no standard whatever, from our present point of view, by which to estimate the length of the period from their immigration into the country of the Indus down to their farther advance to the land of the Saraswati. All we can say regarding them is, that peculiar habits of life were contracted in the land of the Five Rivers, and that, out of the elemental religion there instituted, allusions to which are found in the oldest Vedic hymns, the Brahmanical system, with a new mythology and the introduction of castes, gradually grew up on the eastern side of the Sutlej. That author is, however, of opinion that the period of the passage of the Sutlej and immigration to-

wards the Saraswati occurred from B.C. 3300 to B.C. 3000. Whilst they dwelt in the country of the Five Rivers, from B.C. 4000 to 3000, little change in their habits and belief seems, in his opinion, to have occurred. But about B.C. 3100 or 3000 their power on the Indus appears to have been broken, in consequence of some war with one of the surrounding kingdoms, and from the latter date India east of the Sutlej up to the extent of the Aryan conquests adopted Brahmanism. From that time the religious views, forms and habits of Bactria were for ever abandoned by the East Aryan immigrants, and between B.C. 3000 to B.C. 1900 they extended their Brahmanical religion from the Saraswati to the Doab. It was this race who called the portion which came under their own rule by the name of Aryavarta, the abode of the Aryans. In classical Sanskrit it was also known as Bharata and Bharata-varsha, and also Jambu-Dwipa. But by the western nations, India east of the Indus was always India, and was never called Arya by any writer.

This Aryan or Sanskrit speaking colony of Brahmans, Kshatriyas, and Vaisyas found the greater part of Northern India peopled by rude tribes, whom they designated M'hlecha, Dasya, Nishada, etc., and it is the received opinion that many of those prior occupants were of Scythian, or at least of non-Aryan origin. But to a much later period, and when the Aryans were in full occupation of the country from the Indus to the Ganges and into Bengal, all to the south of the Vindhya mountains continued to be occupied by Turanian races. An immigration into Ceylon of a colony of Aryans from Magadha took place about B.C. 550 (B.C. 543); and Wajeya, the leader of the Ceylon expedition, is said in the Mahawanso to have married the daughter of the king of Pandu. But now, unless Travancore be an exception, there is no large Aryan colony in any part of the south of the Peninsula of India, individual members of that race alone appearing scattered amongst the nations occupying it. There is nothing in history to show, nor is there in the physical appearance of the races to the east of the Ganges and of the Bay of Bengal anything to warrant, the belief that these East Aryan immigrants ever advanced, in masses, beyond their present locality north of the Vindhya range.

Brahmanic Life. — They brought with them views as to the gradations of social rank, against which, up to the present day, all other races and even their own reformers have been repeatedly striving; but they likewise brought larger intellect, letters, and a higher civilisation, not only enabling them to hold a position of superiority, but to inspire the prior races with the desire to be enrolled amongst the Aryan classes of Brahmans, Kshatriya, Vaisya, and Sudra. These East Aryan immigrants throughout all India proper possess the lands best suited for tillage, and in Travancore they are the sole landlords. When they first reached the Panjab, they depended on their horses. Arrived in India, they tamed the elephant, which finally rivalled the chariot. In the time of the Mahabharata, B.C. 1400? Bhagadatta, Uttara, Duryodhana, Anvinda, and others fought on elephants. At the time of Alexander's invasion (B.C. 327) elephants had almost completely superseded cars. And in their wars they placed the infantry in the centre, and the horse and elephants on the flanks of their armies.

The date of the Rajputs' appearance in India proper is even more obscure. The Lesser Sind river now marks the eastern boundary of Rajputana, as does the river Indus that to the west, its limits being lat. 23° 15′ to 30° N., and long. 69° 30′ to 78° 15′ E., an area of 123,000 square miles, inhabited by a population of ten millions of souls. The north-eastern Panjab and Cis-Sutlej district seems to have first been a Brahman before it became a Rajput country, and subsequently to have been advanced upon by the Jat. The great seat of Rajput population and ancient power and glory was, however, on the Ganges. When vanquished there by the Muhammadans, after the 12th century, the principal Rajput families retired into the comparatively unfruitful country to which they give their name. But even in Rajputana proper, though it has Rajputs for the dominant race, the population is much more Jat than Rajput, the Jat extending continuously from the Indus to the Ganges. Before the Rajputs were driven back from Ayodhya and the Ganges, Northern Rajputana had been partitioned into small Jat republics, and the Jat still form the most numerous part of the population and possess the largest share in the cultivation, though they share the more open parts with the Mina, the remains of the Saraswati Brahman population, and the dominant Rajput. The southern and more hilly parts of Rajputana are much occupied by the Mina, the Mhair, and the Bhil, and Malwa is occupied by Rajput, Kunbi, and Jat, the Charun and the Bhot races being also there. Rajputs and Jat occupy the plains south of the Salt Range. In the valley of the Ganges, the body of the Rajput population lies next to the Jat race to the east; in the Middle Doab, Rohilkhand, and Oudh, and still farther east, country is shared by a Brahman population. In Lower Rohilkhand, where they are called Thakur, as also in Western Oudh, Rajput communities are strong and numerous; in Eastern Oudh, especially on the broad tracts between the Gogra and Ganges, there is a great Rajput population, and they are pretty numerous to the east of Oudh, in Azimghur and Ghazipur. They are also numerous in Mynpuri, Futtehghur, and Etawa; and Baiswara, the country of the Bais Rajputs, lies almost parallel to the Brahman country of the Lower Doab.

The Getæ, the Jat, Jut, or Jit, and the Takŝhak, from the Sakatai or Chaghtai region, now occupy places amongst the 36 royal races of Rajputana. The Puranas furnish certain points of information regarding their earliest migrations, and the histories of Mahmud and Timur acquaint us with their later efforts. They expelled the Greeks who remained after Alexander's departure. Between the time of Cyrus, six centuries before Christ, when Tomyris fought for independence, and the rise of Timur (A.D. 1330), although twenty centuries had elapsed, the great Getic nation was little circumscribed in power. Under this last prince of the Getic race, Taghalaq Timur Khan, the kingdom of Chaghtai was bounded on the W. by the Dhasht-i-Kipchak, and on the S. by the Jaxartes or Jihun, on which Timur, like Tomyris, had his capital. Kojend, Tashkand, Ootrar, Cyrapolis, and the most northern of the Alexandrian cities, were within the bounds

of Chaghtai. The Massagetæ, Getæ or Goths, seem gradually to have advanced from their ancient limits into the more fertile districts of Asia, and to have been driven in successive wars across the Sutlej. They are now spread throughout the Indus valley, from the mountains of Joud, through Sind, to the shores of Makran, and up to the valley of the Ganges. They long preserved their ancient habits; appearing as desultory cavaliers under the Jit leader of Lahore, they made a brave stand for independence against the British under the Jat ruler of Bhurtpur and the successors of Ranjit Singh, while Dholpur state is still Jat. In Bikanir and the Indian desert, in the desert tracts E. and W. of the Indus, they are camel and cattle breeders, but cultivate in the valleys and fertile oases wherever tillage is possible.

The *Kathi*, another ancient Scythic race, are the ruling tribe in Kattyawar. The Malli and the Katheri of Multan opposed Alexander's advance; 2300 years afterwards, Mahmud was opposed by a race of the same name, and they must have preserved their ancient spirit to have been so long able to offer a front to the formidable armies of so furious an enthusiast. Their laureate bards still style them 'Lords of Multan and Tatta,' and they repeat couplets descriptive of their emigrations from Multan, their temporary settlement in the tracts called Pawin, N. of the Runn, and telling of their leader, Megum Rao, conducting the first Kathi colony across the gulf into Saurashtra, eight hundred years ago; and so predominant was their power, that it changed the ancient name of the Peninsula from Saurashtra to Kathiwar.

Parsees occupy a prominent place in the W. of India. In the eighth century (A.D. 717), a small body of W. Aryans emigrated from Ormuzd, and landed at Sanjan, 25 miles S. of Damaun. They were a mere remnant of the ancient followers of Zoroaster, and though still few in number (69,000), they have distinguished themselves in W. India by commercial enterprise.

The information regarding the more important immigrations into W. India, as will have been observed, is still so vague as to justify Mr. Elphinstone's remark (i. p. 19), that until Alexander's conquests, the dates of events are all uncertain; and again, from that time till the Muhammadan invasion, a connected history of this country cannot be given.

A Bactrian dynasty for nearly a hundred years held a considerable portion of the Indus territory, but in the early centuries of the Christian era there was a great upheaving of the nations in India proper. During the khalifat of Umar, history records an expedition from Arabia by the route of Baluchistan. From the eleventh to the eighteenth centuries there were repeated inroads of Moghuls, Turks, Persians, Afghans, and Arabs, led by Mahmud, Timur, Baber, Nadir Shah, and Ahmad Shah. Their military followers seized on kingdoms, provinces, and royalties, and in British India, in 1881, their descendants and those of their converts numbered 50,121,585 souls.

As the Muhammadans' power declined, the Mahrattas, a Turanian race, led by Aryan Brahmans, rose to full, though brief, dominion, and have been succeeded by Christian races from W. Europe. The Danes have ceased to retain any territory in the E. Indies. The French, however, in India proper still hold Chandernuggur, Karikal, Pondicherry, Yanaon, Mahe, with eight other smaller settlements, comprising an area of 178 square miles, and a population of 285,022 souls, and they are now dominant on the Mekong river in Ultra-India. Portugal, on the W. coast of the W. Peninsula, at Goa, Damaun, and Diu, has 1066 square miles, with a population of 369,788 souls, and that nation occupies Macao in China. The Dutch have left India proper for Indonesia, where their great possessions amongst the Archipelago islands from Sumatra to New Guinea occupy 455,411 square miles, with a population of 17,952,803 souls,—Malay, Negrito, Papuan, Muhammadan, Christian, and Pagan. The Spanish Indies are likewise in Indonesia, in the Philippine Archipelago, most of the population being of the Negrito race, and almost all proselytes to Christianity. Nothing is known of the date of advent of the multitude of peoples of Mongoloid origin occupying the region from the N.E. part of the Himalaya, southwards to the seas of the Archipelago.

Language.—Dr. Hunter, at page 20 of his Comparative Dictionary, has put forward the opinion that the aboriginal races of the E. Peninsula, Burma, and India N. of the Vindhya range derived their speech from a source common to them and the Chinese (p. 22),—not only the terms for common natural objects and for the civil institutions of a primitive race, but also a part of the nomenclature of tillage, and even such terms of civilisation as road, yam, etc.

The Jaina and Buddhist religionists number in British India 4,640,780; the great bulk of them (3,251,584) being in British Burma. The Sikh religionists, converts from the Jat race, are almost two millions (1,853,426), and are nearly all in the Panjab; and of the Christians, 1,862,684 in number, 711,080 are in Madras, in which tradition asserts there have been converts since the days of St. Thomas the Apostle. The small body of Parsees, and a still smaller number of Jews (7600), are mostly in the west parts of the Peninsula.

Amongst most of these eastern races, the birth of a boy is greatly more prized than that of a girl. Their daughters are occasionally neglected, and, amongst some of the Rajput tribes, even destroyed. The proportion of girls to boys was found by the census of 1871 to be low. Amongst Hindus the range in the several provinces was from 72·95 to 97·37 girls to 100 boys, and amongst Muhammadans from 80·92 to 95·18.

It is quite an oriental custom for the population to arrange themselves into separate communities, each with an independent life, and intermeddling as little as possible with events that do not disturb its internal condition. Under this system a man's country is the guild or community in which he is born, and the people recognise as the supreme authority whoever happens to be de facto ruler. Such race and communal isolation is common to all the populations of British India proper, but it has been widely extended by the system of minute castes which the East Aryans brought into India. Many of the prior races, while continuing the race guild, or clinging to a religious sect, resent the Brahmanical arrangement, and the census of 1871 showed in British India 8,712,998 persons not recognising caste, or designated out-castes. The geographical, historical, and economic notices of

the countries in Eastern and Southern Asia will be found under their alphabetical arrangement. This article relates solely to their ethnic features. —*Logan in Journ. Ind. Archipelago; Bunsen; Max Muller; Hunter's Comparative Dictionary; Tod's Rajasthan; Humboldt's Cosmos; Dalton's Ethnology; Yule's Cathay; Rawlinson's Herodotus; Dr. Caldwell; Sir Walter Elliott; Prinsep's Antiquities; British India Census; Elphinstone's Hist. of India.*

AFRICA. From pre-historic times, Iranian, Turanian, Mongol, Turk, Hamite, Semite, and Negro races have been continuously adding to the inhabitants of India and the Eastern Archipelago. Of the races occupying Africa, ethnologists recognise three distinct ethnical divisions,—that of the woolly fleecy-haired, woolly tuft-haired, and lank curly-haired; and six linguistic divisions,—Semitic, Hamitic, Fulah-Nuba, Negro and Negroid, Bantu, and Hottentot Bushman.

The Fulah of Senegal and the Upper Niger, as well as the Nuba of the Nile region of Darfur and Kordofan, are considered of indigenous African race; but they are very superior to the Negroes, and seem to be the intermediate agents of Muhammadan civilisation. South-Western Asia is the original home of the Hamite and Semitic branches of the Caucasian race; but they have intruded into Africa, and now occupy the whole of its northern part as far as the Soudan and the east coast districts north of the equator. Of the two, the Hamite were the first to become dominant there, but they are in no way akin to the pure African.

The *Semitic* populations in Asia are the Arabians, Syrians, and Samaritans; in Africa, the Abyssinians of Tigre and Amhara, Agow, Falasha, and Gafat. Several branches of this race have played a distinguished part in the history of the world. Conquest and commerce, but chiefly the former, have greatly diffused them. They have gone northward and eastwards into Persia, Central Asia, India, and China; small parties are located in India proper, Ultra-India, and Indonesia. In Asiatic Turkey, there are about 1,500,000 Arabs and others of the Semitic group. They conquered and migrated westerly along the north of Africa and into Europe, and they ruled in Spain for 700 years, but were again driven back into Africa; and now representatives of the Semites and Hamites are found differently mixed in Egypt and Abyssinia, all over the Sahara, and in the Arab and Moorish states; and the races in Morocco have been stated as under:—

Berber and Tuarik,	2,300,000	Jews, . . .	339,500
Shelluk or Shellook,	1,450,000	Negroes, Mandingos,	120,000
Moor and mixed Arab,	3,555,000	Christians, . .	300
Bedouin and other pure Arabs, . .	740,000	Renegades, . .	200

The *Berber* include the Libyan, the Moor, the Numidian, and Gaetulian of the old geographers.

The Berber and Shelluk are untamed, warlike tribes, dwelling in the mountains; when possible, rovers of the sea; claiming fanciful origins, but impatient of any subjection. They are the same race as those whom the French call Kabyle and Zouave. The Moors are little idle men, who grow fat from indolence; they are lowlanders, traders, dwellers in cities, avaricious, perfidious, cowardly, cringing, and insolent. The Riff-dwellers of Kalhiya, Cape Tres Forcas, correspond to the Arab Suaheli on the Red Sea coast, the names being from Ripa, a bank, and Sahilah, a sea-shore.

In Morocco, the Berber continue pure, free from Arab blood, and still call themselves Mazig. Their language is termed Shelluk, or Tamashigt. The Algerian Kabyle or Qabail are pure Berber. They are the old Numidians, and differ in language, form, and habit from the Arabs of the plains. Their number is about 700,000; they have a federal republic, the old Quinque-gentes who gave so much trouble to the Romans, who tried the soldiership of Maximilian, and sixty years afterwards again revolted.

In Tunis the Berber are called Suawua, and south-east of Tunis they receive the name of Jabaliya. The inhabitants of Suiva, the oasis of Jupiter Ammon, the Garamantes of ancient geography, are likewise of Berber origin, as also are the Teda or Tibbu of the Eastern Sahara.

The Sanhadsha of the Western Sahara are Berber. The Tuareg of the central region of the great African desert, who call themselves Imoshag, are Berber.

The *Tuareg* nomade in the Great Desert are very fair, with long hair, aquiline noses, high foreheads, and thin lips. They say their prayers in Arabic, and speak a Semitic tongue. Their arms consist of a long lance with a broad head, javelins 6 or 7 feet long, with jagged hooks at the pointed end, a round buckler (darega) of buffalo or elephant hide from Soudan, and a poniard and broad-bladed scimitar.

The Arabs of Morocco are the Moors of Spain, the Saracens of France,—tall, graceful sons of the desert, courteous, brave, hospitable, and confiding,—descendants of the conquerors who in the first ages of the Hijira propagated the religion of Mahomed, crossed the Straits of Gibraltar, destroyed the Gothic chivalry, reigned in Spain for 700 years, invaded France, devastated Italy, and pillaged the suburbs of imperial Rome. When the last Arab king submitted to Ferdinand and Isabella, and the Moorish palaces of Granada were surrendered to the Christians, the old conquerors went back to Africa, and resumed their nomade life. In Tripoli, the Arab has monopolized the country. In Tunis, the native reappears in a smaller proportion, and in Morocco he is very scarce.

Abyssinia was peopled by Southern Semites, who crossed the Red Sea from Yemen and Hadramaut before the Arab conquest of Egypt. They were converted to Christianity in the 4th century of the Christian era, and in the 6th they re-crossed over to Arabia, to avenge the persecution of Christians by a Jewish ruler, conquered Yemen, and marched to the gates of Mecca, where they were overthrown two years before Mahomed was born. Such partial migrations and conquests have left tribal bodies from other races in the land.

The *Adal* tribes, also said to be a Semitic race, dwell on the west of the Red Sea. They call themselves Afer, but by the Arabs they are called Danakil, from their chief tribe Ad-Alli; and Dr. Krapf was of opinion that this Afer is the Ophir of Scripture.

The *Danakil*, pl. *Dankali*, are a Hamite race who inhabit the most southerly African shores of the Red Sea as far as the Straits of Bab-el-Mandeb.

The *Eloikob* or *Wa-kuafi* and the *Masai*, also Hamite races, are the terror of all Negro tribes in equatorial East Africa, on account of their wars and kidnapping expeditions.

The *Somali*, another Hamite race, occupy the eastern promontory of Africa from near Bab-el-Mandeb to the Juba on the Indian Ocean, and they border on the Galla district on the west. They have a woolly head of stiff thick hair from 6 to 8 inches long, and which is said to be always crimped.

The *Fellaheen* peasantry of the Lower Nile, and the Coptic Christians of the towns of Egypt, represent the ancient Egyptians. These are also represented by the Berabra or Berber of the Nubian Nile districts, who were Christians until the fall of the Berber-Nilitic empire of Dongola in A.D. 1320. Between the Nubian Nile and the Red Sea are the Bisharin, the Hadendoa; and some of the Beni Amer, who, in addition to a corrupt Arabic, speak Tobedauie, a more ancient Hamite language with three genders.

The inhabitants of *Shoa* are about 2,500,000, of whom one-half are Christians, the Amhara, and the remainder partly Muhammadan and partly Galla. The Christians are a stout, well-formed race, from 5 feet 7 inches to 5 feet 9 inches in height, with luxuriant silky black hair.

The *Galla*, a Hamite race, call themselves Orma or Oroma. The word Galla means immigrants, and Orma means strong, brave men. They are partly distributed in Abyssinia, and partly in a compact body in the east of the interior of Africa. They live in a beautiful country, extending from lat. 8° N. to 3° S., with a climate not surpassed by that of Italy or Greece, and speak a language as soft and musical as pure Tuscan. They are from six to eight millions in numbers. They are one of the finest races in Africa, of a dark-brown colour, with strong hair, and well limbed. They are a warlike, manly people, conscious of their own strength, and of a moral and noble character. Their beards are tolerably luxuriant, and their features regular and agreeable. With the exception of the southern tribes, they and their wives always appear mounted either on horses or on oxen.

Amongst them are scattered Christian tribes, but the religion of the race in general is fetish, and the seven tribes of the Wollo Galla are Muhammadans. The fetishists worship the serpent as the mother of the human race, and hold their religious services under a tree. They acknowledge a supreme being, whom they call Mulungu, and have a notion of a future state. There seem to be three natures or attributes in their supreme being, viz. Wak or Waka, supreme; Ogli, a masculine, and Ateli, a feminine, power or embodiment. They have two holy days in the week, viz. Saturday, which they call Saubatta nna or little Sabbath, and Sunday, which is their Saubatta gadda or greater Sabbath.

The *Negro* race families inhabit Africa from e southern margin of the Sahara as far as the itories of the Hottentots and Bushmen. They tend from the Senegal across to the Upper ile, including the Upper Guinea coast; but they ve been driven from the extreme eastern parts Africa by intruding Hamite and Semitic ilies. The Negro tribe speak a number of parently distinct languages, which cannot be reduced to one system; but the people themselves are of one type, and that type quite different from those dwelling north and south of them.

The majority of the Negroes have high and narrow skulls, a prominence of the upper jaw, prominent lips, and an oblique position of the teeth. But the variations are very great. The colour of the skin ranges from ebony black, as in the Joloffer, to the light tint of the Wa-kilema; and Dr. Barth even mentions a copper colour of Negroes in Marghi. Winwood Reade says the typical Negro is rare even among Negroes. In many tribes the jaws are not prominent, the lips are not swollen, and the nose is pointed straight or hooked.

The *Bantu* Negro family occupy Central Africa, from lat. 5° N. Its eastern tribes are the people of Zanzibar, the Suaheli, the Mozambique nations from the coast to Lake Nyassa, the Betshuan inland, and the Kafir, with other little known tribes farther to the west.

The *Soudan* Negro family occupy from the Niger to the White Nile. The tribes are numerous,—Ibo, Nuffi, Ewhe, Otshi, Joloffer, Sererer, Fulke, Sourhay, Hausa, Kanuri, Bagrimma. In the towns of Darfur and Kordofan, both Arabic and Barabric are spoken. The lowest of all Negro tribes inhabit the district of the White Nile.

From lat. 11° southwards, we find the Shelluk, the Nuehr, the Dinka; and west of the last are the Luoh (Djur), the Bongo (Dohr), and the Sandeh (Niam Niam). The Luoh and Bellanda are offshoots from the Shelluk. The Dinka and Shelluk Negroes closely resemble the Fundi Negroes on the Blue Nile, the founders of the kingdom of Sennaar in the 16th century, which they maintained for three centuries. The Fundi and the Bertha Negroes are directly allied in physical characters, language, and manners.

The *Zanzibar* dominions comprise that portion of the coast included between Magdashoa, in lat. 2° N., and Cape Delgado in long. 10° 42′ S. Beyond them, to the N., are the independent Somali tribes, which extend almost to the Red Sea, where they meet the Dankali race; and on the S. they are bounded by Mozambique. The extent of coast under the dominion of the Sultan of Zanzibar is about 1100 miles, but the most valuable parts of his sultanate are the islands of Zanzibar (containing the capital of the same name), also called Ungujo, Pemba, and Monfia. The first is situated at a distance of from 20 to 30 miles from the mainland, and is in size about equal to the Isle of Wight. It contains none but small streams.

The coasts of the mainland are called Us-Suahil, and its inhabitants, without distinction, *Suahili*. The population of Zanzibar island is about 250,000 souls, comprising (1) the Arab landed proprietors, the ruling race, who are enterprising and intelligent, but dirty, ignorant, and bigoted, dishonest and unprincipled; (2) a race of mixed descent; (3) natives of the Comoro islands, brave and industrious; (4) natives of the W. coast of Madagascar; (5) Arabs from the coast of Hadramaut, patient and industrious; and (6) Arabs from Oman, a troublesome, turbulent, and plundering race. Southwards from this,

Indians.—About 4000 Muhammadans and Hindus from British India have settled at Zanzibar, Baamoyo, Pemba, Quiloa, Dar-u-Salam, on the E. coast of Africa, also in Madagascar, at Nossi Bei,

and Marotta. The Muhammadans are of the Khoja, Bohra, and Mehman sects, thrifty and industrious races, who have their families with them. The Khojas settled in Zanzibar about the middle of the 17th century, and are chiefly from Cutch, Jamnaggur, Surat, and Bombay. They number 535 families, governed by a council of five elders, and they annually remit about £6000 for religious purposes to the head of their sect in India. There are 2000 in Zanzibar, 137 in Baamoyo, and a few in Pemba, Quiloa, and Dar-u-Salam.

There are 250 families of the Bohra sect of Muhammadans in Zanzibar, 142 at Mombas, 51 at Pemba, 42 at Lamu, and 21 at Malinda. Their ancestors emigrated from Surat in the 17th century, and settled on the N.W. coast of Madagascar for trading purposes. They are guided by a maula in spiritual affairs.

The Hindu merchants there are of the Bhatti and Banya castes, from Cutch and Jamnaggur. They are engaged in business in all the towns and villages in the mainland, also at Mozambique, Eboo, and other Portuguese settlements; they never bring their families with them. Their number in 1872–73, in Zanzibar, was about 474.

Lieutenant-Colonel C. P. Rigby, writing in 1860, mentioned that 19,000 slaves had been brought to Zanzibar from the adjoining coast of Africa; the adults were sold at from £2 to £7, and boys or girls from £1, 5s. to £2, 10s., the majority being from the great tribes of M'Nyassa, Miyan, and Magindo. The tribes to the N. of Mombassa were too fierce and warlike, and the Somali and Galla are never made slaves. In Zanzibar, in 1872-73, African slaves formed the greater part of the population. Slavery since abolished.

The *language* spoken in Zanzibar is Ki-Suaheli, called by the Africans Maneno Ungoja, and dialects of it are spoken over a vast extent of E. Africa, from the limit of the Galla and Somali country, in about lat. 3° N., to as far S. as the Zambesi. It is soft and pleasing to the ear, without any guttural sounds. It is written with Arabic letters. A corrupt Arabic is also current.

Mr. R. Cust adopts the opinions as to African languages of M. F. Müller of Vienna. He says that among the Semitic, some, like the Old Punic and Old Abyssinian, are dead; others, like the Arabic, Amharic, and Tigree, are living vernaculars. Among the Hamitic, Old Egyptian and Coptic are dead; but Berber, Kabyle, Tuareg, Galla, Somali, and others are spoken by millions. The Fulah-Nuba languages are spoken by conquering races, some of whom have adopted Muhammadanism; they stretch from the Atlantic on the N. fringe of the Negro races, across the continent to the basin of the middle Nile. The Fulah have extended into the heart of Negroland, and are found everywhere. The Negro race extend across the continent S. of the Sahara desert and N. of the equator, and reach from the Atlantic to the equatorial lakes. Their languages are numerous, totally distinct from each other, and of many we know little or nothing. The great Bantu race occupy the peninsula of Africa from the equator southward, leaving a corner for the last family. The diverse languages of these numerous and powerful races, of whom the Zulu and Kafir are so well known, can be traced back to one common mother language, which has perished. The Hottentots and Bushmen represent all that remains of the original earliest inhabitants of the continent. They have been pushed forward by the Bantu, and nearly destroyed; their languages are totally distinct from each other.

Religions.—In Africa, the Semitic race are found as fetish-worshippers, Christians, Muhammadans, and Jews. Abyssinia is Christian, with the chief truths of the Bible blended with merely human notions. The early Arab religion was Sabæanism, a worship of the heavenly bodies, mixed with idolatry, but with Mahomed commenced the Arab conquests, the creed, science, and literature, and now all N. Africa is Muhammadan. When the Arab conqueror Akbah had overrun the states of Barbary from end to end, and, after passing through wildernesses in which he or his successors were one day to found the literary and commercial capitals of Fez, Kairoan, and Morocco, had reached the point where the Atlantic and the Great Desert meet, spurring, so it is said, his horse into the waves of the Atlantic, and raising his eyes to heaven, he exclaimed, 'O Allah! if my course were not stopped by the sea, I would still go on to the unknown kingdoms of the west, preaching the unity of thy holy name.'

Throughout Central Africa fetishism prevails. The Bantu Negroes have ancestor-worship, shamans, and trial by ordeal.

Suahili offer food to the demon of disease. They do not eat it themselves, but place it on some footpath that a passer-by may consume it, and thus take the pestilence on himself.

TURKEY IN ASIA may be taken to include Syria, Mesopotamia, parts of Armenia, Asia Minor proper, and the Arabian peninsula. These regions are occupied by three distinct races,—the Ural Altaic, the Aryan, and the Semitic.

The *Ural Altaic*, in addition to a few Kazzilbash, comprise twelve millions of Turk who speak Turki, and are Muhammadans; also three millions of the Turkoman tribes who speak a Turk tongue.

The *Aryan races* are the Hellenes or Greeks, the Armenians, and the Kurd. The Armenians, three millions in number, are of the Orthodox and United Armenian sect, and speak the Armenian tongue; the Hellenes, two millions in number, speak the modern Greek, and are of the Orthodox and United Greek Church; and the Kurd, one million in number, speak the languages of the Kurd and Zaza, and are chiefly Muhammadan in faith.

The *Arab* 1½ millions, the Maronite 300,000, and the Druse 40,000, are the races of Semitic origin who speak Arabic, but the Arab are Muhammadans, the Maronite are of the United Syrian Church, and the Druse are pagan.

The *Anatolian Turk* are a lusty, stalwart race, of rude manners and harsh utterance, but frugal, patient, much enduring, kindly, hospitable, and tolerant in religious matters. They have an earnest, taciturn temperament, with much sound understanding and shrewd observation, but are defective in foresight and business habits. Hence they make, as a rule, indifferent merchants, and most of the wholesale trade has thus fallen into the hands of the rival races. In the country districts they are agriculturists and stock breeders, and in the towns, dealers in smallwares or craftsmen. Military service weighs heavily on them, and with polygamy prevents their increase.

The *Greeks* or *Hellenes* are industrious traders,

shrewd, calculating merchants, excellent seamen, intelligent agriculturists, and monopolise the learned professions. The Greek race in modern times everywhere displays a praiseworthy zeal for the spread of education.

The *Armenians* still exist as a distinct nationality in the N.E. highlands of Anatolia, and are sparsely diffused throughout Southern Asia, from Constantinople to Ultra-India. They are constitutionally timid and reserved; rarely appealing to arms in self-defence, they yield submission to the strongest. But they are, intellectually, almost on a level with the Greeks, outrivalling them in commercial enterprise, ruling the money market, and are keen, perhaps cunning, traders. They habitually speak Turkish like a second mother tongue, their own language belonging to the Iranian branch of the Aryan family.

Armenia has no political existence. Its ancient bounds were between lat. 36° 50′ and 41° 41′ N., and long. 36° 20′ and 48° 40′ E., but it is now divided between Persia, Russia, and Turkey. The people live in good houses, are industrious traders, and its peasantry are powerful and robust. Their women are on equality with the men. On marriage, the women are silent till the birth of a child. They became Christians in the 4th century, but separated from the Greek Church in A.D. 526, and are now under a Catholicus or Patriarch. Their language, the Haik, is written with an ancient and modern character.

The *Kurd* highlanders are the descendants of the fierce Carduchi of Xenophon. They belong to the Iranian branch of the Aryan stock, and linguistically approach nearer to the Persian than to the Armenian subdivision. They are undoubtedly brave, but restless and unruly, often treacherous, lawless, and bloodthirsty. Half-savage Kurd tribes occupy the uplands about the head-streams of the Tigris and Euphrates. They form a disturbing element in Asiatic Turkey, which is continued from Kurdistan southwards

Arabia by the restless nomade Bedouin Arabs of the Syrian desert, and of the plains watered by e Tigris and Euphrates. Nominally they are bjects of the Sultan of Turkey, but the Shamara, e Beni Lam, and other powerful tribes maintain n ill-disguised standing feud with the authorities, often disturbing the right bank of the Euphrates, rom about the parallel of Aleppo all the way to the Persian Gulf. If united, they might easily bring from ten to twenty thousand formidable mounted warriors into the field, but tribal dissions neutralize their power, and enable the urks to keep them under.

Yezdi or *Dasseni* and *Jacobites*, a religious ect in Armenia, but chiefly in the Basheka province, in the pashalik of Musal and the Sinjar Hills. Their religion is a mixture of devil-worship, with the doctrines of the Magi, Christians, and Muhammadans. Their greatest saint is haikh Adi, who is supposed to have lived about e 13th century, and is believed to have written sacred book, 'Aswad,' or the 'Black.' They nsider the devil the chief agent in executing e will of God. They reverence Moses, Jesus, d Mahomed, as also the Christian and Muhamlan saints and prophets. They adore the sun symbolical of Jesus. On the 10th of the moon August they hold a meeting at the tomb of h Adi for a day and a night. All men and married women are present, and the intercourse is said to be promiscuous. At the village of Shaikh Adi is the brass figure of a peacock, which they call Malik Taus, king peacock, and they venerate it as representing David and Solomon. They circumcise on the eighth day. They place the body of their dead on its feet, touch the neck and shoulders, and strike with their palm the palm of the deceased, saying, 'Ara-Bihisht,' Away to paradise.

Tiari, a tribe, about Sulamary, of Nestorian Christians, with about 10,000 men.

Mendajaha, disciples of John, a religious sect in small communities in Basra, Kurnah, Mahamra, and Shaikh-ul-Shayok. Their religion is a mixture of paganism, Hebrew, Christian, and Muhammadan. They have a book called Sidra, and also the Psalms of David. They respect the town of Mecca, and more so one of the pyramids, beneath which they say their great progenitor, Saba son of Seth, is buried. The priests baptize, and use the Chaldee language in all their ceremonies.

BLACK SEA, CAUCASUS, AND ARMENIA.—The great Asiatic highland south-east of the Black Sea and south-west of the Caspian has ever been remarkable for its numerous races, and is now a well-head of nationalities, where the people promise at no distant period to combine into new nations. This region is enclosed on the west by the torrent river Kizil Irmak, the Halys of the ancients; on the south it has the Tigro-Euphrates valley and its border-lands; on the east are the desert tracts of Central Persia; and on its north, the Black Sea, Russian Georgia, and the Caspian Sea. The highland is formed by several entangled mountain chains, apparently belonging to, but somewhat apart from, the Caucasus, from which it is separated by the wide valley of Georgia, and the plains watered by the Rion or Phases and the Araxes. These highland mountains run N.W. and S.E. from the Anatolian coast beyond Trebizond, to the lofty peak of Demavend, and the neighbourhood of Tabreez or Taurus. It comprises parts of Turkey, Russia, and Persia, the whole east of Anatolia, with Northern Kurdistan, both of which belong to Turkey, the Russian provinces of Erivan and Karabagh, with the Persian province of Azerbijan, and in their central point is the double cone of Ararat, covered by never-melting snows. The soil is fertile up to 6000 feet, and produces all kinds of cereals, with the 'yaila' or pasture lands of vast extent, and clothed with excellent grass, rising still higher. In the valleys below are the vines, fruit trees, maize, rice, tobacco, and varied cultivation, alternating with forests in which grow the ash, walnut, box, elm, beech, oak, fir, and pine, and amongst its minerals are iron, copper, silver, and lead. From its valleys flow the great rivers Choruk, Araxes, Tigris, and Euphrates, with all their countless tributaries, with other water-courses, some for the Black Sea, some to the Caspian, some to the Mediterranean, and some to the Persian Gulf. The population of that mountain tract is made up of Armenians, Turkomans, and Kurds, and until recently did not exceed fifteen to the square mile. But to avoid the pressure of Russian rule, many of the Turkomans from the N.E., and many Circassians, have crossed into the Turkish dominions, and many Turkomans also have joined from Persia.

CAUCASIA consists of the narrow neck of land separating the Euxine (Pontus) from the Caspian Sea, and connecting the S.E. corner of Europe with S.W. Asia. It is inhabited by highland tribes of various races, dwelling in the closest proximity, hemmed in on the north by Russian Slav, and southwards by the Armenian, Kurdish, and Persian Iranians. In comparatively recent times, Tartars and other immigrant races have penetrated into the Kura, Terek, Kuma, and Kuban basins.

In the Southern Division are upwards of a million of people,—the Georgian, Imerian, and Rachan in Imeria; the Mingrelian, Gurian, and Lechgum in Mingrelia; the Laz in Lazistan; the Svan in the Upper Ingur; and the Pshav and Khevsur near the sources of Alazan and Yora.

In the Western Division, on the left bank of the Kuban, on the coast of the Euxine, and N. and E. of the Elburz, are the Cherkess, Abkhasi, and Kabard, 138,000 souls.

In the Eastern Division, the Chechenz, 164,000, occupy the right bank of the Terek, and the Lesghi, 517,000 in number, dwell in Daghestan.

The Oss or Osseti, 110,000, hold both slopes of the Great Caucasus about Kazbek.

The Georgians alone are of historical interest.

Caucasia Inhabitants.

Kartvelian stock—Georgians, Imerians, Mingrelians, Svans, Pshavs, Khevsur,	1,150,000
Laz (Sunni),	20,000
West Caucasian stock—Cherkess, Abkhasian, Kabard,	138,000
East Caucasian stock—Chechenzes, Lesghi,	164,000
Semites—Jews,	30,000
Slav stock—Great Russians, Little Russians, Bulgarians, Bohemians,	1,500,000
Iranian stock—	
Ossi,	110,000
Armenians,	720,000
Kurd, Tat, and Talish,	380,000
Greeks and Germans,	50,000
Mongolo Tartar stock—Tatar, Nogai, Turkoman, Kumik, Kirghiz, Turk, Kalmuk,	1,550,000
Christians,	3,560,000
Muhammadans,	2,200,000

Of all the *Turki* peoples, the Uzbaks are the most civilised, and, besides the Usmanli, they are the only Turki people who possess a written language and a literature. The Chaghtai, in which Baber wrote his memoirs, is still the standard literary language of all the Central Asiatic Turki peoples.

Kara Kalpak, or black caps, are a fertile race.

Kara Kirghiz are the Burut of the Chinese and Kalmuk. They live partly in Zangaria and Turkestan, and partly in the Western Altai. They speak an almost pure Turki dialect. Kara Kirghiz and the Kazak or Kirghiz Kazak represent respectively the highland and lowland nomade elements all along the northern and eastern border-lands of the Aralo-Caspian basin. The Kazak do not acknowledge the appellation of Kirghiz, which the Russians affixed to their name to distinguish them from the other Kazak.

Tajak are the original Iranian element, settled In all the arable land.

Sart is the term applied to the settled inhabitants. ots meaning is not known

CIRCASSIA is the Cherkess of Asiatics. It is a mountainous country in the S.E. corner of Europe, on the northern face of the Caucasus, lying between lat. 41° 50′ to 45° 20′ N., and long. 37° to 47° 20′ E., about 550 miles long and 75 miles broad; area, 40,000 square miles. The highest summits for nine months are covered with snow. In a small tract not less than seventy-two dialects are spoken. The Cherkess and the Che Chen are the two great tribes. They take the common name of Adighe; but the Cherkess include amongst them the Kabard, Abkhas, Uiche, and other clans, and number 400,000 to 500,000 souls. The Che Chen number 150,000 souls. Their religion is a mixture of Christianity, Muhammadanism, and paganism. They reverence Merem, a benevolent deity, and Tschible, the spirit of thunder. There are three social classes,—Usdi or nobles, Tschfokot or freemen, and Pschilt or slaves,—and these are hereditary, like the castes of India. On occasions when their forts or villages have been surrounded, they have destroyed their women and children, set fire to their dwellings, and perished in the flames rather than surrender.

Their young women are famed for their beauty, and are sought for in the neighbouring kingdoms. They are brought up in simple and domestic habits by their mothers, are taught the use of the needle in decorative works, and to make their own clothes, and those of the men of their family, and are otherwise very carefully reared. They are sold to the bridegroom and to traders.

The Cherkess or Circassians were typical representations of the West Caucasian races. They were the most powerful and warlike of all the western nations. Since their final reduction in 1864 by Russia, most of their lands on the left bank of the Kuban have been occupied by their conquerors, the great bulk of the Cherkess having withdrawn into Turkish territory, and dispersed over Armenia, Asia Minor, Syria, and the Balkan peninsula. Similarly, 20,000 Abkhasians emigrated to Turkey at the close of the last Russian war, and both races have become predatory. Cherkess are to be found in Asia Minor along with Lazi, where also are the Yuruk, a nomade Turk race occupying the uplands between Erzerum and the plains of North Syria. Kazzilbash also are there, and are scattered over Anatolia, Persia, and eastwards to Kābul. They call themselves Eski-Turk or old Turks. The fertile plains of Raz Ova and Ard Ova near Tokat, and the villages between Angora and Amasia, and between Kara Hissar and Tokat, are the Kazzilbash headquarters. They profess Islam, but avoid all inquiry into their doctrines. The Circassians and Abkhasians have never found a suitable home in Asia Minor, and are a serious disturbing element, being indolent and predatory. The Cherkess and Abkhasians of West Caucasus are Sunni Muhammadans; the Kabard are Christians; and these three races number 138,000.

Georgians have a tall, slender figure, a noble bearing, regular features, aquiline nose, finely-formed mouth, dark complexion, black eyes and hair.

Arbiches, a daring, brave tribe in the mountains on the E. coast of the Black Sea.

Abasia, a trans-Caucasian province, in the government of Immeretia, Russia. The Abases are of the Caucasian race, rude, and are predatory.

Khersuri, a half-savage predatory tribe near

he crest of the Caucasus. They are surrounded y the Ghondmakar, Kist, Boghasser, and Didyen.

Kistes, a brave pagan Caucasus tribe, a branch f the Lesghi, and bordering on the military road om Tiflis to Mozdok. They are governed by lected elders.

Kosakint, a powerful tribe of the Caucasus, of 0,000 families, who can bring above 4000 exellent cavalry into action.

Lazi, a brave race occupying the head of the reat range of Taurus district of the province of Trebizond) Tarabazun, to the east along the hores of the Black Sea, in the neighbourhood of batoum. At the census they numbered 18,000 ien. During the Russo-Turkish war of 1828–29, hey brought 12,000 fighting men into the field.

Lesghi. The country of this race is about 2,000 square miles, the N. and S. slopes of the Caucasus. Narrow valleys and lofty mountains re occupied also by their tributaries, the Avar, erker, and others. Menteith says there are our tribes,—Kajar Kumak, 20,000 families; Kafir Kumak, 25,000; Avar, 32,000; and the Akuscha, 12,000. The Lesghi are the bravest but ost turbulent of all the tribes of the Caucasus; ost of them are Muhammadans. Nadir Shah ost 30,000 of his best soldiers in a campaign gainst the Lesghi, but they were totally defeated y the Russians in 1788. Their government is emocratic.

Avar, a predatory tribe of the Lesghi, occupying he north slope of the Caucasus between the ivers Ahsai and Koisu. They are of Tartar escent.

Osset, a tribe dwelling on both sides of the Caucasus, numbering 16,000 to 20,000 families, artly Christians and in part pagans. They elong to the Indo-Germanic race, with many ustoms similar to the Germans. They are of lender and light form, some with brown or ed hair. They sit on chairs or benches, never ross-legged like orientals. They are cleanly, rew and drink beer, using horns, and drink ealths. They show the grave of the prophet Elijah (Asiljalegat) in a grove near the village f Lamadan. They pay money for their wives. Until the married woman bear a child, she must, s with the Armenians, be silent. A widow who as borne children may be re-married to the father r brother of her deceased husband. There are obles, freemen, and slaves. They adhere to the endetta. They are short, 5 feet 4 inches, and hick-set, with haggard features, usually blue yes, and red or light-brown hair. The women re seldom pretty.

Pehavi, a tribe of the Caucasus, living in fifteen illages, and numbering 3698 souls. They hold he mountains between Kakhetians and Chechenz.

ARABIA.—The Arab has been a migrating, conquering race. The first emigration from Arabia s supposed to have taken place about 700 years fore the time of Solomon. Arabia is described the Periplus as a country filled with pilots, ilors, and merchants. In Pliny's time Arabs ere the carriers of the Indian trade; their settlers ve occupied the north and east of Africa, have led the western shores of Ceylon, have estabished themselves on the coast of Malabar, and they e prominent in Sumatra in the Archipelago. l all parts of the south of Europe, W. Africa, . and S. and E. Asia, are to be seen descendants of Arab conquerors. They occupy Khuzistan and the whole of the Persian littoral, and also that of Persian and Baluch Mekran. Their armies have overrun the valley of the Lower Indus, have been dominant in Samarcand, Oudh, and Arcot, on the east have reached the Chinese territories, and on the west the Atlantic, Malta, Italy, and Spain.

The present Arabians, according to their own historians, are sprung from two stocks: Kahtan, the same with Joktan or Yoktan of the Bible, the son of Eber, whose descendants occupy the south; and Adnan, descended in a direct line from Ishmael, the son of Abraham and Hagar, who occupy the north. Yoktan, according to Ch. Bunsen, was one of the two sons of Nimrud, and was the chief of the first Arabian emigration that proceeded southwards. Tradition points to the mountains of Armenia as the birthplace of the Arab and Canaanitish races, and it is supposed that they travelled along the banks of the Tigris into Mesopotamia, from which a portion of them commenced a great migration southwards, the result of which was the foundation of the primeval kingdoms of S. Arabia, the kingdoms of the Adites in Yemen, who believe that they came from the sacred north, and once lived in a glorious garden of the earth, which they are to restore. In the matter of their present locations, Dr. Latham, in his Ethnology, considers that Hejaz is peopled by the descendants of Ishmael, but the inhabitants of Mecca and Jedda consist of pilgrims and their descendants of African, Persian, and Turk blood. In S. Arabia, Yemen, Hadramaut, and Oman, the people are more or less Himyarite in blood, history, and civilisation. Those of the towns of Mocha, Sanai, Rodda, and Loheia are the more civilised, and the desert and hill Arabs are rude and ignorant, one of them so rude in speech as to be named the Bin-i-Kalb, children of dogs; and the Berekede, a branch of the Asir, are said to lend their wives. The *Asir* tribe occupy between Mecca and Medinah. They have six kabileh, —Bin-ul-Asmar, Bin-ul-Akmar, Charaan, Asir, Roufeida, and Ahida, and muster about 44,500 fighting men.

The people now occupying the Arabian peninsula are, however, regarded by Captain Burton as of three distinct races, viz. the aborigines of the country, who have been driven, like the Bhils and other autochthonic Indians, into the eastern and south-eastern wilds bordering upon the ocean; second, a Syrian or Mesopotamian stock, typified by Shem and Joktan, that drove the indigenæ from the choicest tracts of country; these invaders still enjoy their conquests, representing the great Arabian people. And, thirdly, an impure Egypto-Arab clan, well personified by Ishmael, his son Nebajoth, and Edom (Esau, the son of Isaac), that still populates the Sinaitic peninsula. The indigens or autochthones, he says, are those sub-Caucasian tribes which may still be met with in the province of Mahrah, and generally along the coast between Muscat and Hadramaut. The Mahrah, the Jenabah, and the Gara especially show a low development. These are Arab-ul-Aribah, for whose inferiority oriental fable accounts as usual by thaumaturgy. Dr. Carter also has remarked on the similarity between the lowest type of Bedouin and the indigens of India, as represented by the Bhils and other jungle races. The principal immigrant race, he says, are the

Noachian, a great Chaldæan or Mesopotamian clan, which entered Arabia about B.C. 2200, and by slow and gradual encroachments drove before them the ancient race, and seized the happier lands of the peninsula. This race would correspond with the Arab-el-Muta-Aribah or Arabicized Arabs of the eastern historians. The third family, an ancient and noble stock, dating from B.C. 1900, and typified in history by Ismael, still occupies the Sinaitic peninsula.

In Arabia there are several powerful nations, practically independent, though the emperor of Turkey claims to be their suzerain. But the great bulk of the population are in tribes, ruled by shaikhs or chiefs of their own election, chiefly pastoral and nomade, many of them predatory, with smaller tribes clinging around the larger for protection. Around Jerusalem are the Anezi, Shammar, Mowali, and Salhan.

The *Shamr* or Shammar is a great and powerful tribe of Bedouin Arabs who inhabit the N. part of the Al-Jazira province of the pashalik of Baghdad, and extend all over Mesopotamia. They pay no tribute, are greatly predatory, and have so thrown the beautiful lands of the Al-Jaziras out of cultivation, that it is literally a desert. They came from Nejd, about the beginning of the 19th century, under the leadership of Farez-ibn-Umr-ibn-Muhammad-ibn Abdul Aziz, and the country they occupy is now called Jazirat-ibn-Farez. They have ten divisions, which have 1000 tents. There are also ten Bedouin and Fellaheen tribes subject to them, mustering 13,500 tents, with 81,000 souls.

The *Shammar Jerbeh* tribe wander in Irak, all over N. Mesopotamia, from S. of Sinjar and the Khabur river to the Saklawiyeh canal, W. of Baghdad. They are the terror of the Turkish authorities and people.

The *Shammar Togha* tribe wander about the Diyaleh river, as far as Kut-ul-Amareh, and from the E. bank of the Tigris to Nahrwan. They have ten families, have about 200 matchlocks or guns, and 700 horsemen. Their war-cry is Sinaaish.

The *Daasur* families have 210 tents.

The *Daour* tribe number 300 guns and 300 horsemen, and, when at feud with the Shammar Togha, they cross to the W. of the Tigris, and settle near Shirsh and Shedhayf.

In *Mesopotamia* are the following tribes:—

Abdeh, a Bedouin tribe in N. Mesopotamia, with 2000 families. They are under the Shammar.

Al bu Asi, a Fellaheen Arab tribe of 500 tents in the N. part of Mesopotamia, round Nisibin.

Near the Zab river are the Ash Shawan, Al Bakr, and Al Tai, with 700 tents. They are pastoral and predatory.

Amud, a Bedouin tribe of Arabs of about 700 tents, in the N. part of Mesopotamia, on the banks of the Jaghjagha river.

Khureseh, a Bedouin Arab tribe near Nisibin, in N. Mesopotamia, with 800 tents and 13,500 souls, tributary to the Shamr.

Thabet, a tribe of Bedouin Arabs who inhabit the N. portion of Mesopotamia. They have 1000 tents, and are subject to the Shamr.

Kikia, a Turkoman tribe in N. Mesopotamia, from Mardin to Veran Shahr, numbering 1000 tents. They are the descendants of the old Artokide kings.

Milia, a Turkoman tribe occupying the extreme N. part of Mesopotamia, from Mardin to Veran Shahr. They number 600 families. They are subject to the Shamr Arab.

The *Baiat* or Al-Beyat, a Turkoman tribe of 300 tents, W. of Kifri, who can turn out 1000 horsemen. Nadir Shah swept away the bulk of the Baiat to Khorasan.

Al bu Schnan, 200 tents, of Zab al Kabir and the Al bu Hamad of Eski Mosul, are pastoral and predatory.

Beni Zid, 100 tents, of Eski Kifri, are pastoral and agricultural.

The *Zobeid* is a great and powerful tribe in Mesopotamia, S. of the Saklawiyeh canal as far the Ajaf marshes, partly nomade and predatory, partly settled and agricultural, on the E. and W. of the Euphrates, about the Hindiyeh. They have 1750 tents, and can muster 500 horse and 600 foot with fire-arms. Their war-cry is Jeheysh, and their chiefs are descended from Abdallah, of Himentæ descent, the Himentæ of Ptolemy.

Dhiffyr, a tribe of Bedouin Arabs, in the desert about the Montafik territory W. of the Euphrates. They are predatory, and cross the Tigris to levy contributions as far as Badrai and Mendali, and aid the Montafik.

Near the rivers Tigris, Euphrates, and Hye are the following tribes:—

Kojami, a savage, ferocious, wild tribe of 1000 families, W. of Urumia and Selmast, in the mountainous country at the source of the Tigris. They are Christians.

Tokabi, a wild tribe about the source of the Tigris. They are Christians.

Abbu Muhammad, an Arab tribe in the marshes N. of Kurnah and the banks of the Tigris, as far as the Hud stream. They rear buffaloes; are neither courteous nor brave.

Al bu Deraj, a tribe of 500 tents, wander between the Tigris and Euphrates, S.E. of the Hye.

Ashair Beni Luam tribe occupy both banks of the Tigris, from the Hye river to the Hud, and have about 4500 tents. They are proud, and do not marry their daughters into other tribes; when pressed by the Government, they migrate into Persian territory. They could, if united, bring 15,000 horsemen into the field.

Asherch Kut al Amareh is a small Bedouin family on both banks of the Tigris, around the Hye stream. They have about 60 guns and a few flocks. They are chiefly guides, and are quiet and useful.

Al Deriya, Al Mayoof, and Al Mariyan are great pastoral families S.E. of the Hye. They do not cultivate.

Al Hamid Bedouins have 300 tents, and dwell in Irak, N. of the Hye.

Arfiyd family dwell from Shumli to Hye in Irak. They have 400 tents. They are Bedouins, and can muster 300 horsemen with spears.

West of Baghdad, as far S. as Musserib, there wander several families, the Al-Abu-Aamer, the Beni Timim, the Az-Zoba, the Al-Tedagheh, and Al-Berghut, agricultural and pastoral, in all about 1200 tents; and to the N.W. of Baghdad are the pastoral Al-bu-Sagr, the agricultural Al-Meshahedeh, and the Aj-Jeburur (300 tents). Near the Dijeil canal, N.W. of Baghdad, are the tribes Al-Khasrij (100 tents), Al-Majma, Al-Makadmeh, Beni Timim, Al-bu-Hujaza, and Aj-jeneyleh. They are pastoral and agricultural, and predatory.

In the *Baghdad* pashalik are the following tribes:—

Abeyd, an Arab tribe, N. of Baghdad. They comprise six families, with 1050 tents. They occupy the lands opposite the Dijeil canal, around Samara and the Katuls, and extend from the E. bank of the Tigris to the Hamrin Hills. They are styled Al bu Shahr, or illustrious. They are predatory, have good horses and camels.

Adeil, an Arab tribe dwelling in Baghdad city; another part of this tribe are in Nejd.

Al Bakr, an Arab tribe of about 200 tents, N. of the Zab river, in Baghdad pashalik.

Al Beyath, an Arab tribe of 300 tents, between Tuz, Kharmati, and Kifri, in Baghdad pashalik. They may be the Al Beiyath, an Arab nomade tribe of 130 tents and 130 matchlocks, who wander about Nahr Kathwaniyeh in the Baghdad pashalik.

Al bu Hamad, a predatory Arab tribe of 150 tents near Eski Mosul, province of Baghdad.

Al bu Sakr, a pastoral tribe of Arabs with about 300 tents and 300 matchlocks, N.W. of Baghdad, above the Saklawiyeh canal.

Al bu Salman, an Arab tribe of 200 tents, partly agricultural, in part predatory. They dwell at Zabl Kabir in the Baghdad pashalik.

Aj Jebur, 300 tents, and the Khasrej, 100 tents, both cultivate in Dholoiyeh Hawis.

Al Kherkhiyeh, 300 tents, cultivate in Keshkul and Syedelan.

Al Kerwiyeh, 300 tents, cultivate in Kara Teppeh.

Al Mashahedeh, a nomade tribe of Arabs to the N.W. of Baghdad, above the Saklawiyeh canal.

Amareh, an Arab tribe in the pashalik of Baghdad. They have 27 divisons and about 2520 tents. In the early part of the 19th century this tribe was the most powerful in Irak-i-Arabi. They have about 500 matchlocks. Their war-cry is Akhuyet Saadeh.

An Naim, a tribe of Arabs of about 100 tents near Hamrin, in the pashalik of Baghdad. They profess great sanctity, and wander about as Syuds and Darvesh. They have camels and horses.

An Nedeh, a tribe of agricultural Arabs near Mend Ali, in Baghdad pashalik. They have 300 tents.

As Seraj, an Arab tribe in the pashalik of Baghdad in Mesopotamia. They have 1480 tents, wander over Mesopotamia, S.E. of the Hye, as far as the Hud river. They can muster 800 horse with spears, and 400 foot with fire-arms.

Azzoba, a tribe of Bedouin Arabs near Nuhi Abu Gharib, W. of Baghdad. They number 300 tents; are partly pastoral, partly predatory.

Baij families are of Bedouin habits. They have 600 tents; they are good horsemen.

Beni Lam, a powerful tribe of Arabs in the S.E. portions of the province of Baghdad, with 68 clans. They occupy the frontiers of the Turkish and Persian empires, are continually engaged in plundering expeditions, are most treacherous, dishonest, and greatly feared. They are estimated to have 40,000 families. The Montafik Arabs have repeatedly defeated them. They can muster about 5000 horse and 10,000 infantry.

Beni Timim, two small Arab tribes in the Baghdad province, engaged in cultivation. They have 150 tents, and dwell between Sindiyeh and the Atheim, and in Balad Ruz.

Dellim occupy both banks of the Euphrates, from west of Baghdad northwards as far as the town of Hit. They have thirteen families and 1700 tents, and are warlike and agricultural. If united, they could muster 10,000 fighting men.

Khezail, a large Arab tribe in the Lamlun marshes near Baghdad; fierce and independent. They are stout, fair, and comely; their women very beautiful. They are the only Shiah tribe of Arabs.

Madan, an Arab tribe settled in small reed huts in the province of Baghdad. They have buffaloes, sheep, and goats. They are of uncouth and brutal habits, and thievish. They use scant apparel. Captain Jones says they have nine families, with 1900 tents and huts. They are strong in guns.

Majma, a collection of small Arab tribes on the left bank of the Tigris, in the province of Baghdad, partly pastoral, partly settled. They are very thievish.

Montafik, a powerful Arab tribe near the banks of the Euphrates from Korna to Samvat, in the province of Baghdad. The shaikh can bring into the field 4000 horse and 4000 foot. About A.D. 1744, they obtained the right of dominion over a small tract of country above and below Suk-u-Shaikh, paying tribute to the Sultan. But, on one of their shaikhs refusing to pay, a Mameluk officer attacked and destroyed them. They have since then again risen.

Anizeh and *Dhiffyr* are Bedouins. They generally locate themselves in the desert about the Montafik territory to the west of the Euphrates, and make occasional forays into Mesopotamia.

Sherabin, a tribe of Fellaheen Arabs who inhabit the neighbourhood of Nisibin, in the province of Baghdad. They number 600 tents, and pay a money tribute to the Shamr.

The *Mahrah*, a sea-coast tribe, dwell in the S.E. part of Arabia, from the opening of the great Wadi Masilah on the S.W., in long. 51° 13′ E., and the town of Damkot, in the Bay of Al-Kamar, on the N.E., in long. 52° 47′ E., with a coast-line of about 135 miles. Their country contains many Himyaritic inscriptions. They are descended from the ancient Himyari of Hadramaut. They have their divisions, subdivisions, or families, *i.e.* bait. They are of small, almost diminutive, stature, and are always at war with each other. They are not a handsome race; their features are short and irregular, eyes small, black, sunken, and piercing, with a cunning expression. They and the Gara touch each other's fingers in saluting, but instead of kissing them afterwards, as the Gara do, the Mahrah place each other's noses side by side, and audibly sniff in the air. Inland they live on milk and flesh, with dates and sorghum millet; on the coast, on fish and dates. They are said to have no religion. Their language is very soft, and they say of it, Kalam d'Mhari misl Kalam-ul-tair, 'The Mahrah tongue is like the singing of birds.' The Mahrah dialect, as spoken by the Mahrah themselves, is described by Dr. Carter as the softest and sweetest language that he had ever heard. A dialect of the Mahrah, called Shehri, is spoken by a tribe around Morbaat, and with this the language of the Curia Muria islanders is almost identical, and that of Socotra appears to resemble it.

The maritime part of Hadramaut is known as Joor Shihr. The Mahrahs to the westward are

said to be descended from the more ancient and original tribes of Gara, and both declare they are descended from the Himyari race.

The *Gara* or *Hakili* race, in the S.E. of Arabia, occupy exclusively the Sabhan mountains, which extend from Marbat to Hasek. They claim descent from the Himyari. They border on the Mahrah race, but near them are remnants of the Afar tribe of the Hassarit, and the Barama, while in most of the towns in Dofar are the *Al-Kathiri*, who originally came from Hadramaut, and are at war with the Gara. The Kahtan family is the head of the Gara tribe.

At Hasek is the tomb of the prophet Hud, the fourth in descent from Shem.

The language of the Gara, called Hakili, or Ekhili, or Ehkyly, appears to be a purer or more archaic dialect than Mahrah. Dr. Carter says the Gara is the Bedawi dialect of the south-east of Arabia, and, like that spoken by the Socotrans and the Curia Muria islanders, is intensely guttural. They understand the Arabic of the towns only after much intercourse. It is spoken at Marbat and Zafar, and throughout the district of Shajr, by the Hakili (Gara of the Arabs), and Barama tribes, whose coast is from Damgut to Nus.

The Southern Arabians say that the Gara has a much less proportion of modern Arabic than the Mahrah. It is spoken along the S. coast of Arabia from Sehut to Damgut, and extends far inland amongst the mountains.

Aden is British territory, but several tribes occupy the region around.

The *Abdali* or *Al-Abadil* occupy Lahej, which has an agricultural population, all Arabs. They have 66 sub-tribal divisions. The Jews are the goldsmiths, money-changers, and masons.

The *Khadmi* and *Hijri* are of African descent, resembling the Suahili, and are menials.

The *Mouludi* are of mixed descent,—Arab fathers and African mothers,—and are more honourably employed. There are few slaves. The principal grain grown is the white and red varieties of the Sorghum vulgare.

The *Fadhli* or *Al-Fadhl* have about 100 miles of hilly sea-board. They have 24 sub-tribes, with about 6000 fighting men. They are proud, warlike, and independent, ready to take offence, treacherous and vindictive, grasping and avaricious, and lax in morals. The *Murakasha* sub-tribe hold a zanoo or base-born son in higher honour than a legitimate son. They claim descent from the ancient Himyarites.

The *Akrabi* tribe (Al-Akarib) have a small territory on the coast-line, inland to the desert. They have about 250 or 300 fighting men.

The *Howshabi* (Al-Howashib), with 10 subdivisions, dwell in a marshy, unhealthy tract. They cultivate sorghum and sesamum.

The *Alawi* tribe are united and powerful. They have about 700 fighting men. Their hilly district is N.W. of the Howshabi country, and little cultivated.

The *Amir* tribe dwell N.E. of the Alawi, on the high road to Sanaa. The majority of the cultivators are Jews. Their fighting men are 2000.

The *Subaui* (Al-Subaiha) is a large sea-board tribe, from Ras Imram to Bab-ul-Mandeb. They are typical Bedouins; are 18 petty sub-tribes, few of which cultivate or trade, and only one has any fixed habitation; but live by plunder, which they do unrestrainedly. They eat the sorghum; are spare of frame, but brave and enduring, though treacherous. They have not any horses, and but few camels, but these of a high breed, usually equal in speed to that of horses.

The *Yaffai* (ul-Yaffaa) have more than 35,000 fighting men, in 15 sub-tribes; brave, but peaceably disposed. Their country is said to be mountainous in the interior. It begins at Khanfar, on the left bank of the Banna river, and has several towns. Many parts are well cultivated. They have several sub-tribes, one of them, the Yeber, of Himyarite descent. Their country is fertile, producing coffee, safflower, cotton, wheat, barley, and wax; the exports being from Shoogra to Hadramaut.

The *Audaki* (Al-Awalik) country is on the sea-board between the Fadhli country and the Hadramaut. The population, 15,000 in number, are herdsmen and cultivators. Some of this tribe have taken service with the Nizam of Hyderabad.

The Arabian Sea, that part of the Indo-Afric Ocean on the south of Arabia, including the Red Sea and Persian Gulf, has 6000 miles of sea-coast. The southern tribes of the peninsula of Senai are more or less fishermen. The littoral Arabs of the Persian Gulf obtain almost all their means of livelihood from the pearl fisheries on the banks off the Arabian coast. The inhabitants of the Persian littoral are Arabs, more or less mixed, but in many places pure. The Persian rulers, however, regard all who reside below the raised table-land of Persia as aliens, and the Arab settlers on their coast retain the habits of their parent tribes.

Women.—The Arabs are not so scrupulous as the Turks and Persians about their women; and though they have the haram, or women's part of the tent, yet such as they are acquainted with come into it.

Customs.—It is necessary, when considering the Arabs, to distinguish between a series of grades towards civilisation, in which they are at present to be found. The Bedouin is wandering, pastoral, tent-loving, disdaining to trade, yet avaricious, and willing to sell his ghi, his mutton, or his horse, and always found in wide and open wastes, unpressed upon by adequate exterior power. Yet even the Bedouin bends to circumstances. He accepts the region allotted for his pasture grounds. Plunder has its laws, and vengeance its chivalry. If he will not trade, he has still wants, and he suffers the presence of a Jew or Saleebah as the Afghan suffers that of the Hindu. A little higher in the scale, as with the Cha'ab, is the original wandering pastoral Arab, in a district where he is pressed upon from without, and where boundless plunder and roaming are restrained by exterior force. The Arab then partly turns to agriculture, and for this he must in some degree settle. Society harmonizes to this level. Trade is possible. Corn is sold. The abba cloaks are woven and exported. Date trees are planted. Huts of reeds replace tents; and one sees in their feeble efforts at reed ornamentation, and in their rough twisting of their reed rope for their bunds, the possible germ of some architectural efforts. Yet higher in the scale is the Arab flourishing as an experienced and wealthy merchant in a town, or administering a well-ordered and comfortable rural district. Passing among these

people, society is seen in its transitional state towards civilisation.

PIRATE COAST.—The littoral within the Persian Gulf between the mountain range and the sea-shore, and extending in that direction from Kasab to the island of Bahrein—a distance of 350 miles—bears the designation of the Pirate Coast. Ibn Haukal, in his version of the Koran, informs us that before the deliverance of the children of Israel from Egyptian bondage, the subjects of a pirate monarch in these parts seized on every valuable ship which passed. The possession of a few ports within and near the entrance of the Persian Gulf, where it is not more than thirty miles across, enabled them to perceive and sally out on all passing vessels. To the Portuguese, during their brief career in India, they proved quite as troublesome as they did in the latter part of the 18th century to the British. The imams of Maskat have been repeatedly at war with these tribes. In 1809, an expedition was sent against them under Captain Wainwright, in His Majesty's ship *Chiffonne*. Their principal stronghold, Ras-ul-Khaimah, was stormed and taken, and fifty of their largest vessels burnt or destroyed. Leit, on the island of Kishm, and several other ports, were reduced, but they soon returned to their old practices. The inhabitants of the Pirate Coast consider themselves to be far superior to either the Bedouin or town Arab. The latter, especially those from Oman, they hold in such contempt, that a Maskatti and an arrant coward are by them held to be nearly synonymous. They are taller, fairer, and in general more muscular, than either of the above classes, until they attain the age of thirty or forty years, when they acquire a similar patriarchal appearance.

The Arab Caliphs were eminently literary. The Arab invasion of Europe first dispelled the darkness which had spread over that continent. They brought with them the knowledge of the East, and in a measure, also, the then forgotten learning of Grecian antiquity. About the 8th century they gave to Europe their numerical figures, and the art of determining their rank in the decimal arrangement by their positional value.

The Arabic language, as written in the Koran, is the most developed and richest of the Semitic tongues. It is not now spoken in any part of Arabia, as there written. Probably it never was so, any more than the Latin, the English, the German, or Italian, have ever been spoken as written in their respective bounds; and Burton quotes from the Arabic Grammar of Clodius, that the dialectus Arabum vulgaris tantum differt ab erudita, quantum Isocrates dictio ab hodierna lingua Græca. Indeed, the Arabs themselves divide their spoken and even written language into two orders,—the Kalam Wati, or vulgar tongue, sometimes employed in epistolary correspondence; and the Nahwi, or grammatical and classical language. Every man of education uses the former, and can use the latter. And the Koran is no more a model of modern Arabic (as it is often assumed to be) than Paradise Lost is of English. The Koran has been translated from the Arabic into English, French, Persian, Urdu, Malay, Javan, Tamul. In Socotra, the language in use is undoubtedly derived from the Ghiz or Ethiopic. At present the Arabic alphabet is in use amongst the Turks, Persians, Malays, some of the people of India and Africa. It was, however, of Syrian origin. The Arab family is Muhammadan, except the Christian Arabs of Malta. Nejd or Central Arabia is Syrian, and arranged into divisions called Suk.—*Lane's Koran; Peschel, Races of Man; Latham's Ethnology; Captain Felix Jones in Boy. Geogl. Socs. PERSIA.—The regions through which the Euphrates and Indus rivers run, and the countries intervening, have, since remote ages, been occupied by races who have taken a prominent place in Indian history. When Chengiz Khan in the early part of the 13th century overthrew Kharasm, and its ruler fled, only to die on an island in the Caspian, and his son, Jalal-u-Din, was defeated on the banks of the Indus, which he swam with seven followers (A.D. 1221) amidst a shower of arrows, but he conquered Sind and established his power in Persia, and was killed in Mesopotamia about A.D. 1233. After Shams-u-Din Altamsh had established himself firmly at Dehli (A.D. 1211, April 1236), he received investiture from the khalif of Baghdad, and at his court dwelt the author of the Jama-ul-Hikayat, a collection of historical anecdotes in Persian. The grandson of Altamsh, Nasir-u-Din Muhammad, reigned at Dehli from A.D. 1246 to 1266. He was an eminent patron of Persian literature, and the Tabakat-i-Nasiri, a general history of Persia and India, was written at his court. In A.D. 1544, the Dehli emperor Humayun, driven from India, was received in Persia by Shah Tamasp, who sent an army to restore Humayun, and it took Kandahar. After the accession of the house of Timur, notwithstanding the hostile feelings felt towards the Persians from religious prejudices, the court of Dehli long continued to have two parties, one using Turki, the other Persian; and although Aurangzeb treated the Persians (the original models of Indian Muhammadans) as rude and barbarous, and never mentions their names without adding a rhyming dislike, to the present day (1883) the Persian continues to be the court language of Indian rulers, and used by the learned in their literary and epistolary writings. Till the middle of the 17th century (1648), Kandahar was usually in the power of Persia; but early in the 18th century (1720-1722) Persia fell to the Ghilji. A few years later, Nadir Shah's victories in Herat (1731) led to his election as king. In 1738-39 he invaded India and sacked Dehli. During the first half of the 19th century, the British from India and the Persians have alternately been interchanging friendly embassies and been at war. British officers of rank and eminence have been lent to discipline the Persian army, and that army has been repulsed from Herat by Lieutenant Eldred Pottinger, and been defeated at Mahammerah by British Indian forces. The region intervening between the Euphrates and the Indus is thinly peopled. It is now occupied by races who are subjects of the king of Persia, the bulk of whom are nomade and of varied origin; also by the races known to Europe as Afghans; by the Brahui mountaineers, and the Baluch races of Baluchistan, and by races on the

sea-coast the period of whose arrival there is unknown, but who are largely Arab.

The *Arab conquest* (A.D. 632-38) permitted many of that race settling in Persia and to occupy prominent positions in it; but there are considerable numbers of maritime Arabs in its seaboard provinces, extending eastward as far as Sind, and who have probably been dwelling in their present localities long prior to the time of Mahomed. The people of Karak are Arabs, as also the Tangistani tribes S. of Bushahr near the sea; likewise the inhabitants of the Rohila district of the Fars province, who rear horses of mixed Persian and Arab breed, and export them to Bombay.

The population of Persia has been variously estimated. Sir John Malcolm estimated six millions, and latterly about five millions have been named. The people are partly settled in towns and partly pastoral nomades, and this joint occupation of the South-West Asian lands, from the Mediterranean and the Red Sea to the Indus, by fixed civic nations and nomadic tribes of herdsmen, sometimes of the same and sometimes of different races, is a standing ethnic phenomenon.

The *nomade tribes* are all predatory, and glory in their pursuits. They are brave and hospitable, but rude, turbulent, and grasping. They move with the seasons to summer and winter quarters. The men of Kasvin, Tabreez, Hamadan, Shiraz, and Yezd are as remarkable for their courage as those of Kum, Kashan, and Isfahan are for their cowardice. From time immemorial, Persian or Pehlavi, Arab and Turkoman, have been contending for mastery. But the Persian inhabitants of towns, and those engaged in cultivation, are not warlike, and the contest has been between the Persian nomade and the Turkoman nomade, —the two great martial classes of the population. The Persian nomades all belong to the Pehlavi stock, though their dialects are different. They inhabit Kirman, nearly all Fars, a part of Irak, and the whole of Kurdistan, a region stretching through the ranges of highlands from near the entrance of the Persian Gulf in a N.W. direction, along the left bank of the Tigris as far as Armenia. The Turkoman nomades entered Persia with conquering armies; they had come from the banks of the Volga, from beyond the Oxus, and from the plains of Syria. Their habits are the same as the Persian nomades, but they speak a different language, and from the Arab conquest till the death of Nadir Shah, the rulers of Persia had either been Arab or Turkoman. No member of the Persian nomades had ascended the throne. It was this, probably, that gave rise to the bloody strife between the Zand and the Kajar. The *Zand* are the most illustrious of all the Persian tribes, and one of their chiefs, Karim Khan, after the death of Nadir Shah, succeeded in establishing himself in Isfahan and the Southern Provinces. The *Kajar* was a Turkish tribe brought by Timur from Syria, A.D. 1398, A.H. 803, and settled between Elburz and the Caspian, where they rapidly increased. After the death of Nadir Shah, a fierce war raged between Karim Khan, Zand, and Muhammad Hasan Khan, Kajar, which ended in Karim Khan's accession. The Kajar tribe is a Turkish Il, and from the accession of Fatah Ali Shah (obiit 1834) they have been dominant. They have two sections, the Yokaribash and Ashagabash, each of which has six subdivisions or clans. The *Ziadoglu* were settled at Ganjah, in Russian Armenia, where they still remain. The *Azdanlu* clan were removed to Merv in the reign of Shah Tamasp I., and held it until conquered and nearly annihilated by the Uzbak under the khan of Bokhara.

Lak, a very large nomade tribe spread over Persia, though chiefly in Fars, Mazandaran, and Kasvin. They claim descent from the Kaianian kings. The Zand, the tribe of Karim Khan, were Lak. They have 20,000 families, all of them predatory. The principal are the Beiranawand, Khojawand, Nadawand, Nakawand, Jalalawand, Abdul Maliki, and Sujah Vaksan. They are of the Ali Ilahi sect.

The *Abdul Maliki* reside partly near Shiraz and partly in Mazandaran, but chiefly around Sarmi Kala. They are said to be about 3000 or 4000 families. They have villages and cultivate, but are constantly on the move. They are professed thieves, living on plunder of passengers and small caravans, but seldom murder. They are liable to furnish 500 mounted fighting men for the Shah.

Iliyat is the general designation of the nomade tribes of Persia. They comprise a very large portion of the population of the country. Many of the best families are of Iliyat origin. The term is derived from the Turkish word Il, signifying a tribe, and the Arabic termination 'at.' All of them, Zand or Pehlavi, Arab or Turk, lead the same manner of life, their pastoral habits little distinguishing them from the Bedouin Arab or the nomade Tartar on the banks of the Tedzen. Each Iliyat tribe has its own history, and the principal nomade tribes are the Afshar, Aimak; Arab, Bajiban, Bakhtiari, Baluch, Bayat, Feili, Hazara, Kajar, Khuda Bandlu, Kurd, Kurd Buchch, Lak, Mamaseni, Shah Seven, Shekagi. Some of them grow small quantities of grain, but their chief avocation is to breed camels, horses, cattle, mules, and asses.

They change their places of encampment with the season and climate, going in the summer to their Ailak, or quarters where pasturage and water are to be found in abundance; and when the cold of winter sets in, adjourning to their Kishlak or warmer region, in which their flocks and herds as well as themselves are better sheltered. Their summer abodes consist of large black tents, made of woven horse-hair, the sides being matting or dried rushes. They are usually pitched in a quadrangular form on the banks of their hereditary rivers, and under the brow of the mountains which have shadowed their forefathers for unknown generations. Hence, though they wander, it is yet within bounds. They have a country, and only change their place in it. The nomade tribes of Arabia and of Tartary bear the same character, possessing an extended inheritance, though it be only a desert. The Iliyat chiefs, to whom the tribes are entirely devoted, are the hereditary nobility of the kingdom of Persia. Those in the southern provinces, the Bakhtiari, Feili, and Mamaseni, trace their origin to the most remote antiquity, and are probably the descendants of the warlike bands who inhabited the same country in the days of Alexander. The Kashgoi are a nomade Turkish tribe of about 12,000 families, whose chief is the Il-khani of Fars. They and the Bakhtiari from the warm pastures of Arabistan and the head of the Persian Gulf arrive in spring

on the grazing of Isfahan. At the approach of winter, both the tribes return to their respective Garm-sair or wintering lands. The entire southern region of Fars, bordering on the Persian Gulf, is called the Garm-sair or hot region. It extends from the sea to the latitude of Kazerun, and runs parallel with the Persian Gulf, from the banks of the Tab to the confines of Luristan. From Bushahr eastward, as far as Kangoon, the tract is named the Dashtistan, or land of plains. The Tungistan, commonly pronounced Tungistun, or narrow land, is a small tract of land east of Bushahr. The greater portion of the people of the whole of that Garm-sair consists of an independent, lawless set, many of the tribes being robbers by profession.

The Garm-sair of *Sijistan* is a narrow tract along the lower course of the Helmand. The Baluch races seem to pronounce it Garm-sehl or Garm-sail, and one of their wintering places is about 75 miles north-west of Nooshky. Each Iliyat tribe has a separate grazing ground for its flocks; and this land, from long and undisputed possession, is considered as the property of the different chiefs. In the fine season they are continually on the move in search of pasturage; but in the winter, several of the tribes, amongst which may be numbered the Karagoosli and Afshar, settle in villages. In Dashtistan, Asterabad, and the northern parts of Khorasan, instead of tents they live in small portable wooden houses. They principally subsist on the produce of their flocks, and consequently grow but a very small proportion of corn. They manufacture cloth, as well as several other little articles for their own use; and the most beautiful Persian and Turkish carpets, so much admired in Europe, are the work of the Iliyat. Inured from their infancy to arms, to danger, and fatigue, and tenacious at the same time of the honour of their tribe, they are at once the prop and the glory of their country. Each tribe is divided into tira or branches, and each tira has a particular leader, all of whom are, however, subservient to the chief. These chiefs are, both from birth and influence, the first men in the empire; they are always mutually jealous and hostile; and the king, by nicely balancing the power of the one against that of the other, insures his own safety and the peace of his dominions. It was also the custom to detain at court, either the chief himself or some part of his family, as hostages for the fidelity of the tribe. Iliyat women are chaste and correct in their lives, and faithful to their husbands, and in their conduct and morals are vastly superior to those of the towns and settlements.

TURK TRIBES.—The *Afshar* tribe is one of the Kazzilbash, spread over Kirman, Fars, Luristan, and Khuzistan, in great numbers at Abiverd, and round the lake of Urumia. They are said to be of Turk origin, and to speak a Turki tongue. Their two sections are Shamlu and Karklu, and they number 20,000 families. They were one of the seven Turkish tribes to whom Shah Ismail owed much of his success, and whom he designated Kazzilbash. Abiverd was the birthplace of Nadir Shah, who was of this Karklu branch.

Layard says the *Gunduzlu*, a Turk tribe of Khuzistan, have 1500 fighting men. It is a branch or clan of the Afshar tribe. Nadir Shah found them occupying the plains of Khuzistan to the foot of the great chain of mountains, and also in the country now held by the Cha'ab Arabs. They were sufficiently powerful to restrict the Bakhtiari to the mountains. Nadir Shah deported them to the north of Persia, but they returned to Khuzistan on his death. The Gunduzlu Turk in winter reside near Boleti, and in summer and autumn on the Ab-i-Gargar.

The *Baharlu* is one of the Kazzilbash Turkish tribes whom Shah Ismail brought from Syria. They have 2000 houses in Azarbijan. The other Kazzilbash tribes were the Ustajulu, Chamlu, Nikalu, and Zu-ul-Kadar, but whether any of them now remain is not known.

Chardaoria tribe from Luristan and the Afshar occupy Sain Kala in Azarbijan.

Kasrin is a town in Irak-i-Ajam, 97 miles from Teheran. Its inhabitants amount to about 25,000 souls. They are chiefly descendants of the Turk tribes who have long pastured their flocks and herds in the neighbourhood. They are hardy and robust, but rude and ungovernable.

Kara Papa is a Turk tribe of several hundred families, in the Solduz district of Azarbijan. They were settled in Georgia until A.D. 1826, and on war breaking out between Persia and Russia they moved into Solduz district, and Abbas Mirza gave them lands on military tenure. They found the occupants of the country chiefly Kurds, with a few Mokaddam Turk. They are prosperous. They have a high reputation for valour, and are skilful horsemen.

The *Khuzistan* province, in the extreme S.W. corner of Persia, has on its south the province of Fars and the Persian Gulf. Its population consists of nomade tribes, dwelling in tents, pastoral and agricultural. In its northern part are Feili, Bakhtiari, Kohgelu, and Mamaseni; in its south are the Arab tribes Anafijah, Ali Kathir, Cha'ab, and Beni Lam. The Dinaruni and their subdivisions dwell in Khuzistan. The Dinaruni are predatory, ignorant, and barbarous, and can muster 3000 men. They are overawed by the Bakhtiari.

The Feili, Bakhtiari, Kohgelu, and Mamaseni occupy also Luristan, where the Feili have two sections, the Pesh Koh and Pusht-i-Koh, cis-montane and trans-montane as regards the Zagros chain. The Pesh Koh are notoriously predatory, and single travellers and caravans cannot travel in safety. They are a branch of the Ali Ilahi Muhammadans, holding to many local superstitions. The Feili pretend to have more respect for an oath than the Bakhtiari, and to be less bloodthirsty, but there is little difference between them. The Silah Silah section of the Feili Lur are of similar bad character.

The *Bakhtiari* are a large, martial, valorous tribe, who occupy the mountains, and move to summer and winter quarters. They have a tradition that they came originally from Syria. The *Haft Lang* and *Char Lang* are their two sections, between which from time immemorial there has been the greatest enmity, and when they approach, blood is spilt. They can muster 6000 cavalry and 13,000 infantry. They have a national dance called chapi, and they have rejoicings over their dead, especially over those who fall in battle. Nadir Shah took a number of them into his army. The Janeki are the chief branch of the Char Lang. The Bakhtiari have been supposed to have given the name to Bactria.

The *Binduni* are a small tribe dwelling amongst the Bakhtiari.

The *Malah-Madi* tribe of Bakhtiari accompanied Nadir Shah against Herat.

The *Alaki*, a branch of the Haft Lang, make their summer quarters in the mountains near Teheran, and in winter go to the sea-coast near Bushahr.

The *Kohgelu* inhabit the mountains at the source of the Jarahi river, between lat. 50° and 51°. They adjoin the Bakhtiari, and are the same in language, manners, customs, character, and religion, but they consider themselves different; they are under the Behbehan governor, whilst the Bakhtiari are under that of Shiraz. They have about 20 clans, with 15,500 families.

ARAB TRIBES.—The *Cha'ab Arabs* are a tall, martial race, strong-limbed and muscular, active and healthy. They occupy the lower part of Mesopotamia, the southern portion of the plain of Khuzistan, in Persia, with the Hindiyan river on the east and the Karun river on the west, extending along the banks from Ahwaz till its junction with the Shat-ul-Arab. Their divisions are the Ali Bu Nasir, the Idris, Nasara, Mohaisen, Bawi, Beni Jemim, and Haidari Haidar, with about 50 subdivisions. Their adults are stated at 68,000, but about 10,000 are supposed to be fighting men. They are agricultural, and have irrigating canals. They protect trade. They are Shiah Muhammadans. They are tributary to Persia.

Albu Ali is a tribe of the Cha'ab Arabs, residing in Khuzistan. They number 2500 adult males.

Abu Ghesh, a tribe of the Cha'ab Arabs, residing at Buziah, in the province of Khuzistan. They have 6000 adult men.

Ali Bakard is an Arab tribe settled in the plain of Ram Hormuz, in Khuzistan. They have good matchlockmen, and a few expert horsemen.

Ali Kathir, a large Arab tribe in the Dizful district of Khuzistan. They have 19 branches, of about 14,000 to 15,000 families, and can furnish a good body of cavalry.

Ali Khamis, a nomade tribe of Arabs, a branch of the Maedan, inhabiting the plain of Ram Hormuz, in Khuzistan.

Al Kuniferah, a clan of the Cha'ab, are located on the road from Mohamra to Dorak, in Khuzistan.

Al Mukadam, a tribe of Cha'ab Arabs, near Dorak, in Khuzistan.

The Amur clan wander about in the southern parts of Khuzistan. They number 10,000 adult males.

Anafijah, a nomade clan of the Maedan Khuzistan tribe of Arabs, are a powerful tribe under the authority of a shaikh, who retains 300 horse and 400 foot. They occupy in Khuzistan the right bank of the Karun below Band-i-Kir. They possess large flocks of camels and sheep.

The Asar Kirah clan reside near Oushar, near Buziah, in the Falahiyah district of Khuzistan.

The Bawi are a large and powerful tribe of Arabs, who can turn out about 1000 horsemen and about 2000 footmen. They inhabit both banks of the river Karun, and are tributary to the Cha'ab shaikh, though its chief considers himself more under the protection than under the absolute authority of the shaikh of the Cha'ab Arabs, against whom they frequently appear in arms. They are notoriously treacherous.

Dinaruni, a predatory, barbarous, and ignorant tribe of the mountains of Khuzistan. They can muster 3000 men. They are overawed by the Bakhtiari. The Ali Mahamdi in Khuzistan is one of the largest subdivisions of the Dinaruni.

The Sadat and Sadir and Saki tribes dwell near Hawizah in Khuzistan, and numbers of the Saki are in Luristan.

The Sharifat tribe has about 10,000 families. They occupy the vicinity of the right bank of the Hindian river in Khuzistan and the Zaitun Hills. This tribe has 2000 foot and 700 horse, and has frequently opposed the Cha'ab shaikh.

Teheran, the capital of Persia, is built in the very lowest part of an immense desert plain. It has 100,000 inhabitants. Colonel Shiel gave the following tribes of the neighbourhood and district of Teheran.

Turk, viz. Shah Seven, 9000 tents; nomade in Kum, Teheran, Kasvin, and Zanjan.

Kharekanlu, Bajmanlu, Kundeshlu, Khellij, Khoda Bandehlu, 400 houses in Teheran city.

Afshari, 900 houses and tents, between Teheran and Kasvin.

Usanlu, 1000 tents at Demavand, Kehleku, and Gavbaz, 150 houses.

Abul Hasani, Jahan Beglu, and Shadlu, 320 tents and houses.

Tuyuj, a base tribe, dwelling in 300 tents near Teheran. They are very poor, are thieves and fortune-tellers.

Turk and *Lek*, viz. Turk-i-Mafi, 100 houses; Pazeki, 2000 tents and houses; Kengerlu, Kara Churlu.

Lek, viz. Nine tribes near Kasvin, 1500 tents; Hedawand, Burbur, and Sylsipur, 1000 tents and houses.

Zargar, thieves and coiners.

Khurd Bacheh, 400 tents.

Shah Sarwari, 250 tents, and Nana Kelli, 650 tents, S. of Teheran.

Kurdistan lies between lat. 34° to 39° 30′ N., and long. 40° 48′ E.; 500 miles long, and 150 miles broad; but near Van its breadth is about 300 miles. The Kurds inhabit the whole of both sides of the main range, which, running out south from Mount Ararat, divides Asiatic Turkey from Persia from Bayazid to near Hamadan. The limits comprise portions of the provinces of Bayazid, Arzrum, Mush, Van, Diarbakr, Musal, and Turkish Kurdistan in Asiatic Turkey, and of Ardelan or Persian Kurdistan, Azarbijan, and Kirmanshah in Persia. It is a succession of steep and rugged mountains, with fertile but narrow strips of valleys at their base. The mountain system consists of the great southern spur of Mount Ararat, which divides the drainage of the Tigris from that of Persia, and from which several spurs project. The western part of Kurdistan gives rise to the Batman Su, Bitlis Chai, Diala, Khabur, Sert Chai, Tigris, Yezdikhaneh Su, Zab greater and lesser, and Lake Van is in Kurdistan. The people are greatly nomade, with large flocks of sheep and goats. Their horses are good, and 60,000 to 80,000 could be annually supplied.

A. Pizhder district.—The Sekkir and Nur-ud-Dini have 100 villages and 1000 fighting men; Shinki, 200 families; Ghellali, 150 families; Siwell, an agricultural tribe.

B. Nomade.—Jaf and its tributaries could

furnish 1000 infantry and 300 horses. The Jaf protect all the tribes of Luristan and Persian Kurdistan, increasing their strength to several thousands. There are fragments of about seventeen tributary tribes, comprising nearly 3000 families, formerly part of the Balbassi, Lak, and Feili. Amongst these are the Zend, to which belonged Karim Khan, king of Persia, whom the Kajar overthrew.

In N. Kurdistan, the four great tribes are the Bahdinan, Bohtan, Hakari, and Rowandez, the Hakari having 27,840 souls.

The Kurd are the Carduchai of the Greeks. They are partly nomade, partly settled. They are brave, hospitable, robust, hardy, and temperate; are long-lived, but uncivilised, averse to settled habits, delighting in war and rapine, and hardly regarding murder and parricide as crimes. They are seldom taught to read or write, but are carefully taught to manage horses and arms. The wali of Ardelan and wali of Sulimania are their greatest chiefs, he of Ardelan claiming to be the lineal descendant of Salah-ud-Din; is tributary to Persia. The features of the Kurd are sharp; face oval, nose prominent, mouth and chin receding; brow ample, eyes deep set, dark; mouth well formed, and teeth fine. Kurd or Kerad seems to mean speech. The people call their country Karmanj. They are invariably mounted; are armed with bows and javelins. Their tents are black.

The Kurd in Asia Minor are thievish, predatory, revengeful, untruthful, and irreligious. The working and industrious portion of the population in N. Kurdistan are Armenian and Nestorian Christians, all serfs, known as Zar Kharidi, sold purchased, and they are bought and sold as predial slaves with the land.

Suimanial is the capital of Turkish Kurdistan.

Bebbeh, a Kurd clan, now dominant in Sulimania, and formerly very powerful. They claim descent from a European princess who married their ancestor Fahib Ahmad.

The Mendimi number 300 families. They are under the Pasha of Sulimania.

Millis, a Kurd tribe, inhabit the Abdul Aziz range in the Sulimania district of Asiatic Turkey.

The Kurd are widely spread. They are found in Kurdistan, on the east of Persia, also in the west of Persia, in Asia Minor, and in Syria; they also possess Merv, they are numerous in Khorasan, are also met with in Baluchistan, on the Dasht-i-be-Daulat, and in Takari (Tirkari), in Cutch Gandava, two miles N. of Cutchi; they say they can muster 500 fighting men. A few of the Kurd are on the Russian territory, some are well within the Turkish, others within the Persian frontier. The nucleus of the Kurd family, however, lies south of Armenia, along the mountain ridge which separates Asiatic Turkey from Persia. They have many tribes, a few agricultural, but most of them pastoral and nomade. They are ...dy, brave, and rapacious. The Mikri Kurd ...upy the south of Azarbijan. They are agricul...ral; they are brave horsemen, and on one ...sion, in the early part of the 19th century, ...rove the whole Russian cavalry off the field.

The Bilba tribe, in Lahijan in Azarbijan, are ...omade, roaming about the borders of Persia and ...rkey. They are the most predatory, turbulent, treacherous of all the border tribes of Kurdistan, and have been ruthlessly hunted down by other tribes. They number about 5000 families, in three divisions,—Piran, Mengur, and Marnish.

Mikri, Hakari, Afshar, and Zerza are found in the Urumia district of Azarbijan.

The Kurd in Persian Khorasan were brought from Kurdistan by Shah Ismail, and settled on the eastern frontier of Persia, to check the inroads of the Turkomans. There were 4000 families, who have since increased to 50,000, and they are formidable, both on account of their numbers and their valour. They continue predatory, and retain much of the Kurd language, though adopting the Persian dress.

The Amberlu Kurd, who occupy the Zetunabad district in Azarbijan, were settled there by Nadir Shah.

Urumia in Azarbijan, on the borders of Kurdistan, has 20,000 to 30,000 inhabitants of the Mikri, Hakari, Afshar, and Zerza. The plain is highly productive, but the people are poor and oppressed.

South of Urumia is the town of Ushnai, in lat. 36° 55′ 29″, at the foot of the great Kurdistan mountains of Turkish Kurdistan. The inhabitants are Kurds of the tribe of Zerza, formerly 4000, but now only 800 houses, the plague having carried off numbers of them.

The Mengur, a division of the Balbas Kurd, are nomades who pasture their flocks in summer upon the Persian frontier, between Sardasht and Ushnae, and in winter retire far within the Turkish line.

The Bera-Dust, a celebrated tribe, inhabit the district of Kamresh, west of lake Urumia, in the Persian province of Azarbijan. They formerly gave chiefs to Sumai and Terkur.

Baban, a tribe of Kurds between lake Urumia and Kerkuh.

The Kurds of Guran of Kirmanshah are frank and hospitable, of the Ali Ilahi religion, mixed with doctrines of Judaism, Christianity, and Shiah Muhammadanism. They are supposed to be of Hebrew origin. Major Rawlinson raised a regiment amongst them. The Sharaf Bayene tribe, between Zohab and Sulimani, are supposed to be Guran Kurd.

The Baho and Dastiari districts of Persian Makran are occupied by the Jagdal, Hot, Latti, Raisi, Kosagi, and Shahzadah.

Adian, a tribe of Kurds claiming descent from Shaikh Adi, the Kurd saint. They dwell on the banks of the Bohtan.

Ali Arus, a nomade tribe of Arabs dependent on Hawizeh district of Kurdistan.

Bahdinan, a Kurd tribe in the valley of Amadia and left bank of the Tigris. The chiefs of Amadia claim descent from the Abbassi khalifs, and assume a saintly character. Some of the chiefs have imitated the latter khalifs by covering their face with a veil, so that no one may see their face.

Bulbassi is a Kurd tribe composed of the following sections:—1. The Kabaiz, the reigning family; 2. Manzoor; 3. Manash; 4. Piran; 5. Rummook; 6. Sinn; and 7. Taafah. The chiefs of tribes are called Muzzin. The Bulbassi will not bestow a girl in marriage on a person of another tribe or people. They have courtship among them, and carrying off a girl by the lover is common. When a chief dies, he is succeeded by the best or bravest of his family, with the common consent of his tribe. If his eldest son be incapable, the best of the brothers succeeds. In

their own country the Bulbassi do not willingly acknowledge any superior, either Turkish or Persian; but when they descend into the regions of Karatchuk, they pay a tribute of sheep to the Bey. Most of the principal people among them possess a complete suit of mail. They sew a wounded man in the skin of a bullock fresh stripped off the animal, leaving only his head out; and they leave him in it till the skin begins to putrefy. They say this never fails to cure the most desperate spear or sabre wound.

Baliki, a large Kurd tribe of 10,000 families, occupying a strong secluded country which forms the prolongation of the Ushnai mountains. They claim descent from Sharezer or Sanaser, son of Sennacherib. They mix up a belief in Moses, Christ, Mahomed, and Ali.

Kelowski or white caps, called also Guran, are scattered all over Kurdistan. They are deemed ignoble.

Khazanli, a Kurd tribe in the Kharzandagh mountains, formerly predatory.

Khoshnav, a Kurd tribe in the north part of the country. They have three branches. Their language partakes of the Bebbeh and Bahdinan dialects. Khoshnav and Rowanduz Kurd are brutally savage. They rigidly follow their prayer times, but do not scruple to kill their enemy, even in their mosque.

Luristan, a province of Persia, of 19,500 square miles, extending for 270 miles westward from the borders of Fars to those of Kirmanshah. It has a population of 56,000, composed of the Feili. It is divided into Luristan Buzurg and Luristan Kuchak (greater and lesser). The former is the mountainous country of the Bakhtiari, stretching from the frontiers of Fars to the river Dizful; and Luristan Kuchak is situated between the river and the plains of Assyria. From the 12th to the 17th century, Luristan Kuchak was ruled by a race of independent princes who were styled Atabeg, the last of whom, Shah Verdi Khan, was displaced by Shah Abbas the Great, and the country, with the title of Wali, granted to Husain Khan, a rival chief. The Feili clan is that of Husain Khan. When the whole of the Luristan Kuchak was under the dominion of a wali, all the tribes were designated Feili, but it is now applied only to those of the Pasht-i-Koh behind the great Zagros chain. Major Rawlinson gives Luristan Kuchak to six tribes and twenty-seven clans. The women perform all the labour. Their religion is an offshoot of that of the Ali Ilahi sect, with many local superstitions. The Lur do not revere Mahomed or the Koran. They worship Baba Buzurg, and regard several holy men amongst them with little short of adoration. And many of their observances are traceable to a time long prior to Mahomed. Macdonald Kinneir had noticed their midnight orgies of Chiragh Kushan, which are probably not now continued, but they were common till the beginning of the 19th century, and are supposed to have been a remnant of the physiological worship of Anaitis and Mithra, from the time that Sesostris erected the emblems of the worship, and Semiramis followed them in practice.

Mahmaseni, properly Muhammad Huseni, one of the most turbulent and lawless tribes of Persia, are settled to the north of Kazerun, in the province of Fars. They claim descent from Rustam. They have six clans,—Rustami, Gavi, Zali, Bekesh, Dushman, Ziari, and Zoi. Their families have been estimated at from 400 to 12,000. They dispossessed the former inhabitants of Fehlian from all the arable land. Regular troops were sent against them after the death of Fatah Ali Shah, on which they threw themselves and children over a precipice and destroyed themselves.

The Rustami of Sarab-i-Silah and Digar, in the plain of Bairam in Fars, are esteemed the bravest of the tribe. They can bring 200 well-mounted and well-armed horsemen into the field.

Laristan, a province of Persia, in lat. 26° 30′ to 28° 35′ N., and long. 52° 30′ to 55° 30′ E., extending along the north shore of the Persian Gulf, and is 210 miles long and 120 miles broad. The coast is in the possession of different Arab tribes, all predatory. The interior has an aboriginal race who speak a dialect of the Pehlavi.

Azarbijan province is in the extreme N.W. corner of Persia. Colonel Shiel gave the numbers of their tents at 65,000, as under:—

Turk.		Lek.	
Shah Sevand, .	15,000	Shekaki, . . .	15,000
Khagehalilu, .	800	Zergar, ...	400
Beg dillu, . .	200	Kulbeglu, Mishkamber,	400
Sheklu, . . .	150	Kara choorlu, . .	2,500
		Chelebeanlu, . .	1,500
Tat and Turk.		**Kurd.**	
Mukadam, . .	5,000	Mikri, ...	15,000
Mahmudlu, .	2,500	Baban, ...	1,500
Beharlu, . .	2,000	**Tat and Lek.**	
Afshar, . . .	7,000	Ahmadavad, . .	200
Kara papak, .	1,500	Dumbeli, . . .	2,000

The Azarbijan people have an aptitude for war, and could supply 60,000 men, viz. 20,000 cavalry, 3000 artillery, regular infantry 12,000, irregular infantry 25,000.

The Chardaori tribe from Luristan and the Afshar, occupy Sain Kala in Azarbijan. Tabreez, its chief town, has a population estimated from 80,000 to 140,000. It has been repeatedly taken and sacked by the Turks, Persians, and Russians.

Shahgagi is a large but rough and lawless tribe of about 50,000 families, in Azarbijan, in the districts of Hasht-Rud, Garm-Rud, Miana, and Ardebel. They use Turkish and Leki. They make excellent soldiers, and British officers in 1833 formed three battalions from them.

Shah Sevand are nomade Iliyats in Irak and Azarbijan. They form a very large tribe of 15,000 families; they do not cultivate, but are wealthy from their herds of cattle and flocks of sheep. They are predatory. Their winter quarters are at Mishkin, and they occupy Ardebil and Khemseh.

Fars, a province of Southern Persia, is bounded on the N. by Irak, E. by Kirman and Luristan, W. by Khuzistan, and S. by the Persian Gulf. It lies between lat. 27° 20′ and 31° 41′ N., and long. 49° 20′ and 54° 20′ E., with an area of 44,335 geographical square miles. Its plains are in general fertile. It has the seaports of Tauri, Kongun, Reshahr, Bushahr, Bandar Reg, and Bandar Dilam. It is sparsely peopled. Its tribes are Persians—Lek, 9000 houses; Turk, 40,000; and Arabs, 10,000.

Kash Kayi is a collection of tribes in the province of Fars, whose ancestors are said to have been deported from Kashgar by Hulaku. They have thirty divisions, with about 15,000 families. They have sheep, goats, horses, horned cattle, and asses, and they make up wool into carpets and

clothing. Some of their sheep are of remarkable size, weighing 130 lbs. to 144 lbs.

Behbehan is a town in the province of Fars, 128 miles W.N.W. from Shiraz. It is on a fertile plain watered by the Kurdistan river. The tribes are nomades, and, with the numbers of their tents, are as under:—

Bawi,	1,200	Sher Ali, Shehrui, Malah medei,	1000 between Ram Hormuz & Shustu.
Kohmari,	800		
Boverr,	2,000		
Charm,	1,000		
Nui,	1,000	Aghajiri,	
Dashman Zarii,	500	Jaghutai,	1,000
Yusufi,	400	Keshtil,	
Tyahi,	1,000	Tileh Kohi,	
Bahmahi,	2,000	Bilehlu,	1,000
Nafar,	850	Jama Buzurgi,	
Beharlu,	1,230		

The Nafar are Turk, and roam through Fars.

The Behmehi or Bahmahi are a wild and ferocious clan, and frequently at feud with the governor of Behbehan.

Ghilan, a province of Persia, extends between lat. 36° 30′ and 37° 45′ N., and long. 48° 30′ to 50° 45′ E., with an area of 4673 square miles. It is bounded on the N. by the Caspian Sea, on the E. by Mazandaran, and on the S. and W. by Azarbijan. The parts near the Caspian are low, unhealthy, jungle-clad plains; the climate is so highly insalubrious, that the Persians have a proverb, If tired of life, go to Ghilan. The population is about 100,000, ignorant and bigoted. The women are extremely handsome and beautiful, and the children are particularly so. There are many gipsies; they are called Kaola, literally black. The silkworm is largely bred.

Talish district is N. of Ghilan, with the Caspian on the E. and the Masula mountains on the W. It is fertile, but unhealthy, and the inhabitants take up summer quarters in the mountains. The men are spare and robust, but not tall; they are brave, but highly predatory and savage. They are devoted to their chiefs; their weapons are the matchlock and Ghilani knife.

Isfahan, in lat. 32° 39′ 34″ N., and long. 51° 44′ 37″ E., is on the left bank of the Zainderud river, in the midst of a plain 75 miles long from E. to W., and 20 miles broad from N. to S. The streets are narrow, dirty, and mean. Its population may be about 200,000. They are industrious, and manufactures in wool and silk are largely produced.

Dabasi are beggars of Isfahan, whose members travel all over the country. They pretend to be afflicted with ailments.

Khorasan, a mountainous province with long narrow valleys, extending between lat. 33° 30′ to 38° 30′ N., and long. 53° to 60° E. Its N. fertile districts are occupied by the Kurd, and its other divisions are Turshez, Tabas-Ghayn, Khaf, Mashad, Nishapur, and Shahrud or Damgan. Shah Abbas is said to have settled the Kurds in the N. district, and to have brought Arabs into the S. part. The central and W. portions have Persians and Aimak; and Hazara occupy the east. To the N.W., and on the frontiers of Asterabad, and towards the Caspian, are Turkomans of the Goklan tribe; to the N. and N.E. are the Kurd of Khabushan and Daragaz; in Turbat, Shaikh Jam, and Khaf, are the Taemuri Aimak; in Turbat Haidari are the Karae and various tribes of Baluch and Lek; while Tushez, Ghayn, Tun, and Tabas are occupied by Arabs. The language generally spoken is Persian. The N.W., N., and N.E. districts are fertile and well watered, and produce metals abundantly; woollen articles are manufactured, and fruits are largely exported.

A branch of the Taemuri of Afghanistan inhabit the district of Khaf in Persia.

Hazara, to the E. of the Taemuri of Khaf, are a small but turbulent tribe, of thievish habits, who kidnap surrounding races and sell them to the Turkoman. They possess three small towns.

Ibn Sharban, Arab tribe of 30,000 families, occupy Tabas, a town of Khorasan. They were brought here by a king of the Suffavi dynasty. They breed camels and sheep. They maintained independence for centuries.

Aimak, numbering 50,000 families, occupy the southernmost parts of Khorasan province, near Kara-Khaf and Bakhey. They are of the same race as the Aimak of Afghanistan, and are all nomade. They are Sunni Muhammadans. The Sakli live in the district of Ghayn in the province of Khorasan. Nishapur district of Khorasan, to the W. of Mashad, is celebrated for its turquoise mines, which are 40 miles W. of Nishapur town.

Karai or Garai is a brave tribe with 5000 tents. The Baluch (2000) and Lek (1000) occupy the town and district of Turbat Haidari in Khorasan.

Kirman, a province of Persia, bounded on the E. by a part of Seistan and Baluchistan, W. by Fars, S. by parts of Luristan, Makran, and the Persian Gulf, and N. by Khorasan. It is about 365 miles long and 280 miles broad. It is very mountainous. The desert region of Kirman is about 270 miles long, from lat. 29° 30′ to 34° N., from the city of Yezd, in long. 55° 40′ E., to a range of mountains separating it from Seistan in long. 60° E. The whole tract is without water, and is so saline that for 80 or 90 miles at a stretch it does not produce even grass. The Afghan army, on its march to invade Persia in 1719, suffered the most dreadful hardships in this waste, one-third of their number perished, and the remainder reached Nurman-shahr with the loss of all their equipage and baggage. There is a path through it from Kirman to Herat, by which couriers can go in 18 days, but the risk of perishing is so great that in 1810 a person asked Rs. 200 to take a letter from Lieutenant Pottinger to Captain Christie. The tribes and their population consist of Afshar, Turk Karae, and Ali Ilahi, Lek, Seistani, and Baluch,—in all about 5000 or 6000 families.

The town of Kirman has 30,000 souls, among them a few Parsee or Gabr. Its shawls, numdahs, and matchlocks are famed all over Asia. The wool of the sheep is of high quality. When cut off the sheep, it is repeatedly and carefully scoured and picked, after which it is immersed in a wash. Its shawls and carpets are next to those in Kashmir.

Kirman town is in the direct route between Khorasan, Balkh, Bokhara, Mawar-un-Nahr, and all the N. of Persia. It has been taken by the Khalifs Chengiz Khan, Timur, the Afghans, Nadir Shah, and so late as 1794 it was betrayed into the hands of Aga Muhammad Khan, the founder of the Kajar dynasty.

Kirmanshah, a district of Persia, lying between lat. 34° to 35° N., and long. 44–5° to 48° E., with the mountains of Persian Kurdistan on its N.,

those of Turkish Kurdistan on its W., E. by Irak-i-Ajam, and S. by Luristan. It is a highly productive region. The Kurds supply sheep to Teheran and Turkey; its fine horses have much Arab blood, and its carpets are celebrated. Its tribes are:—

Lek.	Families.		Families.
Guran,	3,500	Zuleh,	250
Kalhur,	11,500	Nanu Killi,	700
Zanganah,	10,500	Ahmadawand, Pyrawand, Bahtui,	750
Surjahea, (branch of the Zanganah.)	2,000		
Jalalawand,	300	Filehgiri, Sufehwand,	2,000
Balawand, Panjinawand,	1,000		
Zohinawand,	1,000	Vermezgar, Kuziawand,	1,500
Kakawand,	2,000		
Hersini,	400	Turk.	
Jalilawand,	600	Khuda-bandalu,	200

Kirmanshah, the chief town, is in lat. 34° 18′ 45″ N., and long. 46° 37′ E., and 250 miles S.S.W. from Teheran.

The Kalhur is a large and powerful tribe, in the district of Harunabad. They number from 7000 to 11,500 families. The men are tall, well made, and good marksmen. The women are handsome. They are of the Ali Ilahi sect, and they worship at the shrine of Baba Yadgar in the pass of Zardah.

The Sinjani tribe in the plain of Mahi-dasht number 4000 tents, and have considerable stock of camels, horses, oxen, mules, and asses. They are very lax Muhammadans.

Mazandaran, province of Persia, lies between S. shores of the Caspian Sea and the Elburz range of mountains, about 2000 miles long and 60 miles broad, from lat. 35° 45′ to 37° N., and long. 50° 15′ to 54° E. The climate is very unhealthy. They are the most warlike of the Persians; the men are brave and expert in the use of arms. They are required to furnish to Government about 12,000 infantry. The wandering tribes, estimated at 50,000 souls, have settled, and provide 5000 cavalry. The tribes named by Colonel Shiel and Mr. Holmes are Lek, Kurd, Turk, Afghan, Baluch.

Abdul Malaki.	Imamlu.	Khojevand.
Afghan.	Imranlu.	Modanlu.
Afshar.	Jan beglu.	Talish.
Baluch.	Kajar.	Usanlu.
Gerailu.	Kelidgeli.	

Modanlu is the largest tribe, and contributes 1000 horse; the Khojevand and the Abdul Malaki are the next in importance.

Gondar, a small tribe of 500 souls, who inhabit the wild country near Ashraf in Mazandaran; good marksmen with the bow and matchlock. They are said to eat the flesh of the wild hog, and place no restriction on the intercourse of the sexes.

Firoz Koh, a village of 300 houses in Irak-i-Ajam in Persia, 90 miles N. of Teheran. It is built on the bank of a stream, towered over by perpendicular rocks 1000 feet high. The houses rise on the mountain side, but others of the people dwell in caves on the mountain side.

The *religion* of the bulk of the inhabitants of Persia is Muhammadanism of the Shiah sect. But Persia has always been fertile in sects. The earliest known to modern Europe was promulgated from the Alamut, a solitary, bare, and steep rock, 32 miles from Kasvin, which Hasn Sabah, chief of the Assassins, made his fortress. He was the Shaikh-ul-Jabal which the crusaders translated Old Man of the Mountain.

The Ali Ilahi believe in the incarnation of Ali and his descendants. They have long taken a place among the sects of Persia. They extend eastwards into Bombay, but are now chiefly found among the genuine Persian tribes of Lak descent; also among the Guran Kurd, and around the higher parts of Zagros. They are said to practise rites which they conceal from the uninitiated. A similar rule of retaining secrecy to their customs is attributed to a sect called Adami, whose meetings at night, in caves, are said to be conducted with rites like those of the Mylitta of the Assyrians, of the Alitta of the Arabs, and of the Persian Mithra; but such are the usual form of accusations made in Asia by opposing sectarians. The same is said of the Lur.

The Majusi or Gaor Yezdi are said to worship the cow.

The Sufi doctrines current in Persia are various forms of philosophy. Many of the most learned and best read of the community are Sufi sectarians, amongst whom there are both atheists, theists, and pantheists. The Kaimur and Mitanli are Sufi sects of freethinkers, who deny everything they cannot prove. The Dheri sect of the Sufi believe the world to be uncreated and indissoluble.

The Babi sectarians were followers of Syud Ali Muhammad, who, after repeated imprisonings, was at last shot at Tabreez. His doctrines were atheistic, under the guise of pantheism, but many of the religious men, mulla and mushtahid, joined him. He gave to himself and his doctrines the title of Bab (door, porte), to imply that his doctrine was the gate of heaven. Persia has many religious mendicants, darvesh or fakir, some of whom designate their sects by the names of holy men; some of them permit marriage, others are celibates. The Adhumian or Ajumian sect take their name from Sultan Adhum, who resigned his throne to become a mendicant; they do not marry, are wanderers, and are seen constantly moving their lips in silent prayer.

The Christian sects in Persia are of the Armenian and of the Nestorian Churches. The Nestorians claim to be Kaldani; they inhabit the district of Urumia in Azarbijan, and the mountains to the south. They live amongst Kurd; and their patriarch has dwelt at Kojamis near Julamerk, in the heart of the Kurd mountains. Their number in Persia, Turkey, and Kurdistan is about 200,000,—wild, brave, and grasping. About the year 1870 they were attacked by the Kurds, and numbers massacred. There are throughout Persia, as in Afghanistan, Turkish Arabia, Turkey, and the west coast of India, small bodies of Jews, who are occupied in petty traffic and as distillers.

Fire-worshippers, followers of the doctrines of Zertusht (Zoroaster), are still to be found in different parts of Persia. Yezd is a town of 30,000 souls, of whom 1000 are Jews and 4000 fire-worshippers, there designated Gabr (Gaour), but styled Parsee in British India, after their original home. The merchants of Yezd visit Bombay, the Mauritius, Java, and China.

Hindus are met with in many parts of Persia, engaged in financial and mercantile transactions. The town of Turshez, 36 miles N.E. of Turbat Haidari, is occupied by Hindus from Multan and Jeysulmir.

Karbala, in Turkish Arabia, and in Persia, Mashad, and Kum, are sacred towns. Kum is in Irak-i-Ajam, 80 miles from Teheran. The sister

of Imam Raza is buried there, and the town is the most celebrated of the sanctuaries (Bast) of Persia. In Mashad, the capital of Khorasan, the Imam Raza was interred; his shrine is a sanctuary even for murderers, and the people from very great distances send the bodies of their dead relatives to be interred near the saint's tomb. Formerly the whole mahalah, or quarter of Bidabad, was reckoned sacred, like the Kedesh of Galilee, and the Shechem of Samaria and Hebron in Judea. The town of Ardebil (lat. 38° 14′ N., and long. 48° 21′ E.) has the tombs of Shaikh Safi-ud-Din, and of his descendant Shah Ismail, the founder of the Saffavi dynasty, and on their account it is a place of pilgrimage.—*Porter's Travels*, i. p. 475; *Kinneir's Geographical Memoir; Malcolm's History of Persia; Pottinger's Travels, Beluchistan and Sinde; Rich, Residence in Kurdistan; Chesney's Euphrates and Tigris; Fontanier; Taylor; Layard; Burnes; Conolly; Ferrier; Baron de Bode, Travels; Colonel MacGregor, Central Asia*, iv., quoting *Abbot, Chardin, Clerk, Eastwicke, Fraser, Grant, Holmes, Monteith, Morier, Ogilvy, Ouseley, Pelly, Pasley, Rawlinson, Stewart, Stanton, Shiel, Tod, Wagner, Wilson.*

CENTRAL ASIA, as here to be noticed, is known to the natives of Persia as Turan. Its western boundary may be taken as the Caspian Sea and the Ural; on the east is the lofty table-land of the Bolor mountains, which form the western boundary of Chinese Turkestan and Zungaria; on the S. and S.E. are Persia, Kashmir, Kafiristan, and Afghanistan; and its northern boundary is western Siberia. The northern half of Central Asia consists of the Kirghiz desert, which is mountainous and rugged on the east, and full of saline steppes on the west. In the midst of the southern half lies the Sea of Ural, on the western side of which up to the Caspian Sea there stretches a broad tract of desert. But on the eastern side of Central Asia is the fertile tract watered by the Syr Darya and Amu Darya,—the Jaxartes and the Oxus,—and which was conquered by Russia in 1864 and 1868.

The countries north of the Hindu Kush, which lie in the valley of the Oxus and its tributary rivers, from Balkh upwards, have several designations. Eastwards of that city lies Kunduz, and Badakhshan is farther eastward. To the north of this territory are the hill states of Wakkan, Shughnan, Darwaz, Kulab, and Hissar, whose rulers claim a descent from Alexander the Great. To the eastwards of Badakhshan lies the plain of Pamir, inhabited by the Kirghiz, and beyond the Belur Tagh mountains are Chitral, Gilgit, and Iskardo, which extend towards Kashmir. South of Badakhshan is the country of the Siah Posh Kafir, who occupy part of the range of Hindu Kush and a portion of Belut Tagh.

Central Asia has a hardy peasantry, dwelling in the mountain region with its vast upland downs, well suited for summer pasture, partly descendants of the original inhabitants, and in part nomade races. At the foot of the mountains, in the tracts of surpassing fertility, Turk, Bokhariot, Kalmuk, Kirghiz, Uigur, Manchu, Chinese, and Iranian dwell in the well-watered plains.

The regions from the Polar Sea to the Hindu Kush, and from the interior of China to the shores of the Danube, have been occupied by nomade races from pre-historic times, along with descendants of Semitic and Iranian conquerors from the south. The more ancient occupants of Central Asia belong to the Iranian family. The later immigrants are from Mongoloid races. From amongst these came the warrior nations known in the west as the Hun, the Avar, the Uigur, the Kutrigur, and Khazar. And the manner of living, the customs, and physical conditions of the tribes, whose arms reached from the Jaxartes to the heart of Rome and Gaul, had much resemblance to those of the present inhabitants of Central Asia, nomades, who are in their habits the same as they were 2000 years ago. In the tent of many a nomade chief a similar life is observable as that described by Priscus as prevailing at the court of the king of the Huns. Attila, Chengiz Khan, and Timur, in historical characters resemble each other; and Vambery was of opinion that energy and good fortune could now almost produce on the banks of the Oxus and Jaxartes one of those warriors, whose soldiers, like an avalanche carrying everything before it, would increase to hundreds of thousands, and would appear as a new example of God's scourge, if the powerful barriers of European civilisation, which has a great influence in the east, did not stop the way.

Considerable portions of the region are occupied by the Turk race. These are usually recognised to be in ten tribes,—Uigur, Uzbak, Usmanli, Yakut, Turkoman, Nogaian, Basian, Kalmuk, Kara-Kalpak, and Kirghiz.

The Uigur occupy part of the region known to Europe as Chinese Tartary, and the Uzbak are their western neighbours under the Chinese. They at present occupy Kashgar. They are called Hiung-nu by the Chinese, and in Europe are known as the Hunigur, Hongre, or Hun. About B.C. 200 they dispossessed the Yu-chi, but were in turn subjugated by the Chinese before the Christian era.

Uigur, according to Professor A. Vambery, are the most ancient of the Turkish tribes, and formerly inhabited a part of Chinese Tartary, which is now occupied by a mixed population of Turk, Mongol, and Kalmuk. They were the first who reduced the Turkish language to writing, borrowing the old Syriac characters from Nestorian Christians, who had come to their country as early as the 4th century of the Christian era. The manuscripts of this language, written in the characters mentioned, afford, therefore, the most ancient and valuable data in investigating the history not only of Central Asia, but of the whole Turkish race. He believes he had collected all that has been discovered of the Uigur language, though the Uigur had a literature, and were very fond of books, at a time when the western world was involved in ignorance and barbarism. The most valuable manuscript he obtained bears date 1069, and was written in Kashgar; it treats of ethics and political subjects, and forms a kind of manual of advice to kings how to govern with justice and success. It reveals the social condition of this people, and forms the basis of the later regulations by which all Turks are governed. The Uigur writing character was the original source of those still used by the Mongol and Manchu. The modern Tartar characters are written (and, it is presumed, read) in vertical lines from top to bottom of the page, the lines

succeeding each other from left to right. What Uigur meant with Mongol authors is doubtful, but the people and language so called by the western Asiatics were Turki. Captain Valikhanoff speaks of the language now in use at Kashgar as being Uigur, but it is not clear whether he means that this term is known to the natives.

Uzbak are now dominant in Khiva, and are spread thr[illegible] the Bokhara khanate. Their early histor[illegible] obscure, but prior to Chengiz Khan's time all Mawar-u-Nahr was occupied by a Turk race, with whom the modern Uzbak claim identity, and many names of their tribes, as Kungrad, Naiman, Kipchak, Jalair, etc., are identical with those of the Kirghiz, Kara Kalpak, and Turkoman. Their prominence in the khanate of Bokhara dates from the times of Chengiz Khan, whose grandson Shaibani, brother of Batu Khan of Kipchak, son of Jogi (eldest son of Chengiz), ruled over a number of Turk and Mongol tribes occupying the country between the river Ural and Sea of Ural, and also the regions watered by the river Jaik, which flows into the Caspian. With these he founded the khanate of Tura; and one of his descendants, Uzbak Khan, was so beloved, that his people gave his name to the nation. One of his descendants, a powerful ruler named Abul Khair Khan, advanced towards the S.E., under whom the Uzbaks were composed of a number of Turki and Mongol tribes to whom others joined, attracted by their prestige. Their genealogical list, Nasal-namah-i-Usbakia, enumerates 97 tribes, one-third of whom are settled in the khanate, viz. Aimak, Arabet, Chagatai, Chiljuyut, Buzachi, Byagrin, Byatash, Jid, Juyut, Galiachi, Gurlyat, Durmen, Khitia, Kir, Kirkit, Karlik, Kipchak, Kalmuk, Katagann, Kanchin, Kungrad, Kunigaz or Kanigaz, Kureme, Lakaye or Lokhai? Manghit, Naiman, Sarai, Tatar, Turkomans, Uigur, Ung, Ungachit, Uzoi, Yabu, Yuikhun.

The Manghit is the chief and dominant tribe, some of them being settled in towns, others nomade near Karshi and Bokhara. The settled portions cultivate by means of their Persian slaves. Intercourse for ages with Persian women, and of other Turki tribes who have joined them, attracted by their prestige, has largely modified their physical appearance. Burnes, Abbott, Elphinstone, Fraser, Vambery, Khanikoff, Collett, and others have noticed them variously; but they may be described as haughty and overbearing in demeanour towards all the other races of the khanates, averse to labour, rather given to acts of violence, but brave, simple, manly, straightforward, and comparatively honest. The simpler though ruder Uzbak of Khiva is the better.

Urganj, or Yengi Urganj, the modern Urganj, formerly the capital of Khiva, is a flourishing commercial but walled city on the banks of the Oxus, about 18 miles N. of Khiva. The inhabitants are chiefly Tajak. Old Urganj, the ancient capital of Kharazm, is in ruins.

Usmanli are descended from a pastoral band of Oghuz Turk, who were migrating under the leadership of Ertoghrul. The tribe, A.D. 1224, had left Khorasan, and rested for a time in Armenia, and, during their progress westward, Ertoghrul aided successfully a small army of Ala-ud-Din, the Seljuk sultan of Iconium. They take their present tribal name from Ertoghrul's son Usman, and their numbers are about 11 or 12 millions, scattered over the whole Turkish empire in Europe, Asia, and Africa. They form the landed proprietors, the aristocracy and bureaucracy of Turkey; and their language, the Usmanli, is spoken by all persons of rank and consideration, and by all government authorities in Europe, Syria, Egypt, Tunis, and Tripoli. In the southern provinces of Asiatic Russia it is the language of the people along the borders of the Caspian, and through the whole of Turkestan. It is heard even at the court of Teheran.

The Turkoman group of tribes has been known from the early ages as a distinct branch of the Turkish race. They were first known historically as having come from the neighbourhood of Mangishlak on the Caspian, but they have traditions which assert that they lived originally far to the east, and travelled thence in a N.W. direction; and isolated groups are indeed found located on the supposed line of route, in the district of Jizikh, north of Karmina and Samarcand, which, although living for ages apart from the rest of the race, still retain all the characteristic features of the race. Soon after the death of Timur, the tribes overran and occupied Persia, and Azun Hasan, chief of the Turkomans of the White Sheep, overthrew and killed in battle Abu Said Mirza, the most powerful of Timur's descendants. The last chief of this dynasty, Murad Beg, was driven out of Baghdad, A.H. 908, by Ismail Shah of Persia, and was finally defeated and slain by the Persians, A.H. 920, A.D. 1514.

At present the various tribes, entirely nomade, have no political connection with each other, nor any common head, and the power and importance of the race has greatly fallen. But the Mameluk of Egypt were of Turkoman origin; and the Turki races in the N. and W. of Persia and adjoining districts are of this stock. For a long time past they have been employed as mercenaries by Khiva and Bokhara, and they will serve any master who will pay them well. Nadir is said to have had the whole race in his pay; and Aga Muhammad Khan, the founder of the Kajar dynasty, is said to have employed them.

They extend from the Caspian eastwards to Balkh, in the south of the Amu (Oxus), and from that river southward as far as Herat and Asterabad, a tract almost all desert, excepting the districts watered by the Atrak, Amu, Gorghan, and Murghab, where they cultivate the soil.

They are chiefly nomade (charwar), but partly settled (chumur). The latter cultivate, have large flocks and herds, and keep fowls, but have few camels; the nomades have numerous camels, sheep, and goats. Both classes rear horses. The Turkomans have nine tribes,—Ali-ali, Arsari, Chandora, Goklen, Kara, Salor, Sarika, Tekke, and Yomut,—each of them with several taifa or tira, clans or branches. The Russians estimate their numbers at 600,000, in an area of 21,000 square miles.

The Ali-ali, about And-khui, have 3000 tents = 15,000 souls. The Arsari are on the banks of the Amu, about Charjui and Lab-i-Ab, and northwards as far as Kirkinjuk and Karakul. In the end of the 18th century they arrived from Mangashlak. Those on the Amu produce silk, the finest in the khanate. They have 20 clans,

and have 50,000 to 60,000 tents = 250,000 or 300,000 souls.

The Chandor, seven or eight clans, have about 12,000 tents. They frequent the country lying between the S. shores of the Caspian and the Lower Amu.

The Goklen are agricultural, settled, and the most peaceable and civilised of the Turkoman; dwell in the rich country about Garjan; most of them are Persian subjects. They have ten clans, and about 10,000 tents.

The Kara, a small but very savage tribe, at war with all their neighbours, are found about And-khui, and near wells between And-khui and Merv.

The Salor have been famous for their martial qualities ever since the Arab invasion. The Constantinople dynasty is said to belong to them. At present they have three clans, with 8000 tents. The Sarakhs near Merv are said to be of this tribe. They are rich in cattle, and cultivate. They and the Sarihs early left Mangishlak. The Sarakhs are equally brave; they are occupying about Panjdik, on the Murghab, but are at war with most of the other tribes. They have about 10,000 tents, in five clans.

The Tekke have their principal stations at Akbal and Merv. They are the most numerous and powerful tribe. They have less than the other tribes of cultivable land within their borders, and are more dependent on plunder. Their incursions are much dreaded in the N.E. of Persia, as well as in the direction of Herat. Their principal taifas are the Bakshi, Otemisch, and Totamish, with numerous subdivisions, and they are said to number 60,000 tents = 300,000 souls. In 1881 they submitted to Russia.

The Yomut are said to have 31,000 families, of which 16,000 are subject t Khiva, and 15,000 to Persia. They themselves allege that their tents are 40,000 to 50,000. They are settled on the eastern shores of the Caspian and on some of its islands, also in the Khiva desert near the Oxus. They have four clans; one, the Ogurjali, are under Persia, and are peaceable traders.

The purest type of the Turkomans is found amongst the Chandor and Tekke in the remoter deserts, are of middle height, small head, oblong skull, a rather long chin, and snub nose; cheek-bones not high; eyes remarkably bright, sparkling, and fiery; feet usually turned inwards; and usually fair in colour. The women are unveiled, have a ruddy, healthy look, and often considerable beauty. They are chaste, devoted to their families, and do all the hard work, the men confining their work to the care of their horses. The women make beautiful carpets; a long shift is their usual dress, to which they add a shawl and boots, with many silver trinkets, chains, amulets, etc.

The chief expeditions of the Tekke were to seize slaves in Herat, Khorasan, Seistan, W. Afghanistan, and Persia, whom they sold in Bokhara and Central Asia; while the Yomut infested the southern shores of the Caspian. The Ali-ali and Kara captured caravans on their way to Bokhara. The Chandor ill-treat their slaves, so as to be a scandal to the neighbouring races. The slaves are mostly Persians of the Shiah faith; but they take the Sunni from Khaf and Herat, also capture Jamshidi and Hazara, occasionally an Afghan and a Hindu. The slave trade is regularly organized.

The Kara Kalpak is an industrious tribe of Bokhara and Khiva. They inhabit the delta of the Oxus, to which they migrated from the delta of the Syr-i-Darya in the beginning of the 19th century, in consequence of continual fights with the Kirghiz. They are supposed to be the race whom the Russians call Tchernie Kobluki. Their traditions are to the effect that about the 15th century they occupied the territory about Kazan, which they built. Afterwards Tartars came there. Subsequently, the city was taken by the Russians, on which the Kara Kalpaks left, and the Tartars remained. The Kara Kalpaks then led a nomade life for 130 years, but afterwards settled for about 30 years in Turkestan. About A.D. 1690, a war occurred, on which they again left Turkestan, and settled, part of them on the Lower Syr-i-Darya (Jaxartes) and Yani Darya, others on the right bank of the Zar-afshan, and 60,000 kibitkas on the Upper Oxus. Small numbers dwell on the right bank of the Zar-afshan, not far from Samarcand.

In appearance and dress they are intermediate between the Kirghiz, Kazak, and Kalmuk. They are tall, vigorous men, with more powerful frames than any of the Central Asian tribes, but clumsy, and with coarse features. They have large head, flat full face, large eyes, flat nose, slightly projecting cheek-bones, a coarse and slightly-pointed chin. Trotter says they have 10,000 to 15,000 tents in the Khiva districts; their tents are large and strong, and guarded by a breed of large dogs.

Kirghiz proper are called Burut by the Chinese, Kara Kirghiz by other Asiatics, and by the Russians, Diko-ka-mennyi (*i.e.* wild mountain people). They must not be confounded with the people called by the Russians Kirghiz or Kirghiz Kazak, a distinct nation, differing from the Kirghiz proper in appearance, in language, and in many of their habits and customs. Their name and origin are said by them to be derived from Kirk-kiz, forty maidens, the male ancestor being a red dog. Vambery, however, says the name is from Kir, a field, and Giz, root of the verb Guzmak, to wander. They call themselves simply Kirghiz. Their principal quarters are in the mountains around Lake Issyk-kul, and in the valley of the Chu; this valley and the Ala-tagh or Kirghiz-tagh mountains being their boundary to the north, from whence they wander into Chinese territory on the one hand, or into Khokand and Samarcand on the other, while to the south they range over the Pamir, Karatagin, and as far as Badakhshan and the eastern parts of the khanate of Bokhara. They are divided into two great sections, the On (right) or eastern Kirghiz, and the Sol (left) or western, both from a grandson of Kirghiz Beg. The tribes of the On are the Sary Bagnish, Bogu, Saltu, Cherik, Sayak, Adygive, Monandyr, Jadygyr, and Tungstar; those of the Sol are the Kokche, Soru, Mundu, and Kitai. They are ruled by their elders, styled Manap. Their chief wealth consists in cattle, sheep, and camels. They intermarry with the Kirghiz Kazak. They profess Muhammadanism, but retain some of the customs of the fire-worship. Few can read, and their women have much freedom, are unveiled, and there is a curious absence of jealousy. They trade in felts and pelts, skins of the martin and fox, and deer horn. Love of travel and war have often brought together the most distant branches; but whether

on the shores of the Emba, or of the Sea of Ural, whether in the environs of the Balkash and Alatan, there is little difference to be found in the dialects spoken by them.

The Kirghiz between the Ural and Lake Balkash, including the Buriat, are, of all Turks, most nearly allied to the Mongols. The great Kirghiz steppe is the eastern portion of a belt of low-lying country which stretches from Europe into Asia, along the frontier of southern Siberia, and is divided by the upheaved chain of the Ural mountains, which run in a north and south line. The Kirghiz hordes occupy the low plain which, commencing from the north-eastern shores of the Caspian, and continuing along the Eruba steppe, passes across the country north of Lake Ural, directly to the eastern end of the Balkash. They also inhabit the banks of the middle and lower courses of the Syr-i-Darya (Jaxartes), as well as the Kizzel Koom (red sand) deserts, which are localities taken possession of by them in more recent times.

Tungus are widely distributed; there are Tungus in China and on the Frozen Ocean. Manchu, who conquered China in A.D. 1644, and founded a dynasty, belonged to the Tungus. The Tshapodgir occupy between the Yenisei and Tunguska. Mongol and Tungus are few in number, and many of the tribes are dying out. Since the 8th century, the Chinese have known the Mongol as the Mung-ku, but they applied to them the nickname of Tata. This is the origin of the term Tartar, Tatar, or Tahtah, a designation used at the present day as vaguely as Scythia was by the Greeks. By a dialectal change in the Persian language, Mongol becomes Moghul, a term applied to emperors of India, successors of Baber, though Baber was not a Mongol, but a Turk, who wrote and spoke Jaghtai Turki.

The Hazara spoke the language of the Mongol so late as the time of the Baber. The two hordes of the eastern Mongol inhabit the eastern half of Gobi. The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones, paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the Lamas. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road.

Kalmuk call themselves Olot, 'the peculiar people.' They have four hordes,—the Zungar, the Turget, the Khoshod, and the Turbet. They also call themselves Durban-Oirad, the four allies. The meaning of the term Kalmuk is uncertain. The Turget tribe of the Kalmuk, feeling oppressed by the continually increasing power of the Zungar, emigrated to Russia in A.D. 1636, and were granted pasturage on both banks of the Lower Volga by the Czar Michael Feodorovitch. After the destruction of the Zungar power by the Chinese in 1756, in the reign of the Emperor Tsian Lung, the remnants of the Kalmuks rejoined their compatriots in Russia; but on the 5th January 1770, the great portion of the tribe, 150,000 souls of them, in 30,000 kibitkas, set out from the Lower Volga to return to China. They were beset on their route by the Kirghiz Kazak, by the Cossacks of the Ural, and by the Burut or Black Kirghiz, and by other Turk tribes; but 70,000 of the emigrants eventually reached their ancient pasturages,—about half the number of those who started from the Lower Volga.

At the present day, from 80,000 to 100,000 Kalmuk, following the Buddhist religion, are found in the Government of Astracan.

The Kalmuk in Bokhara are descendants of followers of Chengiz Khan, and of stragglers left by the Turget Kalmuk in 1771, in their migration from the Volga to Eastern Turkestan. The latter speak their own language.

Kazak.—The territory occupied by this race extends from the Caspian to the rivers Ural, Tobal, and Irtish, and the Altai mountains on one side, and to the Tian Shan and Hindu Kush and the Amu on the other. Their numbers are computed at 400,000 families, or between 2 to 2½ millions of souls, viz. the Great Horde, 75,000 families; Middle Horde, 165,000; and Little Horde, 160,000. At present the Middle Horde is more in contact with Russia, and is the most civilised, and three divisions roam within Russian territory. They have Mongol features, with black hair; are strong, healthy, and well made; slow, heavy, and ill-favoured. They are morose, vindictive, and revengeful; passionate, but not brave, greedy and avaricious; but are attached to their country, are grateful for kindness, and respect the aged.

Kazaks are chiefly nomades, with great flocks of sheep. They speak a corrupt form of Turkish.

Kazaks roam over the desert steppes that lie between Siberia, China, Turkestan, and the Caspian Sea. Russia, China, Khokand, Bokhara, and Khiva levy tribute on portions of this race; but they are true nomades, and cannot be said to be subjects of any particular power. They subsist on the milk and flesh of their flocks and herds. At the commencement of winter, when forage fails, the Kazak kills the old horses, camels, etc., and salts their flesh for winter food. They are Sunni Muhammadans.

In manner of life and language the Kazak is hardly to be distinguished from the Burut. In colour, the Kazak women and young men have white, almost a European complexion, which darkens by exposure. The Kazak have the short neck of the Turanian race, so different from the long-necked Iranians; and they have thick-set, powerful frames, with large bones; head not very large, crown round, and more pointed than flat; eyes less almond-shaped, but awry and sparkling; prominent cheek-bones, pug noses, a broad flat forehead, and a larger chin than the Burut; beard on chin thin, only hairs on both ends of upper lip. They deem a Kalmuk woman more beautiful than their own. The men in summer wear the Kalpak head-dress, and in winter the Tumak cap of fur, covered with cloth and flaps. They are almost all Muhammadans, but, like all nomade tribes, are lax in their observances, for they retain much of the Shamanist belief which they held prior to their conversion some centuries before. Cheiromancy, astrology, casting out devils, are common to all Muhammadans, but the Kazak draw omens from the burnt sacrifice of the shoulder-blade and the twisting of the entrails.

Iranians.—From the Vendidad opening chapters there seems in ancient times to have been a great kingdom in Central Asia,—an eastern branch, with

its primeval seats on the Oxus. The Iranian people, who were settled between the Oxus and the Jaxartes as early as the times of the Judges of Israel, still, however, hold their ground in the country, under the names of Tat, Tajak, Sart, Galsha, and Parsivan. A primitive and not impure Iranian population might still be found in almost every district, from the Indus to the Jaxartes, and throughout the valleys of the Oxus. And Persian, Kurd, Armenian, Osset, and Tajak are dwelling in the countries to the W. and N.W. of India.

Iranian races have always been known for their refinement and high civilisation, from which Europe borrowed through the Byzantine and Greek culture, and the Persians have long and faithfully retained the features of its national characteristics. Though overrun by the Semitic and Turanian races, the Iranian has borrowed little or nothing from them, but has exerted over them powerful influence. According to Khanikoff (Sur l'Ethnographie de la Perse), the Iranian of Persia came from the east of modern Persia, about Segestan and Khorasan, and moved to the west in pre-historic ages; and, though altered by the attacks of the Turk tribes from the north, or from contact on the west and south with Turanian and Semitic elements, the Mede is everywhere recognisable as the same as described by Herodotus and later Greek writers. The arrow-headed writing at Persepolis enumerates the Iranian people of that day. The form of the Iranian is spare but elegant, even noble, but there have always been differences between the Eastern and Western Iranians.

The East Iranians are—(a) the Segestani or Khafi, (b) Char Aimak, (c) Tajak and Sart; each of which counts many subdivisions. The principal number of the Segestan people occupy Khaf and its neighbourhood, Ruy, Tebbes, and Birjan.

The people of Khorasan are greatly intermixed with Turk elements. The language of modern Iran is laden with Arabic and Turkish words; but in the east the language is much like that in which Fardusi wrote his poem, free from words of Arabic origin.

The Char Aimak consist of four peoples, the Taemuri, Taemuni, Firoz Kohi, and Jamshidi, all of them of Iranian origin, and all speaking Persian. The Aimak, who graze their flocks in the Paropamisus, are brave and relentless; and Afghans, when travelling, whether proceeding from Balkh, Kabul, Kandahar, or Herat, never enter into the mountain districts of these intrepid nomade tribes.

The Taemuri dwell at Gorian and Kuh'sun, on the western boundary of Herat, and in the villages and towns situated east of Iran, from Tarbat Shaikh Jam as far as Khaf. About a thousand of their families dwell near Herat.

The Taemuni dwell in the Jolgha-i-Herat, from Kerrukh to Sabzawar, the few who have extended to Farrah being styled by the Afghans, Parsivan. Each member of the Char Aimak knows no greater enemy than the Afghan, and all attempts to form Afghan colonies amongst them have failed. The Taemuni are of a wild, warlike nature, though agricultural.

The Firoz Kohi, a small number of people, about 8000, dwell on the steep hill N.E. of Kala Nao, and from their inaccessible position afflict their whole neighbourhood with their robbing and plundering. Kala Nao, on the summit of the mountain, and the fortified places of Darz-i-Cutch and Chaksaran, are considered similar to whole nests of the Bakhtiari and Luri in the environs of Isfahan. They have a resemblance to the Hazara, but their forehead, chin, complexion, and figure are less Turanian. They are decidedly Iranian. They take their name, the Firoz Kohi, from Teheran. Timur settled them by force in Mazandaran, but they soon returned to their own country. They have a few cattle, and they sow a little, and plunder the caravans travelling on the Maimani road, or make inroads on the scattered tents of the Jamshidi.

Jamshidi are the only tribe of eastern Iranians who are exclusively nomades. They derive their descent from Jamshid, and moved out of Segestan to the shores of the Murghab, which they have occupied from pre-historic times. They live in the neighbourhood of the Salor and Sarik Turkoman, and they use the round conical tent of the Tartars, surrounding it with felt and a reed matting; and their clothing and food are Turkoman, as also their occupation, for they are as great man-stealers. They excel the other Aimak as horsemen, and for a chapao, band themselves with men of Herat or with the tribes of Turkomans. It was this cause that led Allah Kuli Khan to transport them from Khiva to the banks of the Oxus, after he had conquered them with the allied Sarik. After a residence of 12 years, they fled, and returned to the town of Murghab. The Jamshidi is polite in word and manner. They still retain parts of the Zoroastrian faith, reverence fire, and pitch their tent door to the east.

The Tajak is Iranian. He is met with in largest number in the khanate of Bokhara and in Badakhshan, but many have settled in the towns of Khokand, Khiva, Chinese Tartary, and Afghanistan; some even to the south, in Baluchistan. The Tajak is of a good middle height, has broad, powerful frame of bones, and especially wide shoulder bones; but they diverge from the Iranian; they have the Turanian wider forehead, thick cheeks, thick nose, and large mouth. The Tajak originally came from the sources of the Oxus in the steppe of Pamir. The term is from Taj, a crown, the fire-worshipper's head-dress. The Tajak, however, does not so style himself, but regards the term as derogatory. The Turks style the Tajak, Sart. The Tajak is covetous, unwarlike, and given to agriculture and trade, but fond of literary pursuits, and polished; and it is owing to their preponderance in Bokhara that that city has been raised to the position of the headquarters of Central Asiatic civilisation, for there, from pre-Muhammadan times, they have continued their previous exertions in mental culture, and, notwithstanding the oppressions which they have sustained from a foreign power, have civilised their conquerors. Most of the celebrities in the field of religious knowledge and belle lettres have been Tajaks; and at the present day the most conspicuous of the Mullah and Ishan are Tajaks, and the chief men of the Bokhara and Khiva court are Tajaks, or, as the Turks style the race, Sart. Professor Vambery considers the Tajak and Sart identical, but he recognises that in their physiognomic peculiarities the Sart differs greatly from the Tajak, being more slender, with a larger face, and a higher forehead; but he attributes these changes to frequent intermarriages between Sart men and Persian slaves. The Tajak

have two branches,—the Galcha and the Tajak of the plains. The Galcha inhabit some of the mountainous districts of Badakhshan, Wakhan, Shighnan, Karatagin, and other Hill States to the east of the khanate of Bokhara. They are also said to be found on the Upper Zar-afshan, in the mountain S.W. of Tashkand, and to the E. of Panjkand; and in the latter locality they are called Karatagin. Some, in the secluded alpine valleys of Afghanistan, have preserved their Irani type and language better than the Tajak of the west, who have been exposed to the waves of the Turkish and Mongol conquerors, and who, though obviously Persian, have more or less the heavy cheeks, thick nose, large mouth, and wide forehead of the Turk race.

The language of the Galcha resembles Persian, but has many words of an older Aryan type. The dialects of the Hill States also are known as the Wakhi, Ishkashimi, Shighnani. The Galcha are brave, more than a match for the predatory Kara Kirghiz. The different states are each ruled by a hereditary monarch, most of whom claim descent from Alexander the Great. In their states they form separate communities. In all the others they are dispersed amongst the Turks and Uzbak races, and are following agricultural and commercial pursuits. They have little feeling of nationality, and Khanikoff and Vambery describe them unfavourably for courage, morals, or honesty. The Tajak of the plains are zealous Sunnis.

Ishkashim is a small Tajak state on both sides of the Upper Oxus, tributary to the Mir of Badakhshan. It contains the ruby mines for which Badakhshan is famous.

Wakhan is a small territory in a portion of the valley of the Upper Oxus, or Darya-i-Panj, extending about 94 miles from the fort of Ishkashim, in about lat. 36° 45′ N., long. 71° 38′ E., on the Pamir Kul branch of the Oxus, 42 miles beyond Kala-Panj. It is N. of Hindu Kush, between the Chitral country and the Pamir khanate of Shighnan. It has always been subject to Badakhshan, which it touches in the west. Its inhabitants are of purer Aryan stock than the Tajak, and their language is akin to Sanskrit or Takri. It holds the southern route of the caravan between Turkestan and Afghanistan. To the N. and S. the valley is bounded by high hills, on whose slopes the Wakhan people pasture their flocks. They are Shiah Muhammadans, disciples of Aga Khan of Bombay (died 1881), to whom they sent contributions. They dress in thick trousers and choghas. The valley is ruled by a hereditary chief, whose revenue is derived from the slave trade in which he engages.

Eastern Turkestan rulers have been Muhammadan from the time of Taghalaq Timur, who was, we are told, the first Muhammadan sovereign of Kashgar of the lineage of Chengiz. Buddhism, indeed, was found still prevalent in the cities of Turfan and Kamil at the time of the embassy of Shah Rukh in 1419, and probably did not become extinct much before the end of the century. But in the western states Muhammadanism seems to have been universal from an earlier date, and maintained with fanatical zeal. Saintly teachers and workers of miracles, claiming descent from Mahomed, and known as Khaja or Khoja, acquired great influence, and the sectaries attached to the chief of these divided the people into rival factions, whose mutual hostility eventually led to the subjugation of the whole country. For late in the seventeenth century, Khoja Appak, the leader of one of those parties called the White Mountain (having been expelled from Kashgar by Ismail Khan, the chief of that state, who was a zealous supporter of the opposite party or Black Mountain), sought the aid of the Galdan Khan, sovereign of the Eleut or Kalmuk of Zungaria. Taking the occasion so afforded, that chief in 1678 invaded the states south of the Tian Shan, carried off the Khan of Kashgar and his family, and established the Khaja of the White Mountain over the country in authority subordinate to his own. Great discords for many years succeeded, sometimes one, sometimes another being uppermost, but some supremacy always continuing to be exercised by the khans of Zungaria. In 1757 the latter country was conquered by the Chinese, who in the following year, making a tool of the White party, which was then in opposition, succeeded in bringing the states of Turkestan also under their rule.

The *Turk*, wherever met with, is ever heavy and lethargic in his mind and body, but in his resolves firm and stedfast, not from principle, but from apathy and aversion to change; and it is from these characteristics that his appearance is earnest and solemn,—a profound seriousness, a marked cold expression of countenance, with a great inclination to pomp and magnificence. An Uzbak or Turkoman has a proud bearing, as if possessed with a self-consciousness of greatness and power. The Usmanli Turk's love of independence is boundless. He considers himself born to rule; that hunting and war alone are worthy of him, and husbandry ignominious. In Central Asia, agriculture is exclusively in the hands of the Persian slaves, commerce and business with the Tajak, Hindu, and Jew. The Turk is intellectually the inferior of the Iranian and Semitic nations. This defect is noticed by other nations, who apply the terms Turkluk (Turkdom), Kabalik (coarseness), and Yugunluk (thickness), Sadeluk (simpleness); and with these qualities, as the Usmanli is easily taken in by the Armenian, Greek, and Arab, the Turk is as easily so by the Tajak and Hindu. In transactions the Turk are regarded as possessing more honesty, frankness, and confidence, plainness, simplicity, and uprightness. Compared with the Persians, the Turk is a faithful servant, attached soldier, and upright man. They are more brave, persevering, and love more to rule than any other Asiatic people. They are unpolished, wild, and uncultivated, but seldom cruel out of malice. They crave riches, but only to expend them. They exact much labour from their subordinates, but protect and deal liberally with them. The Turk is innately a nomade, and, like other nomades, is distinguished for hospitality. The Burut is the wildest and most savage and most superstitious of them, but less malicious than the Kirghiz and Turkoman. The Burut has not wholly abandoned Shamanism, and knows little of the Muhammadan religion.

The *Kazak Kirghiz* are less brave and warlike, though readily engaging in a pillaging expedition. They form the bulk of the Turkish nomades, and are for the most part devoted to a wandering life; in very few instances have they settled.

The *Kara Kalpak* are considered dull and foolish.

They are even less warlike than the Kirghiz, they have seldom appeared as conquerors, and are even less employed as mercenaries. They are largely occupied as cattle-breeders, and they are active, benevolent, and faithful.

Many of the *Turkoman* dwell in a half-settled state along the left bank of the Oxus as far as Char Jui, and in Khiva. They are notorious amongst all the races of Central Asia as the most restless adventurers. Throughout the whole globe it would be difficult to find a second nation with such a restless spirit and untameable licentiousness as these children of the desert. To rob, to plunder, to make slaves, is to the Turkoman honourable; they are always poor, and are dirty and avaricious. Their country is the wildest and most savage, where even keeping a few cattle gives only a scanty income.

The *Uzbak* are honest, upright, and have much Turkish open-heartedness; they are proud of their education, and represent all the best side of the national character of the Turks.

In *Central Asia*, the warrior, the shepherd, the priest and the layman, youth and old age, equally affect poetry and reciting of tales. The literature of the Muhammadans or settled nations, brought from the south, is filled with exotic metaphor and illustration. In the three khanates, the Mullah and Ishan have written much on religious subjects, but its mystical allusions are beyond the reach of the people. The Uzbak, the Turkoman, and Kirghiz esteem music as their highest pleasure, and often break out in song, singing soft minor airs. The Uzbak poetry on religious subjects is exotic, derived from Persian or Arabic sources. The Tartar compositions are tales, and relate to heroic deeds similar to the romances of Europe.—*Trotter's Central Asia, Bokhara; Collett's Central Asia, Khiva; Major Wood's Lake Aral; H. W. Bellew, C.S.I. Rigby; C. Markham in Moral and Material Progress; Mr. R. Cust in Philological Institute.*

AFGHANISTAN, in all historic times, seems to have been an arena in which powerful races have been striving for dominion,—Scythian, Mede, Greek, Persian, Moghul, and Turk races, Ghilzae, Saddozai, and Barakzai tribes; even the British have ruled there, and the limits of the ruler's sway have been continuously on the change.

Little is known of the occurrences up to the invasion by Alexander the Great. After that conqueror's death, his lieutenant Seleucus succeeded to the sovereignty of the Asiatic conquests. But under Seleucus' grandson, Afghanistan was taken from the Seleucidæ by aboriginal chiefs, and soon after formed, with Bactria, an independent state, which existed through 150 years. Subsequently Scythians made themselves masters of Afghanistan, and appear to have held possession of it up to the death of Mansur, when one of his officers, Sabaktagin, established an independent dominion over all the S. parts of Afghanistan, making Ghazni his capital. His son Mahmud, who died A.D. 1028, enriched Afghanistan with the spoils of India; but in the reign of Bahram, one of the Tartar's descendants, the Sabaktagin dynasty were deprived of all but the Panjab, and this too, in A.D. 1160, they lost. Afghan rulers at different times have laid claim to the region embraced between lat. 30° and 37° N., and long. 61° and 70° E.; but the whole of the country of the Yusufzai clans, of Kafiristan, of Chitral, of the Afridi, of the Waziri, and much of the Hazara country are essentially democracies, and pretend as little to owe allegiance as the Amir of Kābul cares to claim it; while Badakhshan, Kunduz, the Char Vilayat, the Aimak country, the Hazara, the Ghilzae, and the Kakar, as also Kuram, Khost, and Dawar, only yield obedience when the demand is backed by force. So little have the tribes amalgamated, that the region which Europeans designate Afghanistan is not even known by that name to the people who inhabit it. The term Afghan is hardly known to any of the Muhammadans of Asia, and the original countries of the various tribes is equally unknown. It has, however, been satisfactorily ascertained that the lower valleys of the Kābul country were once occupied by Buddhist and Hindu religionists, and that the present Afghan tribes have advanced into the N.E. corner of Afghanistan within comparatively recent historical times; the peaks of the Safed Koh, between Jalalabad and Kābul, bear such Hindu names as Sita Ram. The Yusufzai and other tribes in the N. are comparatively recent conquerors of the N. hills and valleys, where they have mixed with a free Hindu people, and are fairer than the other Afghan tribes.

There is the certainty that within the three last centuries there were people styled Gabar in the Kābul countries, particularly in Lughman and Bajor, also that in the days of Baber there was a dialect called Gabari. We are also told that one of the divisions of Kafiristan was named Gabrak. That in former times fire-worship existed to a certain, if limited, extent in Afghanistan, is evidenced by the pyrethræ, or altars, still crowning the crests of hills at Gard-dez, at Bamian, at Seghan, and at other places. Near Bamian also is a cavern, containing enormous quantities of human bones, apparently a common receptacle of the remains of Gabar corpses. At Murki Khel, in the valley of Jalalabad, and under the Safed Koh, human bones are so abundant in the soil that walls are made of them. There is every reason to suppose it a sepulchral locality of the ancient Gabar; and coins are found in some number there.

According to Captain Raverty, the people who dwell about Kābul and Kandahar, Shorawak and Pishin, designate themselves Br-Pushtun or Upper Afghans; and those occupying the district of Roh, which is near India, are called L'r-Pukhtun or Lower Afghans; and Major Fosberry suggests (J.E.S.) that the term Pathan, by which the Afghan races are generally known throughout British India, has been derived from Pushtun or Pukhtun. Although the tribes known by these names speak the Pushtu as a common language, they are not all of the same origin, but are dis-

tinguished by marked characteristics, moral as well as physical. One tribe repudiates another, and denies its Afghan origin. The names of Pathan, Rohilla, Afghan, which serve at the present time to designate the Indian Afghans, are really those of so many distinct races little blended together. In their own country they make no matrimonial alliances except amongst themselves, indicating their feelings as an original race. Afghan has been said to be only an Arabic plural of the word 'feghan,' which was applied to them about the time of Sultan Abu-Seid, of the race of Chengiz Khan, because of their constantly disunited state amongst themselves. The primitive tribe of the Afghans is called 'taifah,' a word which corresponds with that of nation. The first division of this primitive tribe are called 'firqa,' a tribe; and the subdivision of this, 'tirah' or branch.

Mr. Campbell supposes them to be Aryan, and probably of similar origin to the Jat. Several writers consider them to be descendants of one of the ten tribes of Israel, and seven books bearing on this subject were placed at the disposal of Surgeon-Major Bellew, and his examination of them showed their own belief to be that they are descendants from Saul, whose history in these books is in the main like that in the Hebrew Bible. Saul's two grandsons, Asaf and Afghana, served under Solomon.

In its physical features, Afghanistan is a star of valleys radiating from the Koh-i-Baba, and everywhere bounded by very rugged and difficult mountains; the two great ranges, leaving the Bam-i-Danial in the N., being the Mustagh and the Hindu Kush, with numerous offshoots from the latter. The Siah Koh is the S. branch of the Koh-i-Baba, from which the Helmand, the Hari-Rud, the Murghab, Balkh-ab, and Kunduz rivers rise.

The *Hindu Kush* range is traced from the S.W. corner of the Pamir in Central Asia, in about lat. 73° 30′ N., whence rise the Amu Darya, the Yarkand Darya, the Kunar, and the Gilgit rivers. It extends W. as far as the spur which divides the Ghorband valley from that of the Helmand, in long. 68° 30′ E., from which point it is called the Koh-i-Baba. In these limits it forms the watershed of the Oxus (Amu Darya) to its N., and the Kābul river to its S.; and its ramifications or breadth may be said to extend from lat. 34° 30′ to 37° 30′ N., nearly 200 miles. The passes from Chitral to Badakhshan across the Hindu Kush are Chitral, Ishtirab, Kagram, Nuksan, Kharteza, and Dara; from Deh Parian in the Panjsher valley a pass leads by Anjuman to Bamian; the other passes are the Thal, Khawk, Bazarak, Shatpal, Parwan, Saralang, Kaoshan, Gwalian, Gwazgar, Chardar, Gholalaj, Farinjal, and Ghorband.

The *Kohistan* region commences from Kaghan, which is a narrow glen stretching upwards from the northernmost point of the Hazara district for a distance of nearly 90 miles, and separating the maharaja of Kashmir's territory from the independent mountaineers. It is a district N. of that city, and has the valleys of Tagao, Nijrao, Panjsher, Ghorband, Charikar, Alishang, Alighur, and the Lower Kuner. The villages are small, but numerous; the Kohistani, 40,000 in number, have always been independent; their country is strong for defence. They are bold, violent, and unruly, and reckon it a disgrace to die in bed. They are prone to individual assassinations; their arms, a carbine, a firelock, a pistol, and short sharp dagger, a few bows and shields. In 1840 the British Indian forces had engagements at Parwandarra, Tutamdarra, Jalgah, Kahdara, Charikar, and Istalif.

Amongst them mulberry flour is the staff of life; and, in their perpetual quarrels, the mulberry plantations of the valleys have, to their credit, always been spared.

The *Suliman* range is thrown off to the S. from the Allah Koh ridge between Kābul and Ghazni, in lat. 69° 30′, and thence running southwards without a break, but throwing off many spurs, it forms the system of mountains of E. Afghanistan and Baluchistan. Takht-i-Suliman is the name given to two peaks on the spur of the Suliman range, which forms the S. watershed of the Zhob river, and ends in the Gomal river at Ghwalari. The N. peak is in lat. 31° 41′ N., long. 69° 58′ 40″ E., and rises 11,298 feet above the sea. The S. peak is in lat. 31° 35′ 40″ N., long. 70° 0′ 40″ E., and rises 11,070 ft. No European has ascended it.

As will have been seen, the Afghanistan country is entirely mountainous, but it has numerous flat-bottomed valleys hemmed in by the mountains. These valleys are so large as to permit the evolutions of an army, and this feature explains why these mountaineers carry on most of their warfare on horseback, and are proud of their cavalry and its elan. The region has many rivers of small size, and many irrigation canals. From its high levation above the sea, the climate is very severe. The people are chiefly pastoral nomades, and even when settled, live in tents. The towns are of no great size. Kabul, the present capital, has a population of 50,000 or 60,000 souls. The Kandahar population was estimated by Dr. Bellew at from 16,000 to 20,000 houses, or from 60,000 to 80,000 souls. Herat has from 6000 to 10,000 inhabitants; Maemana, 40,000; Kunduz, about 6000 or 7000; and Shibbargham, 12,000.

In calling their country Walayat, the Afghans distinguish two portions of it as—(1) Kābul or Kabulistan, N. of Ghazni and the Safed-Koh, as far as the Hindu Kush; and (2) Khorasan and Zabalistan, S. and W. from Ghazni to Persia and the desert of Seistan. Its greatest length is 750 miles, and greatest breadth 550 miles. Afghanistan is further recognised by its people as comprising the provinces of Kabul, Jalalabad, Ghazni, Kandahar, Herat, and Balkh, or, as the last is now called, Afghan-Turkestan. To these are sometimes added the districts of the Ghilzae and of the Hazara. Its ruler is known as the Amir, and his revenues are estimated at forty lakhs of rupees, or less than half a million sterling.

Kābul is the name of a province, a city, and a river. The city is in lat. 34° 30′ 30″ N., long. 69° 6′ 8·31″ E., and is 6396 feet above the sea. On the right bank of the Kābul river, near the junction of the rivers Kabul and Logar, and at the west extremity of a spacious plain, is an angle formed by the approach of two inferior ridges, the Koh Takht Shah and Koh Khojah Safar. The town is about 3 miles in circumference. The population, as has been said, amounts to 50,000 or 60,000 souls in about 9000 houses. Kābul is well situated as a site for commercial intercourse between India and Turkestan, being at the gorge of the nearest and most practicable passes connecting the two

countries. It is the seat of government of Afghanistan. The thermometer maximum in August is 90°, the minimum in October 30°.

The *Kazzilbash* dwell in the Chandol quarter, without the city, on the W. It is fortified. A brigade of the British Indian army occupied Kābul in the years 1839 to 1841, but had a series of reverses from the 2d November 1841 till the 6th January 1842.

The province of Kābul has the Koh-i-Baba on the N.W., the Hindu Kush on the N.; the Panjsher river is on the N.E., and on the E. it extends as far as Jagdalak. On the S. it has the Safed Koh and Ghazni, and on the W. the country of the Hazara. Much of this province is mountainous, but it contains a large quantity of arable land, rich along the base of the mountains. Wheat is the chief product, and after it barley and peas, the two last being largely consumed by the poor. Sheep, corn, rice, ghi, horses, and ponies are imported. The annual revenue amounts to £180,000.

The Kābul river rises by two heads, the northern from a copious spring at Sar-i-Chashmah, in lat. 34° 21′ N., and long. 68° 20′ E., at an elevation of 8400 feet. At a short distance beyond Kābul it receives the Logar river from the S., and thence assumes the form of a large stream, which becomes of importance at Jalalabad, and finally falls into the Indus at Attock, after a course of 300 miles.

Kandahar, a town and fortress in Afghanistan, is in lat. 31° 37′ N., and long. 65° 28′ E., and 3484 feet above the sea. It is situated between the Argandab and Tarnak rivers on a well-cultivated plain. It is 233 miles S.W. of Ghazni, 380 miles S.E. of Herat, and 144 miles N.W. of Quetta or Shal. It is an ancient city, supposed to have been one of those built by Alexander the Great, since whose time it has been successively in the hands of the Seleucides, the Arabs for 600 years, the Persians from A.D. 1535, the Chaghtai Turks, the Uzbaks, the Persians again, the Afghans (1747), the British (1839), again the Afghans, again the British (1880), and again (1881) the Afghans. A brigade of the army of British India held it from the 20th April 1839 to the 8th August 1843. It is surrounded by a mud wall 27 feet high, with six gates, and a ditch 10 feet deep and 24 feet wide. Its districts are occupied by separate tribes,—Barakzai, Nurzai, Alekozai, Popalzai, Bamezai, Bardurani, and Alizai. The houses are stated by Hough to be 40,000, by Bellew 16,000 to 20,000, and the population has been estimated at from 15,500 to 100,000. The citadel is on the N., and the tomb of Ahmad Shah is near. The place has many sickly people, and also many poor beggars and idiots (houlliad), who are reverenced. The trade to Herat and Mashad is in the hands of Persians. Wine is made at Kandahar. The summer is hot, but the winter pleasant.

The *Herat* province contains the districts of Ghorian, Sabzawur, Farrah, Bakwa, Kurak, and Obeh, in which there are 446 villages, with about 70,000 fighting men. The tribes are the Turkoman Tekke, Sarakh, and Salor, the Irsali, Charsanghi, the Persian Hazara, Jamshidi, Taemuni, Taemuri, and Firoz Kohi, and the Berbari Hazara. The city of Herat is in lat. 34° 22′ N., long. 62° 9′ E., and 2650 feet above the sea. It is built on the right bank of the Hari-Rud, and is distant as under:—

Bokhara,	600		

It is situated in a fertile and well-watered valley, surrounded by lofty mountains. The population has fluctuated from 6000 or 7000 to 100,000, as war or peace reigned. The people are mostly Shiah Muhammadans, but Afghan, Persian, Indian, Tartar, Turkoman, and Jew are there, all carrying weapons. Herat is the emporium for traffic between Kābul, Kandahar, Hindustan, and Persia. Carpets are made there of great beauty, ranging in prices from 10 to 1000 rupees. Its fortifications are nearly of a square form, 1600 yards by 1500 yards. It has been besieged oftener than any city of Asia. It fell to the Turkoman in the reign of Sultan Sanjar in 1157, who left not one stone upon another. In 1232 it was twice taken by Tuli Khan, son of Chengiz Khan. On the first occasion he put all the garrison to death, and on the second he massacred 160,000 of the population, only 40 persons escaping. Centuries afterwards it again revolted, and Miran Shah, son of Timur, entered the city with a large force and decimated the inhabitants; a similar fate overtook it when taken by Olong Beg, grandson of Timur. In 1477, Jahan Shah, a Turkoman prince, ravaged it. In 1554, Abad Khan, an Uzbak prince, burned and pillaged up to its gates. In 1607 it was sacked by the Uzbaks. In 1730 it was taken by Nadir Shah; in 1750 it fell to Ahmad Shah, Daurani. In 1823 it was besieged by the Persians; in 1824, by Kamran; from November 1837 to the 9th September 1838, it was besieged by the Persians, while Lieutenant Eldred Pottinger was within the walls, and his conduct and influence made the defence successful. On the 24th October 1856 it was surrendered to the Persians. But since then, in 1863 (27th May), it was taken by the Amir Dost Muhammad Khan, and after his death was again fought for by his sons and descendants.

Seistan province was formerly a separate dominion. In recent times it has been claimed by rulers of Persia, Afghanistan, Kandahar, and Herat. It is situated between lat. 30° 30′ to 32° N., and long. 60° 30′ to 64° E.; and at present it has the four districts of Lash, Shaikh-Nasur, Sehkuha, and Kandahar-Seistan, under four chiefs. In Lash are the Ishaqzai Daurani Afghans; in Sehkuha are Kayani and Towki Baluch; in Shaikh-Nasur are Sarbandi Baluch; and the Garm-sel has Baluch and Afghans mixed,—the total population being about 127,000. Numerous rivers from the N. and N.E. enter it, and at one period of the year overflow their banks. The most important of them are the Helmand, Farrah-Rud, Harut-Rud, and Khash-Rud. The Seistan lake is more a marsh than a lake, and wild hogs abound in its reedy parts, with clouds of insects, wasps, mosquitos, fleas, and flies. The bite of one of the flies is painful, and horses suffer much from them.

Afghan-Turkestan is a name that has been applied to all the Afghan dominions of North Hindu Kush and Koh-i-Baba. It comprises the Uzbak states of Maemana, Andkhui, Sar-i-Pul, Shibbargham, Balkh, Khulm, Kunduz, and Badakhshan.

Kunduz is the name of a district, a river, and a

town. The town is wretched, and is on the right bank of the river just before it joins the Farkhan river. It is 650 miles from Yarkand, 370 miles S.S.E. from Samarcand, 390 miles S.E. from Bokhara. The other fortified towns in the district are Hazrat Imam, Talikhan, and Rustak.

Maemana is a walled town 172 miles N.E. from Herat, and 28 miles S. of Bokhara. The inhabitants are Uzbak, with some Tajak, Herati, and a few Jews, Hindus, and Afghans. They are the bravest of all the Uzbak, and are renowned throughout Central Asia for their fearless and determined disposition. The district is 18 miles broad and 20 miles long, and the population is estimated at 40,000 families.

Khulm is the name of a river, a district, and a town. The town is 307 miles N.N.W. of Kābul, and 310 miles S.E. of Bokhara. The population of the district is estimated at 700,000 souls. Since the early part of the 19th century, Khulm has been visited by Moorcroft, Burnes, Lord, and Ferrier.

Shibbargham, 60 miles W. of Balkh, has 12,000 souls of the Uzbak and Parsivan races

Shaghnan district is on the left bank of the Amu Darya, between Vakhan and Rashan.

Vakhan is a district of Badakhshan-Afghanistan, which consists of the portion of the valley of the Amu Darya from Kala Khojah upwards, and includes the valleys of Sarhad and Sar-i-Kol, the last being a dreary, uninhabitable waste for the greater part of the year. The population is about 1000. The Mir claims descent from Alexander. It produces shawl wool.

Of these races and tribes, it may be mentioned that, physically, the Afghan people are among the finest on the earth, with a broad, robust, ruddy, manly look, and they are hardy and bold. They have a pleasant, frank, simple, unaffected way. About Kābul they are fair, many with red hair and blue eyes, but some of the tribes in the lower and hotter hills and valleys near India have rather dark skins. The majority are astute, intriguing, ambitious, and faithless; avaricious, fickle, uncertain, and crafty; and in bold, unblushing lying a Hindu is a mere child to an Afghan. But, since the middle of the 19th century, the eastern Independent and British tribes have been largely, and in increasing numbers, employed in the native army of British India. General Ferrier describes their black eyes as full of fire; the lids are tinged with antimony, for this, in their opinion, gives force and adds beauty and a dazzling brilliancy to them; their black beard is worn short; and their hair, of the same colour, is shaved off from the front to the top of the head, the remainder at the sides being allowed to fall in large curls over the shoulders. Their step is full of resolution, their bearing proud, but rough.

Every Afghan, writes Colonel MacGregor, is born a soldier; and their army, though in a miserable and confused state, moves with great rapidity, and over immense distances.

The mass of the army is cavalry. This form is adopted from the national character, and the nature of the climate and soil. Their love of war exceeds that of all other eastern nations; they are excellent skirmishers, and experienced foragers.

When he wrote (1876), the Afghan army, 71,000, was in three divisions:—

	Horse.	Infantry.	Total.
Kábul, ...	21,000	10,000	31,000
Kandahar, ...	12,000	6,000	18,000
Herat, ...	12,000	1,000	22,000

The horse was composed of Afghans, Kazzilbash, and Hazara; their infantry of mountaineers, Uzbak, Parsivan, Hazara, and Baluch. There were, besides, many Jazailchi and matchlockmen, all excellent skirmishers.

North of the Hindu Kush is the country of the Uzbak, which includes Maemana, Andkhui, Akcheh, Sar-i-Pul, Balkh, and Kunduz.

The Aimak and Hazara occupy the upper portions of the valleys of the Murghab, Hari-Rud, Helmand, and Arghandab, known as the Hazarajat.

The country of the Daurani extends for 30 miles north and south of a line drawn from Herat through Kandahar to Shal-kot (Quetta).

The Baraich Afghans are great camel breeders. They occupy Shorabak, due east of Seistan, on the banks of the Lora. Seistan lies on the rivers Helmand and Farrah-Rud, and the Seistan people occupy the lower portion of all the rivers running to the Seistan lake. They eat wheat and maize, and mutton, fowls, and hares. Their women are not pretty; their language is Persian mixed with other words.

Seistan has been at times Persian, and at times under the Afghans. Its adult male population has been variously estimated at from 20,000 to 30,000 families by Elphinstone, Taylor, Conolly, Ferrier, Leech, and MacGregor, and is supposed to amount to 127,500 souls, with 30,000 fighting men. Elphinstone supposes the original population to have been Tajak. Its inhabitants now consist of the Kayani, Sarbandi, Towki, Ishaqzai, and Shahreki, all of whom are shiahs, and of Baluch, who are sunni Muhammadans. Ferrier estimated the fighting men of the Baluch of Seistan at 30,000 or 35,000. Contrasting them with Afghans, he says, Afghans are good for a rush, but do not meet the shock of an attack or stand the fire of artillery. The Baluch surpass them in tenacity and bravery; they attack in small parties of ten or twelve, are bold in the advance, and remain firm under the fire of an enemy, tying their tunics together.

The great clan of the Ghilzae, once dominant and still powerful, occupy, on the N. and E. of the Daurani, the upper portion of the rivers Logar and Tarnak, and all the plain country between the E. and W. watersheds of these rivers.

The Siah Posh, and the kindred race in Chitral, are in a triangular tract bounded by the Panjsher river, the south range of the Kunar, and the Hindu Kush.

The Yusufzai occupy all the valleys which drain the Laspisar range and its ramifications. This tribe are involved in domestic strife, but are united against foreign aggression.

Southwards, fringing the eastern spurs of the Safed Koh, are the independent Momand, Afridi, Orakzai, Shinwari, Turi, Khatak, and Bangash ribes.

Still farther south are the Waziri, stretching across the debouchure of all the valleys from the Kuram to the Gomal, and shutting off from the plains the small tribes of Jaji, Permuli, Dawari, and Khostwal.

The Povindah occupy a triangular tract bounded by the districts of the Ghilzae, Waziri, and Kakar.

The Kakar extend N.E. from the Shal valley to the Takht-i-Suliman.

The Uzbak in Afghan-Turkestan are supposed to amount to 350,000, viz.:—

Kunduz, . . .	170,000	Shibbargham, .	10,000
Maemana, . .	80,000	Akcheh, . . .	7,000
Sar-i-Pul, . . .	60,000	Balkh, ...	5,000
Khulm, . . .	15,000	Andkhui, . . .	3,000

In their advance from the north, the Uzbak have been stayed by the Hindu Kush, and by the equal, if not greater, valour of the Afghan. The Kataghan tribe in the Kunduz province, north and south of the Amu Darya (Oxus), number 42,000 families.

Sar-i-Pul town is 100 miles S.W. of Balkh, and has about 18,000 souls, dwelling in houses and tents. The chief and most of the population are Uzbak.

The Saharai, literally people of the plain, is a tribe who call themselves Mongol. They inhabit the plain on both banks of the head-waters of the Murghab, and claim to have been settled there by Chengiz Khan, and to have ever since preserved their independence. They are a small patriarchal republic. They are idol-worshippers, but recognise a good (khuda) and an evil (shaitan) principle.

The Aimak are a Mongoloid race inhabiting the western portion of the Paropamisan mountains between Kabul and Herat. They are bounded on the north by the Uzbak, on the south by the Daurani, on the west by Persia and the Turkomans, and on the east by the Hazara. They acknowledge relationship with the Mongols, Chaghtai Turks, and Kalmuks, and intermarry with these nations. They are shepherds and cultivators, are brave and savage, plundering wherever an opportunity occurs. They speak a dialect of Persian, but Baber mentions that in his time many of them spoke the Mongol language. Their wars are carried on with great cruelty. They have four sections,—the Firoz Kohi, Taemuni, Taemuri, and Zuri. Aimak, in Turki, means a tribe.

The Taemuri and Hazara, west of Herat, are subject to Persia, dwelling in sandy tracts interspersed with barren hills.

The Taemuni inhabit the S. slopes of the Siah Koh branch of the Hindu Kush about Ghor, to the N. of Girishk and Sabzawur. They could collect 20,000 fighting men. They are a powerful tribe of brave men. They have a lead mine at Sharak.

The Firoz Kohi Aimak unsuccessfully defended themselves against Timur, and were deported to the neighbourhood of Herat. They now occupy the mountainous country between Herat and Maemana, extending up the Hari-Rud. They are estimated at from 20,000 to 30,000 families.

The Zuri inhabit Sabzawur or Isfazar, which is an extensive plain to the east of the road from Farrah to Herat, and situated among mountains.

The Aimak and the Hazara have been supposed to be of the same race, separated from each other by the sectarian views they have assumed, the Aimak being rigidly sunni, and the Hazara violently shiah. They resemble each other in their Tartar features and habits, and in the

despotic character of their government. Their chiefs are absolute, levy taxes, keep soldiers in their pay, and dwell in castles. The Aimak live in camps, in Khirgah tents, which they call Urd, each governed by a Ket Khuda.

The Hazara, or Hazarajat, are so called from the innumerable Taifah, or tribes, into which they are divided,—Hazar signifying in Persian a thousand. Their principal subdivisions are (1) Deh Zangi, (2) Deh Kundi, (3) Jaguri, (4) Faoladi, (5) Deh Chopān, (6) Shaikh Ali. They occupy the whole range of the Paropamisus, or the mountains extending between the Hindu Kush and the city of Herat, to within a few days' march of Kandahar. The inhabited parts are 5000 to 10,000 feet above the sea, and the highest peaks rise to 20,000 feet. Their numbers have been variously estimated at from 50,000 to 300,000 souls by Elphinstone, Bellew, Burnes, Wood, Leech, and Lumsden. They are supposed to be of varied origin. The Hazara of the hill country near Ghazni and Kandahar are Turanian in a marked degree, and are without doubt of Mongolian blood. They seem to be in many ways like the Brahui, and at one time they possessed the country on the Kalat side of Kandahar, and were then nearer to the Brahui than they now are. In appearance, these very much resemble the Gurkha; they have the same high cheek-bones, the same small eyes, very little beard, and no doubt are of Turanian origin.

The Hazara are a middle-sized race of stout make, with small grey eyes, high cheek-bones, and wanting in beard. They are of harsh aspect, and are ashamed of their beardless Tartar appearance. They are simple, mild mannered, and industrious, but unblushing beggars and thieves. They are, as a tribe, weak, vacillating, and disunited, very passionate,—at one moment fickle and capricious, and again merry, conversable, and hospitable. Their women are slender, handsome, engaging, and immoral. The Jaguri tribe follow the 'Kooroo Bistan' custom of lending their wives for a night or for a week, and do this to so large an extent that they are said to be losing their Tartar form of features, to which they have a great aversion. Broadfoot, however, limits his remarks on this part of their character to the observation that the women are ugly and not very chaste. The men do all out-door labour, and the women manage the house. They are never beaten. They sing and play on the guitar, and many of them are poets. Their out-door amusements are hunting and racing. Their clothing is made of the coarser camel-hair cloth called 'barak,' their boots of rough goat-skin, and they twist rolls of cloth around their legs. The women go unveiled; twist two or three lungi on their head like a tiara; they wear long woollen frocks, and boots of soft deer-skin, which reach to their knees. The weapons of the men are sword and matchlock, the latter being most trusted to. They manufacture excellent powder, and are good shots. Some of the clans have a military repute; they would make good soldiers, and might have risen to distinction, but they are disunited. Their food consists chiefly in the flesh of their sheep, oxen, and horses; grain is scarce, and their bread is tasteless, as few of them can afford to use salt. They are poor, and in times of scarcity they voluntarily dispose of some of their children to the Uzbak slave-dealers. Each village is defended by a high tower capable of containing ten or twelve men, loop-holed, with a kettle drum, and in time of peace a single man remains in the tower to sound an alarm if necessary. They are violent shiahs, reverence Ali and his Syud descendants, but practically they have no religion, observe no forms or fasts, and have no form of prayers. They speak a kind of Persian; they are very ignorant and illiterate. Their titles are Khan, Sultan, Ikhtiar, Wali, Mir, Mehtar, and Turkhan. They barter men, women, oxen, cows, sheep, ghi, carpets, sulphur, and lead, with merchants from Kābul, Herat, Turkestan, and Kandahar, in exchange for coarse cotton cloth, chintzes, tobacco, felts, carpets, dye-stuffs, iron spades, plough coulters, molasses, and raisins. Almost every tribe is at war with its neighbours; and they are constantly exposed to inroads of Uzbaks from the north, who sweep away whole villages into slavery. The Aimak also carry off as many of them as they can conquer or kidnap; and the chiefs of their own race in their petty wars steal each other's subjects and sell them to Turki merchants. All the unskilled labour in Kābul is done by Hazara, some of them slaves and some of them free; and in winter there are not less than 10,000 of them residing in the city, earning a livelihood as porters and by clearing the snow from off the house-tops. The Hazara pay tribute to the Afghans. Their property consists in dumba (big-tailed) sheep, and a small, hardy breed of horses. Their country has lead and sulphur; they make 'barak' or hair cloth and good carpets.

The Jamshidi Hazara are of undoubted Iranian extraction. These are estimated at only 8000 to about 12,000 families, and are very poor. They inhabit the country north of the range of mountains which bound Herat. They live in black felt tents; they assist the Turkoman in their slaving raids. The women make fabrics of wool and goat's-hair, which sell well in Persia.

The Hazara Zeidnat are a rashly brave, ferocious mannered tribe, occupying the country at the sources of the Murghab river in Afghanistan, and could muster 12,000 fighting men. They number 28,000 tents. They make large quantities of cloaks from 'barak' hair-cloth, rear horses, and have great flocks of sheep, goats, and herds of camels and oxen. In 1847, Yar Muhammad defeated Karimdad, and deported 1000 of their families to Herat; and in 1857, the Persians, after their capture of Herat, removed the whole tribe within the Persian territory, taking from them all their baggage and cattle to prevent them running away. There are no better horsemen in Asia. Their women pride themselves in their ability, when necessity requires, to mount a horse, and use a matchlock and sword with an intrepidity equal to that of their warlike husbands and brothers. They are not pretty, but are well made, enjoy perfect liberty, and their husbands are not jealous of them. In time of peace they do all the household and field work, and with their children weave the 'barak' cloth.

The section of the Zeidnat inhabiting the country 100 miles N. of Herat are sunni Muhammadans. They are renowned for their courage, are considered the most noble of the Hazara, and have the title of Sar-i-Khana, literally chief of the race. They have 28,000 tents. They have numerous flocks of sheep, camels, and buffaloes, and rear

excellent horses. They make 'kourk' or 'barak' hair-cloth from the fine silky wool that grows on the belly of the camel. A piece of barak costs from Rs. 5 to Rs. 40, and suffices for a robe. These are worn in the winter by Afghans and Persian nobles. The wool on the other parts of the camel's body makes a coarser cloth. Their horses are of the Turkoman breed, smaller and not so well formed as those of the Teki, but steadier, and their powers of endurance are unequalled.

The Pusht Koh Hazara dwell S. of the Hindu Kush and its Safed Koh branch. They are divided amongst themselves, and constantly at war with the Afghans.

The Daulat Pah section of the Hazara inhabit a portion of the plain of Urt and valley of Siah Sang to the south of Bamian.

The Deh Zangi Hazara is a great tribe occupying the country N.W. of Bamian. They have four sections, and 10,500 families. They are Shiahs. Most of the Hazara slaves in Turkestan are of this tribe.

Timur seems to have been the last who held the Hazara in subjection. After his death they resumed independence.

The Daurani Afghan tribe occupy the country N. and S. of the road between Herat and Kandahar, 800 miles long and from 80 to 150 miles broad. It has the Paropamisan mountains on the north, inhabited by the Aimak and Hazara. On the west it has a sandy desert, which separates it from Persia; on the S.W. it has Seistan and another desert that separates it from Baluchistan; its southern boundary is formed by Shorawak and the hills of Khojah Amran, and it joins the Ghilzae country on the east. The tribe has two great divisions,—Zirak, with four clans—Popalzai, Alikuzai, Barakzai, and Atchakzai; and Panjpao, with five clans—Nurzai, Alizai, Ishabzai, Khugiani, and Maku. The whole population of their country is estimated at 600,000 souls, of which the Daurani themselves are one-half. They hold their lands on military tenure. They are partly pastoral and partly agricultural, and they speak with delight of the pleasures of their camp life. They term their summer and winter grounds Eilak and Kishlak, dwelling in their coarse black camlet tents, called Kishdi, the same with the Kara-ulli of the Turks and Siah-chadar of the Persians.

Each of the great clans of the Daurani is ruled by a sirdar chosen out of the head family, and the spirit of revenge for blood is much controlled. They have no feuds, and never go armed except on journeys. There are shops in their towns kept by Hindus. The Kishdi or black tents of the shepherds are 20 to 25 feet long, 10 or 12 feet broad, and 8 or 10 feet high. The inclement tracts are left by the shepherds in winter for the plains. They treat their wives kindly, are conspicuously hospitable; like other Afghans, do not abstain from plunder, but they have a consciousness of superiority and a sense of natural dignity, and are respected by all Afghans. They are extremely attached to their country, and have a reverence for Kandahar, to which the bodies of their great men are carried for interment, even from Kashmir and Sind. They travel little, and have never come to British India as merchants or adventurers.

The Saddozai is the chief branch of the Popalzai clan of the Daurani; Ahmad Shah was a Saddozai. He thrice invaded India, and on the third occasion he fought and won the battle of Panipat (6th January 1761), when about 300,000 Mahrattas fell, amongst them the son and the cousin of the Peshwa, and the Mahrattas as a nation ruled by the Peshwa were broken up.

The Nurzai section of the Panjpao Daurani are a martial tribe of about 30,000 families, most of them shepherds. They occupy, along with Iliyat, the district of Sabzawur, which town is 93 miles from Herat and 286 miles from Kandahar. They hold a congeries of forts with their pasturage and cultivated fields around.

The Khugiani tribe of the Panjpao Daurani have three divisions,—Waziri, Khairbun, and Sherzad. The Waziri have given the Panjab province of the British Indian Government much annoyance. The Khugiani reside chiefly in the Gandamak valley of Jalalabad, and have now about 5312 houses.

The Alikuzai number 10,000 families, and are mostly agricultural. The Alizai are pastoral; their numbers are stated to amount to 15,000 families.

The Atchakzai Daurani are entirely nomades, living in black tents in the ranges of Khojah Amran. They say they can muster 14,800 families, in 32 divisions.

The Daurani are stout and well made, with long hair and beards, many of them being above the standard of the Indo-Germanic races of Europe. Some have round and plump faces. With others, the countenance is strongly marked, and with most the cheek-bones are prominent. When a family is by itself, the men and women eat together; but few restraints are put upon the female, and her influence is considerable. The Daurani tribes, all but the Atchakzai, about 5000 in number, are religiously given, but not intolerant. They are of the sunni sect. Their national dance, called Attun, is danced almost every evening, with songs and tales to accompany it. They are fond of tales and fond of the chase.

The Daurani and the Ghilzae clans, from their numerical strength, have exercised greater power than other of the Afghan tribes. The Daurani are known also as the Sulimani, from the mountains whence they came, having dwelt in the Tobeh Maruf district.

The Kufelzai, more generally known as the Popalzai, numbering 20,000 families, are an offshoot of the Abdali, one of the branches of which, the Saddozai, gave sovereigns to the Afghans, in the 17th and 18th centuries.

Their name Daurani is titular. Ahmad Khan, of the Saddozai branch of the Abdali, about the close of 1747 was crowned at Kandahar under the title of Ahmad Shah, Daurani, which Elphinstone says means pearl of pearls, but is commonly understood to refer to the dominion of the world (Dauran). From his time up to 1820, his descendants have ruled; but since the last-mentioned date the Barakzai, a great clan of the Zirak branch of the Abdali, have been furnishing the ruling family in Kābul. Their numbers are about 30,000 families. The great bulk are pastoral, a few engage in tillage in the country S. of Kandahar, in Arghesan, and on the banks of the Helmand.

The Tarin are a tribe in Afghanistan who have

two divisions, viz. the independent Safed or Spin Tarin, and the Tor Tarin in the valley of Peshin, who are subject to the Kandahar Government. The Safed Tarin (White Tarin) could muster 6000 fighting men, and the Tor Tarin (Black Tarin) about 3000.

Peshin is the middle portion of the valley of the Lora river, Barshor being the upper and Shorawak the lower part. Peshin is inhabited by the Tor Tarin, by families of Syuds, and a few Kakar.

The Spin or White Tarin tribe reside in the valley of Zawura, and in the open plains of Tull and Chutialli. They stretch into Cutch Gandava and nearly touch the British frontier. The Tor and Spin form two factions on the Banu frontier in which all the neighbouring tribes became involved, seventeen of them being for the Tor and sixteen for the Spin faction.

Writing of the Tarin, Lieutenant-Colonel MacGregor says: 'I have given them credit for the character of general peacefulness which they hold among their neighbours. There are comparisons among thieves, and in a country like Afghanistan, where an honest man is seldom or ever met with, one can only speak comparatively; for the best of them would in a civilised country be considered as scoundrels of the blackest dye, and consigned to the common hangman.'

The Ghilji or Ghilzae is next in importance to the Daurani tribe. The names and numbers of the several clans are variously enumerated by Mountstuart Elphinstone, Lumsden, Leech, Masson, Broadfoot, N. Campbell, Gerard, and MacGregor, and the estimates of the strength range from 35,000 to 100,000 families, with about 30,000 good fighting men. The names of the clans usually recognised are Ohtak, Thoki, Suliman Khel, Ali Khel, Sabrak, Tereki, and Kharoti. Of these the Suliman Khel is the most important, their numbers being 30,000 or 35,000. The Ghilzae inhabit the country bounded on the south by Kalat-i-Ghilzae, on the west by the Gulokh range, on the east by the Suliman range, and on the north by the Kābul river, but in many places extending beyond these boundaries.

The Ghilzae tribe occupy the principal portion of the country between Kandahar and Ghazni, and are the most numerous of the Afghan tribes. These people are also found between Farrah and Herat, and again between Kābul and Jalalabad, but in either position, being under due control, they are little heard of. The Ghilzae between Kandahar and Ghazni comprise the great families of the Ohtak, the Thoki, the Tereki, and the Andari, with their subdivisions. The Ohtak are acknowledged the principal of the Ghilzae families, and furnished the chief in the period of their supremacy.

Between A.D. 1715 and 1724, the Ghilzae were dominant under Mir Wais, his son Mir Mahmud, and relative Mir Ashraf, who was finally put down by Nadir Shah; but in that interval Isfahan had been twice taken by the Ghilzae, and Persia had lost a third of its population. When Nadir Shah overran Herat and Kandahar, he is said to have deported to Teheran 18,000 Ghilzae with their families, and to have given the Kandahar lands to his Persian followers. But in Ahmad Shah's time there was a fresh distribution, and again another when the Kandahari brothers arrived at power.

The Khojah section are next to Jadran in the extreme east of the Ghilzae country. They murdered Colonel Herring of the 37th Bengal Native Infantry, and were punished by Captain Outram. Their women took part in that fight, handing powder and ball to their husbands, and throwing down on the assailants incessant showers of stones.

Between the years 1839 and 1842, the British Indian army was continuously engaged with the Ghilzae, and Sir John Keane, Captains Outram, Anderson, Macan, and Woodburn, Colonels Chambers, Wymer, and Sale, Generals Nott, Pollock, and M'Caskill, were at different times employed against them. The Suliman Khel attacked the army in its advance to Kābul, and when Kābul was abandoned, the Ghilzae hung upon and destroyed the retreating force. The force moved from Kābul on the 6th January 1842. It numbered then 4500 fighting men, of whom 690 were British, 970 were native cavalry, and 2840 native infantry, along with whom were 12,000 followers. Of all that body, Assistant-Surgeon William Brydon, of the Bengal army, alone reached Jalalabad, and 95 men, women, and children taken prisoners were afterwards released. From Butkak the Ghilzae surrounded them, attacking, plundering, and massacring. On the 8th January, about 3000 of the retreating force and its followers were slain at the head of Khurd Kābul defile.

On the 11th January 1842, a remnant arrived at Tezin to the number of 4500; but at Gandamak, 20 officers and 45 British soldiers, the last survivors, fell. The Ghilzae indeed drank deep of blood.

In 1848 and 1849 they were engaged against the Amir Dost Muhammad Khan, who suppressed them with an army of 25,000 veteran Abdali.

The Ghilzae, although considered and calling themselves Afghan, and, moreover, employing the Pushtu or Afghan language, are undoubtedly a mixed race. The name is evidently a modification or corruption of Khalji or Khilaji, that of the great Turki tribe, mentioned by Sharif-ud-Din in his history of Timur. The testimony of Ferishta, while clearly distinguishing the Ghilzae tribes from the Afghan, also establishes the fact of their early conversion to Muhammadanism. Still there is a tradition that they were at some time Christians of the Armenian and Georgian churches. This tradition is known to the Armenians of Kābul; and they instance, as corroborating it, the practice observed by the Ghilzae of embroidering the front parts of the gowns or robes of their women and children with figures of the cross, and the custom of their housewives, who, previous to forming their dough into cakes, cross their arms over their breasts, and make the sign of the cross on their foreheads after their own manner. In the 10th century they still spoke Turki.

East of Ghazni, in the province of Zurmat, are the Suliman Khel Ghilzae, exceedingly numerous, and notorious for their habits of violence and rapine. These have no positive connection with the Thoki or other tribes, neither have they one acknowledged head, but are governed by their respective Malik, who are independent of each other. Dost Muhammad Khan reduced them to the condition of tributaries, after having destroyed a multitude of their castles.

The Ghilzae women cannot boast of beauty, which they strive to supply by ornament. The girls from the age of eight to twenty are not much veiled, but they twist their hair, and tie it like a cake, which hangs over their forehead, and a little below their eyebrows. The centre of the lock (or hairy cake) is adorned by a gold or silver coin, which in black hair shines prettily. This is the sign of virginity amongst the Ghilzae. The women allow their twisted locks to hang upon their ears, even as far as their arms.

Moorcroft met with a party of wandering Ghilzae; their tents were nothing more than flimsy black blankets, stretched over forked sticks about four feet high; within, they had some more blankets, sacks, and pack-saddles; and without, a few loads of mats, ropes, and netting, for the formation of their packages; both men and women were robust, with strongly-marked features.

The Ghilzae are both an agricultural and a pastoral people, and dwell in villages and castles, as well as in tents. They are a remarkably tall, fine race of men, with marked features, the Ohtak and Thoki peasantry being probably unsurpassed, in the mass, by any other Afghan tribe for commanding stature and strength. They are brave and warlike, but the generality of them have a sternness of disposition amounting to ferocity, and their brutal manners are not discountenanced by their chiefs. Some of the inferior Ghilzae are so violent in their intercourse with strangers that they can scarcely be considered in the light of human beings. They irrigate by the Karez aqueducts and by wells, growing wheat, barley, lucerne, clover, and madder. The bridegroom gives a feast to the neighbours, costing a poor man about Rs. 100; and men often remain unmarried till 28 or 40 years old. When the engagement is arranged, the bridegroom is admitted to see his engagee once or twice alone at night, and, in general, without a breach of chastity. The women frequently fight by the sides of the men. The pastoral Ghilzae are all robbers, often murdering. They are hospitable, and respect elders. The Andar Ghilzae are expert Karez diggers.

Bar Daurani is a name sometimes applied to the Pathan tribes enclosed between the range of the Hindu Kush, the Indus, the Salt Range, and the Suliman range. It was applied to them by Ahmad Shah, and includes the Yusufzai, Utman Khel, Turkolani, Mohmand, Afridi, Orakzai, and Shinwari, also the tribes of the plains of Peshawur and those of Bangash and Khutak.

Povindah.—A great part of the inhabitants of Arabia, Persia, Asiatic Turkey, Afghanistan, and Baluchistan consist of nomade pastoral races, who are continually on the move to and from their winter and summer quarters. But from the most ancient times there have been travelling merchants traversing these regions, carrying the products of the varied climates from one nation to another. The prophet Ezekiel, who lived B.C. 574, tells us in the 27th chapter, that the Ashurites made benches of the ivory brought from the Chittim islands; that the men of Tarshish traded with Tyre in silver, iron, tin, and lead; Javan, Tubal, and Meshech brought slaves and brass vessels; horses and mules were brought by the house of Togarmah; the men of Dedan trafficked in ivory, ebony, and precious clothes for chariots; and precious stones, spices, and gold were the products sold in Tyre by the people of Sheba and Raamah. At the present day, the great trading race of Central Asia are the Povindah. They conduct all the traffic between British India and the Amu Darya valley. They are a pastoral race, but portions of their tribes and some of their clans carry goods to Dehli, Cawnpur, Benares, and even to Calcutta, Bombay, and the Dekhan, and return with the spices and produce of the East to Ghazni, Kalat-i-Ghilzae, Kabul, Kandahar, and Herat. Their chief clans are the Lohani, Nasir, Niazi, Kharoti, with subdivisions Daotani, Mian Khel, Miani, Kundi, and smaller clans, Miti, Suliman Khel, and Mashuni.

They bring to India dried fruits, drugs, spices, silks, woollens, pashminas, felts, horses, cattle, camels, and carry away British and Indian manufactures of every kind. Camels are their ordinary means of carriage. The imports and exports at the Indus ferries of the Dehra Ismail Khan district are valued at 59 lakhs, or half a million sterling.

They are wealthy, have fine horses, and can muster about 14,000 fighting men. In a region so full of wars, the perseverance with which they continue their successful enterprise merits all praise. Between Kabul and Katiawaz, the Kafila can travel separately, but from Katiawaz to British territory they have to move for mutual protection in one great body. They are in truth soldier merchants, moving in bodies 5000 to 10,000 strong, heavily armed, under an elected chief with the title of khan, marching like an army, with advanced guard and rear guard, and flanking parties, in some parts with daily skirmishes, occasionally pitched battles, and when halting at night, posting sentries and throwing out pickets. Major Edwardes says he hardly ever saw a Povindah who had not one or more wounds on his body; and the loss of an eye, broken noses, scarred skulls, lame legs, and mutilated arms are almost as common as freckles in England.

The Kharoti section to the W. and N.W. of the Waziri have 1500 tents. Their climate in winter is very severe. Many of them are quite fair. In spring they live on milk, ghi, kooroot, and cheese.

Only militant merchants of this description could ever have made a profit out of a commerce which had to traverse difficult mountain ranges, through savage robber tribes, and the countries between them seamed with the customs lines of greedy, short-sighted chiefs. Besides the demands of the governments, they are subjected to the exaction of the officials and petty chiefs at every stage of their route, and the blackmail of the various tribes through which they pass,—the Turkoman on the Oxus, the Uzbak robbers of Muzar Sharif, the Tartars of the Dasht-i-Safed, the Hazara of Syghan and Bisut, the Wurdak between Kabul and Ghazni, the Hotuk between Ghazni and Katiawaz, the Suliman Khel of Katiawaz, and the Waziri between them and the Indus valley. Sorely harassed, at every step losing men, horses, camels, bales of merchandise, bribing, cajoling, bullying, defying, and fighting, twice every year the caravans of these martial traders, seeking their precarious gains, battle their desolate way through the deserts of Bokhara, the defiles of the Paropamisus, the Ghilzae plateau, and the passes of the Suliman range, across the Indus to the Panjab. Their

Kafila have to pass the Suliman mountains in one great company for mutual protection. Every year they lose a hundred or more men, and at least two per cent. of their camels, besides some hundred loads of goods. If the routes were made safe, they might make four trips annually. They leave their families at the foot of the hills, and enter British India in October, the largest body moving by Multan, and the smaller by Bahawalpur and Sirsa to Dehli, Benares, and Calcutta. They bring the wool of Kerman to Amritsar and Ludhiana, raw silks, gold and silver wire, fruits; and carry back cotton and woollen fabrics, scarfs, the gold thread of Dehli, the brocades of Benares, drugs, indigo, etc. The passes from which they emerge are the Gomal, Manjhi, Shekh Haidar, and Zarkani. They undertake the safe custody of the passes on the border of the Dehra Ismail district south of Tank limits for six months in the year, without any special considerations being granted them by the Indian Government.

The Nasir are the strongest of all the sections. They have been estimated to number from 1850 to 12,000 families. They are migratory, dwelling in summer among the Tokhi and Ohtak Ghilzae, and moving in winter to the Derajat. They trade less than other sections, but depend on their flocks and herds for food, clothing, and tents. Their sheep and camels are numerous. They are small of stature, ugly, and black; are rude and squalid in their general appearance, and barbarous in their manners. They are one of the chief trading clans between Hindustan and Khorasan.

The Lohani section have three branches,—Daulat Khel, Pani, and Mian Khel. The first two and part of the Mian Khel have settled to agriculture. The remainder of the Mian Khel are traders, the men in summer visiting Bokhara, Samarcand, and Kābul, a guard being left to protect the women in their felt tents; in the winter they move through the Gomal pass to the Derajat, when some of them proceed to Lahore and Benares, and return in April to revisit Karabagh and Pana.

The Aka Khel are a poor tribe of the Povindah. Three of their divisions visit British territory for trade, bringing fruits and cloths. They have a considerable number of camels.

Lohani, a section of the Povindah, are descended from Nuh, son of Ismail, and are rightly called Nuhani. Nuh had two wives,—Shiri, from whom are sprung the Maorat and the Tori; Tori had five sons,—Mama, Mian, Talor, Hod, and Palakh. Mama's descendants are the Daulat Khel of Tank, Isa Khel, and Mian Khel. The Daulat Khel, agriculturists in the Dehra Ismail Khan district, form the predominant tribe in Tank, which is a semi-independent portion of the Dehra Ismail Khan district. Kati Khel, a section of Daulat Khel Lohani Povindah, also reside at Tank.

The Ali Khel are a poor branch of the great Ghilzae tribe; a few trade on their own account, but the majority hire out their camels to the Suliman Khel, with whom they travel. A camel load is about 3½ maunds, and they charge Rs. 5 to Rs. 5½ a maund from Khorasan to the Daman.

The Daotani tribe of the Povindah have nine sections or khel, viz. Badin, Hasan, Ibrahim, Madu, Nuso, Rana, Sado, Sankizai, and Usmanzai. They live at Wana, and come down in three Keri after the Kharoti. They bring silk, pashm, carpets, charas, and are one of the richest of the Povindah tribes.

The Kharoti tribe in Afghanistan inhabit the district of Karabagh and the table-lands of Dur Tselae, Saroba, and Sar-Afzai on the E. borders of Khorasan; their khel are three,—Zadu, I, and Adu, with numerous subdivisions, about 15,000 to 20,000 souls. The Povindah and agricultural Kharoti are of the same clan; the Povindah Kharoti are Ghilzae. They are friendly with the Lohani and Ghilzae Povindah, with the exception of the Suliman Khel, with whom they have an old and very bitter blood feud; they are at enmity with the Waziri.

Purmuli, or Fermuli, or Hurmuli, a brave and warlike race, about 8000 in number, residing south of the Kābul river near Orglum in the Kharoti country, and to the west of Kābul. They carry on an unceasing hostility with the Kharoti tribes around them. Some are soldiers in the Amir's army, and some engage in trade. They occupy the lands at the head of the Waziri country.

The Pashai race, in Afghanistan, were formerly very numerous, but are now greatly reduced, their remnants being found in the districts of Mundal, Chitela, Parena, Koondee, Seva Koolman, Nijrao, Lughman, Koh Karinj, Kunar, Bajawar. The Panjsher people are probably Pashai, though calling themselves Tajak. They and the Nijrao inhabitants speak the Pashai dialect. The Safi of Taghai and the Dara Mir are also probably Pashai. The Pashai are mentioned repeatedly by Lieut. Leech as one of the most numerous tribes in the Panjsher valley and adjoining passes. These are supposed to be Muhammadans, but as the name is mentioned also by Elphinstone as that of one of the Kafir tribes, part of them in the mountains may have retained their heathenism and independence.

The Safi, with about 2800 fighting men between Pashut and Shewa, occupy the north side of the hills on the left bank of the Kunar river. The Safi understand Pukhto, but speak the Pashai. They inhabit the valley of Dara Nur, the hills to the north of Jalalabad, and between that division and the Kafir country, also the valleys of Barhot and Daminj to the west of Dara Nur. They are a straightforward, manly race, with florid complexion, light eyes and hair. They have bee-hives, and make wine and vinegar.

The Safi occupy Dara Nur, Dara Mazar, Dara Pech, and the valleys opening on the Khonar river, and in a district called Surkh Khambar, south of Bajawar. In Baber's time they were Kafirs. They were expelled by the Ghilzae from the lands to the south of Taghow, and between Kābul and Jalalabad. Nadir Shah cultivated a friendship with them.

South of the Safi, at Bahi, the first march from Goshter, on the Jalalabad river towards Bajawar, are a people called Yeghani, who consider themselves Afghans, but are probably converted Kafir, for they speak a dialect which no Afghan can understand.

The Buruki race, who claim to be of Arab origin, occupy Logur and Butkak, in the Ghilzae portion of the Afghan country, and are said to have been settled there, south of the Kābul river, by the Sultan Mahmud in the 11th century. Their

number is about 8000 families, but they arrange themselves into tribes with chiefs. They are good soldiers.

The Jaji tribe dwell in the valleys of the Hariab and its tributaries. They have about 700 or 800 families. They are much at feud with one another; each house is separate, and in the form of a square. They form a circle for their wild war-dance.

The Mehrani tribe inhabit the slopes of the Takht-i-Suliman next to the Shirani; they are great marauders.

The Kakar inhabit the extreme S.E. corner of Afghanistan. They claim to be descended from a man named Sharif-ud-Din, whom Mahomed converted and gave the name of Abdur Rashid, with the title of Pret Khan. He is said to have had five sons,—Shirani, Tarin, Miuni, Barechi, and Umar-ud-Din, all founders of clans. From the extreme antiquity of the Kakar clan it has branched largely, and the Arabi Khel or race of Mulla, the Taemuni of Ghor, the Firoz Kohi Hazára, the Kayani tribe of Seistan, the Utman Khel, and the Gakar, all claim connection with them. The Kayani tribe are commonly called Baluch, but they acknowledge themselves and are recognised descendants from the Saugor Khel Kakars. They are scattered all over Afghanistan; a branch is in Kashmir on the banks of the Jhelum, and the asafœtida trade of Herat is in their hands. They number 14,000 to 20,000 fighting men, viz.:

Jalazai,	2000	Kahizai,	1000
Musa Khel,	3000	Hamzazai,	1100
Kadizai,	2000	Shahozai, Alizai, and	
Usman Khel,	200	Tenizai,	900
Abdulazai,	2000	Khidarzai and others,	200

The Kakar country in the headwaters of the Lora is wild and inaccessible. It forms a square of about 180 miles between the Atchakzai country, the Spin Tarin, the Suliman range, and Baluchistan. But Kakars named Casia occupy in part the valley of Shal. The Punni clan, in Sewi and Sewistan, is Kakar.

The Jalazai section number only about 110 fighting men. The Alizai clan is agricultural and pastoral, and are said to number 10,000 fighting men. They are peaceably inclined, and every winter large numbers come to Dehra Ghazi Khan to labour as wood and grass cutters and road-makers.

The Musa Khel branch are in the hills beyond the Baluch, to the west of Dehra Ghazi Khan district and the Kala Roh range, three or four days' journey from Mangrota or Vihowa. Their sections are Balel, Umas, and Lahar. They could assemble 3000 fighting men.

The Shahozai, said to be an offshoot of the Kakars, number 200 fighting men.

The Bar Namai Kakar are about twenty miles south-west of Mekhtar, and the Khojah are an offshoot from them.

Among the widely-distributed Kakar race there are many differences in manners and in personal appearance. At the time of Mahmud of Ghazni, a warlike tribe of Ghakkar, Gukkar or Kahkar were in the Salt Range or Jhow mountains between the Indus and Behut (Hydaspes), and at an early period of their history they would seem to have been given to infanticide. They are supposed to be the descendants of the mountaineers whose chief, Ambisaces, sent ambassadors with presents to Alexander. Baber writes the name Guker, but it is also written Ghuka and Khaka.

The Khostwal is a Pathan tribe occupying the valley of Khost in Afghanistan, for 40 miles along the Shamil or Kheti river. Their five divisions or Khel are the Ismail, Matun, Manduzai, Shamal, and Lakan, and they number 6000 to 8000 souls.

The Abdul Rahman Khel, of Khost, inhabit the Matun district of that valley, also, therefore, called Matuni. They are a branch of the Karani clan, and are also Mamuri. They number about 1000 fighting men, and are mostly agricultural.

The Makbal is a quiet, peaceable tribe living to the north of the Mangal and west of the Jaji. Some of them dwell in the Khost valley.

Vanicha, a Pathan tribe of 300 fighting men. Their Zargwal section dwell near Bahian, and the Khorasani in the hills bordering Khorasan.

The Tajak are the aborigines of the country, and are not Afghans. Alexander probably found them there, as fire-worshippers, speaking Sanskrit or Pehlevi. They form the industrial part of the population of the khanates of Uzbak, Khiva, Bokhara, Khokand, and Kashgaria, also in Farghana, in Khorasan and in Baluchistan, all over Afghanistan from Jalalabad to Herat, and from Kandahar to Balkh, also in Persia, Turkestan east and west, scattered and unconnected, mixed with the Uzbaks, Afghans, Persians, Baluch, and Brahui, but with independent governments in in Darwaz, Karatagin, Vakhan, and Badakhshan. They seem to have been the aboriginal inhabitants of all these countries, and to have been pushed aside by more martial, advancing, and conquering races. They speak Persian, and in Turkestan and Afghanistan, Tajak and Parsivan are synonymous terms; but in the west they are also called Sart. Tausik or Taujik is the name applied to the Arabs in all Pehlevi writings; but they themselves at present derive their name from Taj, a crown or head ornament. They are supposed to be of the same race as those of Kafiristan, Chitral, Shaghnan, and Roshan. The Tajak are a handsome race, athletic, tall, with fair complexions, and lively, sociable temperaments. They wear the costume and follow the customs of the races amongst whom they are dwelling; but they are of settled habits, mostly agriculturists, or engaged in all the industries of towns. They are sunni Muhammadans, and are quiet, orderly, frugal, and industrious people. Some of them, under the term Turk, serve in the army of the Amir of Kabul and in the Panjab Irregular Force. They are, next to the Afghans, the most powerful race in that country, and compose the principal part of the population round Kabul, Kandahar, Herat, Balkh, the Kohistan of Kabul, Chitral, Gilgit, Shaghnan, Badakhshan, Karatagin, Vakhan, Darwaz, the small states north of the Hindu Kush, of Doshi, Khinjan, Indarab, Khost, Firing, and Versukh; the Baraki of Logar, the Fermuli of Urghun, the Sardehi of Zurmet, and the Shahregi and Sarbandi of Seistan are Tajaks. The Baraki inhabit Barak, Logar, and part of Butkak, mixed with Ghilzae. In 1809 they had 8000 families. The Logar branch speak Persian, those of Butkak speak a language called Baraki. They are more respected than other Tajaks. The river of the Panjsher valley in Afghanistan rises on the south of the Hindu Kush in the Khawak pass. The orchards and mulberry plantations furnish the staple

support of its inhabitants. The Panjsheri, like the rest of the Kohistani, are Tajaks. They are sunni Muhammadans and bigoted. They form peace leagues with the Kafirs, exchanging hostages. They have been independent since the time of Timur, but every man is for himself, and the whole valley is filled with turbulence and strife. They could assemble 10,000 men. They are good soldiers.

The Tajak in the Surkh Rud district of Jalalabad division have 2827 houses. The Parsivan who came with the army of Nadir Shah and settled in towns, are merchants and in various trades; in villages they are shepherds and agriculturists.

Kazzilbash formed part of one or more of the seven Turkish tribes that embraced the party of Shah Ismail, the founder of the Saffavi dynasty. This sovereign, to distinguish them from the others, gave them a kind of red cap, hence their name of 'Red head,' Kazzilbash. The seven tribes were Oustajalu, Chamlu, Nikalu, Baharlu, Zoolkaddar, Kajar, and Afshar. When Nadir Shah marched towards Dehli, he had twelve thousand fighting Kazzilbash with him. When he quitted that city, on his return, he left behind him three hundred of these, who, with other troops, were directed to bring away his treasure, and follow him. They passed through Kabul; but when within two days' march of Kandahar they heard of his death, and a few days afterwards, Ahmad, Nadir's lieutenant, arrived, attended by five or six hundred Daurani; he seized the treasure, and took the Kazzilbash into his service, and his kind treatment of them induced others to come from the neighbourhood of Tabreez, Mashid, Kirman, and Shiraz, in Persia, where the true Kazzilbash exercise the profession of horse-breeders, shepherds, and cultivators. There are now perhaps about ten thousand Kazzilbash in the city of Kābul, who are ever ready to serve as mercenaries. Their leaders are by far the most wealthy, the most intelligent, and the most influential men at Kābul. Under the Amirs of Kābul they have served as body-guards, and still retain their own language. They are known in that city as Ghulam Khani or Ghulam-i-Shah, lit. household or royal slaves. They have three sections, the Jawansher, Afshar, and Morad Khani. The Jawansher are of Turk descent from Shisha, have several sections, and form the principal part of the Kazzilbash.

The Kazzilbash are good horsemen; they constitute the bulk of the cavalry and artillery of the Amir of Kābul. They are also found in the Indian army irregular cavalry. In Afghanistan they are also merchants, petty traders, scribes, physicians, secretaries, and stewards. They speak Persian and Turki.

The Jat in Afghanistan, about 300,000 in number, are Sunni Muhammadans; they are mostly very poor,—farm servants, barbers, musicians, and sweepers.

The Hindki are Hindus of the Khatri class, residing all over Afghanistan, even amongst the wildest tribes, who could not get on without them. They pay a capitation tax, are not allowed the open worship of their religion, nor to give evidence in a court of justice, nor to appear on horseback. The Parancheh Hindki are found in the Panjsher valley at the head of the Swat valley, also in the Banu district in British territory, in Peshawur, Kohat, and in the Hazara country. They are traders, and of recognised integrity.

Arabs have colonies in the Jalalabad district, Bajawar, Peshawur, and Pughman. The Jalalabad Arabs are well conducted, they are pastoral and agricultural. They speak Persian, and believe that their ancestors came with Timur.

Jews are found throughout the country in small numbers.

A few Baluch tribes pasture their flocks and herds in the southern parts.

Kawal (Qu. Khawal) are a tribe of thieves and fortune-tellers, who wander about the Pughman mountains.

The Sadu tribe, in the Pughman hills, much resemble gipsies in habits and mode of life; they are fortune-tellers and thieves.

The Afghan are all Muhammadans, having been converted to this creed within half a century from the first promulgation of that religion. The majority of the tribes are of the sunni sect. The shiah sectarians are the Badakhsi, Vaki, Seistani, Tajak, Kazzilbash, Hazara, Turi, Bangash. Some of the Orakzai, Dawari, Khostwal, Jaji, Chitrali, and some Kohistani.

The Parsivan and Aimak, who are subject to the Afghans, profess Muhammadanism. Besides the two sects just mentioned, some are of the Ali Ilahi schism.

The government of the tribes is a democracy, their representation and self-government being by their Jirgah and Ulus, but, like most rude people, no man's nationality extends beyond his own clan.

The mother of a betrothed girl connives at the engaged couple meeting; this is called Nam-zad-bazi, literally betrothed happiness.

The Afghan are the only people of Central Asia who in comparatively recent times have come to reside to any considerable extent in British India. They have never, however, migrated in large bodies, but have accompanied the Muhammadan rulers of India, all of whom have entered from Afghanistan, and brought bodies of the Afghan with them. They are known in India by themselves and others by the name of Pathan. Some of these have settled in many places throughout Northern India and in some parts of the south, as far south as Hyderabad, Kurnool, and Cuddapah, some of them in villages, where they own and cultivate the soil. These have been in considerable numbers in the native army of British India, and particularly in the corps of irregular cavalry, and in Northern India, in the civil service of Government. A few Pathan settlements are found in the Panjab and about Dehli, and they are numerous in the Upper Doab and Rohilkhand. Pathan principalities, jaghirs, and families are met with all over India, and the Begum of Bhopal is of Afghan descent.—*Bunsen; Calcutta Review; Campbell; Chesney; Elphinstone's Hist. of Caubul; Ferrier's Hist. of the Afghans; Latham's Ethnology; Mohun Lal's Travels; Colonel MacGregor's High Asia; Peschel; Tod's Rajasthan.*

BALUCHISTAN, as known to Europeans, is partly Persian territory, and in part under the rule of the Khan of Kalat. Its territorial divisions have been already noticed under that heading; what remains to be described here are the multitudinous races who have found refuge in its

mountain valleys. According to the most recent authorities, it has an area of 140,000 square miles; 60,000 are under the Shah of Persia, in the Sarhad and Baluch, two mountain plateaux, and 80,000 under the Khan of Kalat, in the provinces of Saharawan, Jhalawan, Cutch Gandava or Cutchi, Las, and Makran.

The territorial boundary between Brahui or Kalat Baluchistan and Persian Baluchistan has been defined; but the inhabitants, particularly those in Makran and the Kohistan, are occupants of the two divisions.

Mr. Masson arranged the portion of Baluchistan subject to the Khan of Kalat into four subdivisions:—

Western.	Maritime.	Central.	Eastern.
Nushki.	Las.	Saharawan.	Cutch Gandava.
Kharan.	Hormara.	Kalat.	
Mushki.	Persani.	Jhalawan.	Harand on the Indus.
Panjghur.			
Kej.			Dajil on the Indus.
Kolwah.			
Jhow.			

The people are partly pastoral and nomade, partly dwellers in towns, and, as indicated by their physical appearance, are of widely different races, who have pushed or been pushed forwards from the S., the W., and the N.W., into their present sites. In the khanate of confederate tribes are the Baluch tribes proper, the Rind, the Brahui, the Lumri, the Dehwar of the capital, the Jet or Jat of Cutch Gandava, the Babi, Arab races occupying the maritime provinces, the Afghans of Shal, and the Hindu residents of villages.

Baluch traditions trace their origin to Aleppo in Syria, from which they emigrated, passing through Persia to Cutchi, Makran, and Seistan. They entered Sind through the Bolan pass, and then broke into two factions, Lishari and Rind, and the Lishari successfully disputed the rights to the water of the Jhool river.

Dr. Cooke was inclined to the opinion that the Brahui were Tartar mountaineers who had gained a footing in the country, ultimately becoming the ruling race; and that the Baluch came from the westward, but whether they were Seljuk Tartars or Arabs from Aleppo, he thinks is a matter of doubt. He considers the Hindus to have been the first colonizers of the upper part of the Brahui mountains, and that the Brahui gradually settled amongst them; that Sehwa, a Hindu raja, called in the aid of these mountain shepherds against hordes of depredators from the western parts of Multan, Shikarpur, and Upper Sind; and that the Brahui, having defeated and driven off these invaders, seized the government for themselves,—a chief of the name of Kumbar becoming Khan of Kalat, of whom the present khan is a lineal descendant.

The other race, the Baluch, he says, ascribe their origin to the earliest Muhammadan invader of Persia, and are very desirous of being supposed to be of Arab extraction. They spurn the idea that they are derived from one stock with the Afghans. The affinity of the Baluchiki to the Persian language favours their tradition that they came from the westward; to support which, also, we see that the majority of the Baluch still dwell on the western frontier.

Sir Henry Rawlinson says the Persians regard Baluch as descended from Belus, king of Babylon. It has been said that Baluchistan was first applied to the territory by Nadir Shah; but Ibn Haukal, in the 10th century? says, 'The Baloujes are in the desert of Mount Kefes, and Kefes, in the Parsi language, is Kouje, and they call these two people Koujes and Baloujes.'

The Brahui are the dominant race. From their physical appearance, their language, and the sites which they occupy, together with their traditions, they appear to have been a nation of Tartar mountaineers, who settled at a very early period in the southern parts of Asia, where for many centuries they lived an ambulatory life in khels or societies, headed and governed by their own chiefs and laws; and at length they became incorporated, and obtained their present footing at Kalat and throughout Baluchistan. Their pursuits and ways of domestic life afford reason for believing that they were originally mountaineers; and some amongst them affirm that the very name demonstrates this by its signification, being a compound of an affix Boan, and Roh, a word said to mean a hill. This tradition is supported by the collateral evidence of the Baluch being called in one quarter of the country Narui, 'lowlanders,' *i.e.* literally 'not hillmen,' a name they received from the Brahui when they came amongst them, and evinced a preference for the champaign districts.

The Khan of Kalat's dominions extend from Shal or Quetta in the N. southwards to the sea on the coast of Makran, and from the frontier of Persia beyond Kharan and Panjgur on the W. eastward to British Sind, a length and breadth of about 400 miles. This territory, varied in character to no ordinary degree, consists of lofty, rugged table-land and level ground, and their climates exhibit the severest heat and most intense cold. When the plains of Cutchi are intolerable in the month of May, by reason of the intense heat, dust-storms, and poisonous winds, the weather about Quetta and Mustung resembles an English spring-time.

A mountainous table-land, running north and south, comprises the provinces of Saharawan, Jhalawan, and Las. It extends from the Afghan mountains N. of Quetta southwards to Cape Monze, or from lat. 40° to 25° N., a length of 340 miles. In breadth it extends from the level plains of Cutchi eastward, to Nushki on the borders of the Seistan desert westward, extending thus about 150 miles, widest about the centre, but it gradually narrows southwards until, at Cape Monze, the range is only a few miles in width. The height also varies. The greatest altitude is attained at Kalat, about 7000 feet, where the climate is European; southward it rapidly declines, until in the province of Las the elevation is little above that of Sind. In this mountain range here and there are long and meandering valleys, but it is the natural boundary of Western India.

The Kohistan of Baluchistan is the part lying to the westward. On its N.E. and W. it has sandy deserts, and on its south are various districts of Makran. Its principal mountains are those called the Sarhad between lat. 29° and 30° N., visible from a distance of 80 or 90 miles. In several places are brooks of liquid salt; pools of water covered with naphtha, sulphur, muriate of ammonia, and hot springs. It is occupied ex-

clusively by Brahui, in a number of petty republics.

The Badozai and Bari tribes of Baluch inhabit the district of Past-i-koh west of Sibi in this Kohistan.

The Memaseni tribe of Seistan and Luristan, west by north from Shiraz, occupy still farther west in the valley of Mushki. They are the bravest but the most savage of the tribes, and lead a wild, disorderly life, frequently at feud with their neighbours. They are the powerful tribe encountered by Alexander in Upper Bactriana.

Bashkurd is the most western district of the Kohistan; it is extremely mountainous, and is separated by a desert from the Persian province of Nurmanshahr. It is occupied by a tribe of Kurds who have advanced out of Luristan. They are pastoral, and prefer the uplands. There is a hot spring at Basman, a hamlet in the Kohistan.

The Baluch and Brahui take their tribal names from the chiefs under whom they serve, the district or country to which they belong, or the traditions as to whence they derive their descent. Between the numerous clans, blood-feuds have at times been long continued. The authority of the Khan is acknowledged by the greater portion of the tribes and races in Baluchistan, and the khanate has treaties with British India. Quetta is now (1883) garrisoned by a British force.

Pottinger, writing early in the 19th century, enumerated 74 principal tribes of Brahui, and gave 106,760 as their fighting strength; but he added that he could have given twice as many more names.

The more important of the Baluch, Brahui, and Afghan tribes in the khanate occupy the following districts:—

Nusherwani (Baluch) in Kharan and Washak and partly in Maskai.
Mirwari (Brahui) in Maskai.
Gitchki (Brahui) in Panchgur and Kej.
Lumri or Numri in Las. They are connected by blood with the Batti of Jeysulmir, and trace their ancestors to Samar, the founder of Samarcand.
Kassi (Afghan) in Shal.
Minghal tribes and Bizanju, Zahri, Haidarani, Kaidrani, and Kambarani occupy the Jhalawan districts of Wad, Nal, Sohrab, Zahri, and Kozdar.
Raisani, Sherwani, and Bangalzai (Brahui) in Mustang.
Rakshani (Baluch? Brahui?) in Nushki.
Kalat by Dehwar, Brahui, Babi, Hindu, Afghan, and slaves. The Brahui is the dominant tribe.
Rind (Baluch) and Jat are in Cutch Gandava, with Rind and Bugti (Rind) in the hills beyond. Garchani (Rind) occupy Harand.

Baluch inhabit the hills to the W. of the N.W. British frontier from the Vihowa pass on the N. to the extreme limits of Jacobabad on the south and west. The khanate tribes own the authority only of their respective chiefs, but several of them occupy partly khanate and partly British territory.

Major John Jacob, C.B., writing in the year 1854, gives the following three lists of—

i. Tribes residing beyond British territory, and de facto independent of any other state.

Khetrani.	Kujjuk and	Bugti	Predatory hill tribes.
Lashari	Barozhi of	and	
Gurchani.	Sibi.	Mari.	

ii. The Border Baluch, who are partly within and partly without British territory, are as under:

Mazari.	Chandia.	Umrani.	Nizamani.
Burdi.	Jettui.	Khyhiri.	Kaihiri.
Dumki.	Jamali.	Jat.	Khanavi.
Jakrani.	Kosa.	Mhar.	

iii. Border Tribes living within British territory. These are the Mazari, Burdi, Khosa, Jemali, Jettui, Dumki, Jakrani, and others.

Baluch have no written tongue, but Persian is used, and in their traditions they claim to be Arabs who left Aleppo after the death of Imam Husain, and to have settled in Kirman and afterwards in Makran, while subsequently some of them went to Kalat and Khorasan and other places.

The great Rind tribes are subdivided into 44 branches. Their traditions affirm them to have emigrated ages ago from Damascus and Aleppo. Their language is the Jatki, in common with that of the other inhabitants of Cutch Gandava, and Mard-i-Rind means a brave man. The Rind of Cutch Gandava are of the Utanzai division.

The Utanzai dwell at Suran; the Dumki and Jakrani dwell at Lehri; the Doda Mari at Kahan; the Bugti, in the hills east of Lehrat, Sing Saloh, and Teriki; the Homarari dwell at Tambu; the Jamali dwell at Rojan. The Dumki, Jakrani, Bugti, and Doda Mari were distinguished by their predatory habits. They indulged these in attacks on the British armies west of the Indus. The Mari tribe inhabit the eastern hills of Cutch Gandava, and were notorious for their lawless habits and frequent inroads on the plains. A peaceful and submissive portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Mari, on the S.E. frontier of Sind. They and the Maghazzi seem to have emigrated from Makran to Cutch Gandava at different periods, and to have become incorporated with the Jat cultivators.

The following minor Rind tribes reside in the N.E. hills of Saharawan:—Kallui at Lup; Kuchik at Kirta; Pushh at Johan; Maudarari at Rodbar; and Puzh at Kajuri.

The Rind on the western banks of the Indus are of two great tribes, the Gurchani, who inhabit Harand, and south of these the predatory but nearly independent Mazari tribe. Their subdivisions are—

A. Dwelling in the hilly region N.W. of Cutchi.

Bugti.	Gurchani.	Lurd.	Mazari.
Chachri.	Lashari.	Mari.	Mundastri.
Dirishk.			

B. Dwelling in Cutchi.

Boledi.	Ghulambulk.	Kharani.	Pogh.
Changia.	Jalambani.	Kosa.	Puzh.
Dinari.	Jatui.	Nusherwani.	Rindani.
Doanki.	Kalui.	Omrani.	Utanzai.
Dumki.			

The Rind section of Baluch are in small groups or singly all over Sind, though more numerous in the north near Jacobabad, or southwards in the Thur and Parkur districts. Rind, under Chakur, attached themselves to the emperor Humayun's fortunes. They got a grant of land in the Bari Doab, and settled at Sat-gharra, on the banks of the Sutlej near Gogaira, and are still there, though not so designated. Some Baluch settled in the N.W. of India, to as far as Dehli, where they are scattered about in various capacities, and are often camel-drivers. They are large, powerful, swarthy men. They serve as mercenary soldiers in Arabia; and latterly, in Bombay, they became labourers at the harbour and on the quays.

The Maghazzi have only four families, the Butani at Jell being the chief. They are the deadly enemies of the Rind, but are probably of the same race. The Maghazzi are subdivided

into four principal families or clans, of which the Butani of Jell are the most illustrious, and gave the chief or sirdar to the whole. They boast of being able to muster 2000 fighting men; and between them and the Rind a blood feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium, and bhang.

The Baluch are in tribes or tomans, each under a hereditary tomandar. The tomans are subdivided into clans or para, each clan with a hereditary Makadam or headman. Each clan has sections or pali. They are a hardy, martial race, truthful and faithful to their engagements. They dismount and fight on foot with sword and shield. They are Muhammadans of the Sunni sect, but are not bigoted nor fanatical, and have no hatred to the British on religious grounds. Their courage is open and stern; 700 Bugti refused to surrender to Colonel Merewether's horsemen, though escape was hopeless, but allowed themselves to be shot down till two-thirds had fallen. They are averse to labour and to all instruction, considering it an indignity to learn to read or write. They are averse to regular service or to wear uniform. In their internal wars and blood feuds they never molest women or children, though they carry on their contests with the most implacable enmity.

The lads who have not put on trousers are regarded as children. Their women move fearlessly about the hills, gathering the fronds of the dwarf palm, or collecting fullers' earth. Widows are remarried to their deceased husband's brother. The men wear their beards, and have bushy whiskers. Their turban is of cloth twisted like a rope; they have a sort of shirt reaching to the knees and plaited at the waist behind, with loose trousers, and a white sheet as a plaid. The ornaments of the women are necklaces (hassi) a torque of stiff solid metal; a necklet (chamkalli, a string of twisted silk with pointed gold beads), armlets, bracelets, and anklets.

Their houses are mean, their flocks are small. They are bad riders, though they have a good breed of mares, 13·2 to 14·1 in height, well built, wiry, and hardy, able to carry their rider 50 to 70 miles, with his bedding, food for man and horse, with matchlock,—in all about 13 stone; they are never shod.

Their arms are sword and shield and matchlock. They are hardy, endure severe privation. They have blood feuds,—Khun-bawur, satisfaction in blood.

The Narui section of Baluch are a tall, handsome, active race, with good features and expressive countenances, not possessing great physical strength, but inured to changes of climate and season, and accustomed to undergo every kind of hardship and fatigue. They fight with great gallantry, fearless of death, only requiring a leader to direct their impetuous valour. They are the most savage and predatory of the Baluch. The Rind and Maghazzi Baluch resemble the Narui Baluch in size and stature, and, like them, have good features and expressive countenances, but are less able to support hardships and labour. They are of a darker colour than the Narui. They are hospitable. They are almost pastoral; usually reside in (ghidan) tents of black felt or blanket, stretched over a framework of tamarisk (guz). The Narui prefer mud houses to tents. The Baluch are indolent, and only rouse themselves to some favourite amusements. They are sober, using flesh meat, wheat, and barley, cakes, rice, dates, cheese, sweet and sour milk, and soup made of dal or peas, seasoned with pepper. The Narui principally inhabit that portion of Baluchistan which lies to the westward of the desert, and there are likewise clans or khel of them at Nushki and in Seistan.

The sections Rind and Maghazzi are settled in Cutch Gandava, to which fertile plain they have migrated at different periods from the province of Makran, and have become incorporated with the Jat, or cultivators of the soil, as the subjects of the Khan of Kalat; a few of these likewise reside in the hills to the N.E. of Cutch Gandava, and on the skirts of the deserts north of Kalat. The Baluch, in all the east of Baluchistan, are but the upper stratum of the population; and there, as also in Seistan and Cutch Gandava, the Jat race form the greatest portion of the agricultural population.

Baluch tribes think much of good blood and the claims of long descent. Baluch mothers, like those of the Armenians, Hebrews, Chinese, and Afghans, see the proofs of their daughter's marriage.

Baluch have a code of honour, to which they scrupulously adhere, and have far more nobility of character and manliness of disposition than Afghans. The Afghans swore not to molest British troops when retiring from Kābul, nevertheless destroyed the brigade. The Baluch swore to keep faith with Captain Browne and his garrison in Kahun, and escorted them safely to the plains, though quite at their mercy and dependent on them even for water. The Baluch closes with his enemy in the fight, sword and shield in hand; the Afghan engages with matchlock, firing from a distance, if possible under cover, and seldom closing with his enemy.

Baluch women generally wear the gagh-gho, a long shift resembling an English night-shirt, but opening behind between the shoulders, and with half arms. It is usually made of red or white stuff, and reaches almost down to the ankles. Red is the fashionable colour, and elaborately worked at the breast.

The men wear their hair long and flowing over the shoulders, whilst a luxuriant beard falls over the breast. The women tie their hair in a knot behind, brushing it smooth in front, and keeping it in place by a fixature. The colour of the hair is frequently brown or red.

Baluchistan grows wheat, barley, millet, and rice, but mutton and milk preparations are the staple articles of food; asafœtida is largely used.

Jaloh is a scorching hot wind of the Baluchistan desert. It is frequent in the eastern low-lying province of Cutch Gandava or Cutchi; it blows also in the sandy deserts bordering on Southern Afghanistan, and is often fatal to animal life.

Lead mines are worked at Kappar or Sekran in Central Baluchistan.

The *Brahui* are confined to the mountain districts, in which also are tribes from several sources; for instance, Jhalawan has Rajput descendants, the Boledi is of Arab descent, and the Kamburani claim to be Abyssinian.

The typical Brahui are certain tribes in Saharawan and Jhalawan. They have, both in feature

and speech, indications of a Mongoloid or Turanian origin. They are hardy, often migratory. Their political chief is the Khan of Kalat. They are Sunni Muhammadans.

The more unsettled and wandering Brahui reside in one part of the country during summer, and migrate for the winter season. They likewise change their immediate place of resort many times, in search of pasturage for their flocks,—a practice rare among the Baluch tribes. They differ so much from the Baluch in external appearance, that it is almost impossible to mistake one for the other. The Brahui, instead of the tall figure, long visage, and raised features of their fellow-countrymen, are stout and squat, have short, thick bones, with round faces and flat lineaments. The title Kamburani is a general one for all the Brahui. The Kamburani are subdivided into distinct gradations of rank, called Ahmadzai and Khani. The first supplies the khan, and the Khani are of the secondary rank of chiefs; while the Kamburani include all the remainder of the tribe, though in common use is applicable to the whole body. They receive wives from, but do not marry their daughters into, other tribes.

Brahui are found throughout Baluchistan, but chiefly occupy the mountainous regions of Jhalawan and Saharawan, while Kalat, the capital, is their headquarters. They are hardly to be surpassed in activity, strength, and hardiness, being alike inured to the cold of the mountains of Baluchistan and to the heat of Cutchi. The women of the Bizanju tribe, and those of the Nichari near Kalat, are esteemed very handsome; but the exposure to which they are subjected during their migrations soon bronzes the face, and they acquire a hardy, masculine appearance. At the commencement of the winter months, all migrate to the plains, and many leave the hill country as early as the middle of September. On a march they sustain incredible labour.

The Gurganani Brahui take their name from the Persian Gurg, a wolf.

Kamburani Brahui are estimated to have 1000 fighting men. They are supposed to have come from Abyssinia, Kambur in Baluchi meaning an Abyssinian. It is said also to mean a tortoise.

Brahui and Baluch are equally hospitable, but the Brahui are the more quiet and industrious race, with habits averse to the rapine and violence to which the Baluch tribes are addicted. In personal bravery and endurance of privations and hardships, the Brahui are esteemed superior to all the neighbouring races. Their gratitude is lasting, and their fidelity conspicuous. They are mild and inoffensive in manner, though uncouth and uncivilised. Their women are not secluded.

The tribes, especially the Brahui mountaineers, reside in tomans, or collections of tents. These tents are made of goats' hair, black or striped; the furniture is very simple,—a few metal cooking-pots, a stone hand-mill, and some rough carpets and rugs, with a distaff for spinning wool, and a hookah, are all that are usually found in a Brahui tent. That of the chief may perhaps be better furnished, and he is richer than his neighbours in flocks and herds. The dress of the lower orders is made up of a long tunic, trousers loose at the feet, and a black or brown greatcoat or cloak, usually of felt, kamrband, and sandals. They wear a small cap, either fitting tight to the outline of the head, or dome-shaped, with a tassel on the top. Those of the higher classes are elaborately ornamented with gold thread. A few wear turbans; and the Baluch have them preposterously large, of white muslin. The higher classes are somewhat better dressed, and carry loongees or scarfs, which they throw around their shoulders in exactly the same manner as a Scotchman wears his plaid, and as the ancient Irish wore them long ages ago.

Saharawan province, in Central Baluchistan, is about 10,000 square miles. The population does not exceed 50,000. This elevated plateau is the more northern of the Baluch confederate provinces, and runs with the Afghan districts of Peshin and Toba, and is separated on the east by a range of hills from Dadar and Cutch Gandava. It has only the Bolan river and a few rivulets, but the climate is cool, and the rains ensure good grain harvests. Quetta, Kot, or Shal is one of its districts, and snow lies there for two months of the year. The population consists of the Kassi (Kassye) tribe of Afghans, who claim affinity with the Safi clans; but in spring and summer numerous Brahui tomans range over its plains. Its capital, called Shal by the Baluch, by the Afghan is called Quetta, an equivalent for 'kot' or fort, sometimes Shal-Kot.

The Shal valley was ceded to Nasir Khan of Kalat by Ahmad Shah, the first Daurani sovereign. It has many small divisions and villages. Its capital, Shal or Quetta, is very unhealthy from July to September.

Part of the Sherwani Brahui dwell in Shal. The Sherwani occupy also exclusively Khad and Kishna, but reside with other tribes in Shal and Mustung. They take their name from their belief that they came from Sherwan on the Caspian.

Mustung has a healthy climate and fertile soil. It contains no Afghans, the fixed inhabitants are Dehwar, mixed with the Raisani, Sherwani, Mahmud Shahi, Bangal-zai, Lari, and Sirphera tribes of Brahui.

The Raisani, the most respectable of the Saharawan tribes (from Rais, Arabic for ruler), are able to raise 500 fighting men. The Raisani furnish the chief of Saharawan, whose place on all state occasions is on the right of the Khan of Kalat, the chief of Jhalawan being on the left. They are traders, horse-dealers.

The Lari Brahui occupy the valley of Nermuk in Saharawan, but reside also at Mustung and Shal, with other tribes.

Sirphera, literally head-shearers, dwell in Saharawan and Cutchi. They reside in summer in Gurchani, and during winter in Cutch Gandava. Pliny mentions the Sarapareæ near the Oxus.

Mangachar has a few dispersed hamlets. It is well irrigated with canals, and the whole plain is intersected with dams to preserve the rain. The tomans are scattered over the plain. Many brood mares are kept. It is separated from Mustung by a lengthened valley termed Khad, in which the Sherwani tribe of Brahui dwell. The Brahui tribes on the east border with the Mandawari, Kuchik, and Puzh Rind tribes and the Ghazghi Brahui, adjacent to Cutch Gandava. The Langhao are in Mangachar.

Dasht-i-be-Daulat belongs to the Kurd Brahui tribes. It is in the northern part of Saharawan and west of the Bolan Hills, and is about 15 miles

in length and breadth. In spring it is clothed with lovely flowers and grasses, and is then covered with the tomans of the Kurd, who retire to Merv after the harvest of autumn, and then predatory bands of Khaka roam over the ground. The Kurd possess also Tikari in Cutch Gandava. Their sections are the Made-zai, Shadan-zai, Zirdad-zai, Shadi-zai, and Massutari. A pastoral tribe of Kurd occupy the Kohistan.

The *Kharan* province, in which lie two small towns, is occupied by a Rind tribe of Persian origin, called the Nusherwani, of whom the Alif-zai are one branch. They cultivate a little wheat and barley, but insufficient for their own wants. They claim a descent from Nusherwan similar to the Udaipur Rajputs. They are the dominant tribe in Kharan. The Dagari and Hijbari tribes are said to be the original owners.

The Rodani Rind are at Ashi Khan and Puden, the Ghazghi and Samalari are in the hills west of Khanak, and the Sunari in Dasht-i-Goran.

Jhalawan province has that of Saharawan on the north and west, Las-Beyla on the south, and Cutchi and Sind on the east. It lies between lat. 26° and 29° N., and long. 65° and 67° E., and comprises the districts of Sohrab, Zahri, Baghwan, Khezdar, Zidi, Kappar, Wad, and Nall, together with the hills occupied by the Mingal, Bizanju, and Samalari Brahui. The inhabitants are pastoral, and have large flocks of sheep. Jhalawan has less elevation than Saharawan. Many of the tribes are supposed to be of Rajput origin; and, until lately, the practice of infanticide was prevalent amongst them. Near Bagwana Dr. Cook saw a cave in the rock filled with the dried mummy-like bodies of infants, some of which when seen had a comparatively recent appearance. The fixed population in their little towns does not exceed 10,000, and are greatly exceeded by the pastoral tribes. The great Brahui tribes of Mingal and Bizanju give them the preponderance. The Bagwana valley is all well cultivated.

Bizanju Brahui inhabit the districts of Nall, Urnach, and Kolwah, also Ormara in Makran. They have 10 sections,—Tamarari, Muhammadari, Gabarari, Umarari, Nindowari, Ludani, Lotani, Chanal, Baduzi, and Siapad. Many of the sections occupy the Urnach valley. The two great divisions, the Umarari and Tamarari, are west of, but on the same hills as, the Mingal. They are a violent people, and much addicted to rapine.

Boharzai is a predatory tribe in the Chiru Nal valley in Jhalawan.

Khozdar, a sub-district of Jhalawan, has the Mardui Brahui tribe. They smelt lead from a carbonate ore.

The Mingal, a powerful Brahui tribe, dwell in the southern hills of Jhalawan, from the limits of Khozdar to Bela in Las. Their manners are rude and their habits predatory. The Shahi-zai and Phailwan-zai are their two great divisions. They pretend to be able to raise 18,000 fighting men.

Ziggar Mingal dwell in Nushki to the west of Saharawan. They are hospitable, and adhere to their promises. The Ziggar Mingal and Rakshani of Nushki have no proper towns or villages, but de in tents, though not migratory. Their r, the Kaisar, is useless for irrigation, and is amongst the sands. They cultivate wheat at skirts of the hill ranges supporting the plateau of Saharawan. Snow seldom falls. The Ziggar Mingal at one time occupied the Dasht-i-Goran near Kalat, but their increasing numbers compelled them to emigrate into Nushki, dispossessing the Rakshani, of whom two tomans or clans still reside at Nushki. They have a much-valued breed of horses, called Tarji. Their flocks are very numerous.

The Nusherwani, the ruling tribe in Kharani, extend into Nushki, others into Baluch Makran, Panjgur, and Kolwah.

Sageti (Sajadi?) have about 700 adult men. They inhabit the valley of Graisha in Jhalawan. They are supposed to be descendants from a portion of the force that marched southwards with Alexander. The chief family of the tribe are the Saki, distinctly of Scythian origin. They are of those Sakæ who formed part of Alexander's army, and whose country is stated by Dr. Wilson to have been that lying between the Paropamisan mountains and the Sea of Ural. It is not improbable that they accompanied Alexander as far as the south of Sind, and, returning with Craterus up the Moolla pass, settled in their present position. Sakæ still occupy the borders of the Caspian.

Zahri or Jahri, a Brahui tribe in Jhalawan.

Nushki is an extensive province west of Jhalawan. It has several towns and castles, and is inhabited by Mehmasani, Nusherwani, and Mirwari.

Mirwari Brahui are in Nushki, Jao, and Kolwah in Baluchistan.

The Mehmasani have branches in Seistan and in the hills of Luristan.

Kalat town, in lat. 29° N., and long. 66° 40′ E., is the capital of Baluchistan. It is 7000 feet above the sea, in a narrow valley, with the hills of Cutch Gandava on its east. Its soils are rich, and it has one permanent stream, with several of the karez aqueducts. Kalat district is the principal district of the Brahui race. The town was taken by storm by the British Indian army on the 13th November 1839, from the northern or Mustung gate. The population consists of the dominant Brahui, and of Baluch, Dehwar, Babi, Afghans, Ghilzae, and slaves. The miri or citadel has the palace of the khan. The Babi suburb is on the south side; Brahui, Ghilzae, Afghans, and others dwell in the Past-i-Shahr, and Afghans are in all the suburbs. The number of the inhabitants has been stated at 12,000, and that of its houses at 800. The Ahmadzai branch of the Kamburani is the section of the Brahui to which the Khan of Kalat belongs. It is said to be descended from Kambur, son of the Imam Kambar; but Kambur, in Baluchki, means an Abyssinian, and the dominant tribe is believed to have come from that country, and to have been ruling since the middle of the 17th century.

Gadad are the slaves (Khanazad, household guards) of the Brahui rulers. Every family of consideration in Baluchistan has slaves either of African origin or of captives taken in predatory excursions.

Dehwar speak pure Persian. They are the settled inhabitants of towns and on cultur le lands. They are called Tajak in Persia, Sart Bokhara, and Dehgan in Afghanistan, Dehwar and Dehgan meaning villagers. They are a quiet, orderly people. In Baluchistan they have about

thirty sections, in five grand divisions. Dr. Cook says their language is nearly pure Persian; they inhabit the Deh or villages, and do not migrate, are an agricultural people, hard-working and poor.

The Babi or Ababi are a wealthy trading class in the Shal district and at Kalat. They are stout, well-made men, with good features and pleasant manners. They appear to have come originally from Afghanistan. They have four khel or sections,—Umar, Hija, Chur, and Ganga.

Cutch Gandava for brevity is generally called Cutchi. It is bounded on the N. and N.E. by the Murree and Bugti countries, on the W. by the Hala mountains, on the E. by Sind, but is separated from Sind in the S. by a desert strip 20 miles broad. From these bounds it will be seen to extend from the town of Dadar, near the mouth of the Bolan pass in the N., to near Khyree Gurree in British Sind in the S., a distance of 100 miles, and from the Hala mountains on the W., 150 miles eastwards to the Panjab. The surface is nearly uniformly flat, and is mostly a waste, for although the streams of the Bolan, the Narra, the Shari, and the Teywaugh run through it,—and wherever water is obtained Cutchi can be cultivated, and bajra (Penicillaria spicata) and juari (Sorghum vulgare) grown,—the air is arid, the average annual quantity of rain being about two inches, and for two or three years at a time there may even be no rain. When it does fall, a severe form of fever follows, from which no one escapes. Except within the influence of irrigation or after successive seasons of favourable downfalls, Cutchi may be termed a desert waste. Bagh, the principal town, in lat. 28° 56′ N., and long. 67° 54′ E., about 38 miles from Dadar, has a population of 8000 to 10,000; the neighbourhood is positive desert or Pat. Gandava is the second town.

Dadar, in lat. 29° 28′ N., and long. 67° 34′ E., and 743 feet above the sea, is also a town of some importance. It is 5 miles from the E. entrance of the Bolan pass, and is well supplied with water from the Bolan river, but it is almost surrounded by hills, and the closeness and great heat have given rise to the Persian saying, 'Ai Allah! Dozakh chira sakhti chon Dadar hasti!'—O Lord! why did you make hell, when you have Dadar? The Bolan pass is 54 miles long reckoning from its mouth, 5 miles W. of Dadar, through the Hala mountains to the Karlaki, 2¾ miles to the E. of the Dasht-i-be-Daulat, 5900 feet above the sea, where the fertile, well-watered valleys of Mustung and Shal occur. From April to August, the climate of Cutchi is proverbially sultry, and the desert blast, the bad-i-simum or jaloh, sweeps across it. In winter the climate is temperate, and the Khan of Kalat, and all the wealthier Brahui, as also the Rind Baluch, resort to it. The khan takes up his residence at Gandava, but Bagh is the more important town. The several tribes in Cutchi number in all about 100,000 souls. It is inhabited by very distinctly marked races,—the Jat, Rind, Maghazzi, and Brahui. The Jat seem the original race, and occupy the centre of the province. The Rind, lawless sub-tribes, Jakrani, Dumki, Bugti, and Murree, are a more recent intrusive race dwelling on the skirts. The Doda, a division of the widely dispersed great Murree tribe, for the last three centuries have occupied the hill ranges E. of the plain of Cutchi. The Murree are a brave race, long distinguished as daring depredators. In 1880 they harassed the British in the advance to Kandahar.

Harand and Dajil, in Cutch Gandava, but bordering on the Indus, are inhabited by the Gurchani, and have the Mazari on their south.

The pastoral and agricultural tribes are the Jat, the Khosa, Jamali, Jettui, Machee, Oomrani, Ramdani.

The Dumki sub-tribe of Rind claim a Persian origin; they are a hardy, brave, and martial race.

The Jat, distributed throughout Baluchistan, are all Muhammadans. Those of Cutchi have 22 sections engaged in tillage; also 18 sections of camel-breeders.

The Jat of Cutchi dwell in villages.

The Guruwani tribe in Cutchi follow Muhammadanism, but are descendants from former Hindu rulers in the highlands of Baluchistan.

The Kaihiri is a strong but peaceable tribe in Chatar and Pulaji in Cutchi, who claim to be Shaikhs from Afghanistan. They rendered good service to the British. They suffered defeats in 1828 from the combined Murree, Bugti, Dumki, and Jakrani, and were driven out of the country, but were restored by Sir Charles Napier after his hill campaign in 1845. He enrolled eighty of their number as irregular horse, and stationed them in the Cutchi side of the desert. These are still kept up, at Rs. 14,580 per annum of pay.

The Langao tribe is of Hindu origin, and retain the Hindu titular appellations. They dwell S. of Bagh in Cutchi, and in the valley of Mangachar between Kalat and Mustung. Their Maidizai offshoot reside in Gwadar.

The Magheri tribe have four subdivisions,—Hajizai, Bambirani, Bhond, and Arbani. Their chief town, Jalal-Khan, is N.W. of Bagh.

The Jatui is a small agricultural sub-tribe of Rind Baluch between Shikarpur and the Indus, also in Cutchi. They were formerly predatory, but are now peaceable. They have eleven subdivisions.

The Tarin, a Pathan tribe furnishing about 700 fighting men, inhabit the country to the north of Cutchi.

The Jakrani tribe is Baluch; they occupy the portion of Cutch Gandava to the E. of Chutar and Shahpur. They are a section of the Maghazzi. They have nine subdivisions,—Salivani, Majani, Sujapaz, Suwanani, Sudkani, Solkani, Mulkani, Karokani, and Dirkani, and have 300 fighting men well mounted. They and the Dumki before British annexation were largely predatory, but after Sir Charles Napier's campaign in 1845, the best portion of this tribe was removed to fertile land near the Kashmir desert in the Jacobabad district. They used to unite with the Dumki, and could muster for plundering about 1500 horsemen well armed, with about 500 more able-bodied armed men on foot. The Jakrani carried on their forays on horseback, and levied black-mail on all merchants. They are now peaceful cultivators of their own and Government lands.

The Kojah are a section of the Kakar Afghans who have settled in the district of Sibi in N. Cutchi. They have attained to great power, and in 1840 had 700 fighting men. Their country is richly cultivated.

The Barozai or Barozhi, a clan of Pathans, reside in the town of Kurk in Sibi, a semicircular bay 25 miles across, in the hills N.E. of Dadar, and

irrigated by canals from the Narra river. They number 700 men. They are living between the Brahui, Murree, and Kakar, and have adopted the Baluch manners and customs. They pay tribute yearly to Kandahar.

The Bugti is a sub-tribe of Rind Baluch who occupy the hilly country to the W. of the Rajanpur border. Their six divisions, and the number of their fighting men, have been stated as under:—

Kaheja, . .	120 to 175	Kalpar or Sekh-	
Nothani, . . .	...	arce, . .	150 to 250
Firozani, ...	430	Phong, . .	20 to 150
Zarkani, ...	380	Kiazai or Sham-	
Masuri, . .	180 to 325	bani, . .	350 to 500

Thus the total number of the Bugti fighting men has been variously estimated at from 1300 to 4000. Their country is chiefly rugged and barren, but contains much good pasture land and some fertile valleys. They sell cattle and sheep to the people of Sind. Their Kaheja, Kalpar, Nothani, and Phong clans inhabit the hills on the N.W. frontier of Sind and Cutchi and the S. part of the Mazari country on the Panjab. The lands of the Shambani and Masuri clans extend along the Panjab frontier, between the British military posts of Banduwala and Sabzil-ki-Kot on the E., adjoining the Mazari and Dreshuk, with the Gurchani on the N., and the Loharani Murree on the W. The Bugti and Murree were incessantly at war through a prolonged period. In 1839 the Bugti made predatory attacks on the British army as it advanced on Afghanistan, and were then defeated by Major Billamore. In 1844–45, Sir Charles Napier moved against them with a force of 7000 of all arms, besides a number of Murree Baluch auxiliaries, but only about 3500 Bugti seem to have opposed. The campaign lasted fifty-five days, with little loss to the Bugti. Major Jacob, in 1847, was subsequently engaged against them, and they suffered much distress for food; and on the 1st October 1847, Lieutenant Merewether killed 600 of them, with a loss on his side of 9 killed and wounded. They have since made several inroads on British territory; but they were broken up, and removed to lands near Larkhana. Such of them as wished returned in 1851 to their own country, and are now orderly, industrious, and contented. Their valley of Mutt is well cultivated, and produces excellent wheat and millet, and they sell their sheep and wool. The original Hindu inhabitants of the Mair and Bugti hills were driven out by their present occupants, but the natives of Barkhan (the Khetran), inhabiting the more mountainous district to the northward, were able to hold their own. The whole are nominally subject to the khan as chief of all, but his power appears to vary with his popularity. Dehra Dibrak, or Dehra Bugti, is the capital of the Bugti. It is in the Siaf valley, and is their only town, for they are essentially nomade. Major Billamore's force captured it in 1839, and again in 1845 General Simpson's column. Bugti occupy also the southern portion of the Suliman mountains, a tract of extremely hilly, stony, and barren country beyond the British frontier on the west, and south-west of Mithenkot in the Panjab, and north of Shikarpur in Sind. They acknowledge the Khan of Kalat. Their valleys are numerous and fertile, with streams flowing through them. They have ne sub-sections. They can muster 1000 fighting en.

The Mazari, a sub-tribe of Rind Baluch, occupy the tract of country on the right bank of the Indus, between Mithenkot and Burdeka, partly in the Panjab, partly in Sind. They are south of the Dreshuk. The adult males are about 2500. They long continued predatory, and were the most expert cattle-stealers on the border. They are now orderly, and sided with the British in the Indian mutiny of 1857. They have 39 sub-sections.

The Murree sub-tribe of Rind Baluch inhabit the outer hills which surround Cutchi on the east, north, and north-west sides. They are subjects of the Khan of Kalat. They have the Tarin and Luni on the north, the Khetrani and Bugti on the east, the Bugti on the south, and Kakar on the west. Their districts are Kahun, Mundahi, Jantali, Phailawar, and Nisao. Their four sections are Ghazani, Loharani, Bijarani, and Mazarani. They number 8000 souls, with about 2000 to 3000 fighting men. They are predatory. Their opposition to Captain Browne of the 5th Bombay N.I., who defended Kahun, and to Major Clibborn in 1839, is matter of history. In 1859, an expedition under Major Henry Green was sent against them. Many of this clan settled in Lower Sind, in the Khyrpur country, and in the districts near Sukker, but these have not for several generations had communication with the independent hill Mari. The country of the hill Murree is mostly barren hill, with many extensive valleys and fertile spots; it extends from the neighbourhood of the Bolan pass on the west to the Bugti and Khetrani country on the east about 100 miles, and from Surtoff on the south to the Afghan territory on the north about 80 miles. The Narra river and its large tributary the Lar, also the Lharee, run through it. Their chief town is Kahun.

The *Shum* plain formerly belonged to the Shumbani tribe, but they have been driven from it by the Murree, who devastated all the country around their own district. The Dauggati or wild ass roams over the elevated plain.

Gurchani dwell south of the Lughari. They are said not to be pure Baluch; the tradition being that Doda of the Deh caste was banished from his tribe, and, mounting his maro, he rode into the desert, lost his way, wandered on and on, until at last he was found by the Rind more dead than alive. After trying all other means to revive him, a young virgin was sent to lie with him, that the warmth of her body might restore him to life, which was effectual, and he married her. His family rejoined him from Tatta or Sewerton in Sind. The Gurchani have 49 sub-sections.

The Dreshuk is a Baluch tribe dwelling south of the Gurchani. They are large landowners, but all their lands are cultivated by the Jat race. They have ten sub-sections.

The Khetrani or Khuttran tribe, about 18,000 in number, are in a district in the hills of Baluchistan to the north of the Bugti country, which their district adjoins. Its greatest extent is about 120 miles N. and S., and 70 miles E. and W. The chief town is Barkhan, which is about 160 miles N.N.E. from Shikarpur. N. of the Khetrani are the Afghans, to their W. the Murree (Baluch), and on their E. are the Lashari and Gurchani tribes. The Khetrani are not Afghans nor Baluch, but they intermarry with both these races. They follow agriculture, and are of peaceable habits, their country being sufficiently fertile to supply their

wants; and though brave and ready to fight when attacked, they abstain from plundering their neighbours. The river Lar runs through their country.

The Lashari and Gurchani dwell in a barren and unproductive strip of country between the Khetrani and Multan. They are shepherds and herdsmen.

The Jamali is a small, poor clan of Baluch cultivators and shepherds, who reside at Rojhan at the N.W. of Shikarpur, and on the edge of the Barshori desert, also in E. Cutchi. They dwell in Upper Sind along with the Jettui, a similar tribe. They are principally in Khyra Garhi in Larkhana. They are not predatory, and some are artisans. A tribe of the same name is found in Lower Sind.

The Dumki tribe occupy the territory between the Mazari on the N. and the Burdi on the S. They were the most martial and formidable of all the Baluch tribes. General Jacob disarmed them, and they subsided into peaceable and industrious cultivators.

Burdi are a small tribe of Baluch, residing mostly in the Burdeka district on the western bank of the Indus, with the Mazari district on the north and Sind canal on the south. They continued predatory until the year 1860, combining with the predatory Dumki, Jakrani, Khosa, etc.; but on General Jacob disarming all the population of Sind, and cutting a road through the forest, this sufficed to render the Burdi peaceable and well-disposed cultivators. Several small branches dwell in Sind and Cutchi.

The Khosa tribe is scattered all over the country between Nuggur Parkur and Dadar, and have several villages on the Sind border. They are said to have been originally Abyssinians. The tribe is found in many parts of Upper Sind, Cutchi, and on the southern frontier of the Panjab. Major Pollock, writing in 1860 of the Khosa in the plains of Dehra Ghazi Khan, said a Khosa who has not been in jail for cattle-stealing, or deserved to be, who has not committed a murder, or debauched his neighbour's wife, or destroyed his neighbour's landmark, is a decidedly creditable specimen; and if, added to this, he is out of debt, he is a perfect marvel. They have 35 sub-sections.

The Maghazzi are subdivided into four principal families or clans, of which the Butani of Jell are the most illustrious, and give the chief or sirdar to the whole. They boast of being able to muster 2000 fighting men; between them and the Rind a blood feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium, and bhang. They are one of the principal Baluch tribes in Cutchi. Their chief town is Jhal, 24 miles from Gandava, at the foot of the western hills. They can raise a formidable force of well-mounted men. They resemble the Narui in size and stature, and, like them, have good features and expressive countenances, but are not capable of bearing so much fatigue. A small number of them in 1830 defeated the Rind. Pottinger included amongst the Maghazzi, the Abrah, Burdi, Isobani, Jakrah, Jakrani, Jalani, Jataki, Kalandarani, Lashari, Matihi, Musani, Kakrani, Nari, Turbandzai, and Unar. Postans considered them to be of Jat origin.

LAS.—Las and Makran are two seaboard provinces. Their coasts are arid and sterile, with sandhills and other rugged hills near the sea. The Las province lies between lat. 24° 50′ and 26° 15′ N., and long. 65° 28′ and 67° 18′ E., with an area of 5000 square miles. Las means the plain country. Las extends from the Hingor river to the river Hubb (by Ras Muari), and is separated from Lower Sind and the delta of the Indus by the Hala mountains. Its chief town is Bela (Beyla), and is the residence of its chief, the Jam. The houses of this town are mean, but ancient coins, trinkets, and funereal jars are exhumed near it.

The Chandra kup or basins of Rama Chandra are in the province of Las, near the Phor stream, on the road to the temple of Hinglaj, and between the greater and lesser Hara mountain ranges. The kup are seven small truncated conical hills of very light-coloured earth, rising two to four hundred feet somewhat abruptly from the plain, with numerous fissures at their base. They are saline mud volcanoes, the mud constantly bubbling up, and sometimes overflowing. There are similar mud volcanoes in Makran.

Shahr Roghan is a deserted town of caves resembling those of Bamian. It is about 9 miles north from Bela in Las, on either bank of the Purali river, in a wild, broken ravine, with cliffs rising perpendicularly 400 or 500 feet. The excavations, about 1500 in number, are in the form of rooms 15 feet square. The legend connected with it resembles that of Tobit and the seven friends. It relates to a beautiful but demon-harassed princess, Buddul Tumaul, who slew her seven lovers, and was at length rescued by Saif-ul-Mulk, son of the king of Egypt.

Hinglaj in Las is famous for its Hindu temple. It is on the Hara range, near the Aghor or Hingor river, about 30 miles from the seaport of Ormara, and 150 from Kurachee. It is one of the fifty-one pita or spots on which, according to Hindu belief, the dissevered limbs of Sati or Durga fell. Muhammadans regard it as the shrine of Bibi Nani, the Nanaia of the old Babylonians, Bactrians, and Persians.

It has many subdivision, such as Jamhot, Gungah, Angariah, Chuta, also the Gadur, Masorah, Manghia, Shekh, Shahoka, Sur, Vahreh, Sabrah, Mandarah, Runja, Burah, Dodah, etc. The population of Las province has been estimated from 30,000 to 60,000 souls. Their tribes are the Lumri or Numri, the Chuta, Med, Jokia, and Barfat. The people are Muhammadans, many of them of the Mehman sect. The seaport Sonmiani contains numbers of the Mehman sect or race, and part of the fixed population of Bela is called Jaghdal.

The Lumri or Numri is the dominant tribe, and is commonly termed the Lassi branch of the Lumri tribe. The Lumri or Numri are believed to be descendants of the Samma and Sumra Rajputs. They trace their origin to Samar, who founded Samarcand, and acknowledge a consanguinity to the Bhatta of Jeysulmir. Lumri have obtained possession of all the hill tract lying between the Pubb mountains and the Indus, east and west, and between the Mallir and Bharun rivers on the north and south, from which, about A.D. 1780, they ultimately drove the Khosa. Their features resemble those of the Rajputs. They wear arms, but they are peaceful shepherds and cowherds. They form the bulk of the population of Las. The Jamhot or Jamot are the dominant tribe of the Lumri, and furnish the Jam or ruler

of the province. The Dodeh are a section of the Lumri in Las. The Lumri are an active, hardy, pastoral people; their wealth consists in flocks of goats, with fewer buffaloes and camels. They despise agriculture; wild Lumri are found grazing on the rocky banks of the Hab river. Their language varies little from that current in Sind. They manufacture coarse fabrics from the wool of their goats and camels. The Lumri eats meat almost raw, and is greatly addicted to the use of opium.

The Biruvi tribe dwell near Bela; they sell their children when in want. They are better looking than the Sidi, and, as they speak Sindi, Hindus prefer them as domestic servants.

Hormara, a sterile district with a port of same name, is subject to Las. Near Jabal Malan is a tribe called Gujur; at Garuki, the Saugor tribe; and at Hormara in Makran, with four hundred houses, is a tribe of this name. The Hormara tribe say they came originally from Sind. Persani, west of Hormara, is a small port of two hundred houses.

Chuta, a small tribe of 2500 souls, occupy a district of the same name, on the river Hub, which falls into the sea at Cape Monze. They are said to be of Sumrah, but also, it is said, of Brahui origin, and seem to occupy the Pubb hills of Kurachee, on both banks of the river Hub, and separated from British territory by the Kurter, Mihi, and Mol hills. The Chuta say that when Dodeh, their ruler, fell in the battle by Allah-ud-Din, the Chuta tribe left Sind and joined the Brahui. They are pastoral, cattle graziers. They are of smaller stature than the Sindians. Their huts are of mat or of coarse blanket, drawn over a rough framework of sticks. They wake their dead. They are quarrelsome, and so addicted to thieving as to have an alliteration of their name Chuta Buta, Chuta Rogue. They have 14 clans.

Las has two or three places for receipt of custom.

MAKRAN is a province which extends from Jashk to the Hingor river. Makran has Persia on the west, the provinces of Las and Jhalawan on the east, Persia, Afghanistan, and the Kharan district on the north, and the Arabian Sea on its south. Its western portion is under Persian rule, and its eastern under the Khan of Kalat; the boundary being at long. 62° E. Its name is supposed to be the combination of two Persian words, Mahi-khoran, Ichthyophagi. It was also known to the ancients as Karmania altera. From Cape Jashk on the Purali river, a distance of 500 miles, the shores of the coast of Makran are washed by the Arabian Sea. It is a district of hills and valleys, in parallel ranges running east and west, but almost rainless. On many of the hills are beds of clay, 50 to 150 feet thick, containing fossil shells of the miocene formation. Between Gwadur and Ras Kucheri are many of the mud volcanoes called Chandra kup, and near Ras Jashk is a hot spring with a temperature of 128°. One group of the Chandra kup, consisting of three cones, is a mile to the westward of Huki and about 60 miles from Sunmiani. The other group, consisting of two cones, is about 10 miles north of Ormara.

It is the most westerly of the Kalat territories, is sometimes called Kej Makran. It is the osia of the Greeks. It is inhabited by many s, of whom the Gitchki is the most numerous, but about half the population is of a sect of Muhammadans called Zigger. Its chief town is Kej; Gwadur and Ormara are seaports, and Panjgur is an inland town. The Makran and Las region has been familiar to Europeans ever since the trying march across it of Alexander the Great. He left Patala in Sind (presumed to be Tattah on the Indus) some time in March or April, and proceeded in the direction of Bela, crossing in his route the lower ranges of the Brahuik mountains. Thence he marched in the direction of Jao (Jhau) in Makran, forcing a very difficult pass some distance south of the ancient town of Gwajak, where he was opposed by the natives. He then kept nearer the coast, traversing the present Kolwah district, experiencing much difficulty in obtaining water, and suffering from fatigue, hunger, and thirst, until he reached the fertile valley on the western border of Gedrosia, the present Banpur, from which he passed into Karmania, the present Persian province of Kirman.

The names of the places mentioned by Arrian on the Las and Makran shores, viz. Malana, Araba, Kalama, Derembosa, and Kophas, are still retained in the modern designations Malan, Araba, Kalamat, Darambab, and Kophan. The Asthæ of Ptolemy and Kamina of Nearchus, is the small island of Satadip, called Asthilal by Arabs and Baluch, lying a short distance off the Makran coast, between Ormara and Pasni, its other names being Astola Island, Haftala, Sataluh, and Sangadip. It was much resorted to by the Juasmi pirates. Hindu pilgrims visit it.

In the time of Marco Polo traffic seems to have been directed through Makran, whose people, he says, 'live by merchandise and industry, for they are professed traders, and carry on much traffic by sea and land in all directions. And you must know that this kingdom of Kes Makran is the last in India as you go towards the west and north-west.'

The habits of the people on the coast seem to be identical with those of the races who are known to have dwelt there two thousand years ago, and described by the ancients as the Ichthyophagi. From Basrah to Hormuz, and eastward to the Indus, the sea-coast people still principally live on fish. The Mahi-abah and Mahi-ashnah, literally fish-bread and fish-soup, used among the people of Las, is prepared from fish (more particularly a small kind found near Hormuz), dried by exposing it to the sun. Strabo and Arrian relate that the ancient Ichthyophagi made into bread in a similar manner, the fish, which they dried and roasted. The region of the Ichthyophagi, as known to the ancients, commenced at Malana, near Cape Arabah, and ended between the ancient Dagasira and the place now called Cape Jashk. Churchill's collection of voyages mentions that 'the coastes of Persia, as they sailed in this sea, seemed as a parched wildernesse, without tree or grass; those few people that dwell there, and in the islands of Las and Cailon, live on fish, being in manner themselves transformed into the nature of fishes. So excellent swimmers are they, that seeing a vessel in the seas, though stormie and tempestuous, they will swimme to it five or six miles, to begge almes. They eate their fish with rice, having no bread; their cats, hennes, dogges; and other creatures which they keepe have no other dyet.' Nieuhoff, also, who travelled in 1662, says that

about Gambroon, the common people make use of 'dates instead of bread or rice; for it is observable that the ordinary food of the Indians, all along the coast from Basora to Sinde, is dates and fish dried in the air; the heads and guts of the fishes they mix with date-stones and boil it altogether with a little salt water, which they give at night to the cows after they come out of the field, where they meet with very little herbage.' At the island of Kharak, also, at the present day, fish and dates are the chief articles of the people's food, and fish is still the staple article of food of the inhabitants on the sea-coast of Baluchistan.

There are, in Makran, cyclopean structures raised by some unknown prior race. They are called Ghorbasta or Ghorband, and bear a resemblance to the cyclopean remains of Europe. They are built across ravines and on the declivities of mountains, to form tanks and to distribute the water. They must have been constructed by a race who had, on entering it, foreseen that the country would not otherwise support them, and the race is supposed by Dr. Cooke to have been Pelasgi, or a people with kindred habits.

Ras Jashk, or Cape Jashk, is the western limit of the Makran seaboard. The inhabitants of the village near it are Baluch and Arab fishermen.

The present population of Makran, about 200,000, consists,—1st, of Gitchki, Boledi, and Malikah, who furnished the ruling chiefs in Makran; 2d, the second class are great and powerful tribes, some of them of Brahui origin, viz. the Bizanju, Nusherwani, Mirwari (Brahui), and some Narui or Baluch, viz. Hot and Rind; 3d, tribes of respectability, viz.:—

Ashkani.	Jatgal.	Lagaori.	Sajadi.
Bari.	Kaodai.	Mulai.	Saugorif.
Band.	Kalmati.	Maidizai.	Singalu.
Birdi.	Ketwari.	Puzhi.	Shahzadah
Gojah.	Kosaji.	Raisi.	Wardili.
Gorji.	Kotigi.	Shebi.	Zishtkhani

th, inferior tribes, viz.:—

Bahari.	Kolwah.	Lori.	Med.
Durzadah.	Langao.	Lundi.	Zati.

The Makran tribes are hospitable, faithful to their agreements, and courageous. Though averse to European discipline, they take service with Sindhia, Holkar, the Gaekwar, and the Kattyawar chiefs. The Makrani is capable of great fatigue and endurance, though not of large frame. Their language is a branch of ancient Persian. Their houses are mean, chiefly of matting.

The Saugor, a tribe of Baluch, are fishermen.

Gwadar town is occupied by 4000 or 5000 inhabitants,—Biadhiah, Arab, Hindu, Khojah, Med, and Korawa.

The small seaport village of Chaobar or Charbar, belonging to the Imam of Muskat, has 560 inhabitants, consisting of Med, Bosdar, Keji, Tizi, Shirik, Khojah, Bania, and Hamali.

The Raushani Narui, in Upper Makran, are numerous and influential, and have the following sections:— Arbabi, Khasoji, Kurd or Shahidi, Malika, Ming or Mind, Rakshani, Sajadi. The Rakshani give the chief to the tribe.

The Mand district is occupied by a lawless portion of the Rind tribe.

The Jagdal, Jalgal, Zodgal, or Zadgal tribe, in Makran, are of Lumri or Numri origin, immigrants from Sind and Las. They wrested power from the Boledi, and now hold the Baho Dashtiari district under the Persian Government.

The Kalmati or Karmati tribe in Baluch Makran are immigrants from Sind.

The Hot, a Baluch tribe, is widely spread over Central Makran, in Tump, Dasht, Baho, and Geh. They are the most numerous in the province, and are held in high consideration.

The Mirwari tribe dwell in Mushki, Jhao, and Kolwah. Pottinger in 1810 said their fighting strength was 7000. Masson says they are of the Kamburani family now ruling at Kalat.

Ashkani Baluch are settled in the hilly districts north of Kej, in Baluch Makran.

The date trees of Makran flower in February and March, and the fruit ripens in August and September. When in full flower, a stalk of the male flower is inserted into a small incision made in the core of the top of the female tree.

The maritime and fishing population of the little ports on the coast of Makran, from Sonmiani to Charbar, are often denominated Med, and comprise four divisions,—the Guzbur, Hormari, Jellarzai, and Chelmarzai. Med fishermen are boat-owners. Padiharee have no boats. The other fisher races are the Korawa and the Raisi. The Kaodai or Khudai, a tribe in the Dasht and Kolwah districts of Makran, are a well-to-do and respectable people. Lagaori tribe in Persian Makran are perhaps the Laghari.

The Birdi is a tribe settled in Makran.

Zati or Sati occupy chiefly Baho and Dashtiari.

The Shahzadah are of Arab descent. They first settled in Sind, but migrated afterwards to Juni, Dasht, and Baho, in Makran.

The Boledi also is an Arab tribe, which has taken its name from that of a town in the Kej district. In the 17th century they seem to have subverted the power of the Malika, only to be, in their turn, put aside by the Gitchki.

The Kolwah dwell only in Gwadar, in Makran, to which they came from Juni, where they were slaves or servants to the Shahzadah. They are a seafaring people, superior to the Med in social position; but, like the Med, superstitious and immoral, with peculiar religious rites.

Panjgur (or Panchghar) is a district of Baluch Makran about 100 miles to the N.E. of Kej. It is a rich and fertile tract, with a cluster of forts and villages amongst groves of date trees, for which it is celebrated. It is occupied by the Gitchki tribe of Brahui, of peaceful and agricultural habits, and also by the Nusherwani tribe of Persian origin, the two tribes being at feud.

Kolwah is an extensive valley of Baluch Makran, immediately west of the Jhao district. It is separated by a sterile hilly tract from the maritime district of Ormara. It is four or five days' journey from the coast, has several villages and castles, and is occupied by the Bizanju, Kaodai, Mirwari, Ormarari, Rakshani, and Nusherwani tribes, who interchange their commodities with the coast, sending wool, ghi, hides, and bdellium. Wheat is largely grown here.

The Homarari occupy Balor. Ormarari may mean the people of Ormara.

The Banpur valley is a province in the Kohistan of Baluchistan. It was annexed by Persia about 1845, and now forms part of Persian Baluchistan. It was at this valley that Alexander emerged from the arid tract he had followed through Bela, Jhao, and Kolwah.

Jhao or Jao, a valley to the west of Las, and

st of Kolwah, is sparsely inhabited by Bizanju, Ialada, and Mirwari (Brahui), who are rich in ıerds of cattle, buffaloes, and camels, and in flocks)f sheep and goats. It is well wooded, without cul-ivation. The valley has but one village, Nandaru. Numerous mounds, here called dam or 'daim,' ɔxist, where coins and trinkets are found, remnants)f some former civilisation. These daim occur in ɔther parts of Baluchistan. There is also the site)f an ancient city, which Masson has suggested nay be that founded by Alexander the Great ımongst the Oritæ.

Kej is a division of Makran, and properly in-:luded the districts of Dasht and Kolanch.

The Kolanch district has a population of 2000)f the Puzhi, Band, Wardili, Jagdal, and Bizanju :ribes.

The *Dasht* district extends from Gwetar Bay, N.E. to the vicinity of Kej, a distance of about 100 miles. The inhabitants are members of Bar, Birdi, Hot, Kaodai, Shahzadah, and Rind tribes, in ıll probably 3000 or 4000 persons.

Kej town was the former capital of Makran, ınd is now the residence of a deputy of the Khan of Kalat. It is a cluster of small villages ınd forts in the great valley which traverses Makran from east to west. The population con-ıists of Gitchki of much importance, the Raisi, the Mulai, the Sangura, Durzada, Leri, Lundi, ınd Kutwari, about 10,000 souls. The name of the district of Kej Makran is written by Man-lelelo Getsche Macquerono. Marco Polo names it Kesmacorono, which is supposed to be Kej mahi-khoran, fish-eating Kej. Ibn Haukal (p. 140) says 'the Baloujes are in the desert of Mount Kefes, and Kefes in the Parsee language is Kouje, and they call these two people Koujes and Baloujes. The Baloujes are people who dwell in the desert.'

The Gitchki tribe are settled both in the Baluch and Persian portions of Makran, but have their chief residence in the town of Kej. They are said to be descended from a Sikh named Mar Singh, son of Pana Singh of Lahore, who in the early part of the 17th century settled with his companions in the Gitch district. One branch resides in Kej and Tump, and another at Panjgur. Since the begin-ning of the 18th century, they have been at feud with the Boledi, but intermarry with them. Some are of the Zikri, some of the Dai sect.

Mulai or Mullai, a Baluch family settled in Kej; it is not numerous, but is respectable, and some of them seem to belong to the Zikri sect.

Ketwari is a Brahui tribe in the Kej district.

Kosaji, a tribe occupying Baho and Dashtiari in Persian Makran. Baho and Dashtiari are under the superintendence or rule of two Jagdal chiefs. The inhabitants are Jagdal, Hot, Latti, Raisi, Laghari, Kossgi, and Shahzadah.

Religion.—The people of Makran are Sunni Muhammadans, but have amongst them the Dai, Mazhabi, or Zikri, the Biadhiah, and Khojah sectarians. The Khojah are often opprobriously designated Lutiah. The Dai or Zikri sect are in Baluch Makran, in Kej, Kolanch, and Kolwah. The Dai, met with at Gajer, resemble the Brahui in appearance, and wear the same dress. Portions of certain Brahui tribes are Dai, such as e Sageta, Saki, Shadu, Shahduzai, Marbrow, etc. ıey say that they originally came from the west-ard near Kej, where there is a city called Turbot. ɐe sect abounds in Makran, and has extended east. At Turbot is a little hill of circular form, called by them Koh-Murad, on the summit of which is their principal masjid, where they meet at stated times to perform their rites. Their book is said to enjoin them to curse Mahomed, and in derision to say God is God, but the mother of Mahomed is His prophet. Their ritual services are conducted at night; men and women assemble, and revolting acts are said to be practised during the wild state of excitement into which they work themselves. Their prophet is Mahdi, and they date their origin from A.D. 1591 in the Panjab. At marriages their priest is said to see the bride, but all these may be calumnies, as they are of the kind usual amongst Asiatics when alluding to other sects. At the siege of Kej they conducted its unsuccessful defence against Mihrab Khan's son, and the assailants killed or captured all its defendants, exhumed and burned the remains of their patron saints.

Professor Wilson, in his Ariana Antiqua, p. 141, mentions the Dai amongst other Scythian tribes as associated with the Massagetæ; and in a map attached to Digby's translation of Quintus Curtius, their position is fixed a little south of the Jaxartes. This coincidence of association with the Sageta and Sakæ, both then and now, is worth remarking.

The Biadhiah sect are Arab immigrants from Oman, residing in the town of Gwadar in Baluch and Persian Makran. They reject both Osman and Ali, and are regarded as heretics (Kharji) by both Sunni and Shiah. Like the Shiah, they practise dissimulation (takiya) in speaking of their faith. They drink wine.

Hinglaj or Nani is a hill in Baluch Makran 1800 feet high, and has one of the most ancient Hindu shrines existing. It is sacred to a goddess said to be Parvati, or Mata, or Kali. The Muhammadans regard the hill as sacred to Bibi Nani, probably the goddess Nanaia of the Babylonians; and the shrine is a well, the water of which at times rises up with a bubbling noise, and pilgrims reverence the rising bubbles by salaaming and throwing in their offerings. If an interval occur between the rising of the bubbles, the pilgrims call on Mata to appear. Animals are sacrificed at the shrine to Kali.

Languages in use in Baluchistan, are Brahuiki or Kur-Gali, Baluchki, Jatki, and Persian, but only the last-named is a written tongue. Considered as a whole, Dr. Caldwell regards the Brahuiki language as derived from the same source as the Panjabi and Sindi, but it unquestionably contains a Dravidian element, derived, in his opinion, from a remnant of the ancient Dravidian race having been incorporated with the Brahui. From the discovery of this element beyond the Indus river, he adopted the opinion that the Dravidians, like the Aryans, the Græco-Scythians, and the Turco-Mongolians, entered India by the north-west route. The Brahuiki language, accord-ing to Mr. (Sir George) Campbell, is mainly Aryan (Indo-Persic), with a Turanian element. The Brahuiki or Kur-Gali is spoken by the tribes of Saharawan and Jhalawan, from Shal or Quetta in the north to Jhalawan in the south, and from Harraud in the east to Kohak in the west. Baluchki is spoken by several of the Jhalawan and Rind tribes, as the Minghal and Bizanju, also by the Brahui Khan of Kalat, and by his sirdars or chiefs, who consider Brahuiki as vulgar.

The structure of the modern Baluch language does not seem to warrant belief that any other than Persian was the parent stem. Philologists concur in opinion that the Baluchki is a tongue of the Aryan or Sanskrit stock, in which Persian, Sindi, Panjabi, and Sanskrit words recur; and that the Brahuiki belongs to the Scythic or Turanian, or Tamulian, or Dravidian stock. Lieutenant Pottinger mentions that the Baluch tongue partakes considerably of the idiom of the Persian, being at least one-half of its words borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. Dr. Latham classes the Baluch language with the Persian, but considers it as a modified form.

The Jat, who form the principal part of the population of Cutch Gandava, speak the Jatki language. Indeed, from Herat, Kābul, Kandahar, the Panjab, to Sindh and Cutch Gandava, between the Sutlej and the Ganges, the Jat everywhere preserve their own, the Jatki tongue.

The **NORTH-WEST FRONTIER** of British India, both beyond and within the British border, has many martial tribes, many of them with democratic forms of government. They may be thus shown :—

Independent Tribes along the outer face of the N.W. Panjab Frontier, and inhabiting hills—

Adjoining Hazara district—Hasanzai, 2000.
Adjoining Peshawur districts— Judoon, Bunoorwal, Swati, Ranizai, Usman Khail, Upper Mohmand, 16,000 to 19,700.
Adjoining Peshawur and Kohat districts- Afridi, 15,000 to 20,000.
Adjoining Kohat district—Buzoti, 500; Sipah, 300; Orakzai, 20,000 to 25,000; Zymukht, 5000; Turi, 5500.
Adjoining Kohat and Dehra Ismail Khan districts— Waziri, 20,000 to 30,000.
Adjoining Dehra Ismail Khan district — Sheorani, 10,000; Oshterani, 1000; Kusrani, 1200; Bozdar, 4000.
Adjoining Dehra Ghazi Khan district—Khutran, 3000; Kosah, 5600; Lughari, 5120; Gurchani, 2000; Murree, 3000 to 4700; Bugti, 1200.

The *independent tribes* are estimated to have about 128,000 fighting men, but there have been few instances of anything like combination among them, and the mountain hosts can only be kept together for a few days at a time, as each one has to carry his own four or five days' supply of provisions. After annexation of the Panjab, several independent tribes harassed the border tribes of British India, and expeditions were undertaken for their repression; but their leading men have, in later years, been able to retain their tribes to their agreements, and the British frontier is enjoying rest.

Barechi, a simple, inoffensive clan, numbering about 3000 families, who occupy the valley of Shorawak. Their camels are numerous. They are at enmity with the Baluch on their south.

Jadran, a Pathan tribe of Sunni Muhammadans who inhabit the eastern slopes of the main Suliman range. They are slightly made, but hardy, and small parties annually visit Banu and work as coolies. They are nomades, little above the savage state; have no cattle, tents, nor large towns, but travel with all their goods on their backs.

Kajakzai are descended from a Kakar chief, who fled to the vicinity of Sibi in Baluchistan. They number 700 to 1000 fighting men.

Khuttuk tribe, with 15,000 fighting men, occupy the hills south of Peshawur to Kushalghar and Kalabagh on the Indus.

The Mangal is a considerable tribe in the southern and upper portions of the Kuram valley, and also those of the Zurmat. They are said to possess 200 forts, 500 black tents, and 8000 fighting men. They are said to be thievish. They have several sections.

Marwati or Maorati, a brave tribe of Pathans in the Marwat division of the Banu district, numbering 42,725 souls in 1868, with fighting men estimated at from 5500. They are one of the finest races, Trans-Indus, tall, muscular, fair, and often rosy-cheeked. They are of pure Afghan blood, a branch of the Lohani tribe. Their khel or sections are the Bahram, Dreplara, Musa, Tapi Nuna, and Jhandu. They are bold, manly, simple, and upright, deeply attached to their sandy villages and reed huts, frank and friendly with strangers. Their country is arid; they have few wells, but form tanks, and one village has to go 14½ miles for water.

Kafiristan, called by its own people Wamastan, is a country on the north of Afghanistan, bounded by the crest of the Hindu Kush between Kashkar ridge and the Farhan ridge, and occupying the valley of the Chigar Sarae. The race occupying it are known as the Siah Posh, lit. black clothes, and in the Chigar Sarae are independent. No European has visited the race. The soil of the valley is fertile, producing wheat and barley, and the mountains are clothed with forest trees, the growth of ages. Cultivation is carried on by the men and women, who till, sow, and reap, using a pointed stick of hard wood, and a three-pronged fork; they have oxen where the country is open, but the hill tracts are terraced, and the soil is turned with hand labour. The principal crops are sown in spring and reaped in autumn. They export a few slaves and forest products, and import small-wares. They levy a tax (Kalang) on the Muhammadans and Nimchah on their borders. Kafir slaves are much prized for their fidelity and courage, and the Barakzai family retained them as their confidential body-servants. The labouring tribe amongst them is called Bari. They erect rope bridges across the streams and ravines, of ropes made of goats' hair. The form of government is that of patriarchal republic. They practise the vendetta, they make forays, and kill all Muhammadans whom they encounter.

The Siah Posh have been conjectured to be descendants from the Greek followers of Alexander, also from the Arab tribe of Koresh, but Lumsden supposes them to be aborigines driven from the plains. Their language is of Sanskrit origin. They have several tribes, amongst whom are the Katti, Kamoz, Waegal, and the Kam or Kampar. They are fair, some of them with blue eyes, but others with Mongoloid features. They are social, drink wine freely. They are polygamists. The ages for their marriages are, for men, 20 to 25 years; and women, 16 to 20. Women are kept in a separate building periodically, also on childbirth, both of these being Hindu customs. The dead are placed in a box, which is left on the top or side of a hill, which is a Tibetan and Zoroastrian practice. They are idol-worshippers, the figures being those of a man or woman. Dogan is their chief deity; and Mahadeo, Bruk, Kantaar, Pane Truskai, and Eumrai are his incarnations.

The Utah is a priestly class, and the Dil are soothsayers. They sacrifice sheep, goats, and cattle. They eat everything except carnivorous animals. They sit on chairs and stools, like the people of Lughman and the Khugiani. They ornament their houses with carvings. Timur in A.D. 1398, Sultan Muhammad Mirza in A.D. 1453, Baber A.D. 1507, and others, made inroads against them, but with only doubtful successes. Some of them, in the time of the Emperor Jahangir, were converted to Muhammadanism. The Chanak tribe inhabit the valley of Mukah, west of Islamabad in Lamghan, and S. of Duhmiah in the Sakal Dara; they have become Muhammadans. The Duhtuk principally occupy the country on the borders of Chitral.

The Kafir race occupy the most inaccessible portions of the Indian Caucasus between the Bajawar, Kashgar river, and Bamian, in the mountainous region of Northern Afghanistan, with Bajur and Kuner on the south. Kafiristan is bounded on the west by the Belut Tagh, on the east it touches Chinese Turkestan and Little Tibet, to the south lies Afghanistan, and to the north Khokand or Farghana, where the population is Chaghtai Turk. They are independent, have defied all attempts at reduction, their enmity to Muhammadans has been inveterate and unceasing, and they give no quarter; but of the Kafir clans, 18 in number, 8 have now become Muhammadans.

The Kafir are fond of honey, wine, and vinegar, music and dancing, the sexes dancing apart. They have no written character, and are said to speak a language resembling Pushtu. They wear a lock of hair on the right side of their heads. They are persecuted by all the surrounding nations, who seek to capture them as slaves. Their women do all the out-door work, and follow the plough. The exposure of the dead adopted by the Siah Posh has contributed probably to their being suspected to be a remnant of the reformer Zertusht, but in no account is the least mention of fire-worship amongst them. The marriage ceremonies are extremely simple, consisting merely of procuring two twigs or rods, of the respective height of the bride and bridegroom, and tying them together. They are then presented to the couple, who preserve them with much care, so long as they find it agreeable or convenient to live together. If desirous to separate, the twigs are broken and the marriage dissolved. The Siah Posh build their houses of wood, of several storeys in height, and much embellished with carving. These accounts are trustworthy, as we witness that the Safi of Kaziabad, in the hills west of Lughman, and who have been converted, actually reside in such dwellings. Their arms are bows and arrows, long knives and daggers.

Khaibar District.—One of the most northerly of the passes beyond the British frontier leads through the Khaibar mountains. It is 18 miles in length, leading from Peshawur towards Kābul. As it approaches the northern outlet, it becomes more formidable. The pass is of an irregular form, but the average breadth is about 1500 paces; the hills which border it may be about 700 feet high. The Afridi, Shanwari, and Mohmand are the chief tribes in its vicinity. Nadir Shah paid a sum of money to secure his passage through it. The Daurani rulers of Kābul also acknowledged certain of the Afridi and Shanwari to be real passmen, and paid five Afridi clans, Zakha Khel, Sipah, Kuki Khel, Malik Din Khel, and Kambar Khel, also paid the Loargi and Singu Khel of the Shanwari. The British, likewise, from their first invasion of Afghanistan, have paid the passmen to keep the Khaibar clear.

The *Shanwari* inhabit a portion of the Khaibar mountains, some of the eastern valleys of the Safed Koh, and are also found on the borders of Bajawar. They have five sections—Abdul Rahim, Ali Sher, Sangu, Sipai, and Manduzai. They have been continuously predatory since the British approached their borders. They are the most industrious carriers between Peshawur and the other marts on the way to Kābul, using mules and camels for carriage. They are stalwart and hard-working, but inveterate thieves.

The Lowaghar Shanwari have three sections near the British territory, with 1050 fighting men.

The Tirai tribe live among the Shanwari; they speak a language differing from that of their neighbours.

The *Afridi* are a large and very important tribe. They inhabit the lower and easternmost spurs of the Safed Koh range, to the west and south of the Peshawur district, including the valley of the Bara and portions of those of Chura and Tira. To their east they are bounded by the Khatak of Akora and the Mohmand and Khalil divisions of the Peshawur district; the Mohmand are on their north; to their west are the Shanwari; and the Orakzai and Bangash are on their south. They claim descent from Khalid ibn Walid, a Jew who embraced Muhammadanism, but take their name from Afrid, who, in the 10th century, at the time of the advance of Mahmud, fled for refuge to the wilds of Sheratala.

Their clans or khel, and the strength in fighting men, are as under:—

Kuki, ...	3500	Zakha, ...	4000
Malik Din, . . .	3500	Aka, ...	1200
Kambar, ...	3500	Sipah, ...	1500
Kamr, ...	1500	Adam, ...	3500

These give their names to the divisions of their country. In the northern portion of their country is the Khaibar range, barren, rugged, and inhospitable to the last degree; to the south is the watershed of the Bara river.

The Afridi is the most important tribe of all on the Panjab frontier. Their country is about 80 miles long, and, on the average, 8 miles in breadth, and mountainous throughout. One or two thousand of them are serving as soldiers in the Bengal army and Panjab Irregular Force. The Afridi in appearance are fine, tall, athletic highlanders, whose springy step, even in traversing the dusty streets of Peshawur, at once mark their mountain origin. They are lean but muscular, with long gaunt faces, high noses and cheek-bones, with fair complexions; they are brave and hardy, and make good soldiers, but are subject to home-sickness. They are careful shots and good skirmishers, but their speciality is hill fighting. Lieutenant-Colonel Edwardes, detailing the occurrences in the Peshawur district during the Mutiny, mentions as an instance of the strange things that happened in those days, that one morning 500 Afridi of the Malik Din Khel (who were in disgrace and under blockade) marched from the hills into the cantonment, armed to the teeth, and said they had come to fight for the British and be forgiven. He accepted them at once, and they repulsed the first assault of the 51st Bengal N.I. when it rose, and then formed the nucleus of one of the Panjab regiments.

The Afridi round the Kohat pass are carriers and traders, and cut and sell firewood. They occupy the mountains in summer, living in moveable mat huts; but, as winter draws near, they descend to the Khaibar, Bazar, Kajurai, Bagiara, and Lower Bara districts, and the low valleys and hills bordering on the west of the Peshawur basin, in order to avoid the snows of Maidan, which is 7500 or 8000 feet above the sea; Dwatawi and Tordara being about 6000 feet. None of the Afridi clans are found west of the Safed Koh or Rajgal ranges. They have the command of the Khaibar and Kohat roads. The Adam Khel Afridi are located in the hills and glens westward of Jalala Sar; and in the glens on each side of the defile leading from the Peshawur valley to Kohat, it holds the entire pass in its grasp. They are permanent residents in villages, strengthened by towers, possess many camels, and are large carriers of salt.

The Adam Khel Afridi is their largest and most powerful clan, has always been quite independent, and has never acknowledged any authority. Their possession of the Kohat and Jawaki passes have given them great importance. They are separated from the great body of the Afridi. Their sections are the Gali, Jawaki, Hasn, and Asha Khel, who can muster 4540 fighting men.

The Hasn Khel, of the Adam Khel Afridi tribe, are in two great sections, the Akhorwal or Tatar and the Janakhori, and can muster 1900 fighting men from their five villages. After the punishment of the Bori in 1853, they submitted; they subsequently gave annoyance, and again, in 1867, tendered submission.

The Jawaki Afridi live in 22 villages in the hills to the east of the Kohat pass, and from time to time, up to the year 1878, have given great trouble to the British. They have, according to Major Cavagnari, 18 khel, according to Major Coke 7 khel, with about 1000 fighting men. They are almost the sole wood carriers of Kohat; they possess many camels. Their importance is increased by the circumstance of their holding the Jawaki pass, for which they get Rs. 2000.

In 1853, after the assassination of Colonel Mackeson, an expedition was sent against the village of the Bori section, 33 miles N.E. of Kohat. The force was 1532 strong, under Brigadier Boileau, and that village was destroyed, with a loss of eight killed and twenty-nine wounded on the British side.

The Kambar Khel, in the Maidan of Tira, have two divisions, with ten subdivisions. The Kamr Khel are mostly scattered about the hills south of the Dwatawi pass to Tira Maidan.

The three sections of the Malik Din Khel are in the central portions of the Tira Maidan.

The Zakha inhabit the Khaibar pass from Gargora to Garhi Lal Beg. They are the most important and most powerful of all the Afridi clans, and can muster between 4000 and 5000 fighting men, and have eight subdivisions, viz. Bari, Khasrozai, Mohib, Paendah, Pakhai, Zaodin, Nasr-u-Din, and Shan. They move in summer to Maidan and Bara, and in winter dwell in the caves and hamlets of Bazar and Khaibar. The Kiu Khel have their summer quarters in Bar Bara and Tordara, and winter in the caves of Kapirai, and to the mouth of the Khaibar.

The Ashu Khel are located to the south of Fort Mackeson, on the first range of hills, and in the Uchalgada valley. They live in five villages, and can muster 700 matchlocks.

The Afridi of Janakhwar are the best of the Afridi, bold and intrepid in action.

The Aka Khel are in the dreary hills to the S.W. of Peshawur, from the Bara river to near Akhor, going to Tira in summer, in winter living in caves. They are of a reddish-white colour, with strong physique, and are notorious for theft and robbery.

The Sipah section of the Afridi have three clans,—the Abu Bakr, Hormaz, and Landi Khel, and can muster about 1500 fighting men. They have nine villages in Bara, between the Kamr and Zakha Khels, but separated from the Zakha by the long range of the Surghar hills. They winter in the caves of Kajurai, near Gandao and Mehmani.

The *Mohmand* tribe are partly British subjects, occupying a subdivision of the Peshawur district immediately south of Peshawur. When the Mohmand tribe immigrated from the west, the ancestors of this Peshawur clan advanced and dispossessed the Dilazak, and have since had no further connection with the main body, who located themselves in the hills to the N.W. of the Peshawur valley, between the Kābul and Swat rivers. This main body are independent, and have six clans,—the Baizai, Tarakzai, Halimzai, Khwazai, Utmanzai, and Dawezai, each with many subdivisions. The strongest in fighting men is the Baizai, who are estimated to have 12,000, while the total strength has been stated at 19,700; and Ahmad Sher gave their numbers at 35,000, but it is probable they could never bring 16,000 into the field. The Mohmand country is rugged and unfruitful, the natural resources few, and mats are the sole manufacture. Like all Pathans, they boast of Pathan honour, but it is believed that they would sell, or prostitute, or kill any one for gold. They have no literature. They do not take service in the British army so readily as the other tribes. Three of their clans are known to the British,—the Pindi Ali, the Alamzai, and the Michni Mohmand. The last of these, the Michni Mohmand, after annexation, were allowed to hold from the British Government a fief or jaghir in Doaba, the fertile triangle near the junction of the Swat and Kābul rivers, of which they collected the revenue. A portion of the lands they themselves cultivated, and farmed out the remainder to other tribes of the plains as tenants. Many of their clansmen dwelt in the neighbouring hills, and others traded in the Peshawur valley.

The Alamzai Mohmand, whose headquarters are at Gandao in the hills, also held a fief of Panjao, in British Doaba, chiefly cultivated by tenants. A few of their clan lived on the plains, but the majority in the hills.

The Pindi Ali inhabit a very strong locality in the hills; at a former period, prior to British rule, they had held a similar jaghir in Doaba, which, like other fiefs, had been granted by preceding Governments as black-mail, to buy off depredation. They belong to the Isa Khel and Barhan Khel subdivisions of the Tarakzai clan. They were the worst behaved of all the Mohmands, and for eleven years after the British occupation of the Panjab, they worried the British border. They could muster about 2000 fighting men. For the first

ght years, the Mohmands gave more trouble an any other of the Peshawur border tribes. In ecember 1850, they made an inroad on the village f Shabkadr; in March, August, and October 851, the Michni Mohmands were aggressors; and n the 25th October, a force, under Sir Colin ampbell, was sent against them, and was vari- usly engaged till the middle of December, by hich time a fort had been erected to hold them a check, and the force returned to cantonments. n the following July (1852) the Michni and anjao Mohmands, having been exiled from ouse and lands, and cut off from trade and all ommunication with the plains, tendered their ibmission, and their fiefs were restored. In the utumn of 1854, the Michni Mohmands again isbehaved, and in September Colonel Boileau d a force against them, and destroyed some of e villages, which fired on the troops as they oved along the open ground. They continued to isbehave, and made eighty-three raids and tacks on British territory between 1855 and 860; but they at length submitted to Lieutenant- olonel Edwardes, who had written to Saadat Khan at he desired the honour and welfare and strength of himself and family. From that time until the Ambela expedition of 1863, the Mohmands ab- tained from troubling the border. But Sultan Khan, son of Saadat Khan, then collected about 3000 Mohmand, Safi, and Bajawari, and they were met at Shabkadr by Captain Earle with 55 of the 6th Bengal Cavalry and 100 Native Infantry. Lieutenant Bishop charged and fell, but the enemy lost about 28 killed and wounded, and retired to Ragmena and Gandao. But by the 1st January 1864, Sultan Muhammad had gathered around him about 4500 Mohmands, and advanced beyond Shabkadr. Here, Colonel Macdonell, C.B., met them with 3 guns, 477 cavalry, and 1272 infantry, and defeated them with a loss of about 100 killed and wounded, and they dispersed to their homes. One of the wives of Sher Ali Khan, the Amir of Kābul, was a daughter of Saadat Khan. The Michni Mohmand murdered Lieutenant A. Boulnois, R.E., near the fort of Michni, on the 14th January 1852, and near that place Major Macdonald was murdered by them on 21st March 1873, for which there was no motive. The numbers of the fighting men the Mohmand clans could turn out have been given as 19,700, viz. the Baizai clan, 10,000 to 12,000; the Khwazai, 800; the Tarakzai, 2500; the Halimzai, 3000; the Utmanzai, 500; and the Dawezai, 900.

The Shalmani race inhabit the village of Shalman, on the Tartara hill in the Khaibar range. Elphinstone says they are originally from Kuram, were afterwards in Tira, and again in Hashtnuggur.

The Mula Guri tribe of 500 families, on the north slopes of the Tatara mountain, on the Peshawur frontier, are notorious thieves.

The Black Mountain is at the N.W. extremity of the Hazara district. It is a long narrow granite ridge of nearly uniform height, with higher peaks at intervals, and occasional deep passes. Numerous large rocky spurs project from the sides, which are often precipitous; the routes to ascend the mountain being along the spurs from British territory, are those of Tanawal and Shunglai, ata, Agror, Chajri, Barchar, Khun, and Gali. e more prominent passes and peaks are as ler:—

Pabal Gali,	6930 feet.	Ganthar,	9572 feet.
Pinja Gali,	7772 ,,	Kanesar,	9775 ,,
Akhun Baba-ka-Chura,	9157 ,,	Kahi Gali, Jabrai, Chakra, Chita Batr, and Doda,	Not ascertained.
Machai,	9803 ,,		
Khand-ka-Dana,	9429 ,,		

The view from Machai is grand. The jungle on the lower S.E. slopes consists of Berberis and Acacia modesta; at 6000 feet the Pinus longifolia and Pinea Webbiana begins, Abies deodara and oaks. The poplar and plane grow in the valleys. The Indus runs deep and rapid under the western foot of the mountain, and is there from 70 to 300 yards wide. In its course there are eleven ferries, with boats large enough to carry twenty to thirty passengers, and the natives all along cross it on inflated skins (Shina in Pushtu). The tribes of the mountain (from N. to S.) are the Hasanzai, Akozai, Chagharzai; N. of Agror, on the E. face, are the Syud of Pariari and the Swati of Deshi. The Hasanzai and Akozai, the bravest, belong to the Isazai branch of the Yusufzai; and the Chagharzai, the most numerous, to the Malizai branch. The Hasanzai adjoin the frontier of the Hazara districts of the Panjab. They reside on both sides of the Indus, those Cis-Indus living on the Black Mountain, and those Trans-Indus immediately opposite to it. They have ten khel or clans, who could furnish 1115 fighting men; and the other races who are living amongst them—the Tilli, the Gujar, and craftsmen—could furnish 600 more. Every man possesses a sword and shield, and there are said to be 1100 matchlocks in their tribe. In 1851, Mr. Carne and Mr. Tapp, two officers of the customs, were led into an ambuscade formed by the Hasanzai, near the Jhandrani ravine. Mr. Carne parleyed with their leader, who swore that if they delivered up all their property, their lives would be safe; but though agreed to, the Hasanzai bound the two officers, and, taking them a little off the road, cut their throats in cold blood. In December 1852, a force marched to punish the Hasanzai. It was in three columns, under Lieutenant-Colonel Napier (now Lord Napier of Magdala), Major Abbott, and Major Davidson; and from the 20th December to the 2d January, the British forces were engaged. The Hasanzai behaved bravely, defending their ground step by step, and gaining temporary advantages, but inflicting little loss on their British assailants. In August 1863, 500 or 600 Hasanzai made a raid on the Tanawal villages of Shushi, Chumiar, Bandi, Nawashah, Jrabu, Dargarian, and Bai, burning them and carrying off some cattle. But they entered into agreements to be peaceful, and they adhered to their promises, until a section of them attacked the Oghi Thannah on the 30th July 1868. They were afterwards parties in all the Agror attacks during August, but submitted when General Wilde's force advanced up the Black Mountain.

The Chagharzai and Hasanzai are the first Pathan neighbours of the British to the north, inhabiting a mountain tract on the east bank of the Indus, known as the Black Mountain. The Chagharzai inhabit both banks of the Indus above Buner. They are said to have above 7800 fighting men, and are in three clans,—the Nasrat, Firozai, and Basi Khel. Their spring (rabi) crops are wheat, barley, masur, and tobacco, and their kharif or autumn crops, maize, rice, and mat'h beans. Their

wealth is in cows, buffaloes, and goats. They are thorough mountaineers, hardy and brave above all the neighbouring tribes.

Passing to the west of the Indus are the Mudah Khel and Amazai. The Mudah Khel are to the north of Amb, the principal town of the Tunawal chief.

The Mahaban mountain infringes on the Indus, where it washes the British frontier district of Hazara. The Mahaban has many tribes around it. It is a peak in the extreme corner of the Yusufzai country. It is on the right bank of the Indus, at the east end of the spur of the Ilam range, which divides the drainage of Buner from that of the Yusufzai plains. It is clothed with forest trees, chiefly fir, with luxuriant herbage, and is generally suited to the requirements of a pastoral race; it is also terraced and cultivated.

The Amazai inhabit the eastern slopes of the Mahaban mountain.

The village of Malka, in the Amazai country, is situated on a plateau on the N.W. of the Mahaban mountain, and was selected by Hindustani fanatics as a settlement. On the inner side of Mahaban it has easy communication with the Amazai, the Mada Khel, Chagharzai, and Hasanzai; and the Khudu Khel, Utmanzai, and Jadun are close at hand and easily reached. In 1863 an expedition was sent to destroy Malka, from which resulted a campaign in Ambela, and the Bunerwal ultimately undertook to burn Malka, and expel the fanatics from Buner, Chamla, and the Amazai lands.

Following the west bank of the Indus to the Pihur ferry, we come to the amphitheatre of hills which environ the Peshawur district, in which are a considerable number of tribes. The Jadun or Gadun are the first nearest to the Indus, cunning and intriguing. After them are the Buner or Bunerwal, the Swati, the Mohmand, and Bajauri, who opposed the British in the Ambela campaign.

The Jadun or Gadun of Gadunia dwell south of the Hasanzai, partly on the slopes of the Mahaban mountain, partly in the Hazara district. They are supposed to have been a clan of Kakar Afghans who had been driven to take refuge in the Safed Koh, and afterwards in Hazara and Chach. They have two divisions,—the Salar, who possess 12 villages of 2530 houses, and the Mansur of 18 villages. None of the villages are walled, but a few have towers. The tribe are cultivators and cattle-owners, and their buffaloes are celebrated. They boast of having 12,000 fighting men, but about 2800 is the supposed true number they could turn out. In 1861 they annoyed the British frontier by sheltering Hindustani fanatics at Satana, but they entered into an agreement to live peaceably. Subsequently, however, they invited the fanatics to return, and on the 15th July 1863 they were subjected to a blockade; and Colonel Wilde, C.B., led a force against them, arriving at Maini on the 30th December, and on the 5th January 1864 fresh agreements were entered into. Their conduct continued to be so unsatisfactory, that on the 15th June 1870 they were again blockaded. During July and August they kept the border in agitation, but on the 10th September they came to terms, their Jirgah or council agreeing to pay a fine of Rs. 3285, and give security for Rs. 1500 more. A few of the Jadun are serving as soldiers in the British Indian army.

Satana.	Swat Races, viz.:—		Ranizai.

Satana is a village on the right bank of the Indus river, at the east foot of the Mahaban mountain, 13 miles above Topi. The village was originally made over by the Utmanzai to Syud Zaman, from Takhta-band in Buner. His descendants allied themselves to Syud Ahmad, who settled in Satana, and they aided him in all his ambitious struggles to establish a Wahabi empire of Muhammadan reformers on the Peshawur border. The ablest of the Satana Syuds was Syud Akbar, who, in 1849 or 1850 was chosen to be badshah or king of Swat. He died in May 1857; and two leaders rose, viz. Syud Mubarak Shah, a son of the deceased Syud Akbar, and Syud Umar, who kept a gang of thieves. The refugees from Hindustan had one or two mulvi, but no one of reputation. Not content with the church lands, the Syuds of Satana demanded tithes from the Utmanzai, who resisted their attempt to cut their grain crops. Syud Umar was shot, and Syud Mubarak was wounded in the foot, and the Syuds and men of Hindustan were expelled. After the destruction of the Hindustani settlements at Mangal Thana, a force under Sir Sydney Cotton, in 1858 attacked and defeated them, destroying Satana. Also, in 1863, on its removal to Malka, on the opposite slopes of the mountain, on the 26th of August 1868, a large body of the Swati attacked and defeated the Wahabi Hindustani, and drove them into the country of the Chagharzai, Trans-Indus, east of the Buner valley.

The Ambela or Surkhawi pass leads from the Sudum valley, Peshawur district, into that of Chamla. Steep mountains rise 1000 feet, absolutely precipitous. In 1863, General Chamberlain's brigade, 5000 strong, was opposed on the pass by nearly all the fighting strength of the Yusufzai clan, 15,000 strong, under the Akhund of Swat, the chief of Panjkora, and other leaders. The object of the British was to drive the Hindustani fanatics from Malka. The operations lasted from the 20th October to the 25th December 1863. The loss to the British was 227 killed, amongst whom were 15 British officers, and 620 wounded, of whom were 21 British officers. Generals Chamberlain, Wilde, and Garvock commanded.

The Laluani is a Baluch tribe inhabiting the village of Lalu, on the crest of the Ambela ridge, 3 or 4 miles east of the pass.

The Swat river runs through the Swat valley. This valley is about 70 miles long, but its breadth varies from a few hundred yards to 10 miles. Its three subdivisions are Ranizai, Kuz or Lower Swat, and Bar or Upper Swat. The valley is highly cultivated and densely peopled, producing rice, beans, barley, wheat, Indian corn, fruits, sugar-cane, cotton, and tobacco. The people are bigoted Sunni Muhammadans, with as many factions as there are villages. Their religious leader for many years was Abdul Ghafur, styled the Akhund, who was revered from the Indus to the Kuram. Swat valley is intersected by ravines and glens, bringing down the drainage of the bounding ranges. It is unhealthy in summer. The occupants are Afghans, Mulla, and Syuds. The total population is estimated at 96,000 souls, and

onsists almost entirely of Baizai, Khwazozai, and Akozai. The Kohistan of Swat is above Chaorari. The head of the Swat valley is occupied by the Torwal and Garwi tribes, who speak a language different from Pushtu, which, however, they understand. They are probably allied to the Kafir, Chitral, and Gilghit races. Beyond Swat and Bajawar is Kafiristan.

Towards the lower extremity of the Swat valley, a formidable range of hills bounding the valley runs for many miles from east to west, nearly parallel to the British frontiers; and at the eastern extremity of this range stands the Mora mountain. Between this range and the frontier, however, intervene two tracts, named Ranizai and Lower Osman Khel, both quasi-dependencies of Swat.

The best of the passes leading into Swat is one named Mullakund, which opens from Ranizai. A little farther to the eastward of Ranizai also there are some passes leading into the Lunkhor valley, which belongs to British Yusufzai. These latter passes are not available for passage from Swat to British territory, because leading into Lunkhor they can be stopped by any party holding that valley. The passes viâ Ranizai and Osman Khel, if the people of those tracts accord a passage, lead straight on to the British plains of Hashtnuggur. Above the Lunkhor valley, just beyond the British frontier, is the strong village of Pullee.

The subdivisions of the Peshawur district, adjoining the tribes above described, are Lunkhor or north-west corner of Yusufzai, and then Hashtnuggur.

Of the Swat, Ranizai, and Lower Osman Khel tribes, the two latter are subordinate to the former.

The Swati race inhabit portions of the Swat valley and of the valleys of Tikri, Alahi, Deshi, Nandihar, Pakli, Konsh, Bogarmang, and Agror, Balakot, and Garhi Habib-ullah, north of Hazara. They are sometimes called Dehgan, and seem to be of Indian origin, and to have formerly ruled between the Hydaspes and Jalalabad, but they have been dispossessed of their lands by the Pathans. They have no connection with the Yusufzai Pathans who now occupy the Swat country. They are of poor physique and of low courage; they appear to have all the vices of the Pathans, and, as with them, cold-blooded murder and grinding avarice are the salt of life. They are all Sunni Muhammadans, and very bigoted.

Panjkora consists of a number of narrow and hill-bound valleys, inhabited by the Malizai, Khwazozai Akozai, and Yusufzai. The climate is severe in the north, but mild in the south, and the district fertile. The Panjkora river divides it from north to south.

The Akozai are a grand division of the Yusufzai tribe, comprising the Baizai and Khwazozai clan, who inhabit the Swat valley. The Akozai are estimated at 90,000 souls.

The Khwazozai are a section of the Akozai Yusufzai.

The Malizai section of the Khwazozai Akozai and Yusufzai occupy the country of Panjkora, which also takes their name. They can muster 2000 fighting men.

The Kohistan of Malizai is a glen at the head of the Malizai drainage. The people are supposed to have been Kafirs, converts to Muhammadanism.

The British Baizai district is a bay about 20 miles long and 12 miles broad, which runs into the hills between the Paja and Malakhand ranges at the extreme N.W. of the Yusufzai division of the Peshawur district. It is inhabited by Baizai, Swati, Utman Khel, and Khatak, with some Mohmand, Rowanri, etc. The last of these claim to be Pathans, and there is no great family of khans in Baizai. On the 11th and 14th December 1849, Colonel Bradshaw led an expedition against those in British territory, in which he attacked and destroyed the villages of Sangao in British Baizai, and Pali Zormandai and Sherkhana in Swat Baizai.

The Baizai division of Swat is south of the Mora range and north of Lunkhor. It is called Sam Baizai, to distinguish it from Baizai in the Swat valley, and comprises the villages of Pali, Sherkhana, Jalalpur, Zormandai, Bazdara, and Mora Banda, each with its separate khan.

Gujar herdsmen are in hamlets scattered over the Mora mountain.

The Osman Khel or Utman Khel are a Pathan tribe who occupy the hills north of Peshawur, between the Mohmand and Ranizai, on both sides of the Swat river, from the Koh-i-Mora to the Khanora mountain. They are descendants of Utman Baba, who accompanied Mahmud of Ghazni on his expedition into Hindustan in the year 997, and settled in this country. They have five khel or sections, descendants from his five sons. They are a powerful tribe, and, according to Turner, can muster 17,000 fighting men; Mountstuart Elphinstone says 10,000, and Bellew 5000. Their country is very hilly generally. They are all at feud with the people of Bajawar; in 1827 and 1850 they engaged the Mohmands. They are a tall, stout, and fair race, are sober but uncivilised, and have frequent quarrels amongst themselves. At first they gave much trouble to the British frontier, and in 1852 afforded an asylum to and aided the fugitive Khan of Tangi; on which a force under Sir Colin Campbell proceeded against them in May, and their principal villages, Pranghar and Nawadand, were taken and destroyed after a determined resistance. Since then the Utman Khel have never given any trouble.

The Utman Khel or clan who inhabit the northern portion of the Baizai division of Yusufzai are probably a section of the above tribe. They have three clans,—Ismail, Daulat, and Sehsada. Their villages are strongly situated in the nooks and corners of spurs running down from the Paja and Mora ridges, and the people are as wild as the hills they inhabit. Their conduct has been, on the whole, more consistently mulish and refractory than that of any other village along the whole border from Abbottabad to Jacobabad. They began to give trouble in 1847, and up to 1872 they continued in it. In 1849 a force under Colonel Bradshaw destroyed the village of Sangao belonging to the Dawat Khel. In 1855 the same village was fined Rs. 200, on account of some robberies and molestations of travellers, and the village was removed from its hill position, and its two sections located respectively in the more accessible villages of Pipal and Mian Khel; but during the troubles of the mutiny they crept back again. In 1859 they sheltered some criminals, and opposed the attempt made to seize them. In 1863 six of their villages furnished men to oppose

the British force which was sent on the Ambela campaign, and they were fined Rs. 2500; after which they were disturbed by intestine factions, with regular fights on the 21st August, 25th and 29th September, 3d and 21st October 1864, in which the British did not interfere. In November and December Lieutenant Ommaney unsuccessfully endeavoured to induce them to make peace; but in February 1865 Captain Monro was more successful, and fines were imposed. In 1865 quarrels broke out afresh among them, and on the 16th January 1866 a force of 4000 men and 12 guns, under Brigadier-General Beresford, C.B., was sent amongst them. The villages of Mian Khel and Sangao, and other villages, were destroyed, and new sites fixed for them. In 1872, however, some of the clans evacuated the villages of Kui, Barmul, and Mian Khan, and as they refused to return or to obey the authorities, the houses of the Kui ringleaders were pulled down.

The Ranizai are a subdivision of the Baizai Akozai division of the Yusufzai clan. The country they inhabit is divided into the Sam Ranizai and Bar or Swat Ranizai. The latter is the lowest or most westerly part of the Swat valley, in which they have thirty-five villages. Sam Ranizai is an extensive district, stretching over the Totai Hills, and includes the whole of the lower end of the Swat valley, in which there are about thirty khel or clans. On the annexation of the Panjab in 1849, it was found that the Sam Ranizai country was being made a refuge for malcontent criminals of every description, who periodically made raids on British territory. In 1852 the Ranizai Swati attacked a detachment of the Guide Corps, and a force under Sir Colin Campbell was marched to their village, on which the Ranizai maliks of Shahkot submitted, were fined Rs. 5000, and gave ten hostages. The force then marched towards the British territory; but as the Ranizai refused to pay the fine, and repudiated the hostages, whose families they expelled from their territory, on the 18th May Sir Colin returned to Shahkot, and found his force opposed by about 4000 infantry and 500 cavalry, all from Swat, in addition to the armed villagers. The king and the akhund of Swat had stationed themselves on the crest of the Malakand pass to witness the fight. After a slight resistance, the Swat troops broke and fled, leaving 300 of their number dead on the field. The village and its granaries were then destroyed, and from the 20th to 24th twelve other villages were similarly destroyed, and the British force returned through Lunkhor to Gujargarhi. In June they tendered submission, and all that was required of them was to behave peaceably. Since that time the Ranizai people have fulfilled all their engagements, and have evinced an anxiety to maintain peace.

The government of Swat, like that of all Pathan tribes, is a most complete democracy. The country is split up into as many factions almost as there are villages, and even in these there are often several sections. But the late akhund, Mullah Abdul Ghafur, working on their religious feelings, was able to induce them to combine, and he used all his power to prevent collision with the British Indian Government.

Abdul Ghafur, the akhund, was born in the village of Syedasam in Buner. He was poor, and for twelve years studied for the priesthood in the village of Beka in Yusufzai, living on shamak and milk, and he subsequently became a disciple of the Mian of Kaku Khel. He returned to Buner, and afterwards went to Swat, where he was revered for his sanctity, and was always consulted by the Swat people. He recommended them to select Syud Akbar of Satana as their king. When that ruler died, on the 11th May 1857, his son, Syud Mubarak Shah, made unsuccessful efforts to succeed him, and, being expelled from Swat, he, with mutineers of the Bengal N.I., settled in the valley of Panjtar, which adjoins the Yusufzai side of the valley of Peshawur, where they founded a Wahabi colony, headed by Mulvi Muhammad Inayat.

The Pathans of Swat are hospitable; the men are spare and apparently feeble; the women are strong, stout, and buxom, and enjoy more liberty and rule the men to a far greater degree than is known amongst other Pathans.

Deshi, a clan of the Swati on the eastern face of the Black Mountain. They have 720 fighting men. Other tribes, Zizrari, Syud, Mula, Akhun Khel, and Gujar, have settled amongst them.

Garwi, a Kohistani tribe inhabiting the head of the Swat valley, and numbering about 3000 adult males. They are not Afghans, and have a distinct language.

Maturizai, a section of the Baizai Akozai Yusufzai on the east bank of the Swat river. Their two sections are the Balol Khel and Ala Khel.

Musa Khel, a section of the Baizai Akozai Yusufzai on the left bank of the Swat river.

Naikbi Khel, a section of the Khwazozai Akozai Yusufzai on the right bank of the Swat river. They have 6000 fighting men.

Orakzai, Bazoti, Sipah, Zaimusht, and Turi adjoin the Kohat district of the Panjab. The Orakzai inhabit the mountainous country to the north and west of the Kohat district. Their country is called Tira. It consists of the Khankai and Mastura or Tira Toi valleys. The Tira mountains are spurs from the Samana range and from the Safed Koh, and of 5000 to 7000 feet of elevation. The people are all Orakzai mountaineers, wiry, martial, deceitful, cruel, and avaricious. They migrate for the winter with their flocks to the low levels of the Kohat and Tiri hills about Miranzai.

The Orakzai have the Afridi on their north and east, the Kohat district bounds them on the south, and the Safed Koh on the west. Their chief sections are the Daulatzai, Ismailzai, Laskarzai, and the Hamsaya, and they can furnish 28,870 fighting men. In 1855 they caused trouble in the district adjoining them. On the 30th April, 1500 or 2000 of the Afridi and Orakzai were driven off from an attack on General Chamberlain's camp at Darsamand. In 1868 and 1869, they again gave trouble, till Colonel Keyes advanced against Garo in February 1869, and destroyed it on the 25th February, since which time they have been quiet. Garo was a mere collection of caves.

Rabia Khel section of the Ismailzai Orakzai was the most prominent of all the Orakzai in the disturbances on the Miranzai border in 1855. From April to August 1855, they committed eighteen raids. They occupy the crest and north ridge of the Samana range. Fighting men, 600. They were punished by a force under General Chamberlain.

The Daulatzai section of the Orakzai inhabit the corner of the Afridi hills, near the Afridi and the Kohat district. Their sections are the Bazoti and the Usturi Khel, each 500; the Utman Khel, 600; the Mani Khel and Firoz Khel, each 800; the Sipah, 300; the Abdul Aziz Khel, 400; and Bar Muhammad Khel, 1000.

Bazoti inhabit the corner of the Orakzai country between the Afridi and the Kohat district. They have several khel or clans, which are said to number 500 fighting men. In the cold weather the Bazoti live in the Bazoti valley; but in summer, from April to November, they go to the head of the Mastura glen in Tira, where they sow their wheat before leaving, and their rice crop in the Bazoti valley before their return to Tira. At the commencement of the British rule west of the Indus, the Bazoti were always cattle-lifting on the British border, and they organized and headed the attack on the Kohat pass which led to Sir Charles Napier's expedition of 1850. But they were quiet till the 15th January 1868, when they joined with others in again making raids. On the 11th February, a small force of 2 guns, 80 cavalry, and 480 infantry, were sent against them, but were unsuccessful, retiring with the loss of 9 killed and 27 wounded; and on the 13th February 1869, the Utman Khel attacked the Kohat Kotal, supported by the Bazoti. Colonel Keyes, 25th February, moved against them with 4 guns and 2000 men, but retired with a loss of 2 killed and 34 wounded; the enemy were about 200 strong, and lost 17 killed and wounded.

The Utman Khel number about 600 fighting men. They are the most predatory clan of all the Orakzai tribe.

Sipah inhabit from the west of the entrance to the Bazoti valley. They are Shiah Muhammadans. They share, since 1853, the allowance granted by the British for keeping open the Kohat pass.

The Abdul Aziz Khel touch on British territory. They are Shiah sectarians, and Gar in politics. The family of the Begum of Bhopal are said to be of this clan.

Another clan of Orakzai, the Mula Khel, are Hamsaya, located on the outer spurs of the Samana Garh, S.W. of Hangu; they can muster 1000 fighting men. The Mamuzai, a branch of the Lashkarzai, 3000 men. The Ali Sher section of the Lashkarzai, also 3000 men; they bring cotton.

The Bar Muhammad Khel of the Daulatzai, in the upper part of the Tira valley, can muster 1000 fighting men. They are Shiah sectarians, Gar in politics, and winter in British territory.

The Shekhan dependents (Hamsaya) of the Orakzai inhabit the hills of Drand, beyond Gaoz Dara, and to the west of Samalzai.

The Mishti Khel of Hamsaya, also a dependent section, occupy the hills from the exit of the Kohat river to Kasha. They have about 3000 fighting men.

Buner is a valley bounded N.W. by Swat, N.E. by the Puran valley, S.W. by the Yusufzai plains, and S.E. by the Indus. It consists of a hill-girt plain, about 18 miles by 12 miles, but encroached upon by spurs upon all sides from the boundary hills. It is inhabited by the Iliazai and Malizai division of the Yusufzai, who have in Buner 94 100 villages. They are Pathans, or Afghans, l are usually called Bunerwal. They are rich cattle, especially buffaloes, but they have to import grain. Buner communicates with Swat by the Karakar, Jawarai, and Katel passes, all difficult, and only used by footmen; and the passes that communicate with British territory are the Spirzai, Malandri, Surkhawi or Sherdara, and Buner. On the east the Barando defile leads into it.

Occupying parts of the Buner valley are the Alisher khels of the Gadazai Iliazai and Nurzai Iliazai, and two sections of the Iliazai Yusufzai named the Ashazai and Panjpai.

The Gadazai occupy the south slopes of the Ilam and Dosira mountains in villages. Their sections or khel are the Ibrahim, Hasn, Seni, Ali Sher.

The Bunerwal of the Buner valley, in 1849 backed up some British subjects in Lunkhor who had refused to pay revenue, and they also aided the Swati in attacking Pali, and threatening the villages in British territory to which the Paliwal had fled for safety. When the British in 1863 advanced to take possession of the Ambela pass, the Bunerwal were the most determined of the British opponents. During some negotiations, in which, unfortunately, their suspicions were aroused, they attacked the British camp on the 22d October. Further negotiations ensued, and on the 17th December they undertook to dismiss all their fighting men on the Buner pass, to destroy Malka in the presence of British officers, to expel the Hindustani fanatics from Buner, Amazai, and Chamla, and to give hostages till the above were carried out. Accordingly, on the 19th, a party advanced to destroy Malka, in which they were aided by the Amazai. Colonel MacGregor, when noticing these events, observes that 'their conduct throughout cannot but be regarded with some admiration: they fought us like men throughout the defence of the heights of Ambela, and when they made peace they stuck to their engagements like gentlemen. British loss was 847 killed and wounded; that of the Bunerwals is not known, but it must have been heavy.' In the operations in the Ambela pass, the force of the enemies opposed to the British by the 18th November had increased to 15,000 men, composed of Bunerwal, Hindustani, Swati, the Amazai, Ranazai, Mada Khel, the Utman Khel of Lunkhor, and others.

The Chamla valley is immediately north of the Mahaban range. Its breadth varies from 1200 yards to nearly 3 miles. It is near to and politically part of the Buner country

The Chamla valley is separated from Buner by a spur of the Guru mountain, and from the Khudu Khel by a spur of the Mahaban, but it is inhabited by Bunerwal, and the meaning of Chamla is said to be tenant-holders. The valley and the central plain of the Yusufzai are commanded by hills that descend from the Hindu Kush.

The *Zaimusht* are Afghans who inhabit the hills between Miranzai and Kuram. They have two great divisions,—the Khwaidad Khel and the Mahamadzai or Mamuzai. Their villages are open, but with towers. Cultivation is only seen close to their villages, owing to the number of internal blood feuds in this tribe, which necessitate their agricultural operations being near to obtain support. Their country is a tract about 15 miles long, between two ranges of mountains, and generally covered with jungle. They remain in their villages throughout the year. They were at feud with the Bangash. There was a bitter blood feud between

their own two clans. It arose about the year 1840 from their joining opposite sides in a dispute between the Kābul Khel Waziri and the Turi and Bangash; but in 1866, Captain Cavagnari, aided by the Miranzai people, induced them to conclude a truce for ten years. Their fighting men have been largely over-estimated at 400 cavalry and 5000 infantry.

In the Daman or skirt of the Suliman range are the Shiah Turi, the Jaji, and the Isa Khel. The Jaji dwell in houses with a teh-khana or excavation in the earth. The Isa Khel occupy the banks and islets of the Indus, engaged in the cultivation of wheat, but are also robbers.

The Turi Afghans inhabit the valley of Kuram. They and their neighbours the Jaji are said to be descended from two Moghul brothers. Tor and Jaji; but Lieut.-Colonel Edwardes was of opinion that the Turi are Khatar Hindki in origin from the Rawal Pindi district. They have five great divisions or khel, termed Panjpadri or five-fathered, viz. Gandi, Alizai, Mastu, Hamza, and Dopazai, and 53 subdivisions, and can turn out 5000 fighting men. Their ordinary covering is a blanket shirt; they are dark-complexioned men, strong, hardy, and courageous, and are superior horsemen. A mounted Turi is a perfect model of a mosstrooper. His horse is small, but active and enduring, and he carries his own clothing under the saddle; while, at the saddle-bow, in leather wallets, hang food for man and horse, spare shoes, nails, and a hammer, in case of accident, and an iron peg and rope to picket the horse anywhere in a moment. The object of horsemanship with them is to commit daring and distant raids. A profusion of arms cover every horseman. One or two short brass-bound carbines at his back, two or three pistols and knives of sorts and sizes all round his waistbelt, and a sword by his side. Major James, however, considered them far inferior to the Waziri in courage and all manly qualities, and says, with coarse sensual features, there is much of the savage in them. On scenting their prey, their eyes dilate, and they evince all the greed and ferocity of wild beasts. In their raids they are ruthless, and spare neither age nor sex. They are generally short, compact, and sickly-looking, mean, with a skulking or cunning look about them. They are at feud with the Waziri, Zaimusht, Mangal, and Jaji, and they joined General Chamberlain in the Kabul Khel expedition against the Waziri, and served as spies and plunderers. They were formerly nomade, but about the end of the 18th century settled in Kuram, which they purchased from the Bangash, and afterwards also obtained Pewar; and the Bangash have now only the villages of Zeran and Shilofzan in the hills, and Isa Khel in the plains. The Bangash are dependents of the Turi, but there was war between them. On one occasion the Turi killed 500 Daurani on the Jaji border, and only ceased slaying on the intercession of a Kazzilbash chief. At first they gave much trouble to the British on the Kohat border, and in 1853 and 1854 made eight raids on British territory. In June 1856 they made thirteen raids; and on the 21st October 1856 a force of 14 guns, with 4500 men, under Brigadier Neville Chamberlain, marched against them, and reached Thal, the frontier village, on the 5th November, and he fined them Rs. 8630; but the feud between the Turi and Waziri has since then given a great deal of trouble. Part of the Turi are nomade, moving with their flocks and herds between Nilab on the Indus and Kābul, wintering about Bal Yamin, and pasturing in summer near the Safed Koh. They are Shiahs, and revere the shrine of Fahm-i-Alam, the father of Nadir Shah. Their war-cry is that of the Shiah sectarians, Ya Ali! Ya Haidar!

The *Waziri* or Vaziri are a large tribe of Pathans, with 43,980 fighting men, who inhabit the hill country to the W. of the British frontier, W. of the Indus, adjoining the Kohat district and the district of Dehra Ismail Khan, and extending from Thal in Miranzai to the Gomal pass. Their great clans and their fighting strengths are,—the Utmanzai, 17,200; Ahmadzai, 9580; Mahsud, 14,500; Gurbaz, 1500; Lali or Lelai, 1500. They are the most united body on the N.W. Frontier of British India; they have shown a more hostile spirit and kept more aloof from the British than any other tribe. Their proper settlements are among the higher spurs of the Suliman range, where they pass the summer months. In October the greater portion of the tribe descend with flocks and herds to the lower hills bordering on the Kohat and Banu districts. The Mahsud district is rugged. The northern Waziri cultivate broad tracts on both banks of the Kuram river. They claim descent from Vazir, son of Suliman, from whose grandsons and great-grandsons, Utman, Ahmad, Mahsud, Ali, Balol, Lali, and Gurbaz, the great clans of this tribe take their names. They are tall, muscular highlanders, with considerable courage. They have warred with all their neighbours, from all of whom, except on the British side, they have made conquests. They usually go on foot, and are most active in the mountains, generally attacking at night. A Waziri when caught by any of the surrounding tribes was never spared. On the other hand, the Waziri never injure women, nor take their jewels, but all men they invariably kill. Their neighbours admit their truthfulness and courage. They are haughty and bloodthirsty towards strangers. They are a fine race, prone to plunder, and careless about bloodshedding; but bold, plain spoken, true to their friends, and inclined to be boastful and rough in council. They have never owned any allegiance to Kābul.

The Mahsud Waziri number about 15,000 fighting men; they inhabit the hills on the Tank and the South Banu borders. Their sections are the Alizai, 5600; the Shahman Khel, 3000; and Balozai, 8100. They have always been highly predatory, especially the Alizai branch, and are at enmity with all around them. On the British occupation, they resumed their habits, and in 1860 the tribe was overcome by a force under General Chamberlain, 5196 strong. The British lost 63 killed and 166 wounded; the Mahsud Waziri lost more, but nevertheless have continued troublesome. They occupy the vast and lofty mountain range to the S. of the Banu district, and to the W. of the Dehra Ismail Khan district. Its principal hills are the Ghubur, about 7000 feet above the level of the sea; the Pirghul, 11,500; the Shuvi Dhur, 11,000 feet; and behind and above all, beyond the Mahsud territory, towers the Takht-i-Suliman, 14,000 feet above the sea level.

The Ahmadzai have about 9580 fighting men.

The Hati Khel are the most numerous of all the Ahmadzai. They are very much employed in the salt trade, but had many idle hands, some of whom in a band of robbers murdered Captain Mecham on the 5th November 1859. Before the Sikh conquest of the Panjab, about the beginning of the 19th century, the Ahmadzai nomades had occupied the Banu country in winter, and at length took permanent possession of the lands nearest the Thal. The Bizan Khel section of the Ahmadzai are responsible for the passes of Pinza, Khurd, Kalani, Kilhoi, Ghlosin, Tangi.

The Utmanzai are the most northerly clan, and can muster about 17,000 fighting men. Of their sections, the Kābul Khel are wild and lawless, with three subdivisions, the Miami, the Saefali, and the Pipali, numbering 3500 fighting men. The Kābul Khel, between 1850 and 1854, committed over twenty petty raids on British territory, and the British blockaded the whole tribe.

Although the Waziri are a united tribe, the clans have not joined each other on the occasions of the British expeditions into their territories. The blood feuds are not extensive, the actual murderer only being permitted to be slain in avenging a murder. They have no poor amongst them, the tribe subscribing to re-establish any family who are in need. They have cereals as their chief food, but use mutton. All graveyards are sacred to the Waziri, who in their yearly migrations to the hills never hesitate to deposit on the family tombs any property they wish to leave behind them. This is left untouched even by professional robbers. They have amongst them great numbers of fakirs, and they hold the tomb of Darvesh Musa in great veneration. In cases of adultery, they kill the woman and cut off the man's nose. Like all Pathan tribes, marriages are entered into after puberty. Childless widows are re-married to a relative of the deceased. The bridegroom buys his bride.

The *Batani* Pathans inhabit the outer spurs of the Waziri Hills, adjoining the S. of Banu and N. of Dehra Ismail Khan districts, from the E. slopes of the Gabr mountain at the Shamla Khurd pass to the Hisara pass. They trace their lineage through Batan to Kais, the founder of the Afghan race. Captain Maclean's list of their sections gives the Dana with 1400; the Tata, 1600; and the Uraspun, 1000 fighting men. Captain Norman gives the sections of the Dana as the Bobak, Bobar, Voraka; and the Uraspun, as the Tsaplai Shakhai. Captain Carr gives ten sub-sections of the Tata, 16 of the Dana, and 13 of the Uraspun. The Batani country is bare, stony, and uncultivated, resembling the Doon of the Himalaya. There are numerous passes into their hills; their principal settlements within the hills are those of Jandula, Siragar, and Gabr. They have flocks of sheep and herds of cattle, and cultivate wheat and bajra (Penicillaria spicata). They are of middle height, spare and wiry, are agricultural but predatory. They number 4600 fighting men at the outside. They were for years troublesome. They bring to British territory, grass, wood, wool, ropes, malu, camels, bullocks, sheep, oats, hill rice, ghi, and honey, and take back , sugar, oil, salt, donkeys, piece goods, and ndals.

Dawar is a rich, open, and fertile valley, in lat. 33° N., and long. 32° 57′ E. It is called Rodh by the inhabitants, who style themselves Dum or Marasi; it is entirely surrounded by the Waziri Hills, and the Waziri settlers on the British border. The Banuchi are its nearest neighbours, and its communications with its neighbours are through the mountain tracts of the Suliman range. The tribal divisions are Tapizai and Malai, with many subdivisions; and the entire population has 25,000 souls, all of them Sunni Muhammadans. All their villages are walled; fever prevails, and goitre is a common disease. Lieutenant-Colonel Edwardes described them as great blackguards, and they are depraved and vicious, and are addicted to great crimes. They shave one eyebrow, half the moustache, and half the beard, and apply antimony above and below the eye. On the 6th March 1872, a force of 1650 cavalry and infantry with two guns was sent against them under Brigadier-General Keyes, C.B., and after a brief action on the 7th they submitted, the British loss being 6 wounded, and the Dawari loss 43 killed and 30 prisoners.

Chamkani, a tribe who inhabit the base of the Safed Koh, said to have 3500 fighting men. They are very poor.

Shirani or *Sheorani* are a Pathan tribe who inhabit the hill country to the W. of the British frontier, from the Shekh Hyder pass on the N. to the Ramak on the S. They thus adjoin the subdivisions of British Tank, Kolachi, Draband, and Chaodwan. Their fighting men have been variously estimated at from 3000 to 10,000. They have three great sections,—the Chua Khel, Uba Khel, and Sen Khel,—with numerous clans. A great part of their territory is occupied by the Takht-i-Suliman and the hills which surround its base. Many parts of it are nearly inaccessible; one road in some places is cut out of the steep face of the hill, and in others supported by beams inserted in the rock, and is still impracticable for loaded bullocks. The population is scattered in villages of from 20 to 40 houses through the valleys and lower part of the mountains. The sites of their houses are cut out of the slopes of the hills, so that on three sides the earth forms the lower part of the wall. Each cottage has only one room and one entrance, which is closed at night by the branch of a thorny tree. The Shirani are of middle stature, spare, but stout; have bold features, grey eyes, high cheekbones, and their general appearance is wild and manly. They are hardy and active. The clothing of a common Shirani consists of a coarse black blanket tied round their middle and another thrown over their shoulders; a few yards of white cotton cloth is loosely twisted round their heads; and their feet are protected by sandals made of leather prepared by the tamarisk. Their usual food is bread made of Indian corn, with butter and kurut, and wheaten bread; their luxuries are milk, wild olives, pomegranates, and pine seed. Mutton is occasionally eaten. They never kill horned cattle for food, but when a bullock happens to die, they cut its throat in the Muhammadan manner, and eat it. They marry late, and the women have only domestic work, except at their two harvests. The principal employment is agriculture, the valleys being largely irrigated. The common stock consists of small bullocks, but they have asses, a few goats, and a very few horses. They are punctual in their prayers. They were at war with all the surrounding tribes that pass

through their country in the annual migrations. The passes into their country are the Chaodwan, Draband, Gajestan, Guioba, Isparikat, Kuram, Ramak, Shekh Haidar, Shirani. Prior to the British annexation of the Dehrajat, the Shirani were the terror of the whole border, and were generally the aggressors. From 1849 to 1853 they annually made inroads on the British territory, but in the last-named year they were met and defeated and followed up by Brigadier Hodgson, and their fort of Kotki mined and blown up. Mr. Elphinstone gives a very favourable account of them, but Colonel MacGregor commenting on it observes that 'a Pathan obeys no one, and, except the dictates of his own revengeful and avaricious nature, nothing has any influence with him.'

The *Babar* tribe inhabit the Koh-i-Daman of the Dehra Ismail Khan district, opposite the Saugor and Dahina passes. Between them and the Mian Khel, on a boundary dispute, a blood feud raged for upwards of a hundred years, each year renewed. They are a brave but scattered tribe. They are of Shirani descent. They number 600 or 700 fighting men. They are of mercantile habits, and are the richest of all the tribes of the Daman. They are very fair, and are the most superior race in the Trans-Indus districts. The proverb, 'A Babar fool is a Gandehpur sage,' testifies to their wisdom.

The *Ushtarana* or Oshterana is an Afghan tribe who inhabit the outer hills opposite the extreme south portion of the Dehra Ismail district. They are conterminous of the Dehra Ismail Khan and Dehra Ghazi Khan districts. They are largely engaged in trade, and have been supposed to be a division of the Lohani tribe. They are in two clans, the Gagalzai and the Ahmadzai, each of which has about 450 fighting men, but there had long been a blood feud between them, and they were hardly on speaking terms. Nothing can be more miserable than the whole of the Ushtarana country. They are not predatory, and are the bravest tribe of the Suliman range. They possess a large tract of land in British territory. On the outbreak of the Sikh war in 1848, 200 of them followed Major Edwardes to Multan. The Vooch or Korah pass, on the border of the Ushtarana hills, and nearly opposite to Dehra Fattah Khan, constitutes the boundary line between the Pathan and Baluch tribes. It is faced by the British outposts of Doulalwalla and Vihowa.

The *Kasrani* are a Baluch tribe who dwell in the extreme north of the Dehra Ghazi Khan district, a portion of the south of the Dehra Ismail district, and in the hills to the immediate west of these tracts. Their hills extend from the Korah pass downwards for a distance of about fifty miles. They have many subdivisions, and their fighting men are estimated at about 668. There are about 3314 of this tribe in the plains of the Dehrajat, and they graze large herds of cattle on the sandy plains between Kot Kasrani and Vihowa. They are the most northerly of all the Baluch. They made an inroad on British territory in 1852, and were punished by the police; and in 1853 Brigadier Hodgson moved against them with 1000 sepoys and police, and destroyed some villages. The hill Kasrani and their neighbours the Bozdar long had a bitter feud, but by British influence a truce was arranged. In 1868 Lieut. Gray attempted to seize Jahangir Khan, but he was himself made a prisoner and carried off, and only released after a force of the Bozdar and the Panjab cavalry had been sent in pursuit.

Khastai, a small tribe of Pathans beyond the Dehra Ghazi Khan border. They are peaceful and quiet, agricultural and pastoral.

Luni, a Pathan tribe west of the Dehra Ghazi frontier. Their neighbours on the north are the Kakar and the Musa Khel, on the south are Murree Tarin, with the Khetran on the east. Their adult men are 1200. They speak a mixture of Pushtu and Baluch. The Chumalang range of hills produces a valuable coal, also sulphur.

Bozdar, a Baluch tribe who occupy the hills on the Dehra Ghazi Khan frontier. Their country extends on the north as far as the Saugor pass and Drug, where they touch the Kasrani, Esot, and Jafar; on the east to the foot of the hills on the Saugor border; on the south to the Vidor pass and the Majvel Sham (plain), where they meet the Hadiani and Khetran; and on the west to the crest of the Kala Roh, where they are bounded by the Luni and Musa Khel Pathans. Their country is about 40 miles long by 30 broad, and is entirely mountainous, formed of the outer spurs of the great Suliman range. They number about 2720 fighting men, as under:—

Dulani, . .	850	Chakrani, .	400	Jalani, . .	120
Ladwani, .	360	Sihani, . .	150	Jafarani, .	300
Gholamani, .	300	Shahwani, .	140	Rustamani, .	100

and they have numerous subdivisions,—according to Major Minchin, 64, with 3776 fighting men. Their country is a series of bare and sterile ridges, divided by bare ravines with small patches of cultivation. They are friendly with the British. Their greatest enemies were the Ushtarana Pathans, and at times the Khetran. They fight with matchlocks. They have few horses, and about 100 horsemen. They purchase the coarser grains, cloth, tobacco, and oil in the markets of British India. They claim to be of Rind Baluch origin; and their name, from Boz, a sheep, was given because of their possession of large flocks of sheep. From 1850 to 1856 they were frequently troublesome to the British, and in 1857, an expedition, 2369 strong, under General Chamberlain, was moved against them. The Bozdar numbered 1700, and lost 20 to 30 killed and 50 to 70 wounded. More than all the frontier tribes, the Bozdar had for years previously plundered and murdered in the plains and the hills. They recommenced plundering in 1861, but later on they behaved better.

Esot, a small tribe of Afghans near the Dehrajat frontier. Balfarat, a small clan of Esot Pathans on the Vihowa border of Dehra Ghazi Khan.

The Jafar is a tribe of Pathans with 500 fighting men. They dwell to the N.W. of the Bozdar hills, between the Buj spur of the Suliman and the Bozdar tribe. They have twelve branches, and possess a few camels and horses.

The *Khutran* or *Khetran* are a Baluch tribe inhabiting the hills to the west of the Dehra Ghazi Khan district. The Khetran are curiously intermixed with the Baluch tribes, and farther south are the Kosa, Laghari, Gurchani, Murree, and Bugti, occupying the frontier line of the Dehra Ghazi Khan district down to its point of junction with the Sind border; on the north the Musa Khel and Luni Pathan, the Bozdar on the N.E., the Hadiani Laghari on the east, and the Durkani section of

the Gurchani occupy the high crests of the Kala Roh and the Morunj plain. The Murree are on the W. and S.W. West of the Kolu valley is the small tribe of Zarkhan Pathans, west of whom again are the large tribe of the Tarin, and N.W. are the Ushtarana and Shahdozai. It is a large extent of country. Their boundaries can with difficulty be marked out, and they lay claims to portions of the adjoining lands. Their sections are the Ganjura, Chacha or Dariwal, Hasani, and Nahr, with many clan subdivisions, and their fighting men have been stated at from 3000 to 6000. They all live inside forts. They are the wealthiest of the Baluch tribes, are not warlike, do not plunder, and are largely engaged in cultivation, but are recipients of all the plunder on the border. They seem to have been formed by branches of other broken tribes. They are at feud with the Murree, Bozdar, and Durkani, and with the Luni and Musa Khel Pathans. They carry on a large trade with the British territory. A branch of the Khetran live round Vihowa in the Dehra Ghazi Khan district, who can raise 300 fighting men.

Hasani, a tribe in the Khetran country near Laghari Barkhan, also in the Shahdozai country.

Zar Khan, a small but very martial tribe of Pathans inhabiting the Kolu valley, and separated from the Khetran by the Jandran range. They number 600 men. They have good horses, and their arms are swords, shields, and matchlocks.

The *Laghari* tribe on the border of the Dehra Ghazi Khan district occupy from the Dalana on the north to the Kura pass on the south. Their sections are the Aliani, Hadiani, Boglani, and Haibatani, with numerous clans. They have been variously estimated as capable of furnishing from 1900 to 5250 fighting men. In the Dehra Ghazi Khan district, in 1868, there were also 11,311 Laghari and 904 in the Dehra Ismail district. At the opening of the Sikh rebellion they sided with Mulraj.

The *Kosa*, in the Dehra Ghazi Khan district, is a Baluch tribe with seven divisions,—Balelani, Jangel, Jandani, Jarwar, Isani, Tomiwala, and Mehrwani, estimated capable of furnishing from five to six thousand fighting men. They are among the bravest of the Baluch, and formerly were very powerful. They live almost wholly in the plains, which they cultivate. They are likewise graziers, and have numerous flocks. There have been difficulties in securing the succession, but the tribe has twice aided the British.

Gorchani, Gurchani, or Gorishani tribe are Baluch, but mixed, who inhabit the Jampur division of the Dehra Ghazi Khan district in the immediate vicinity of Harand. They have thirteen sections,—Shikani, Hotwani, Khalilani, Alikhani, Bazgir, Jaskani, Pitafi, Lishari, Durkani, Chang, Surani, Joqiani, and the Helwani. Their fighting men are estimated at 1100 to 1200. The Pitafi and Lishari sections had been inveterate thieves, and until 1866 continued to give trouble; but in recent years there has been no complaint against them. Their population is 3938 souls, of whom 1100 or 1200 are adults. In 1867, a raid on Harand by 1200 Murree, Bugti, and Khetran, was met by the Gurchani and the 5th Panjab Cavalry, and defeated with great loss.

Murree or *Mari*, a brave Baluch tribe who inhabit the outer hill which surrounds Cutchi on the east, north, and north-west sides. They are subject to the Khan of Kalat, and nowhere touch on British territory. They possess the districts of Kahan, Mundahi, Jantali, Phailawar, and Nisao, and their four main sections are the Ghazani, Loharani, Bijarani, and Mazarani. Their country extends from the Bolan pass to the Phailawar plain, about 120 miles, mostly barren hills, but with many fertile valleys. They are nomades, and rich in cattle, but their habits were altogether predatory, and they can furnish about 4000 fighting men. The portion who inhabited the eastern hills in Cutch Gandava were notorious for their lawless habits, and for making frequent inroads on the plains. They and the Maghazzi seem to have emigrated from Cutch Gandava at different periods, and to have become incorporated with the Jat cultivators. A peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam Murree on the S.E. frontier of Sind; the Doda Murree occupy Kahan. In April 1840, Captain Lewis Browne of the 5th Bombay Native Infantry occupied Kahun, and held it till the 28th September, when he retired with his arms and a gun,—all efforts to relieve him having failed. In one of these disastrous efforts under Major Clibborn at Nufusk, the British lost 179 killed and 92 wounded; they subsequently met with many calamities. On the 23d May 1849, in a fight with the Brahui at Bibi Nani, they lost 750 men out of 1300. In August 1849, they plundered the village of Mal, and attempted predatory incursions on British territory. In 1852 (24th January), the fort of Kahun and many of its houses were destroyed by an earthquake, and many lives and much property lost. A cave in a hill, in which many were dwelling, was filled up by the fall of the hill, destroying 260 Muhammadans, 80 Hindus, and many cattle. On the 11th December 1852, a large body of Murree attacked the town of Pulaji, and killed 40 of the Kaihiri. Major Jacob then remonstrated with the Khan of Kalat, and urged him to restrain his subjects; but on the 30th January 1853, a party of 200 Murree horsemen left their hills, and attacked some Bugti shepherds on the Mazardan plain. On the 23d March of that year they fell on the village of Trihar, killing several of the Dumki, and carrying off a very great number of camels and other cattle. On the 3d April they had carried off cattle from Kasmir, and were followed by the Sind Horse, and, coming up with them near Hirpani, a hand-to-hand fight ensued, in which the British lost ten killed and wounded. They made raids on the 17th and 23d June, the 10th and 17th September, 28th October, 26th November, and 28th December 1853, and 24th February 1854. On the 21st January 1859, the Khan of Kalat assembled 8000 horse and foot to punish them, and was accompanied by a British force under Major Malcolm Green, and Sir Henry Green was present, and the Murree tendered their submission. But in December 1862 the khan was obliged to take another force into the hills. In their attacks on the Panjab border, between the 25th September 1850 and 1869, they made about twenty raids, killing people and carrying off cattle. On the 1st February 1869, the Murree chiefs met Colonel Phayre, in the presence of the Bugti, Dumki, and Mazari chiefs, and the Murree agreed to live peaceably.

The *Bugti* tribe are Baluch who inhabit the hilly country to the west of the Rajanpur border, and it has been estimated that they can muster from 1200 to 4000 fighting men. Their six divisions are the Kaheja, Nothani, Musuri, Kalpar, Phong, and Kiazai. Much of their country is rugged and barren, but it contains good pasture lands and some fertile valleys. They claim to be allied with the Rind Baluch. They and the Murree were unceasingly at war, but the Bugti were also at feud with the Mazari, Dreshuk, Dumki, Burdi, and others. They made predatory attacks on the British army when advancing towards Afghanistan. In 1844-45 Sir Charles Napier advanced against them with 2500 men, and was opposed by about 3500 Jakrani, Dumki, Bugti, and Khetran. The campaign lasted from the 15th January to the 4th March 1845, on which the chiefs submitted, after 54 days of incessant exertion. They again, on the 10th December 1846, assembled a force of 1500 armed men, and made an inroad to within 15 miles of Shikarpur, and returned to their hill with 15,000 head of cattle, without the loss of a man. On the 1st October 1847, the whole Bugti force entered the plain, but were met by Lieutenant Merewether of the Sind Horse, with 133 men. The Bugti formed a solid mass to receive the attack, but were overthrown at the first onset, retired, and were again defeated, and at last threw down their arms and surrendered. Out of 700, only two horsemen regained the hills, while the loss of the British was nine killed and wounded; and the tribe, broken and dispersed, fled for refuge to the Khetrans. Nevertheless petty inroads occurred, and on the 7th April 1869, 500 Bugti attacked the post of Kasmir, and were repulsed, and, as they retreated, a native officer and party came on a party of 300 or 400 Bugti driving off 1000 camels. He immediately charged them, killing many, and recovering all the camels.

The **BRITISH TRIBES** on the N.W. frontier of India inhabit partly hills and partly dwell in the plains. They may be enumerated as follows:—

i. **Hazara** district—

a. Turnouli of Darwazai.
b. Syuds of Kaghan and Agror.
c. Ghakar.
d. Swati.
e. Dund or Doond Dhund.
f. Sutti.

ii. Peshawur district—

a. Yusufzai.
b. Khalil.
c. Mohmund of the plains.

iii. Kohat and Peshawur district—*a.* Khatak.

iv. Kohat district—*a.* Bangash.

v. Dehra Ismail Khan district—

a. Banuchi.
b. Marwati.
c. Butani.
d. Chiefs of Tank
e. Chiefs of Kolachi.
f. ,, Dehra Ismail Khan.
g. Nutkani.
h. Lund.

vi. Dehra Ghazi Khan district—

a. Dreshuk.
b. Mazari.

The British Hazara is a Cis-Indus district of the Panjab. It is a mountainous country, bounded on the north by various independent tribes, on the S. by Rawal Pindi, on the E. by Kashmir, and on the W. by the Indus. Its greatest length is 130 miles, and breadth 40 miles, with an area of 2994 square miles. It has four revenue subdivisions,—Haripur, Mansera, Tanawal, and Kaghan. In the last are Gujar ryots, and Swati occupy Kunhar as far as the Black Mountain. In its south portion are the Bomba, Dhund, Karal, and Ghakar, and in the tracts on the Indus are the Utmanzai, Mashwani, and Tarkheli.

The Tanaoli and Jadun are in Tanawal. They are fair cultivators. The Gujar, Awan, and other Muhammadan converts are hard-working and thrifty; the Syud, Swati, Utmanzai, and Tarkheli are careless, lazy races. The Mashwani are very thrifty.

Agror is a subdivision of the Hazara district, 10 miles long and 6 broad, consisting of three main valleys in the upper portion of the Unar river, bounded on the north by the Mana Ka Dana spur of the Black Mountain. Its beautiful mountain glens, Unar, Arbora, and Kathai, are one mass of luxuriant vegetation, and open into several minor glens,—Chulandarian, Kabl, Bazdara, and Kanjara Dara. A great spur comes down from Nanga Parbat, and another range comes from above Kabl. The inhabitants, 8721 in number, are Swati and Gujar of low physique and debased morality. The Swati have all the vices of the Pathan without his courage, and they do not care to fight even for their own fields. There are a few Tanaoli, Awan, Pathan, Koreshi, Syud, and Dasht, bigoted Muhammadans, who speak Pushtu, all ruled by a khan. The Koresh tribe claim Arab origin, and are in all the Trans-Indus districts.

There are also in Agror portions of upwards of twenty Afghan tribes, with the usual artisans of eastern villages, and a few Khatri and Brahman Hindus, living in 45 small villages. In July and August 1868 a small force was sent into Agror; the Swati submitted, but others held out, and a large force under Major-General Wilde advanced to the Black Mountain. In July 1869 two hamlets in the valley were burned by raiders of the Hasanzai, Parari Syud, and Akozai, on which a British force destroyed the Akozai village of Shahtut. On the 5th and 15th April 1870 and 4th June 1871 other villages were attacked by raiders, but after 1872 the Agror valley and Hazara border were free from any hostile attacks.

Swati.—The Alahi valley, to the north of Hazara, drains into the Indus nearly opposite Ghorband. The inhabitants are Swati.

The *Kohistan* is a valley on the Hazara border to the N.E. of Alahi, along the west and north of Kaghan. It has an area of 500 or 600 square miles. The Kohistani claim to be of Arab descent, but their neighbours say they were idol-worshippers up to the last quarter of the 18th century. This seems correct, as their divisions are the Rana proprietors, the Yeshkan vassals, Kamin artisans, and Dum musicians. The Kohistani are a physically fine race, free spoken and very united. They trade in timber and other produce. Their divisions or khel are the Bara, Kali, Galoch, Shandar, and Gatar.

The *Kaghan* valley or glen forms the most northern part of the Hazara district. It has a population of about 22,000, Syuds and Gujar. It consists of the inner slopes of two parallel mountain ranges, clad with perpetual snow, and ranging in height from 12,000 feet at the S. entrance of the valley to 15,000 feet at its northern head. It stretches upwards till it nearly reaches Chilas. The Gujar are quiet and peaceable cultivators. The Syuds are proprietors, having received it

from the Sikhs. They are lazy, disunited, and intriguing. They were proceeded against in 1852, and they surrendered to the British.

Gujar are found in the frontier districts of the Peshawur division, and amongst the independent tribes. They profess Muhammadanism, are cultivators and rear cattle. They are a fine healthy race, quiet, industrious, and frugal. They are of Jat descent, but are now subdivided into clans and khel like the Afghans. They are very numerous, and form the entire population of many villages. They are not owners of the lands beyond British limits, but lease from the Pathan proprietors.

The Bambar tribe of Hazara inhabit the range of mountains behind Rarágoli, N.E. of the Jadun. They are a portion of the Bambar tribe of Muzaffarabad. They have no sympathies with any other Hazara tribes.

Mashwani are a tribe of Syuds in the Hazara district in the N. portion of the Gangdar range, also about 400 families in the Koh-Daman of Kábul. They are of fine physique, manly, brave, and truthful. They are large carriers.

The Utmanzai inhabiting the Torbela and Khalsa tracts of Hazara are a branch of the Utmanzai of Yusufzai. The population of Khalsa is 8567 souls, and of Torbela 7088.

The Jadun or Gadun is a Pathan tribe partly on the slopes of the Mahaban mountain, partly in the Hazara district, and in part Trans-Indus. They are surrounded by tribes of Yusufzai origin. Their country is called Gaduna. They have two divisions, —Salar and Mansur. They claim to have 12,000 fighting men, but may have a sixth part of that number, and these are badly armed. The British have several times blockaded them in their valleys.

Dalzak is a tribe of Afghan descent, part of them inhabiting a portion of the country on the right bank of the Indus, but are chiefly on the left bank in Hazara.

The Dhund is a very handsome race, inhabiting the Boi tract of Hazara, especially between the Jhelum and the main range, numbering 18,518 souls, living in villages on plateaux about 1000 feet above the river. They are improvident, lack energy, and have been badly affected towards the British.

The Tanawal district on the Hazara border is the most wild, mountainous, and rugged part of Hazara, and is peopled with armed and warlike peasants. It is divided by the river Siran into an eastern and a western part. The Palal are British subjects, and the Hindwal are in an independent principality, and occupy an actual area of about 720 square miles in the Doaba of the Indus and Siran, with a revenue of Rs. 28,000. Bahingra, a rugged, steep mountain, is in independent Tanawal. The Pakli plain in the Hazara district is occupied by the Swati, Awan, Syuds, and Tanaoli.

The Karāl are a poor, humble tribe, 16,615 in number, dwelling in the Nara tract of the Hazara district and in the Jadun tract. Some of their villages on the spur of a ridge in Hazara are 5000 feet above the sea. They are agriculturists. They are of Hindu origin, converts to Muhammadanism.

The Awan are the most numerous and the best of these frontier tribes, and there is no better people in India. They are settled in large agricultural communities on the Chach plain, on the eastern side of the Indus, and in smaller bodies farther east, on the Jhelum, Gujerat, and Sealkot districts. They are scattered in Yusufzai and the Kohat district, as well as in Hazara and other districts on the left bank of the Indus. In Yusufzai they are said to number 3000 souls. They have enlisted in the Panjab force and in the regular infantry. They are good soldiers. The Awan of the lower lands, and Dhund, etc., of the higher lands, have democratic village institutions.

Gakkar, Ghakar, or Kakar, a tribe inhabiting portions of the Hazara, Jhelum, and Rawal Pindi districts of the Panjab. They claim to have come into their present position from Seistan with Mahmud of Ghazni; but they are one of the oldest and most powerful of the Hindu dynasties of the Panjab. They opposed Mahmud on the plains of Peshawur, but they seem soon afterwards to have adopted Muhammadanism, and their country was a jaghir to them from the times of the first emperor of Dehli, for which they paid the annual tribute of a horse, and rendered military service at first to Dehli, afterwards to Kábul, and subsequently to the Sikhs. About 1783 they suffered from a severe famine.

In 1847, when the British came into contact with the Hazara, they took the British side; they aided in the siege of Multan, and again sided with the British in the mutiny of 1857. Their chiefs have borne the titles of Sultan, Mirza, and Raja. The Gakkar are not distinguishable from the Awan in personal appearance, both being very large, fine men, but not very fair.

They are supposed to be descendants of the mountaineers, whose chief Ambisaces sent ambassadors with presents to Alexander. In the time of Mahmud they inhabited the Salt Range or Jhow mountains between the Indus and the Behut (Hydaspes). Baber names them Gakar; but it is also written Ghaka and Kakha. At an early period of history, old writers tell us that they were given to infanticide and polyandry. It was a custom, says Ferishta, 'as soon as a female child was born, to carry her to the market place, and there proclaim aloud, holding the child in one hand and a knife in the other, that any one wanting a wife might have her; otherwise she was immolated.' By this means they had more men than women, which occasioned the custom of several husbands to one wife. When any one husband visited her, she set up a mark at the door, which, being observed by the others, they withdrew till the signal was removed.

The Dhund, Tanaoli, Alpial, Kurral, Awan, and Gakkar tribes are known only by their tribal names, without any common appellation; they live north of the Salt Range. They are described by Mr. Campbell as the finest and handsomest men in India, perhaps in the world. They profess Muhammadanism, and have fanciful Muhammadan genealogies, but are wholly Indian in their language, manners, habits, and constitutions. Their language is Panjabi. They have no connection with the Pathan races, and they claim none with the Jat and Rajput, the Dilzak alone claiming to be of Hindi origin. Their features would seem to show that they have kindred with the Kashmiri, or with the pre-Hindu congeners of the earlier Indians found in the hills far west, but their language and character, dress, and the architecture of their houses, would indicate that they are nearly allied to the Panjabi.

Peshawur, in the Panjab, is the name of a province, a district, a city, and military cantonment. It is British territory, in India proper. The city is in lat. 34° 1′ N., and long. 71° 37′ E., and 1200 feet above the sea. The district lies between lat. 33° 50′ to 34° 30′ N., and long. 71° 30′ to 72° 50′ E. The cantonment in 1868 had 21,720 inhabitants; the city, 60,974; while that of the district was 523,152, principally various tribes of Afghans, with Paracha, Khojah, Tajak, Kashmiri, and Brahmans, giving 271·2 souls to the square mile, the chief races as under:—

The tribes on the Peshawur and Kohat borders are in two political factions,—the Gar and the Samal. The tribes who are of the Gar faction are the Abdul-Aziz, Adam, Afridi, Akhel, Alikhel, Bazoti, Firoz, Kambar, Kuki, Manu, Masuzai, Sipah, Turi, Ustura, Utman. The Samal faction are the Afridi, Aka, Ali-Sherzai, Bar-Muhammad, Kamr, Khadarzai, Malik Din, Mishti, Mamazai, Orakzai, Rabia, Shekhan, Sipah, Soda, Waziri. Zaimusht, and Zakha. The factions arose two hundred years ago, in the quarrels of two Hindu brothers.

Peshawur is said to be a corruption from Purshawur. Major James thinks it means the seat of Purrus or Porus, the name of a king or dynasty, as similarly Lahawar means the seat of Lawa.

The Peshawur valley is at the extreme north of the Trans-Indus territory. On its north are the hills of the Mohmands, Utman Khel, Swat, Buner, and the Mahaban tribes. It is bounded on the E. by the Indus, S. by the Khatak and Afridi hills, and W. by the Khaibar mountains. Its area is 1928 square miles; the valley is closed on the N.W. and S. by a more or less continuous range of high hills. To the east for about 20 miles is a gap occupied by the plain of Chach. The northern boundary is a continuous range of hills extending in an arc from the Indus, opposite Torbela to the Swat river, where it debouches on the plains at Abazai Fort. The highest points in this range are Mahaban, 7471 feet, Tatara, 6862 feet, Mulagarh, 7060 feet. Its N.E. is inhabited by Yusufzai; the Khatak, Khalil, Mohmand, and Daudzai occupy districts with these names; the Muhammadzai and Miana inhabit Hashtnuggur, and Lunkhor has the Khatak and Utman Khel; while many tribes are in Doaba and Khalsa. It is highly fertile and well peopled. Its rivers are the Indus, the Swat river, the Kābul river, which divides into streams. The Yusufzai have the best climate and are the finest people. In this district Lieutenant-Colonel Mackeson was wounded on the 10th September 1853. Major Adams, wounded on the 15th January 1865, died on the 26th of that month, and on the 3d October 1865 Lieutenant Ommaney was killed.

The *Yusufzai* Pathans inhabit the hills north of the Peshawur district, and the Yusufzai division of that district lies between lat. 34° to 34° 3′ N., and long. 71° 55′ to 72° 40′ E.; area, about 2000 sq. m.; population, 98,977. They claim that their ancestor Mandai had two sons, Umar and Yusuf. Umar left one son named Mandan, from whom and Yusuf the tribe are descended. Mandan had seven sons, from whom sprang the Usmanzai, the Utmanzai, and the Rajär.

Yusuf had five sons, viz. Uria surnamed Badi, the founder of the Badi Khel, Isa of the Isazai, Musa of the Musazai, whose son Ilias founded the Iliazai, Mali of the Malizai, and Ako of the Akozai. There is also a Yusufzai clan called Ramzai.

The total population of the Mandan branch is 140,000 souls with 30,000 fighting men, and of the Yusufzai, 106,000 souls with 43,200 fighting men. About the year 1873 there were 795 Yusufzai serving in the Bengal army and 364 in the Panjab force. Besides the Yusufzai, their district had in its population, Gujar Awan 3000, Kashmiri 6000, Hindki 10,000, Mula slaves and Hindus. The Gujar are Muhammadans; they form the entire population of many villages; they cultivate the lands, paying rent, and are also cattle graziers. They number about 75,000 souls, and are a fine athletic race.

The Hindki are mechanics, artisans, and traders, and have the following guilds amongst others,—Charikar, ploughmen; Dum or Mirasi, musicians; Gadba or Rawanri, shepherds, graziers; Musalli, sweepers; and Shahkail, cotton cleaners. All the Hindki are termed Hamsaya (neighbour) or Fakir (beggar). The Ghulam slaves were descendants of war prisoners; the men are called Mrai and the women Windza. They are beyond the British frontier.

The Mula number 34,000. They have two sections, Astanadar or Buzurg and the Mula, both of them holy classes. The Hindus are nearly all Khatri, and number 22,000.

The Yusufzai, formerly nomades, are now agriculturists and traders. They are superstitious, proud, greedy, and revengeful; they observe their religious rites of prayer and pilgrimage, almsgiving (Zakat, Khairat, and Ashar) and fasting. They are boastful of their descent and prowess, and demand, Am I not a Pukhtun? They are hospitable; but so soon as the guest leaves he might be robbed or murdered by his late host. Their honour, Nang-i-Pukhtana, is satisfied with Badal or retaliation; Nanawati, sheltering a guest; and Mailmastai, feeding a stranger.

They are suspicious and jealous of their women; the abuse or slander of one's female relatives was only to be washed out by blood; and not unfrequently the slandered one, whether guilty or innocent, was murdered to begin with. They do not treat their women with respect or confidence. Elopements (Matiza) are one of the most fruitful causes of feuds. They are dirty in their persons and clothes. They are fond of field sports, and in disposition are lively, merry, fond of music and recitations. The women are uneducated, and coarse and obscene in their conversation. On a death occurring, the women of the quarter assemble for the vir or wuzar lamentation.

The Mandan division of the Yusufzai number 4000 souls, with 80,000 to 100,000 of other races settled amongst them. They can muster 25,000 to 30,000 armed men. They have seven khel or clans.

The Utmanzai is a division of the Mandan.

The Razar section of the Mandan comprises five of the seven sections of that division. They all reside in the British district of Yusufzai, and give their names, Ako Khel, Malikzai, Manizai, Khidaizai, and Mamuzai, to their respective subdivisions. The Mamuzai rebelled during the mutiny of 1857, but were subdued.

The Akozai is a division of the Utmanzai clan of the Mandan Yusufzai. They are located beyond the British frontier, and occupy the south spurs of Mahaban, on the right bank of the Indus.

The Khudu Khel section of the Saddozai division of the Utmanzai Mandan Yusufzai inhabit the north slopes of the Sar Patai mountain. They are said to have 1500 or 1800 fighting men. They gave trouble to the British in 1857, and a force under General Cotton moved against them in 1858.

Isazai is a division of the Yusufzai clan.

The Akozai division of the Isazai clan of Yusufzai inhabit the western slopes of the Black Mountain on the Hazara border. They have four sections or khel, Barat, Aziz, Tansan, and Painda, and can muster 1165 fighting men. They have been troublesome on the Agror border.

The Mada Khel section of the Isazai Yusufzai inhabit the northern slope of the Mahaban. They number about 2000; their clans are the Mada, Hasan, and Bazid, but Dalazak, Gujar, and boatmen live in their country.

The Hasanzai section of the Isazai Yusufzai dwell on both sides of the Indus; those Cis-Indus on the Black Mountain, and those Trans-Indus immediately opposite it. They have ten sections, and 1115 fighting men. They murdered Messrs. Carne and Tapp in November 1851, and Colonel (now Lord) Napier led an expedition against them.

The Malizai division of the Yusufzai occupy the lower portion of the Buner valley. They number 16,000 souls, and can muster 3500 or 4000 matchlockmen.

The Nurizai section of the Malizai Yusufzai are in the south-west corner of the Buner plain.

The Daulatzai section of the Malizai Yusufzai inhabit a portion of the valley of Buner. They have between 3500 and 4000 matchlockmen.

The Nasrozai section of the Iliaszai Yusufzai has the Panjpao and Makhozai as subdivisions. The Makhozai inhabit the country to the north-east of Buner, in a glen through which a tributary of the river of the Puran valley flows.

The Amazai section of the Usmanzai clan of the Yusufzai are partly within and partly beyond the British border, and are divided into two portions by a northern spur from the Mahaban. Their country is well wooded with pines, but is rough and narrow. Their fighting men have been estimated at from 1500 to 8000, the former probably correct. Malka, burnt in 1863 by General Chamberlain, is in the Amazai territory, and in 1864 (11th January) they excluded the Hindustani fanatics from their limits.

Daulatzai is a division of Amazai Usmanzai Yusufzai in the Peshawur district, in the Sudhum valley, enclosed on three sides by hills. Their subdivisions are the Bazid Khel and Hasan Khel.

The Ismailzai, a section of the Amazai Usmanzai Mandan clan of Yusufzai, are in the Yusufzai plain.

The Akozai is a grand division of the Yusufzai, comprising the Baizai and Khwazozai, who inhabit the Swat valley; they number about 90,000 souls.

Paindah is a section of the Malizai Khwazozai Yusufzai.

Adingzai is a section of the Khwazozai Akozai Yusufzai, who inhabit the right bank of the Swat river, and a glen running north from it about 10 miles long, from the Swat river to the Laram hill. A hill on their east separates them from the Shamozai. They have forty-four villages. Their sections or khel are the Mir-Hasan, Babu, Utmanzai, Shergha, Marjan, Baram, and Umar Khel. The Utmanzai and Babu Khel redistribute their lands amongst themselves every ten years. They communicate with the Malizai by the Laram pass.

Ashi Khel, also called Shamizai, is a section of the Khwazozai division of the Akozai Yusufzai.

Malizai is a section of the Khwazozai Akozai Yusufzai who occupy the country of Panjkora. They number 8500 fighting men. They opposed the British in the Ambela campaign.

The Khadakzai section of the Akozai Yusufzai reside north of the Ranizai, on the right bank of the Swat river.

The Baizai section of the Akozai clan of the Yusufzai are mostly on the south bank of the Swat river, beyond British border.

The Jinki Khel section of the Baizai Akozai Yusufzai are on the left bank of the Swat river, with the Kohistan on their north.

The Babuzai section of the Baizai Akozai Yusufzai are on the left bank of the Swat river. They have four sub-sections, and about 1000 fighting men.

The Barat Khel is a section of the Babuzai Baizai clan of the Akozai Yusufzai.

The Azi Khel is a section of the Baizai Akozai Yusufzai dwelling on the left bank of the Swat river.

The Ranizai Yusufzai is a subdivision of the Baizai Akozai division of the Yusufzai clan, and are further subdivided into the Sultan Khan, Usman, Burhan, Utmanzai, and Ali Khels. They all reside beyond the British border. They can muster about 3000 matchlockmen. The Ranizai country is divided into Sam Ranizai and Bar or Swat Ranizai. Sir Colin Campbell moved against them in 1852.

The Aba Khel division of the Baizai Akozai Yusufzai is located on the left bank of the Swat river. They have five khel, viz. Ismail, Khasai, Zaman, Khalai, and Skhalo. The Abazai are on the right bank.

The Chagharzai tribe of Yusufzai Afghans inhabit both banks of the Indus above Buner. Their three subdivisions are the Nasrat Khel, with 800 fighting men; Firozi and Basi Khel, with 4150 fighting men. The Trans-Indus Chagharzai have 1950 fighting men.

Ghoria Khel is a name sometimes used to designate the five Peshawur tribes, Mohmand, Daudzai, Khalil, Chamkani, and Muhammadzai.

They are descended from four sons of Ghoria, son of Khar Shabun, son of Saraband. The Ghoria Khel came from Kandahar, and settled for many generations in Ghazni, from which they removed to Kābul, and afterwards to Nangrahar and Peshawur in the reign of Kamran, son of Baber; they fought with the Dilazak, and gradually got possession of the country, which they still retain, the Chamkani excepted. Their chiefs are called Arbab, lords. They are said to be more treacherous than other Pathans.

The Daudzai tribe of the Ghoria are located in the Peshawur valley, between the Khalil and Khalsa divisions and the Kābul river. The population in 1868 was returned at 37,671, almost all Muhammadans, Syud, Moghul, Daudzai, Gujar, Khojah, Kashmiri, Khatri, and Arora. The three Daudzai sections are the Mandaki, Mamur, and Yusuf. In 1881, there were only 5898 of the Daudzai tribe returned in the Panjab.

The Khalil inhabit a portion of the Peshawur district in the plain between the Khaibar Hills and Peshawur. They are of Afghan descent. Their chiefs have the titular name of Arbab (the Arabic plural of Rab, lord). They numbered 13,595 souls in 1881. About 100 serve in the Bengal army and Panjab force.

The *Mohmand* tribe are partly independent, but a portion of them colonized in the south-western lands of the Peshawur district, and in 1881 numbered 44,009 souls. They are now respectable cultivators, have been lukewarm supporters of the British, and have maintained friendly relations with their neighbours, the Afridi. They have not, however, fraternized with their fellow Mohmands of the rugged, sterile, hilly country N.W. of Peshawur, against whom in 1851 a force under Sir Colin Campbell was sent; in 1854 another force was sent under Colonel Boileau; and in 1864, a third time, under Colonel Macdonell. The Pendi Ali Mohmand worried the border for the first eleven years of British rule. The six clans of the Mohmands can turn out 19,700 fighting men; Tarakzai, 2500; Halimzai, 3000; Khwaizai, 800, Baizai, 12,000; Utmanzai, 500; and Dawezai, 900. The Halimzai section includes the chiefs who hold the Panjpao lands in the British territory near Shabkadr, and inhabit the Kamal district north of Pindi Ali. They are considered the best fighting men of the Mohmand. By 1873 only 272 Mohmands had entered the Panjab force and Bengal army.

In the Hashtnuggur division of the Peshawur district are two tribes meriting notice,—the Mian, a branch of the Kaka Khel Khatak, who are carriers, and the Muhammadzai or Mamanzai, a mixed population of 25,000 souls, who have about 5000 matchlockmen.

The *Gagiani* tribe of Pathans in the Doaba division of the Peshawur district are said to have come from the valley of the Kābul river, and to have ousted the Dilazak. Some of them settled at first in Bajawar, but were soon driven out by the Tarkolani.

The Parancha is a mercantile tribe of about 500 families, who are said to have come from Baghdad and settled in various parts of the frontier districts of Kohat and Peshawur. They claim descent from Nusherwan. They trade from Bombay and Calcutta with tea, indigo, chocolate, and cloth, about September, to Bokhara, and from Bokhara they start afresh for Yarkand, Tashkand, and Orenburg, and go also to the fair at Nijni Novgorod, which they call Makraia, and bring back wrought silk, Tilla and Ratiska coins.

The *Kohat* district of the Panjab is on the right bank of the Indus, between lat. 33° and 33° 35′ N., and long. 70° 35′ and 71° 55′ E. It extends 120 miles from Darwazai on the right bank of the Indus in the Khatak country, five miles below Atak, to Biland Khel on the Kuram river, at the head of the Miranzai valley. The breadth of the Kohat district is from Darwazai to Rokwan in the Shakrdara estate, where it joins the Banu district; the distance is 72 miles, a labyrinth of barren rocks and ravines of the most impracticable nature intersecting it in every direction. Its area is 1,816,000 acres, of which 1,497,760 are absolutely barren. Its rivers are the Kohat Toi and Tiri Toi. It produces sulphur, alum, and has rock-salt mines. The population of 145,419 souls consists of Sikh, Hindus, Bangash, and Khatak Muhammadans. The Kohat defile in the Afridi hills between Kohat and Peshawur runs for miles from Fort Mackeson to Busti Khel. The Kohat district is divided by tribes into two unequal parts, viz. the northern and more fertile but smaller part, consisting generally of the system of the Kohat Toi; this is inhabited by the Bangash, while the southern, which is the larger and more desolate portion, belongs to the Khatak; it consists of the system of the Tiri Toi and the south spurs of the Khatak Hills. The British administrative divisions of Kohat are Kohat Khas (proper), Miranzai, and Tiri. Th total population is 145,419 souls; of this 180 are Sikhs, 6544 Hindus, 136,565 Muhammadans, comprising Yusufzai, Bangash, Khatak, Orakzai, Baluch, Waziri, Syud, Moghul, Mohmand, and ther Pathans, with Jat, Ranghar, Bhatti, Arora, Gakkar, Parancha, Brahmans, Khatri, Bania, and Sikh.

The Kohat pass in the Afridi hills leads from Kohat to Peshawur. It runs down the bed of a stream, with a level roadway. Its width varies, and the tribes interested in it are the Bangash, Jawaki Afridi, Adam Khel Afridi, Bazoti, Firoz Khel, Utman Khel, and Sipah Orakzai, Gali Khel, Akhorwal, and Hasn Khel. In 1850 a force under Sir Colin Campbell moved against the Afridi, and since then the pass has been occasionally blockaded.

The Miranzai division of the Kohat district is forty miles long and three miles broad, consisting of numerous small well-cultivated valleys, with 26 villages. The people are wealthy in cattle, goats, and sheep. They were settled in 1855 by Brigadier-General Chamberlain, and again in 1856 and 1859. The Miranzai district comprises the valleys of the rivers Hangu and Shkali. The tribe have 26 villages, and a population of about 24,000.

The Land tribe occupy Land Kamar in the Kohat district. They have three khel or families, —Gari, Khwazi, and Tarki. Their country is famed for its Ber fruit (Zizyphus jujuba).

The *Banuri* are a family of Syuds who have resided in the town of Kohat since the time of Aurangzeb, and the people of Swat have since paid 'ooshur' to them. They have been devoted

servants of the British, and Mir Mubarak Shah fell at the siege of Dehli.

The *Waziri*, who occupy the hill country to the west of the Trans-Indus frontier from Thal in Miranzai to the Gomal pass, claim descent from Vazir, son of Suliman. They are nearly all independent. Their total fighting strength is 43,980, viz. Utmanzai, 17,100; Ahmadzai, 9580; Mahsud, 14,500; Gurbaz, 1500; and Leila, 1500. The Ahmadzai seem to have emigrated to the Banu district about the close of the 18th century, and gradually dispossessed the Banuchi owners, coming into undisputed possession of some of the best tracts on the left bank of the Kuram. They have never allied themselves to the Banuchi. Nearly all the Ahmadzai have now settled down in the plains as good cultivators, and pay their revenue regularly. In British territory (20,743) the Ahmadzai hold 15,572 acres, paying Rs. 5864; the Vazir, 21,420 acres, paying Rs. 7670; and the Utmanzai, 5848 acres, with a rental of Rs. 1806.

Khatak, a tribe of Pathans, 118,050 souls, who inhabit the S.E. portion of the Peshawur district, and S. and E. of the Kohat district, in a desolate region, stony and barren. Karlanrai, of the Sarban branch of the Afghans, had four grandsons, —Lukman, Utman, Zadran, and Usman, from whom tribes are sprung. Lukman's descendants are named Khatak, from a Pushtu expression, Pah Khatar, meaning 'he has come to grief,' in allusion to his having had Sabaka, a very ugly woman, saddled on him as a wife. Their descendants formed the Bolak, Taraki, and Tari clans of the Khatak tribe. Their country may be said to extend 120 miles along the right bank of the Indus, from Hund to Kalabagh, with a breadth varying from 7 to 65 miles. The Darshi, Kundi, Seni, Uria Khel, and Jaluzai tribes have at various times attached themselves to the Khatak. The Akora Khatak inhabit the extreme S.E. portion of the Peshawur district, and there is a Khatak colony in Lunkhor. Of 72,723 returned in the census of 1868, 56,260 were in the Kohat district, 11,400 in the Banu district, and 4735 in Peshawur. Mr. Elphinstone estimated the Akora divisions at 10,000 families, and the Tiri at 14,000; Lumsden estimated the Akora branch at 38,000 souls; Dr. Bellew gave 14,000 souls as the number of the Khatak in Yusufzai, and thinks they could turn out 3000 matchlockmen. Mr. Elphinstone described the Khatak as tall, good-looking, and fairer than any of the tribes of Peshawur. Colonel Lumsden, writing shortly after annexation, described the hill tribes as a wild, turbulent, impoverished set; but Coke noticed the Baraki and Bangi Khel Khatak as a fine hardy race, notoriously plucky, and better suited for infantry soldiers than any Pathans he knew of. During the 13th century the Khatak are supposed to have left Shal, in the Suliman range, where they resided with their kinsmen the Waziri, and settled in Banu with the Shitak, the ancestors of the present Banuchi, and they were allotted the Sadr Awal canal from the Kuram river near Adhami, which is now in possession of the Bizan Khel section of the Ahmadzai Waziri located on the Banu Thal. Towards the end of the 15th century they quarrelled with the Shitak, and left Banu and settled in the hills and plains as far as the Nilab Ghasha on the right bank of the Indus. Malik Akhor in the time of Akbar took up his residence in the Gaozdara, a pass near Shaikh Aladad leading to the Jawaki country, and the country northwards towards Atak, and the district thus occupied is known as Akhora Khatak. Malik Akhor aided Akbar, and had grants of land conferred on him, which enabled him to become chief of the Khatak, whom he governed for 41 years, until murdered by the Balak clan. His eldest son, Yakia Khan, ruled 61 years, and was murdered. Yakia Khan's son, Shabbaz Khan, reigned 31 years, and was killed by an arrow wound in the head at Kamalzai in Yusufzai. The son of Shahbaz was the celebrated Khushal Khan, who served the emperor Shah Jahan, but was long imprisoned by Aurangzeb. When released, he abdicated in favour of his son, Ashraf Khan, after ruling 50 years. Subsequently the family continued engagements with Ahmad Shah Abdali, with the Kābul rulers, and with the Sikhs. On the British annexation of the Panjab, Khojah Muhammad Khan was confirmed in the chieftainship of Tiri, the chiefs of the Akhora Khatak obtained grants of land as jaghir and cash allowances. The Khatak as a rule have been very good subjects to the British, and in particular Khojah Muhammad, K.C.S.I., Nawab of Tiri, was uniformly loyal and well intentioned, and an unsullied example of fidelity, gallantry, and merit. The Khatak in Yusufzai are the Shabat Khel, the Mamuti, and the Mishak of Kasima and Lunkhor; the Hote of Tazagram and Lunkhor; the Yakub Khel in Lighani and Miasar; the Huseni in Charchar and Lunkhor; and the Makor in Alu and Lunkhor.

On occasions of betrothals, marriages, circumcision, they have great rejoicings, and perform the martial Khatak dance. A number of men with drawn swords revolve to the music of the pipe (Surnai) and drum. Their movements at first are slow and in measured time, their swords being alternately held aloft above their heads, or sweeping down towards the ground, as if to cut an enemy. These movements become quicker, the music more spirited, the dancers shout their war-cry, and swords flash through the dust and smoke as they revolve wildly round the fire, keeping it up until quite exhausted. It is worth seeing. The Khatak were mixed up with the fortunes of Akbar, Shah Jahan, Aurangzeb, Ahmad Shah, and since the 15th century the strife amongst themselves has been incessant. They are a warlike but turbulent race, but, as mentioned, have been uniformly loyal to the British. A branch of Khatak are in Yusufzai.

The Barak is a large and important branch of the Khatak, living S. of the Tiri Toi, and W. of the Sagri and Bangi Khel. They are of the Tari section, and under the British rule are all managed by the Nawab of Tiri. They possess the lands of Daresh Khel, Bahadur Khel, and Latammar, the valley of Nari, all Chaontrah, the Loeghar mountains, and the country of Gudi Khel, between the Spinghar and Shinghar ranges and the tract of Land Kamar. They are a well-behaved, fine hardy race; are the swiftest footmen and best mountaineers in the country, famed for their courage. They number 5000 fighting

Bangi Khel are of the Bolak branch of the

Khatak, who inhabit the hills to the north of Kalabagh, on the Indus, in the Banu district, lying between the Tiri Khatak and the Sagri Khatak. They are wild in their habits, their hills are barren and often without water; they were in old days noted robbers, but are now peaceable and well-behaved; they are fine active, athletic mountaineers, and of a frank bearing, grazing cattle and cutting wood for the markets of Kalabagh. A few are in the Panjab Frontier Force. Their sections are the Abi Khel, Tarka Khel, Tapi Khel, and Maraj Khel. Their inhospitable country has caused them much inconvenience, and led to disputes between them and the Sagri Khel of the Khatak.

Ano Khel, a section of the Tari division of the Khatak, to which the Khatak chiefs belong.

The Nasrati is a small, high-spirited tribe of Khatak, who dwell in the valley below the Shinghar range, and also pasture and cultivate the Thal.

The Babar section of the Khatak reside chiefly in Kani, on the left bank of the Indus. They have large flocks of sheep and goats, and they eat the flesh and drink the milk of camels.

The Bangash is a Pathan tribe who inhabit the Miranzai valley, the Kohat defile in British territory, and also the valley of the Kuram river in Afghanistan. They are said to be descended from a person named Ismail, who was surnamed Bankash or Bangash. Their subdivisions are the Garu, with the sections Amir, Jamshidi, and Miranzai; and the Samalzai, with the sections Tuzi, Namani, and Alizai. They are said to have come from Gardez in the Ghilzae country, from which they were driven by the Ghilzae about the 14th century. They then settled in Kuram, where they remained for another hundred years. Another account is that they came from Seistan, and are of the same race as the Jat. The emperor Baber (A.D. 1504) found them located in Kuram, which was formerly divided into Bangash-i-Bala and Bangash Pain, Upper and Lower Bangash. Since the middle of the 18th century the Turi have been gradually dispossessing the Bangash from Bangash-i-Bala, and now every Bangash attaches himself to a Turi as his Naik or protector. Their numbers in Kuram are 5600. The three main divisions of the clan are the Miranzai, with three clans; Baizai and Samalzai, with five sections. The Miranzai took up the lands of Nariab, Upper Miranzai; the Baizai inhabit the Kohat valley proper, and the Samalzai are in the wild jungle district of the same name. They are not deemed courageous by British officers. They are hospitable. They have behaved well to the British. In 1853 they claimed the right of occupying the Kotal of the Kohat pass, and their share of the pass emoluments was settled at Rs. 3200. Other accounts describe the Samalzai clan as noted for their bravery, and that they could turn out 700 fighting men.

Bangash are of the Shiah sect. The 1868 census showed 31,774 Bangash in British territory. Sultan Muhammad, Barakzai, up to 1848 held Kohat as a fief from the Kābul government. It was then taken possession of by the British on account of hostility evinced during the second Sikh war. The Khan of Hungu, in the Bangash country, was in the British service as revenue collector, when he was murdered by one of his own relatives. The khanship descended to his son. The Bangash tribe have suffered much from the raids of their hill neighbours, Waziri, Orakzai, Turi, and Kābul Khel. The Miranzai valley belonged to the fief of Sultan Muhammad, but, being an outlying locality, was overlooked when Kohat was taken possession of. The Kābul government then lost no time in arranging for the occupation of Miranzai, which appeared to have been vacated; so Sirdar Azim Khan, the governor of the Kuram province, in 1851 summoned the Miranzai to surrender, but they petitioned the British to include them in Kohat. Under the circumstances this request was acceded to. They were in their hearts hostile to the British Government, as indeed they were to any government whatever. They offered to guard the Kotal, and asserted that they had a hereditary claim, stronger than that of the Afridi, to occupy the ridge. The Kotal was then made over to them, and as the Afridi refused to open the pass, it was resolved to establish a blockade, and the Afridi were debarred from entering the Kotal and Peshawur valleys. While these arrangements in 1853 were progressing, the Guli Afridi suddenly attacked the Bangash people on the Kotal, and seized that post. Several Bangash chiefs were killed in the encounter, and Major Coke, who was present, was slightly wounded. Upon this check, the Bangash people obtained the alliance of the small though warlike tribes, Bazoti and Sipah. These were independent, and dwelt in the hills near the pass. The southern section of the Jawaki Afridi also joined the league.

The *Marwati* or Maraoti tribe of Pathans give their name to the Marwat division of the Banu district; they are a branch of the Lohani tribe, being descended from Loh and his first wife Shiri. They have five khel or clans,—Bahram, Dreplara Musa, Tapi, Nuna, and Jhandu. They were formerly pastoral, and traders in the Katawaz district of the Ghilzae country, but left it from a quarrel and tried to settle in Tank, from which the Daulat Khel ousted them, and they came on to Marwat. They are tall, muscular, and fair, often rosy-cheeked, and evidently of pure Afghan blood, forming a striking contrast to their mongrel neighbours the Banuchi; they are a bold, manly, simple, and upright people, deeply attached to their sandy villages and reed huts. They are proud, but dignified, and frank and simple in their manner with strangers, and are distinguished from all the Pathan tribes by a more generous treatment of their women.

Their country is excessively arid; the water is so far below the surface, they cannot afford to sink wells to it. Their women are the water-carriers. At the census of 1868 they numbered 42,729 souls, and their sections in former days could turn out 5500 fighting men,—Bahram, 2000; Dreplara, 2000; Musa Khel, 1500.

Banu, in lat. 32° 15′ to 33° N., and long. 70° 20′ to 71° 20′ E., a district in the Panjab, 60 miles long and 55 miles broad, with an area of 2036 square miles. Its Trans-Indus portion is bounded N. by the Khatak hills, W. and N.W. by the hills of the Waziri, S. by the Batani and Masrot ranges, and E. by the Indus. It is surrounded by barren hills, but is a highly fertile valley;

in spring a vegetable emerald, and in autumn clothed with crops growing from lacustrine calcareous clay often 40 and 50 feet deep. The climate is feverish. The population is about 200,000, mostly agricultural — Baluch about 70,000; other Muhammadans, 100,000; and Hindus, 200,000. The chief towns are Edwardsabad, Laki, Isa Khel, and Kalabagh; their houses built of mud, with a Chouk or place of assembly, and a guest-room. The people are dirty. They are strict Muhammadans.

Isa Khel is a division of the Banu district, enclosed between the Indus and the Khatak hills. Most of the inhabitants are Niazi; but the Awan, and Jat, and Hindus are intermixed. Many of the Niazi are migratory.

The sanatorium of Shekh-Budin, in lat. 32° 17′ 49″ N., and long. 70° 50′ 49″ E., and 4516 feet above the sea, is on the Mohar range in the Banu district, 64 miles south of Banu.

The Banuchi or Banuwal is a mixed tribe occupying the Banu subdivision of the Banu district. The people have come from all the surrounding lands, and their stature and appearance are of the most varied kind; most of them are spare, without much muscular development, attributable to the malarious climate. They are morally a low, vicious race, very litigious and untruthful. The Waziri, the Marwati, and Isa Khel are as different from them in character as in race.

The Umar Khan Khel, one of the clans of the Bairam Maorat, occupy the Agzar Khel village in the Banu district.

The Niazi is a tribe of Afghans settled in the Banu district, descendants of Niaz Khan, son of Lodi, king of Ghor, by his second wife Takia. Lodi was the Lohani chief who invaded Hindustan, A.D. 15 (A.H. 955), and conquered the Daman; and the Isa Khel districts were allotted to Niaz, whose descendants still occupy it. The Niazi, like most of the Lohani, are divided into an agricultural and a Povinda portion. The agriculturists are all in British territory; their sections or khel are the Isa, Kamar, Kundi, and Sarhang. The Povinda have five branches, and trade between Khorasan and the Dehrajat. Their sections or khel are the Mamrez, Nur Khan, Mahsud, Ali, and Mala. The Niazi are good loyal subjects. They have no money expenditure at their marriages. The Michan Khel section of the Niazi hold villages in the Banu district. They are Shaikhs, and very wealthy.

Tôr and *Spin* are two factions on the Banu frontier. They originated from the quarrels of two Banuchi, Sarke and Ibrahim, in which all the tribes got involved. Those who sided with Sarke were called Sarke Gundidar, subsequently Kohna Gundi, and afterwards Tor Gundi; they comprise 32 sections. The Spin faction embraces 27 sections; they were first called Jan-behdar, afterwards Noya Gundi, and lastly Spin Gundi.

The *Dehrajat* is a portion, about two-thirds, of a narrow strip of land which extends along the west bank of the Indus river, about 300 miles from the Kalabagh range to the N. boundary of Sind, and hemmed in between the Suliman range and the Indus. The three portions of the Dehrajat are the Dehra Ismail Khan, Dehra Ghazi Khan, and Dehra Fattah Khan. A thin fringe of cultivation and jungle extends along the bank of the great river, and terminates, as you advance into the interior, in a flat desert country, where a precarious supply of water from the hills affords a poor cultivation in the vicinity of the thinly-scattered villages. Lower down, the hill streams become smaller, and the aspect of desolation still greater, so that for miles not a human being is visible, nor can a drop of water be procured to quench the thirst produced by these scorching plains. The Pathan and Baluch tribes who inhabit the hills, have the same attachments to their chiefs, internal hereditary feuds, dislike to combination, and predatory habits, which distinguish so many mountain races, but have withal a martial bearing and love of independence. The scarcity of water limits cultivation, and their wealth consists in their herds, which find a scanty pasturage at the foot of the hills. Amongst the mountains occur a few fertile patches. The country being traversed by footpaths known only to themselves, the hill tribes were accustomed to issue from it in raids on their wealthier neighbours in the plains, harrying their cattle, and retreating in safety to their impracticable mountains. To stop this, in the beginning of 1857, after one of such inroads, the Panjab Government sent an expedition from amongst the troops of the Panjab irregular force, to reduce the Bozdar tribe; and names known to fame in the Indian mutinies—Chamberlain, Coke, Nicholson, Hodgson, Probyn, Watson, Wylde, and Green—were all trained in this school of warfare, involving severe marches, incessant fights, and exposure to all the seasons of the year.

Baluch tribes extend along the lower half of the Dehrajat frontier; they are less warlike, and are more or less migrant and predatory, particularly in the west. In habits they resemble the Iliyat and Kurd. They have dark skins; live in mud houses, in forts, and in their black felt tents called gedaun, stretched over a tamarisk framework. An assemblage of gedaun forms a toman or village, inhabited by a khel, and a tribe consists of a certain number of khel. The headquarters of Baluch tribes, and the majority of the clansmen, are in the independent hills beyond the British territory, the boundary line of which runs along the base of the hills; but a large number of each tribe also hold lands in the plain, and are British subjects, some of the chiefs also residing there. The Baluch of the plains, for the most part, after annexation, behaved as well-disposed subjects, but the Baluch of the hills continued their old habits of plundering. All the tribes were at feud with each other; they not only fought in the hills, but they carried their contests to the plains, where they attacked all villages except those belonging to their own tribe. The men of the plains usually resisted the attacks with spirit at the time, but they were not allowed to retaliate afterwards, as they used to do under the Sikh rule. To guard British villages and people from their constant aggression, a strong cordon of military posts was fixed along the base of the Suliman range. The marauding parties were 50, 100, 200, 300, occasionally even 500 strong. They were often mounted, and fled, if hotly pursued, for 15, 20, and even 30 miles. Many of the villages and much of the cultivation being close to the hills and in front of the posts, the plunderers carried off their booty to the hills before the detachment could come up.

Dehra Ismail Khan is a British district lying between lat. 31° and 32° 15′ N., and long. 70° 20′ and 71° E. On the south it joins Dehra Ghazi Khan, and the boundary marks the separation of the Pathan and Baluch frontier tribes. The eastern boundary is the river Indus. The general aspect of the country is that of a dry alluvial plain, destitute of all vegetation, and intersected by the ravines of the hill feeders of the Indus. The irrigation canals are small. The area is 3777 square miles. The cultivators are Pathans or Jats. The Multani Pathans have been loyal to the British; the others are the Gandapur, Mian Khel, Daulat Khel, and Babar. Pushtu and Panjabi are spoken. Its population comprises Christians, Syud, Moghul, Saddozai, Alizai, Popalzai, Waziri, Pathan, Laghari, Baluch, Bozdar, Kosah, Kasrani.

Dehra Fattah Khan, a small town in lat. 31° 7′ 9″ N., and long. 70° 46′ 39″ E., is 532 feet above the sea. It is on the right bank of the Indus, and 53 miles south of the capital of the district. The rainfall is very precarious.

Daman-i-Koh is a tract of country stretching along the foot of the mountains west of the Dehrajat, inhabited by Afghans, Jat, and Baluch.

The Mandu Khel is a small peaceable agricultural tribe to the west of the Dehra Ismail district, numbering 3000 souls. The Multani Pathan tribe are in Multan, Dehra Ismail Khan, and Dehra Ghazi Khan. They are descended from the Abdali, who came in the times of Alamgir and Aurangzeb. They have been friendly with the British.

Gandapur, a tribe who inhabit the Daman of the Dehrajat in the vicinity of Kolachi, Takwara, and Luni. They are peaceable British subjects, in the Dehra Ismail Khan district. They numbered 5945 in 1868. The Kolachi division and town of the Dehra Ismail Khan district are occupied by the Gandapur, the Mian Khel, Babar, and Baluch, along with Syud, Koresh, and Hindus. The Gandapur clan were formerly in Afghanistan, but abandoned it and settled near Kolachi. They are hospitable.

The Kundi is a quiet agricultural tribe of Pathans, in the N.W. corner of the Dehra Ismail Khan district. They claim descent from Lodi, the founder of the Lohani tribe, whom they accompanied into the plains. They have about 1000 fighting men.

The Mian Khel tribe, in the Dehra Ismail district, are a section of the Lohani. Their two sections are named Isot Khel and Sein Khel.

Isot or Sot are nomade Pathans on the hills to the west of the Dehra Ismail Khan frontier. They are said to be of Kakar origin. They have no towns or villages, and have about 300 fighting men. They remain about the slopes of the Tiri hill in summer, and in winter migrate to Kaliwahin, on the western slopes of the Nara. They have four sections.

Khar Sin or Ghar-shin tribe are harmless and inoffensive Syuds, who reside among the Ushtarani on the frontier of the Dehra Ismail district, also among the Kakar of Peshin, and among the Murree. They are pastoral and agricultural. They are a branch of the Khar Sin of Uch and Ahmadpur, in the Bahawulpur territories, with whom they came from Bokhara in the 18th century.

The Hari Pal tribe on the Dehra Ismail frontier, on the borders of Spasta. They are fakir, and about 800 in number.

The Kapip are a poor agricultural tribe to the west of Draband on the Dehra Ismail frontier. They are peaceable, and sow sorghum and maize, and have fruit-trees.

Zmara, a small tribe of the Dehra Ismail frontier. They have the Ushtarani on the east, the Isot on the south, the Shirani on the north, and the Musa Khel on the west.

The Miani tribe are in the Gomal valley, in the Dehra Ismail Khan district.

Belot, in lat. 32° 15′ 20″ N., and long. 71° 11′ 51″ E., has the shrine of Shah Abdul Wahab. It is in the Dehra Ismail Khan district, on the right bank of the Indus. Two Hindu shrines are near.

The Butani is an Afghan tribe dwelling in the Dehra Ismail Khan district in the hills near the Peyzu pass. They were predatory until they became British subjects.

The *Dehra Ghazi Khan* district of the Panjab is situated between lat. 69° 20′ and 71° N., and long. 28° 20′ to 31° 10′ E. Its area is 6530 square miles, or, according to Captain Barron, 5256. It has four divisions, viz. those of Saugor, Dehra Ghazi, Jampur, and Mithankot. It has Sind lands, or those along the banks of the river, and Pachad lands, or those within the influence of the hill streams. The mountain peaks rise to 7640 feet. It has many mountain streams, and 13 canals. Its population in 1868 was 308,840 souls.

The Bakhtiari tribe who inhabit a portion of the Dehrajat round Draband, are said to be a branch of the Bakhtiari of Persia. They have about 1300 houses.

Dehra Din Panah is in the Saugor division of the Ghazni district, 44 miles north of Ghazni. It is two miles from the right bank of the Indus. Abdul Wahab, canonized as Shah Din Panah, is buried there, and his shrine is visited. He was a native of Uch in Bahawulpur. He died in the 16th century.

The Pastrani, according to Major G. Jacob, a well-educated, peaceable tribe, who inhabit the hills at the extreme north of the Dehra Ghazi Khan district.

The Nutkani is a Baluch tribe in the Dehra Ghazi Khan district, inhabiting the country S. and E. of Mangrota. They have been estimated to have from 800 to 3000 adult fighting men. Their country is fertile. They claim to have come from Aleppo.

The Mazari, a Baluch tribe, is in the extreme S. of the Dehra Ghazi Khan district. Their four sections are the Baluchani, Rustamani, Masidani,

and Sargani; some of them are in Sind, and they number 5422 souls. They have even been notoriously predatory, and up to 1870 gave trouble to the British.

Lund of Tibi is a Baluch tribe in the Jampur division of the Dehra Ghazi Khan district. They have Gorchani plain on the N.E. and S., and Durkani on the W. Their three sections are the Lund, Rind, and Kosa. They are a compact tribe, with about 952 fighting men.

Lund of Sori is a Baluch tribe who inhabit the extreme northern portion of the Dehra Ghazi Khan district. Their six divisions are Hyderani, Bakrani, Zarani, Gar Surani, Kilani, and Gurchani. Their number in 1868 was 7523, and their fighting men about 2000. They received from the British Rs. 300 monthly to protect the passes.

Laghari, a tribe on the frontier of the Dehra Ghazi Khan district, from the Dalana on the N. to the Kura pass on the S. Their four sections are Aliani, Hadiani, Boglani, and Haibatani, in all 11,311 in 1868, with about 3770 adult males. They claim relationship with the Talpurs of Sind.

Kosah, a Baluch tribe scattered through the Dehra Ghazi Khan border, with seven divisions, viz. Balelani, Jangel, Jandani, Jarwar, Isani, Tomiwala, and Merwani. The population is about 13,348, with about 1500 fighting men. The tribe is brave, but the chief's house much divided against itself.

Khetran is a Baluch or a Pathan tribe, and are about 13,746 in number, who inhabit the hills to the west of Dehra Ghazi Khan, and have a branch within the district. They have the Musa Khel and Luni Pathan on the north, the Bozdai on the north-east, the Laghari and Gurchani on the east, with the Murree on the south-west and west. Their country drains into the Kaha river, and is of large extent. They have four sections,—the Ganjura, Dariwal, Hasani, and Nahr,—with many subdivisions. They have about 4582 fighting men. They live inside forts, and are not warlike, but are expert riders and swordsmen. Their country is a succession of picturesque fertile valleys with barren mountains.

The Kasrani Baluch tribe are in the extreme north of the Dehra Ghazi Khan district, also in the southern portion of the Dehra Ismail district, and the hills to the immediate west of these tracts. Its divisions are the Lashkarani, Khubdin, Bhada, Wasusani, Laghari, Jarwar, and Rustamani, with numerous subdivisions, with about 1549 fighting men. A force under Brigadier Hodgson was sent inst them in 1853.

The Adamani section of the Kasrani is settled Jok Budhu in the Dehra Ghazi Khan district. ey are now peaceable.

Gurchani, a Baluch tribe who inhabit the mpur division of the Dehra Ghazi district near arand. They have twelve sections, with about 38 souls, and 1312 fighting men. They gave ich trouble since annexation.

Dreshuk, a Baluch tribe of Dehra Ghazi Khan. divisions are Kirmani, Mingwani, Gondfaz, ni, Arabani, Jaskani.

ahar, a tribe who live partly round Harand in e Ghazni district, and partly round Nahar ka Kot the Khetran hills. They say they came from ghanistan.

Of the other Baluch tribes in the Dehra Ghazi an district, a mere mention will suffice. They are the Amdani, Chandia, Giskoria, Ghoramani, Gopang, Hut or Hoth, Laskani, Malkani, and Mastui. Beyond the Dehra Ghazi Khan border are the Pathan tribes Khastai and Luni. The Khastai are little numerous, are peaceful and quiet; they are agricultural and pastoral.

The Luni speak a mixture of Pushtu and Baluch, and have 1200 men. The Chum, a long range of hills, produces a valuable coal, also sulphur. Their neighbours on the north are the Kakar and the Musa Khel, on the south are Murree and Tariu, with Khetran on the east.—*Aitcheson's Treaties; Asiatic Researches; Bellew; Burnes' Cabool; Burton's Scinde; Calc. SIND is a province of British India, between lat. 23° to 28° 32′ N., and long. 66° 43′ to 71° 15′ E. It is on both sides of the lower course of the Indus and the delta of that river, and is bounded on the north and east by the Panjab and Rajputana, on the south by the Arabian Sea and Runn of Cutch, and on the west by Baluchistan. Its maximum length is 350 miles, and greatest breadth 280 miles. Its area is 48,014 square miles, and population in 1881, 2,413,823. It is under the Bombay Government, and is arranged for administration into the five collectorates of Kurachee, Hyderabad, Shikarpur, Thar and Parkar, and the Upper Sind Frontier. But a good deal of the province is hill and desert, the fertile plains being in the valley of the Indus. The density of the population varies greatly, being 2·19 per square mile in the Kohistan of the Kurachee collectorate, 15·9 in Thar and Parkar, 85·2 in Shikarpur and in that of the Hyderabad taluk of the Hyderabad collectorate,—the average being 50·3 to the square mile.

It has been repeatedly overrun by conquering armies,—by Alexander of Greece, B.C. 327, by the Bactrian Greeks, by Indo-Scythic tribes, by Hindu or Rajput dynasties, by the Arabs of the khalifat, and by Mahmud of Ghazni. After his time it was subject to perpetual incursions from the Ghori, Khilji, and Taghalaq dynasties of Dehli and the Panjab, and the Moghul rulers of India, descendants of Baber; Persian, Afghan, Baluch, and the British, have each in succession had dominion over it, and it is now a British province.

Three thousand years of continuous changes of races and of dynasties have peopled Sind with multitudinous tribes and clans, many of them till lately predatory, numbers of them handing down blood feuds for generations, the bolder and stronger striving with the sword to win more fertile lands, and all of them being pressed forwards by ever

succeeding conquerors, till stopped by the great river Indus or the sea.

The first task of the British was to establish order, and this was successfully attained by disarming the population, which in 1881 was as follows:—

	Hindus.	Muhammadans	Christians.	Jains.	Parsees.	Jews.	Sikhs.	Aborigines.	Total.
Kurachee, . . .	68,975	390,067	4674	9	960	106	10,819	3,050	478.688
Hyderabad, . .	89,114	594,485	428	144	21	31	42,940	27,460	754,624
Shikarpur, . . .	93,341	684,275	736	...	64	9	68,655	5,892	852,986
Thar and Parkar,	43,755	109,194	14	1038	...	4	898	48,440	203,344
Upper Sind, . .	9,894	109,183	230	...	9	3	3,664	1,198	124,181
Total Sind, . .	305,079	1,887,204	6082	1191	1063	153	126,976	86,040	2,413,823

One of the races still present, the Med or Medi or Mand, is noticed, B.C. 40–30, by Virgil, who calls the Jhelum Medus Hydaspes. They were not one of the five tribes of Yuchi or Tochari mentioned by Chinese writers, but seem to have belonged to the great horde of Su or Abar, who entered India B.C. 126, and gave their name of Indo-Scythia to the province. They seem to have been forced to migrate from the Upper Panjab to Sind. The earliest of the Muhammadan writers notice that they were firmly established in Sind by A.D. 250, along with their ancient rivals the Jat. Ibn Haukal describes them in his time (about A.D. 977) as occupying the banks of the Indus from Multan to the sea; and there can be no doubt that they are now represented by the Mer of the Aravalli range to the east of the Indus, of Kattyawar to the south, and of Baluchistan to the west. Edrisi describes the Mand as a numerous and brave tribe who occupied the desert on the borders of Sind and India, and extended their wanderings as far as Alor on the north, Makran on the west, and Mamchel (or Umarkot) on the east. Ibn Haukal records that 'the Mands dwell on the banks of the Mihran, from the boundary of Multan to the sea, and in the desert between Makran and Famhal (or Umarkot). They have many cattle-sheds and pasturages, and form a large population.' Rashid-ud-Din locates them in Sind at a still earlier period. According to his account, Med and Zat, two descendants of Ham, the son of Noah, were the progenitors of the people of Sind, prior to the Mahabharata. The name is variously written as Mer, Med, Mand, in all of which forms it is found even at the present day. To these General Cunningham would add Mind, which is the form of the name given by Masudi. He identifies this people with the Medi and Mandrueni of the classical writers; and as their name is found in Northern India from the beginning of the Christian era downwards, and not before that time, he concludes that the Mandrueni must be the Saki Indo-Scythians who occupied the Panjab and Sind, and who, under the names of Mand and Zat of the early Muhammadan authors, were in full possession of the valley of the Indus. Lastly, Wilford's surveyor, Mogal Beg, writes Mandyala, which is also a form that he received from two different persons; while in General Court's map it is spelt Mamriala. To this people General Cunningham refers the name of Minnagar, or 'city of the Min,' which was the capital of Lower Sind in the second century of the Christian era. That Min was a Scythian name in use is known from its occurrence in the list of Isidor of Kharax as one of the cities of Sakastene or Sejisthan. The actual position of Minnagar is unknown, and there are but few data to guide us in attempting to fix its site. If he be right in identifying Minnagar, or the 'city of the Min,' with Manabari, or the 'place of the Mand,' he thinks there can be little doubt that the great Indo-Scythian capital was at Thatha.

The following list of the tribes and races in Sind was prepared by General Merewether, and it is believed to be very accurate:—

KURACHEE COLLECTORATE, 478,688.

Syuds.—Shirazi, Shakrur, Alavi, Mashedi, Maiindrani, Ariti, Rezuri, Bokhari, Amirkhani, Lukalivi, Mutalivi, Istrabadi, Khabroti. Their forefathers came to Sind from different places on the Asiatic continent.

Kureshi, viz. *Alvi*, descended from Ali, from Iran.
Abasi, derived from Abas, from Irak.
Sidiki, ,, ,, Ababakr Sidik.
Faruki, ,, ,, Umar.
Usmani, ,, ,, Usman.

Baluch.—Rind, Juttoi, Chandia, Nuhani, Khosa, Chang, Lushari, Kupri, Julbani, Gungani, Nizamani, Almani, Gopang, Mungwani, Dluwani, Sunjrani, Jamali, Jurwar, Kolachi, Pitabi, Mugsi, Murree, Khowad, Daruck, Laghari, Muhesur, Talpur, Bugdi.

The Rind tribe is the head of all the Baluch from Baluchistan, and from them the several tribes are said to have descended. The Talpur, however, became rulers in Sind, while the Rind remained dependents. The Baluch generally are said to have come originally from Aleppo in Syria. They have all the characteristics of Arabs,—sharp, well-defined features, and well-knit limbs. All their divisions merely denote families or descendants of men of renown, whose names the families bear.

Karamati.—Pubrani Muhammadans, Bighad, Gubole, Bayi, Kachri, Kumba, Mugra, Ahmadani, Ruzida, Supad, Murwa, Ladia, Muheri, Sahtia, Allura, Jingiani, Morsur, Biramani, Khirturi, Thuani, Rajwani, Sotiani, Parwari, Chirani, Gocha, Rahwani, Gorewani, Sherikhani, Mindiar, Goramani, Kulri, Mochir, Sholani, Bunbani, Dewani, Jamali, Said, Durayai, Toremani.

These have descended from Baluch tribes, but are subdivided into several sections named.

Assundi, descendants of a tribe from Multan.
Moghul, ,, ,, Persia.
Turuk or Turks, ,, ,, Khorasan.
Afghan, ,, ,, ,,

Sumra claim to be descendants of Samra; their sections are Kumirpota, Mitopota, Budipota, and Norungpota. 'Samra' has been corrupted into 'Sumra,' and under this the several tribes are found in the Kurachee collectorate. They came to Sind about Hijira 445, and became the rulers of the province in 609, from which year they were in power up to 751, when they were overthrown by the Summa.

Summa.—Buda, Shora, Suhta, Agil, Ottur, Amra, Hajana, Rathor, Puria, Janspuwar, Nalica, Charshu, Sind-Summa, Chugra, Butti, Kornja, Notiar, Udhar, Udha, Lukba, Muhur, Sutia, Potor, Lund, Unur, Babria, Dungua, Guba, Phul, Lukkha, Munapya, Munabiya, Kaka, Tukhra, Pulli, Randbhir, Musra, Summa, Sumaja, Notia, Abra, Wahud, Nahia, Phulnabia, Koria, Dissur, Mindra, Ludia, Odbaja, Kidri-Pota, Lund-Summa, Kakaja, Nara, Jaraja, Hingora, Jugsia, Virriah, Hingoja, Derra-Sumani, Halla, Udbahingora, Jasingora, Ramabey, Sahad-Summa, Tellaruja, Nuria, Hapra, Rahuja-Juna, Granoe, Rahawa, Lukhatia, Sumra, Jamlakha, Sudaria-Summa, Juna-Summa, Budio, Saheb-Summa, Oto-Summa, Shekbab-Summa, Biya, Bodia-Chellaria, Mungra, Abraja, Cur-Hingora, Sultanote-Numria, Jokia, Jutt, and other sections.

Summa now claim to be descendants of Ham, son of

Noah. They were the early inhabitants of Sind, and were in power as rulers, from Hijira 752 to 927, when they were overthrown by the Arghuni.

Arghuni came to Sind during the reign of the Summa, whom they overthrew. They succeeded the Summa as rulers of Sind about the year 927 Hijira, and continued so until their defeat by the Turkhani in Hijira 962.

The *Turkhani* came to Sind about the same time. They succeeded the Arghuni as rulers of Sind about the year 962 Hijira, and were in power until Hijira 1021.

Foreign Tribes.—Tukzi, Tumini (Thainr), Alt-Mogelra (now known as Moria), Powanhar, Jubisia, Alutba, Binwalla, Sufean, Koral, Bayar, Supia.

Descendants of Harun.—Mukrani, Ludi (now known as Ludia), Hubsha, Sidi, Jungiani.

Sindi Musalmans, viz. Nakhuda, Machi, Solangi, Mochi, Memon-Khowaja, Memon-Sayata, Guda, Chuwan, Awan.

Brahmans.—Kokanist and Deshast from the Dekhan, Gujerati and Nuggur from Gujerat, Gowar, Sarsat (Sindi), Pokarna from Jeysulmir.

Khatri or Khastria, containing the tribes Wania, Kanuga, Amil, Merani, Gadi, and Mahajan.

Miscellaneous Hindus, viz. Doghra, Rahtor, Meghwar.

Hyderabad Collectorate, 754,624.

Baluch.—Talpur, Rind, Lasharri, Laghari, Jamali, Murree, Chandia, Hajana, Nizamani, Khosa, Gubole, Gadi, Mugsi, Kunbhiri, Kuppri, Nuhani, Buglani, Chulgri, Hote, Nadani, Chang-Juttoi, Porkhurri, Lund, Julbani, Kurmi, Dewani, Mubrani, Rusmani, Mushori, Kulloi, Zore, Kolachi, Buldi, Mungalja, Ruse, Bhurgri, Jiskani, Mari, Surgani, Lakhani, Hisbani, Gubchain, Khatrian, Sanjarani, Rustomani, Bozdar, Janwari-Shaer, Amandani, Karmatti, Zindpuri, Shahoni, Korai, Dulwani, Sukrani, Nath-Koni, Gurchani, Daidano, Dreshuk. The same remarks apply here as to the Baluch in Kurachee.

Peers.—Nakshbandi, Jublani.

Samra.—Cultivators and oil manufacturers.

Syuds.—Ruzvi, Bokhari, Barawala, Mutalavi, Catchi, Sunaimi, Lukiyari, Nagori, Qurani, Shirazi, Khabrati.

These are the landowners and extensive cultivators. Originally came from Arabia and Persia 700 years ago. The several divisions derive their names from some distinguished ancestor, or from the place where they originally lived, or where they settled down when they came to Sind. Razvi from Imam Musa Raza, Shirazi from Shiraz, Lukiyari from Lukki.

Kureshi.—Abasi, Usdi, Kalhora, Qazi, Insari, Dukhiya, Sidiki, Farnqi, Alavi, Humzori. The Qazi are cultivators and scribes. Originally came from Syria.

Sumatra or Summa. Summa, Unar, Abra, Gandhai, Sahta, Dhera, Mitira, Bhawwar, Sethore, Bhata, Daliar, Bhawwari, Setharua, Nangor, Mangria, Gangra, Kiria, Haliah, Hariah, Gundall, Nulipotra, Udyan, Maihiar, Pima, Tunia, Depar, Lakha, Parihar, Chana, Agara, Chachok, Patu, Sadar, Phail, Dahari, Bihan, Wagan, Buriara, Detha, Manlahan, Mahisar, Baghia, Kakepotra, Dahraja, Bhan, Malak, Laujara, Pali, Waria, Theba, Hathipotra, Sukhra, Gaba, Hingora, Rahu, Kaka, Juneja, Kaurija, Vistara, Wasan, Aradinja, Chanika, Juna, Kanreja, Sirachaja, Maira, Bhanoja, Mamar, Dokeja, Manahin, Buga, Bhurt, Halliputa, Powahar, Suheja, Shora, Sumra, Numriah, Jokhia, Kalur, Pullija, Jugsia, Thora, Sama, Chunchur. The above are cultivators—Aborigines.

Shaikh or Memon.—Hudokut, Qazi, Khebrana, Surha, Akhund, Patoli, Katiyar, Puggir, Lusi, Bandru, Kussabi, Mirzapuri, and Khowaja.

These, originally Hindus, are cultivators, shopkeepers, workmen, etc. Distributed throughout the collectorate. The Khwaja descended from the Memons, but are Shiahs, and call themselves descendants of Khwaja Suliman Pharisee.

Gola.—Shidi, Habshi, Khaskeli, Sindi, and Zemghur. These were slaves in former days.

Khowaja were also converted Hindus.

Khaskeli are the descendants of slaves purchased by the Baluch and others from foreign countries.

Raza, Lohar, and Wadha or Dahkan, are different tribes, and are called from the trades they follow.

Dhobi, Pinjara, are of varied origin.

Kalri, Kori, Mochi, Sonara, and Thathara. Some foreigners and some Sindi.

Muhana, Baleshahi, and Machi. Machi and Shikari are the lowest of the Sindi tribes, and are generally cultivators and fishermen.

Miscellaneous Races, viz. Gurji, Mungri, Khokur, Hore-wala, Dubgur, Puri, Patan, Silawut, Sati, Pinjora, Chaki, Lakhati, Dhobi, Kumagur, Nukash, Solungi, Raza, Lohar, Matchi, Zurdoze, Dhingai, Bazai, Nagori, Khudhari, Buthora, Hajjam, Siyil, Bura, Girana, Ghuryalchi, Kunjur, Gabi, Marwai, Korai, Siyil Kudra, Sahita, Maganhar, Hulya, Rajpur, Chabuk, Dahirri, and Bubbur, Dyatra (Canzat). Syal, Baber, Julwar, Samtra Mushori, Naich, Subag, China, Buk, Dul, Panihar, Subaki, Jora, Lishari, Goracha, Pifera, Isran, Setar, Bhangir, Watia, Tagar, Ghanga, Dashk, Motimal, Zurdori, Naneal, Dridona, Majdona, Vidyola, Dangroj, Nougraj, Jokhia, Khokhar, Hatar.

Brahmans.—Gowar, Drawar, Barhi, Bawanjahi, Seikar, Silar, Kawunchundra, Sarsad, Pokarna, Kitri, Sydpar, Dukhni, Purbi, Maharashtra, Tilung, Carnatic, Kokunt, Gujur, Surisali, Pokumi, Purli, Gund, Sarsedh, Canouj, Kankubh, Mital, Brahmput, and Bluchak.

Khastra.—Mangoh, Munijan.

Waish.—Lohana, Bhatia, Bhabira, Amil, Panjabi, Mahesirri, Usuwar, Suhwani, Khalsa, Shahdadpuri.

Khitri.—Gurupota.

Sudar. Khutti, Sonara, Sutar, Bagoi, Sochi, Lohar, Mochi, Tumbuli, Kalal, Jakhiri, Jeysulmirani, Kurmi, and Ode.

Lohana and *Sarsut* Brahmans, descended from Sri Ramchund, Pokurna, Babra, Panjabi, Khudabadi, Sehta.

Udasi and *Sunnasi.*

Sonaras, descended from Deni.

Hindu Ascetics, viz. Sunnasi, Byragi, Jogi, Jangam, Udasi, Bhagat, Barra, Thukur, Bhut, Jajak, Brahmachari.

Shikarpur Collectorate, 852,986.

1. Syud; 2. Pathan; 3. Moghul; 4. Brahui; 5. Baluch; Rind, Juttui, Talpur, Chandia, Khosa, Laghari, Mugsi, Buldi, Lashari, Julbani, Lund, Jamali, Bunglani, Bugti, Mazari, Gadi-Dundki, Nizamani, Bang-Jakrani, Dumki.

Jhut, Surrai.

Sindi, Abra, Kallora, Pholpota, Gopang, Mussem, Porrur, Syal, Soda, Bugia, Budda, Sukta-Turrio, Machi, and Bhutto.

Hindus.—Brahman, Chuttri, Bunya, Amil, Thakkur.

Upper Sind Frontier, 124,181.

Baluch.—Tribes the same as given above, viz. Rind, Dumki, Jakrani. Murree, Bugti, Lashari, Gurchani, Mazari, Burdi, Cosah, Jamali, Mugzi, Chandia. These people have all the characteristics of Arabs, both in features and customs. They are restless and unwilling to labour, but will undergo the most wonderful fatigue for the purpose of stealing a camel or bullock. They have sharp, well-defined features, and very spare but well-knit bodies and limbs. All their traditions agree that they originally came from Syria, probably about 1200 years ago.

Khyheri are a priestly set who attached themselves to the Baluch on their way eastwards from Aleppo, joining them from Tabreez. In importance among themselves, the Baluch rank as follows:—

1. Rind; 2. Lashari; 3. Jutoi; 4. Dumki; 5. Jakrani; 6, Murree; 7, Bugti; etc.

Brahui.—These have a different origin from the Baluchi, and have remained for the most part in the mountains of Baluchistan, giving the khan to the country. The traditions of the Brahui are not so clear as the Baluch, but they came also from the west, entering Baluchistan from Kirman, by Makran.

Jhut.—This is a wandering race, but attaching themselves to Baluchi and other tribes. They were generally Hindus; are squarer and stouter in their build, and have broader features than the Baluch. They are all camel breeders and dealers.

Hindus.—Are principally of the Bunya caste.

Thur and Parkur, 203,344.

The Thur and Parkur district is inhabited by Hindus and Musalmans, more equally divided than in any

other part of Sind. Each of these include several tribes which are divided into classes. Their manners and customs resemble those of Cutchi. They are naturally inactive. The chief occupation is breeding and grazing cattle, for which they evince greater preference than for agricultural pursuits. The language in use is a combination of Sindi, Marwari, and Gujerati, and is called Dati. In some parts of the district they carry on business in Gujerati, but the generality use the Dati, with which they are more familiarized.

1. Syuds; 2. Baluchi, viz. Rind, Chandia, Gurgage, Kullohi, Bunglani, Dulwani, Sugrani, Dhownki, Laghari, Nattikani, Murree, Kuppri, Bhurgi, Khosa, Numriah, Butrani, Lashari, Bubber, Koriah, Nora, Kolachi, Zindpuri, Berohi.

Jhut.—Chacher, Kalru, Kokur, Syal, Pusiah, Thyme, Arie.

Summat.—Summa, Summaja, Dull, Roalma, Umur, Bumbra, Gailra, Pulli, Saita, Rajur, Nukry, Powur. Powhore, Hallapotra, Molla, Diary, Durs, Sukkerdeonpotra, Kotriah, Vikiah, Dadpotra, Keriah, Sungrasi, Thabba, Nori, Seahra, Joga, Jinji, Junaja, Hingorja, Hingora, Bahun, Kullur, Bakur, Durpar.

Hindus.—Brahman, Puskurna, Vias, Ackaraj, Cavata, Josi, Basu, Changangri, Jundria, Prohut, Masara, Dhowra, Lora, Mahdave, Viasurra, Takur, Hirow, Panah, Kullah, Hojah, Sarsud, Nuriajur, Sanichurri.

Soda. Sultan, Bhojraj, Gungdass, Bijara, Sadur, Bhujbur, Kalun, Sungrasi, Virjuid, Bhar-Mull, Askaran, Uda, Bhowta, Gagilra, Sutta, Muddat.

Commercial Tribes, viz. Lohana, Kerar, Uswur, Kutri, Chepa, Sonara, Darzi, Malli, Sutar, Uda, Barber, Rajput, Dohut, Balwaro, Kavrio, Charni, Bhatti, Rhye, Dhur, Jessore, Chowan, Jaraja, Purwar, Vurhun, Joga.

Broken Tribes, viz. Mengwar, Bhil, Koli, Balashahi, and Shikari.

Miscellaneous Races, viz. Shaikh, Memon, Kumbrani, Gudda, Bujir, Mohana, Jokiah, Dukur, Koliah, Amunda, Bhopa, Mahur, Hakra.

These multitudinous tribes can be summarized from the 1881 census as follows in the total Sind population of 2,413,823:—

Brahman, . . .	13,531	Shaikh, . . .	32,888
Rajput, . . .	10,534	Sindi, ...	1,273,761
Lohana, . . .	211,926	Other Muhammadans, . .	119,080
Other Hindus, .	69,088		
Baluch, . . .	409,012	Aboriginals and forest races, .	86,040
Pathan, . . .	14,729		
Syud, ...	37,734	Others, . . .	135,500

Most of the races dwelling in Sind designate themselves by tribal names, either assumed by themselves or applied to them. These names indicate the country or town from which they came, or the ancestor or distant race from whom they have sprung.

The tribes are so mixed up one with another, that, excepting just on the borders, no part of the country can be marked off as occupied by any particular tribe; even on the borders there is much intermixture. The great Murree tribe of Baluch, for instance, has a large, and the strongest, part of its clans in the hills to the north, and outside of the Sind border; but there are a great many of the Murree located in different parts of Sind, even down to 100 miles south of Hyderabad.

The *Arab* is numerously represented by Syuds, who claim descent from Mahomed, through his daughter Fatima and her husband Ali. There are, of them, 13 tribal designations in Kurachee, and 11 in the Hyderabad collectorate,—landowners and extensive cultivators, who say they came from Arabia and Persia about the 12th century. The Hasani and Husaini Syuds (which is properly written Sayyid) are numerous; the former class have the title of Pir, as Pir Bhawan Shah; the Husaini race is termed Sayyid, as Sayyid Jendal Shah. As is usual in the Sind province, these two families are subdivided into clans, called after their previou[illegible] as Bokhari, Mathari, Shirazi, [illegible] etc. Most of them are of [illegible] persuasion, and therefore they [illegible] during the various Afghan in[illegible] these Sayyids are learned men, [illegible] by the commonality, in spite of t[illegible] belief. Under the Kalhora dyna[illegible] possessed of large landed esta[illegible] inam (or free gift) in perpetuit[illegible] Talpurs came into power, the priest[illegible]

The *Koreshi* was the Arab tr[illegible] Mahomed belonged. They have [illegible] tribal names; they are cultivato[illegible] scribes, originally from Syria, Iran, [illegible] claim descent from Ali, Abbas, Ab[illegible] and Usman, styling themselves Al[illegible] Abbasi from Abbas, Sadiqi from Abu[illegible] from Umar, Usmani from Usman.

The Sadiqi are sufficiently numerous[illegible] the title of Makhdum, or master, as [illegible] Nuh, Sadiqi.

The Faruqi names usually begin with [illegible] (master), as Miyan Ibrahim, Faruqi.

The Alavi, the posterity of Ali by any [illegible] numerous wives except Fatima, are all [illegible] are not often met with, and bear the title of Khwajo, *e.g.* Khwajo Murad Ali.

The Abbassi, descendants of Abbas, are very numerous in Sind. They are called Mullo (priest), or Buzurg (the great), *e.g.* Buzurg Maaruf, Abbassi.

Other foreign tribes are descendants of Harun, also Mukrani, Ludi (now known as Ludia), Habshi, Sidi, and Jungiani.

The *Afghans* are generally found about Hyderabad, and in the north of Sind. Many of them have been settled in the country for some generations, and have become possessed of considerable landed property. The Kakar are the most aristocratic of the Afghans.

Gola, formerly slaves, principally from Africa, are the Sidi, Habshi, Khaskeli, Sindi, and Zemghur.

Baluch.—All the tribes who have come from Baluchistan are known in Sind by the general term Baluchi. The Rind tribe is, in Sind, the head of all those from that region, and from them have descended other sub-tribes. The Talpur, however, became rulers in Sind, and the Rind remained their dependents. The Baluch are generally said to have come originally from Aleppo in Syria. They have all the characteristics of Arabs,—sharp, well-defined features, and well-built limbs. In Sind, many of their divisional appellations merely denote families of descendants of men of renown, whose names the families bear. There are 28 tribal names in the Kurachee district, 60 in that of Hyderabad, and 13 in Upper Sind. They are averse to regular labour, and restless, but they will undergo the most wonderful fatigue for the purpose of stealing a camel or bullock. All their traditions point to Syria as their original site, and the date of their advent as about 1200 years ago. Amongst themselves, the Rind rank first in importance, then the Lashari, Jutui, Dumki, Jakrani, Murree, Bugti.

The *Brahui* have mostly remained in the mountains of Baluchistan. General Merewether says that the Brahui traditions are less clear than those of the Baluch, but are to the effect that they also

came from the west, entering Baluchistan from Kirman by Makran.

Jacobabad, a frontier district of Sind, between lat. 27° 56′ and 28° 27′ N., and long. 68° to 69° 44′ E., which comprises the tract of country bounded by the Bugti Hills on the north, by Kalat on the west, the Bigari canal on the south, and the river Indus on the east. The district ranges from 170 to 257 feet above the sea. From 1865 to 1870 the rainfall ranged from 1·11 to 8·80 inches. At the extreme north is desert plain. The Sind Hollow, a former bed of the Indus, traverses one-third of the district, and between it and the river the country is split up into numerous 'dhund' and 'dhoree.' On its north is a range of barren hills with fertile valleys, occupied by the Murree and the Bugti. Baluch tribes, Jamali, Dumki, Jakrani, Khosa, Mazari, form the population, with Burdi, Sindi, Jumma, the nomade Jat, who rear camels, cattle, sheep, and goats, and Hindu cultivators. The Jat are a hardy, good-looking, industrious race, and their women are very comely; they drink largely of camels' milk. The Baluch use jowari (sorghum) flour, and bajra (Penicillaria spicata), and milk. The cultivation is by irrigating canals.

Chanduka is a fertile tract 60 miles long, in Upper Sind, formerly occupied by the Chandia Baluch. It extends to the desert of Cutchi on the north, has the Hala range for its western boundary, and the river Indus on the east. Its principal town is Larkhana, so called from the Larak, a tribe formerly settled there. The tombs of Shah Muhammad Kalhora and of Shah Baharah are there. Hindus and Muhammadans comprise the population. The Muhammadans are Baluch and Sindi, the latter are agriculturists and artisans. The principal tribes are the Chandia, the Jamali, the Abra, and the Jat, with the Lahori, the Hukrah, and the Chujrah. The Chandia and Jamali are poor. The Jat are cultivators, and rear cattle. They are migratory; their subdivisions are the Darudgar, Junejah, Kohawar, Wagun, and others. The settled portion are not called Jat.

The *Sindi* are a quiet, industrious race, tall and handsome, and can undergo much fatigue, but are not very noted for activity. They are nearly all cultivators. They are untruthful, illiterate, and superstitious.

Languages. — The Larayi dialect of Sind is spoken in Chanduka; it differs much from the Sarhaiki spoken north of Larkhana. Persian is the polite language.

The *Kalhora* and Talpur tribes furnished the last dynasties, and though the one deduced its origin from the Abbassides of Persia, and the other advanced pretensions to descent from the prophet, both were alike Baluch.

Yar Muhammad, Kalhora, assisted by the Rind Baluch, overthrew the Puar Rajputs, who held dominion in Sind. He directed that a number of clubs should be suspended in front of his tomb, as a memorial of the case with which the conquest was effected. The clubs were still hanging in 1847 in front of his tomb at Khodabad.

The *Talpur* have their name from the town (poora) of palms (tal or tar), and are said to amount to one-fourth of the population of Lohri or Little Sind, which misnomer they affixed to the dominion of Hyderabad. There are none of the Talpur in the t'hul. They emigrated from Chot to Sind about A.D. 1760, and, after attaining power, ruled from A.D. 1799 to 1843, when they were overthrown by the British. The family have four principal branches,—the Shahwani, the Shahadani, the Khanani, and the Munikhani. A minor branch is the Jumidani. The Talpur are of the Shiah sect, and claim to be Syuds.

The Lughari family is a subordinate branch of the Talpur. The Lughari of the Dehra Ghazi Khan plain dwell south of the Khosa, extending from Viddore to Gungehur, between Choti Bala and Hurrund. The Lughari joined Lieutenant Edwardes' camp in his advance against the dewan Mulraj. The Talpur of Sind was one of their sections. The Lughari claim to be able to trace their pedigree up to their departure from Arabia. They have 55 sub-sections, of whom a large number reside in the hills.

Burgari, a minor tribe of Baluch in Sind, are also connected with the Talpur family.

The *Daoudputra* inhabit generally the country of that name in the north, but are to be met with in various parts of Sind.

The *Desert of Sind* lies between the frontier of Rajputana and the valley of the Indus, and from Daoudputra on the north to Buliari on the Runn, 220 miles long and 80 broad, or 17,600 square miles. It is one entire t'hul, with few villages and a few shepherds; 50 miles without water, the wells 70 to 500 feet deep, and the sand-hills little mountains. It was through this tract that Humayun sought refuge to the Dhat country and its capital, then Omarkot, where Akbar was born. Arora, there, is a ruined town. Omerkot was wrested from the Soda race by the Rahtor tribe of Marwar, and since then the chiefs of the expelled clan have dwelt in Chore, 15 miles N.E. of Omarkot. At one time, every third year brought famine. The Soda women of this desert tract of Dhat are proverbially handsome. In this desert, and in the valley of the Indus, are the Soda, Kat'ha, and Mallani, descendants of the Sogdi, Kat'hi, and Malli, of Gete and Yuti, many of whom call themselves Baluch, or keep the ancient name of Numri, whilst the Zj'hut or Jat retain their primitive appellation. There are also remains of a Johya and Dahya, who, with Gete, Jat, or Hun, hold places amongst the 36 royal races of ancient India. The Baraha and Lohana tribes are there; the Sahrai, the great robber of the desert; the Bhatti, Rahtor, Joda, Chauhan, Mallani, Kaorwa, Joshya, Sultano, Lohana, Arora, Khumra, Sindil, Maisuri, Vishnavi, Jakhur, Shiag, Ashiag, and Puniah. Jakhur, Shiag'h, and Puniah, harmless, industrious, in the desert and the valley, are denominations of the Jat race, but most of these sections have become Muhammadans, and call themselves Zj'hut.

The *Nyad* or proselytes from Rajput or other Hindu tribes are—Zj'hut, Rajur, Umra, Sumra, Mair, Mer, Mor or Mohor, Baluch, Lumria or Luka, Sumaicha, Mangulia, Baggreah, Dahya, Johya, Kairui, Jangurea, Undur, Berowi, Bawuri, Tawuri, Chrendea, Khosa, Sudani, Lohana. These converts are ferocious and intolerant.

The *Soda* is scattered over the desert, some are Muhammadans.

Kaurwa, a peaceable nomade race, chiefly in the t'hul of Dhat, rear cattle.

Dhote or Dhatti, like the Kaurwa, a pastoral race of Dhat; their cows give 8 or 10 seers of milk daily.

pur in Rajputana, are found in Sind. They form part of the mercantile body usually styled Marwari. They are enterprising bankers, financiers, and in Sind merchants, also petty traders and shopkeepers.

Jokia, a tribe in the western part of the Kurachee collectorate, claim a Rajput origin, and their chief takes the title of Jam.

The *Lohana* of Sind are Vaishnava and Saiva Hindus. Some of them worship the river Indus deity and his wazir under the names Jenda Pir and Udhero Lall. They engage in trade and in agriculture. The suffixed titles of their subdivisions are—Mul, Chund, Rae, Ram, Das, Lal. They are the principal number of Hindus in the country, but, like the Saraswati Brahmans, they eat meat, fish, and onions, and drink spirits, buying the flesh from the Muhammadans, it being unlawful for them to kill. They are not highly educated, but in the time of the Talpur Amirs they were largely employed as revenue collectors, and were described as scheming and crafty. Under British rule they have shown an earnest application and devotion to duty, able and energetic, honest and upright. They are financiers, bankers, merchants, and shopkeepers.

Tradesmen are the Raza, Lohar, Wadha or Dakhan, Dhobi, Pinjara, Katri, Khori, Mochi, Sunara, Thattiara, Muhana, Baleshahi, and Machi.

There are, besides, in the Hyderabad district, 78 races of miscellaneous origin.

Religion.—The Muhammadans are 78 per cent. of the population; many of them claim to be Syuds; and besides the great sects of Shiah and Sunni, there are several prominent smaller bodies.

The *Ismaili* are chiefly in Sind, where they take the title of Khajah (Khoja, Khowaja). They are numerous in Bombay city, and in the Sind collectorates of Kurachee, Ahmadabad, Hyderabad, and Tanna. In Bombay city, on the date of the census, 8451, or 6·15 per cent. of the Muhammadans there, returned themselves under that designation, and about 18,000 were residing in other parts of that presidency. They are petty dealers and merchants, are quiet, peaceful people, and have never given any annoyance to the British.

The Ismaili acknowledge Ali, Hasan, and Husain as rightful imams; some hold that the line closed with Ismail, son of Jafar Sadiq, who was their seventh and last imam. From him they take the name Ismaili, and also from him the 'seveners.' The Ismaili put a metaphorical interpretation on the Koran, which tended to explain away and supersede its doctrines, leaving only a negative religion, and substituting licence for morality. They were sometimes called Mulahida, heretics, and have been deemed to include the Karmatians, and the Assassins, and others, but these are merely offshoots from the Ismailian heresy. The doctrines were largely spread by Abdallah, son of Maimun, a native of Persia. In the middle of 1878, Killu Khutu, a young Muhammadan, murdered the Mukhi or headman of the Khojahs in the open street in broad daylight at Umercurry in Bombay. He was hanged on the 20th July 1878.

The *Bora* or Bohorah Dr. Wilson describes as corresponding in many respects with the Ismaili, the Ansari, the Mutawilah, and the Druse of Syria. They pay particular regard to the tenets of Ismail, son of Jafar, the sixth imam, and hold, like the Shiah, but in a more exaggerated form, the mystical doctrine of the union of the deity with Ali. The mercantile Bora are divided into three sects,—the Sulimani, the Aliyah, and the Dawudiah, from certain lines of the mullas or pontiffs, to which they adhere. In Bombay city they form 7·8 per cent. of the Muhammadans there; but it is in Kaira, Surat, Broach, Ahmadabad, and other cities of Gujerat, that the sect are principally numerous. They are pedlars, shopkeepers, workers in iron and tin, and many of the men are long absent from their families following their professions. The Bombay census returns show in that presidency about 10,000.

The *Karmati* or Karamata is a sect founded about 278 A.H. (891 A.D.) by Ahmad, a follower of Abdallah. He taught that everything desirable was allowable. He endeavoured to carry out his views by violence, and began an open war against the ruling powers. In 290 A.H. (903 A.D.) the Karmat sect made a fearful inroad into Syria; and in 314 A.H. (923 A.D.) they plundered Basra and Kufa. In 319 A.H. (931 A.D.), led by Abu Tahir, they took Mecca, with terrible slaughter, plundered the temple, and carried away the Black Stone (Hajr-ul-Aswad), which they retained for twenty years. Ar Razi, the twentieth khalif, paid them a subsidy to secure the safe passage of pilgrims to Mecca. The Fatimite dynasty of Egypt was founded in 297 A.H. (909-10 A.D.) by an Ismailian, in rivalry of the Arabian khalifat. It grew rapidly into power, and became a source of great trouble and jealousy to the rulers of Baghdad, and the wars were most savage and unrelenting. They appear to have pushed eastward into the valley of the Indus, and to have sought a country in Sind about 375 A.H. (985 A.D.), and seem to have been ruling there at the time of Mahmud's return from the fall of Somnath. They destroyed the great idol at Multan, and the chief whom Mahmud of Ghazni drove thence was one of this sect. But they re-obtained power there, for in 571 A.H. (1175 A.D.) Muhammad Ghori again delivered Multan from the hands of the Karmatians. In 634 A.H. (1237 A.D.) we find them in some force at Dehli, where they made a concerted assault on the Muhammadans in the great mosque, and slew a considerable number, but they were finally overpowered, 'and every heretic (mulahida) and Karmatian was sent to hell.' Their name was given to them from their use of the Karmata or Karmat style of writing Arabic, in which very small letters are used with very close lines. General Merewether's returns show 39 sections of Karmati in the Kurachee collectorate in Sind, but whether or not they belong to the Karmati sectarians, there is no information.

The *Assassin* sect known to the Crusaders also sprang from the Ismaili. The founder was Hasan-us-Sabāh, a native of Re. He was schoolfellow and companion of Nizam-ul-Mulk, the well-known wazir of the Saljuki dynasty, and author of Majma-ul-Wasaya. The forcible removal of all foes and rivals by the dagger was the distinctive practice of this sect. Nizam-ul-Mulk fell under their daggers, and the author of the Jahan Kusha nearly became a victim to them. In 483 A.H. Hasan-us-Sabāh obtained possession of the strong fortress of Alamut or Alah-amut (the eagle's nest) in the province of Rudbar, about

eleven parsangs north of Kazwin. Here he and his descendants maintained themselves for nearly two centuries, when the fortress and many others fell to the Mongols. Mangu Khan determined to exterminate the whole of the Ismaili sect; and under him and his successor Hulaku, their fortresses were taken, and many thousands of their men, women, children, and babes at the breast were put to the sword.

The *Memon* sect of Muhammadans are numerous in the Kurachee and Hyderabad collectorates of Sind, and have spread into all the Bombay districts. The number given in the returns of the census taken in 1872 is about 50,000, but others of the sect must have merely styled themselves Musalman. In Bombay city they numbered 8825. In the returns received from General Merewether there are entered Memon Khojah and Memon Sayata, and are placed among the Shaikh or Memon sections. Dr. Wilson says they take their sectarian name from Mihman, a Persian word for a guest, a stranger, and that they are converts to the Sunni form of the Muhammadan religion, principally from the agricultural and mercantile classes of Hindus in Sind, Cutch, and Kattyawar. In Sind they have many learned and respectable men amongst them, but the bulk are engaged in trade, agriculture, and cattle-breeding.

Slaves.—There was in Sind in the time of the Amirs, a system of slavery common to it and all the countries to the north-west, viz. that of fathers selling their daughters as wives when very young, as also of the sale of girls for the zananas of the wealthy. The Afghans were particularly notorious for this traffic in Sind, but it was after all very limited. Under the former rulers, many slaves were brought from Africa and Arabia, and employed as domestics. They were known as Habshi (pl. Habush), also Sidi.

The *Gnda*, a mixed race between Sindians and Sidi women, were equally slaves with their mothers, and could be bought or sold at will.

Languages.—Sindi is the prevailing vernacular tongue, but the Sindi people and language are more confined to Lower Sind, and there the Sindi has much Arabic mixed with it. It is, however, spoken from the northern boundary of Kattyawar northwards to Bahawulpur, and from the hills on the west to the desert which separates Sind from the western portion of the Indian Peninsula. The Arabic character is used in writing. The language of Lar is purest. Sindi is of Hindi origin, being a still greater variation from the Sanskrit than the Gujerati. It is often written in a peculiar character, called the Khuda Wadi, and the Hindus keep all their own accounts and correspondence in it. This tongue has the dialect of the Siraiki of Upper Sind, containing numerous Jataki words.

Cutchi has in it elements of the Gujerati. That of the hunters and tanners, Dedh, is another dialect.

The language in use in the Thur and Parkur is called Dati. It is a combination of Sindi, Marwari, and Gujerati. In some parts of the Thur district they carry on business in Gujerati, but the Dati, with which they are more familiar, is in more general use.

Jataki is the language of the wide-spread Jat race, from the northern regions of the Panjab southwards to the Arabian Sea.

The Persian and the Urdu are also to some extent in use.

The few Afghan zamindars settled in the north of the province still use the Pushtu of their forefathers; but the dialect is not sufficiently diffused among the people to be included in the languages of Sind. The same is the case with pure Panjabi; it is confined to the small number of Sikhs who are settled in the different cities and towns.

Baluchi is spoken by the tribes who have migrated to the plains of Sind. One-half of its words appear to be Persian or dialectal variations from that tongue. Like Brahuiki and Pushtu, the Baluchi vocabulary contains a few Sanskrit and Arabic roots, together with a considerable proportion of other words. As must happen among a people divided into clans, and separated from each other, the dialect abounds in diversities of words and idiom, and, being naturally poor, it borrows many vocables from the neighbouring countries. Its literature is confined to a few tales, legends, war songs, and the productions of the Bhat or Baluch bards.—*Sir Henry Elliot's History of India; Mr. (Sir George) Campbell's Ethnology of India; Census Reports*, 1872, 1881; *Dr. Forbes Watson's People of India; Aitcheson's Treaties; Tod's Rajasthan; Elliot's History of the Panjab; Postans' Personal Observations; Postans' Sind; Masson's Journeys; Burton's Scinde; Ouseley's Travels; Hindu Infanticide; Pennant's Hindoostan; Rennell's Memoir; Rawlinson, Herod.; Smith's Dictionary of the Bible; Cunningham's Ancient India; Genl. Merewether in Litteris.*

PANJAB, a great province in the extreme N.W. of British India, with an area of 142,449 square miles, and a population of 22,712,120 inhabitants. It takes its name, literally the Five Rivers, from five of the great streams which intersect it,—the Sind or Indus, the Jhelum or Hydaspes, the Chenab or Ascesines, the Ravi or Hydraotes, and the Gharra or Hyphasis. In many parts the rainfall is scant, and droughts and famines occur. In 1859 there was drought; famines recurred in 1860, 1868, and 1869, severely in the last-named year, and the year 1878 was calamitous. Wheat, their great food grain, has been selling at 25 to 63 lbs. for a rupee.

1862, 55 lbs.	1867, 45 lbs.	1872, 40 lbs.	1877, 42 lbs.

It is a frontier country in the route of the conquerors who have invaded India,—Aryan and non-Aryan, Scythi and Gete, Turk and Mongol,—who have occupied the plains, and have pushed broken tribes into the mountain and desert tracts. Conquest and occupation have been facilitated by the democratic institutions of the inhabitants, and Alexander, Timur, Baber, Nadir Shah, and Ahmad all entered from the west.

At the time of Alexander's expedition, the Greeks heard of 118 different kingdoms in the N.W. of India, all more or less hostile to each other; and the many martial tribes in and around this province, and the variety of languages spoken within its bounds, attest the accuracy of the Greek historians; also thirty-six native chiefships are still interspersed in British territory.

Jatki, . . .	1,604,760	Unspecified, . .	7,738
Kanawari (Tibarskad), . . .	12,209		

Summarizing its inhabitants under their respective religions, the numbers are—

Muhammadans,	11,662,434	Buddhists, . . .	3,251
Hindus, . . .	9,252,295	Parsees, ...	465
Sikhs, ...	1,716,114	Jews, ...	31
Jains, ...	42,678	Others, ...	1,153
Christians, . .	33,699		

It is the only province of British India in which the Muhammadans preponderate; but the mass of the people are of Jat origin, and have only in comparatively recent years accepted the Islamic faith. The great sects of Muhammadans are as under—

Sunni, . . .	11,306,855	Farazi, ...	165
Shiah, ...	102,256	Others, ...	250,627
Wahabee, . . .	2,531		

Tribes.—The more prominent of Muhammadan tribes belong to three great nations,—the Ghilzai, the Pathan, and the Afghan. The *Ghilzai* tribes, 23 in number, have combined with tribes of Persian origin, but all claim descent from the Pathan progenitor Kais. *Pathans* proper number 23 tribes, comprising Karlanri, who are Indian in the mass (Afridi, Khatak, Waziri, etc), with a large admixture of Turk tribes, also Bangash. The Ghurghushti Pathans claim descent from Ghurghush, son of Kais. Of the *Afghans* proper, 29 tribes are represented in the Panjab. They are recognised to be of Jewish or Arab stock, who have fused into a nation with the Gandhari, an ancient Indian race. They have two divisions, the original Afghans from Ghor, of Jewish or Arab descent or both, with whom are blended the ancient Gandhari immigrants from Peshawur to Kandahar. There are also 14 tribes of the Kakar, a Scythic stock, with affiliated tribes of Indian origin. Baluch claim to have come to their present territory, west of the Indus, from Aleppo. The three nations may be shown as under—

A. Ghilzai Nation.

Several of the independent tribes are barbarous savages. The Census Report of 1881 mentions that 'the true Pathan is perhaps the most barbaric of all the races with which we (the British) are brought into contact in the Panjab.' He is bloodthirsty, cruel, and vindictive in the highest degree; he does not know what truth or faith is.

The *border tribes* within British territories are largely Pathans, similar in origin and in customs to the independent tribes occupying the mountains and valleys intervening between British and Afghan territory, many of the tribes, indeed, being partly independent, and in part under British rule. Afghan rulers have avoided interfering with these tribes, but they have become somewhat civilised since they have seen the British rule.

The *Syad* Muhammadans are descendants of Mahomed and of Ali. They are distributed through all the province. The Moghul are chiefly in Peshawur and Hazara. Yusufzai, Mohmand,

halil, and Muhammadzai are almost entirely the Peshawur district; Khatak are in Bunnu d Kohat; Bangash are almost all in Kohat; aziri and Lubani are chiefly in Bunnu.

The *Baluch* in the Multan division are said to ve arrived in the Panjab about the 16th cen ry. They are strong-built men, with forbidding atures, ignorant, rough, and boorish in manners, gnacious and thieving. They breed camels, azing them in the jungles of Gugaira near Lahore, lling them in Lahore and the N.W. Provinces. mels' milk forms one of their chief articles of t. In 1881, 51 of their tribes were represented the Panjab, numbering 355,238 souls.

The Jat, Rajput, and allied castes number 275,294, as under—

	British.	Feudatory	Total.
t,	3,564,519	868,231	4,432,750
jput,	1,436,058	241,511	1,677,569

und,	20,315	...	20,315
hat,	9,468	34	9,502

Jat.—There are 81 Jat clans, 26 of them numring over 10,000; 16 over 20,000; 8 over ,000; and 3 over 100,000.

Colonel Tod formed the opinion that many of Jat and Rajput clans are alike of Getic origin; d at the present day we find 31 clans in the njab over a million strong, classifying themves indifferently under the two headings. e Jat race are conspicuous for their industry; ir well-fenced and well-worked fields are vays distinguishable from the slovenly and illed-for lands of Gujars and Brahmans. The fe of the Jat works cheerfully in the field with n in every kind of agricultural labour.

Broken Tribes.—Dwelling amongst the settled es of the Panjab are nearly three millions of oken tribes, mostly non-Aryans, and whom the tled races deem unclean. Their avocations are avengers, leather-workers, fowlers, etc. A few them are regarded as wholly unclean; others homeless migrants, dwellers in tents, mostly edatory; but all of them possess a kind of notheism, mixed with shamanist and totem es. Many of these remnants have adopted am; some have taken the Sikh pahul; others ve adopted the new Ram-dasi faith. Some er their dead, while others cremate the remains. 912,000 are of Hindu origin; 173,000 follow Sikh faith; 492,000 are Muhammadans, and ne are Buddhists.

Sikhs.—The Panjab was the birthplace of the Sikh religion. The chiefs of this creed were dominant when the British fought the battles of Moodkee, 18th December 1845; Ferozeshah, 21st and 22d December 1845; Aliwal, 28th January 1846; Sobraon, 10th February 1846; Kussoor Fort taken, 11th February 1846; Lahore occupied, 20th February 1846; and the Panjab was annexed 30th March 1846.

Nanak, the founder of this faith, was born near Lahore in the latter half of the 15th century, and died at Dehra Nanak on the Ravi in 1539. He taught a form of monotheism, and was followed by other leaders, to whom the title of guru was conceded. A hymn composed by Nanak is recited among other parts of the ritual morning and evening. It is repeated three times in the Granth. Its train of thought resembles the hymn by Milton, sung by Adam and Eve in Book v., Paradise Lost. Parts of it run—

'To thee sing th' angels who men's deeds record,
And note and weigh their faith in thee Supreme;
To thee sing regions, orbs, and universe,
Created, cherished, and upheld by thee;
To Thee sing those whose deeds delight the eye,
The hosts that wear the colours of thy faith.
All things beside which sing thy glorious name
Could ne'er be told by Nanak's lowly song.'

In 1675, Guru Govind, the tenth spiritual chief from Nanak, formed the Sikhs into a religious and military commonwealth. In the wars that occurred between them and the Moghuls, there were cruel barbarities on either side; but the destruction of the Dehli empire, and the dissensions amongst the Mahratta leaders, allowed the rise of a Sikh leader, Ranjit Singh, from whose officers the country was conquered.

The *Bedi*, descendants of Nanak, rank first among the followers of this faith. They are well-to-do, but from pride of birth were so notoriously addicted to the crime of infanticide, as to have been designated by the opprobrious title of Korimar, daughter-slayer. They number only 6804 souls.

The Sikh are secular and religious. Of the latter are three classes,—Akali, Nihang, and Nirmalla.

The *Akali* were armed religious devotees of the Sikhs, established by the Guru Govind, and they zealously supported him against the ascetic Banda, the Byragi. In Ranjit Singh's time they moved about almost in a state of nudity, and were very insolent.

No one is a Sikh by descent,—a Sikh must be installed. The institutionary discipline of a young Khalsa Sikh is very compendious: when he can bend a bow, wield a sabre, and mount a horse, his instruction is completed.

The followers of Govind, the tenth and last guru, are styled Singh or lion. The followers of Nanak and of his eight successors known simply as Sikh, but there are several sects,—Udasi, Nanak Shahi, Ganj Bakshi, Ram Rayi, Nirmala, Naga, Suthra Shahi, and Govind Singhi. They all believe in the Adi Granth, or first volume compiled by Arjan, but not in the volume compiled by Guru Govind.

All orthodox Sikhs must have the five K's, five accompaniments whose names begin with the letter K,—the kes, or long hair; the kirpan, a small knife with an iron handle, round which the kes is rolled and fastened into the hair of the head; the kach'h, or drawers; and the kara, an iron bracelet. No part of the person must be shaved, and smoking is prohibited.

The *Daoudputra* are on the left bank of the Sutlej river. In the beginning of the 18th century the Daoudputra were weavers and cultivators, and displayed no martial character, but local convulsions enabled the head of the tribe to assume power at Bahawulpur, and they have since then maintained themselves there. They now claim descent from the Khalif Abbas. They are a tall, strong race, of somewhat dark complexion, but with good features, and wear their hair hanging on their shoulders in masses like the people of Sind and Baluchistan. They have been friendly with the British, and in the battles of the 18th and 28th June 1838, a contingent aided General Cortland and Major (afterwards Sir Herbert) Edwardes in the contest with Mulraj, who had revolted at Multan.

Converts.—Of the Rajput converts to Muhammadanism, the Bhatti are chiefly in the Central Division; the Janjua, Siyal, and Gheba are in the Rawal Pindi Division; and Rangar in the Dehli, Hissar, Ambala, and Hazara districts.

Of the other converts to Muhammadanism, the Jat are few in the Peshawur Division. Ghakkar are in Rawal Pindi, Jhelum, and Hazara districts; Dhund, in Rawal Pindi and Hazara; Kharral, chiefly in Montgomery; Karral, in Hazara; Wuttu, chiefly in Sirsa and Montgomery; Meo, chiefly in Gurgaon; Gujar are in all the districts, though mostly in the Chenab, Sutlej, and Hazara; Paracha, in Peshawur and Rawal Pindi; the Khojah, in Amritsar and Rawal Pindi; the Kashmiri are in Amritsar, Lahore, Rawal Pindi, Peshawur, and Hazara. *Census Reports* of 1868, 1871, 1881; *Mr. (Sir George) Campbell's Ethnology of India*; *Dr. Forbes Watson's Tribes of India*; *Powell's Handbook*; *Major-General Sir C. M. MacGregor's Frontier.*

NORTH-WEST PROVINCES AND OUDH.—Hindustan, in Europe, is a geographical term applied to British India generally. By the people, however, and by the European residents, the name is restricted to that part of India which lies between the Himalaya and the Vindhya mountains, and the N.W. Provinces and Oudh occupy a large part of that expanse. Hindustan was the Madhya-desa of the ancient Aryans, the middle region or Aryavarta, the Arya country. In a slokam in the Sanskrit work, the Amarakosha, the ancient boundaries of it are thus defined:—

'Ariavartahā punia bhūmi hi,
Mad'hiam Vindhya Himāva yoho,'

i.e. the Aryan country, the sacred land (lies) between the Vindhya and Himalaya, in this way indicating both the dominant race and the boundaries of the country held by them at the time that Amara Sinha wrote.

In 1877 the N.W. Provinces and Oudh were placed within one jurisdiction. The N.W. Provinces lie between lat. 23° 51′ 30″ and 31° 5′ N., and between long. 77° 3′ and 84° 43′ 36″ E., seven degrees of latitude and seven of longitude, its area being 81,403 square miles; while Oudh lies between lat. 25° 34′ and 28° 42′ N., and long. 79° 44′ and 83° 9′ E., three degrees of latitude and three of longitude, with an area of 23,992 square miles. They together, including also the

eudatory Rampur State and Native Garhwal, mbrace an area of 111,228·9 square miles, and a otal population of 44,849,619 souls, of whom over 3 millions are males, and 21½ millions are emales.

	Area.	Total Pop.	Males.	Females.
N.W. Prov. & Oudh,	106,103·9	44,107,869	22,912,556	21,195,313
Rampur State, .	945	541,914	282,359	259,555
Native Garhwal, .	4,180	199,836	102,340	97,496
	111,228·9	44,849,619	23,297,255	21,552,364

Oudh lies between Nepal and the N.W. Provinces. It contains no mountains. In the Gonda district the boundary is on the ridge of the first range of low but abrupt hills of the Himalaya; elsewhere it is in the plains, and is a part of the alluvial valley of the Ganges and of some of its tributaries. The mountainous region of Garhwal has a population of 50 to the square mile. Large tracts of Garhwal, however, are thickly populated, and where the situation is favourable, the cultivation stretches high up the hills, terrace after terrace.

There has been a decrease throughout a large area since 1872. This decrease was due to famine. In the central tract, consisting of the Lucknow Division and Rai Bareli and Sultanpur, the decrease of nearly eight per cent. must be an indication of a real loss. There is a well-defined tract showing a decrease, while another shows an increase. There must consequently have been some condition especially affecting the population of these districts. Such a condition we find in the drought of 1878 and the fever of 1879, from which this central tract suffered especially. That the population of these districts was thus particularly affected, we find from the smaller proportion of children living of the years of birth 1878 and 1879. There can therefore be no doubt that the population of this tract actually has diminished by somewhere about eight per cent., owing to the effects of those two fatal years.

The *languages* spoken are not numerous. It is the great seat of the Hindi and of its offshoot the Urdu or Hindustani, and its other dialects and other tongues have been classed as follows:—

a. Gaurian languages, Indian languages of Sanskrit affinity—

Hindi and Urdu,	43,221,705	Sindi, .	
Garhwali, . .	340,913	Gujerati,	3,847

			44,066,500

b. Tamil, Telugu, Canarese, Malealam, 1,671
Gondi, . 201
Burmese,
1,880

c. Arabic, Hebrew, Persian, Baluch, Pushtu, Chinese, Armenian, Turki, Ladakhi, Tibetan, ... 5,508
Abyssinian, ... 12
European languages, ... 33,199

The *religions* professed throughout this province are the Sikh, the Hindu, the Jaina, the Muhammadan, and the Christian, with many cults among the aboriginal races. The fall of Buddhism and the final triumph of Brahmanism was accomplished after long years of sanguinary wars, lasting through generations, perhaps centuries, and the plains of Oudh are supposed to have witnessed the last efforts of Buddhism, gradually retreating to the Himalayan mountains. They were so devastated by these prolonged contests, that tradition assigns the country lying between the four points of Ayodhya, Kashi, Bithur, and Nimasarang as a solitude. The spirit remains, and Oudh has seen many Hindu reformers.

Ramanand, A.D. 1350, a follower of the doctrines of Ramanuja. His disciples were Kabir, a weaver; Asanand; Rai Das, a Chamar; Sena, a barber; Dhunna, a Jat; Pipa, a Rajput; and the Ramāwat poets Sur Das and Tulsi Das.

Kabir, of Oudh, preached about A.D. 1470.

Gorakhnath, also of Oudh, was a contemporary of Kabir, and founded the sect of Kan Phatta Jogi.

Birbhan, of Dehli, lived in the 17th century, and in A.D. 1658 founded the Sad'h or Sad'hu, a unitarian or monotheistic sect, with doctrines derived from those of Kabir and Nanak.

Sur Das, a disciple of Ramanand, and native of Oudh, of the time of Akbar (A.D. 1556–1605). He was blind.

Tulsi Das, a follower of Ramanand, died at Benares A.D. 1625. He wrote the Ramayana in Hindi.

Jag Jewun Das, A.D. 1761, of Oudh, founder of a Sadhnami sect.

Harischandra, founder of a Vaishnava sect amongst the Dom of Oudh.

The devotees and religious mendicants of the N.W. Provinces numbered more than 240,000, and were in twenty-four separate tribes.

The Atith, Aghori, Brahmachari, Dandi, Jogi, and Paramahansa are *Saiva* sectarians.

The *Vaishnava* sectarians are Bishnoe, Byragi, Kabirpanthi, Khaki, and Ramanandi.

Gosain are found in all sects, and Naga and Sanyasi are both of the Vaishnava and Saiva sects.

Hijra, Khaja, Sukhi are servants and attendants in temples, dancing boys.

Khunkhuniya and Kingrihara are Vaishnava musicians.

Kangal and Pankhya are beggars.

Mahant, Malang, and Murchera are superiors of monasteries.

Nanak Shahi, Sadhu, and Sadhnami are monotheists.

Darvesh and Madaria are the Muhammadan sectarians.

Other sects number 57,015.

The *Hindu gods* of the Vedic times, Agni, Indra, Varuna, and others, have been forgotten, as have also the worship of the celestial bodies and the elements. Even the Brahmanical gods, whose worship followed that of Buddha, and known as Brahma, Vishnu, and Siva, are greatly set aside. Brahma is worshipped only at Bithur on the Ganges, and for the others there have been substituted the incarnations of Rama and Krishna, with the lingam symbol for Siva, and the female forms of Lakshmi, Parvati, Durga, Bhawani as the sakti or active energies of their respective gods.

The *Muhammadans* in the province number 5,922,886,—in the N.W. Provinces 4,489,443, and in Oudh 1,433,443. The great bulk, 5,752,056, are of the Sunni sect, only 170,547 being Shiahs, Wahabee 28, and unspecified 255. They have a great reverence for holy men of past ages, and considerable numbers, as darvesh or fakirs, become religious mendicants. Many of these, however, like the Hindu Jogi, adopt this form in

order that they may follow a lazy life. Nearly half of the fakir sects of the N.W. Provinces and Oudh are in Allahabad and Gorakhpur. Badi-ud-Din, styled Shah Madar or Zindah Shah Madar, is said to have been a Jew, born at Aleppo, and to have visited India in the reign of Sultan Ibrahim Sharqi, and resided between Cawnpur and Farrakhabad. He died A.D. 1433, and Ibrahim erected a handsome tomb over him. Muhammadan tradition is that he was born A.D. 1050, and that he is still alive, hence the term Zindah, living. A great fair is held at his tomb for the first 17 days of Jamadi-ul-Awal.

They reverence five pirzadah, viz. Ghazi Mian, a pirzadah who was slain, and is regarded as a martyr; his tomb is at Baraitch in Oudh. Pir Hathili, a pirzadah, was sister's son of Ghazi Mian; monuments have been erected, and fairs are held in his honour. Pir Jalil, a pirzadah of Lucknow. Pir Muhammad, a pirzadah of Jounpur; and another.

The great bulk of the Muhammadans are engaged in humble avocations,—cotton cleaners, weavers, spinners, dairymen, greengrocers, glass bracelet makers, butchers. It is believed that most of these are descendants of converts from Hinduism. This is the ordinary explanation of the numbers of Muhammadans in the different parts of the country; but since the first Muhammadan invasion of Oudh by Syud Salar Masa'ud, a relative of Mahmud of Ghazni, many armies, each with camp followers, have entered it, and each have left remnants behind.

Muhammadans from their first coming into India took a liking to the mild climate and rich soil of Bijnour, and many of them settled in it. Even in later times the jaghirdars were more numerous in Rohilkhand than anywhere else. They were styled Rohi or mountaineers, and gave their name to the district. They made many proselytes.

The chief castes in the two provinces are—

Ahar, cultivators,	257,670
Ahir, herdsmen,	3,584,185
Arakh, labourers,	64,713
Bahelia, fowlers,	67,360
Banya, Mahajan, trader, banker,	1,204,130
Banjari, carriers,	41,846
Ban Manus, rope-makers,	33,213
Bans phor, bamboo workers,	68,817
Bari, leaf-plate sellers,	69,188
Barhai, Kharadi, Kuka, carpenter,	497,207
Bhangi, Hela, scavenger,	426,243
Bhar, cultivator,	349,113
Bhat, Jaga, Jachak, Rajbhat, bard,	129,921
Bhuinhar, landlord, cultivator,	188,080
Bhurji, grain-parcher,	301,086
Bind, toddy-drawer,	72,581
Boria, cultivator,	21,335
Brahmans, Ojha, Padha, Panda,	4,655,204
Chamar,	5,360,548
Dhanuk, village watchmen,	119,341
Dhobi, washer-men,	518,872
Dom, basketmaker, singer, dancer,	176,615
Fakir, mendicant,	225,276
Ghosi, dairyman,	12,475
Gadaria, shepherd, wool-spinner,	860,220
Gosain, Hindu devotee,	118,259
Gujar, landholder,	269,036
Jat, cultivator,	672,068
Joshi, astrologer,	33,302
Kanjar, ropemaker,	19,524
Kach'hi, gardener, agri. labourer,	1,941,663
Kahar, fisher, water-carrier,	1,222,672
Kalwar, distiller,	345,365
Kandu, cultivator,	78,552
Kayasth, clerking,	513,495
Khatik, butcher,	152,030
Khattri, mercantile,	47,288
Kori, weaver,	843,422
Kumhar, potter,	633,989
Kurmi, gardener, cultivator,	2,129,633
Lod'ha, landholder, cultivator,	1,000,599
Lohar, blacksmith,	496,547
Lonia, saltpetre-maker,	378,619
Mahabrahman,	1,385
Mali, gardener,	236,355
Mallah, boatman,	612,905
Meo, cattle-breeder,	13,246
Nai, barber,	639,957
Nat, acrobat,	36,810
Orh, trader,	18,983
Pasi, watchman,	1,033,184
Patwa, tape-weaver,	29,860
Rajbhar, pigherds,	11,157
Rajput, land-owner,	3,027,400
Ronia, trader,	38,105
Setwar, cultivator,	36,498
Sonar, goldsmith,	247,485
Taga, landholder,	101,615
Tamoli, betel-leaf seller,	209,775
Tharu, cultivator,	27,172
Teli, oilman, grocer,	685,123
Others,	1,981,690
Muhammadans—	
Gujar,	39,858
Jat,	10,401
Mewati,	26,666
Rajput,	122,055
Taga,	26,070
	225,050

Each of these castes has a history, but the limits of this work preclude notices. The Arakh, Bhar, and Cheru, now small broken tribes in very humble avocations, were dominant even since the Muhammadan times. The Chamar aboriginals have largely adopted the Satnami monotheism, and the Taga or Tyagia claim to have been cultivators of the lands before the Jat settled.

The *Gujar*, now a predatory race, once ruled, and gave their name to Gujerat.

The *Kshatriya*, in Oudh, are the chief land-holders. About 160 talukdars hold under direct grant from the British Government, and are entitled to seats in the viceregal darbar; and the first 45 or so of these claim the royal Hindu titles of raja, rana, or rao. They follow only arms or agriculture, or serve as semi-military personal retainers, peons, overseers, bailiffs, rent collectors.

The *Khassia* generally call themselves Rajputs. They are the oldest inhabitants of Garhwal, in which district they form half the pupulation. They are peculiar to the hills. Their name is derived from Khusdes, the ancient name of Kamaon.

Bisnoi or Beshnoi, a sect of Hindu religionists who worship only Vishnu. They were originated about A.D. 1460 in Bikanir, in Marwar, by reformer named Jhamji. They do not now make any converts, are exclusive as to their food abstaining from eating food touched by any other sect. Until recently they saluted each other with the Muhammadan greeting, Us-salam alaikum, and had such Muhammadan names as Ghulam Muhammad, Faiz Muhammad. They bury their dead.

The Bisnoi of Garhwal are turbulent, and disliked by the other inhabitants of the N.W. Provinces. The caste is common in the Moradabad district, where they combine Muhammadan and Hindu customs. They are there a quiet, industrious people, generally carpenters.

Mewati, a predatory tribe of cultivators who seem to have come from somewhere in Rajputana, and are found here and there along the S.W. borders of the N.W. Provinces of India. The Alwar country near Dehli seems of late to have been called Mewat, but they extend farther east than the Gujar, and in Malwa are common as regular soldiers and depredators. They are supposed to be mostly Muhammadans.

Boksa, a forest tribe in Western Rohilkhand, and in part of the forests or Siwalik Hills of Dehra Doon and Terai. They are of short stature and spare habits, with broad faces, depressed noses, prognathous jaws, thick lips, very scanty beard and moustaches, but not darker in colour than the ordinary Hindus of the country. They are reputed to be skilful in witchcraft. They are

very ignorant and indolent, but simple, inoffensive, and good-humoured. They have a scanty, rude cultivation, and collect forest produce and wash for gold, but they have no caste, eat almost anything. They have no separate language. They are supposed to be dying out. They are said to enjoy a wonderful immunity from the effects of malaria.

In the Terai they claim to be Powar Rajputs, and claim to be addressed as Thakur. They seem to have come from Dharanuggur about the 11th century. Tharu or Tarooa state they came from Chitore, after its third sack, that by Akbar about A.D. 1560. They rear fowls.

The Boksa and Tharu are alike superstitious, truthful, addicted to drink, not very chaste. Both are to an extent migratory, exhausting the land, and moving to fresh soil. They frequently consult their medicine men, who are called Sarara.

The *Gaharwar* and Dungra are other occupants of the Terai.

Atith, Saiva sectarians, followers of the doctrinal teachings of Sankaracharya (A.D. 850). He had ten disciples, each of whom founded a house, and are known as the Dasnami; 6½ houses have since dissented (atitha, passed away from worldly cares); the remaining 3½, known as the Dandi, because they carry a staff, adhere to Sankara's views.

The *vagrant*, mendicant, and predatory races are the badhak, bawari, bhand, bhantu, bharthi, bhat, bhaurupia, birjbasi, dalera, gandhila, gujar, haparia, khangar, nat, natak, sunoria.

The *forest* and hill tribes and fowlers are the bahelia, bandi, bhotia, boksa, chuyar, dhanuk or dosadh or darkar, dom, dungra, gaharwar, khunkar, passiah, raji or rawut, and sansia.

The *religious* mendicants are the aghora, atith, bishnoi, fakir, gosain, joghi, paramahansa, sanyasi, and satnami.

Infanticide of female children has been a crime amongst several of the races of the south and east of Asia from prehistoric times. Muhammad denounced it among the Arabs; and in the 19th century, in India, the British have striven to put it down. It has been practised by the Bedi amongst the Sikhs, by Rajput races of Rajputana, by the Jharijah Rajputs of Cutch, by the Toda mountaineers of the Neilgherries, but notoriously to a large extent by Rajput tribes in the N.W. Provinces and Oudh, and the Government of India published Act viii. of 1870 for its suppression. In this Act, certain tribes, chiefly Rajputs, were proclaimed. The total number of persons belonging to castes suspected of the practice is 1,247,503, but the average number 'proclaimed' amounts only to 357,419. These latter have been carefully watched for the last five years, and a census taken annually. The present percentage of females is 39·3, and of males 60·7, while the general return for the whole population shows 48 per cent. of females. The present census shows an increase in the proportion of females, but this is due, Mr. White says, to the superior accuracy of the present report, and not to the suppression of the practice of female infanticide. There is little beyond surmise known as to the laws regulating the production of the sexes; but it has been suggested (Report, p. 45) that in the N.W. Provinces and Oudh more boys are begotten than girls, and the following are the births registered among the proclaimed castes:—

	Male.	Female.	Total.
1875, . .	8,701	7,914	16,615
1876, . .	8,893	8,539	17,432
1877, . .	8,722	8,304	17,026
1878, . .	5,838	5,504	11,342
1879, . .	7,830	7,295	15,125

Also, the 1881 census report gives the males and females of 193 castes in the N.W. Provinces and Oudh, 164 of whom had more males than females.

It is not solely among the proclaimed castes of this province that females are fewer than the males; all the races and sects have fewer women:—

Races.	Male.	Female.	Total.
Hindus, . .	19,813,098	18,240,296	38,053,394
Jains, . .	42,819	37,138	79,957
Sikhs, . .	2,776	868	3,644
Buddhists, . .	61	42	103
Brahmas, . .	4	2	6
	19,858,758	18,278,346	38,137,104
Muhammadans,	3,022,445	2,900,441	5,922,886
Christians, .	31,208	16,456	47,664
Jews, .		44	101
Parsees, .		26	114
	3,053,798	2,916,967	5,970,765
Grand total,	22,912,556	21,195,343	44,107,869

It is only in the Madras Presidency and Bengal Province that the females exceed the males. Ratio per 1000 to total population:—

	Males.	Female		Males.	Female
Madras, .	495	505	Central Provinces, .	505	495
N.W. Provinces,	519·5	480·5	Bengal, .	498	502
Berar, .	516·5	483·5	Panjab, .	542·5	457·5
Bombay,	516	484	Hyderabad,	508	492
Burma,	533	467	England and		
Coorg, .	563	437	Wales,		
Assam,	513	487	1881, .	486	514

The census report (p. 37 par. 46) puts forth the opinion that the increase in the proportion of females at the 1881 census is not due to the decrease of female infanticide, and this seems a legitimate deduction from the following details:—

Under ten years old.

	Males.	Females.	Percentage of Females.
Suspected clans, .	946,591	833,565	46·8
Rest of population,	4,929,176	4,699,254	48·8
Total population,	5,875,767	5,532,819	48·4

Above ten years old.

Suspected clans, .	3,004,682	2,512,665	45·5
Rest of population,	14,032,107	13,149,829	48·4
Total population,	17,036,789	15,662,494	47·9

In the 1872 census, it is supposed that there had been a large concealment of girls under twenty years of age. In 1872, the girls under ten were 4,135,097, and in 1881 they numbered 4,094,684, a decrease of 40,469.

In the feudatory province of Garhwal, the males are returned as 170,755, and the females 174,874.

RAJPUTANA, a region to the west of Hindustan, is chiefly ruled by feudatory princes, mostly of Rajput descent. These have twenty states, with an area of 129,750 square miles, and a population of 10,102,049. The British portion, consisting of Ajmir and Merwara, has an area of

2710 square miles, and a population of 460,722, the totals being in area 132,460 square miles, and population 10,729,114, or 80·9 to the square mile. The country is little productive; one part of it, indeed, Marwar, embracing the Indian desert, takes its name from Mri, death; and the people mostly consist of races who have been driven from the more open plains, and found shelter in this inhospitable region.

Rajputana lies in the centre of a circuit all round the edge of the more compact mass of the Jat people,—from the Salt Range, through the Northern Panjab and adjoining hills, to Rohilkhand, Oudh, and the Centre Doab, thence by Bundelkhand, through Sindia's territory, Malwa, Mewar, Gujerat, and Kattyawar, into Lower Sind. They are not found in any number to the north of the Salt Range, nor are they in any of the hill country west of the Jhelum. A large proportion of the Rajputs scattered about the Eastern Panjab, Cis-Sutlej territory, and Dehli districts, are now Muhammadans, as are occasional Rajput villages all over Hindustan, and a good many Rajput rajas, their conversion having been influenced by the Moghul emperors. But east of Dehli, conversion is quite the exception. A small Rajput tribe, called Jan-jua, now Muhammadans, is, however, found about the Salt Range.

The North-Eastern Panjab and Cis-Sutlej districts seem to have first been a Brahman, then a Rajput country, and subsequently advanced upon by the Jat. The Jat country is just such as would be occupied by a large stream of people issuing through the Bolan pass, in lat. 28° or 30° N., and the Rajputs are ranged in a semicircular form around the eastern and northern and south edge of the Jat area, the mass of them occupying the richer valley of the Ganges. Mr. Campbell's conjecture is that the Rajput are an earlier wave from the same source as the Jat, who came in by the same route, have advanced farther, and been completely Hinduized; while the Jat have come in behind them.

From Mahmud to Aurangzeb, the Indian conquerors were contented with the nominal subjection of the hardy Rajput tribes of Rajputana, among whom military enthusiasm, grafted on religious principles, was added to strength and agility of body. Sir John Malcolm, writing of them, remarks that it was not easy to subdue Rajputs. Such men, though broken by their own dissensions, before and after the Muhammadan conquest, into a thousand petty states, almost every one of which was an object of contest between brothers, yet still every individual was a soldier who preferred death to disgrace, and though ready to be the servant, scorned to be the slave of any monarch upon earth.

Akbar allied himself with the Rajput royal houses, and for a hundred years, high civil and military posts were bestowed on them. The most brilliant conquests of Akbar, Jahangir, and Aurangzeb were by their Rajput allies. But the Rajputs were alienated from the Moghul family by the bigoted conduct of the emperor Aurangzeb, who reimposed the poll tax on Hindus which Akbar had abolished, and by his destroying Hindu temples everywhere. Aurangzeb alienated the sympathies of a race who, when rightly managed, had encountered at command the Afghan amidst the snows of Caucasus, and made the furthest Chersonese tributary to the empire c Assam. Raja Maun of Jeypore took Arakan Orissa, and Assam. Raja Jeswunt Singh of Mar war retook Kābul for Aurangzeb, and was rewarde by poison. Raja Ram Singh Hara of Kotah mad several important conquests, and his grandso Raja Eswari Singh and his five brothers were lef on one field of battle.

The love of country and the passion for possess ing land are strong throughout Rajputana. Whil there is a hope of existence, the cultivator cling to the bapota; and in Harauti this amor patriæ i so invincible, that, to use their homely phrase 'he would rather fill his part in slavery there, tha live in luxury abroad.' There are, however amongst the Rajputs 84 mercantile tribes.

Rajputs have been little prominent since th early part of the 18th century. Besides the con tinuous strivings amongst their own tribes, follow ing the crushing defeat of Prithi-raj, A.D. 1193 by Shahab-ud-Din, for several hundred years they had to sustain the shocks given by the Muham madan invaders. On the decline of the house o Timur, they became the dupe and then the prey o the Mahrattas, and they were only saved from utter annihilation by becoming the loyal allies o Great Britain. The armies they furnished hav exhausted the material, infanticide has diminished their numbers, and their wives, shut up like those of Muhammadans, give no aid in agriculture Misfortune and compulsory inaction has led to the excessive use of opium, and the 19th century has heard nothing of the independent chiefs of this once warrior race.

Of late years, Rajputs, as they have become under Brahmanical influence, have more and more strictly been denying themselves animal food and the flesh of the wild boar, and the greatest number are vegetarians, subsisting upon farinaceous food, with vegetables, pulse, ghi butter, and milk.

The names of the states are Ajmir, Banswara Bhurtpur, Bikanir, Bundi, Dholpur, Dungerpur, Jeypore, Jeysulmir, Jhallawar, Jodhpur Kerrowlee, Kishengarh, Kotah, Lawa, Merwara Oodeypur, Partabgarh, Shahpura, Sirohi, Tonk and Ulwar. Ajmir and Merwara are British territory, Bhurtpur and Dholpur are ruled by Jat princes, and Tonk by a Muhammadan chief, the other seventeen states being under Rajput sovereigns. But Rajputs nowhere form a majority of the population, though they are strongest numerically in the northern states and in Mewar.

At the census of 1881, the religions of the people were found to be—

Hindus,	8,839,243	Sikhs,	
Muhammadans,	861,747	Parsees,	
Christians,	1,294	Others,	21,077
Jains,	378,672		

And the castes were found to be—

Brahman,	906,463	Chamar,	567,098
Rajput,	479,554	Dhakar,	75,008
Mahajan,	634,440	Sondhia,	43,740
Kayasth,	19,118	Balal,	61,530
Gujar,	402,709	Other Hindus,	3,344,167
Jat,	425,598	Sikh,	9
Ahir,	130,653	Parsee,	7
Mina,	427,672	Muhammadan,	861,747
Bhil,	105,870	Meo,	45,946

The Khanzadah, in Ulwar (Alwar) and North Jeypore; the Kaimkhani in the same neighbourhood; the Meo, who are an indigenous tribe,

ery strong in Ulwar and Bhurtpur; the Merat ction of the Mairs in Mairwara; the Sodhas of ajput descent, in the far west, towards the orders of Upper Sind, have adopted Muhamadanism, but continue to regulate their arriages by their own rules of genealogy and onsanguinity.

The *Baori* and Moghya are predatory tribes, the rmer north of the Aravalli, and the latter south f that range. They are professional thieves.

The *Bhat* or Bards are a prominent race, the enealogists of the Rajput races.

Jaina are of Rajput descent, though now financiers and merchants. The Gujar, Jat, Mina, and Mair are the principal agriculturists.

Rajputs have spread into every part of British ndia, but wherever found they claim to belong o certain tribes and clans, and, like the people of Europe and the Mahrattas of the Dekhan, they ave also surnames, though the families are too xtended for these names to be utilized.

Rajputs claim to have three origins,—(1) the escendants of the Suryavansa or Solar race, the ncient dynasty of the Sun; (2) the descendants f the Chandravansa or Indravansa or Lunar race, ne ancient dynasty of the Moon; and (3) the gnicula, the family initiated at a sacred fire said o have been kindled on Mount Abu by the saint gastya. From these three, thirty-six primary oyal races are said to have sprung, of whom the ollowing may be enumerated:—

1. 36 Solar or Suryavansa dynasties.
   1. Grahilot or Gehlot, 24 branches. The Sesodia is the most distinguished. The rana of Udaipur is a Grahilote.
   2. Rahtor, descended from Rama by Kusa, his second son, 24 branches. The raja of Jodhpur or Marwar belongs to this tribe.
   3. Kachwaha, also sprung from Kusa, 12 branches. The raja of Jeypore is of this tribe.
2. Yadu or Chandravansa or Jadu or Lunar dynasty, sprung from the moon.
   1. Yadu or Jadu, descendants of Krishna, 8 branches. The Jharija and Bhattya in Cutch and Jeysulmir are the most powerful.
   2. Tuar. Vikramaditya was a Tuar.
3. Agnicula or Fire race have four tribes and 87 branches, viz.—
   1. Pramara, west of Malwa and the desert of the Indus, 35 branches. The Mori, Soda, Sankla, Khair, Umra, Sumra (now Muhammadans), Vehil, Mairawat, Balhar, Kaba, Omata, Rebar, Dhundia, Sortla, Harir little known.
   2. Parihara, 12 branches.
   3. Chalukya, of great power in the 11th, 12th, and 13th centuries, 16 branches. The Bhagel branch is their chief representative.
   4. Chauhan or Chaumana, 24 branches. The Hara of Harawti, the rajas of Kotah, Bundi, the Khichi of Raghar, the Deora of Sirohi, the Sonagarba of Jhalore and Pawaicha of Pawaghar.

The unnamed progenitors of the four Agnicula ribes of Rajputs—the Chauhan, Chalukya, or olunkee, Puar or Pramara, and the Parihara—eem to have been invaders who sided with the Brahmans in their warfares, partly with the old Chatri, partly with increasing schismatics, and artly with invading Græco-Bactrians, and whose arlike merit, as well as timely aid and subsequent onformity, got them enrolled as 'Fire-born,' in ontradistinction to the Solar and Lunar families. he Agnicula are now mainly found in the tract f country extending from Ujjain to Rewah near enares, and Mount Abu is asserted to be the lace of their miraculous birth or appearance.

Colonel Tod was inclined to regard the Agnicula race as of Scythic origin, but Mr. Elphinstone (p. 229) points to the difference in their physical appearance and habits from the Rajputs.

The seat of the Pramara or Puar was amongst the Vindhya, at Ujjain, Dhar, and Mandu. Vikramaditya, the champion of Brahmanism, was, according to common accounts, a Puar Rajput.

There are several races in Rajputana on whom the surrounding civilisation has made no apparent impression.

The *Bhil*, an aboriginal race, are entered as numbering 105,870. They are in clans under chiefs, inhabiting long stretches of wild and hilly tracts, where they live almost independent, holding together under their own petty chiefs and headmen, paying irregular tribute or rents to the chief of the state, or to the Rajput landowner upon whose estate they may be settled. There are also, of course, a good number of Bhils, as of all other half-tamed tribes, who have mixed with the general population. At the 1881 census they rose in rebellion on the attempt to number them; but their numbers have been supposed to be, in Udaipur, 51,076; Partabgarh, 270; Dungarpur, 66,952; Banswara, 18,045.

The *Dadu Panthi* sect, who have their headquarters in Jeypore, have the armed Naga as one of their sections; the *Ram Sin'h* sect prevails in Ulwar and Mewar, and have their headquarters at Shahpura.

Mair have been supposed to have at one time dwelt in the Upper Panjab and in the Indus valley, and they have been conjectured to be a relic of the Med, an Indo-Scythic tribe that crossed into India from Central Asia.

Mewat.—The fierce and turbulent mountaineers of Mewat, though their frontier was within 25 miles of Dehli, were never entirely quieted until the establishment of the British Government.

The Parihara *Mina* until recently carried out the destruction of their female infants. They traced the practice to an injunction of a woman who became a sati, also to a curse of Mahadeva. To be a father-in-law is to ensure contempt, and he is looked upon by the bridegroom as an inferior. Their daughters are, however, eagerly sought after by the other tribes of Mina. They worship Siva as Mahadeo, whom they usually designate Baba Adam, father Adam. The Mina are undoubtedly aboriginals.

One of the Mina race puts the tika of investiture on the forehead of the Rajput raja of Nerwar. It is of blood drawn from the face of another Mina.

The tika of investiture put on the forehead of the rana of Udaipur is of the blood of a Bhil.

The Hinduized chiefs of Central India have the tika of investiture of the blood of a pure Kol; and the head of the Cheri, formerly a great tribe, but now a few families, is invested with the blood tika of the non-Aryans and the title of raja.

Rajput women, even more so than the Musalmani, are kept strictly concealed, termed gosha or pardah nashin, rarely appearing abroad, and even then, on the necessity occurring, carefully veiled. A woman exposing her face is understood to proclaim herself immoral. They are, as a rule, entirely uneducated; but occasionally a queen or the wife of a Thakur may have a smattering of Hindi. Many of them drink spirituous liquors, and most of them indulge freely in tobacco and

opium, the latter drug being given even to infants. They possess great influence over their husbands, and evince the deepest interest in all that redounds to their husband's name and fame. Family pride with them appears the chief motive of every action, and they are at all times ready to brave danger, even to sacrifice their lives, in support of it. This spirit has on occasions led to their affording examples of daring which have placed them as high in the songs of the bards as their fathers and husbands, but at others has led them into long-continued family quarrels, the wives being in constant dispute with each other.

Their daughters are married to men of the best tribes, and their widows are not permitted to re-marry; and it is the point of honour as to their daughters' marriages, that led to the practice of infanticide. Their practice is not to marry into their own but into another tribe, and this has assimilated the tribes to each other. A marriage ceremony is not considered completed until 'teeag' or distribution of presents to charuns and bards has been made, which formerly were disgracefully high.

The Rajputs were long notorious for encouraging their widows to immolate themselves as sati, with the dead bodies of their husbands, and there are many chattri or domed cenotaphs erected, where chiefs or men of mark have been burnt after death, often with their wives and female slaves.

Several of the tribes were notoriously guilty of destroying their female infants, and this criminal tendency has not, it is supposed, been eradicated. At the 1881 census, in every one of the twenty-two States the males are in excess of the females, the totals of their numbers being 5,710,337 males and 4,852,434 females.

Rajputs are little advanced in high education, though the celebrated astronomer Jye Singh earned a European fame.

Some of the tribes follow the Scythic custom of adopting the names of animals as the titular appellations of the clans. The Sesodia have their designations from Sissu, the hare; the Lunri are the fox; the Kachwaha, the tortoise; the Gurgbansi and the Langa are the wolves.

The better known of the tribes and clans are —

Agarwal.	Dahuna.	Kaim-khani.	Rajwar.
Agnicula.	Dhakara.	Kamara.	Rangar.

The *Ajmir* and *Merwara* provinces are un British jurisdiction, although parts of Merwara belong to the Marwar State and part to that of Mewar. The area is 2710·68 square miles, and the population 460,722, of which number 57,309 persons are in British Merwara, 5611 are in Marwar Merwara, and 38,514 in Mewar Merwara. Mer means a hill, and the saying is,—Mer aor mohr, ūnché pār rāzi hain,—Mer and peafowl love the heights.

Ajmir city in 1881 had a population of 48,735 souls. In Ajmir villages three or four families live together in one house. In towns, particularly in Ajmir city, families differing from each other in caste and connection are seen living in separate compartments in the same enclosure, and three or four strangers take a house jointly.

Jain.—The principal *mercantile* tribes are the Agarwala, Bija Bargi, Khandelval, Mahesri, Oswal, and Saraogi, in all 39,641 in number. The head priests or Sri Paj of the Saraogi Digambara Jains are celibates, and are greatly reverenced. The Swetambara head priests are the Jati. They carry a stick, dress in white or yellow, some of them marry.

The Jati of the Dhundia, a sect of the Oswal tribe, are ascetics, both male and female. They seldom wash their bodies, do not shave the head, and keep their mouth covered with a cloth to prevent incurring the sin of swallowing minute insects. The Tera-panthi are a like sect among the Saraogi. Both sects abhor the killing of animals.

The Digambara neither eat nor drink when the sun is below the horizon. The Swetambara are less strict.

The aboriginal castes and tribes as under

	Ajmir.		Total.
Mer, . .	15,764	17,182	32,946
Merat Gorat,		7,334	7,711
Barar Rawat,	1,636	18,400	20,036
Bhil, . .	4,760	1,789	6,549
Mina, . .	4,389	35	4,424
Chita, .	86	46	132
Total, . .	27,012	44,786	71,798

The Chita and Barar, according to tradition (Tod, i. p. 680), are descended from Jodh Lakhun, son of Prithi-raj, and a Mina girl who had been seized in a marauding expedition, whom he married, supposing her to be a Rajputni. Discovering her race, he sent her away, and her two sons, Ahul and Anup. One day, while resting beneath a banyan tree (bār), the brothers prayed that, as a sign, if their race was to continue, the trunk might rend asunder, and the event is handed down in a distich—

'Charar se Chita bhayo, aor Barar bhayo bār ghat,
Shakh ek sé do bhayé; jagat bakhāni jāt.'

'From the rending noise, the Chita are called, and the clan Barar from the splitting of the bar tree.
Both are descended from one stock; the world has made this tribe famous.'

CENTRAL INDIA is occupied by 69 Native States or semi-independent holdings. The rulers of Bhopal and Jaora are of the Muhammadan faith, the other chiefs profess some form of Hinduism. These states are spread through two irregular and detached tracts stretching from west to east across the middle of the continent of India. A straight line drawn from Nemuch, in long. 74° 54′ 15″ E., to the capital of the Bhopal State, in long. 77° 25′ 56″, would pass through portions of Gwalior, Jaora, Gwalior, Jhallawar

(Rajputana), Gwalior, Dewas, Narsingarh, Rajgarh, Gwalior, to Bhopal. These Native States are in political relation with the Government of British India, conducted by an agent to the Governor-General for Central India and his assistants.

The total area of Central India is 75,229·64 square miles, with a population of 9,261,907 souls, or 123·12 persons per square mile. 94 per cent. profess some form of Hinduism, 5 per cent. Muhammadanism, and Jain, Parsee, Christians, Sikhs, and Jews form the other 1 per cent.

Hindus,	7,800,396	Sikhs	1,455
Muhammadans,	510,718	Aborigines,	891,424
Jains,	49,824	Jews,	38
Parsee,	916	Unspecified,	71
Christians,	7,065		

The population can best be shown in detail by arranging them as Hindus and Aborigines—

A. Hindus, viz.—

	Males.	Females.	Total.
Brahman,	515,385	446,608	961,993
Rajput,	436,349	367,017	803,366
Ahir,	129,161	117,215	246,376
Balâi,	86,447	83,945	170,392
Banya,	152,553	134,125	286,678
Chamar,	566,038	510,911	1,076,949
Gujar,	183,884	153,582	377,466
Kach'hi,	93,671	89,393	183,064
Kunbi,	86,286	81,862	168,148
Teli,	132,617	117,635	250,252
Others,	1,747,627	1,568,085	3,315,712

B. Aborigines, viz.—

	Males.	Females.	Total.
Bhil,	111,256	105,766	217,022
Gond,	209,066	204,536	413,602
Mohia,	2,665	2,426	5,091
Mang,	739	770	1,509
Mhar,	1,194	1,194	2,388
Mina,	26,562	23,273	49,835
Kol,	91,646	95,669	187,315
Deswuli,	7,823	6,839	14,662
Total Aborigines,	450,951	440,473	891,424
Grand total,	4,882,823	4,379,084	9,261,907

The proportions thus being 87·23 females to 100 males.

The *race* descent is various in the nations, even in the chiefs. The rulers of Rewa, Sohawal, and Koti are Baghel. Bundela princes rule in Ajaigarh, Bijawar, Charkhari, Dattia, Panna, and Urch'ha, and other less important though powerful families in Bundelkhand are Bundela. The maharaja of Urch'ha is the acknowledged head of the Bundela tribe.

The chiefs of Rutlam, Sailana, and Sitamau are Rahtor Rajputs, and have a common ancestry, claiming descent from the Jodhpur family. Khichi and Umat Rajputs are in the west from Bundelkhand, and there are small scattered numbers of Parihar, Kachwaha, and Sesodia Rajputs, with Puar Rajputs, in Dhar and Dewas.

Rewa, with an area of about 10,000 square miles, has no roads or means of internal communication.

The *Jaina*, 49,824 in number, are a wealthy commercial people, dwelling in towns, and exercising much influence over their fellow-townsmen in all matters bearing on the sanctity of animal life. Instances have occurred of their depriving a whole community not only of animal food, but also of clean clothes, during periods sacred to their special faith. They admit of proselytes from the higher Hindu castes.

The *Chamar* are deemed unclean; to touch them is pollution, and they are rarely allowed to reside within the village.

Baghelkhand and Bundelkhand in the eastern parts of the region include in their population a considerable number of Gond, Kol, and semi-independent Baghel.

The *Bhils* in Central India are in the S.W. corner of the Agency.

Kol of Central India occupy the hilly country of Chutia Nagpur, Mirzapur, Rewa, and Panna. Kol wives eat with their husbands; the Kol are passionately fond of dancing, which they cultivate as an accomplishment. They have a peculiar dread of witches, and are very superstitious. The custom of marrying by capture is current amongst them. The young man waylays the girl he has selected to carry off, and brings her to his house. Her relations soon appear, but are satisfied by presents of cows and goats.

The Moghia, 5091 in number, correspond to the Banrior of Rajputana. They are a predatory race, for whose reclamation a special officer has been appointed by Government.

Languages, 19 in number, are spoken in cantonments by 90,811 persons, chiefly Urdu or Hindustani (71,560), Mahrati (6011), English (5646), and Marwari (3023). The rest are Arabic, Bengali, Afghani, Baluchi, French, German, Gujerati, Hindi, Canarese, Panjabi. Mahrati is the court language at Indore, Gwalior, Dewas, and Dhar, but at the other states Hindi and Rangri.

CENTRAL PROVINCES form an administrative division of British India, under the jurisdiction of a Chief Commissioner, lying between lat. 17° 50′ and 24° 27′ N., and long. 76° and 85° 15′ E. The area is 113,279 square miles, and the population 11,548,511. To the north extends the Vindhyan table-land, which sheds its waters northwards into the valley of the Ganges; south of this are the valleys of the Nerbadda and the Tapti; farther south are the extensive highlands constituting the Satpura table-land: and still farther to the south extends the great Nagpur plain, formed by the valleys of the Wardha and Wain-Ganga.

In this expanse there are 18 British districts,—Balaghat, Baitul, Bhandara, Bilaspur, Chanda, Chindwara, Dumoh, Hoshangabad, Jubbulpur, Mandla, Nagpur, Nimar, Narsingpur, Raipur, Saugor, Sumbulpur, Seoni, and Wardha. Enclosed in these are the following 15 Feudatory States, comprising about a fourth part of the entire area, with a population of 36 to the square mile:—

	Area.	Pop.		Area.	Pop.
Bastar,	13,062	196,248	Makrai,	215	16,764
Kalahandi,	3,745	224,548	Chhuikhadan,	174	32,979
Raigarh,	1,486	128,943	Kanker,	639	63,610
Surangarh,	540	71,274	Khairagarh,	940	166,138
Patna,	2,399	257,959	Nandgaon,	905	164,339
Sonpur,	906	178,701	Kawardha,	887	86,382
Raira Khol,	833	17,750	Sakti,	115	22,819
Bamra,	1,988	81,286			

Races.—The territory is peopled by Aryan and Turanian races. The Dravidian and the Kolarian, two great branches of the Turanian family, are believed to have entered India from the north, at different points, and, when pressed southwards, they decussated and intermingled in the hilly forest tracts of these Central Provinces. Few of their dialects are cultivated, and several of their clans are little above barbarism.

In the entire province, 6,058,300 speak the Hindustani, and 1,967,881 speak Mahrati; but

amongst the Dravidian clans, 967,502 speak Gondi, and 588,914 of the Kolarian branch speak the Munda tongue. The more open parts of the country have been occupied by intruding civilised races, for 16 Indian tongues are spoken, viz. Bengali, Bhuin, Bygāni, Canarese, Dhangar, Goanese, Gujerati, Kaikari, Kashmiri, Malealam, Uriya, Panjabi, Sindi, Tamil, Telugu, and Yerkal; as also 7 Asiatic non-Indian tongues and 10 non-Asiatic. The cultivated languages are the Hindi, Urdu, Mahrati, Ch'hattisgarhi, Uriya, Telugu, and Gondi; and the 11 unwritten tongues, Gondi, Gayeti, Rutluk, Naikude, Kolami, Madi or Maria, Madia, Kuri or Muasi, Keikadi, Bhatrain, and Parja.

The races who have most numerously immigrated are the Brahmans and Rajputs. The former number 359,886, and the latter 212,515. By immigrants from all the surrounding races, the territory has over five hundred castes, omitting the washermen, barbers, potters, and similar classes, the more important being as under:—

Agharia,	19,539	Gosain,	27,533

Rajputs are here whose ancestors arrived before Hinduism was established. Amongst th Rajput clans there are portions of nations an tribes, with whom, up to the present day, Brahman ism has never been accepted; and many of th non-Aryan races are preferring the theistic doc trines of Nanak and Kabir.

The Rajputs from Malwa seem to have pushe their conquests into the country, and intermarrie with them, and their descendants are still know as Rajputs or Gond Rajputs. They establishe governments, one of which ruled the Narmad valley, and had its capitals at Mundala and a Garha near Jubbulpur. It was founded by Jad Rai, who succeeded his father-in-law Nagdeo, th Gond raja of Garha (A.D. 358). Mundala was con quered by his descendant, Gopal Sa (A.D. 634) Sungram Sa, the 47th in descent from Jadu inherited only three or four districts in 1480, bu at his death, in 1530, he ruled over fifty-two Ferishta tells us that when Asif Khan invade Garha in 1563, Bir Narayan was raja. Hirdi Sa the 54th raja, built the temple at Ramnagar, nea Mundala; and Seoraj, the 59th, began to reign i 1742, when Balaji Baji Rao invaded the country A *second* kingdom had its seat on the southern slope of the Satpura Hills, at Deogarh in Chind wara, one of the rajas of which, Bakht Baland was either taken prisoner by one of Aurangzeb' generals, or visited Dehli of his own accord, wher he was converted to Muhammadanism, and the permitted to return to his country, where 'hi descendants,' says Mr. Hislop, 'though adherin to this change of creed, have not ceased t marry into Gond families, and hence the presen representative of that regal house is not only acknowledged by the whole race about Nagpur a their head and judge, but is physically regarde a pure Raj Gond.' A *third* Gond principality ha its capital at Kherla in Baitul, to which belonge the famous forts of Gawilgarh and Narnallah. In 1433, its raja, Narsingh Rai, who is represented as powerful and wealthy, was slain in battle by Hoshang Gori, king of Malwa, and Kherla taken. At a later date it appears to have become subject to Pandu Gauli, the raja of Deogarh, and continued so under his successors. Not far from Kherla we find a hill raja at Saoligadh, in Aurangzeb's time, who seems to have maintained his independence till swept away by the Mahrattas between 1760 and 1775. A *fourth* Gond kingdom was that of Chanda on the Wardha, which extended far to the east and south-east. The four dynasties arose before the ascendency of the Moghuls in India, and have left architectural and

other monuments of great interest. 'The principal architectural remains are at Mandla, at Garha near Jubbulpur, at Chauragadh near Narsingpur, at Deogarh near Chindwara, at Kherla near Baitul, and at Chanda.' There was a *fifth* Gond Rajput dynasty at Warangal or Orankal, in the Dekhan, to the south of the Godavery, which is said to have been founded by Kakati of the Ganapati family, about A.D. 1088. The kingdom became very powerful about the end of the 13th century, and the raja of Orissa, becoming jealous of his neighbour's power, solicited the aid of Ala-ud-Din, who sent an army in 1303, through Bengal, to attack Warangal, but his expedition failed. Malik Kafur was then despatched with 100,000 horse into the Dekhan, and, after a siege of some months, he took Warangal in 1309, and made the raja Ladderdeva tributary. In 1321 it was again besieged by Alif or Jema Khan, the son of Ghaias-ud-Din Taghalaq, but he was obliged to retreat with the loss of nearly his whole army. He returned, however, and in 1323 reduced the place and carried the raja prisoner to Dehli. It is said he was afterwards released and restored; at all events Warangal reasserted its independence in 1344, and assisted Hasan Ganga Bahmani in his revolt. From this time the Bahmani kings of Kulburga involved the native rajas in continual wars. Firoz Shah (1397-1422) especially obtained great successes over the raja of Kherla; and finally Amad Shah Wali took permanent possession of Warangal, forcing the raja to relinquish his ancient capital and flee northward across the Godavery, where he established himself in wild independence among the inaccessible forests. The Gond rajas still maintained their independence, however, and in 1513 we find them joining in a powerful confederacy on the side of Medon Rai against Muhammad II. of Malwa. At the close of the 16th century, Akbar reduced the western portion of Gondwana, but it was not till the middle of the 18th that permanent progress was made. About 1738, Raghoji Bhonsla interfered in a disputed succession in Deogarh, and secured half the revenues; but in 1743 the Gonds raised an insurrection, which Raghoji quelled, and annexed the principalities of Deogarh and Chanda to his own dominions; and in 1751-52 he took the forts of Gawilgarh, Narnalla, and Manikdrug, with the districts dependent on them. From this period large numbers of Mahrattas settled in these districts, and the Gonds became more restricted to the hills.

The great husbandmen and gardener races, the Kachi, Kolta, Kunbi, Kurmi, Lodhi, Mahdela, Mali, and Marar, number 1,531,900 persons, a seventh part of the population of the Central Provinces. They are all immigrants.

The *Kunbi* (451,712) came into the province from Poona, Kandesh, and Maharashtra generally. They are the oldest settlers, and, as in the Mahratta country, Kunbi has come to mean a farmer. They are the backbone of the agricultural community; they distinguish their origin as Mahratta Kunbi, Dekhani Kunbi, and Deskar Kunbi, and those who came from Berar were Mahratta horsemen who accompanied the first Raghoji.

The *Kurmi* are the cultivators north of the Kunbi, but to the south of the Rajput and Jat. They form the bulk of the population in the part of Manbhum near the Damuda river (Dalton, p. 157), and are a very industrious class of quiet cultivators in considerable numbers in all the central and eastern parts of the N.W. Provinces, and in Hindustan generally, and there attend to the finer garden style of cultivation much more than the Jat and Rajput, but, like the Jat race, are assisted by their industrious women, while the Kunbi women's industry has passed into a proverb: Bhale jat, Koonbin ki, K'hoorpi hat'h, K'het nirāwen apne pi ke sat'h.

The Kurmi have villages of their own, and are also spread in detached families or groups. Colonel Tod and Mr. Campbell consider them to be identical with the Kunbi, and to occupy from 16° to 23° or 24° N., and from the western frontiers of Gujerat to the countries watered by the Wainganga, the Middle Ganga, and upper streams of the Nerbadda. Very few of these became soldiers, and in the valley of the Ganges they are looked down upon as mere humble tillers of the soil. They are more numerous towards the Jubbulpur and Saugor territories, where they mingle with the Lodha. Thence westwards, as on both sides of the Nerbadda, in Malwa, where they meet the Jat, and throughout the southern borders of Hindustan, there are numerous Kurmi who speak Hindi. Those in Hindustan are darker and less good-looking than Brahmans and Rajputs; but Mr. (Sir George) Campbell states (p. 93) that they are quite Aryan in their features, institutions, and manners. Other authorities, however, think that there is no similarity in the physiognomy of the Kurmi and Kunbi. The Kurmi subdivisions are—Jeshwar, Dhaviai, Patan, Adhonda, Patrihu, Ghora Charhao; but Sir H. Elliot says the seven subdivisions are usually enumerated as K'hureebind, Puturya, G'horchurha, Jyswar, Canoujia, Kewut, and Jhooneya. Wilson also says they have seven sections.

The *Ghameta* of Behar are a subdivision of the Kurmi. They form, says Elliot, a large class of the cultivators in the eastern and central portion of Bengal; few in Dehli and the Upper Doab.

The *aboriginal* races to a large extent (1,753,917) adhere to their peculiar religions, and their tendency is towards some form of monotheistic cult. A summary shows—

Hindus,	8,703,110	Aboriginal,	1,753,917
Sikh,	99	Religions–	
Kabirpanthi,	317,094	Parsee,	399
Satnami,	398,409	Jew,	63
Kumbhipathia,	913	Christian,	11,973
Brahmo,	7	Muhammadan,	285,687
Jaina,	45,911	Unspecified,	12
Buddhist,	17		

The *Kabirpanthi*, followers of Kabir, and their sect the Dadupanthi, have departed from Kabir's monotheistic teachings; the majority continue to worship their own gods, but invoke Kabir as an additional deity. The chief guru of the sect resides at Kawardha, in the Bilaspur district. The system of caste has been introduced, and all ceremonies are performed by Hindu priests according to established ritual.

The *Sad'h* mendicants, who beg from door to door in pairs, own allegiance to the chief guru at Kawardha. In the Central Provinces, most of the Kabirpanthi are married people, whereas in Northern India they are celibates.

The *Nanakpanthi*, and its sect the Nanakshahi, continue to follow the inculcations of Nanak.

The *Singhapani*, followers of Singhaji, a holy

man, have temples in the Hoshangabad and Nimar districts, which are frequented by people of all castes.

The *Satnami* sect was founded by Ghasi Das, a Chamar, between the years 1820 and 1830, amongst the people of his own tribe in Ch'hattisgarh. Their title means the True Name. They are theistic sectarians, with some rules as to diet and narcotics.

In the 15th century, in Rewah, Rohi Das, a Chamar, had put forward similar views, but that reform had not taken a permanent hold of the people. Ghasi Das has been more successful, and the entire Chamar tribe are carrying out his injunctions with more or less strictness. Their widows re-marry. They have no tradition as to the date of their arrival in this province, nor as to the cause of their being designated Chamar, meaning leather-worker. They have active, well-set figures, of a brownish colour, with features less marked than those of the higher castes. They are fair cultivators, industrious, tenacious of their rights, and numbers of them are in easy circumstances. Their women are strong and sturdy, and many of them are fair and comely. The Kabir-panthi and Satnami theists are being daily added to.

The *Dhami* sect of the Damoh and Saugor districts combine the reading of the Koran with the observances of the Hindu religion.

The *Aghori* are Hindu beggars, who extort money from people by eating loathsome substances in their presence.—*Tod's Rajasthan*, ii. p. 371; *Elliot's Supp. Glossary.*

GONDWANA.—Between lat. 18° 40′ and 23° 40′ N., and long. 78° and 82½° E., an area of 135,000 square miles, is a mountain and forest region which was known to the Moghul geographers as Gondwana. It was held by the Gond chieftains who were dominant until overcome by the Mahrattas in the early part of the 18th century, and they are now under the sway of the British in Jeypore, Berar, Chutia Nagpur, and the Central Provinces, and under the Asof Jahi dynasty of Hyderabad.

Gonds are amongst the most numerous of the tribes of the Central Provinces. They are found in the north, about Saugor and the source of the Hasdo. On the east they cross that river into Sirguja, where they border on the Kol, and are found with the Khand and Uriya in Nowagudda, Kareal, and Kharond or Kalahandi. In the south they form the mass of the population of Bastar, and a portion of the inhabitants of Jeypore in the Madras Presidency, and occupy the hills along the banks of the Godavery, about Nirmul, in the Hyderabad country; and on the west they are intermingled with the Hindus of Berar for 30 miles from the right bank of the Wardha, and along with the Kur extend along the hills both north and south of the Nerbadda to the meridian of Hindia, where they give place to the Bhil and the Nahal.

The Gonds divide themselves into twelve and a half castes, viz. Raj Gond, Raghuwal, Dadare, Katulya, Padal, Dholi, Ojhyal, Thotyal, Koila-bhutal, Koikopal, Kolam, Madyal, and an inferior sort of Padal as the half caste. Mr. Hislop says the first four, with the addition, according to some, of the Kolam, are comprehended under the name of *Koitor*, the Gond par excellence. This term, in its radical form Koi, is the name given also to the Meriah sacrificing tribes of Orissa, and to the wild tribes skirting the left bank of the Godavery, from Rajamundry to near the mouth of the Indrawati. The Koitor, as a rule, resent with no small vehemence the imputation of belonging to any portion of the Hindu community. The first three classes generally devote themselves to agriculture; the fourth includes those who have begun to conform to the Hindu religion and ape Hindu manners. The *Padal*, Pathadi, Pardhan, or Desai, called Raj Pardhan to distinguish them from the Mahrati-speaking half caste, who play on wind instruments of brass and spin cotton thread, are the religious counsellors or bhats of the upper classes. The *Dholi* are musicians, and a subdivision of them in jungly districts are employed as goatherds. The *Ojhyal* are wandering bards and fowlers. The *Thotyal* (*i.e.* maimed) or Pendabarya, 'minstrels of God,' are also called Matyal, because their songs are chiefly in honour of Mata, the dreaded goddess of small-pox. They make baskets also. The *Koilabhutal* are the third wandering caste, and their women are dancing girls. They follow their profession chiefly among the Hindus, it being reckoned disreputable by the people of their own race. The *Koikopal*, *i.e.* Gondi Gopal, are a settled class devoted to cow-keeping. The *Madya*, called Jhodia in Bastar, are savages on the Beila Dila Hills and in the remoter parts of Chanda; the only clothing the women wear is a bunch of leafy twigs fastened with a string round their waists to cover them before and behind. In this they resemble the Juanga to the south of the Kol country, the Chenchi near the Pulicat lake and to the north of Ellore; and till about A.D. 1830 a similar custom existed among the Holier near Mangalur. The *Kolam* extend along the Kand'hi Konda or Pindi Hills, on the south of the Wardha river, and along the table-land stretching east and north of Manikgad'h, and thence south to Danttanpalli, running parallel to the right bank of the Pranhita. They do not intermarry with the common Gond, but the one attend the nuptials of the other, and eat from their hands. Connected with the Gonds, though not included in the preceding classes, are the *Badiya* between Chindwara and the Mahadeva Hills, who have conformed to the Hindus in their language and some religious observances; the *Halwa*, pretty numerous in Bastar, Bhandara, and Raipur, who covet the distinction of wearing a sacred thread, a privilege, till recently, sold to those in Bastar by the raja; the *Gaiti* Gonds in Bastar who call themselves Koitor; the *Moria* Gond, who are the principal agriculturists in Bastar; and the *Naikude* Gond, inhabiting the jungles on both banks of the Pain-Ganga, and especially the tracts between Digaras and Umarkhed, and found about Aparawapet, and as far as Nirmul, who have adopted the Hindu dress, and will not eat beef, but they live by the chase, or cut wood and grass, and are a terror to their neighbourhood by their depredations.

Marriage.—The Gond of Nimar serve for a wife, but practise forcible abduction of the bride, with a mock fight. They are polygamic.

Dulha Deo is a favourite deity in Bundelkhand and amongst the Gond of Central India. It is the apotheosis of a bridegroom (dulha) who died in the marriage procession, and whose death so affected the people that they paid him divine

honours. The worship of Adonis is similar, and also that of Thammuz, whose annual wound in Lebanon allured the Syrian damsels to lament his fate.

The Gond of Mandla have the Lamjina Shadi, in which the betrothed lad serves an apprenticeship for his future wife. A Gond girl, however, may exercise her own will and run off with a man, but it is quite allowable for her first cousin or the man whom she has deserted to abduct her from the man whom she has chosen. The Shadi Bandhoni is a compulsory marriage. In the Shadi Baitho, a woman goes to a man's house. Widows re-marry either to a younger brother of their deceased husband, or to some other man.

The *leaf ordeal*, in Bastar, is followed by sewing up the accused in a sack, and letting her down into water waist-deep; if she manage, in her struggles for life, to raise her head above water she is finally adjudged to be guilty. Then comes the punishment. The extraction of the teeth is said in Bastar to be effected with the idea of preventing the witch from muttering charms, but in Kamaon the object of the operation is rather to prevent her from doing mischief under the form of a tiger, which is the Indian equivalent of the loup-garow.

Religion.—The Gond clans are generally spirit-worshippers; all of them bring the spirit back to the house. If a man of the Bygah of Raipur die, three days afterwards his son throws grain before a fowl. If it eat any of the grain, he believes that the spirit of the father has entered the house, and the fowl is sacrificed thereto. Similarly with the Binjwar of Raipur, on the third day the relatives take a pot of water to the village tank, and bring back the spirit of the deceased to his house, where he is thenceforward worshipped. The Bunjia bring the dead man's spirit back to the house in a pot of flour.

The Bilaspur Gond worship a raised earthen mound, under the name Bura Deo. They worship also a branch of the Saj plant, a species of euphorbia. Pharsapend, the god of the Gond of Chanda, is represented by pieces of iron in an earthen pot, and suspended from a tree remote from the village and from the high road.

BENGAL PROVINCE occupies the lower part of the valleys of the Ganges and the Brahmaputra, but gives its name to an administrative circle, with an area of 193,198 square miles, and a population of 69,536,861, part of the area, 36,634 square miles, comprising the hilly districts of Koch-Bahar, Hill Tiperah, the Tributary States of Orissa, Chutia Nagpur, and Behar.

In Sind, conquering and fleeing races have been stopped by the Indus, the ocean, and the Indian desert; in the Panjab, the further southern progress of advancing tribes has been barred by the many rivers, and by the fronting nations of Aryans, Jat, and Rajput settled in the Gangetic plain; and, similarly, many great tribes who are distinct from the races in other parts of India, and who keep aloof from each other, have been coöped up into the river and hill regions of Bengal. Amongst such may be mentioned the Babhan, Baori, Barui, Bhumia, Bhumij, Bind, Dosadh, Gareri, Kandara, Kapali, Karan, Khandait, Kharwar, Koch, Kol, Madak, Mal, Pan, Pod, Rajwar, Sadgop, Santal, and Tiar. There are even now in Bengal 38,319 Asiatics other than natives of India and British Burma.

Bengal is under the jurisdiction of a Lieutenant-Governor, and comprises the four provinces of Bengal proper, 76,406 square miles; Behar, 14,139 square miles; Orissa, 9053 square miles; and Chutia Nagpur, 26,966 square miles; with 36,634 square miles of Feudatory States. These great provinces are arranged for administrative purposes into nine revenue circles, each under a British officer; their respective areas, in square miles, and population, being as under:—

	Area—Sq. Mile.	Population.	Per Sq. Mile.
Bhagulpur,	20,492	8,063,160	393·48
Bardwan,	13,855	7,393,954	533·67
Chittagong,	12,118	3,574,048	294·94
Chutia Nagpur,	26,966	4,225,989	156·72
Dacca,	15,000	8,700,939	580·06
Orissa,	9,053	3,730,735	412·10
Patna,	23,647	15,063,944	637·03
Presidency,	12,029	8,204,912	682·09
Rajshahi,	17,428	7,733,775	443·76
Feudatory States,	36,634	2,845,405	77·67
All Bengal,	193,198	69,536,861	371·41

Religion.—The Census return for 1881 has classed the religions of these millions under ten headings, as under:—

Hindu,	45,452,806	Sikh,	549
Muhammadan,	21,704,724	Jain,	1,609
Aboriginal,	2,055,822	Parsee,	156
Buddhist,	155,809	Jew,	1,059
Christians, 19 sects,	128,135	Brahmo,	788
		Unspecified,	35,404

A remarkable feature in this summary is to be seen in the great numbers who profess Islam. The total number in all India of this persuasion is 50,121,585, and almost one-half of that number is in Bengal. Many of them are found in Eastern Bengal and the adjoining districts of Sylhet and Cachar, and in the two districts of Bogra and Rajshahi, and there they comprise the bulk of the cultivating and labouring class; while in Chittagong and Noakhali they follow a seafaring life. When they embraced this religion is not known, nor is it known from what race of aborigines they were converted, and few of them present any peculiar features. The Malik or Mullak of Behar are supposed to have been converted Rajputs. They cultivate land, and the wealthy possess considerable landed property, but generally they are employed as land-agents and peons. They use toddy freely, and are turbulent when under its influence. They do not intermarry with other Muhammadans; their marriage ceremonies are kept secret, and are conducted by women. Others of the Muhammadans retain portions of their former creeds. Many of the Bedi tribe of Bengal, for instance, have adopted Islam and are circumcised, but continue to worship the Hindu goddess Kali.

The *Hindus* have all adopted that caste system which is so intimately bound up with other parts of their religious and social life. The number of their castes is supposed to be about 1000, and the more prominent among them are the Adhikari, Babhan, Baidya, Bhat, Brahman, Deswali, Dogla, Ghatwal, Karan, Kayasth, Khandait, Khandwal, Kishnpachi, Mahanti, and Rajput. There are 265 minor castes, numbering 1,371,260 persons.

The *trading* castes, 963,159 in number, are the Banya, Komati, Muniyara, Nuniyar, Panwaria, Suratwala, and Vesya, but the nations of all parts of Asia, Europe, and America have here their representatives engaged in commerce.

The *pastoral* castes, in number 4,115,377, com-

prise the Bhartia, Gandhari, Garcri, Gordha, Gujar, and Goala.

Sex.—Bengal is, for India, in the unusual position of having more of the female than of the male sex, the respective numbers being 34,911,270 and 34,625,591, but they largely continue the Hindu practice of giving their young girls in marriage to full-grown or even middle-aged men. The necessary result follows in a great number of widows, and while there are in Bengal 1,375,217 widowers, there are 7,401,629 widows.

The *races* in the Bengal, Behar, Chutia Nagpur, and Orissa provinces in their mental and physical characteristics are widely dissimilar. The *Bengali* of Bengal proper lives amid a network of rivers and morasses. He presents a weak and puny appearance, but he is able to endure an amount of exposure to which a native of the Upper Provinces of Hindustan would soon fall a victim. In active pursuits, the Bengali is timid and slothful, but in intellect he is subtle and sharp-witted; and these qualities, combined with a plodding industry and a fondness for sedentary work, have enabled the race to obtain employment in all the offices of the Indian Government, and to rise to some of the highest judicial posts in the land.

On the south-west of Bengal are the *Uriya* people of Orissa. They are even more timid than the Bengali race. They are conservative to a degree, are wanting in enterprise, contented to follow the practices of their forefathers, and evincing a thorough dislike of all modern improvements. They are the most bigoted and priest-ridden race in British India.

On the north-west is the province of *Behar*. It is occupied by a hardier and more manly race, who speak Hindi, the language of Upper India, and are usually called the Hindustani. They are more decidedly Aryan than any other of the races found in Bengal. Even the semi-aboriginal tribes of Behar are of a better build and of a nobler mien than similar tribes in Lower Bengal.

Besides these three distinct nationalities, the Province of Bengal contains several tribes who have been but partially subjected to Aryan influence, and have hardly as yet come within the pale of civilisation. They are evidently of prior arrivals in the districts which they now occupy, but wave after wave of immigration has poured into India in bygone ages, and no one can say who were the real first comers. These tribes are found in masses throughout the province, and, though much mixed up together, they retain their customs and habits distinct. Besides these, there are within each nationality numerous tribes and castes of various origin and race, and in various degrees of civilisation. Amongst them, the Aryan Brahman, who traces his lineage back to the time when Kanouj was dominant, and the half-civilised Koch or Poliya of Dinajpur. These are probably the representatives of two perfectly different stocks; but even where no distinction of race can be traced, there are frequently found tribal subdivisions with ethnical peculiarities of their own.

The number of separate tribes and castes in the Bengal Province probably do not fall short of one thousand. If their respective subdivisions and septs or clans be taken into account, they would probably amount to many thousands. The aboriginal tribes alone are very numerous; while those for whom, though Hinduized to a certain extent, an aboriginal origin may be claimed would swell the number by a very large amount.

The *Babhan* (1,031,501) are a fine, manly race, who claim to be Sawaria Brahmans. They adopt from the Rajputs the honorific terms singh and rai; and take those of tewari, misr, and panre from the Brahmans.

Baisnab (568,032) is not a race, but a Vaishnava sect in Bengal, where the letter 'v' is changed into a 'b;' and they are also called Boistab. The sect claim to be followers of the tenets of Chaitanya. They are reformers, admit with initiatory rites all comers into their number; they have no separate caste distinctions, but have Brahmans as gurus. They abstain from animal food and from intoxicating liquors. Many are married, and the lives of those who are single are generally said to be immoral. The doctrines of Chaitanya enjoined the living heart worship of Vishnu (Bhagat or Bhakte), and the putting aside of symbols and ceremonies. Much of the finest portion of the poetical literature of Bengal almost wholly originated with the Baisnab sect.

The *Baori* (481,493) take the heron as the emblem of their tribe, and must not be eaten by them. The dog is sacred to them.

The *Bhar* afford an illustration of the vicissitudes of nations. At present are largely swineherds, but before the arrival of the Aryans they were rulers over the country from Rhotas to Rewah. The Bharata of the Puranas are supposed to have been Bhar, and the Amethia and Purihar Rajputs are said to be Bhar. The goddesses at Patna and Gya are supposed to have been erected by this race. Many stone forts remain in the country formerly ruled by the Bhar, and are said to have been their handiwork. The Bhar, the Cheru, and the Pasi have given their daughters in marriage to Rajputs.

Birhor (1539) are said to have, till lately, been given to cannibalism. A Birhor whose end was approaching would invite his clan to assemble to feast on his body.

Brahmans are a numerous and influential race, most of them of Aryan origin, but they are kept apart by social and clan distinctions, and are distributed throughout all India, in number 7,123,909, a third part of whom (2,754,100) being in Bengal. They are to be seen in every station in life, and in every avocation, as office-holders, learned men, fortune-tellers, guides to pilgrims, musicians, astrologers, beggars, funeral performers, cultivators, priests in all parts of the country, and even coolies in Nepal. Brahmans of Orissa have two great divisions, the Vaidik or learned class, and the Laukik who engage in business, in husbandry, as gardeners, and even as bricklayers.

Butia or Bhotea amongst the people of Hindustan is applied to any Tibetan. Many are employed in the N. of Bhagulpur as coolies. Butia of Bhutan burn their dead, and throw the ashes into the nearest stream. They are Buddhist and shamanist.

Chandal or Charal (1,576,076) are a hardy race, capable of enduring considerable exposure and fatigue. In the Ramayana, the powerful prince of Oudh is represented as courting the alliance of Gohurka, a Chandal chief. They are now, throughout all Northern India and Bengal, in a subordinate position, usually as labourers.

Cheru (15,665), like the Bhar, were once

dominant. They have a tradition that, starting from Moorung, they took Kamaon; thence they made themselves masters of Bhojpur. Subsequently (1611) they took possession of Chumparun, and in 1613 occupied Palamow. According to another legend, they ruled in Behar, whence they were expelled by the Sivira, who were again thrust out. They claim to be descended from the great serpent, an indication of their Mongoloid origin. They eat flesh. Their women assist in the field labours.

The *Dom*, in Bengal 343,246, and in all India 721,655, are widely dispersed throughout the northern parts of British India, dwelling outside the towns and villages apart from the settled population; they have several sections. They work as blacksmiths, carpenters, masons, weavers, are miners and musicians, fan and basket makers, gravediggers, and executioners. They serve Europeans as sweepers, cooks, and their women as ayah ladies'-maids. Dom women are famed for their good looks, and are notoriously unchaste. They perform in the women's apartments. The Hindus do not permit them to draw water from the same wells. They construct the funeral pyres of the Hindus, and supply the fire. They worship stones, to which they sacrifice fowls and goats.

Dosadh (1,138,651).—Nearly all in Bengal claim to be descendants of, and they worship as a demon, the astronomical umbra Rahu, the moon's ascending node, which they say causes eclipses.

Gaola in Bengal number 3,992,949. They are a pastoral race, following the same pursuits as the Ahir and the Gopa. They are as far south as Hyderabad in the Dekhan, but many have settled down in villages as dairymen, with large herds of cows and buffaloes. They are of strong, powerful frames. In Behar are turbulent, so greatly so, that Patna Gaola is a term of reproach.

Ghatwal (113,173).—Nearly all in Bengal are descendants of men who were employed in Behar in keeping the passes open.

Juanga, chiefly of Orissa, number only 529 in Bengal. Their women, until 1871, had as their sole covering a string of beads around their waists, into which they stuck a bunch of leaves before and another behind.

Kaibartha, in Bengal 2,100,379, and in India 2,137,540, are the great cultivators of Bengal, and many take Khasiya as their designation.

Kayasth, in Bengal 1,450,843, and 2,159,813 in all India, have twelve sections. They are essentially a caste of scribes, and are to be seen in the service of all the native courts, and in the offices of the Indian Government. They eat and drink freely. Their women are strictly secluded.

Khandait (617,017), from Khanda, a sword, are descendants of military retainers, who had their lands on a strictly military tenure, but are now undistinguishable from other husbandmen. They and the Paik are of a similar position.

Koch (1,878,884) are chiefly in Koch-Bahar, with numbers of them in Matsya-des and Kamarupa, *i.e.* in Rangpur, Lower Assam, and Purnia. The Koch kingdom was founded by Haju, about A.D. 1550. The Koch, Mech, and Bodo are often classed together, but Colonel Dalton regards these as distinct races. The Pali or Paliya are supposed to be of Koch origin. They have several sections. With the Pani-Koch women, when they marry, property vests in the wife, and descends to her daughters; the husband goes to the wife's house, and is subject to her. They sacrifice to the sun, moon, and stars, also to the deities of the woods, hills, and rivers, and to the manes of their progenitors.

The *Koeri* (1,204,884), called also Muari and Murao, are the best spade husbandmen, and largely engage in poppy cultivation and the manufacture of opium, with other garden produce.

Kol is a term said to be of Sanskrit origin, and to have a derogatory meaning, but applied by Hindus to aboriginal tribes of Chutia Nagpur, of two distinct families, the Kolarian and the Dravidian, whom Colonel Dalton thus classed:—

A. Kolarians who speak the Munda language or allied to it, viz.—

Asur.	Birhor.	Kharria.	Korwa.
Bhumij.	Ho.	Kora.	Muasi.
Munda.			
Santal.			

Kolarians who have lost their own original language—

Cheru.	Kharwar.	Kisan.	Saont.

B. Dravidians.

Bhuiya.	Gond.	Mal.	Sabar, and many others
Bhuiher.	Kandh.	Oraon.	
Binjhia.	Kaur.	Rautia.	

In the census of 1881 they are arranged by Mr. Bourdillon somewhat differently:—

Kolarians, 30,244, viz.

Munda,	14,310	Bhumij,	129
Karwa,	6,888	Kharwar,	112
Chuar,	5,766	Bhil,	87
Mahili,	2,510	Kharria,	44
Brijia,	376	Korwa,	22

Dravidians, 25,948, viz.—

Oraon,	21,115	Dhangar,	4,835

Indefinite, 413,428, viz.—

Poithalik,	362,521	Nagpuri,	1
Paharia,	50,906		

The following is Mr. Bourdillon's distribution:—

Chutia Nagpur,	791,750	Orissa,	1,062
Behar,	15,644	Feudatory States,	62,635
Bengal,	575		

Kurmi are largely occupied as gardeners and husbandmen. They number 4,065,075 in Northern India, and of these 1,213,422 are in Bengal.

Mal, 125,238 in Bengal, and 16,876 in Assam, are supposed to have long occupied the districts near the Ganges and bordering on the Bay of Bengal. Pliny writes of 'Gentes Calingæ proximi mari, et supra Mandei Malli, quorum Mons Mallus, finisque ejus tractus est Ganges.'. Also, 'Ab iis (Palebothris) in interiore situ Monedes et Suari quorum Mons Maleus.' Mr. Beverley thinks that the Mal take their name from the Dravidian word Mallai, a hill, and that they were driven eastward over all Bengal, where they fell into their present position of society.

Mech (9288) stretch along the base of the mountains of the Sikkim, Bhutan, and Nepalese Hills, from the Kauki river to the Brahmaputra. The malaria of the forest, so deadly to strangers, has no effect on them. Their features are of a strong Mongolian caste. They call themselves Bodo or Boro.

Mugh are in the south of Chittagong and in the hill tracts, and they settled in the Sunderbans about A.D. 1780, when they fled from their homes on war breaking out between the king of Burma and the rajas of Arakan, but they love to revisit their homes in the fair weather season of the year. Their general physique is strongly Mongolian. They are Buddhists. The

term Mugh was applied to the fire-worshippers of Persia by the Arabs, and to any non-Muhammadan.

Nat (26,560) are a vagrant, wandering race, with habits and occupations assimilating to those of the gypsies of Europe.

Oraon (45,638) call themselves Khurnkh, and the younger men of the tribe Dhangar. They are honest, industrious workers, are a merry, light-hearted people, excessively fond of dancing, which is their great national amusement. They are known to Europeans as part of the Kol, but they are not Kolarians. Oraon have a Dumkuria, or Morang hall, in which the unmarried men and some of the married sleep. Any absentee is fined. In this hall are kept all the flags and instruments used in their dances. In some Oraon villages also there is a sleeping-house for the unmarried girls, with an elderly woman to look after them. The names of the Oraon clans are taken from animals, which are sacred to the particular tribe.

Pasi, 164,595 in Bengal, and 1,033,184 in the N.W. Provinces, are watchmen, fowlers, swineherds, labourers, and agriculturists, and spread throughout the N.W. Provinces and Behar, but they too, like the Bhar and the Cheru, were formerly rulers in the land. They were owners of the pargana of Khyrabad in Oudh, in the time of Prithi-raj in the 12th century, and they fought on the side of the Chandal against the Chauhan. Since then they have been highly predatory.

Puran of Orissa assert that they and another race were produced from a peafowl's egg,—the Puran from the white, and the Kharria from the shell.

Rajwar have many clans, some of them cultivators, others predatory. They are of mixed origin, but chiefly aborigines.

The *Santal* (in Bengal 1,128,190, and in Assam 7744) say of their origin that a wild goose came from the great ocean, and alighted at Ahiri-pipri, and there laid two eggs, from which issued the first parents of the Santal. The Santal have twelve clans, one of them is the Murmu, which is their name for the Portax pictus antelope, and the clan must not kill it, nor eat its flesh.

The Santal parganas are 140 miles N.W. of Calcutta, in a wild and sparsely populated country. For revenue and administrative purposes, these are arranged into four sub-districts. The Santal and Paharia have regular village institutions, with a manjhi or headman, and similar to the Munda and Maniki among the Kol and Ho. Over the Santal manjhi are headmen of hundreds called parganas. The Santal have no written language of their own; very few of them can write either Hindi or Bengali, and they aided in the census operations by tying knots on strings of different colours to distinguish males from females, and children from adults. In Bengal proper, Santals are mostly in the Midnapur and Bancoorah districts, others are in Orissa. They have six domestic ceremonies, viz. (1) Admission into the family, (2) into the tribe, (3) into the race, (4) betrothal, (5) cremation, (6) placing three fragments of the skull into the Damodar gods and demon. They are exogamic.

Dosadh are constitutionally brave. A number of them fought in Clive's army at Plassey.

CALCUTTA, the capital of Bengal, metropolis of all India, and the seat of the Government of India, is built on the left bank of the Hoogly, a branch of the river Ganges.

	Males.	Females.	Total.

A mixed race, known as Eurasians, are not numerous, only 9410, and there are representatives from the nations of Europe speaking twenty European languages. The 26 Asiatic tongues spoken are as under:—

Arabic.	Hebrew.	Persian.
Armenian.	Hindustani, 87,526.	Pushtu.
Assamese.	Khassi.	Santali.
Bengali, 417,234.	Madrasi.	Siamese.
Burmese.	Malay.	Singhalese.
Chinese.	Mahrati.	Tamil.
Cutchi.	Malabari.	Telugu.
Garo.	Malay.	Uriya, 15,151.
Gujerati.	Panjabi.	

with 20 European languages.

ASSAM has an area of 46,341 square miles, and a population of 4,881,426. It is in the extreme north-east of British India, being bounded on the north by the eastern section of the Himalaya mountains, which portion is inhabited by the Bhutia, Dafla, Aka, and other hill tribes. On its west and south lies Bengal proper, and on the east it has the feudatory Native State of Manipur and the wild regions of Upper Burma.

Assam is naturally divided into three portions, viz. the valley of the Brahmaputra on the north, that of the Surma on the south, and between these two valleys are mountain regions running east and west, which form the watershed of the two basins, and help, with numerous streams, to swell the waters of two of the largest rivers which at the present day form the chief means of communication. On the night of the census, there were 3899 boats on the rivers, with 20,301 persons on board. The people are thus distributed:—

Surma valley, . . .		2,258,434
Brahmaputra valley, . .		2,249,185
Cachar Hill tracts, .	24,433	
Garo ,, ,, . .	85,635	
Khassya and Jaintia do.,	169,360	
Naga Hills, . .	1,380	
,, ,, tracts, .	93,000	373,807

There are 105·34 persons to the square mile but there is much waste land; the density ranges from 9·91 per square mile in North Cachar Hills to 361·95 in Sylhet.

The *Brahmaputra* valley has been the scene of frequent revolutions, by which one tribe has succeeded to another, and each has left its traces on the character and physique of the present inhabitants, who have Ahom, Chutiya, Koch, Bodo and Aryan blood largely in their veins. They are a proud, haughty, and indolent people, and have been inclined to use opium in excess.

Hindu missionaries are largely and actively engaged in proselytizing. The chief of the propaganda are Gosains from Nadya and Kanouj. A few of the Kamrūp Gosain marry, but those of Upper Assam are celibates of the Vaishnava sect, living in monasteries (shatra) with their temple in the centre, and the cells of their chief followers, to the number sometimes of several hundred, disposed in order around it. There are also some Kolita missionaries.

The Chutiya, Koch, and Rajbansi have accepted Hinduism. The Madhahi, Mahalia, Rabha, Sarania, Totila are semi-Hinduized; but the Garo, Hajong, Kachari, Lalung, and Mech remain in their own faiths.

The Kachari chiefly worship the Bathau or the Siju (Gharbura), a species of euphorbia (E. antiquorum). A plant of it is kept in every courtyard as their tutelary deity, called Siju-Gohain, and is carefully protected by a fence of split bamboo. Offerings are made of rice, eggs, chickens, and goats. Other of their deities are Mainau, who provides food and drink; Khober (? Kuvera), the god of wealth; Hasung Madai, the traveller's god; with Dalah, Gabang, Hagrani, Madāi, sylvan deities; and Daini Madai, gods of the waters.

The Deori or Deoshi is their divine, who in sickness and peace makes offerings of salt, rice, pulse, eggs, chickens, pigeons, goats, pigs, to the wrathful deity, and works himself up into a state of hysteria.

Other tribes named are the Aka on the borders, the Kolita and Kaibarth in the valley.

The Muhammadans also are actively proselytizing, and their numbers are 1,317,022.

I. *Bodo* Tribes, viz.—

Matak (Moran),	220		

Most of the other races in this province are represented in other parts of India.

On the Northern Assam frontier are found, in the following order from east to west, the Aka, Bor, Abor, Doflla, Miri, and Mishmi.

On the Southern Assam frontier we have the numerous Naga and Singpho dialects, the Mikir and Angami, the languages of the Khassya and Jaintia hillmen, the Boro in Cachar, and the Garo in the hills of that name.

Abor and Bor-Abor tribes occupy the hills between the Subansiri and Dihang rivers, and extend to the east. They are powerful tribes. The Abor have a Morang or town hall in each of their villages, which is occupied nightly by all the bachelors, and a proportion of all the married men; that at Membu was 200 feet long, and had 16 or 17 fireplaces. They call themselves Padam. The term Abor is said by Colonel Dalton to mean barbarous. It is applied particularly to the hill races on the southern slopes of that portion of the great Himalayan range between the Dihang and Subansiri rivers.

The *Manipur* State has an area of 8000 square miles, and a population numbering 221,070. It is a hill country, sparsely occupied, with 27 inhabitants to the square mile. The bulk of the Manipuri of the valley claiming a Kshatriya descent (130,892) have embraced Hinduism. The men are indolent, and leave the out-door work to the women and to slaves. The Koi are of slave descent. The hill tribes number 85,288. The non-Hindu tribes have about 300 deities to whom they sacrifice.

BOMBAY.—The Bombay Presidency of British India is under the rule of a Governor and Council, composed of natives of Great Britain, and for legislation there is a Council in which Europeans and natives of India assemble. These two bodies have jurisdiction over an area of 124,516 square miles, in provinces extending between lat. 13° 15′ and 28° 12′ N., and long. 66° 43′ and 76° 28′ E., and over the fortified promontory of Aden in Arabia, 1600 miles away to the west, in lat. 12° 45′ N., and long. 45° 4′ E. The physical features of the provinces in the area here indicated are of a widely different character, and they include portions of British territory mixed with several possessions of Indian princes.

Bombay city, with its great population, is on

an island which has been joined to the mainland by means of a causeway.

The *Konkan* and North Canara districts are chiefly in the lowland between the ghats and the sea, with an ample rainfall of 100 inches. The seaboard has several small harbours, and the people are fishing and seafaring races. In the Northern Konkan, the country between the hills and the coast is a mass of low ranges, and cultivation is carried on on the steep slopes of the hills and in the intervening valleys. In the southern part of the Konkan, the hills approach the sea, leaving little room for agriculture, but there are many small harbours with fisher races.

Gujerat, with the valleys of the Sabarmati and the Mahi, and the lands in the lower course of the Tapti and Nerbadda, excepting in its east and north-east, is a flat country, with a good soil. Its rainfall, 37 inches, is scant. Its people, in their castes and occupations, differ more than in any other part of India.. There are numerous aboriginal races, some of them landowners, some in a servile condition, with several aboriginal and forest tribes of whom there is no tradition. The area of Gujerat is 10,158 square miles, arranged into the five districts of Ahmadabad, Baroach, Kaira, Panch-Mahals, and Surat. The low-lying alluvial tract around the coast of Gujerat is occupied by Rajput tribes, and by Gujar, Kathi, Koli, and Kunbi. In its southern districts the most numerous of the aboriginal classes are the Chaudria, the Duria, and the Bhil of the Dang.

The *Dekhan* province is wholly on the table-land of the Peninsula plateau, 1500 to 1800 feet above the sea, and is occupied largely by the Mahratta race. It is covered with the regur or black cotton soil, of inexhaustible fertility, but in its eastern part the rainfall is always so scant and uncertain that the tract is known as the famine belt. Its districts are Ahmadnaggur, Kandesh, Nasik, Satara, Sholapur, and Poona, 37,081 square miles. Bombay Dekhan is the name applied only to all that part of the table-land stretching from the ghat range eastward to the Hyderabad and British possessions.

The Karnatic is partly above and partly below the ghats; the greater portion of it is included between the river Kistna and the Tumbudra. Its inhabitants speak the Canarese language, and irrigate with the aid of tanks. In its south-west corner there are valuable forests, and cultivation is carried on in patches interspersed with forest. It includes the revenue districts of Belgaum, Canara, Dharwar, and Kaladgi, 18,860 square miles.

Sind is in the valley and delta of the Indus. It is the most northerly portion of the Bombay Presidency, is a highly arid region, but is fairly cultivated by means of canals led from the Indus river. Its population is of a very mixed character, differing in race, in religion, and in customs and habits.

In this presidency are some of the largest towns of India—

Ahmadabad,	124,000	Nadiad,	28,000
Ahmadnaggur,	39,000	Nasik,	24,000
Belgaum,	32,000	Poona,	129,662

Baroach,	37,000	Surat,	107,000
Dhulia,	18,000		

Bombay city is a creation of the British people. The island formed part of the dower of Catherine of Briganza, queen of Charles II., who in 1668 transferred it to the English E. I. Company, on an annual rent of £10. But from prehistoric times, people from the S.W..of Asia, of Egypt, and of Southern Europe have in succession been trafficking in territories which are now under the jurisdiction of this presidency. Besides the aboriginal races whose advent is unknown, this presidency has descendants of Kathi, Getæ, Parthians, and Huns from High Asia.

From the early years of the Christian era until the middle of the third century A.D., the Sinha or Sah were ruling at Sehore; they were displaced by the Gupta, who in their turn fell before a native race ruling from Balabhi or Wullubhi, at the foot of the hills of Chamardee. In 770, Wullubhipur, the present Wulleh, fell to a foreign race. From this time parts of this region were held by the Chaura (746-942), by the Solunki Rajputs, and Mahmud of Ghazni (1024), Shahab-ud-Din (1174-1179), and Kutub-ud-Din (1194) harassed the northern parts. The Wagela dynasty was ruling in the 12th and 13th centuries; in A.D. 1297, Alif Khan, brother of Ala-ud-Din, suddenly appeared with a large force, defeated Kurun of the Wagela race, took Anhilwara, sacked Cambay, and destroyed Sidhpur and Somnath. Anhilwara had been to the west of India what Venice became to Europe; but in 1411 Ahmad Shah abandoned Anhilwara, and occupied as his capital Kuranawati, on the left bank of the Sabarmati. From that time till the opening years of the 19th century, the region has been an arena on which Dehli rulers, the Rajputs, the Portuguese, the Mahratta dynasties, the Asof Jahi of Hyderabad, and the British have been striving for victory and dominion, each leaving some of its followers in the territories.

Its princes and chiefs in alliance with the British are about 363 in number. Their states have an area of 73,753 square miles, and a population of 6,941,249; and the region between Kandesh and Sind, a distance of 400 miles, nearly all belongs to feudatory rulers.

Amongst these feudatories are their Highnesses the Gaekwar of Baroda, the Rao of Cutch, the Jam of Navanagar, the Thakur of Murvi, the Jetwa Rana of Porebandar, the Gohil Rawul of Bhownaggur, the Jhala ruler of Hulwud-Drangdra, the Bhonsla raja of Kolhapur, the Nawabs of Cambay, Junaghar, Janjira, and Savanur, with many great families in the Southern Mahratta country whose ancestors held high offices under the Peshwa.

The 1881 census of the Hindus shows 716 castes in 11,438,033 persons. There are 147 subdivisions of the 650,880 Brahmans. The

Wania or Banya, 391,288 in number, have 68 subdivisions. The Jains, who number 215,033 souls, have 81 sub-sections; and 1,133,927 Muhammadans are said to have 233 sections.

Halepaik,	43,061	Sali,	40,084
Hat-gar,	16,246	Waghri,	32,051
Kabligar,	20,347		

The *trading classes* of the Bombay Presidency are the Bhattia, Gujar wania, Gujerati, Jain, Konkani wania, Lohana, Mahrati wania, Lingaet, Marwari wania. The Lohana are chiefly in Sind, with a small number in Gujerat. The home of the Bhattia is in Cutch, a few in Gujerat, and in some numbers in Bombay city. Wania is a general term applied to all traders, and there are Gujar traders from Gujerat. The Gujerati merchants are the most widely spread of all this trading class, and are styled Wania, Khedayada, Lad, Modh, Marwari, and Srimali. The Bhattia, Jain, and Parsee are keenly engaged in trade; as also are the Bohra, the Khoja and Mehman Muhammadans.

Agriculturists are Kunbi, Koli, Jangam, Agria, Bhandari, Dubla, Lingaet, Panchamsali, Halepaik, Raddi, Mali, Mahratta, and Sadar. The Kadava Kunbi are very particular as to their intermarriages. But when a suitable match for a girl cannot be found, she is married to a bunch of flowers, which are afterwards thrown into a well. She is then a widow, and can be married with the natra rites. Or she is married to a married man, on the agreement that he divorce her on completion of the ceremony, and she can then be re-married by the natra ceremony.

Under the native governments, each of the village communities in the Dekhan had a portion of ground attached to it, under the control of the inhabitants. They were paid from different sources, in some from Meras lands, in others from Gairan or Gutkooli and Inam lands. In the Dekhan and Carnatic table-land, the offices of the headman and accountant, as also those of the minor members of the municipality, are hereditary; but in North Konkan and Gujerat, the appointments are by selection. The village system has a deep root among the Mahrattas.

In Kolaba, the village menial, he who watches the gates and preserves the boundary marks, is the chief. The usual members of the village staff are the sonar, kasar, sutar (carpenter), teli, darzi, lohar, kumhar (potter), chamar, muchi, hajam (barber), parit (washerman), mhar, and mhang.

The *shepherd* races are the Bharwad, Brinjari, Dhangar, Gaoli, Gol, Gras, Kumbar, and Rabari.

The *seafaring* and *fisher* tribes are the Ambi, Bhoi, Gabit, Kharwa, Mach'hi, Mangala, and Moger.

The chief *forest* tribes are returned as under:—

Forest.	Males.	Females.	Total.
Chodra,	17,276	17,189	34,465
Dhodia,	26,254	27,625	53,879
Gamtha,	4,253	4,159	8,412
Naikada,	12,763	13,526	26,289

But besides there are the Bhil, Kathodi, Thakur, and Warli.

The *aborigines*, returned as numbering 562,678, are chiefly in the Panch Mahal district, where they form 30 per cent. of the population; in the Thar and Parkar they are 23 per cent.; in both Thana and Surat they form 19 per cent.; in Kandesh, 14·6 per cent.; in Nasik, 10; and in Baroach, 9 per cent. Of their total number, 561,317 are illiterate, viz. 284,507 illiterate males, and 276,810 illiterate females.

Famine, Rainfall.—The rainfall in the Dekhan districts, always scant, at uncertain intervals even fails, and dearths and famines result. About the year 1801, aggravated by wars, a severe famine occurred, and in 1877 another occurred, owing to another failure in the rains. In the latter year the famine area extended over nine districts in all. Three of these districts—Kandesh, Nasik, and Satara—showed some increase in 1881 on the population return of 1872; but the decrease in Ahmadnaggur was 3·48 per cent.; in Poona, 2·45 per cent.; in Sholapur, 19·02 per cent.; in Belgaum, 8·56 per cent.; in Dharwar, 10·78 per cent.; and in Kaladgi, 21·77. The natural growth of the population, had it not been for the famine, should have been about 8 per cent. on the population of 1872.

	1872.	1881.	Actual Decrease.
Ahmadnaggur,	778,337	751,228	27,109
Poona,	921,353	900,621	20,732
Sholapur,	719,375	582,487	136,888
Belgaum,	944,985	864,014	80,971
Dharwar,	989,671	882,907	106,764
Kaladgi,	816,273	638,493	177,780
	5,169,994	4,619,750	550,244

There was thus an actual decrease of 550,244 on the population of 1871, and a decrease of 963,843 on what the population should have been had it increased as in ordinary times.

The *Languages* current in this presidency are about forty in number, but the following sixteen cultivated tongues are the vernaculars of twenty-one out of the twenty-three millions which form the total of the population:—

Hindustani,	1,074,127	Goanese or Konkani,	46,742
Mahrati,	9,286,608	Tamil,	8,971
Gujerati,	7,535,100	Hindi,	20,274
Canarese,	498,234	Tulu,	595
Sindi,	2,095,703	African,	2,088
Marwari,	192,974	Turkish,	225
Baluchi,	151,326	Cutchi,	11,715
Arabic,	10,498	Panjabi,	24,301
Persian,	4,308	Pushtu,	8,925
Portuguese,	4,260	Telugu,	123,367

The other tongues spoken are Chinese, English, French, German, Somali, Spanish, Swedish, Bengali.

Religion.—The Hindus of the Bombay Presidency recognise themselves as worshippers at particular shrines, and the only prominent sects are the Walabha-Chariya, the Swami-Naraiyan, and the Lingaet.

The village deities are Kandi Rao or Kandoba, Venkoba, Vittoba, Ganpati, Hanuman, and Bhyroba. The Nag serpent and Hanuman images are in every village south to the Tumbudra. But the Mahratta are largely spirit-worshippers, and blood sacrifices are frequent. At Chinchor, near Poona, a Brahman family claim to be an incarnation of Ganesa. Krishna was accidentally killed near Pattun. His ashes are entombed there, and with the temples at Dwaraka are largely visited. The sun-worship continues there, and with it that of the lingam. The Jaina sect have the holy sites of Shatrūnji, near Palitana, Gorakhnath, Abu, Sita, Girnar, Gop-nath, etc. At Somnath or Someswara is a famed lingam temple, which was lately rebuilt by Ahalya Bai, widow of Holkar. The Parsee temples are chiefly at Bombay and Surat. They are mean structures compared with those of the Jaina sect, who delight in raising beautiful fanes for their sainted Tirthankaré.

On the Girnar mount is the Bhairava J'hap rock, from which devotees were wont to throw themselves; and the rock on which Asoka's edicts are cut is at the entrance of the valley which leads to the base of the mountain, from the Junagarh side.

The *Brahmans* are largely of Aryan descent, and differ chiefly in their lineage from founders of families. They might therefore be supposed to incline towards assimilation. Yet the Gujerati Brahmans alone have eighty subdivisions.

The Brahmans of Maharashtra are Deshast or Dekhanist, Kokanist, Karhadé, and Deorukha.

Those of Gujerat are the Audich, Anāwala, Mewāda, Modh, and Nagar.

The Gaur Brahmans are the Saraswat, Sashtekar, Shenvi, and Kanaujia (Kanyakubja).

The Havik are Canara Brahmans, and cultivate.

Deshast or Dekhani Brahmans include mostly those of the table-land in the Dekhan and Canara above the ghats. The Matrayani and Madhyandini are of Kandesh and Nasik, and the Palsé Brahmans of N. Konkan.

The Konkanist Brahman, also called Chitpawan, who rose to fame in the times of the Peshwas, mostly belong to the Konkan and Poona. They are a highly intellectual race.

Jain religionists are proportionally numerous in Cutch, in the northern states of Gujerat, particularly in Ahmadabad. In Kolhapur and the Southern Mahratta country, many of the peasantry belong to this sect. The sect have about eighty subdivisions. The Oswal or Humbad, the Porwal and Shrimali are the chief. Jain husbands in Gujerat marry into Hindu families. The Hindu wife, while in her husband's home, conforms to his ritual; but on the many occasions on which she revisits her father's family, she reverts to the rites of her ancestors.

The *Muhammadans* number 3,021,112. They are known as the Shaikh, Sayyid, Pathan, and Moghul; but in their religions they are of Sunni and Shiah sects. The Sunni are followers of the four commentators of the Koran, Hanafi, Shafai, Hanbali, and Maliki. There are several Shiah sects, the more prominent of its branches being the Khoja, Bohra, and Mehman. One section of the Khoja follows the representative of Hasan-us-Sabbah, the Shaikh-ul-Jabl, or Old Man of the Mountain of the times of the Crusaders, whom they regard as an incarnation of Ali. About A.D. 1480, a large body of Hindus of Cutch adopted this religion. Their leader, Aga Ali Shah, resides in Bombay, and succeeded his father, Aga Khan, a claimant for the Persian throne, who, after being driven from Persia, was long a Bombay resident.

The *Bohra* are a numerous, widespread, and wealthy sect. Their chief apostle, Dai or Mallah, resides in Surat. He names his successor. Those of Ahmadabad are of the Sunni sect.

The Shiah Bohra of Surat, those trading in Bombay, and a few others, are highly trained in the vernacular language of their own locality, and also in Urdu and Arabic.

The *Mehman* are cultivators, shopkeepers, artisans. They are believed to be converts from Hinduism. They are distributed through the Kurachee district.

In Sind, the Malik and the Mol Islam are other divisions, and in Aden are the Imamya and Zaidiya.

Fakirs are Muhammadan devotees; among them the fakir or darvesh belong to several schools, the Azad, Banawa, Chishti, Iraq, Rafai, Jalalia, Kadaria, Kalandaria, and Madāria. The founder of the last-mentioned school, Shah Madār, lived in Makhanpur, 60 miles from Lucknow. The Kadaria take their name from Abdul Kadar, Jalani, of Baghdad; Jalal Bokhari of Bahawulpur founded the Jalalia, and the Azad are a section of the Jalalia, and are celibates; and the Kalandari claim as their founder Bu Ali Kalandar, whose tomb is held in great reverence.

More than 60 per cent. of the Muhammadans reside in Sind. The Muhammadans are largely converts from some of the Hindu tribes, and descendants of immigrants from the adjoining districts of Baluchistan, Afghanistan, the Panjab, and the Indian desert.

The *Parsees* are a prominent, though not a numerous body of the population. They have separated, on very unimportant points, into two sects, one of these, the Kadimi, or old firm, reckon by the old Persian era, which is a month earlier

than that used by the Shahanshahi, Shensoi, or Rasmi, who form 92 per cent. of the sect.

The *Jews* take a humble position, largely artisans, masons, carpenters. They came from the Persian Gulf or Arabia in the 15th or 16th century. They call themselves Ban-i-Israil.

The *homeless broken tribes* and predatory sections of the Dekhan population have received much attention from several writers.

In 1843, the Editor furnished to Jameson's Edinburgh Journal notices of the homeless tribes of the Southern Mahratta country. In 1852, Captain Harvey, of the Bombay police, described seventy-one races wandering in that presidency; and in the following year, Major Douglas Graham enumerated thirty-eight of the moving communities in the Kolhapur territory, additional to those described by Captain Harvey. Little more than the names of these can find room here.

The *Beder* extend along the western part of the Dekhan plateau in all its extent, from the Tapti to Mysore. The Beder attained their highest power about the 16th century. Harponhully, in the Bellary district, was founded by two brothers, one of whom married a daughter of the Polygar chief of Chittuldrug. In A.D. 1517, Raidrug was given to a Beder chief who built the present fort. There are now two Beder chiefships, Zorapur and Gurgunta, to the south of Sholapur. Until early in the 19th century, the Beder in the Southern Mahratta country were under a Naik, who held the fortified village of Chikuldini, at the foot of the western hills; they were eminently predatory, tillage extending no farther than around their houses. They are a simple-mannered race, civil and good-humoured, and communicative, but very poor. The ancestor of the Zorapur chief aided Aurangzeb in the siege of Bijapur, for which he was rewarded with the title of raja, and was made a mansabdar of 5000. They number 118,335 in the Bombay Presidency, and in all India 171,269 is the return. The Berad, 263,896.

The *Bhaori*, or Hirn Shikari, or Hirn Pardi, are a migratory race of fowlers and hunters, who are to be seen in most parts of the Peninsula. They snare game and wild animals of all kinds, jackals, foxes, wolves, leopards, tigers. They are of short stature, black and shrivelled, greatly wanting in intelligence, and timid in their intercourse with people in the towns to which they bring their captures for sale. The women earn a little by selling antidotes for snake-bites and scorpion stings,—simple roots and parts of the animals they kill; and the jackal's horn, a projecting part of the frontal bone, is eagerly purchased from them as a charm against the evil eye. They are in all parts of India, but chiefly in Marwar. They have several tribes, Rathor, Mewar, Chauhan, Sawandia, Korbiar, and Kodiara. They dwell in distinct hunting-grounds, generally with rivers as boundaries, and have hereditary chiefs, termed Haulia, who assembles the tribe on occasions. One portion of the reward for capturing tigers is allotted to the river deity; the forest deity has another. They are wretchedly poor, with a few rags for clothing, but they steal from fields and grain-pits; and the settled population think they are wealthy. When the beard first appears, it and the hair of the head is cut once annually, for five successive years, but afterwards it is left unshorn. Their girls are married about the time they grow up; the rejoicings last five days, during which the couple, smeared with turmeric, remain seated on the ground. They bury their dead.

The *Bhatoo*, Doomur, or Khelati are a wandering race of acrobats, who arrange themselves into twelve sections, and move about in the districts of Aurangabad and Ahmadnaggur southwards to Hurrihur in Mysore. The men seldom exceed five feet in height, and the women proportionally smaller. At the period of adolescence, the young men and women are perfect models for the sculptor. Besides performing as athletes, the men exorcise demons from those possessed, and the young women are devoted to the gods, Kandoba at Chinchor, near Poona, being usually resorted to. When the girl is about five years old they lay her at the feet of the deity, and she becomes a Mürli devotee. Most of their feats consist of leaping over or climbing up a bamboo. They sustain severe injuries; an old man of 60 years of age recollected having actually seen four people killed, and innumerable injuries of others, by falls from the bamboo. His own right elbow-joint had been crushed. They usually take a partner from amongst the devoted women, who have grown too old to perform. They profess to worship Narayan, but the bamboo with which they perform is the chief object of their adoration; when cut down they have it consecrated, and term it Gunnichari or chief, and in their assemblies or Panchaits it is erected in their midst. They have no other idols, but they visit the shrines of Ellama, Tulsidas, Bhawani, Dawal Malik Peer, and Nursoba. They bury their dead, place food at the head of the grave, and draw favourable omens.

The *Bhattia* and *Banya* of Mandavi and other parts of Cutch have been trading since many centuries in Africa and Arabia, and were largely engaged in the African slave trade. The *sailors* of Mandavi are bold and skilful, and their pilots famed for their skill and daring.

The *Bhil* of Ajmir, Central Provinces, Hyderabad, and Rajputana number 141,972; and in the Bombay Presidency 341,634, chiefly in Kandesh, Panch Mahal, Nasik, Thur and Parkar, and Ahmadnaggur. In the western districts they are known as the Kale Puruj (black men), also as the Dubla (slender). North of the Nerbadda, in the Bhil marriages, the groom takes the bride on his shoulder and dances round a fire; it is called the Ghora-natch. Bhil clans are in a state of great moral transition. They were bold plunderers, their national weapon the bow. Those located between the Tapti and the Satpura Hills are known as the Wah-wih or Wa-sa-weh. The Bhil worship the image of a horse, named Baba Deo Ghora.

The *Bhoi*, fishers, palanquin-bearers, and seamen, extend across the Peninsula from Bengal to Bombay, wedged in between Aryan and Kolarian races in their north, and Gond, Teling, Mahratta races in the south. Mr. Plowden supposes them to be the Besta of Madras, 367,904; states 11,019 are in Berar, and 46,134 in Hyderabad, but does not mention the 48,398 whom Mr. Baines returns from Bombay.

The *Chamar*, 163,102 souls, are tanners, curriers, and shoemakers. Their name is derived from the Hindi word for leather. The Chamar are known as the Sultungar, Huralbukht, Dubali, Woji, Chour,

Paradosh. The Sultungar dye and sell sheepskins; the Paradosh work in tent-making, etc. The higher rank Chamar make shoes; the Huralbukht dye skins red, and make shoes; the Dubali, Woji, and Chour make bridles, pakhals, waterbags, and eat animals that have died of disease.

The *Dubali* section of the Chamar are 10,224 according to the 1871 census, but the memorandum placed before Parliament showed 73,000 Dubali in the Surat district.

Dohor or Dhor, Kutai, or Duphgar, dye skins of horned cattle, and are leather-workers, make pakhals, mot or well buckets, dol or hand buckets; the Kutai are cobblers, tent-workers, and eat diseased animals, as also do the Duphgar, who make leather oil-bottles.

The Chamar of Bombay reckon as sections, the Chour, Dubali, Huralbukht, Paradosh, Sultungar, and Woji. They are all tanners, curriers, shoemakers, and saddlers, and all of them eat animals that have died of disease.

The *Dher* are the great labouring class of the Dekhan, and seem to have been its first proprietors. They were returned in 1881 as 110,040, and the Mhar and Dher 1,197,730, and these two are supposed to be identical. In physical appearance Dher, Mhar, Mala, Parayan, Chandal, Kahar, and Holar are identical, and number in all India 10,069,739.

Gujar.—Dekhan people designate as Gujar all persons from Gujerat. The Duria race of Gujerat make their temples of cotton trees, around which they raise upright stones in rows or in circles.

The women of the Chaudria race of Gujerat dispose immense strings of cowries around their head and neck. They are dreaded as witches, and in 1836 numbers of them were to be seen deprived of their noses as a prevention of witchcraft.

Jharija, a Rajput clan ruling in Cutch, are spread through Cutch, Gujerat, and Kattyawar. They have until recently been largely given to infanticide. They get wives from the daughters of the Jhala, Wagel, Sodha, and Gohil Rajputs. In 1818, Captain M'Murdo estimated the numbers of the Jharija in Cutch at 12,000 persons, of whom only 30 were women. They killed girls to avoid paying for them heavy marriage portions. In the Bombay Feudatory States, the females were 20,357 to 132,331 males. In British provinces, 93,722 to 103,184 males. The Rao of Cutch, the Jam of Navanagar, and Thakur of Murvi are Jharija, and it was the Murvi chief who, in Colonel Walker's time, 1818, was the first to discontinue infanticide.

Kaikari, HIND., MAHR., TAM., TEL., *Kaikadi*, are makers of baskets from stems of cotton plants and palm leaves, but are all predatory.

Kattyawar people consist of Ahir, Koli, Kunbi, Lohana, Mher, Mehman, Rajputs, Rebari, and numerous Muhammadan tribes from Sind, Makran, Baluchistan, Arabia, Miana from Cutch, Badhel, Wagher of Okamundel and Sindi called Bawur. The Wagher of Dwaraka with the Badhail of Aramra were long the terror of these seas. In 1803, 1858, and 1859 they repulsed British troops, but in 1868 (8th May) the place was stormed, and their chief fell.

Kattyawar Babria, a peasant tribe, give their name to the Babria district.

The *Koli*, 2,219,540, are scattered from Rajputana to the southern part of the Mahratta country:

Mahratta,	881,014	Berar,	30,398
Ajmir,	260	Hyderabad,	213,966
Baroda,	429,688		

Koli are spread from the Thur and neighbourhood of Sind to Goa, and eastward to the Bhima. The Koli of Gujerat, up to the early part of the 19th century, were a restless, turbulent race, despising agriculture, and living by plunder. Their chiefs were Rahtor, Chauhan, Mukwana, etc., Rajputs who intermarried with the aborigines. The Dubla Koli, up to 1836, were mostly hereditary slaves. One proprietor in S. Gujerat had 300 of them. Their owners employed them in fishing and husbandry, and hired them out. The Dubla are now chiefly in the Broach and Surat districts, and in the latter district were largely Hali or predial slaves, hereditary serfs to families of colonizing Brahmans of the Anāwala section. They are a little higher than the Dhodia in the social scale.

Kayasth, the great scribe and writing class of all India, 2,159,813. More than half the writers of Bombay claim to be Kayasths.

The *Maddikpor*, as they call themselves, are a migratory race in the Southern Mahratta country, who are known to the people as the Kili Kyuntur, the Kotabu. They are in general tall, well-made men, of an olive-yellow colour. They arrange themselves into ten branches,—Avoti, Atok, Naknar, Pachungya Ram, Sinda, Sarwar, Saskene, Mohrkar, Sengan, and Durwia,—and claim to be allied to the Koli or Barkar. They are beggars and fishers; their women earn a little by tattooing the foreheads of Hindu women, from which the tribe are called Putcha, and by knitting; but the chief occupation of the men consists in exhibiting transparencies painted on deerskin in bright colours, representing the story of the Mahabharata, which they relate to admiring crowds. They have also dancing puppets. They dwell in closely-woven grass huts. Every morning they worship the transparencies. The bamboo box is placed on a spot freshly covered with cow-dung, the lid is opened, and a prayer made for daily food. They are not restricted to one wife. They catch fish.

Mhang (161,970) of Kolhapur were long notorious for their wild, untameable habits, their great cunning, hardiness, and predilection for outrage and robbery. They have been known to refuse an offer for their daughter's hand because the young man was not an expert thief. They are illiterate, and make as their mark the figure of a knife. Many of their young women were devoted to the deity Kandoba as Murli, or attached as Jogini to the goddess Yellama, and on the 3d of Mangh-Wud (February) they were accustomed to parade the streets in a state of nudity in honour of the goddess. Their tutelary deity is Jagadamba.

The *Mhar* and the *Dher* (852,523) of the Bombay Dekhan, the *Parwari* race of the lands below the ghats, the *Holar* of the Canarese-speaking district, the *Chandal* of Bengal, the *Pariah* of the Tamil country, the *Kahar* and the *Mala* of the Teling nation, assimilate in physical appearance. The Dher is the great labouring class of the Bombay Dekhan, and seem to have been its first owners. The numbers returned of these races are 10,069,739, viz.:—

Mhar,	1,434,446	Chandal,	1,749,608
Dher,	110,040	Kahar,	1,840,856
Dher and Mhar,	1,197,730	Holar,	447,421
Parayan,	3,290,038		

None of all these have accepted Brahmanism, but adhere to shamanist rites. They reside outside the villages, are labourers, weaving in the intervals of agricultural operations, are village servants and watchmen. They have several sections, and the Wusydong Mhar, the Tilwun, Wun, and Aduwun claim to have come from near Benares, and to be descended from a race whom they call Dong. They are nearly all illiterate.

The *Miana* of Mallia in Mucha Kanta, on the banks of the Muchu river, have a Thakur, but own allegiance only to their own Chowhattia or heads of tribes. They are of a turbulent disposition.

Murli.—Several of the Indian races, the Dhangar, Dher, Mhang, Koli, Mhar, and Manurwara, and occasionally even the higher Hindu castes, under various vows, devote their girls to the gods. The deity to whom the girl is more frequently vowed, is some incarnation of Siva or his consorts. Amongst the Mahratta people on the western side of India, Kandoba is the usual Siva avatar to whom the girls are devoted, and his chief shrines are at Jejuri, Khanapur near Beder, and at Malligaon; but other deities, or even a dagger, are objects for their vows. The ordinary people believe that from time to time the shadow of the god comes on the devotee (deo ki chaya ati, ang par), and possesses the devotee's person (Murli ke ang ko bhar deti). These devotees are called Murli in Mahrati, Jogini or Jognidani in Canarese, and Basava in Telugu. They at times affect to be or really are possessed, during which they rock the body, and people occasionally make offerings to them as to an oracle or soothsayer, laying money at their feet, and await the possessing to hear a decision enunciated. The female deity to whom those near the Bhima river are devoted, is Yellama; the Bhuili race devote their Murli to Mata. Boys also are devoted, and styled Waghia, from Wag, a tiger. Near Amraoti it is to Amba and to Kandoba that the Murli and the Waghia are devoted. The Waghia does not associate with the Murli. At Amraoti, the people say that Kandoba moves on Sunday particularly, and selects a clean tree (clean Murli), whose body he fills.

Paggi of Gujerat must not be omitted. Their skill in tracking footmarks has acquired for them great fame.

The *Ramusi*, 43,037, are found in all the districts westward from Telingana to the edge of the Western Ghats. They call themselves Boyill or Boiggia. They claim to have three sections, as under:—

1. Bhaka.
   - *a.* Chauhan.
   - *b.* Jadu.
   - *c.* Roray.
   - *d.* Gurgul.
2. Holga.
3. Behdar.

Though they have adopted Mahrati, they preserve a few words of their original Telugu for purposes of crime.

The Ramusi have continued predatory for about 500 years. When Ala-ud-Din Husain Gangui Bahmani (A.D. 1347–1358), heading the revolted troops of the empire, assumed sovereignty, and made war on the Hindu countries that encircled the kingdom of Kulburga, the Ramusi seem to have been detached from the Teling nation, and to have at first settled among the fertile valleys of Maharashtra around Kuttow, Musswur, Malloura, Nalgund, the hill fort of Maimanghar in Mandesh, and east of Satara and the town of Phulton, and now they are found scattered from Hyderabad westwards; and the valleys of the Maun, Neera, Bhima, and Peera rivers, with the hills and plains in the vicinity, the districts of Satara, Poona, and Ahmadnaggur, give shelter to their descendants, who are thus scattered through a region lying between lat. 17° and 20° N., and long. 73° 40′ and 75° 40′ E. But in this wide extent 40,000 is perhaps the utmost number of their people. They are generally ill-favoured, but not dark coloured, short statured, but muscular and capable of untiring labour. The women are even more ill-favoured than the men, but are active, and hardy, are very much attached to their children, and are strictly virtuous. They are pantheistic, but their favourite deity is Kandoba or Kandi Rao, named also Martinda, to whom, as also to Bhawani Rama, they made their vows on their plundering expeditions.

The Bhaka Ramusi are hardy, active, and enterprising, covetous, rapacious, and treacherous. From the time of Sivaji they plundered and were the ready instruments of rebellion, and successive rulers retaliated by massacring them on every opportunity. They were finally put down in 1832 by the British, when their leader Oomiah was hanged on the 3d February. During the unquiet times of the Mahratta rule between 1790 and 1818, they had gained head, and kept the country disturbed. They have now settled down to husbandry, and some of them are employed as watchmen, an office which in several towns is hereditary, the Rakhwala being one of the municipality. The Holga branch arrange themselves in 13 sections; their language is nearly Canarese. Though not hereditary robbers, many of them are decoits, highwaymen, and burglars, and often commit murder when engaged in robbery. They are part of the commune, as village watchmen, with shares of the village fees, and some are cultivators. In olden times they undertook to track up all robbers, and if they failed they had to make good half the value of the property plundered.

HYDERABAD is a principality in the centre of the plateau of Peninsular India. It is ruled over by a Muhammadan sovereign, whose ancestral title, Nizam of the Dekhan, was bestowed on the founder of the family by the emperor of Dehli, but the dynasty is known as the Asof Jahi. The territory has been gathered under one sway from portions of four great nationalities,—Telingana in the east, Karnatica in the south, Maharashtra in the N.W., and Gondwana in the N.E., all of them peopled by non-Aryan races, amongst whom are some Aryans, with Muhammadans, and many fragments of broken, homeless, wandering tribes. The area is 81,807 square miles, and its population 9,845,594, being 120 to the square mile, the great bulk of them professing some form of Hinduism.

Hindu,	8,893,181	Jain,	8,521
Muhammadan,	925,929	Parsee,	638
Christian,	13,614	Jew,	47
Sikh,	3,664		

The dominion has been formed only since the

middle of the 18th century, and there is not yet any approach to a fusion of the masses into one nation, the rulers and their officers and their army being all alike foreigners. There has never yet been any Teling, Mahratta, or Canarese who has been placed in a high office of the State, although 85 per cent. of the population belong to these three races. The existing position of the races will be seen from the languages now spoken:—

Telugu,	4,279,108	Panjabi,	2,126

Kaikari,	5,294		

Since 1784, an ambassador, styled a Resident, has been to this court, but they have been frequently changed; from 1784 to 1797 inclusive, there were 4; 1805 to 1853, 17; and 1856 to 1884, 15.

Since the middle of the 19th century, the Berar portion of the Nizam's dominions of 17,711 square miles has been assigned to the British, in order to provide from its revenues funds for the pay of the Hyderabad contingent of artillery, cavalry, and infantry, which the Hyderabad State by treaty enrol for mutual defence. A census has been taken in 1881 of each of these two portions of the Hyderabad territory, but only that for Berar is to hand. Mr. Plowden, however, in his general report for all India, has given the following as the castes and races of the Hyderabad part:—

Ahir,	3,904	Kunbi,	1,658,665
Banya,	392,184	Kayasth,	3,427
Bhoi,	92,170	Kumhar,	90,835

Jat,	278	Lingaet,	97,836
Kach'hi,	537	Vellalar,	188
Khatik,	9,384		

The Gadaria, Jogi, Kamma, Pasi, and Uriya make an additional number.

On the boundary line in the middle course of the Tumbudra and the Kistna rivers, and in the valleys of their affluents, the Bhima, the Gatpurba, and Malpurba, are several chiefs meriting notice. Until the year 1839, a family of Pathan Muhammadans ruled at Kurnool on the right bank of the Tumbudra, with the title of Nawab. In that neighbourhood a Syud family still rule as nawabs of Banaganapilly. Farther west are the Reddi chief of Gadwal, the Mahratta chief of Sundur, one of the Ghorpura family; the Kshatriya raja Narapati of Anagunda, claiming to be a descendant of the great king Rama of Vijayanagar, who was overthrown by the combined armies of the four Muhammadan kingdoms of Golconda, Kulburga, Bijapur, and Ahmadnaggur; the Pathan nawab of Shahnur, the Ghorpura chiefs of Gujundargarh and Akalkot, and at Gurgunta and Beder Sorapur are descendants of that Beder soldier Pid-Nack, to whom Aurangzeb, for aid given at the siege of Bijapur, granted a small territory in the Raipur Doab, and who are now feudatories of the Hyderabad Government. The Beder of Sorapur drink spirits, eat the hog, crocodile, porcupine (sarsal), manis (uli), iguana (ghorpara), cow, buffalo, cat, rat, bandicoot (Mus gigantea), and jerboa rat. Eminently predatory, they gave their name to the Pindara who for nearly a century kept all India in commotion, and in the mutiny and rebellion of 1857 the Beder of Sorapur rose, but were suppressed, and their chief, sentenced to transportation, destroyed himself en route. The descendants of Pid-Nack are tall, handsome, fair men, fond of the chase, hunting the wild boar with powerful dogs. The town of Sorapur is in the centre of a rocky amphitheatre, admirably suited for the location of a predatory band.

The *Muhammadans* of Hyderabad are not cultivators, but several of them have State revenues in jaghir. Of those in Berar, only 1296 are professional. The Syuds of Kulburga, Gogi, and Hyderabad seem impoverished; those of Pathan, Moghul, Arab, Persian, and Habshi origin all prefer military employ, and rarely take to the plough. Before and after the fall of the great Hindu kingdom of Vijayanagar, several Muhammadan dynasties had ruled in parts of the lands now forming the Hyderabad territories, amongst others, the Nizam Shahi of Ahmadnaggur, the Adal Shahi of Bijapur, the Bahmani dynasty of Kulburga, the Imad Shahi of Ellichpur, the Kutub Shahi of Golconda, and the Asof Jahi, who are now ruling, and the greater part of the Muhammadans are now to be found in the cities which since the 14th century have formed the capitals of these rulers. They may be about 7 per cent. of the population.

Goolar or *Baid*, about 2000 in number, are dwelling in the villages between Hyderabad and Poona, but a very considerable number reside in Seroor, 10 miles from Kulburga, and near Hiraphool, and between Kulburga and the Bhima. They call themselves 'Gol,' also Hanam-Gol, from Go, cow, and claim to be of the cowherd race. The people, however, designate them Adavi Goolar and Gaddha Goolar, that is, country or wild Goolar and donkey Goolar. The Adavi Goolar are also designated Bai-Mandel-Wanlu, also Dowai-Darman, also Dowa-Dene-Walé, because the men are travelling herbalists, collecting medicinal roots and plants for the native physicians. They are poor, and the young people and the women beg. Their physical appearance and colour are strikingly similar to those of the Rajputs, only they are not so tall, and are more slender. They have no resemblance to any other of the races in Southern India. They do not eat the cow or bullock, but use the goat, sheep, hare, and other creatures; like the Beder, they eat the crocodile. They do not intermarry with the Gaddha Goolar. The latter dwell in the outskirts of towns and villages; the men wear beards, and rear dogs and asses;

they hunt for wild animals, and eat the jackal, the crocodile, the porcupine, and the iguana. They are goatherds, and the women beg.

The *Goorao*, the *Vidur*, and the *Krishna pakshi* are offspring of Brahmans and women of the lower castes. Some of the Goorao are employed in temples, others are clerks.

BERAR has an area of 17,711 square miles, with a population of 2,672,673, being 151 to the square mile; the females are 88,311 fewer than the males. It is also designated the Hyderabad Assigned Districts, and is administered by the Indian Government, arranged for revenue purposes into the six districts of Amraoti, Akola, Basim, Ellichpur, Buldana, and Wun. A considerable portion of its eastern districts belonged to Gondwana, and there are still there many small broken tribes of that race; but since the latter years of the 15th century, it has had a succession of Muhammadan and Mahratta rulers, the Imad Shahi of Ellichpur, Nizam Shahi of Ahmadnaggur, the Dehli emperors, the peshwas of the Mahrattas, the Azof Jahi of Hyderabad, and now the British.

How the followers and the agricultural tribes of the surrounding nations have taken advantage of these changes to occupy the arable lands, will be seen from the current languages, viz.—

Mahrati,	2,207,514	English,	571
Hindustani,	302,601	Panjabi,	189
Gondi,	73,344	Pushtu,	90
Telugu,	39,435	Arabic,	35
Korku,	29,039	Sindi,	14
Gujerati,	17,043	Bengali,	13
Kaikari,	1,496	Persian, Baluch,	
Canarese,	1,487	German, French,	
Tamil,	792	Chinese,	10

Out of the whole number of inhabitants, there are only 73,344 speaking Gondi and 29,039 of the allied Korku, the others are foreigners.

In 1881 the more important of the trades, tribes, castes, and sects were as under:—

Banjari,	27,495	Koli,	30,398
Berad,	330	Komati,	5,430
Bhat,	2,520	Kori,	68
Bhoi-Besta,	22,961	Koshti,	14,785
Brahmans,	65,754	Kumhar,	20,066
Chamar,	26,885	Kunbi,	834,174
Dhangar,	74,559	Lingaet,	9,859
Gaoli,	30,159	Lodhi,	1,773
Gujar,	967	Mali,	195,981
Jain,	6,329	Mhang,	46,366
Jat,	89	Mhar,	307,994
Jogi or Nat'h,	9,113	Pasi,	256
Kahar,	247	Rajputs,	41,133
Kalal,	14,943	Salé,	9,126
Khatik,	4,487	Sonar,	27,548
Khatri,	2,015	Teli,	75,552

The chief aborigines of Berar are 164,941, as under:—

Andh,	37,010	Korku,	28,450
Arakh,	371	Lajhar,	1,824
Balai,	803	Moghi,	344
Bhil,	5,308	Nihal,	2,483
Gond,	64,817	Pardhan,	11,628
Kollam,	12,163	Banjara,	297
Kolabhuté,	43		

Ahir.—Berar is the most southerly part of British India in which this designation is found; even the Gaola race may be said to cease here, although in Hyderabad there are a small number of Gaola who keep cows and buffaloes; but the Dhangar, being the shepherd race, occupy the central Dekhan as herdsmen, and farther south the Kurubar, shepherds, from Kuru, a sheep.

The Ahir, before the Christian era, were in the N.W. frontier of India, from which they passed to Lower Sind and on to Gujerat. When the Kathi arrived in Gujerat in the 8th century, they found the Ahir there, and part of the Ahir had advanced to the east, and into Kandesh. An inscription in one of the Nasik Buddhist caves shows that early in the 5th century that country was under an Ahir king; and in the Puranic geography, the region from the Tapti to Deogarh was called Abhira, or the country of herdsmen. The Ahirs held dominion over the wild tracts of Gondwana, parts of Kandesh and Berar, and possessed the fortresses of Asirgarh, Gawilgarh, and Narnala; and in the 12th and 13th century they were rulers of Deogiri or Dowlatabad. Those of them who moved towards the Wain-Ganga have become Gawari, and in the Mailghat they are the Gaolan.

In Berar, the *Dhangar* sheep farmer race are of two sections, the Kota Pullia Dhangar, who keep sheep, and the Barji Hatkar, or 'shepherds with the spear.' The latter still hold much land on the borders of the Nizam's territory, and, until the British domination, were notorious for pugnacity and rebellion; they even still continue a quarrelsome and obstinate race. They are supposed to have come from Hindustan in twelve tribes, and been impelled by the Gonds towards Hingoli and Basim, which locality got the name of Barah Hatia, or the twelve tribes. They are found from Basim, on the north of Hingoli, into East Berar, where they occupy the hills on the north bank of the Pain-Ganga. The Hatkar are fine, able-bodied men, independent but arrogant; many of them never shave or cut the hair of their face.

The *Hatkar* arrange themselves into the Poli, Gurdi, and Muski clans, all of whom eat with the Kunbi. They burn the dead who die in battle or in the chase, but inter those who die of disease, seating the body cross-legged, with a small piece of gold in its mouth.

Gaoli have been settled from time immemorial along the Satpura range, and once were dominant in the hill country around Baitul.

The *Bhil* of Berar occupy the eastern slopes of the Gawilgarh range to its western extremity, and stretch far westwards into Kandesh. They belong to the Turvi clan; all now are Muhammadans. Those who live along the outskirts of the Satpura have embraced Muhammadanism. All along the Gawilgarh skirts, the Kurku, the Gond, and the Bhil have settled down to agriculture wherever the country has been cleared, and are now honest, peaceful, and inoffensive.

Gharpagari, of the Amraoti district, profess to have power to prevent the fall of hailstones on a field.

Mailghat is a strip of country along the course of the Wardha river, occupied by the Raj Gond races, the Agarmunde, Bhoya, Pardhan or Bard, Ballai, and Nihal; also by the Mugi, who are fishers and fowlers.

Gond occupy the Mailghat and the southern skirts of its hills, extend in the north-east into Sirguja; they are found along with the Khand and Urya in Karal and Kalahandi or Kharond; in the south they form the mass of the population in Bastar, form part of the population of Jeypore, and occupy the hills along the left bank

of the Godavery about Nirmul, and on the west are intermingled with other inhabitants of Berar for 30 miles from the right bank of the Wardha. Gondi is spoken by 1,079,565 of people:—

Bengal, ...	1,294	Hyderabad,	38,224
Berar, ...	72,344	N.W. Provinces, .	201
Central Provinces, 967,502			

Andh, along with the *Gond*, the *Korku*, and the *Kolamb*, inhabit the Mailghat and the southern skirts of the hills. These four tribes each speak a separate language, but resemble each other in their physical appearance, and all have features quite distinct from the inhabitants of the villages. They reside also in the Maiker, Amraoti, and Wun districts, but in that last mentioned are a wild and uncivilised race. Andh are also called Pardhan, and are said to be helot Gond, but they are cultivators. They eat meat, but not the flesh of animals which have died of disease.

Banjara have the three sections, Charan, Labhana, and Matturiah. They eat together, but do not intermarry. Their war and love songs and their language are in a form of Hindi. They are illiterate.

Kaikari of the Mahratta country and Berar and Central Provinces are supposed to be the same as the Korcha of Bellary, the Korawa of N. Arcot, the Koragar of the Canara jungles, and the Yerkuala of Madras, all skilful thieves. They have 1272 divisions.

Kaikari, in Berar, are a migratory and predatory race, ostensibly basket-makers, using the midrib of the fronds of palms, also cotton stalks. In 1867 an effort in Berar was made to compel them to settle, but they preferred expatriation.

The *Kolam* extend along the Kandi Konda or Pindi Hills, on the south of the Wardha river, and along the table-land stretching east and north of Manikghar, and thence south to Dantanpalli, running parallel to the right bank of the Pranhita. They eat with the other Gond, but do not intermarry.

The twelve Gond clans are—Padal, also called Pathudi; Pardhan, Raj Pardhan or Desa; Dholi; Ojhyal; Thotyal; Koilabhutal; Madya, called Jhodia in Bastar; Kolam; Badiya Hullwa; Gaiti Gond; Moria Gond; Kur or Muasi.

They are also said to arrange themselves into 13 sections, viz.—

Manes.	Kahilwar.	Jaduwan.	Khatulia.
Gowari.	Thotli.	Kohalin.	Thakur.
Raj Gond.	Pardhan.	Andh.	Buchadi.
Dalwe.			

The *Madya* are savages on the Beila Dila Hills and in the remoter parts of Chanda; the sole covering of the women is a bunch of leaf twigs in front and behind, kept in position by a string round the waist.

The men and women of the Gond never associate at work, but labour apart. A Gond desirous of having a wife, and having resolved on a particular girl, takes with him a band of his comrades to the field where the women are at work, and he suddenly, alone, runs towards and attempts to capture her. His comrades will not, however, aid him to carry off the girl unless he succeed in touching her hand before she reach the village shelter. By touching the girl's hand, the marriage contract is sealed and cannot be broken; nevertheless the women often fight every inch of the ground, inflict the most serious hurt and sometimes shameful defeats, continuing the contest even after the bridegroom has touched the bride's hand, and if the village skirts be reached, the men turn out to aid the women, and pursue the attacking party back to their own village.

Koli, of Berar, are the Mahadeo Koli, Bunkar Koli.

Kunbi constitute a large part of the cultivators in all Maharashtra, in the north-western parts of Hyderabad, in Berar (681,368 souls), in the Central Provinces.

The Kunbi, in Berar, allot themselves into 11 classes—

Mali.	Haldi Mali.	Sagar.	Vindesa.
Ful Mali.	Wanjari.	Atole.	Pazni.
Jerat Mali.	Gantadi.	Telale.	

With the exception of the Haldi Mali and Pazni, they have Roti vya whar amongst each other but not Beti vya whar, *i.e.* they eat with each other but do not intermarry. The Kunbi and Mali alone, of the Sudra people, are 834,588 souls. The Kunbi and Mali eat flesh, drink liquor in moderation, and their widows may all re-marry if they choose, except those of the deshmukh, who follow the high caste custom.

Since Berar came under British rule, many immigrants have added to its people, and the revenue has greatly improved. Receipts, Rs. 1,01,73,849; expenditure, Rs. 87,83,350; and there are now 896 schools, with 35,891 scholars.

The prominent *religious sects* are the—

Lingaet.	Muhammadan.	Sanyasi.
Jain.	Sikh.	Byragi.
Vaishnava.	Manbhao.	Jogi.
Rai Dasi.	Nanik Shahi.	Gosain.

Religious mendicants—

Bhat.	Gosawi.	Waghe.
Thakur.	Byragi.	Dangat.
Gurao.	Nath.	Dandigan.
Manbhao.	Gondhali.	

Many deified persons—

Krishna.	Hanuman.	Panchwai.
Siva.	Rukmini.	Satwai.
Ganpati, Ganesh.	Kandoba.	Asra.
Bhawani.	Bhairava.	Trees and plants.
Surya.	Ram-das.	Mari Mai.
Rama.	Tukaram.	Spirits, demons.
Parasurama.	Maneshwar.	Cobra.
Vithoba.		

Kandoba is largely worshipped in the Mahratta country, and is assumed to be an incarnation of Siva. In Berar, until lately, women used to swing themselves by iron hooks fastened into their flesh, after first naming their petition to the priest; in his honour, also, men drew strings of heavy carts by means of iron hooks fastened into their bodies. The Wagher beg in his name, and the Murali are devoted to him. Many houses have a silver image of him, sword in hand, on horseback, before which, on the Champa Shasti, they wave a copper platter, bearing cocoanut, jagari, turmeric, and sixteen small lamps made of dough. His votaries offer him brinjals and onions, which they may not use themselves before this day. He rides on a black dog, which is worshipped. He is worshipped on Sunday, and is also called Martand (the sun).

The Kunbi and Mali worship at Muhammadan shrines. No non-Hindu is allowed to approach a temple; his touching it is pollution. They have as deities, stones daubed. Sikhs are few in

Hyderabad or Berar, and are mostly of mixed descent. The sect have a college at Nandeir, on the left bank of the Godavery. On the 10th day of the Dasara, in Berar, a married girl is worshipped.

Some Mhar worship Vithoba, the god of the Pandarpur temple. Others worship Varuna's twin sons, Meghoni and Deghoni, and his four messengers, Gabriel, Azrail, Michael, and Anadin. They worship also Kali Nik, Wackach, Sari, Gari, Mai Kans, Dhondiba; likewise the four Bhairava, Kal, Bhujang (snake), Samant, Andhut; the heroes Bhima, Arjuna, Lachman, Ch'hatrapati (Sivaji), and others; and the demons Aghya and Jaltia Vital. In their worship, some are said to officiate naked; others with their clothes wet and clinging. The statues of Vithoba and Rukmini are nude. The Mang worship Mahadeo; he swears by the dog. The Dukar Kolhati hunt the wild boar, and kill a boar when they worship Bhagwan every year or so.

The *Manbhao* are a small order of Cœnobites. They admit both sexes, who are celibates, though they form one community. They wear black clothes, and shave their heads. One of their principal mat'h or monasteries is at Rithpur, near Ellichpur. They are all over Maharashtra; some have married and settled down in villages. They worship Krishna and Datatri; they are of quiet, inoffensive manners, and their nuns and monks wear black clothes. Their number in Berar is only 3519. The sect was founded about the 17th century by Kishn Bhut, a Brahman, who is said to have had four sons by a woman of the Mhang or leather-worker race. At the present day celibacy is professed by the men and women, and both wear a black cloth tied round their waist, forming a skirt, to indicate that they do not recognise any distinction as to sex. Their name is said to be Maha Anubhao, great understanding, abbreviated into Manbhao. The Gharbari are laymen, and the Byragi, who wear black clothes, are both monks and nuns. They are hated by the Brahmans. They do not admit the low-caste Mhar.

Datatri is a son of the rishi Atri (supposed to have been a triune incarnation of Brahma, Vishnu, and Siva). The Gharbari are lay members; the monks and nuns wear clothes stained with lamp-black (kajal). They are admitted into the order by the chief monk cutting off a portion of the hair; the monks and nuns are clean shaven. They are prohibited drinking the water of any village in which there is a temple to any goddess; they are not to drink the water of a village in which a man has been murdered or poisoned, or been killed by falling into a well. If a man die a natural death, they must visit a graveyard before they eat or drink. They will not cut or break down a tree, large or small. Tulsi Bai, the mistress of Jeswunt Rao Holkar, was a Manbhao woman. The Gosawi, Manbhao, and Gondhali recruit their ranks from Sudras of any caste.

Trees.—In Berar, certain families hold in honour certain trees and plants; and at marriage times branches of those trees are set up in the house.

Ma[illegible] whose g[illegible]oti is a deity of the people of Berar, to Num[illegible] ardianship they confine their boundaries. erected to [illegible]'s temples, shrines, and images are to his hon[illegible]eim, but no specific rites are celebrated [illegible]our. He is nowhere styled Hanuman, and only the educated are acquainted with the legends which suppose him to have been chief of the Langur monkey tribe.

Marriage.—In Berar, a widow is married by the 'pat' form, an inferior ceremony. The groom is not married to the woman, but to the swallow-wort plant, or to a ring or a pitcher. The twigs of five plants are used,—the mango, the shami, jambul, apata, and swallow-wort. The trees are worshipped, a twig is cut from each; in the bride's house they are placed in an earthen pot, around the mouth of which is bound a strip of yellow cloth, torn from a woman's bodice. They are subsequently worshipped at the Deokundi ceremony. After death, when the corpse has been washed, dressed, and anointed, a sprig of holy basil is placed on the dead man's mouth or ear.

In Berar, most Hindu women are allowed to make a second marriage. Ahir, Gujar, Jat, the younger brother marries the widow of the elder brother.

Vidur and Krishnapakshi are the same. They are the offspring of Brahmans with women of inferior caste.

MYSORE.—The great central plateau of the Peninsula of India includes the Mysore territory, the British districts of Salem, Bellary, Cuddapah, Kurnool, the Hyderabad dominions of the Nizam, the British districts of Belgaum, Dharwar, Sholapur, Poona, Aurangabad, and the assigned province of Berar. They present vast undulating plains, of various elevations from 1400 to 3000 feet above the sea, almost entirely devoid of trees, and with but little low jungle. Here and there low ranges of hills appear, and isolated rocks, hills or drugs, mostly bare or springled with a low brushwood. Towards the north and west of this plateau region large steppes occur. The surface is more broken by hills and ravines than in the south, with a greater abundance of low jungle and stunted trees. In many of the ravines are timber trees, and towards the more northern portions there are considerable tracts of long grass lands or 'rumnahs.' The whole of this tract was formerly named the Dekhan, from the Sanskrit Dakshina, meaning the south. The prevailing character of the soil in the Salem and Mysore portion of this region is a reddish loam overlying gneiss and granite rocks; in the Ceded Districts, in the eastern part of Hyderabad, and in the Southern Mahratta country, it is mostly regur or black cotton soil, overlying sandstone, limestone, and claystone strata, with patches of red soil, but regur is the only soil visible over all the great volcanic outburst of greenstone that covers Berar, Poona, and the west of Hyderabad, and north to the Nerbadda.

When Tipu Sultan fell at the storm of Seringapatam, the British placed on the throne a descendant of a former Hindu ruler, but his administration was not successful, and in 1832 Mysore was placed under a British officer as commissioner. On the 25th March 1881, on the present ruler coming of age, the country was restored; but, by treaty, Bangalore and its outskirts, 12 miles square, was assigned to the British. It is the British cantonment in Mysore.

Mysore, Maisur, or Maheshwar, as a State is in alliance with the British. Its ruler, H.H. the Maharaja Chamarajendra Wodayar Bahadur, is a Hindu prince, and was adopted by his childless pre-

ecessor. The territory has an area of 24,723 square miles, and in 1881 there was a male population of 2,085,842, and females 2,100,346—total, 4,186,188, being 169 to the square mile. Ten years before, in 1871, a census was taken, which showed males 2,535,924, females 2,519,488—total, 5,055,412, or 204 per square mile. Loss of males, 450,082; loss of females, 419,142; total loss, 869,224. The loss of the male population was 18 per cent., and that of the female 16 per cent.

The loss in the Hindu and Buddhist population was 864,343 souls in 4,820,688, or at the rate of 18 per cent. on the population of 1871.

The Muhammadan loss was 8517 in 208,991, being at the rate of 4 per cent.; but Christians increased 3573 upon 2566.

The Mysore people recognise 101 castes in their country, but in the census of 1871 the enumerators returned 413. The more important are as under:—

Beder, . . .	171,269	Lingaet, . . .	80,821
Brahmans, .	162,652	Madigaru, . .	174,821
Buddhists, . . .	9	Muhammadans, .	200,484
Christians, .	29,219	Rajputs, . . .	13,251
Halu Kurubaru	225,282	Reddi, ...	54,593
Hindus, others,	3,780,433	Parsees, ...	47
Holar, . . .	447,421	Sikhs, ...	41
Jain, ...	10,760	Sivachar, Gan-	
Jew, ...	1	daru, . . .	259,110
Komati, . . .	25,985	Wakkali, . . .	695,215

The Banajiga (29,866), Idiga Nagarta (4888), and Tiglar, market gardeners (28,780), are also named. The Idiga in Coorg collect the palm wine.

In 1871 the principal tribes were named as under:—

Brahman, . . .	169,637	Lumbana, . . .	33,000
Kshatriya, Rajputs,	67,358	Parsee, ...	43
Wakkaliga, . .	1,191,000	Muhammadans, .	208,991
Kuruba, . . .	371,000	Buddhists, Jains,	13,263
Baidara, . . .	262,000	Christians, . .	25,676
Korawa, . . .	36,600		

There have been many immigrants from surrounding nations, as the languages current in 1881 willshow, but the country is essentially Canarese:—

Hindustani, . .	231,450	Konkani, ...	4,370
Telugu, . . .	637,230	Coorgi, ...	21
Mahrati, . . .	67,871	Persian, ...	118
Tamil, ...	130,569	Arabic, ...	40
Gujerati, . . .	1,181	Pushtu, ...	87
Canarese, . . .	3,095,647	English, ...	8,148
Malealam, . . .	332	Sindi, ...	17
Tulu, ...	8,941	Other ten tongues, . .	30

Many of the Muhammadans are descendants of immigrants, and others are of Hindu origin. During the reigns of Hyder Ali and of his son Tipu Sultan, numbers of Hindus were forcibly converted to Muhammadanism.

The *Labbai* are commercial. Colonel Wilks says that in the 8th century, during the administration of a cruel governor of Irak, Hajaj Bin Yusuf, members of the house of Husain abandoned their native country, and settled in the Konkan and to the east of Cape Comorin, and were the ancestors of the Labbai. See Labek.

The social customs of many of the Hinduized and aboriginal tribes differ from those of other parts of India.

Brahmans.—Among the Smartta and Madhava the mother will not eat anything cooked by her daughter until the birth of her daughter's first child, as she only then becomes ceremonially pure. The Sanketa or Sanketi Brahmans of Mysore are an offshoot from a Smartta colony in the Madura district, and speak a corrupt Tamil. Their women tie their saree cloth tight round the body.

The *Wakkali* or Wakkaliga is the great agricultural body throughout the Canarese-speaking districts. Their number in Mysore is 695,215. There are eight sections,—Nonaba, Gangadikara, Maliya, Morasa, Lalgunda, Reddi, Kamme, Kunchatiga, and Nadavar. They eat together, but only marry in their own respective clans. Some of the women of the Morasa section of the Akaliya had to sacrifice a finger of their right hand previously to piercing the ears of the eldest daughter, preparatory to her betrothal. Placing the finger on a block, the blacksmith with a chisel and hammer strikes it off at a single blow. If the girl to be betrothed be motherless, and the mother of the boy to whom she is to be betrothed have not before undergone the amputation, she has now to permit the sacrifice. See Wakalu.

The *Holar* or Holiyar is the great servile race of all the Canarese-speaking countries, taking the place of the Mahratta Mhar, the Hyderabad Dher, the Teling Mala, and Tamil Parayan.

The *Kulawadi*, village policeman, beadle, henchman of the headman of the village, boundary commissioner, is invariably a Holiyar. The Holiyar are farm labourers, watch the herds, and one of their number is generally priest of the village goddess. Every village has its Holigeri or Holiyar's quarter outside the village boundary hedge, and they object to and prevent Brahmans passing through their hamlet. If attempted, they turn out in a body, slipper him, in former times even to death. Other castes may approach to the door, but must not enter. If by chance a person do get in, the owner tears the unwelcome intruder's cloth, ties up some salt in a corner of it, and then turns him out. This is supposed to avert any evil which his presence might have brought on the owner of the house. At Melkot, the chief locality of the followers of Ramanuja, and at Beleru, where there is also a deity worshipped by Brahmans, the Holiyar have the right of entering the temples on three appointed days of the year. At Melkot they have the privilege of dragging the car. Captain Mackenzie mentions that all castes in the village recognise the Kulawadi as the rightful owner of the village. If a question be raised as to the village boundary, the Kulawadi is the only one competent to take oath as to how the boundary ought to run. The old custom was for the Kulawadi to place on his head a ball of earth, with some water in the centre, and to march the boundary. If he march wrongly, the ball falls to pieces, the Kulawadi dies in fifteen days, and his house becomes a ruin. On a death occurring, the Kulawadi receives a fee from the family, who thus 'buy from him the ground for the dead.' The fee is called Nela-Haga (in Carnatica, Nela, earth, and Haga, a coin worth one anna two pie). The Kulawadi, however, is not supreme; he again pays annually one fowl, one hana (4 annas 8 pie), and a handful of rice to the agent of the Sudagadu Sidda (or lord of the burning grounds), who resides in the Baba Booden Hills, and appoints agents for the tracts of country to collect his dues.

The skins of all animals dying within the village boundary are the property of the Kulawadi, and

this one fact often settles a village boundary dispute. The Karu Kallu is the village boundary stone; it is a plain menhir, and the village Patel once a year makes an offering to it, which the Kulawadi at the conclusion of the ceremony carries off. Where there is no Patel, the Kulawadi performs the annual ceremony. The ordinary attire of all the Holiyar, and of the Mhar, is the narrow lungoti strip of cloth passing between the thighs, with a coarse hair blanket or cumbli for covering. The ancient Mysore Holiyar, Vira-Baraka, is said to have been cursed by the gods thus:—

'An old cumbli for clothing, a stick in your hand,
The leavings of betters you'll eat in this land.'

And these words paint the present condition of the Kulawadi.

Washermen of Mysore worship Basava-devaru or Ubbe in a temple with a shapeless stone, and to this they sacrifice animals, to prevent the clothes being burned in the Ubbe or steaming-pot. They also worship Vishnu. Basava lived in the 12th century, at Kalian, where he was minister to Bajal, the king, and he introduced there the worship of the lingam. But the Mysore washermen, though worshipping Basava as a deity (devaru), nevertheless are Vaishnava.

Beder or Nayik.—Their clans are called Kiratika, Barika, and Kannaiya in different parts of Mysore. They have two other divisions, Karnata in the south, and Telinga in the north, who neither eat together nor intermarry. The former wear the lingam. Most of the Pallegar of Mysore are of this race. They are a brave, martial, but predatory race, and have two small principalities at Beder Zorapur and Gurgunta, between the Kistna and the Bhima rivers. The Beder are said to have formed part of the armies of Tipu.

Pindari (Beder) tribe of Muhammadans, converts from the Beder race, and were formerly predatory, have now settled to agriculture and take employ in the Mysore horse.

Idiga, or toddy-drawers of Mysore (80,715), worship all the Hindu deities, but especially evil spirits, and they adore pots full of toddy. In the Nagar division they are called Hale Paika, and were soldiers under the Pallegars. They eat animal food, and drink largely. Their widows do not re-marry, but are concubines, and their children become an inferior division of the caste.

Kuruba of Mysore have two sections,—Betta Kuruba and Hande Kuruba. The Kuruba worship Bire-devaru, also a box containing the wearing apparel of Krishna under the name of Junjuppa. They are agricultural, herdsmen, labourers, and blanket weavers.

Betta Kuruba or Hill Kuruba are met with in the forests along the S.W. boundary of Mysore, and amongst the hills at the foot of the Neilgherry range, living in small, rudely-built villages called Hadi. They earn a livelihood by felling timber, at which they are very expert. They are a diminutive race, the men averaging about 5 feet 2 inches in height; but they are very active, and capable of much endurance. Of late years they have been seeking employment in the neighbouring coffee estates. The *Jenu* or Honey Kuruba (1094) gather honey and other forest products. They are shorter and darker than the Betta Kuruba, and in Coorg are migrants. *Iraliga* collect forest produce, and differ from the Jenu Kuruba only in name. See Kuruba.

Badaga, of the Neilgherry Hills, regard the Kuruba as sorcerers, and at the beginning of the ploughing season they get a Kuruba to turn the first furrow, and to bless the first handful of the seed corn, otherwise they imagine the harvest would be a failure, and they give the Kuruba a small portion of the crop.

Soliga (1069) dwell in the Beligiri-rangam Hills on the S.E. frontier of Mysore. They live in small communities of five or six huts in the midst of the forests. They speak old Canarese. They cultivate with the hoe small patches of ground to grow a coarse plantain, vegetables, and a little ragi, which they eat with edible roots and the flesh of animals they catch. They avoid strangers as much as possible, and visit the plains only to purchase necessaries.

Natwa (Natya, SANSK., dancing), or dancing women attached to temples, are also called Kunda Golaka. They are drawn chiefly from the Sudra classes, Banajiga, Beder, and Besta; are born in the caste, or adopted or devoted by their parents even before birth.

Waddara are earth and stone masons, but give information largely to robbers. They are polygamists on a large scale, and widows and divorced women are re-married.

Hasular occupy the ghats in the N.W. part of Mysore. They are a short, thick-set race, very dark skinned, and with curled hair. They fell timber, work in betel-nut gardens, and gather wild cardamoms, pepper, etc. They speak a dialect of Canarese.

Verara, in the southern taluks of the Mysore district, are said to have been slaves to the Nairs in the Wynad district. They resemble the African in features, having thick lips and a compressed nose. They speak a language of their own.

Nagarta call themselves Vaisya Hindus, but this claim is not admitted by the Brahmans or by the Komati. They engage in agriculture, but never till the ground with their own hands, nor even follow any mechanical profession.

Of *mendicant* sects in Mysore, the more important are the Dasa, Jangama, Satani, Domba, Jangalaga, Budabudiki, Pichakunte, Hale or Pansu, Makkalu, and Helva or Paknati Jogi.

In 1871 there were 12 wild tribes, 44 servile tribes, and 16 of homeless migrants. Omitting mere trade and country designations, the remaining castes and tribes are the Agamudi, Agasa, Besta or Bhoi, Bilwa, Golla, Koracha, Lumbana, Murka or Hale Kanadiga, Namadhari, Palli, Rachwar, Rajpindi, and Uppara.

Many of the Christian sects of Europe have missionary bodies in Mysore,—English, French, German, Scotch, Roman Catholics; but the French have been prominent since the days of the Abbé Dubois in the 18th century, and they have now a vicar-apostolic, with 13 European missionaries and native priests.

Mr. (Sir) Walter Elliot mentions in the Journal of the Ethnological Society that the Canarese race of Mysore and the Southern Mahratta country believe that the spirits of unmarried persons, of the unchaste, of those who have died a violent death, etc., become malignant ghosts, called Viraka, who are appeased by offerings.

COORG or Kodaga is a British province to the

west of Mysore, between lat. 11° 55′ and 12° 50′ N., and long. 75° 25′ and 76° 14′ E. It is 60 miles long by 40 broad, and its area is 1583 square miles, with a population of 178,302, of whom 77,863 are females. It is a hilly country, culminating in mountain ranges, the highest being 5375 feet above the sea. Kodaga is said to mean west.

In 1834 it was ruled over by a raja of the Lingaet sect of Hindus; but his cruelties, carried on for a long series of years, brought on a war with the Indian Government, and, after a battle on the 8th April 1834, the country was annexed. Since then, the general population has largely increased by settlers from surrounding districts, but the Coorg are believed to be diminishing.

The numbers speaking the current languages perhaps best show the original nations of the present inhabitants:—

Canarese,	92,079	Konkani,	1,689
Coorgi or Kodaga,	28,535	Wild dialects,	13,853
Malealam,	10,189	English,	514
Tulu,	9,589	Lambani,	111
Hindustani,	8,513	Gujerati,	58
Tamil,	5,025	Portuguese,	57
Telugu,	5,008	French,	9
Mahrati,	3,055	German,	14

The Coorg race hav 13 clans, but they arrange themselves into Coorg and Amma Coorg. They are a tall, muscular, broad-chested, well-favoured race of mountaineers, 5 feet 8 inches to 5 feet 9 inches in height, handsome and well made, far superior in physique to the inhabitants of the plains, whom they greatly despise. They are also far advanced in civilisation, and are very intelligent. They have a Caucasian head, regular features, aquiline nose, with chiselled lips, black eyes, and dark hair. They wear whiskers and moustache, but no beard, have a fair complexion, with intelligent countenances, and general bold, independent deportment. They follow agriculture, and a few seek other employments; but, as a rule, they eschew military employ. They believe themselves to be descendants of the daughters of Chandra Varma, king of Matsa Desha, obtained by the intercession of Parvati. Chandra Varma is said to have come originally to Coorg. The vice of drinking has a deep and widely-spread hold upon them. They marry at a ripe age, but the wives of brothers are in common. They are a compact body of mountaineers, who have been lords of the soil from time immemorial. They live in farmhouses far apart. The Amma Coorg take among the Coorgs a place similar to that of the Brahmans among Hindus.

The Coorg despise manual labour, and cultivation is carried on by the immigrants, the Tamil Vellalar, the Teling Reddi, the Canarese Wakala, and the Malabar Nair, while the Teling Sudra are labourers. The Arambagaru are agriculturists, and the Arambada Kikartiru are dependents on the Arambagar.

The 1881 census return classifies the people as under:—

Coorgs,	26,558	Non-Hindus,	56,030
Amma Coorgs,	475	Muhammadans,	12,541
Brahmans,	2,445	Native Christians,	2,637
Rajputs,	480	Europeans,	228
Other Hindus,	56,801	Eurasians,	287
Inferior castes and tribes,	21,100	Jains,	99
		Parsees,	21

The following tribes have not accepted Hinduism:—

Balagai Holeya, agriculturists.	Malaya Holeya.
Kembati, natives of Coorg.	Marta do.
Mari Holeya or Moringi, coolies from Malabar.	Parava do.
	Kukka, coolies from Canara.

Other aboriginal and jungle tribes are—

Adigarai, labourers, speak Malealam.
Ajala, ,, from Canara.
Betta Kuruba, a fowler tribe from Malabar and Canara.
Jenu Kuruba, foresters.
Palay, agricultural labourers, speak Tulu.
Yarava, of 2 sections, Paniyar and Panjira, from Wynad.

Holeya, labourers in Coorg, number 32,450. They are ill-favoured, with coarse, stupid features, short in stature, but strong built, with dark or black skin and black, straight hair. They practise demonology. Some of them, as the Badagu, speak Canarese. Others, as the Kembati, speak the Kodaga tongue. They are of small stature, eat beef and other flesh meats. They worship Ryappadevaru and Jamauts.

The Yarava of Coorg number 11,894. They came from the Wynad and settled in the Yedenalknad and Kiggatnad taluks. They have thick lips, woolly hair, and black complexion. They are labourers. Their language is said to resemble Malealam; they worship evil spirits, and have no priests.

The Betta Kuruba are well proportioned, with good features. They are fowlers, mat and basket makers. They have a central hut, around which other huts are erected, like the nave of a wheel. All adult males sleep in the central hut. People approaching the huts have to take off their shoes.

Hegade, a small tribe of cultivators in Coorg, of small stature, who follow Coorg customs, but do not eat or intermarry with them.

In the S.W. part of Coorg are the priests of Amma, the goddess of the river Cauvery. They generally retain the old devil-worship of the Dravidian race, of which they are a branch. They chiefly worship the goddess Cavare Amma or Parvati; but demon and ancestor worship are common.

The *languages* prevailing are Coorg, Canarese, Malealam, Tamil, Tuju or Tulu, Urdu, and English. The Coorg or Kodaga language has generally been regarded by some as Canarese, modified by the Tulu. But Mr. Moegling states that it is more nearly allied to the Tamil and Malealam than to the Canarese. It is generally recognised as between Old Canarese and Tulu. It is admirably suited for expressing easy-flowing poetry of a humorous or solemn strain.

TRAVANCORE has an area of 6730 square miles, and a population of 2,401,158, being 357 to the square mile; the males, in 1881, were 1,197,134, and females 1,204,024. The Travancore dominion is also called Kerala, a term which is supposed to be derived from its dense forests of cocoanut palms. It is also called Veynād, also Tirupapur Swarupam, likewise Karma-Bhumi, the eastern coast being Jnana or Punnea-Bhumi. Trividam Code is the original of the Travancore of the English. The people know it as part of the Malealam, which means literally hill and dale. In the native parlance, the term comprises the districts of Malabar, South Canara, and the Native States of Cochin and Travancore. By Europeans, however, Malabar is the name given to the coast region of the extreme S.W. of the Peninsula of

India. Its inhabitants have not been often disturbed by foreign war, but the external influences of foreign races engaged in commerce have been largely felt.

Parasurama, in his invasion from the north, overran the provinces below the ghats, overcame the races which he found there, exterminated the higher classes, and introduced foreigners. His march probably extended to Cape Comorin, whence he drove Ravana, the native ruler, and many of his followers, into Ceylon, from which, at a later period, the ancestors of some of the castes of Tinnevelly and of the Tiyars of Malabar returned. He was not a Brahman, but seems to have been an aboriginal chief whom the Brahmans employed in their schism with the Kshatriya; he is represented as exterminating the Kshatriya with his battle-axe (parasu), which is the distinguishing weapon of the Kond. He has been deified as on of the incarnations of Vishnu.

Sects.—From Bombay to Cape Comorin are many indications of long-continued intercourse with western nations, and from prehistoric times coin of Augustus, Tiberius, and later emperors have been found in Malabar and Coimbatore. A colony of *Nestorian Christians* from Antioch early settled to the south of Goa. The *Jews* of Cochin possess copper s'asanams of a king of Kerala, attested by witnesses signing their names in Archaic Hebrew Cufic, and Pehlavi, about the 6th or 7th century Many families professing Judaism are scattered through the Southern Konkan, but they are not Jews, more probably Samaritans, who call themselves Ban-i-Israel. In Cochin there are two classes of Jews, one of them very fair, and of pure descent from the parent stock, the other dark, and probably proselytes or slaves.

Rulers.—Since the 14th century, portions of this coast region have been under the control of the dynasty of Bijanagar, of the Adal Shahi of Bijapur, of the Portuguese and Dutch from Europe, of Muhammadan rulers of Seringapatam, and of the British; and in the wars of these races many ancient chiefs have disappeared, and amongst them the Zamorin of history has lost nearly all his ancestors' possessions. These changes and immigrations have introduced many castes and customs peculiar to this region. Amongst the former are Namburi Brahman, Tiruvappaud, Tamban, Koil-Tamburan, Samunthaken, Pundala, Unniathiri, Kurthavu, Nedungadi, Eliathu, Mut'hathu, Adical, Chakiar, Nambiar, Oonnee, Psharodi, Pushpaken, Varier, Alat'hi, Nambidi, Thyambadi, Plapulli, Nair, and many others.

Inheritance.—Many of these have adopted the custom of the descensus ab utero, the descent by the female line, which they designate Marumakkatayam. The Ponan, a branch of the Tir or Ilivar, have not adopted this. Also amongst the Namburi Brahmans, only the eldest brother marries, the unmarried girls being carefully secluded, and many never marry at all; but even the Moplah Muhammadans follow this law of inheritance. Along with and dependent on it is the existence of polyandry amongst the Nairs of Malabar, which also in a household form prevails amongst the people of Coorg, as also amongst the Toda of the Neilgherries, amongst the Kapilli tribe on the Dindigul valley, amongst the Totti, a Pariah race in Mysore, also amongst the people of the Tibet passes.

Kerala or *Malealam*, also written Malayarma and Malayama, from Mala, a mountain, and Alam, a dale, is a long tract of land extending from Gocurnum near Goa to Cape Comorin, and includes within it the British districts of South Canara and Malabar, and the Feudatory Cochin, Calicut, and Travancore under Hindu rulers, with the Muhammadan Bibi of Cananore. The country is a succession of hills and valleys. Kerala is supposed to be a dialectal change from Malikeram, cocoanut, dense forests of that palm growing in the country; but it is also said to have been derived from a prince of that name who is famed for wisdom, benevolence, and moderation. The total area of that united Malealam or Kerala tract is 16,634 square miles, with a population of 5,490,991. The most distinctive part of the tract is Travancore, which has an area of 6730 square miles, and in 1881 a population of 2,401,158.

Languages.—From its position in the extreme south, with a seaboard the first to be touched by voyagers from the west, races are there of the most diversified origin, and the languages current are Arabic, Hebrew, English, French, Portuguese, Sanskrit, Urdu, Hindi, Mahrati, Gujerati, Sindi, Konkani, Malealam, Tulu, Tamil, Telugu, and Canarese, though Malealam and 16·8 per cent. of Tamil are the tongues used by 99·2 per cent. of the population, Malealam principally to the north of Trevandrum, and Tamil south of that city. Adjoining the Malealam district on the north is the S. Canara district, in part of which, around Mangalore, the Tulu language is spoken, Canarese being the tongue in general use.

The Malealam language is spoken in the low country and along the Western Ghats, from Cape Comorin to the Chandragiri river, or more strictly, perhaps, to Nileshwar (Nileswara), where a Nair raja, conquered by Hyder Ali, formerly ruled.

The people occupying that tract are mostly settled, but it has had several dynastic races; the Zamorin of Calicut, the Bibi of Cananore, the raja of Cochin, the raja of Travancore, and the Dutch, have all held sway there; but the present rulers are the maharajas of Travancore and of Cochin, the Zamorin of Calicut, and the Bibi of Cananore; and the present paramount power is the British.

Tulu, Tuja, or Tulava, a cultivated Dravidian tongue, is an idiom which holds a position midway between the Canarese and the Malealam, but more nearly resembling the Canarese. Though once generally prevalent in the district of Canara, it is now spoken only in a small tract of country in the vicinity of Mangalore, by not more than 100,000 or 150,000 souls. It has been encroached upon by many languages, and is likely soon to disappear. The Tulu has a strong resemblance to Malealam, though the Tuluva-speaking race are unable to understand their Malealam neighbours. The people speaking the Tulu shrink from contact with foreigners, even from people of their own caste, retreating from the great roads, cities, and bazars as eagerly as the Tamil flocks to them; and the Tulu-speaking race are to be found isolated with their families in their high walled parambu, in parts where the lines and centres of communication are entirely occupied by the more enterprising Tamil people. Tulu is the original language of

ıe Canara collectorate, but has been largely isplaced by Canarese, the language of the conuering power about the 15th century. It now revails (though not exclusively) from the north order of Malabar (Kavai), where it is much mixed ·ith Malealam, to Udapi in the north. Mangaore, Mulki, and Udapi are the chief places where , is spoken. The Tulu people belong to the same ıce as the Tamil and Telugu family, now conentionally called the Dravidian race. There is no oubt that Tulu is a dialect of the Canarese, and losely allied to the Toda, Badaga, and Coorg ialects. There do not seem to be any dialects of elugu. Malealam is a dialect of Tamil. By ialect is meant that these languages were, many enturies ago, the same as the Canarese and (in ıse of Malealam) as Tamil, but that long separaon and different influences have caused the ariations we now see. Tulu, Toda, etc., are far ıore closely allied to Canarese, and Malealam to 'amil, than Canarese, Tamil, and Telugu are to ne another. The Tulu people have no literature, xcept a few translations by German missionaries.

The ruling families in Travancore and Cochin laim to be of the Kshatriya race, of whom in Travancore there are fourteen clans all regarding hemselves to be of the Lunar line, and of one gotram or stock, descendants from one chief. They do not therefore intermarry. Their daughters, with one exception amongst the clans, are usually married by Brahmans, and the offspring are called Samanthar or Murdhavasikthar. The exception to this is the Koil Pandala subdivision, from which consorts are chosen for the Ranis of Travancore.

The Malayala Sudras are the Nairs of Malabar. They are the agriculturists of the country, cultivating as tenants of the Namburi, who are the landlords or Janami of Malealam, and who are looked up to as the 'suzerain master, their household deity, their very god on earth.'

The titular designation given to nearly all the Brahmans of Travancore (except to the Papi caste) is Namburi (from Nam = Veda, and Purepika, to complete), meaning an expounder of the Vedas. Among the varied clans of Brahmans in India, these Namburi take a very high position for sanctity. With the object of retaining their landed property unbroken, succession is from father to son, but it is strictly entailed on the eldest son. The younger sons are not allowed to marry, but visit the Ambulavasi (temple) and Sudra women, who receive them more for the honour than for any gifts they bring. The Namburi are unboundedly hospitable to Brahman strangers, and are charitable. They are of a fair colour, their women are considered beautiful, and the race are remarkable for cleanliness of person and neatness in dress.

Their women often remain unmarried after they have grown up, and even to an advanced age. Numerous daughters are considered a misfortune, the dowry and marriage expenses bearing heavily even on the wealthiest Namburi. Infanticide, however, is unknown. But a Namburi, anxious to see his sisters married, will give them to a family from which he takes one or more wives. The Namburi women are guarded with a more than Muhammadan seclusion. At home they dress like the Nair women, with a cloth from the waist downward. When they move abroad they are covered over with cloths, and attended by a Nair servant woman, who commands all men on the road to stand aloof.

There are 27,138 Brahmans, mostly immigrants from the districts of the Madras and Bombay Presidency. The Travancore people style these foreign Brahmans 'Putter,' a corruption of Bhatta, devout; but they are also distinguished by affixing the localities whence they came, as Mahratta, Telugu, Tamil, Gujerati, Pandy, Karnatica, Choliar, Gowda, Mukkani, Pataya, Vanchi, Iyengar, and Sanati Brahman.

Inheritance Laws.—The peculiar marriage customs of the bulk of the races in Travancore originated the existing law of inheritance. That law is called Marumakkatayam; it is the descensus ab utero of the Locrians, under which a sister's children inherit. Parasu Rama urged all his Brahman colonists to adopt it, but those of Panniar alone complied. All the Kshatriya families, however, follow this law of inheritance.

The Marumakkatayam law of inheritance is, however, followed by all the Brahmans who serve in temples, by all the Malealam Sudras, most of whom have the titular designation of Nair; by the five artisan castes, the goldsmith, brazier, stonemason, blacksmith, and carpenter; also by the Maran Sudra, who eat rice prepared by a Varier, and whose women receive Variers' visits; by the old Kshatriya race, amongst whom are the sovereigns of the country; and by the Nanjanad sections of the Vellalar race.

Nair girls are all married at an early age, before they grow up, and the ceremony is attended with much display of wealth, but the husband or person who ties on the marriage string (the tali) has no claim to possess her then or in after life. But when she attains maturity she chooses the person with whom she is to associate, who presents her with a cloth. The union agreement, however, on either side is dissolvable at pleasure, the sole restriction on the Nair woman being that she must not admit any man of a class below her own. Accordingly a Nair household has no husband, but consists of its owner, and the maternal uncles, the uterine brothers and sisters,

and the sisters' children. Women may rule the state, and, under the Marumakkatayam law, in nearly half the houses in the country, women are the sole proprietors of their households.

Among those who follow the Marumakkatayam law, a female child is more highly prized than a boy, and the ratio of adult women to 100 men in Travancore is higher than in neighbouring districts, as under:—

Malabar, . .	110·4	Kistna,	103·2
Travancore, .	110·5	North Arcot,	102·2
Ganjam, . .	110·2	Kurnool, . .	101·5
Salem, . .	109·2	Chingleput, .	101·4
Coimbatore, .	109·1	Nellore, . .	99·3

Godavery, .	108·2	Bellary, . .	98·6
Vizagapatam,	104·6	Neilgherries,	80·1
South Arcot,	103·3		

Northwards from Travancore the marriag and inheritance laws vary. The Tuluva people are remarkable for the law of succession called Aliya Santana. This is the law of the so-called Sudra tribes, and a tribe that practises it is probably Tulu. But the race does not include Brahmans or low castes, who are mostly settlers from other parts of S. India, though in some cases they have adopted the custom. In South Malabar, descent is to sons-in-law; but in N. Malabar, the Nair, the artisans, carpenter, brass-smith, blacksmith, and goldsmith, also the Tiar, who are toddy-drawers, and the Mookwa fishermen, are all polyandrists, and the descent of property goes in the female line. In North Malabar, this law of descent is called Marumakkatayam, and the Muhammadan Moplah has conformed to this usage. In Canara, a similar law, called Aliya Santana, or nephew inheritance, prevails, and is in practice more strictly carried out than in N. Malabar. In N. Malabar, the adherents to Marumakkatayam form united family communities, termed Tarwaad. The senior member of whatsoever branch is the head of the family, is termed Karnaven; the other members are styled Anandraver; the remotest member is acknowledged as one of the family, and entitled to maintenance if living under subordination to the head of the family and taking part in their religious observances. For the women there is nothing analogous to the state of widowhood as existing elsewhere. Whether in alliance with men or not, they reside in their own families. The Nair marries before he is ten years of age; but though he supports, he never associates with his wife, who receives, at her pleasure, any men, provided they be not of lower birth. Consequent on this form of descent, a Nair does not know who his father is. In law, property is held to vest in the females only; practically the males are co-sharers with the females. In default of males, females succeed to the management of the family property. In some families the management devolves on them preferably to the males, and the senior female takes it. There is, however, a growing tendency to convey property from father to son, arising from the gradual abandonment of polyandry. The connubial connection in question is called in Malabar Goona-dosham, Goona, good, Dosham, evil (for better or worse). In Travancore it is styled Mundu-vanga, viz. Mundu, cloth, Vanga, receiving, and the girl taken is of ripe age, and her consent must be obtained. Personal acquaintance thus precedes the union. The hour selected for the ceremony is 8 P.M. There is an assemblage of friends; the man presents the woman with a mundu or white muslin cloth, in a corner of which, in North Malabar, a small sum of money is tied. The girl either goes to the man's house, or remains in her own, and is visited by him there. Each party is unrestricted as to the number of such connections that may be formed, but these ordinarily do not exceed two or three. The descent being in the female line, the parentage of the father is immaterial. The Marumakkatayam law is not followed in North Malabar by the Aka Podwal, a class of pagoda servants, nor by the Brahmans of North Malabar or of Canara. But in Travancore law, as only the eldest brother of a Brahman family is allowed to marry with his equal, the other brothers form other connections, and their children, therefore, do not inherit. In the Tuluva country, the Brahman widow can devote herself to the temple, and reside outside or inside its walls. If within the walls, she is a servant of the idol, and receives the visits of men of her own caste only; the offspring of such, if boys, are called Moylar, and the girls are married to them. But if she elect to reside outside the walls, she must pay a monthly sum to the pagoda, and may cohabit with any man of pure descent.

The Nair women do not cover their bosoms when at home, and, in North Travancore, not even when abroad. With the well-to-do Nairs, reading and writing are essential in the education of the women, and singing and instrumental music are accomplishments. Eighty per cent. of the educated native women are of the Malealam Sudra (Nair) and native Christian classes.

Religion.—In Travancore, the superior divinities are Vishnu, Siva, Bhagavati, and their incarnations. The inferior objects of worship are in the Paikoil or devil-temples and other places. But all the latter, and many of their female gods, owe their origin to Tamil immigrants, the true Malealam population invariably resorting to the higher idols. There have been white and black Jews in Travancore from very ancient times, and Christians from the earliest days of Christianity. At present there are—of the church of Rome, 153,815; Protestants, 57,318; Syrians, 287,409. Muhammadans are 146,909 in number.

The Ambalavasi (Ambalam, pagoda or temple, and Vasi, he who lives), 7078 in number, are peculiar to Malabar. They have fourteen large and numerous small subdivisions, but all are employed in the Hindu temples, of which there is one to every 248 of the population. They abstain from animal food of every kind.

Amongst the Sudra castes in Travancore are the Vellalar, the Mudali, and the Pandi Sudra.

The *Vellalar* in 1872 were 24,125 in number, and in every district in the kingdom. In the adjoining provinces of British territory, where Tamil is spoken, the great body of the cultivators claim to be Sudras of the Vellala stock, and when well to do they receive the honorific suffix of Mudali.

The Idayan, Edaga, or Yadava is the shepherd race scattered over Southern India. In Travancore they are known as the Konan, Kangayen, Valayadaiyen, and Vaduk-idayen, and are 6319 in number. The Gopa, Gaola, Gorakh, and Satgop of Northern India, Bengal, and Orissa, and

the Gaoliga of Mysore, and some of the Dhangar, are cowherds, but are not identical with the Kurubar, and some of the Dhangar of the Dekkan, and some of the Ahir of Northern India. The shepherd race of Southern India are spreading out into all available employments. They are classed as Sudra Hindus, and usually styled Pillai, in distinction to the Vellalar cultivators, who add Mudali, or first man, to their names; and the shepherds, Idayan, take a lower social position.

The races in Travancore who were held in servile positions are upwards of 30 per cent. of the population, and may be shown as under:—

Chemman or Chakler,	1,042	Shannan,	128,600
Kshowraken or barber,	14,578	Mookooven or fishermen,	29,342
Kanian or soothsayers,	8,330	Malayaraen,	17,627
Paraven,	959	Vaden and Oolladen, hunters,	6,155
Thundan,	21,814	Puller,	5,438
Noolian,	2,185	Koravar,	54,828
Elaven,	387,176	Pariah,	66,454
		Pullayar,	196,539

The *Pullayar* or Pulian are a hard-working and extremely useful race, noted for their truthfulness and integrity. Until recently they were bought and sold like other property, but they have been freed by the present maharaja. They have remained on the lands they were cultivating. In social life they are lower than the Pariah. They speak Malealam. They are unknown in the British provinces.

The *Elavar* or Elaven are numerous. They aggregate 387,176, and are engaged in cultivation and in manufacturing the produce of the cocoanut tree, which forms a staple of the country.

The *Shanar* or Channan race, in number 128,600, are also found in the neighbouring British districts. They are chiefly engaged in the manufacture of the produce of the palmyra palm, Borassus flabelliformis, which is only inferior in value to the cocoanut tree.

Some of the Elavar and Paravar are amongst the most respectable cultivators in the Travancore kingdom. The Shanar of S. Travancore are even a more enterprising class; and the Pariah, throughout Southern India, is the chief labourer in the fields, and in other out-door work.

The *Kammalar*, or artisans of Travancore,—the goldsmith, the coppersmith or brazier, the stonemason, the blacksmith, and the carpenter. In Travancore, however, the Chembu-thatti or coppersmiths claim to be a distinct caste, but this is not conceded to them.

The *Chetty* of Travancore, of whom there are fifteen subdivisions, most of which seem mere nationalities.

Tiyar, from the Singhalese Twar, an islander; the Ponan race in Malabar. They are a branch of the Ilivar or Tir from Ceylon. They inherit from the father.

Parayer, also Pula Parayar, also Todinvar, a low-caste predial slave race of Malabar, who are stone-cutters, who are supposed and believe themselves to be wizards and witches. Vengeance and fear have occasionally led to their being cruelly treated.

Paniker, a race dwelling amid the forests and jungles of Malabar, who roughly clear the ground, and raise crops of coarse rice and other grains during the monsoon, and move to another place. They also collect forest products,—cardamoms, beeswax, gums. Their sole implement is a kind of adze. They are of diminutive stature. There is a small race called Kaniar Panikar, who practise astrology and necromancy. They calculate eclipses, cast horoscopes, and foretell the times and seasons, sell charms for all purposes, love philters, discover treasure, cure disease.

Cheramar, one of the predial slave races of Malabar. They are supposed to be descendants of the race conquered by the Chola kings. They are of very diminutive stature, very black skin, and not unfrequently woolly hair. Wilson derives the name from Chera, the soil. They follow the rule of Marumakkatayam.

Nagadi, an abject race in Malabar, beggars and thieves. They are of diminutive form, of the deepest black in colour, features brutish, hair thick and curly.

Bakudara and Betadara, two rude slave races in Tulava, who worship a benevolent deity named Buta, represented by a stone, kept in every house. They, too, believe that the spirits of the dead become Paisachi, and they offer sacrifices to Buta to restrain the Paisachi from troubling them.

Holier women, until towards the middle of the 19th century, used to visit Mangalore with no other covering than thick bushy branches before and behind, hung from their waists.

Bant, a tribe in Canara who worship the Paisachi or demons, and believe that persons who die a violent death become Paisachi.

Bunter, a race in Canara, the original landowners, who follow the rule of female descent. They marry, and the wives reside with their husbands, but do not interfere in the house management.

The *Kurumbalen* are a slave race who worship the hill god Malai-deva, and the spirits of deceased ancestors. They burn their dead if good men, and bury them if bad; and they believe the latter to become demons, requiring to be conciliated by sacrifice.

Maleali,	1,937,454	Hebrew,	97
Tulu,	664	Others,	22

Maleali is spoken by about 4,847,681 people along the Malabar coast, on the western side of the ghats or Malaya range of mountains, from the vicinity of Chandragiri near Mangalore, where it supersedes Canarese and Tulu, to Trevandrum, where Tamil begins to be spoken; but all along that coast Tamil intertwines with Maleali, which is a very ancient form of Tamil. The Rama Charita is the oldest existing Maleali poem.

Tulu or Tuluva is destitute of a literature in the proper sense of the term, and never had any character of its own. The only books printed in Tulu have been by the Basle missionaries. It is one of the most highly developed languages of the Dravidian family. It is spoken by about 300,000 people between the Chandragiri and Kalyanapuri rivers. It is written with the Malealam characters; it differs widely from Tamil,

less so from Canarese, and less again from Coorg. Tulu is said to mean meek, humble.

COCHIN, a small territory on the seaboard of the western side of the Indian Peninsula, in treaty with the British. Its area is 1361 square miles, population 600,278; 301,815 are males. The Bibi of Cannanore and H.H. the Zamorin of Calicut may also be named.

MADRAS CITY is on the east coast of the Peninsula of India, in lat. 13° 4′ 6″ N., and long. 80° 17′ 22″ E. In 1881 its population was 405,848. It is the capital of a presidency, to which it gives its name, and which is under the jurisdiction of a Governor and Council.

Famine.—In 1871 there was in this presidency a population of 31,597,872, but in 1881 only 31,170,631. Between the census taking of 1871 and that of 1881, in the years 1877 and 1878, in consequence of drought, there was famine in several districts, and many died. It pressed most heavily on Bellary, Coimbatore, Cuddapah, Kurnool, Madura, Nellore, North Arcot; and Mr. M'Iver calculated the total loss at three and a half millions. In the districts most severely affected the decrease of the population was 1,751,327, or 12·8 per cent. In those not affected or but slightly affected by famine, there has been an increase of 1,288,430, or 7·19 per cent. The age returns of the census of 1881 show that the effects of the famine had been most severely felt among the very young and the very old; and besides causing deaths, it prevented births. The children who were born in 1878 and 1879, and who were begotten in 1877 and 1878, were short of 700,000 as compared with 1871; and in 1881, of the ages up to 20, there were 1,947,950, or 12·04 per cent., fewer than in 1871.

Parts of the districts now comprising the Madras Presidency were known to Europe in times prior to the birth of Christ. Dynasties known as the Pandya, Chola, and Chera were then ruling, and merchants from the west were trading; a Pandyan prince sent two embassies to Augustus, who received the first at Tarragona, and the friendship of the Romans was sought by O Kerobothros, a king of Chera or Kerala. The Chola, the Σωραι of Ptolemy, were in power from B.C. to the 11th or 12th centuries A.D.; but in 1113, and again about 1150, parts of the Chola territory were overrun by the Singhalese.

The Kurubar, a shepherd race (kuru, a sheep), the Σωροι νομαδες of Artakur (Arcot) of Ptolemy, formed a federal community of 24 states, with castles, which were destroyed by one of the Chola kings of Tanjore in the 5th and 6th centuries, and he established a new capital at Conjeveram; but to the present day the country people point out the Kurubar-Kot or forts which that shepherd race had constructed. Since the Chola fell, this southern region has seen a Hindu dynasty at Bijanagar, the Muhammadan Adal Shahi of Bijapur, the Hindu Mahrattas who succeeded to Tanjore, with Hindu princes in Cochin, Calicut, and Travancore; and from the 15th to the 18th century, several races were striving for dominion. Muhammadan rulers, Mahratta armies, Polygar chieftains, and the Dutch, the Portuguese, the French, and the British, all took part in the strife, till the British, the Muhammadan dynasties of Hyderabad and Banaganapilly, and the Hindu rajas of Mysore, Travancore, Cochin, Puducottah, and Sandur alone remained as dominant powers. The Pandiya, the Cheru, the Chola, and the Kandya kings of Ceylon have all disappeared.

The north-east parts of the Peninsula have also had many dynastic changes. The Andhra dynasty ruled at Chicacole and Rajamundry prior to the Christian era. Pliny says they had 30 fortified towns, an army of 100,000 men, and 1000 elephants. The Kesari, lion kings, ruled in Orissa. The Chalukya Rajputs of Rajamundry succeeded a Buddhist dynasty, and subsequently the Ganapati of Warangal, the Vema Reddi, the Rayel of Bijanagar held sway; and the Chalukya of Kalian were overthrown during a time of religious war, when the people adopted the Lingaet teaching of the Jangams.

This presidency has an area of 141,001 square miles, with a population of 31,170,631, viz. 15,421,043 males, and 15,749,588 females, being 221 to the square mile. The most numerous races under Madras rule are the Tamil and Teling, with parts of the nations speaking Malealam, Canarese, Tulu, and Uriya; all of these are occupying ancestral lands, many from unknown times, and to them have to be added a quarter of a million of landless people speaking Mahrati, and over half a million speaking Hindustani.

Tamil was the language of three of the ancient dynasties who have been named. The *Chola* of Tanjore and Combaconum were settled on or near the Cauvery and Colerun rivers, and gave their names to the Coromandel or Cholamandel coast. The *Pandiya* capital is now occupied by the inhabitants of Madura; and the Chera ruled at Kerala on the Malabar coast. The *Kurumbar*, also, about the commencement of the Christian era, was briefly dominant in Southern India, and the Idayan herdsmen race still form a numerous portion of the Tamil-speaking people.

Mr. Taylor is of opinion that Tamil was cultivated in its purity in the ancient Pandiya kingdom. It is now spoken in the extreme south, south-east, and in Ceylon, throughout the vast plain of the Carnatic or country below the ghats, termed the Carnatic Paen Ghat by the Muhammadan sovereigns and by the British who have succeeded them. The Tamil-speaking country extends from Cape Comorin to Pulicat, 30 miles north of Madras, and inland from the Bay of Bengal to the Eastern Ghats. The Tamil skirts all the eastern frontier of Mysore, is also spoken over the Bara Mahal, Salem, South Arcot, Chingleput, Tanjore, Trichinopoly, Madura, Tinnevelly, Coimbatore, and Combaconum, meeting with the Malealam at the Gap of Palghat. It is spoken also in the southern part of the Travancore country, on the western side of the ghats, from Cape Comorin to the neighbourhood of Trevandrum; also in the northern and north-western parts of Ceylon, where Tamilar formed settlements prior to the Christian era, and from whence they have gradually thrust out the Singhalese.

The Tamil was the earliest developed of all the Dravidian idioms, is the most copious, and contains the largest portion of indubitably ancient forms. It includes two dialects, the classical and colloquial, the ancient and the modern, called respectively the Shen Tamil and the Kodun Tamil, which so widely differ that they may almost be regarded as different languages. The people at present speaking Tamil are, as regards

social customs, the least scrupulous or superstitious, and the most enterprising and persevering race of Hindus, and swarm wherever money is to be made, or wherever a more apathetic or a more aristocratic people is waiting to be pushed aside. The majority of the Hindu religionists found in Pegu, Penang, Singapore, and other places in the east, where they are known as Kling, are Tamil. All throughout Ceylon the coolies in the coffee plantations are Tamil; the majority of the money-making classes, even in Colombo, are Tamil; and ere long the Tamilar will have excluded the Singhalese from almost every office of profit and trust in their own island. The majority of the domestic servants, and of the camp-followers in the Madras Presidency, and the half of its army, are Tamil; and the coolies who emigrate so largely to the Mauritius and the West India Islands, are mostly of the Tamil people. Including the Tamil in the military cantonments and distant colonies, and those in South Travancore, Northern Ceylon, and excluding all Muhammadan, Teling, and Brahman residents of the Tamil country, who amount to at least 10 per cent. of the whole population, the people who speak the Tamil language are estimated at about 16 millions. The Tamil people are, generally speaking, dark coloured and short statured, energetic, fiery, and quarrelsome, but not vindictive. Many of them have embraced Brahmanism, but the low castes and fragmentary tribes have a spirit and a devil worship, and worship the local deities called Ammun.

Telugu is spoken on the eastern borders of the Peninsula by about 17 millions. The people are a taller and fairer race than the Tamil, many of the more northern of them being equal in stature to the Aryan Hindus of the north. They are more Brahmanical than the Tamil races, and are as energetic as the latter, though less restless.

Canarese people are about 7 millions in number, chiefly in the centre of the Peninsula; they are a tall and dark but singularly graceful race.

The Teling and Canarese are almost of similar physical frame, but, as a rule, the Teling are fairer. The great similarity of the two languages Canarese and Telugu justifies the opinion that the people are of the same stock, and that circumstances have modified their characters and personal appearance. The table-land occupied by the Canarese, from the southern part of the Mysore country, through Bellary in the Ceded Districts up to the Tumbudra, is arid, and the soil yields as food crops small millets.—Eleusine corocana, Setaria Italica and Germanica, Panicum Italicum, and Penicillaria spicata,—which even the labourers of the south of India only use on pressure when scarcity or dearth prevails.

Malealam is spoken in the south-west of the Peninsula by about 4 millions; Tulu, on the west seaboard somewhat to the north, by about 30,000.

Kodaga is spoken by the people of Coorg, 150,000 in number.

On the Neilgherry Hills are the Kota, about 1000 in number, the Toda about 1360 in number, the Badaga, another small tribe, and Kurumbar and Iralar who dwell on the slopes of the mountains. In the interior of the Peninsula are the Gond, and on its N.E. border the Khond, Kund, or Ku, all of whom are estimated at half a million of souls. Amongst these larger nations smaller tribes are intermixed, some of them living in forests or migratory; some have preserved their ethnical identity in sequestered wilds, others have merged as helot castes of the lowland Hindus, and these now fragmentary peoples form the debris of widely-spread primitive races.

Seventy-three languages are enumerated in the schedules, of which 48 are Asiatic and 25 non-Asiatic. Those principally spoken are five Dravidian tongues, Tamil, Telugu, Malealam, Canarese, and Tulu, viz. 28,853,267, or 92·56 per cent. Uriya, Urdu or Hindustani, and Mahrati are spoken by Uriya, 1,128,495; Hindustani, 696,103; Mahrati, 230,006.

There were 19,044 different caste names returned. The Vellalar alone were returned of 54 subdivisions and 3389 caste names. The Satani, a Hindu sect of the 16th century, have already seventeen divisions.

Since the middle of the 19th century, the tendency with the Tamil and Teling Hindus has been to mark themselves as belonging to particular families, in imitation of the Brahmans of Southern India, all of whom know the got or founder of the section to which they claim to belong. The following are the more numerous of the castes and races in the Madras Presidency:—

Ambalakaran,	155,537	Kurumbar,	114,381
Ambattan, barbers,	342,835	Lingaet,	117,616
Agamudayan,	302,339	Madiga,	1,126,748

The *agricultural* races in Telingana are the Velama, the Reddi, the Kamma, the Kapu, the Balija, the Pakanatti, the Naidu. The Tamil cultivators are the Vellalar and a smaller number of the pastoral Idaga; those of the Mahratta districts are the Kunbi, and further north Kurmi.

In Malabar and Malealam the Nair are the chief husbandmen, but in the Canarese districts the Wakkali, and in Canara the Bant and Nadavar. The Teling cultivators have spread into all the western and southern lands. These follow the Brahmanical doctrines, maintain the caste observances of purity and impurity, and have adopted the early marriage customs and other institutions of Menu. They are essentially agriculturists, but they take military service, engage in mercantile transactions, or enter the civil service of Government. Tamil and Vallalar were brought from the Cauvery river by the Chola kings, who conquered the Kurumbar and eradicated Buddhism. They now occupy the whole of the Coromandel coast in its southern part, and have many agrestial slaves. They had many slaves before leaving the Cauvery, and doubtless added to them during the persecution of the Kurumbar race.

The *religious sections* of the people are as under:—

Hindus, . . .	28,497,666	Jews, .	
Muhammadans,	1,933,571	Theists, .	
Christians, . . .	711,072	Kodaga, .	
Jains, ...	24,962	Agnostics, ...	1
Buddhists, . . .	1,546	Others, .	69
Parsee, ...	143	None, .	
Brahmo, ...	132	Not stated, . .	1,419

The *Hindus* are returned as under:—

Saiva, . . .	15,399,686	Lingaet,	64,580
Vaishnava, . .	10,494,408	Others, . .	2,538,992

The Saiva Brahmans arrange themselves as—Aradhya, Namburi, Smartta, Velnati, Vaighnasulu, and Uriya. The Vaishnava Brahmans are—Madhava, Sri Vaishnava, Andhra, and Golconda. The Telugu Brahmans—Murikinati and Niyogulu. Others—Bengali, Gouda, Konkana, Gujerati, and Maharashtra.

The *Muhammadans* (1,933,571) are largely descendants of the soldiers that have overrun the Peninsula, but a large number belong to Arab and Persian traders who have settled in the country, and many of the Labbai and Moplah section are from the offspring of Hindu mothers.

Arab, ...	3,736	Syud, ...	23,386
Labbai, ...	30,182	Shaikh, . . .	54,670
Moplah, . . .	495,714	Others, ...	217,238
Moghul, . . .	1,235	Not stated, .	1,092,037
Pathan, . . .	15,373		

They are almost all of the Sunni sect.

The *Christians* of the Madras circle are numerous. One of the primitive Christians seems to have arrived in the south of India in the early years of the Christian era; the Portuguese fleets brought from Europe many missionaries, amongst them St. Francis Xavier; Robert de Nobilibus, Britto, Beschi, Dubois, and others have been striving to convert the people. The Romish church has several vicariates, and the Portuguese priests attend to much of the coast line; the French have a vicar-apostolic in Mysore, and their priests are also in the Northern Circars and in the N.W. Provinces; while the Italians occupy Hyderabad and Native Burma. Since the closing years of the 17th century, Protestant Christians of all denominations from Europe and America, amongst them Ziegenbald, Schwartz, Rhenius, Caldwell, Duff, Mason, Anderson, have been zealously endeavouring to educate and to proselytize, and these efforts have resulted in 1,862,634 Christians in all India:—

Madras, ...	711,080	N.W. P. and Oudh,	47,673
British Burma, .	84,219	Central Provinces,	11,973
Coorg, ...	3,152	Central India, .	7,065
Bombay, . . .	145,154	Ajmir, ...	2,225
Bengal, ...	128,135	Baroda, ...	771
Panjab, ...	33,699	Cochin, ...	136,361

Hyderabad Dekhan,	13,614	Rajputana, . . .	1,294
Berar, ...	1,335	Travancore, . .	498,542

The *Vellalar* are shorter and darker than Brahmans, shorter and darker even than the Teling people, but they have in general well-formed countenances and graceful forms, though amongst them also occur the decidedly African lip and nose and forehead. They believe that they came from the north. They are now classed by the Brahmans as Sudra Hindus, but Southern India only became Brahmanical about the 8th to the 10th centuries, and when the Vellalar adopted Hinduism is unknown. They claim to be Vaisya, of the Buvansa or agricultural section, a claim which the other races do not admit. They are very largely agricultural, and take the honorific appellation of Mudali or first man, pl. Mudaliar. Under former native rule in Tonda-Mandalam, the Vellalar alone were allowed to hold landed property. The Vellalar are eager in their study of English, have largely obtained employment, civil and military, under the British Government, and are an honourable, moral, and peaceful race, intelligent and thrifty, and respectable in their domestic life. The designation Vellala means charitable; but their name has been supposed to have been derived from Valaumi, the Tamil word for the act of regulating irrigation. In the present day, in Tinnevelly, they will not touch a plough, the Puller race doing everything for them. They do not use animal food or intoxicating liquors; they marry before puberty; their women are chaste; polygamy is almost unknown, the widows do not re-marry, and they burn their dead.

Vellalar as farmers and peasant-proprietors, in the cultivation of rice, betel, and tobacco, are perhaps not excelled in any part of the world. They rarely accept a menial occupation. They are mostly of the Saiva sect, but the chief objects of their worship are village gods, and they keep the Pongal and Dipawali festivals.

The Karakatan Vellalar of the Madura Hills occupied their present locality before the Vellalar of the plains adopted the customs of the Aryan immigrants. And now, amongst them, when an estate is likely to descend to a female, in default

of male issue, she is forbidden to marry an adult, but goes through the ceremony of marriage with some male child, or, in some cases, with a portion of her father's dwelling-house, on the understanding that she may receive any man of the caste. Her children inherit the property, which is thus retained in the woman's family, the child-husband being the supposititious father. Amongst the Tamil races who have adopted Brahmanism, the Vellalar, alike in numbers and in social rank, take the chief place. The Christian converts of the Vellalar retain their Kudmi or scalp-lock of hair.

The *Teling* races following agricultural pursuits, have very distinct characteristics. Several of them seem to be of Aryan origin, and all of them are taller and fairer than the races in the south.

The *Aiima*, or Velama, or Yelmi (258,698 in number) in the Teling country are a prominent agricultural tribe, with military proclivities, and claim to be Rajputs. They are soldiers and agriculturists.

The *Rachwar* or Rajwar of the Northern Circars also claim to be descendants from the Kshatriya race; they are a brave tribe, with a high sense of honour. They have been long established in the Northern Circars, and have been remarkable for the desperate acts by which they expiate a real or imaginary insult. Their name is variously written and pronounced by others, but the Teling style them Racha and Racha-vadu, doubtless a variation from raja, often corrupted to Ratsawar, Raiswar, or Rowar. They were military retainers in Mysore and in Kamaon, where they speak Telugu; they practise medicine. The Rachwar chiefs are a remarkably fine, handsome race. There are defects in their genealogy, but they are permitted to intermarry with the Rajputs of Rajputana.

In the middle of the 18th century, zamindar Rangaru of Bobbili had a feud with a neighbouring polygar named Vizeram Rauze, and the latter persuaded the French commander, M. Bussy, to espouse his side of the quarrel, and Rangaru was obliged to retire to his stronghold. It succumbed to the army brought against it by M. Bussy on the 24th January 1757, consisting of 750 Europeans, of whom 250 were horse, 4 field-pieces, and 11,000 peons and sepoys, the army of Vizeram Rauze, who commanded them in person. Rangaru believed it hopeless to maintain the fort against so overwhelming a force, and, calling his principal men together, he declared that it was immediately necessary to preserve their wives and children from the violation of the Europeans, and the still more ignominious authority of Vizeram Rauze. The stern determination was carried out to the fullest; the habitations in the middle of the fort were indiscriminately set fire to, and every woman and child either perished in the flames or was remorselessly stabbed in endeavouring to escape. Then those who accomplished the deed returned to die on the walls, and fell almost to a man. Rangaru himself, hastening to the defence of a tower, was killed by a musket-ball. After the capture of the fort, four of Rangaru's soldiers concealed themselves in a thicket, and three days afterwards two of them succeeded in penetrating to the tent of Vizeram Rauze, and, having stabbed him in thirty-two places, were themselves immediately cut to pieces.

The great bulk of the Teling people engaged in agriculture retain their tribal designations: thus—

The *Balijavadu*, pl. Baljawanlu, in Telingana, are a Sudra tribe of husbandmen.

The Sudra Pakenatti, Muttatti, and Vellanatti are village authorities, and take the designation of Reddi. A peaceful and innocent migratory race bearing the name of *Pakenatti* were found in Mysore and the Telugu country, about the beginning of the 18th century, driven from their homes by oppression.

In the Ceded Districts, the *Peracoonta Kapalu* and Gungeddi Kapalu are husbandmen of the Sudra grade.

The Gumpa Kumalu, or Kama-waru, or Kamavaru, are Sudra husbandmen, who do not permit strangers to enter their houses, and regard their tribe as pure Sudras.

The *Nack* or *Naidu* are honorific terms applied to masters or chiefs of tribes, and many of the Teling Sudra take this honorific appellation. They are tall, robust men, fair complexioned, who are in good positions as merchants and as servants of the British Government.

The *Kapu* in the Cuddapah district do not allow the re-marriage of their widows, nor concubinage, but the latter is generally winked at to prevent the family disgrace of their becoming common; and even adultery is but little regarded so long as the offenders belong to the same caste or subcaste.

The *Palli* race of the Cuddapah district pledge their wives as security for loans of money, and if not repaid, the woman is re-married to another man. A case of this bigamy was tried in 1876 at the Session of Cuddapah, and all the parties were fined. The husband had borrowed some money from his mother-in-law, and left his wife with her till he could repay. Having failed to pay within the prescribed period, the wife was re-married to another man. The twice-married wife, her mother, and a third party who was present at the second marriage, were held to be equally punishable as principals, all having been present at the re-marriage.

Paik of Vizagapatam are military; a fine brave race, and good shots with the matchlock. They have ten sections, viz. Suathro, Bellama, Noula, Kalgina, Kampu, Kunu, Uriya, Binnakurya, Bosuntea, and Guri.

The *Mutraj* subdivide into Bhui and Mutraj, and the Bhui of Telingana is classed as a Teling Sudra, who occupies himself as a palanquin-bearer; but where settled, away from his fields and agricultural pursuits, the Bhui is engaged in catching fish by the net.

The *Ur-bhoi-waulu* are mercenary soldiers who serve native sovereigns. They are never found in the ranks of the British army. There are a few of them in every large town in the south.

The *Yerra Walleroo* are a Dhangar or herd tribe in the Northern Division.

The *Palalu*, of the Northern Circars, are agricultural labourers who are regarded as slaves to the ryots, and were hereditarily attached to and transferable with the land.

The *Agari* of Cuttack are said to be domestic slaves.

Gaita is the name of a barbarous Gond tribe in the Rajamundry district.

Nackar and *Reddi*, in Tinnevelly, claim to have

been there ever since Rama's advance on Ceylon, and to have formed part of that leader's army. They call themselves Oudh Reddi.

The Reddi and Kamma Teling came from the north, and are styled by the Tamil people Varuga or Vadaga, meaning northern. According to Dr. Caldwell, they had been previously settled on the Ganges. They are a taller, finer race than the Tamil, Canarese, or Mahrattas. The Reddi are bulky, fair, handsome men, energetic and enterprising. They have advanced along the Kistna, and the rajas of Gudwal and Wanparti are Reddi. They have pushed colonies of Reddi into the Canarese and Tamil districts, and are found in small scattered communities west to Bellary, and south-west to Tinnevelly, and west to Poona.

The *Teling* or northern agriculturists think themselves superior to the Tamil cultivating castes. In the Madura district, soon after the establishment of the Nayakan dynasty, the Teling immigrants became so numerous and so influential that the Jesuit priests of Madura regarded them with the Brahmans as constituting the chief part of the people; and at the present day the poorest and most ignorant Teling bangle seller is disposed to give himself airs, and to affect a superiority over Tamilar of considerably better position than himself.

The *Karare* are a Telugu-speaking race, part of whom have migrated into the Tamil country, where they have 18 clans. Most of them are farmers, but the Baliji section are also petty traders, hawkers, and sailors. They were primarily an agricultural people, holding lands on military tenure, and working their farms by means of inferior castes.

The *Reddi* of the south of India are divided into 24 clans, who marry in their own clans. The temples of the Reddi and the Naekar are of a rude form; they are of the Vaishnava sect, but a brass lamp seems to be the only utensil they contain, and flowers and cooked food and spirits are offered before it; they worship demons like the Shanar. Some, also, at one place, worship a lingam. Their emblem of the Brahmanical Vishnu is an octagon pillar, and they call Vishnu Perumal or Senna Rayer Perumal. They eat all but cow's flesh. As a law, the men marry their sister's daughter, but an aunt does not marry her nephew. Sometimes the bride is a mere child of 5 or 6 years old; sometimes the bridegroom's age is no more, while the wife to whom he is married is a full-grown young woman, who, by the time her husband has grown up, has a young family of 4 or 5 children. Property descends through the issue of a son and granddaughter, uncle and niece. If a man refuse to marry his own sister's daughter, his father's property descends not to him, but to the man who marries the rejected woman.

The Reddi are married on the field, the Naekar are married in the house; a cotton thread is fastened round the woman's neck. If no son be born, they marry younger wives in the hope of male progeny, and the Rev. J. F. Mearns had known a man with five wives. They burn their dead, and offer rice to the manes. If the crows eat the offering, th state of the deceased is augured as happy. The Reddi are exclusively farmers. They speak a corrupt Telugu, but read and write Tamil. The Naekar are mostly clerks and farmers, but are also tradesmen, brokers, shopkeepers, and the hawkers of the Peninsula are almost all Naekar.

The *Naekar* seem to have invaded the south of India during the reign of the Pandiyan dynasty, which they overthrew; and they held the country by allotting it into 72 portions, each under a polygar chief with military followers. The dynasty reached its highest under Tirumali Naekar. Some of the polygars appointed by them were of the Totier caste or race, and one of the chief polygars is of the Totier caste, but they consider the designation reproachful. They are known collectively as the Kombelathar, but they consist of nine families or clans, descendants of a common ancestor. They are a bold, martial race, robust and tall in stature.

Khandait were granted lands on military tenure. They resided in fortified houses, and held their lands at a quit-rent on condition of acting as a feudal militia, and protecting the lowlands from the incursions of barbarous mountain tribes. Their name is from Khanda, a sword.

The *Mala* race are the Teling Pariah, but the derivation of the word is not known. In the Brahmanical Puranas there is mention of a race called Mala in the N.E. of Bengal, and their country in the Midnapur district still bears the name of Mal-bhum, and it may be that the Mala were slaves whom the races now in Telingana brought with them from the Gangetic valley.

The Tamil herdsmen call themselves *Vadava* or *Idayan*, also *Go-vansa* or cowherd race. They are darker and more slender than the Vellalar, and are less engaged in cultivation. They usually take the honorific appellation of Pillai, or son of the gods, as Gurusami Pillai, a designation which is, however, also adopted by other races. In Tinnevelly the Idayan take the honorific title of Konan. Pillai or Pilly means a son, but is applied to the god Vigneswara, the son of Siva and Parvati, known as Pilliar; and it has been said that three or four centuries ago Brahmans of Tinnevelly took the title of Pillai, sons of the gods. The larger number worship Vishnu. A smaller part are of the Saiva sect, but in the south the village deities and evil spirits or devils are the chief objects of their worship. In some districts widows are re-married to the brothers of the deceased husband.

Kurumbar. In the Peninsula, in the Ceded Districts and Hyderabad, the Kurumbar are dark, almost black men, of slender and spare forms; they are quite dissimilar from the Gaoli in personal appearance, wholly distinct also from the Idayan or Yadava Tamilian herdsman race, who are known in all the Tamil country as Pillai or son, and in all probability the dispersed Kurumbar or Dhangar of the Peninsula of India, some of them in towns and others almost nomade, are the fragments of the great shepherd race who held sway in the southern districts in the early centuries of the Christian era. The life of the shepherd Kurumbar is passed at a distance from towns and villages, in the open plain, or in the glens and forests, night and day watching their flocks. The *Handi Kurubar* are Kurumbar who take service in towns.

Kurumbar have caste clans, but they are not rigid in the observance of caste rules nor as to food. They marry grown-up women, which Brahmans never

do; they sacrifice to ancestors, and they have a god called Bhyrava, but have no demon-worship. They are shepherds, gardeners, labourers, weavers. Some engage in Kumari cultivation. They are quiet, inoffensive, industrious, honest, and sincere. The Kad or Red or Jungle Kurubar are mentioned by Buchanan as a poor, dwarfed tribe, employed as watchmen.

The *Dhangar* are of the Mahratta and Telugu countries, are in twelve tribes, who do not eat together nor intermarry. In the hill country of Ramgarh and Chutia Nagpur the Oraon tribe take this name, and descend periodically into plains for labour. The Dhangar, in Calcutta, are labourers (Campbell, p. 33). Mr. Hodgson describes the Dhangar as of Mongol origin. In the south of India they are cowherds and weavers in wool. Many are settled in towns, occupied as labourers, kitchen gardeners, and dairymen, and the Dhangar in the south of India arrange themselves accordingly. The Teling Dhangar are milkmen and weavers of coarse woollens; the Mahratta Dhangar graze cattle and sheep, and clarify their butter into ghi; the Bangar Dhangar are purely cowherds.

The *landless labourers* of the Madras Presidency (Parayan, 4,439,253; Vannian, 3,751,093) number about a fourth of the entire population. They chiefly comprise the Vanniar, the Pulliar, and the Pariah; the Oddara and the Uppara, road, salt, and tank makers.

The *Vanniar* and the Pulli or Palli are the chief labouring agricultural classes of the southern districts of the Madras Presidency, particularly numerous in Trichinopoly and Tanjore. The Vanniar are good field labourers and excellent farm servants and cultivators. Before the British became paramount, they were predial slaves on the lands of the Vellalar and Brahman proprietary, but a large number of them are now farming on their own account, or work the lands of the higher castes on the principle of sharing half the net profits with the proprietor; others of them are simply labourers, and by taking advances from their employers are still practically serfs of the soil, from inability to extricate themselves from their indebtedness. They are, as a rule, very dark skinned, and have all the characteristics of a non-Aryan race. They now rank, however, as Sudra Hindus, and, like other Sudras, are claiming to be of the higher social rank of the Vaisya, but this is not conceded to them. The honorific suffix of Naik is used with their names. It is supposed that in former times several of the semi-independent polygar chiefs in the south were Vanniar.

Kanakkan in Tamil, Shambog in Canarese, Adigari in Maleali, Karnam in Telugu, are designations of the race who follow accounting and clerking in the Tamil, Telugu, Canarese, and Teling districts. They correspond in their avocations to the Kayasth of Northern India. The Kanakkan recognise four subdivisions,—Sir K., Suratu K., Minadu K., and Mattuvali K. And the 1881 census report showed 102,472 of the Kanakkan and Karnam race, most numerous in Ganjam, N. and S. Arcot, and Chingleput. In the early days of the E. I. Company's progress they were their brokers, agents, and interpreters. They are the hereditary village accountants.

Polygar chiefs were known in Madras as Men-Kavalgar, and the village watchmen as Sthala-Kavalgar, whom the British call Talliyar, from Sthaliyar, or local guardians. Of these tribes none have risen to general power, but they established many small principalities in secluded places, and by siding with the larger powers they retained their petty sovereignties,—the Beder rajas of Bednore or Nagar in Mysore, of Harponhalli in the Ceded Districts, of Beder Zorapur in the Doab of the Bhima and Tumbudra, the Matta Rachawar of Carvatinagar; the Kallar chief of the S. Arcot district, styled H.E. the Tondaman Raja of Puducottah; the Maravar chiefs of Ramnad and Siva Ganga in Madura, and others in the south, some of whom claimed the privilege of coining money. Towards the close of the 18th and beginning of the 19th century, the British Government required to reduce several of the polygar chiefs. In 1802–3 Kotta Bomma Naik, the dumb chief of Panjalam Kurchi in Tinnevelly, thrice beat back British detachments, and was at last subdued by a small army with Europeans and guns. If the British arms were otherwise engaged, these tribes would instantly rise as the Gujars and the Beders of Zorapur did in the revolt of 1857.

Shanar or *Shanan*.—Three palms of British India, the cocoanut tree, palmyra tree, and date tree, furnish the greater part of the palm wines, which are largely fermented and drunk by the people, or from which sugar and an alcoholic spirit, as also vinegar, are prepared. The palm-tree cultivators of the Madras Presidency in 1881 were 1,478,660 in number.—Billava, Eruvan, Gavundla, Hale Paika, Idiga, Indra Kavisian, Shannan, Segadi, Sondi, and Tiyar. Those of the Travancore State were 508,692 in number,—all the Paraven, Nulian, Thundan, Elaven, and Shannan. The dry, rainless tracts of Tinnevelly bring to perfection the palmyra tree (Borassus flabelliformis). Western India and Ceylon produce the cocoanut tree (Cocos nucifera), which grows with most luxuriance within reach of the salt air of the ocean; and the date tree (Phœnix sylvestris) is seen all over the south of India in patches, and extensively in parts of the Dekhan, of Northern India, and of Bengal.

The Shanar race in Tinnevelly and the south of the Peninsula have a tradition that they came from the north of Ceylon. They are everywhere a hard-working, industrious people, traders, cultivators, toddy-drawers, distillers, eating freely of fish and flesh, and drinking the toddy or palm wine. They are dark skinned, with low foreheads, sunken eyes, and prominent cheek-bones, timid and superstitious; are not so good-looking even as the Maravar, either as to physique or features. In the sandy sea-coast wastes of the south of the Peninsula they have widely extended the cultivation of the palmyra tree; they claim a seigniorage over these tracts, and they are largely occupied in extracting the palm wine. A man will attend to about 50 palm trees. Travancore Shanar women lately wished to cover their bosoms, and their attempt to do so was interfered with by the Nair race. More than one-half of them profess Christianity of the Protestant or Romish Churches, and the other half follow demonology, with the usual bloody sacrifices and devil dances. In Tinnevelly and Canara they are largely devil-worshippers. In Malabar they worship some local deities; but in Tinnevelly very many of

them have become Christians. Some of them from Tinnevelly have graduated in the Madras University, and the position of the race is improving. Of the Travancore palm cultivators, the *Elaven* and Paraven are also called Shogan, also Valen and Elava Panikar. These correspond to the Teyar of Malabar, and members of this community are amongst the most respectable of the Travancore people. The Shanar of S. Travancore correspond to the Elaven of N. Travancore, and are even a more enterprising class. The Shogan appear to be the Chego race of Malabar, noticed by Wilson as the Chegavan or Chekavan, whom he describes as a man of low caste, commonly a Teer, one whose occupation is drawing toddy. In civil war or rebellion, the Chego were bound to take up arms for the sovereign; and some princes employed them as soldiers if they had not a sufficient force of Nairs. The Chego are subdivided into two sections, the Chego and the Twen Chego.

The Shanar have many of the characteristics of the aboriginal tribes, worship devils or local deities; but in Tinnevelly, where many of them have become converts to Christianity, the contrast is great between 'Martha,' the native Christian Shanar girl of to-day, with her neat attire and good education, and poor 'Chodalee' of former times, before Rhenius and his fellow-labourers Christianized Tinnevelly. Sir Walter Elliot considers the Hala-Paik of Sirci in Upper Canara, and the Bilawari below the ghats, to be nearly allied to the Shanar.

Teer, *Teyar*, *Tiar*, *Eygoorer*, or *Jurer*, the toddy-drawers of Malabar, follow the rule of descent a matrice. The women are polyandrous, and admit all comers. Till recently treated as unclean, and compelled to move from the road when a Nair approached, they are now being educated in the Government schools, obtain service, are acquiring land, and are very well to do. They are fairer and more refined looking than the Nair. Teer is said to mean island, and the Maldives and Ceylon have been named as their original country. Dr. Caldwell thinks they came from Ceylon, but a Teyar race occurs in the Sunderbans. The Teyar of Malabar and Travancore have one wife between several brothers, but plurality of wives is also common. Physically they are a fine and handsome race, the women being particularly fair.

Kallar, *Kallan*, or *Colleri* are a tribe in the Tondaman country, in the Vasanga district, in the eighteen palliams or districts, and throughout the Madura, Tinnevelly, Salem, Tanjore, Chingleput, and Coimbatore districts. Calicoil was the stronghold of the lord paramount, the raja of Tondaimandalam, the country of the Tondaman, which was an ancient division of the Peninsula of India, of the part now occupied by the Arcot and Chingleput collectorates. The country of the Tondaman, H.E. the raja of Puducottah, a feudatory chief, is now only a small tract near Trichinopoly.

Until late years they were so predatory that in the south of the Peninsula of India Colleri became the designation of a thief, and their tribal name is derived from Kallara, eddi es, plunderers. In ancient times they seem [illegible] Ter inhabited the woods from Trichinopoly t[illegible]ekar are norin. Orme describes them in the mid[illegible] 18th century as expert thieves and plunderers, and the Jesuit Father Martin says they were very cruel. Pennant, writing of them in the 18th century, says the adjacent countries are covered with thick forests, and little cultivated by reason of the savage inhabitants, the Polygars and Colleri, who may be truly styled 'sylvestres homines.' The Colleri, he adds, were predatory, and their government, as also that of the polygars, feudal. They generally sided with the Muhammadans and the British in the wars against the French in the times of Clive and Dupleix; but, as with the Maravar, they have now settled down to peaceful occupations. They are small statured and dark skinned, and their monkey-like features afforded to Valmiki the illustration of Rama's advance to Ceylon being aided by the monkeys.

The Ramayana describes the forest (or wilderness) of Dandaca as covering the whole extremity of the Southern Peninsula, and the rude inhabitants are designated rakshasha (monsters) or vanara. Vanara is from Vana, a wilderness, and Nara, a man, that is, a wild or uncivilised man; and to this sense, as to the wild races in the extreme south, Mr. Taylor thinks may be reduced the fable of Hanuman, the chief monkey, and that of his army. He says that those who have seen the Colleri and Marava will readily consider them to differ from all family likeness of the Aryan Hindus; and as their visages often resemble baboons more than men, it would require even less than the ardent poetical imagination of a Valmiki to induce the employment of an equivalent word, which would so aptly seem to convey the idea imparted by their appearance. In 1871 they numbered 351,551, the population of the Puducottah State alone being then 316,695.

The monkey-faced races in the south of India are all brave and martial people, with much physical power and endurance. Their habits and customs are entirely aboriginal. Nominally of the Saiva sect, they are mostly devil-worshippers. They usually bury their dead. They have a first and second marriage, like the Maravar of Ramnad. The titular surname of all Kallar is Ambalakaren, and they returned 155,537 in 1881. Divorce and re-marriage of widows are allowed. Marriage of near relatives is usual. The Western Kallar of Madura are polyandrists. It constantly happens that a woman is the wife of either ten, eight, six, or two husbands, who are held to be fathers jointly and severally of any children that may be born of her body. And when the children grow up, they style themselves the children not of ten, eight, or six fathers, as the case may be, but of eight and two, or six and two, or four and two fathers.

The *Maravar* of Tinnevelly are employed as Kavalgar or watchmen, but almost every case of highway robbery in that district is traced to this race. They were formerly the most martial tribe of the south, and held their lands under military tenure. They were numerous and powerful in Madura and Tinnevelly even after British occupation, but they are said to be disappearing. Their widows re-marry; divorce is easy. In their daily life they use all flesh meats except that of the cow, and drink spirits. They were long predatory, but they have settled down to agriculture, and some of them have property. The zamindar of Ramnad is a Maravar. They also occupy Shiva-

ganga. Their district has been surmised to be the Marullo of Cosmas Indicopleustes, which was on the continent opposite Ceylon.

The Maravar men wear ear-rings, and by pulling, elongate the lobes of their ears. The women insert massive ornaments in the lobes of the ear till a perforation is made an inch wide, and the ear sometimes comes down to the neck.

They worship local deities, demons, and evil spirits, to whom they offer liquor, flesh, and fruits, and practise divination and sacrifice; and, on the occurrence of a small-pox or cholera epidemic, the whole village is excited, and devil dances are common. They are a robust, hardy, dark-skinned, stalwart race, athletic, with well-developed muscles, active, of moderate height, the cranium rounded, narrow in front, forehead low, eyes large and full. They are employed as village watchmen, and are honest to their employers, but have been largely given to thieving and gang robbery. The men do not wear turbands. They wear their hair long, and arranged like the women of the Dekhan.

The Maravar women of Ramnad and Sivaganga wear cloths of 25 or 30 cubits in length, folded in plats, which they fasten behind. This is unlike other Hindu women, whose cloths do not exceed twenty cubits, and are fastened on the right side in front. In their marriages, disparity of ages is not considered, nor is the presence or assent of the bridegroom necessary,—a blade of wood in his absence serving as proxy. They intermarry, some of the subdivisions not marrying into the father's family; but Hindus in general intermarry with the mother's relations. In Ramnad and Tinnevelly, the titular surname of all Maravar is Dever.

Beder.—In the tract lying between the Mysore, Hyderabad, and Mahratta territories are several petty sovereignties, such as the nawab of Banaganapilly, a Syud family, in the east of the Ceded Districts. Until 1839, the Pathan nawabs of Kurnool ruled on the right bank of the Tumbudra river. Farther west, the Reddi chief of Gadwal, the Mahratta chief of Sundur, one of the Ghorpara family; the Kshatriya raja Narapati of Anagoondah, who claims to be the descendant of the great king Rama of Vijayanagar, who was overthrown by the combination of the Muhammadan kings of Golconda, Kulburga, Bijapur, and Ahmadnaggur; the Pathan nawabs of Shahnoor, the Ghorpara chieftains of Gujundargarh and Akalkot, and at Ghoorgontah and Beder Zorapur are the descendants of that Beder soldier Pid Naik, to whom Aurangzeb, for aid given at the siege of Bijapur, granted a small territory in the Raichore Doab. The Beder race have only these two small sovereignties, and some of them in Zorapur are tall, well-made, robust men.

The Beder of Beder Zorapur drink spirits, eat the hog, crocodile, porcupine (sarsal), manis (uli) iguana, bullock, cow, buffalo, cat, rat, bandicoot (Mus giganteca), and jerboa rat.

Prior to the Muhammadan invasion of the Peninsula, the Beder race seem to have been settled in the northern part of Mysore under successive dynasties, and they do not appear to have advanced north of the Bhima river. They were numerous in the doab between the Krishna and Tumbudra rivers, and the Beder principalities of Gurgunta, Jalihalli, and Deuhūg protected the line of the Krishna. In the Raichore Doab also were Beder principalities, at Kapkgari, Adoni, and south of the Tumbudra at Chittuldrug, Harpanhalli, and Zorapur, the last of which rose to considerable power during Aurangzeb's reign. The Beder of Zorapur rose in the rebellion of 1857.

The Beder race in parts of Mysore, 260,000 in number, form a considerable part of the population, and have many polygarships, and 26,761 in the Madras districts. Some of them have become Muhammadans. Their name is variously written, and pronounced Beder, Baida, Baidera, Waida, Vedda, Vedar, Veddar, Vedan, Bedan, and Berad. They are the race who gave their name to the Pindara who harassed Central India for nearly 100 years.

The *Pindari* are mentioned in Indian history as early as the commencement of the 18th century. Several bands followed the Mahratta armies in their early wars in Hindustan. They were divided into durrah or bands, commanded by sirdars or chiefs, and people of every country and of every religion were indiscriminately enrolled in this heterogeneous community, a horse and sword being deemed sufficient qualifications for admission. A common interest kept them united. Some of the chiefs acquired wealth and renown in the Mahratta wars; they seized upon lands which they were afterwards tacitly permitted to retain, and transmitted, with their estates, the services of their adherents to their descendants. The predatory Pindara bands were all broken up and the members dispersed at the close of the third Mahratta war, during the Marquess of Hastings' administration.

The *Kammalar*, or artisans, are also called in Telugu Kamsala or Panchala, the last name being given to them because of their five trades,—goldsmith, coppersmith, blacksmith, carpenter, stone-cutter. Those of the Tamil and Telugu country respectively intermarry with their own country artisans. They number in Madras, 602,300. The Brahmanical caste system ranks them as Sudras, but in the Madras Presidency they wear the sacred thread, and maintain that they are of higher origin than the modern Brahmans, and many of them add 'Achari,' religious teacher, to their names. According to Mr. Sherring, the Mahratta goldsmiths also claim to be allied to Brahmans; and in the south of the Madras Presidency, some Kammalar call themselves Visva Brahmans. They do not, however, have Brahman teachers. They are nearly all of the Saiva sect, but they worship Kamatchi Amma, Kali, and village gods. They bury their dead in a sitting posture; to obtain which, as death comes on, they raise the upper part of the body against a wall, to which by a peg or nail they secure the head. The Vaishnava artisans burn their dead. Most of the artisan races are skilful workmen, and, since the opening of railways and other public works in India, they have all been earning double their former wages. They are quiet, docile, and respectable men, but they detest Brahmans, have their own guru or priests, and their own books. They have as an idol a figure like a sitting Buddha. Sir W. Elliot supposes them to be the descendants of Buddhists, partially converted by Canarese persecution to an ostensible Brahmanism. In Malay form the chief of the left-

hand castes, and their followers are the Pallar, with the leather-workers and tanners. The right-hand castes are led by the Brahmans, and their followers the Pariahs lead the van, and beat their drums when they come to blows. The points on which they now differ or stickle for are trifles.

Chetty, Chettiar, Setti, or Chitty, of the Telugu and Tamil districts, number nearly a quarter of a million (235,169). Their designations are dialectal variations from the Sanskrit Sreshthi, and Hindi and Mahrati Seth, Seti, and Shet. It is applied in the south of India to all the races engaging in trade, banking, or mercantile transactions, though many of them enter Government offices. They claim to be the Vaisya section of the Hindus, but they are of varied origin, few of them eating together or intermarrying; some of them large, bulky, xanthous-coloured, intellectual men, and others short statured and of mean physical appearance. This may be judged of by mentioning that there are ninety different clan designation of the Chetties of the Madras Presidency, one of which is again subdivided into upwards of one hundred sections. In 1871 there were 16,948 Chetties in Travancore, divided into sixteen sections. They all add the honorific term Shet or Seth, or Chetty or Chettiar, to their names, as Jagat Shet, Vencata Kistnamah Chettiar, as indeed do the Parsee and the trading Bohra, Mehman, and Khojah Muhammadan.

In the Madras Presidency they are essentially traders, and take their designation from their origin, as Marwari Chetty, Gujerati Chetty, etc. The Komati Chetty claim to be Vaisya Hindus; the meaning of Komati, their designatory name, is not known. They wear the sacred thread. They are of the Saiva and Vaishnava sects, but many worship the goddess Kamatchi Parameswari. Many are landholders.

Natu-Kothiar, of the south, all speak Tamil, and follow Brahmanism; are large spice merchants, and all of them have the marked African protruding lips and nose sharply cut at the forehead. They are keen, active traders, but grasping, with no public spirit. They seclude their wives.

Weavers.—The Tamil castes of weavers are the Kaikalar or Kaikilan, and they numbered in 1871 above a million. About half the men are employed in the construction of textile fabrics and dress, in which they are aided by their families. The number of looms continues steadily to increase. The great number of the agricultural labourers weave coarse cottons and woollens in the interval of their field work. The designation Kaikkil means to undertake, but those engaged in special branches of their trade are in Tamil called Seringar, Jendraver, Saliyar, Sedan, and Silupan. Their names in Telugu are Salay, Padmay-Salay, Jendrar, Thokata, and Devangalu, about 400,000 in number. These have, however, numerous subdivisions, and the weaver colonists from northern countries who are settled in the south hold no intercourse with the southern weavers. In every large town there are colonies of silk weavers, Patnulkar, whose ancestors originally came from Gujerat, fair, handsome men and women, their chief men dealing in raw silk, and well to do. 62 per cent. of the southern weavers profess the Saiva religion, but worship village deities and demons. They are addicted to drink. The women and children all work at the loom; the fly-shuttle is not as yet in use. Their numbers are increasing; some allow widows to re-marry. The weavers of the Chingleput district devote their eldest daughter to the service of the temple.

Shembadaven or *Fishermen.*—Several races in the Madras Presidency follow this occupation. They number 873,448. The Tamil people call their chief race Shembadaven, but in the Canarese language and in Malealí they are called Mukkava or Mukwa, and in Telingana the fishing tribes are the Boi, the Besta, Chapakulam, Patnavar, Mogivlu, Paravar, and Valaiyan. They fish along the seashore, in the marine lagoons, and they spread along the larger rivers.

The *Mukwa* fishermen in North Malabar follow the rule of descent a matrice, but those in the south permit of descent of property to sons.

Paravar are a dark-skinned, almost black, race in the extreme south of the Indian Peninsula, living in villages along the sea-coast, and earning their bread as fishermen, with nets, lines, and hooks. They own canoes, which they take to sea before daylight, and return about noon. Their ancestors are said to have been converted by Xavier, and they still profess the Romish religion, but they are drunken and dissolute. Mr. Nelson mentions that the Portuguese on coming to India found the Paravar greatly oppressed by the Muhammadans, and they assisted the Paravar on the agreement that they should become Christians.

The *Boi* race, 414,810, from the northern part of Telingana, are fishermen, palanquin bearers, domestic servants. They mostly profess to be of the Vaishnava sect.

The *Pulli* have about thirty subdivisions, according with their various occupations, but these all eat together and intermarry. In Tinnevelly, the Pullans are loathed by all caste races. They live by ploughing, sowing, and reaping the fields of the wealthy caste men. They are also employed as coolies in road-making and building, etc. They are not permitted to live within a Hindu village, but apart, and their hamlet is called the 'Pulla-cherry.' Their women never cover the upper portion of their bodies, and to do so in the presence of any other caste would be considered a gross insult. Their religion is the worst kind of devil-worship.

The *Puller*, Pallar, or Pali race in the south of India were formerly in a state of slavery, but their position is now solely dependent on their means. Both men and women work well, take part in all agricultural labour, the women in this particular vying with the men. The Puller women as a rule cannot be induced to cover their breasts. Previous to British rule, the Puller who inhabited the forests and mountainous districts of the Malabar coast were regarded by the settled inhabitants as inferior to the beasts of prey, and were not even permitted to erect houses for themselves. A shed supported on four bamboos, and open on all sides, sheltered them from the rain, but not from the inclemency of the weather. They dared not venture on the public road lest their steps should defile it; and when they perceived any person approaching them from a distance, they were required to utter a loud cry and make a wide circuit to let him pass.

In Travancore, the Pullayar, about 188,916 in

number, are described as the lowest in the scale of society. They are, however, a truthful, honourable, hard-working, useful race, and are labourers in the rice lands. They speak Malealı, and are scarce in the Tamil-speaking taluks of Nanjanad and Shencottah. Until lately they were bought and sold as chattels, but are now free men, though they prefer to remain on the lands of their former master. A few of them are wandering in the Warsanad and other jungles of the Madura district.

Pariahs are supposed to be identical in race with the Malavadu of Telingana, the Holiyar of Carnatica or Canarese-speaking race, the Dher of Hyderabad and Berar, the Mhar of the Mahratta, and the Poliyar of the Malcali. The Vetti, the village servant of the Tamil people, is a Pariah. The Pariah name is supposed to be derived from Parai, TAM., a drum. Pulaiyar is the term by which they are known in Shen Tamil, and is said to be from Pulai, TAM., flesh, hence vileness; but it is more probably from Pulam, TAM., land. The Canarese term Holiyar, and the Hala-Kannadi Poliyar, are supposed to be from Hola, a field or land. But in the Kapurdigiri inscription of Asoka, which is engraved also on the rocks at Girnar in Kattyawar, and of Dhauli in Cuttack, are the words, 'In all the subjugated territories of king Priydasi, and also in the bordering countries, as (Choda) Palaya (or Paraya), Satyaputra, Keralaputra, Tambi pani,' etc., the Paraya are named in the centre of the Dravidian group, with the Chola or Sora, Kerala or Malabar, and Singhalese.

The *Holiyar* of the Canarese believe that they were once an independent people, and had kings of their own. The Pariah of the Tamil countries also believe that they were once the most important race; and Ellis states that those of Tondamandalam in the province of S. Arcot consider themselves the real proprietors of the soil. The head Vetti Pariar at Trivalur in Tanjore carries the chouri or fan of the god Tiyaragar or Siva, and in Madras, at the festival of Eggutal (the sole mother), it is a Pariah who puts the tali or marriage cord around the neck of the goddess.

The *Holiyar* of the centre of the Peninsula where Canarese is spoken, and in Canara, seem to be identical with the Pariah or Dher race of the other districts, and, like the latter, are predial slaves. In Coorg, the Holiyar has three branches, the Holeyaroo, Yewaroo, and Paleroo. Both in Canara and Coorg, however, they have other designations prefixed, such as Mauri Holeyaroo, Byr Holeyaroo, Murtha, Bulgi Holeyaroo, Rookha Holeyaroo, Badaya Holeyaroo; and in Coorg, Kembatta Holeyaroo. Amongst the Mauri Holeyaroo, property descends through the female line.

The *Komati*, or Hindu shopkeepers of Madras, before contracting marriage send an offering of betel to the Chakili or shoemakers; and in Vizagapatam, Brahmans go through the ceremony of asking the consent of the Malavanlu to their marriage.

The Patel or head municipal authority is occasionally found to be a Pariar in the Mahratta country. The Editor has seen one of them. The Pariar of the Tamil country are unable to enunciate some of the true Tamil vocables; they either mispronounce or omit them. The Pariar of the Tamil countries are never called Adumai or slaves.

The Pariah clans are found in every village and town in the Peninsula. They are settled in houses, their quarter being usually apart from other residents, and outside the walls of fortified places, and called Parcherry in the Tamil country. Their history is altogether unknown; they are almost wholly landless; they are often, in the villages, predial slaves, and escape from this position only in the largest towns, where labour is available.

They are labourers, servants, grooms, never are scavengers; eat dead cattle, dedicate their girls to the gods; are shamanists, fetishists, and polytheists. The Mhar are regarded by Hindus as lower in social rank than the Dher. The Mhar are not numerous, but are to be met with throughout the Mahratta country, dwelling apart outside the village, and, like the Pariah, are often part of the Baluth, being the village messenger and watchman. The mark for their signature is a staff. The Pariah are wholly different in race and appearance from the leather-working race, the Chakili, Madaga, Dhor, Chamar, or Mhang, whose mark signature is a knife. The Pariah are a willing, ready people, obliging, grateful for any little kindness, and, for the traveller, whether at midnight or midday, in sun or rain, or cold or heat, they take up their staff and move cheerfully along to show the road to the next village. Indeed, in the great tract of country forming the Peninsula, the Pariah races and the Mhar are the chief free labourers. Hindu farmers rigidly prevent their holding land, and with equal tenacity prevent those of the hamlet leaving it, lest the village lose its labouring hands. They have been really village slaves throughout the Hyderabad country. The Pariah amongst the Tamil people arrange themselves into many tribes.

Their women, in the Tamil country, are married at all ages, their widows re-marry, concubinage and bigamy are not rare, and they marry near relatives. They are addicted to drinking. Many of them are educated. Auvaiyar, a Pariah woman, is famed throughout the Tamil nation for her poetry. Also, the Kural, the most popular poem ever produced in the Tamil country, was written by Tiru Valluvar, the divine Valluvar, a Pariah. It is read and admired by Tamil Hindus of every class and creed. The author addresses himself to mankind in general, without reference to caste or creed. He enunciates a monotheism embracing all humanity. He rises above the puerilities of castes, and preaches a pure morality to the human race as a whole. Though a Pariah, he was deemed to be worthy of election to the academy of Madura, an honour usually reserved exclusively for Brahmans of learning and piety. Another Pariah poet, Kapila, author of the Agaval, has been supposed to have been a brother of the author of the Kural, and his works still hold a high place in public esteem.

Pariahs are permitted to marry into each other's families. They are regarded by caste Hindus as unclean, but they are not out-castes or men who have been expelled from other castes, but a race of non-Hindus. They are usually the serfs of the Sudra agriculturists. Those in the large towns in Southern India, in the employ of Europeans, are quick, intelligent, and active. They are emigrating with great rapidity to the West Indies, Mauritius,

Cape Colony, and the Burmese provinces, etc., where sectarian or social distinctions are unknown. There are ten castes who are lower in the social scale than the Pariah, and from these are excluded the Pallar, who dispute precedence with the Pariar. The Pariar constitute a well-defined, distinct, ancient race, independent of all others, and has its own subdivisions, its own peculiar usages, its own traditions, and its own jealousy of the encroachments of the races which are above it and below it. And the Pariah, whom St. Pierre's romance has fabled as a mild, benevolent, subdued being, whenever he has an opportunity, is as severe on other sects as from the custom of the world we would surely expect. Some of them devote their young women to the gods, but the practice is followed for money, and is generally regarded as vile.

The *Dher* of Hyderabad worship all the heathen deities; they are eminently polytheists, but they also worship the elemental rain water, as the Meghoba (probably Mrigh), as a deity; and at stated times make a lamp-stand of dough, on the top of which they place the ghi pipkin as a lamp, with ghi or clarified butter and a cotton wick, which they light and worship, putting cakes before it. Many of them worship departed spirits, most of them evil, some of them good spirits, and others which they designate devils, and which appear only at night, as saya or shades. All believe in transmigration, and one man mentioned his hope to be re-born as a Muhammadan. They are monogamic.

The Pariah aid in cultivation and reaping, yet if they touch cooked food it becomes unclean.

The Pariah of the Panjab are fine powerful men, and tolerably good looking. Native governments recognised in them a material for soldiers useful in desperate enterprises. The early Sikh reformers tried to proselytize these men, but with very partial success, though a few, as Sikhs, obtained a respectable position. Christians also have almost failed in converting them. Mr. Campbell regards those of the Panjab as Aryans.

Every Jat village in the Panjab has a Pariah quarter, where the low-caste people reside along with the Choora. They are the ordinary labourers, who do the inferior coolie work.

The Dher are few north of the Satpura range, south of the Nagpur road. The Berar Dher class themselves as Andhwan, Somassi, Wad, Larwan, Laryan or Larron, and Tirwan. The Somassi and Wad intermarry. The Somassi and the Laryan Dher eat together, but do not intermarry. The Somassi Dher ride on horseback in their marriages, the Laryan on a bullock.

These *ancient races* have been in their present servile position for two or three thousand years. In this interval they have been the predial slaves and servants of Christians, and Buddhists, and Muhammadans, and Hindus, but they retain their shaman and fetish customs, into which they have infused little, if any, of the creeds of their successive masters.

Koragar are described as a race in South Canara who are still sold as slaves. They are physically strong, with a forehead of moderate size, and black skin. There are three clans,—the Ande Koragar, Vastra Koragar, and Sappu Koragar. Under Hindu rule, the Ande Koragar were considered so unclean; they were not permitted to spit on the ground, but had a pot suspended from the neck into which they expectorated. The second clan wear the shrouds taken from the dead, and the Sappu have leaves as a covering. The women cover their breasts with the leaves woven together, to which they were condemned because one of them in authority asked a high-caste girl in marriage. Their marriage ceremony consists in having water poured over them, and rice sprinkled. The Aliya Santanam law seems to guide them, but that of the Makkala Santanam is also in force, and the children are allotted accordingly. The destined slave has new clothes given him. The master takes a plate into which he pours some water, and drops into it a piece of gold. The slave takes a sip of the water, and pours the remnant on a spot of ground, which is then given over for his use.

The *Cherumar* or Chermar are lower in the social scale than the Tiyar. Should a Cherumar be walking along a public path, he must run into the jungle on the approach of one of the superior castes, nor can he come within 32 feet of the Nair or 64 feet of the Brahman. Some of the hill tribes of Malabar are required by Brahmans to remain a hundred paces distant; and in trade or barter he must lay down his goods, retire to the prescribed distance, and leave the payment to be adjusted by the higher rank man. The Cherumar were returned as 99,009 in 1871, and 64,725 in 1881.

Leather-workers are amongst the most humble of all the settled races in the south of India. They are the Chamar, Madigaru, Chakili, or Mhang. They dwell outside the village walls, are tanners, workers in raw hides and in leather, shoe and harness makers, messengers, scavengers, and executioners. They are never grooms. A very few have ever been known to have the ability to read or write. The race, as a rule, are of a dark black hue, short in stature, and of very slender frame; lower limbs particularly slight, and calf and foot delicate. They still eat creatures that most races regard as unclean. In villages, where they perform the lowest menial offices, they are paid by portions of the crops and some small privileges.

In Northern India and in Bengal, the Chamar form the great bulk of the labourers, taking the place of the Pariah of the Peninsula. There are many sections throughout the Hyderabad country, and in Berar they are part of the Baluth of the village system of Maharashtra. The Mhang worship the leather ropes which they make. They also make cakes, which they place on the ground, and over them five stones and a lamp, and worship these. They also worship the spirits of departed men who have led evil lives. They claim the right to have for food, cattle and camels and horses that die of disease; but in the village of Dangopura, in 1866 and 1867, this point was for twenty months under litigation, the ultimate decision being in favour of the Dher. In the Northern Dekhan are the sections Mhang Garoro, Hollar Mhang, Dekhan Mhang.

The *Mhang Garoro* are also styled Pharasti or migrants, as they have no settled abode, but move from place to place begging. Their men and women assume other clothes, and smear their foreheads with the red kuku, a mixture of tur-

meric and safflower. They also are conjurors and sleight-of-hand adepts, from which they have their name Garoro. The men also beat the dholak when practising their conjuring tricks.

The *Hollar Mhang* are village musicians. At marriages, play on the sanmai, a musical wood instrument, and beat the dafra. They are also labourers, and go messages.

The *Dekhan Mhang* make brooms and mats from the date palm; are also labourers, bring wood, marry girls under age, fall at the foot of Hanuman, but worship at a distance, being not allowed to approach. They, like the Pariah and the humble native Christian, are also prohibited approaching the house of any Hindu, but stand some yards off and intimate their presence by calling out baba, or maharaja, or ayer, and, as with the Dher, everything they have brought, and everything they touch, and the place they touch, is unclean. If it be a metal dish it is passed through fire, and if of cloth or other material it is washed, or sprinkled with water, or placed on the ground for earth purification.

They mount on horseback in procession to their marriage, a right which they prohibit the Dher and Teli or oilmen. In some parts they do not usually claim dead creatures as a right, but beg portions from the Dher.

They worship generally all the local deities or village gods,—the Ammun, the Ai, the Mata, Musoba, Mariai, Devi, Kandoba, and the Mangir or ghosts of deceased relatives. Mangir is in the form of a human being engraved on silver or copper, intended to represent a deceased father or mother; sometimes it is a casket of copper containing a silver figure of a man. The Mangir is worshipped at the Dewali and Dassara, and at Amas and full moon and anniversaries. The figure is worshipped by washing and burning frankincense. They bury or burn their dead. They place the corpse in the ground, then bring a potful of water from the river, pour it on the body, and cover the dead with earth; after three days they take food and place it over the dead.

The *Dhor*, HIND., TEL., Dhoria, CAN., Dhorata, MAHR., are found in most of the larger villages of the Dekhan. They are tanners, but are regarded as Hindus, and, unlike the Dher and Mhang, reside within the villages. They worship the earthen jar in which the hides are steeped, placing red lead on it. They do not partake of animals that die of disease. They never devote their young women to the gods. They are looked on by the Pariah or Dher as vile, and are not associated with in eating or intermarrying. The Dhor are robust, fair, short men, with well-developed chests, wide faces, light-coloured eyes, many of them with a light moustache, and in all their features they present evidence of a Mongoloid origin. They never eat the large horned cattle, the cow, buffalo, or bullock, nor do they eat dead animals, but fowls, fish, deer, goats, and sheep are lawful. They marry in their own tribe, making the marriage procession on a bullock, and say that they are not entitled to proceed on a horse. Like almost all the races of India, they worship, at anniversaries, the chief implements of their trade, which in their case is the tan-pit; but they weekly cowdung a small spot in their house, on which they burn incense, place flowers and wheaten cakes covered with rice, bow down, worship, and eat. The deity thus invoked one family at Oodghir said was Bawa Adam, whom they consider to be Mahadeva (Siva), and inquiry elicited the information that about 60 or 80 miles west of Punderpore is a stone named Bawa Adam or Father Adam. It is doubtless the phallic lingam of Hindus. They also worshipped Ai, mother, whom they designate as the Bhawani at Taljapore, but Kandoba at Malligaum also receives their worship. The temple guardians, however, do not permit the Dhor to approach near to the idols, as their trade of workers in skins and hides makes them unclean. They bury the dead who have fallen victims to small-pox and cholera, but those from some other diseases are burned; a pregnant woman dying is burned. They make leather from hides, and manufacture such articles as are used for water purposes, the mot bucket, the d'hol or drum, and pakhal or water bags. In Berar, workers in leather consist of 12½ clans, amongst whom are the Dhor and Kullar Bandela Chamar. The Katai make shoes and sandals, and labour in the fields at seed and harvest times. The Katai are identical in personal appearance with the Chuckler (Chakili) of the very south of India.

The Chamar in Aurangabad worship Mariamma and Sitla. They marry when under age, amongst themselves, proceeding on foot to the goddess Sitla, whose shrine they circumambulate five times. The expense is about a hundred rupees. They speak Hindi. They burn their dead.

Agambadyar, a rude tribe in the most southern part of peninsular India. Their ordinary surname is Servikaren.

The *Totti* of the Tamil people is a village servant who waits upon the villagers. The domestic Totti does the humblest part of the house work.

Kurchager, a race in the Wynad forests, skilful bowmen, dexterous in destroying wild animals.

Wild Races.—In the mountainous parts of the Ganjam district, in Jeypore, and in all the hill tract which lies between the Bay of Bengal and the Central Provinces, are numerous races who have not attained to the civilisation reached by nearly all populations of the plains. They speak their own tongues. Their tribal names are Agurtu, Balija, Erikulu, Gadabalu, Gartulu, Golla, Gonda, Jannalu, Jatafi, Jond, Konda-Doralu, Konda-Rajalu, Loddi, Pano, Pittola, Pydelu, Telega, and Yenadi.

The *Khond* occupy parts of the Ganjam district and of Orissa, between the Mahanadi and the Godavery. The Khond lie between the Kol and the Soura. They are the most numerous of the hill tribes of Ganjam. They own and cultivate the soil, and huntin game is their only other avocation. The men are of medium height, stout, strong, and not uncomely, with aquiline noses, high cheek-bones, and receding foreheads. The women are short statured, coarse featured, and not cleanly. They wear a scanty kilt-like piece of cloth reaching from the waist to the middle of the thigh. Both men and women wear a profusion of brass rings and armlets. Sir Walter Elliot says they call themselves Kuinja; their neighbours in Orissa call them Khand, and the Telugu people call them Ku, Kod, and Gond. Khand is said to mean mountaineer. The Khond, the Kol, and the Soura races have held the sam

position as now since the 4th century, though some intermingling has occurred on their borders. The Kolarian races of that region have been arranged as Gadaba, Kerang Kapu, Bhumiga, Bhunijiga; and the Dravidians as Parja, Dhurwa Gond, Batra, Koi, Matiya, Konda Kapu, Konda Dora, Khond, Kottiya, Pentiya, Muriya.

The Khond of the northern and central parts of the Mahal or mountain country of Ganjam are skilful, energetic, and well-to-do farmers. They are in tribes, speaking different dialects, and in varying degrees of civilisation and lawlessness. The Kuttiah Khond on the Kalahundy and Jeypore borders are perhaps the most fierce and martial. The tribes occupying the hills bordering on Ganjam, with the exception of the Simili Khond tribe of Bodagada, are somewhat more civilised; and in the Gumsur Mahal, where many of them speak Uriya, there is not much perceptible difference between the Khond tribes of the hills and those living in the jungle villages at the foot of the ghats.

It became known in 1833 that the Khond race were addicted to the sacrifice of human bein (Meriah) to the earth goddess, and eve since then the British Government have mad continuous efforts to suppress this rite. Since 1857, the Khond of Kimedy have been surging up from time to time, but the true reasons are not known, though those alleged are their hopes of renewing the Meriah. The Khond who occupy the eastern parts of the highlands between the Godavery and the Mahanadi, were notorious for their human sacrifices. Those near Berhampur average in height 5 feet $5\frac{3}{4}$ inches, and in weight 8 stone, with well-developed muscles and tendons standing out hard and firm. They are wiry and active, have an upright gait, carry their heads erect, straight noses, narrow nostrils, thin lips, black eyes, not high cheek-bones, slightly projecting lower jaw, white and regular teeth, with oval faces, as if of a mixed Caucasian and Mongolian origin.

The Khond in the Eastern Ghats, south of the Mahanadi, have the face round, the cheek-bones somewhat prominent, the forehead full and expanded, the nose flattish and broad at the point, the mouth large, with lips full but not thick. The eye is quick and brilliant, the general expression of the face intelligent, determined, and good-humoured. In person they are muscular, neatly formed, and about the height of the races of Hindus of Southern India. The skin is clear and glossy, and it varies little in colour from a light bamboo to deep copper. Like the Gangetic tribes, they have little or no beard. They are social, and more truthful than natives of the plains, but easily excited. Animal food and palm wine, and the spirit from the Bassia latifolia flower, are only used on festive occasions. The deities of the Khond are the same as those of the S.E. Gond. Pen and Pennoo are common to Khond and Gond.

In the Kotiah country and round about Baliguda, buffalo sacrifices have taken the place of the Meriah. The buffalo is tied to a sacrificial pole (Bassa-kumbo), and the chief pujari or worshipper places his tungi seven times on the buffalo's neck, and on his giving it a final heavy blow, each of the pujari, sacrificial priests of all the other villages, who have all been standing ready with knives in their hands, rush on the buffalo, slice off pieces from it, and, with some of its blood, each darts to his village and buries the sacrifice in the sacred grove, sprinkling the blood to the four quarters of the earth. On the following day all return to the place of sacrifice to eat the remainder of the flesh, and drink toddy to excess. The Khonds of the Boria Mutah do not follow this practice. The other Khonds sacrifice two or three buffaloes every two or three or four years, but do not bury any portions.

Khonds in the Gumsur Mahal were about 54,290. The headman of a village is styled Majji, and Patta-Majji is the designation of the headman of a number of villages. They are a finer race of men than the Soura. The Ippa tree (Bassia latifolia) flowers in the months of March and April, and the whole country is then given up to drinking. The Government's agent presents cloths to the Majji and to the Meriah victims rescued from the sacrifice. The family is the basis of their society, and Khond sons have no property during their father's life. On failure of male issue, the land passes to the village. The Khond are faithful and brave, boundlessly hospitable, and a guest's safety and care are paramount duties. Agriculture and war are deemed the sole honourable avocations.

A boy is married in his tenth year to a girl four or five years older than himself. In the middle of the marriage feast, at night, while the dancing goes on, the girl's uncle lifts her on his shoulder, while one of the boy's uncles does th same with the bridegroom. Suddenly the uncles exchange burdens, and the boy's uncle makes off with the bride. In a moment the festivities cease, the kinsmen range themselves into two hostile tribes, the girl's friends trying to recapture the bride, the boy's to cover her flight. The two parties carry the fight to great lengths, and the conflict exhibits an ancient custom of marrying by capture.

The *Pano* race in the Purla Kimedy and Gumsur Mahals are hill Pariahs, and each Khond village has a Pariah low-caste hamlet attached to it. Their total number in the Madras Presidency was stated to be 34,683 in 1872. The *Kandara* and Pana are chiefly found as agriculturists and weavers in Orissa.

Gondwana, besides the great portion under the Nizam, includes Korea, Sirguja, and Udaipur. But Gond colonies extend as far east as the Katak (Cuttack) Tributary Mahals, where they blend with the Khand and the Saura or Savara, and they extend to Kandesh and Malwa on the west, where they touch the Bhils. A considerable portion of this tract are Gonds. The Maria are the wildest and purest of the 12 tribes, all of whom call themselves Koitor, plural of Koi.

The *Koi* in the hill country of the Godavery district is a numerous hill race. The Koi of Jeypore are a listless, drunken set, and bad cultivators. They are found from Jeypore southwards to the Godavery river, and westwards to Kummumet in Hyderabad.

The *Matiya* cultivators of Jeypore say their ancestor sprang from the soil, and point to an opening from which he came.

In 1868 disturbances rose in Keonjur in the early part of the year. It is one of the Tributary Mahals of Cuttack. The Juanga, the Kol, and

Bhuiya joined them, and at one time 20,000 were in insurrection, and it was not until August that it was put down.

Sowrah, Saur, Sabar, Sar, Savara. These varied names arise from the circumstance that in Bengal v is pronounced as b, and is constantly softened into au and u. Their principal habitat is in the mountainous country, about 200 miles long, which rises from the Bay of Bengal, and, stretching southwards from the Mahanadi, runs down from the Chilka lake to the Godavery river. They are a branch of a widely-dispersed race, who are found in Central India, in Gwalior, and Marwar, and even as far as Southern Rajputana. The name is identical with Sairea, applied to populations occupying the fastnesses of the Eastern Ghats, along with the Khand and Kol. The Purla Kimedy Mahals are principally inhabited by Sowrah, and the Jalantra Mahals both by Sowrah and Khand. These two are the chief races in the Mahals, but the Uria, the Soondi, and the Pano are interspersed amongst them. The Soondi are arrack sellers, and the Pano are a degraded race of Uria origin. These Sowrah and Khand are rude and uncivilised, and live by tillage and the barter of sundry forest articles. Sir Henry Elliot has suggested that the Siviri, the Seori, and the Cheru may perhaps be the Saurasena. In the Harivansa is the following passage:—'From this race came the Sauravira and Saurasena. The great king Saurasena has given his name to the country over which he reigned.'

The *Sowrah* have also been supposed to be the Suari of Pliny and the Sabarae of Ptolemy. The Sabar and Sahar of Pooree, Cuttack, and Balasore in Orissa, are possibly one branch, as also are perhaps the Chensuar farther south; these are savages armed with bows and arrows and battle-axes. The hilly tract which extends from Purla Kimedy to Berhampur in Ganjam, is bounded on the east by the narrow belt which separates the hill tracts from the sea, and on the west by the Khand clans of Chinna Kimedy and Jeypore. The Sowrah are believed to be prior occupants, but in habit and barbarism they bear a strong resemblance to the Khand. The Sowrah are wholly within Telingana, and extend from the Godavery to the southern frontier of the Khand. Their country is one of the most difficult in the world,—a hilly tract covered with a jungle as deadly to sepoys as the lowest swamp in the Santal parganas. They are small, mean, and very black. According to Major Macpherson, the hill tribes south of the Khand, and running up to near the Godavery, are Sowrah. Dr. W. W. Hunter says the Sowrah also now live with the Oraon or Odaon of the Bengal frontier. An insurrection in 1858 was neither aided nor led by Khand, the principal actor in the affair was a man named Danda Sina, of Garbah Goomah, a village occupied by the Sowrah tribe. Danda Sina had some time before been apprehended by the authorities of Ganjam on a charge of dacoity. He was convicted and sentenced, but the sentence required confirmation, and in the interim he contrived to effect his escape. Flying to his own village, he collected a large body of his clansmen, and with 10,000 followers attacked the manager of Purla Kimedy. Seven peons were killed upon the spot, and though the manager escaped, the whole country was immediately in a state of excitement. The Sowrah had previously been irritated by the execution of two of their number for murdering the headman of a village, and had openly threatened vengeance for their deaths. An old device was also employed to stimulate them to action, and give additional coherence to the movement. As in the Santal rebellion, an avatar descended, though he was not, as with the Santal, in the shape either of a cart-wheel or of a piece of paper. The Sowrah appear to be advanced beyond that point in theology, and their idol was a little brazen image. But in all other respects the device was identical with that employed among the Santal. The avatar issued commands, the active leader was sole interpreter of them, and the commands authorized armed resistance to regular authority.

The Sowrah race who occupy the hills near Chicacole, near Kalahundy, and southwards as far as Badrachellum, bury their dead with their weapons. The headman of a village is styled Gomango. The Sowrah in the Purla Kimedy Mahals are about 16,398, and 15,193 in the Pedda Kimedy Mahals. Half the villages are situated below the hills, and their occupants are in constant intercommunication; even the hill Sowrah frequent the markets of the plains, and the people of the low country no longer fear to trust themselves amongst the hills. They pay their rents to the raja of Jeypore.

The Sowrah who occupy the Pedda Kimedy, Surangi and Purla Kimedy Mahals to the south of the Khand tribes, have little in common with the Khand. In agriculture they are on a par with the Khand tribes.

The *Chensuar*, Chenchwar, or Chentsu, a wild, half-savage forest tribe inhabiting the Eastern Ghats of the Peninsula. They are known to their settled neighbours as the Chenchu kulam, Chenchwar, and Chensuar. Wilson names them Chenchuvadu (Vadu, Te. a man; Wanlu, Vanlu, pl. men). They dwell in the tract of jungle covering the westernmost range of the Eastern Ghat line, between the Pennar river and the Kistna, known locally as the Nullamallay and the Lankamallay. Those of the Nullamallay range seldom visit the plains, their time being occupied in the search for forest produce, roots, on which they subsist, honey, tamarind, wood-apple, game, and herbs, which they barter for grain. In the Cumbum district some of them earn a livelihood by guarding the crops and cattle of the farmers on the hill tracts. They are generally peaceable, but a few who live near the plains are given to petty thefts of grain. Their weapons are the bow and arrow, a bill-hook, and sometimes a matchlock. They inhabit clearings in the forest, and live in beehive-shape huts like the African, Nicobarian, and many of the ruder Asianesian tribes. These are of wickerwork, with walls about three feet high, and a conical straw roof, with a screen for a door. The men are almost nude, and have in general only a rag for covering, with a leather cap on their head. The women dress like the wandering female basket-makers, whom they resemble in features. The features of the men are small, but the expression is animated, cheek-bones higher and more prominent than those of the Hindus in general, nose flatter, and nostrils more expanded; their eyes black and piercing; in

stature they are a little shorter than their neighbours, and they are slightly but well made, except about the knee, which is large, and the leg. The colour of the skin is darker, and there seems a tendency to cutaneous eruption. They have large dogs, and a few are employed as hill police in the pass from the Cumbum to Badwail. The Nandial Chenchwar have no images. They are polygamists; they bury their dead, but sometimes burn, and, like the Tatars, they carry the deceased's weapons to the grave. They use the spear, hatchet, the matchlock, or a bamboo bow and reed arrow tipped with iron. They look on weaving and other manufacturing arts with contempt. They are patient and docile. Vocabularies of six of these non-Aryan tongues, the Khand, Savara, Gadaba, Yerukala, and Chentsu, are given at p. 39, No. of 1856, of Beng. As. Soc. Journal.

The *Patuah* or *Juanga* are a forest race inhabiting the Tributary Mahals to the south of Singhbum in Cuttack, scattered in the mahals or killahs of Keonjur, Pal Lehra (30 villages), Dhenkanal (6 villages), and Hindole (6 villages). The stature of the men does not exceed 5 feet 2 inches, and that of the women 4 feet 3 inches or 4 feet 4 inches. Their forms are slight, with little muscular development, and physique weak. Their face is shorter and broader than that of the Uria, nose is flat and nostril wide. Their colour is not darker than the Uria peasant. The men are not handsome, but the women are repulsively ugly. The men dress like the peasantry of the neighbourhood; but till 1871 all the covering of the women consisted of two bunches of twigs with their leaves attached, one before and one behind, which were changed daily, kept in position by a strip of bark or a string of glazed earthenware beads passed twenty or thirty times round the waist and over the stems of the twigs; hence the name of the tribe, Patuah, literally people of the leaf, but they call themselves Juanga. The women also wear necklaces of the same kind of beads, and their hair is gathered together in a knot at the back of the head, fastened by a string with a silver or brass button at each end of it. The women wear no blanket or covering at night, but sleep between two fires. Their traditions are to the effect that they were formerly vain of fine dress, and were wont to lay aside their good clothes to prevent them being soiled, and wear such leaves when attending to the cleaning of the cow-house or other duty, when one day a thakurani, or, according to some, Sita, appeared, and commanded them as a punishment for their vanity always to wear such leaves. Dr. Shortt mentions that the legend of Killah is that a rishi commanded them to wear the leaves. They believed that if they violated these commands they would be devoured by tigers. Women dance in a circle to the sound of a large drum beaten by the men, moving round and round in the same measured step, occasionally advancing towards the musicians and then retreating, but keeping the body inclined towards the musicians. Their villages are in some clearing or opening in the forest; are small, with about six or eight families, in poor and mean thatched huts of wattle and daub, each family in its own dwelling. They have no lands, but sometimes assist in the cultivation of the neighbourhood. Their avocations are chiefly those of the chase, using the bow and arrow and dogs; they kill deer, hogs, and not unfrequently snakes, of the flesh of which, especially that of the Python molurus, they are very fond. Except the cow, they are omniverous. Their usual food is insipid and nauseous roots (tunga, kurba, and panialu), and the seeds of the jungle grasses. They all call themselves Pudhan, and have no system of caste. They pay homage to nameless spirits who inhabit the woods and mountains, and make offering to the genius loci of a fowl, a goat, or rice, or spirits. In the month Baisakh they offer libations to the manes of their deceased ancestors. They bury their dead. Marriages are arranged by the parents, and are scenes of revelling and drunkenness. They adhere to one wife, unless she prove unfruitful. Like many Hindus, they will not pronounce their wives' names. Their language is not similar to Uriya, and it shows that they are connected with the Mundah of Chutia Nagpur, and that their nearest kinsmen are the Kheriah. But in their present position they are isolated from all other branches of the family, and they have no suspicion that they are connected with them.

The Juanga have been said to extend into Bastar, and to be there called Jharia, and farther north to have the name of Madia; but these points need confirmation. The Juang of Keonjur and the Malhar or Patuah of Dhenkanal are identical in manners, dress, language, and habits. Hitherto, any person wearing a cotton cloth became, by so doing, an out-caste from his people. But in 1871 the maharaja of Dhenkanal and the British revenue officer induced the women to discard their leaves and use cloths. They rebelled in April 1868, but were subdued by the month of August. The Juanga or Jowang dwell apart from the agricultural population, and have a language of their own. They cultivate patches in the forest clearings, but they like to wander in the forest and gather its wild products.

The *Vedan*, *Veder*, *Veddar*, or *Bedan* of the Malabar forests are predial slaves, who cut timber and do not cultivate. In Travancore and Cochin are the Vedan and the Oolladen; both tribes are hunters, and are most numerous in the mountain taluks.

The *Kadar*, a hill race, occupying the Animallay Hills in the collectorate of Coimbatore. They are open, independent, straightforward men, simple, and obeying their Mopens or chiefs. They are strong built and active, with woolly hair and something of the African features, and file their front teeth to a point. The women wear enormous circles of pith in the lobes of their ears which they distend down to their shoulders. A black monkey is the Kadar's greatest dainty. A small number are employed by the Forest Department in forest conservancy and in felling timber and others collect forest produce, which they barter for grain. They also cultivate for themselves, on the hills, patches of ragi (Eleusine coracana), which they supplement as a food supply with roots, herbs, etc., found on the hills.

Malecali, a race in the Shevaroy Hills, in South India and in Malabar. They inhabit the mountain tracts of the Salem district. A small body of the Maleali occupy the hills in the Kallakurchi taluk of the South Arcot district, and are engaged in cultivation and felling timber.

here are two small hamlets of them above apanassam in the mountains dividing the Tinevelly district from the Travancore territories. few in the Salem district have a rude kind of umari cultivation, breaking up patches of land, hich they abandon when the soil becomes exausted, but residing in villages, with none of the ild habits of the people of the jungle. They ave their own social rules, and their headmen re all-powerful. On hills twenty-five miles S.W. rom the town of Vellore, there are thirty small illages, with a rude and uncivilised population ho do not clothe themselves properly. They peak a language scarcely intelligible, but beeved to be a Tamil patois. They are addicted o thieving, but live by cultivation and exchangng wheat.

The *Ariyan* or *Malai Arasar* or *Malai Arayan*, iterally Hill Kings, are a community of 15,000 or 0,000 people in the southern mountains of Travancore. They are nomade or semi-nomade, hifting their locations to suit their kumari cultivaion. Many of them live in huts constructed on rees, above the reach of wild beasts. But there re others with villages beautifully situated mongst the mountains, from 2000 to 3000 feet bove fever range. They worship the dii loci esiding in peaks, trees, and great rocks, and also he spirits of ancestors. Their priest worships he hill deity, and works himself into a state of ossession. They bury their dead in cromlechs, onstructed, like the cromlechs in Coimbatore, of our stones and a covering one, like those now in se amongst the Gotta tribe of Gond, on the odavery; and in the cromlech is deposited a netal image, or an oblong stone in which the pirit of the deceased is supposed to dwell. They ave sacred groves, where the greatest reverence nd silence is observed. They are great hunters. hey are innocent in character, are truthful and haste in language, but are great drunkards. heir language is Dravidian. The Malai Arasar, in he range of ghats between Tinnevelly and Travancore, are in small communities of five or six families. hose of the Coimbatore district live in the low ungles of the Pollachy and Oodalempetta taluks, nd in the Bolumpetta jungles. Their huts consist of a few sticks covered with bark and thatch. hey live on wild forest products, but, since A.D. 1850, they have been cultivating potatoes for their wn use. They have a few fowls and dogs. As race they are diminutive and pot-bellied, their rania small and pear-shaped, rising to a point bout the junction of the occipital bone with the agittal suture; a low retreating forehead; long, angled, black hair, flat nose, and small eyes. hey are averse to intercourse with strangers. hey catch wild animals in pits and traps, and se bows and arrows. They are low in the scale f civilisation. Their principal occupation is unting, but some of them are engaged in the ultivation of forest land. Coffee planters have een dispossessing them of their lands.

Malai Kudi, or plural Malai Kudiar, a hill tribe iving in the jungle tracts of South Canara, in he Uppanangadi taluk, in the cardamom forest racts, etc., bordering on the ghats. The Malai udi Kunalie, Malai Kunalie, Nad Kunalie, Kari unalie, Kumri Mahrati, and Koragar, formerly, hen kumari cultivation was unrestricted, may ave had their abodes permanently in the heart of the jungles, but they have long since taken to the plains, and are now to be found everywhere, though in secluded localities.

A *Negro* race occupy the hills at Dandilli in North Canara.

The *Neilgherry Hills* are situated between lat. 10° and 12° N., and long. 76° and 77° E., bounded on the north by the table-land of Davarajpatnam, S. and E. by the open country of Coimbatore, S.W. by the Manaar river, a branch of the Bhowani; W. by the chain of ghats, and N.W. by the district of Wynad. The base of these mountains, including that of the Kunda Hills, covers a circumference of 200 miles. Their greatest length is from E. to W. 46 miles, and medium breadth 15 miles; the surface is composed of ridges of different elevations. The country is divided into three districts, the Peringa Naad, Malka Naad, and Thodawar Naad. The first two are mountainous, but the third is of sloping hills and gently undulating surface of table-land. Dodabetta is 8700 feet above the level of the sea. The races occupying these Naad,—the Thodawar, Buddaga, Kothur, Kurumbar, and Erular,—until the early part of the nineteenth century, remained secluded amongst their forests and on the mountain summits.

The *Toda* or Todawar, properly Tuda or Tudavara, live in hamlets or 'mund' on the hill plateau. Motta and Mund are words meaning a Toda hamlet. They never could have exceeded a few thousand, but they have diminished through opium eating and polyandria, and, at a former period, the prevalence among them of female infanticide. It is said that no girl has been destroyed since 1819. Before marriage, young people associate. After marriage, the Toda wife, or if there be more than one, all the wives, in a family of brothers are common to all the brothers. They claim to be aborigines, and other classes recognise the claim, and regard them as the lords of the hills, and pay them in kind, as tribute, one-sixth of the produce. They occupy the Todawar Naad and Malka Naad. Their villages are in the depths and on the skirts of the forests. Their houses are built in the form of a parallelogram, 10 feet by 6, roof semicircular, and door $1\frac{3}{4}$ to 2 feet high, and 14 to 18 inches wide, and it is the only aperture. Their appearance is calm and dignified, and carriage graceful. Their colour is a deep copper hue. Their numbers in 1825 were—men, 145; women, 100; boys, 45; and girls, 36=326. Their men average in height 5 feet $3\frac{3}{5}$ inches, and average weight $121\frac{1}{4}$ lbs. Nose long, large, and well formed, generally aquiline. The women average in height 60·25 inches, in weight 110·80 lbs. They are handsome and comely in feature.

The Toda have five sections—(*a*) Peiki, (*b*) Pekkan, (*c*) Kuttan, (*d*) Kenna, and (*e*) Todi, who eat together but do not intermarry. Todawar or Torawar, in Tamil, means herdsmen. The men carry a small axe and their cowherd staff. Toda women tattoo their arms, legs, and chest with dots. The men wear a piece of stout cotton cloth about 5 lbs. in weight thrown around them as a toga or mantle, descending to the knee, and their feet and head are always bare. The women have a similar mantle, but falling to the ankles, with the loin cloth (Mundu, TAM.) of Hindu women below it. The Toda do not bathe, but anoint their bodies with ghi, which soon becomes rancid.

They are dirty. The Toda women have metal and shell ornaments, with brass armlets weighing 6 lbs. The Toda lead a quiet, peaceful life. They are fond of feasting and dancing on festive occasions; all use tobacco, many use opium, and in latter years the use of arrack has largely increased. Their cemetery and place of funeral sacrifice is a pretty green spot, partially enclosed by a stone wall, and rendered very gloomy by a thick wood on one side and lofty hills on the other. It is their practice to sacrifice buffaloes on the demise of a Toda, and a strongly-walled area is set apart for the reception of these animals, whose bones and horns are strewed on the ground. At the demise of a Toda chief, the funeral procession entered the green and moved towards the centre. The deceased was dressed in a new garment and mantle, and arrayed in all the ornaments which he had worn during life. He was carried on a bier formed of branches and herbs, and followed by a number of mourners, male and female, who chanted the lament, whilst others carried wood for the funeral pile and provisions for the evening meal. A herd of buffaloes was driven into the walled area, and the men, armed with clubs, entered with exulting shouts, and performed a wild dance amongst the buffaloes. These soon became excited to the highest pitch, and, at a signal, a bell was attached to the neck of each infuriated animal. Two young men would throw themselves on the animal's neck, seize it by its horns, and others would run to their assistance, and eight or ten men would be seen hanging on the neck of one animal, whilst others increased its rage by blows of their clubs, and goaded it on with hideous yells and gestures. Three or four animals were thus attacked at one time, and the bell attached to the neck of each. But meanwhile the general assemblage which lined the walls were weeping, exulting, or sending forth shrieks of horror whenever a man was wounded, a buffalo overpowered, or a lover or a husband in imminent danger. On the next day, the victims were finally sacrificed. The men struck the animals behind the horns with a wood-cutter's axe. But sometimes the blow was indecisive, and an infuriated animal escaped and drove madly amongst the multitude. After the sacrifice, several wild dances followed, during which the men feigned to cut and lacerate themselves. On the third day, the deceased was burned on the funeral pile.

The *Kotar* tribe ranks next to the Toda in priority of occupation of the hills. They have no caste, and as a body are the most industrious of the hill tribes, giving much of their time and attention to agriculture, handicraft, etc. When not required at agricultural operations, they employ themselves as carpenters, smiths, basket-makers, etc., making and repairing their ploughs, bill-hooks, hoes, etc. They are also curriers, and are highly esteemed in the plains for the excellent leather they make. They perform all the menial offices required by the Toda and Badaga, supplying them with barbers, washermen, etc. They acknowledge the Toda as lords of the soil, and accordingly pay the tribute demanded by them as Goodoo. At the same time they exact from each hamlet of the Badaga within a certain distance of their own village, certain annual fees, which they receive in kind, for services rendered as handicraftsmen, etc., in addition to that of ceremonial or festive occasions for menial services performed. They hold the best lands, and they have the right to select the best whenever they wish to extend their holdings. They are well made and of tolerable height, rather good featured and light skinned, having a copper colour, and some of them are the fairest skinned among the hill tribes. They have well-formed heads, covered with long black hair, grown long and let loose, or tied up carelessly at the back of the head. An average of 25 men gives the following measurements, etc.:—

	Men.	Women.
Age, years, ...	27·68	32·44
Height, inches, ...	62·61	57·98
Circumference of head, inches, .	20·95	20·36
Circumference of neck, ,, .	11·95	10·7
Circumference of chest, ,, .	30·68	29·3
Circumference of arms, ,, .	8·76	8·2
Circumference of thighs, ,, .	15·52	14·63
Circumference of legs, ,, .	...	35·
Length of arms, ,, .	30·	26·52
Length of hands, ,, .	7·	6·5
Breadth of hands, ,, .	3·25	3·
Length of feet, ,, .	10·	9·25
Breadth of feet, ,, .	3·5	2·25
Weight, avoirdupois, lbs., . .	105·2	96·24

They have a slightly elongated face, with sharply-defined features; the forehead narrow but prominent, and occasionally protuberant; ears flat, and lying close to the skull. The women are of moderate height, of fair build of body, but not nearly so good-looking as the men. Their arms are tattooed, having nine streaks, with four dots on each arm and four circular marks on each forearm. The women assist the men at their work in the fields, and make baskets and earthen pots, etc. Their number at the last census was 1065. They form large communities, each village containing from 30 to 60 or more huts of tolerable size, walls built of mud, and covered with the usual thatch grass. The station of Kotagherry takes its name from the Kotar villages in its vicinity. The Kotar, as a body, are unclean. All the dead cattle and carrion in the vicinity, of every kind, find acceptance among them as food. Oxen and buffaloes which perish from old age or disease belong to them of right, and they carry home and greedily devour the tainted carrion which they find on the highways and in the fields. Some rude images of wood or stone, a rock or tree in a secluded locality, form their objects of worship, and to these sacrificial offerings are made; but the recognised place of worship at each village consists of a large square piece of ground, walled round with loose stones, 3 feet high, and containing in its centre two pent shaped sheds of thatch open before and behind and on the posts that support them some rude circles and other figures are drawn. They hold an annual feast in honour of their gods, which comprises a continuous course of debauchery and licentiousness, extending over two or three days. On these occasions they clothe and ornament themselves in their best, and make as grand a show as they can, and to witness which the other tribes are invited. Much indecent dancing takes place on these occasions between the men and women, and frequently the spirit of their deity is supposed to descend on some of them when their frantic deeds seem to form but a branch of demonology. As a rule, they marry and live with one wife, and have a number of

ildren. The Kotar possess a small breed of ws, but have no buffaloes. They never, as rule, milk their cattle, but leave it all to the lves. The Kotar keep up an annual feast in emory of their dead, when a few cattle are ain on a rude kind of altar constructed for the urpose, and on it a portion of the flesh of the imal is laid, with a little of each of the different nds of grain they cultivate, and is consumed as a rnt-offering to their gods, in memory of their ad relatives and friends. During this ceremony e young men and maidens dance around the tar together. Whilst the younger members are us engaged, the elders busy themselves in pre- ring a grand repast for their friends, whom ey invite from the adjacent villages on the casion of this annual festival. More cattle are w slain, and the flesh mixed with small portions every kind of grain grown in their fields; a eat fire is raised, and the scene becomes one of nfused riot and mirth, with blowing of the llera horn, mingled with yells and shrieks and ating of tom-toms, the confusion continuing m morning till night.

The Kotar language is a very old and rude alect of Canarese, having the same Tamil ots, but differently pronounced, without the ttural or pectoral expression of the Toda. They e believed to be descended from some of the low- ste tribes of the plains, who in former times ught refuge on these hills from the persecution actised on them by the invaders of India. There scarcely a useful implement connected with e mechanical arts, trade, agriculture, or hus- ndry, that they are not conversant with.

Every Kotar village has belonging to it a circle Badaga hamlets or villages, from which they ain at periodical seasons the payment in kind of rtain fees or dues, and for which they in return rnish the Badaga with, or rather make for them he latter supplying the material), their imple- ents of wooderaft and husbandry. These fees e generally paid in a certain quantity of what- er grain the Badaga has cultivated, for each ough of land, besides incidental dues on mar- ages, etc. The Kotar always attend the funerals d obsequies of the Toda, etc., receive from them e carcases of the buffaloes that are offered in crifice, allowing from a half to a quarter of a pee for some; and others they receive in return r the assistance they afford on these occasions, for services which may have been performed r the family of the deceased. If they cannot pply themselves with flesh by any of these eans, they kill some of their own herd, or pur- ase for that purpose from the other tribes. The otar burn their dead, collect the bones on the llowing day, and bury them in a hole, marking e spot where they have done so. This they do order to the performance of the obsequies. On e night of the first Monday after the first new oon in the month of March, all the friends of e deceased assemble, and, preceded by music, go the place of burning.

Badaga are the most numerous tribe on the eilgherry Hills, are also called Badakar and adakar, meaning Northerner, but their Toda name Marves, the term for a labourer. They state that at the 15th century their ancestors came from Malusal Hills, sixty miles south-east of the n of Mysore. Their name is supposed to be a modification of the Canarese word Vuddaca or North, and they undoubtedly speak an ancient but organized dialect of the Canarese; but whether famine or persecution drove them from their own country is not known. They are of fair com- plexion, and handsome.

Both men and women work in the fields, but of late years a large number of men find employ- ment as labourers and artisans. The other hill tribes on the hills live in isolated communities, but the Badaga dwell in villages on a rising ground, in streets running in parallel lines, in thatched houses built of stone and mud, and divided into separate compartments, with a double tier of lofts, and with a wide terrace in front as a drying, thrashing, and winnowing floor. The doorway, 43 inches high and 26½ broad, is their only opening.

The cattle are penned in an adjoining cowhouse or shed. Dr. Shortt says they have eighteen sects. The arrangements on betrothal are made by the parents, but the marriage only takes place when grown up. Polyandry does not prevail, but divorce is easily obtained. The women look like mummies. They wrap a cloth round their bodies from below their arms to their knees, and fasten it with a cord below their arms and around their hips; the arms and shoulders and their legs below the knees are bare. A scarf goes round the head, and is let fall behind. The women are of domestic habits, are simple, modest, and retiring, and kind and affectionate mothers. Formerly they claimed as their deity Hettee-du, an old man, and Hercar-du, who, they said, conducted them to the mountains; and they still have numerous deities. A chief deity is in Rungasawmy peak, where men of the Irular tribe officiate as priests, and offerings of ghi and fruits are made; another deity is on a droog near the village of Hollikul, where a Badaga priest officiates; and there are other male and female gods. Many are comparatively wealthy. They can neither read nor write; they are timid and superstitious, haunted with a dread of evil spirits, and are deceitful, ungrateful, and false. They are in perpetual fear of the Kurumbar, to whose sorcery and witchcraft they attribute all accidents and ailments which befal themselves, their cattle and crops, and in their delusions they have killed Kurumbars and suffered for it. Nevertheless they get the Kurumbar to officiate as priests at all social ceremonial occasions. They both burn and bury their dead.

Irular or Erular in the Tamil districts are most numerous in N. Arcot, Chingleput, Salem, and Coimbatore. In the Neilgherries they are a low type of the Dravidian race occupying the lower skirts of the forests at the base of the hills. They arrange themselves into two clans, the Urali and the Kurutalei, meaning rulers and serfs. They dwell in the clefts of the mountains and in the little openings of the woods. The word Eruli unenlightened or barbarous, from the Tamil word Erul, darkness. It is the term applied to them by their neighbours, and they speak a rude Tamil dialect. They sacrifice he-goats and cocks to their deity Mahri, which is a winnowing- fan, and they have minor fetish objects, mere stones, that they call Moshani and Konadi Mahri. They inter their dead in great pits, 30 or 40 feet square, thatched over and planked across, with an opening about a cubit square in the centre of

the planking; across this opening are laid pieces of wood, on which the dead are placed, and covered with earth, and are left so till another person die, when the former remains and the earth are turned into the pit and replaced by the newly dead. They are scattered in small communities, practising a rude system of agriculture, which scarcely furnishes them with sufficient food, so that, when pressed for sustenance, they resort to the jungles and live on such products as they can collect. They make use of animal food of every description, not even excepting vermin and reptiles. They collect for their immediate wants as food, the wild fruits, herbs, and roots; also honey, beeswax, gums, and dyes of various sorts, and medicinal herbs and drugs, which they barter with the people of the plains in exchange for food and clothes. They are intrepid as regards the wild beasts they meet in the jungles, and in their search of honey they sometimes suffer severely from contact with wild bears. They hunt and take game of every description. The Irular in the Salem district wander through the jungles, collecting forest produce, and living upon roots and whatever they can kill, snakes, rats, and lizards even being used as food. They are simple and superstitious to a degree, and the people of the plains believe them to be sorcerers. They rarely come out of the jungle, and their headmen arrange the barter of the forest produce for grain, salt, trinkets, tobacco, and sheep, with the people of the plains. They are employed by the Forest Department in the forest conservancy and in felling timber, and those so occupied live in hamlets of bamboo and daub huts. Polygamy is allowed, and they have many children, but they die off largely from fever.

The following is the result of the weight and measurements of an average of 25 men:—

Age,	26·68 years.	Length of arms,	30·0 in.
Height,	61·78 in.	Hands,	6·5 ,,
Head, circumf.,	19·83 ,,	Breadth of hands,	3·25 ,,
Neck,	11·59 ,,	Length of legs,	34·5 ,,
Chest,	29·91 ,,	Feet,	9·0 ,,
Arms,	8·12 ,,	Breadth of feet,	3·25 ,,
Thighs,	15·17 ,,	Weight (avoir.),	96·2 lbs.

The women are strong and stoutly built, anything but prepossessing in appearance, and very dark skinned. Their feet, of those of all the S. Indian races, are the most beautifully formed. They are fond of ornaments, and wear heaps of red and white beads about their necks, thin wire bracelets and armlets, with ear and nose rings.

In their habitats the men wear no clothing but the lungooti, but when working on plantations they wear cloths like other natives. The women wear a double fold of a wrapper cloth, which extends from the waist to the knees; the upper part of their bodies with their bosoms are nude.

Kurumbar.—Above the Irular, at heights varying from one to two thousand feet, in the clefts of the mountains and in little openings in the wood with which at this elevation they are girt, live a race calling themselves Kurumbar. They occupy the highest range bordering on the Neilgherries. Their neighbours, when speaking of them, usually prefix to their name the term Mullu, a thorn; in Tamil they are called Kurumbar, in Canarese Kurubaru. The Toda do not consider the Irular as forming a part of the inhabitants of the hills, but they allow this designation to the Kurumbar, whom they call Kurb, their term for a cleft or glen, and from them they receive certain services. Swarthy and unhealthy-looking in countenance, small of stature, the head but thinly covered with sickly-looking hair, the only covering it has; little or no eyelash, small eyes, always bloodshot and apparently much inflamed, pot-bellied, and with water running from their mouths, they have in most respects more the semblance of savage than of civilised man. Their women and children have much the same squalid appearance, though on their necks and wrists they wear ornaments made of the different kinds of wild seeds and of berries. Many of the men also wear ornaments in their ears, of yellow straw, plaited with some degree of ingenuity. They have no marriage ceremony; but occasionally, when two have been living together for some time, they will enter into an agreement, in the presence of friends, to remain united for life; and in a family where a succession of such unions has taken place, they will, once in two or three generations, perform a ceremony, and hold a festival in celebration of them. This is done by pouring pots of water over one another, the pairs seating themselves together for this purpose, the ablution commencing with the seniors. They then put on new cloths, and end the day in feasting and merriment. Kurumbar on the eastern slopes of the Neilgherry Hills and below Segur obtain a livelihood by timber-felling. The Kurumbar of the Wynad forests on the western side of the Neilgherry mountains have two sections, the Jani and the Mulli, and the Gurchea, Panniar, and Pulliar races live along with them. The Jani Kurumbar live entirely in the forest; they are the only axemen, and without them it would be difficult to work a forest, and the wood contractor and planter alike employ them. They are very docile, quick of imitation, and slavishly submissive to their mudeli or head. Those employed by the coffee planters are a little civilised, appreciating the comforts of life in a slight degree higher than their more savage brethren. They erect rude huts for the habitation of themselves and family, which are built on elevated ground, surrounded by jungles, and about six in number; they touch one another, and the whole present the form of a crescent. One larger than the rest, styled the cutcherry, is erected in the middle in the shape of a hall, for the sojourn of casual strangers. It is dedicated to their household deity, and the place cannot be contaminated by a shoed foot. They may be said to be ephemeral residents in these habitations; the presence of a suspected stranger in their vicinity, sickness, or other trifling but natural cause, will make them migrate from one place to another, but generally within the same district.

Yenadi.—This term is said to be a dialectal variation from the Tamil word Anathan, meaning a poor man who has no guardian, guide, help, or protector. The race are also called Villi, Irular, and Maraver. Villi and Vader are synonymous, and mean hunters or uncivilised men who dwell in the woods. Irular or Iroolar means unenlightened or ignorant men. The Villi and Irular are less rude than the Yenadi.

Villi dwell in hamlets of five or six huts on the outskirts of most of the villages in the district of Chingleput, and are sometimes called Yenadi. They are herbalists. They have Mongol features;

the men have scant hair on the lip or chin, and no whiskers. They are polygamists. They eat all animal food, except the flesh of the cow. They dig up the wild chay root. The average height of the men was 5 feet 5 inches, and weight 83 lbs.

The *Enadi* or *Yanadi* race dwell in the Sriharicottah jungles, and in the hills and forests northwards to Nellore; they numbered 67,935 at the census of 1871. In 1867, in the Nellore district, they were estimated by Dr. Lloyd at 20,000. A similar race occupy the neighbouring forests on the hills at Naglawaram. In 1871 a number of the Enadi were living in Madras at the Vasarapad serpent temple as its priests, and were finding employment as labourers. The Sriharicottah estate lapsed to the British Government in 1835. Till then, the Enadi were in a state of complete barbarism, did not know the use of money, were rarely seen, and lived on fruits, roots, and other jungle produce. In order to civilise them, Government employed them to gather jungle produce, and gave them in exchange rice and clothing. Also a register of marriages, births, and deaths was established, and at each birth of a boy 2½ annas were given, and of that of a girl 1¼ anna. The residents inland are more robust than those of the Sriharicottah jungles.

The Yanadi live in huts over all the town of Nellore; but in 1871 those residing in a wild state in the hills separating Nellore and North Arcot were supposed to be few, sickness and civilisation having tended to remove them from that wretched condition. Those wild Enadi are small in stature, have poor attenuated frames, with no reverence for human life. They have been known, in removing a cloth from a sleeping man, to kill the unresisting owner first. Those in the hills live upon roots and grain obtained in exchange for forest produce, medicinal herbs, and honey. They steal sheep, and use violence if necessary, but they readily take employment with a civilised man, and rarely return to their old life.

Yerkal

Yerkal, Yerakedi, .	,,		

call themselves 'Kurri.' They are wanderers, living in grass mat, or reed huts, make and sell mats and baskets, and tell fortunes. Where Canarese is spoken in the Peninsula, they occupy themselves ostensibly as basket-makers and in fortune-telling; but they are notoriously predatory, and steal girls, whom they devote to prostitution. They are found on the outskirts of most towns.

The Yerkala of the Nellore district are migratory mat and basket makers, using the midrib and leaflets of the date palm. They also make wooden combs, work as labourers, and a few who have settled engage in cultivation. They rear pigs, poultry, donkeys, and dogs, and eat the flesh of most animals. They are usually of a dark-brown colour, the men are spare and light made, but hardy, with low forehead, small eyes, short nose. They wear only a strip of cloth, and they tie their hair in a knot above their brow. They admit polygamy, but do not re-marry their widows They seem to be identical with the Yevaru, Yerra-wanru of Coorg, a class of predial slaves, amongst whom are several subdivisions,—Panay-Yewaru, Punjay-Yewaru, etc. The Yerrakula in the Kistna district are settled in villages.

The *Korawa*, in 1872, 60,255 in number, and Erukala, 54,163, in the Madras Presidency, are supposed to be the same race, known by the former name amongst the Tamil people, and as the Erukala in Telingana and amongst the Canarese. They are certainly of similar habits. The Korawa subdivisions are—(1) the Bajantri or Gaon Korawa or Sonai Kolawaru, (2) Teling Korawa or Kasbi Korawa, (3) Kolla Korawa, and (4) Soli Korawa. The clan called Kunchi or Kunsi Korawa, also known as the Kuachra Katta Kulwaru, seem the same as the Kasbi Korawa, and the Pattra Korawa or Patr Pallu have their name from the dancing girls having bells on their feet and ankles.

The Yerkal, Korawa, or Kunchi Kori are wanderers, of whose original country they themselves retain no knowledge. They are darker than the usual tinge of Hindus around them. In their own communities they style themselves Yerkal, and they give the same appellation to the language in which they hold communication with each other. With the exception of the cow, almost all animals are used by them as food.

They worship a goddess called Poler Amma. Polygamy is common; and if a man owe money to his neighbour, he pledges his wife or daughter to his creditor, who may either live with them or transfer them to another person. On the release of the debtor, he reclaims his wife and any children that may have been born in the interval. In N. Arcot, Chingleput, and Tanjore, the Korawa mortgage their unmarried daughters, who become the absolute property of the mortgagee until the debt is discharged. In Madras, the Korawa when in want of money sell their wives outright for about Rs. 50. In Nellore they all purchase their wives at from Rs. 30 to Rs. 70, making payment in asses or cattle. Their various clans do not intermarry. They bury their dead. In Travancore there are about 56,274 Korawa; and there is a race of this name in Cutch of similar habits.

The Bajantri Korawa are musicians (Baja, music); they are also called the Gaon or village Korawa. They are found in the Bijapur, Bellary, Hyderabad, and Canara district, residing in small tents (pal) or in grass huts outside the walls. The men are more robust than the settled population, but the women are shorter and darker than the Canarese. They abstain from cow's flesh, but eat deer, wild hog, tigers, jackals, and porcupine. They are thieves; they will not labour; the men are musicians, and with their women make grass screens (tatties); at harvest times they beg and pilfer from the reapers; the women tattoo the arms and foreheads of the Hindu women. They marry when the bride and bridegroom are about eighteen years of age; polygamy is allowed, and they live virtuously, never prostituting their children. They keep in their houses idols of the figure of Hanuman, and mark their foreheads with the marks of the Vaishnava sect.

The Teling Korawa are known as the Kasbi Korawa, *i.e.* prostitute Korawa, also Aghare Pal Wale, sitters at the door of their tents, as Tamar sat in an open place, and was seen by Judah (Genesis xxxviii. 13–21). They differ in appear-

ance from the Bajantri Korawa, but resemble in figure and countenance the Teling people. They are found throughout the Dekhan, are basket-makers and sell brooms; but their chief subsistence is from their young women, one of whom from their earliest infancy they devote to the gods. The devoted women are the Murli of the Mahratta, the Bassai of the Canarese, the Basava or Lingallu of the Teling races. The goddess to whose service their lives are dedicated is Madda Elama, also Hūlgiwa, near Bellary, and Chatwai, a divinity of their own creation by sprinkling red lead on the tarwar tree, the Cassia auriculata. The devoted women sometimes bear children, who are admitted into their caste. he colours seen amongst them vary from the fairness of the Brahmans to that of the darkest of the Sudra races. No one can read or write. They abstain only from cow's flesh and pork. The women dress with the choli or bodice and saree. They are rarely permitted to reside inside towns, or only then at some ruined spot remote from respectable people. They bury their dead, and place the deceased's usual food at the head of the grave, auguring most favourably if it be eaten by a crow and next if by a cow; if rejected by crow and cow, they deem the deceased to have lived a very depraved life, and fine the surviving relatives.

Religion.—The *Satani* are a Vaishnava sect; are frequently religious mendicants, priests of inferior temples, minstrels, sellers of flowers for offerings to the idols. They are followers of Chaitanya, a Vaishnava reformer of the 15th century, and of his disciple Sanatana. Chaitanya was a person of low caste, but became distinguished as an author and expounder of the doctrines of his master. The sect admit all classes and all castes into their sect, and many common women join them. In 1872 they numbered 194,777 in the Madras Presidency, and 714,000 in number in all India. They have views similar to the Baisnab (Vaishnava) reformers of Bengal.

The *Jaina* period in the Tamil country extended from the 8th or 9th to the 12th or 13th centuries A.D. Sandara Pandiya, who expelled the Jaina sect from Madura, was ruling when Marco Polo visited India at the close of the 13th century. Sandara Pandiya is also called Kun Pandiya or Kubja Pandiya. Nearly all the Jaina in the Madras Presidency are in N. and S. Arcot and in S. Canara.

Non-Hindus.—In British India, the people following the Brahmanical religion restrict the term Hindu to the Sudra races; the Brahman, the Rajput, and the Chettiar being distinguished by these appellations respectively. On the other hand, all whom they regard as low castes are styled by them Chandal or M'hlecha, which latter term indeed they extend to Christians and Muhammadans. The non-Hindu races of British India are about seventy millions,—Buddhist and other races not recognising caste,—aboriginal tribes, semi-Hinduized aborigines, Christians, and Muhammadans. Also such races as the Kol, the Bhil, the Gond, the Khand, the Beder, the Dher, Mhar, Mhang, Chakili, Waddaru, Malla, Madaga, and the Pariah, the leather-worker, and fragments and small tribes scattered amongst the communities, occupying forests and mountain fastnesses, dwelling on the outskirts of towns, or migratory and nomade.

These are largely shamanist and fetish-worshippers. The shaman and fetish-worshippers, in general, bury their dead.

The deities to whom their worship is more specially directed are beings whose anger is to be feared. Pieces of wood or stone are made to represent these deities, a shapeless stone from a river bed, or a piece of the Erythrina tree, or of the margosa wood; but the institution of a prominent idol seems invariably to be accompanied by some sacrificial rite, sometimes a goat in kid, but more frequently the buffalo or bullock is the victim. A cart is made, on which, after sacrifice, the stone is placed, daubed with red lead, and taken to the site appointed for it. Poch Amma or Kokli Amma is the goddess who sends small-pox, and Mari or Marai Amma, the goddess from whom cholera comes, the epithet Mari or Marai being brought, seemingly from the root relating to death, derivatives from which have branched into many of the old-world lan

Throughout the south of India, each household of the Hindu and non-Hindu races, and each hamlet and town, have their particular personal and local deity. Eg-gath Amma is the guardian deity of the city of Madras, and once a year the idol representing her is taken around the town, halting for some days at particular spots. Wilson says that Mari Amma and Eg-gath Amma are goddesses adopted from the Virgin Mary and St. Agatha. Bal Amma, a shapeless mass of wood, is a goddess much dreaded, as are all who keep such an idol in their houses, and they are obliged to intermarry amongst themselves. Mari Amma seems the same as the Ai of the non-Aryan races in the Mahratta country.

The goddesses Mhang-kali, Ujla Mhang-kali, Jul Amma, Yeli Amma, Poch Amma, and Madri Heri of the Central Dekhan, are all supposed to be relate ' to ' some elder, some younger, sisters of the same brood. To all of them are offered the sacrifice of blood of sheep, or goats, or horned cattle, and when the people are excited by an outbreak of a pestilence, the numbers of sheep and buffaloes sacrificed before an Ammun idol are numerous, so many as forty sheep in a night. The worshippers move in procession under loud cries, accompanied by the Murli women, who frequently become hysterical, who are then believed to be possessed by the god, and the onlookers exclaim, Deo ka ch'haya aya, ang'h b'har lia. The shade of the god has come, and filled the body. All of them adhere to the worship of spirits, and to such fetish and shaman cults as the above, in which indeed many of the uneducated Hindus, and more particularly the Mahratta Sudra people, share. But these forms of fetish-worship are most observed amongst the Pariah race, the leather-workers, the predatory races, the races that have been or continue to be predial, by domestic slaves, the forest races, and migratory homeless fragments of broken tribes.

The village god, the Gramma-deva, is everywhere worshipped by bloody sacrifices. The name in the centre of India is Bhim Sen, or Bhum Sen amongst the Gonds, Bhum supposed to be from Bhumi, earth. Bhum pen of the Gond is usually a shapeless stone, covered with vermilion, and it is worshipped over all Gondwan and from E. to W. Berar.

The Asaga race of washermen of Mysor

worship a shapeless stone, which they call Bhumadevaru.

The Hari Mariah of the Mahratta races is a sacrifice of a live kid in front of their village god, and probably has its name from the Hindi word Har, a plough.

Amongst all the aboriginal and Aryan races of the Peninsula, serpent-worship and spirit-worship prevail. In the more southern parts, and among the less civilised races, new objects of worship are being constantly selected. In 1868, the raja of Wanparti died at Hyderabad, in the Dekhan. He had passed through a life of storm and turbulence, and his spirit was worshipped in Secunderabad on each occasion that cholera broke out. In the extreme south, the Pai or Pei or Paisachi are disembodied spirits, demons, and are worshipped by all the heathen Shanar race of Tinnevelly. The Bant race of Canara believe that persons who die from violence become Paisachi. In the Telingana villages are many small temples dedicated to the Perintala, the spirits of women who have been deified, Perintala meaning a wife, a domestic woman. Amongst other female deities is Polimera, the goddess of boundaries, from Pola in Telugu, meaning land.

The village of Perriapollium, 25 miles north of Madras, on the bank of a small river, is famous for a temple dedicated to a goddess known by several names, Amma, Ellai Amma, Mari Amma, who is claimed by Hindus to be their Kali, or Durga, or Bhawani. An annual festival is held there, and about 100,000 persons assemble, and sheep, goats, and buffaloes are largely sacrificed, their heads being severed by one blow of a billhook. At the close of the festival, men, women, and children bathe in the river, and afterwards array themselves solely with the leaves of the Azadirachta Indica, not a particle of clothing nor of cotton is allowed to remain on the body, even the waist-string worn by men, and the thali or marriage neck-string worn by women, are laid aside. With the men, leafy twigs of the tree fastened to a straw rope are tied round the waist, and the leaves reach to the lower part of the thighs or knees. The women as their sole covering hold a cluster of the twigs in their hands, and cross their arms over their breasts. In this state they rush up to the temple door and salute the image within, then circumambulate the temple two or three times, bowing to the idol each time they pass the doorway, and then return to the river, where they bathe and resume their clothing. Occasionally devotees, in fulfilment of their vows, lie down near the temple, and roll themselves round and round it. Cattle, also, covered with the leaves, are led around the temple.

The Vira-Saiva sect of Lingaet and their Jangam priesthood are Hindus; are most numerous in Mysore and in the Canarese-speaking parts of the Madras, Hyderabad, and Bombay districts. They are not a moral sect, are bigoted and exclusive, and the men wear the emblem of Siva, in silver caskets, suspended from the neck or fastened around the arm. They are strict vegetarians, are engaged in all the avocations of civil life, and rarely enter the army.

The *Moplah*, written also Mapillai, from Ma, other, Pillai, a son, are all Muhammadans, and descendants of Arabs who visited or settled in Malabar. Wilson supposes that the Malabar women who bore children to them, ignorant of the race of foreigners who were the fathers, styled the children 'sons of mothers;' but the probability is that the law of descensus ab utero, Marumakkatayam, prevailing there from prior ages, was followed by the mothers of the children born of casual or permanent intercourse. The Moplah are all large men, active and enterprising, and possess much landed property. They have been restless under British rule, and have repeatedly risen in insurrections, but these have been very local, and seem to have sprung from agrarian grievances, the result of being unacquainted with the Hindu proprietary rights in the lands. They are a devout, God-fearing race, inclined to puritanism, are occasionally fanatical and prone to religious excitement, but they have never been rulers in India, have no dynastic recollections or longings, and are well worthy of being encouraged by their British rulers. Under the influence of religious excitement; they are reckless of their own lives or those of others, and the presence of European troops in the district has always been considered necessary to secure peace. There were outbreaks about the years 1837, 1849? 1873. They are a hard-working, plodding, and frugal people, temperate and simple in their lives, and striving their best to live honestly and decently. They all speak the Malcali language, but they use a modified form of the Arabic alphabet to write in. The Moplah women are secluded. They number over 500,000 in the Madras provinces, principally in the Malabar and S. Canara districts. They prefix to their names the word Jonakan, a dialectal variation from Yavana, Grecian, to distinguish them from the Nestorian Christians, who are also called Mapillai, but have the word Nasrani, Nazarene, prefixed to the term.

Labbai, a race of Muhammadans in the Madras Presidency, where they number over 300,000, hard-working, intelligent, upright men, entering keenly and enterprisingly into all branches of trade, and extending their mercantile connection over all the Peninsula. They are merchants, tradesmen, pedlars, leather manufacturers, fishermen, boatmen, and sailors. They are numerous in Tanjore, Tinnevelly, Madura, N. Arcot, and Madras town. They are liberal, large-minded people, yet frugal and thrifty in their personal expenditure. They use the Tamil language in their families, and have the Koran in that tongue. They take their name from the Arabic word Labek! meaning my lord, equivalent to the English expressions, 'I beg pardon,' 'What did you say?' Like the Moplah of the western coast, they are supposed to be descendants of Arab fathers by women of the southern parts of the Tamil country. They are mostly Sunni.

Christians have been in the south of India from soon after the time of Christ. During the past four centuries, Xavier, Robert de Nobilibus, Beschi, and Britto all laboured to convert the people of the south of India to the Romish forms; while Schwartz, Kohloff, Rhenius, and others have laboured for the Protestant Church.

Eurasians in the Madras Presidency at the census of 1871 were 26,374, of which 13,584 were in Madras or the neighbouring district of Chingleput, and 5409 in Malabar, where the Portuguese and Dutch had formerly settlements.

Their women in Madras are married when very young.

Cairns are observed in every part of the Peninsula of India from Nagpur to Tinnevelly. There are immense numbers on the Animallay Hills. There are six different kinds of cairns and cromlechs at the Neilgherry Hills. The Todas use the Azaram, a small stone circle, within which they burn their dead. Mr. Metz says the kistvaens are termed Moriari mane. These contain pottery with a rich red glaze, and many of the clay figures found in them have a high Tartar head-dress. They contain a very large urn or jar, filled with human bones, partially charred, with a number of beautiful little vessels of various shapes, made of glazed pottery, and with relics of iron weapons.

In the cairns of the Dekhan have been found skeletons on their faces, some with arms and utensils; other cairns have had ashes and charred bones.

BRITISH BURMA has an area of 87,220 square miles, and in 1881 a population of 3,736,771. It extends from lat. 10° to 22½° N., 950 miles, from the Pakchan river to near the sources of the Koladyn river.

The province has five natural divisions. In Arakan, the narrow strip of lowland between the Yoma and the sea; the valleys of the Irawadi, Sitang, and Salwin, separated from each other by the Pegu Yoma and Poungloung ranges; and, in the south, in Tenasserim proper, a narrow lowland strip between the Siamese frontier and the Bay of Bengal. The coast line is upwards of 1000 miles.

The country is very thinly occupied, only 42·8 to the square mile. The inhabitants are composed of numerous tribes of the Mongoloid family, but owning no connection with each other, and they have entered the districts, some from the north, some from the east, and some from the south. Every year 80,000 to 100,000 immigrants enter Burma, more than one-half of whom are from Upper Burma, the others from Madras and Chittagong. Most of those who come from Buddhist countries settle in the province, but the bulk of the persons from India make a little money, and in three or four years retire. The Chinese who come to it are, more than others, inclined to settle, most of them being familiar with the Buddhist form of religion, which the races in Burma largely follow.

In the census of 1881, it was shown that 541,743 persons were born outside the provinces; of these 316,000 were natives of Upper Burma. The immigrants are mostly men, consequently the females are very few.

	Males.	Females.		Males.	Females.
1872,	1,435,518	1,311,630	1881,	1,991,005	1,745,766

The Burmese women readily intermarry with the immigrants.

There seem to have been two great branches of immigrants from the great bend of the Brahmaputra, one of these, Naga, Kuki, Shandoo, Lushai, Khyen, Mru, and Kum-wi, bending westwards. Another branch moved to the east, and are now known in the upper valley of the Irawadi as Kakhyen, who, on the watershed of the Irawadi and Salwin, merge into Karen, with the Karen-ni as an offshoot, and advanced into the delta of Pegu as the Karen cultivator; and of these the Toungthu are probably a fragment. Subsequent to the descent of these tribes, a great people seem to have entered from the head-waters of the Irawadi, occupying its splendid valley, and driving back the prior occupants into the mountains on either side. These last comers are now represented by the Burmans, from whom the Arakanese branched soon after the occupation of Burma proper.

The tribes that have been exposed on the seaboard of Arakan or in the basin of the Irawadi, to the influence of the Chinese, Shan, Mon, Bengali, and more distant commercial nations, have attained a comparatively high civilisation. The Singpho, although much behind the Burmans, are greatly in advance of the Kuki, and the Burmese seem at a very ancient period, when their condition was similar to that of the Kuki, and perhaps in many respects more barbarous, to have spread themselves from the Upper Irawadi to the south and west as far as the highlands of Tiperah on the one side, and Pegu on the other. Wherever the stock from which they have been derived was originally located, they probably first appeared on the Ultra-Indian ethnic stage as a barbarous Himalayan tribe, immediately to the eastward of the Mishmi, if indeed they were not identical with the Mishmi of that era. The Upper Irawadi was probably then occupied by the ruder and inland tribes of the Mon-Annam alliance.

Dr. Mason, writing in 1860, classed the races of Burma as follows:—

a. Burmese Tribes, viz.—

1. Burmese.
2. Arakanese.
3. Mugh.
4. Kanyan.
5. Tounghoo tribe.
6. Tavoy tribe.
7. Yau, Yo, Jo, or Quoi.
8. Ze-baing or Ye-bain.
9. Pyu.
10. Kado.
11. Danu.

b. Talaing, Peguan or Mon.

c. Shan Tribes, viz.—

1. Shan or Tai.
2. Lao, Lau, Lawa, or Wa.
3. Paloung or Paloa.
4. Phwon or Mwoon.

d. Karen Tribes, viz.—

i. Sgau Karen, viz.—
1. Sgau.
2. Man-ne pghe.
3. Pa-ku.
4. We-wa.

ii. Bghai Karen, viz.—
1. Tunic Bghai.
2. Pant ,,
3. Lay May.
4. Manu-manau.
5. Red Karen.

iii. Pwo Karen, viz.—
1. Pwo.
2. Shoung.
3. Kay or Ka.
4. Taru or Ku-hta.
5. Mop-gha or Ple-mau.
6. Ha-shwie?
7. Toungthu.
8. Khyen, Kyn, or Chin.

iv. Shan Karen, viz.—
1. Yen or Yein.
2. Yen-seik.
3. Ying-bau.
4. Pandung.
5. Toung-yo.
6. Black Karen.

e. Miscellaneous Tribes, viz.—

1. Ka Khyen or Kaku.
2. Ka mi or Ke mi.
3. Kyan.
4. Koon.
5. Sak.
6. Mru.
7. Shandoo.
8. Selung.

In Burma, in 1881, the chief races were as under:—

Burmese,	2,612,274	Chinese,	12,96
Talaing,	154,553	Bengali,	99,68
Karen,	581,294	Hindustani,	72,99
Chin,	55,015	Tamil,	35,05
Toungthu,	35,554	Telugu,	35,71
Kway-mi,	13,773	All races from India,	246,28
Mru,	11,020	Europeans and Amer-	

Their religions were as under:—

Buddhists, . .	3,251,584	Jews, ...	204
Nat worshippers, .	143,581	Parsees, ...	83
Hindus, ...	88,177	Brahmans, ...	37
Christians, . .	84,219	Jains, ...	5
Muhammadans, .	168,881		

The great *Mramma* family are known to the British as Burmese. They include the Arakanese, Burman, Tavoy, Choung-tha, Yau, Ya-bein races. The people and their speech are of common origin.

The *Arakanese* differ but little from the Burmese in feature or form, and though the Arakanese spoken language is so dissimilar from that of the Burmese, as to be almost unintelligible, when written it is the same in almost all respects. They preserve the letter r, which the Burmese pronounce y in sound. The Arakanese also retain with its natural sound the inherent vowel a, which on the east of the Arakan Yoma range is pronounced in several different ways.

In Tavoy are descendants of an Arakanese colony, planted there before the Burmese had conquered the intervening Talaing or Mon. The principal inhabitants of Amherst province are Talaing, Karen, and Toungthu, with small numbers of Arakanese, Shan, Burmese, Hindus, Chinese, Muhammadans, and Malays.

The *Yau* live on a western tributary of the Irawadi, about the latitude of Pagan. They do not differ much from the Burmese either in race or language. They are the pedlars of Upper Burma.

The *Ya-bein* are almost indistinguishable from the Burmese. Their language is a dialect of the Burmese. They rear silk-worms, which is never done by the pure Burman.

Choung-tha, or children of the stream, are a part of the Arakanese nation who have remained in the hills. They are gradually descending into the plains. They speak Arakanese, and are Buddhists.

In the Tibeto-Burman family, and belonging by origin to the same great Mramma group as the Burmese, are classed the hill tribes of Arakan,—the Sak, Chaw, Kway-mi, Koon, Mru, and Shandoo tribes,—who live near the Koladyn and its tributaries. Their languages are marked by differences sufficient to entitle them to be separately named.

The *Burmans* proper occupy the valley of the Irawadi, mixed with Karen, from lat. 18° N. to the delta. They are Buddhists. Their language, the Burmese, is spoken in Arakan, in the valleys of the Irawadi and Sitang, and in Tenasserim to the south of Tavoy. There are numerous Shan States far to the north-east, but they generally owe fealty to the Burmese monarch. The tribes and natives under the sway of the respective rulers are numerous.

The Burmans are lively, inquisitive, active, irascible, and impatient. The men have long bodies, with short, stout thighs. They are of a reddish-yellow colour, are not fond of continuous daily labour. Both men and women wear a jacket, and a wrapper for the lower part of the body.

The Burman woman's lower garment is a narrow cloth of various colours, of a pleasing contrast, which descends generally from the waist or from below the arm to the feet. It is made to overlap, and is tucked in in front, at the waist, but it is so [illegible] shown at each step. The young people are little restricted in their intercourse, and the marriage ceremony, and that of divorce, are simple; the women are naturally affectionate, very intelligent, engage largely in market and shopping business, and even undertake extensive mercantile transactions.

Every male Burman is tattooed in his boyhood from the waist to the knees; in fact, he has a pair of breeches tattooed on him. The pattern is a fanciful medley of animals and arabesques, but it is scarcely distinguishable, save as a general tint, excepting on a rather fair skin. Erskine, in his Course in the Pacific, mentions that the natives of the Samaon or Navigators' Islands have exactly the same fashion.

The Burmese are spirit worshippers. They propitiate the Naides, they reverence the snake. Almost every Mon village has a Nat sin or Nat shed.

They believe in astrology, alchemy, and witchcraft, the evil eye, philtres. The Hman Tsaya is the witch-finder. Diseases are supposed to be the work of evil-disposed Nats. The Kyat or Jat are elfs or goblins, who live in the earth-mounds found in the forest.

Pungyi or *Phoongye*, meaning Great Exemplar or Great Glory, is the name by which the members of the monastic rule of Buddhism are commonly known in Burma.

Mugh is a term which the Muhammadans and British have given to the Arakanese, but that people restrict it to the descendants of Arakanese by Bengali mothers. The Mugh form six-tenths of the native population of Arakan, one-tenth being Burmese and the remainder Hindu. In Arakan, and in the basin of the Irawadi, are several tribes of the same stock with the Burman, and their languages are in their present form so much akin to it that they may be almost considered as forming, with Burman, dialects of one tongue.

Karen is a term by which the Burmese designate most of the mountaineers of Pegu and Southern Burma. The Shan call them Yang, which is pronounced by the Burmese Yen, and there are tribes known as Yein, Yen-seik, Yenbau. Some of the Karen tribes wear white clothing, some black, and some red, and these colours have been used to designate them. But as some of their tribes wear a frock or tunic, while others have short trousers as a costume, the forms of their clothing have been employed as designations.

Red Karen call themselves Ka-ya; some of the Bghai clans, Ka-yay. They have traditions pointing to the north as the region whence they migrated, and of having crossed a river of sand (shamo), a desert where the sands rolled before the winds, also of having once been in the possession of books of religion, which they had lost. This tradition may refer to Gobi desert, which is intersected from E. to W. by a depressed valley, the Shamo or Sea of Sand, which is also mixed with salt. West from it lies the Hau Hai or Dry Sea, a barren plain of shifting sand blown into high ridges. But they are an impressionable race, and it will be difficult to localize the place to which they allude.

The Karen preceded the Burmans in the delta of the Irawadi, and are now the joint occupants with the Mon. They are also found in the lower plains of the Salwin, the deltas of the Sitang

and Irawadi, the middle basin of the Sitang as far as Tonga, and in Tenasserim. In Martaban there is also a remnant of an allied tribe, the Toungthu. Both the Karen and the Toungthu belong to the Yuma branch of the Tibeto-Burman family.

The long and narrow hill tract between the valley of the Irawadi and the Salwin as far north as 23° is occupied by cognate tribes called Karen-ni (Red Karen), who are said to speak a very ancient dialect of the Yuma family. This branch has a parallel range on the western side of the Irawadi, and in their traditions they assert that they preceded the Burmans as the dominant people of the basin, and they seem from very ancient times to have occupied the whole of the valley southward from the valley of the Banak on the west to the borders of Yunnan.

No trace of the Mon is left along the Yuma range,—tribes of the Karen family being the exclusive holders of its inner valleys. Some of the very imperfectly described tribes on the eastern side of the Irawadi, to the north of the Karen-ni, viz. the Ze-baing, Ka-Khyen, etc., may belong to the older immigration. But the Mon is the only remnant within the ancient Karen province, and its earlier preservation is doubtless owing to the same causes, its arts, civilisation, and wealth, which have enabled it to hold its own against the Tibeto-Burman horde of the Irawadi.

The Karen in British Burma are over half a million (581,294). Their language differs widely from those of the hill tribes of Arakan, and ethnologists class them by themselves, separate from the members of the Mramma family. They are supposed to have come from the N.W. of China, moving towards Yunnan, and thence along the hills on either side of the Sitang and Salwin rivers into their present positions, about the 6th century of the Christian era.

There are three great groups,—the Sgau or Burman Karen, the Pwo or Talaing Karen, and the Bhgeh or Bweh, to one or other of which linguistic groups all the clans are referred.

The Karen languages are monosyllabic and tonic, and show unmistakeable evidence of Chinese influence in their vocabulary. The Bweh Karen are in the Salwin and Martaban district. They include the Karen-ni or Red Karen.

The Karens paint the two posts of their doorways, the one red and the other white. Karens walk round the dead to make a smooth path, like the Bhotani in procession round the shrines of Buddha, and like Jews, who walk seven times round the coffins of their friends. The Jewish priests, in offering oblations, Psalm xxvi. 6, walked round the altar seven times. The Assam hill tribes, like Karens, consider the touch of the dead pollution, as in Numbers xix. 13: 'Whosoever toucheth the dead body of a man, and purifieth not himself, defileth the tabernacle of the Lord: because the water of separation was not sprinkled upon him, he shall be unclean.' Karens are smaller than the Burmans. The White Miaou-tse, who occupy the hill country of Central China, present many points of resemblance to the Karens. They are brave, independent, and at certain intervals sacrifice an ox without blemish to the great Father. It is amongst the Miaou-tse that the Old Testament is said to have existed from time immemorial, which they say came to them from heaven 2000 years ago.

The first convert to Christianity was Ko Thah Byu, who was baptized at Tavoy in 1828; but before his death in 1841, there were 1300 native disciples. The missionaries amongst them have been Mr. Boardman, Miss Macombe, and Messrs. Mason, Wade, Bennet, and Abbot. Several of their dialects have been reduced to writing, some in Roman, some in Burman character, and the Scriptures translated.

Sgau tribes speak the Sgau dialect. Sgau is their own designation for themselves, but they likewise claim to be P'gha-ka-nyo, or men. As the seaboard is approached, the Sgau and the P'wo are found mingled together from Bassein to Mergui. They are, however, found from Mergui, in lat. 12° N., to Prome and Tounghoo, in lat. 19° N.; a few have passed westerly into Arakan, and on the east they have wandered to the east of Zimmay over the watershed that separates the Meinam from the Salwin. They are the most numerous of all the Karen tribes. They wear a white tunic, with a few horizontal bands of a red colour near the bottom, and from this they are called White Karen. Where the population is sparse, they cultivate the most favourable spots, first, before hewing down the trees, abjuring the departure of all evil, and then dibbling in the rice seed, which they do not sow broadcast like the Burmese; planting also cotton, capsicum, Indian corn, vegetables of all kinds, and Job's tears between the rows. They also fish largely, for they eat all creatures, lizards, snakes, deer, wild hog, elephant, rhinoceros, wild ox, buffalo; they gather the wild cardamom, or wash for tin. They have no mechanical art, but some of the women weave and embroider. Their betrothals are in infancy, and the married couple early associate, but there are frequent separations. All the Sgau and the P'wo burn their dead, but a bone is taken from the ashes, and in the dry season is buried with a festival, with music and dancing. The bone is placed in a booth, and around it the articles belonging to the deceased are hung, with a torch at the head and another at the foot to represent the morning and evening stars. They make offerings to evil spirits, the Na, and to a good spirit, whom they style grandmother.

Bghai or Bweh.—From the mouth of the Thoukye-Khat creek to near the British boundary and the Shan State of Mo-bya, the whole country from the Sitang to the Salwin is peopled nearly exclusively by tribes to whom the Sgau and the Pa-ku give the name of Bghai. The Bghai or Bweh are met with immediately north of the Sgau and P'wo, on the left bank of the Sitang, and on the watershed between it and the Salwin.

Lushai.—The high mountain range called Moduting, Mranidong, and Yomdong, forms a natural boundary between Chittagong and Arakan. The Koladyn flows about 16 miles distant on the east, and the country there is mostly uninhabited. To the west are the Lushai.

The *Shandoo* are a recently intruded tribe. They are the most warlike tribe, and exist in large numbers outside the boundary of British Burma, and are said to be pressing the Kway-mi and Mrus southwards. They are probably the same race as the Kuki, who, according to Colonel Dal[illegible] stretch fr[illegible] Koladyn to

border of Manipur and Cachar. Their language belongs to the Tibeto-Burman family.

The *Kway-mi* or Ka-mi (dog-tail) differ but little from the Mru. Both these races are moving southwards. Sir Arthur Phayre believed them to form a branch of the Myam-ma race, from which the Burmese and Arakanese spring, and he considers the hill tribes to be prior occupants. They number about 19,000, two-thirds of whom are in the hills of N. Arakan, the rest having settled on the Akyab plains. They have black, straight hair, high cheek-bones, oblique eyes, and scanty beards. They appear, like the Rakhaing-tha, in a more rude state of existence, and the traditions of the latter people refer to the Ka-mi as prior occupants.

The *Toungthu* in personal appearance and dress somewhat resemble the Shan. They are short of stature, and thickly built. Their language is tonic, and closely connected in vocabulary and syntax with the Pwo Karen. They are a clannish, taciturn people. Their name signifies hillman, but they call themselves Pao, and are divided into many local clans. In British Burma they number about 30,000 in the Amherst district, on the banks of the Salwin, and along the Thatone range of hills, and about 5000 east of Kyi Keto.

Northern Arakan hill tracts comprise a district about 60 miles long and 40 broad. There are six distinct clear ranges, and two important rivers with their affluents pierce the mountains. Till recent years the whole of this region was the home of many wild and lawless clans, who lived amidst constant rapine and disorder, and the British policy has been to mark a boundary for the more civilised possessions. In 1875–76 there were four tribes within the British territory, numbering 12,442 souls. Rakhaing or Khyoungtha, sons of the river, 1219; Khami or Rhwe-myi, 7172; Anu or Khoung-tso-Khyeng, 2162; Khyaw or Kuki Mro, 2126. The Mru outside the boundary are the worst of the marauders.

The *Khyen* are the largest of the numerous hill tribes of Arakan. They occupy the Yoma range of mountains between Pegu and Arakan, are numerous in the hill tracts of Northern Arakan, and on the eastern side of the Irawadi, in the uplands of Prome and Myedai, and on the watershed between the Irawadi and Sitang. There are also some 5000 in Sandoway. Captain Hannay says they are identical with the Naga. Colonel Yule thinks they are nearly allied to the Kuki. Dr. Mason classes them with the Pwo Karen. They are a retiring, timid race; are migratory, but are settling down under British rule, following the practice of jhoom or toung-ya cultivation. In British Burma they number over 50,000, partly in Arakan and in Pegu, chiefly in Thayat-Myo and Prome, with settlements on the north of Pegu as far as Tounghoo. The Chin or Khyen are widely extended in British Burma, being on both sides of the Arakan Yoma, also in the Thayat-Myo and Prome districts to the east of the Irawadi river, and are in large numbers in Upper Burma. They point to the Chindwin river as their ancient home. They tattoo the faces of their young girls so as not to leave even an eyelid free from hideous blue-black deformity. Their language has affinities with the Pwo Karen.

The *Chaw* are a small tribe of 587 souls in North Arakan. They are connected with the Kuki.

The *Sak* or Thek are in the Akyab district.

Shan of the Burmese are the Po-yi of the Chinese, and the Tai of the Siamese. Po-yi means White Barbarian. The Shans are behind the Chinese in the arts, but in Burma every article of husbandry of iron, brass, or silver is from the Shan States N. and E. of the capital, also the best of the lacquered ware, the last principally from Monai to the E. of Lower Pagan. The Shan States also manufacture silk, and the Shans of the N.E. and the Cathay Shans or Munipuri know the art of dyeing both cotton and silk. The silks are exceedingly rich, and of varied check patterns.

The Shans in British Burma in 1881 were 59,723 immigrants and their descendants, chiefly from the Shan States. Outside the boundary they are very numerous from the N.E. of the kingdom of Ava to Bankok. They are of the same origin as the Ahom and Khamti of Assam. Their language is monosyllabic, and has, like the Chinese and Karen languages, more numerous tones than the Burmese. They are hard-working and careful cultivators.

Mon or *Talaing*.—The tracts about the mouths of the Irawadi, Sitang, and Salwin were anciently called Savarna Bhumi or Ramanya, and were inhabited by the Mon. The language of the Talaing is monosyllabic and tonic, with a sprinkling of polysyllabic words, and had a common origin with those of Cambodia and Annam; and Captain Forbes has suggested that the Assamese, Mon, and Cambodians moved down the Indo-Chinese Peninsula about the same time, and occupied contiguous tracts of country until the Siamese intruded themselves between the members of the Mon Annam family. It has been suggested that the Mon language is connected with that of the Munda or Kolarian tribe in Chutia Nagpur, and a few words in both languages are more or less alike.

There are in British Burma 154,553 pure Talaing, and 177,939 persons of mixed Burmese and Talaing parentage.

The Burmese call them Talaing. The Siamese appellation is Ming-mon. The ancient capital of the Talaing was called Thadung, Thatung, or Satung. Its ruins are still to be seen between the mouths of the Sitang and Salwin rivers, and the colonists seem to have been of Hindu origin, possibly arriving several centuries before the Christian era. They seem to have extended their empire to Pegu and Arakan in the early centuries of the Christian era, and to have held sway for sixteen centuries. Part of this population dwell on the delta of the Irawadi, Mon being the name used by themselves for the native populations of Pegu, Moulmein, Amherst, and Martaban; but their neighbours call them Talaing, and the same names, Mon or Talaing, are given to the vernacular language of Pegu. The alphabet, like that of the T'hay and Burmese, is of Indian origin, being essentially that of the Pali form of speech; and, like all alphabets of this kind, its language embodies a Buddhist literature. The Mon language is quite unintelligible to a Burmese or Siamese.

The Talaing language has the intonations characteristic of the Chinese family, but to a

much less extent than the Chinese itself, the Tai, or the Karen. The roots are principally monosyllabic, but this language is remarkable for its numerous compound consonants. Like all other Indo-Chinese languages, grammatical distinctions are made by particles prefixed or suffixed. In its vocables it is the most isolated language in Further India, but it has a radical affinity with the language of the Ho or Kol. The Talaing people call themselves Mon, which has this bearing on their origin, that a Ho or Kol tribe are called Munda and Mon. Mr. O'Riley thinks that the Mon are only distinguishable from the Burmans by their less Mongolian and more Rakhoing aspect. They appear to have been considerably modified by the Indian element, which has always been very powerful at the head of the Bay of Bengal.

The *Daingnet* or *Dinet*, 1995 in Akyab, are in features somewhat like the Gurkha of Nepal. They do not tattoo their bodies, dress in white, and do not intermarry with other races. They dwell among the hills of the Yet-thay-doung township, near the Chittagong frontier. A few speak the Nepal tongue, some talk Bengali, and some Arakanese.

Salone, 894 in number, are a tribe of sea gypsies, living in the dry weather in their boats, wandering about the islands of the Malay Archipelago, and during the monsoon taking shelter in huts built on the lee side of the islands. Their clans keep to their respective fishing grounds. They have peculiar wicker boats, and were formerly exposed to the attacks of Malay pirates. They are in personal appearance between the Malay and the Burmese. Their language has affinities with the tongue of the former, and belongs to the Malay Polynesian group of agglutinating languages. They visit Mergui to dispose of the beche-de-mer.

2,245,125 persons speak the Burmese language proper. Amongst these are included many of mixed race, such as the Burmese-Talaing.

There are 362,988 Arakanese, chiefly in the Akyab and Kyouk-pyu districts of Arakan, with large numbers in Sandoway. The whole number speaking Burmese therefore is 2,612,274.

All the languages that have been included under the head of Burmese belong to what is sometimes called the Tibeto-Burman family, are monosyllabic, and are spoken by races possessing the Mongolian type of countenance.

The Burmese women readily intermarry with the immigrants. The principal mixed races are as under:—

Burman-Chin,	1,554	Chin-Karen,	988
,, Chinese,	4,886	Shan-Chinese,	1,213
,, Karen,	713	,, Karen,	1,323

—*Dr. Caldwell's Comparative Grammar and Shanars; Mr.* (*Sir George*) *Campbell's Ethnology of India; Dr. A. Campbell in Journ. Ethnological Society; Sir Walter Elliot in Jo. Eth. Soc.; Sir Henry Elliot's India; Captain Forbes, N.E. Frontier; Fraser's Himalaya Mts.; Gerard's Kunawar; Dr. W. W. Hunter's Non-Aryan Languages and Imperial Gazetteer; India Administration and Census Reports; Journals Asiatic and Ethnological Societies; Marshall's Todas; Mason's Burmah; Samuells, in Beng. As. Soc. Jo.*, 1856; *Dr. John Shortt on Leaf Festival, on the Yenadi, on Neilgherry Tribes; Turner's Embassy; Dr. F. Watson's People of India; Dr. H. H. Wilson's Hindoo Castes; Dr. Thomson's Travels in N.W. Himalaya; Mr. Trelawney Saunders in Geog. Soc. Journ.*

On the **NORTHERN AND NORTH-EASTERN FRONTIER OF INDIA** the principal races may be enumerated as under:—

Chinese Frontier and Tibet.—Tibetan, Bod, Gyami, Gyarung, Takpa, Manyak, Thochu, Sokpa, Horpa.
Nepal, W. to E.—Serpa, Sunwar, Gurung, Murmi, Magar, Thaksya, Pakhya, Newar, Limbu.
E. Nepal.—Kiranti, Rodong, Rungchenbung, Chingtangya, Nachhereng, Waling, Yakha, Chourasya, Kulungya, Thulungya, Bahingya, Lohorong, Lunbichhun, Balali, Sangpang, Domai or Dumi, Khaling, Dungmali.
Nepal Broken Tribes.—Darhi, Denwar or Dhenwara, Pahri, Chepang, Bhramu, Vayu or Hayu, Kuswar, Kusunda, Tharu, Bhramah, Bhotia, Brahman, Ekthariah, Gallia, Kami, Khas, Margi, Mungar, Murung, Nimbu, Parbattiah, Sarki, Yakha.
Sikkim.—Lepcha.
Bhutan.—Lhopa.
Bengal, N. E.—Bodo, Dhimal, Koch, Garo, Kachari.
Bengal, E., is Assam.

The valleys of the Himalaya are occupied by many tribes, who carry on traffic and intercourse over the mountain passes, amongst the highest of which (above the sea) are the Baralacha, 16,500 feet; Niti, 16,800 feet; Baleh, 17,700 feet; Umasi, 18,000 feet; Lankpya, 18,000 feet; Kuibrang, 18,300 feet; Lakhur, 18,400 feet; Mana, 18,760 feet.

Mr. Hodgson, Dr. Campbell, and Mr. Aitcheson have all noticed the maze of languages spoken in the Himalaya; and the ethnic phenomena in the Himalaya warrant the conclusion that they were peopled by successive swarms from the great Turanian hive; that its tribes are yet traceably alike to the Altaic branch of the north and to the Dravidian of the south, and that the Khas, the Kanet, the Dogra, and several other tribes of the Western Himalaya are of mixed breed, descended from Tartar mothers and Aryan fathers.

The *Nimcha* are a half-breed race on the southern slope of the Indian Caucasus, between the Afghans and the higher peaks. They speak a language related to the Indian tongues, with some curious affinities to Latin.

The northern region of the Himalaya is occupied exclusively by the Cis-Himalayan Bhotia (called Palu Sen, Rongbo, Serpa, Kath Bhotia, etc.), who extend along the whole line of the ghats, and who, with the name, have retained unchanged the lingual and physical characteristics, and even the manners, customs, and dress of their transnivean brethren.

To the central region of the Himalaya are confined, each in their own province, from west to east, the Dunghar, west from Nepal; the Dardu, Gakkar, Bamba, Kakka, Dogra, Kanet, Garhwali, Kohli, the Kus, Khas, or Khasia in Nepal; the Magar, the Gurung, the Kusunda, Chepang, Sunwar, Newar, Murmi or Tamar, Khombo or Kiranti, the Yakha, the Limbu or Yakthumba, the Lepcha or Deunjong-maro in Sikkim; the Lhopa in Bhutan.

In the lower region of the Himalaya, and in similarly malarious sites of the middle region, dwell the Bahoa, west of Kamaon to the Indus; the Chibh, the Janjoh, the Awan, the Khatir, the Boksa in Kamaon; the Bhotia in Nepal; the Kuswar, the Dahi or Dari, the Bhramu, the Kumha, the Dhenwar, the Tharu, the Hayu, the Pallas, the Kichak, the Dhimal of Sikkim and east of it; the Bodo and the Koch'h. Of these, the Khas, Magar, Gurung, Newar, Murmi, Lepcha, and Bodpa, etc., are dominant unbroken tribes.

The broken tribes are the Awalia, Chepang, Kusunda, and Hayu; and there are located amongst them from time immemorial tribes of helot craftsmen, blacksmiths, carpenters, curriers, potters, etc., who are regarded as unclean.

The unbroken tribes are the more recent immigrants from the north; their languages are of the simpler Turanian type, whereas those of the broken tribes are of the complex or prononinal type.

West of Nepal comes the Palpa, then the Thaksya, Sunwar, and Serpa; the dialects of Kamaon and Garhwal, which carry us on to the Milchan of Kanawar; the Hundisi and Tibarskad north of it.

In Nepal, the Parbattiah or Paharia, a dialect of Hindi, is spoken all over the state, and forms the court language.

Between Leh and Dras, three distinct dialects of the same language are in use. The people and their language are called Bhot by the Kashmiri. It is entirely different from Kashmiri and its cognate dialects of Dardistan and Kafiristan, or of Badakhshan and Wakkan, and bears no resemblance to the Turki and Kalmaghi spoken in Kashgar.

In the lower country, the people near the debouchure of the Kashgar river speak a mixed tongue, called Lughmani.

The men of all castes in the hills are short and of poor physique; they look worn, and get deep lined on the face at a comparatively early age.

The young women are often extremely pretty, those living in the higher and colder villages having, at 15 or 16, a complexion as fair as many Spaniards or Italians, and with very regular features. But they grow darker as they advance in years, and become very plain.

Most of the traders of the snow valleys have some members of their families residing at Daba or Gyani on the Nuna-khar lake.

The natives of Sukeyt, Mundi, and Kulu, in the Kohistan of the Jalandhar, have sallow complexions, and appear to be of the same race as the inhabitants of Bussahir. In fact, many of the coolies employed as carriers between Simla and Kalka are men from these states, who are attracted there by the wages, which average one anna a day in their own districts, but from four to six annas on the left bank of the Sutlej. The men are generally tall and strong, but few of them are handsome. Many of the young women are pretty, but at the age of 20 or 25 become coarse and stout. The dress of both sexes is nearly the same. It consists of a drab-coloured woollen frock, trousers of the same or of leather, and a flat skull-cap, generally black, with sandals made of coarse grass. The woollen cloth called puttoo is manufactured by themselves, and resembles thick coarse blanketing. It is sold in pieces of 10 inches in width and about 21 feet in length, at 2 rupees 8 annas or 3 rupees a piece, according to the quality. Both sexes wear a girdle around the waist, and the men generally go bare-legged during the hot weather. They seldom, if ever, wear shoes; the richer classes, however, wear worsted stockings and shoes when they go out. The women, instead of the cap, sometimes have a coloured piece of cloth tied round their head, and occasionally twist their hair into one long plait, the end of which is ornamented with slips of coloured cloth or shreds of worsted.

Sati was greatly followed in Mundi by the rajas, and by the principal Rajput families, but by the treaty with the British in 1846 it was discontinued. When raja Tori Sain died in 1826, 17 women, mostly slaves, were burned with his body, and 18 with that of Zalim Sain, who died in 1839. Infanticide also was very common.

The *Chumba-gaddi* race of the Chumba Hills say they are Rajputs, and of the Gaddi-jat. They are somewhat short, but strong, and cleanly in their habits. They are sharp, and able to impose on their less knowing neighbours. Most of the witch-finders are of the Chumba-gaddi race, and the race may always be known by their peculiar conical caps, with lappets to turn down over their ears, like an English travelling cap. When Europeans made their first appearance in the Kangra valley, these men had very slight notions of caste, and would eat or drink anything the Europeans gave them, but since their contact with the natives of the plains they have become as bigoted as any Hindu. The Gaddi are hill shepherds about Kangra and elsewhere.

The *Lahuli* people are a race distinct from the people of Kulu or of the Chumba range. The Lahuli men are short, but sturdy, very ugly and very dirty. Their women are decidedly plain. The dress of both sexes is a black woollen frock with drawers, and a woollen plaid, with black circular caps of felt. The women let their hair fall from the back of the head in long plaits.

Chitral, Upper and Lower.—An independent state, consisting of the upper part of the Kunar valley, Afghanistan. It is bounded on the N. by the Hindu Kush, dividing it from Wakhan and Badakhshan; a crest on the E. separates it from Gilgit and the parallel tributary valleys of the Indus; on the S. it is separated from Panjkora, and on the W. from Kafiristan. The population is Muhammadan, Kafirs of the Kamuz, Askin, and Ashpin tribes. They are the Dhangar race. The men are tall and well made, but exceedingly cowardly; the women are remarkable for their beauty and their immorality. They bear a strong resemblance in their features and colour to the hill people of Chumba and Kangra, symmetry of form, black eyes and hair. They speak a dialect of Dardu, but generally use Persian, Pushtu, and Turki. The soil is fertile, climate severe in winter. The rulers of both Chitrals are Sunni in faith. They capture their own Shiah subjects and the Siah Posh, and sell them as slaves; sometimes whole families are sold. Boys and girls are the most prized of all the slaves brought to the Turkestan market, and fetch from Rs. 100 to Rs. 500; but the more comely women, Rs. 500 to Rs. 1000. The exports are korah kashkari or unbleached silk; choga, made of shawl-wool, with which all animals, dogs, and particularly goats, are provided.

The *Rawat* or *Raji* of Kamaon lead a wandering and uncivilised life in the forests on the eastern borders of the district. They are a remnant of a prior population, whom Mr. Traill thinks are of the same race as the Dom. The Rawats appear to have been a knightly and equestrian order among the Bhils, and they have a tradition that their ancestors were the aboriginal princes of Kamaon. The terms Dom and Rawat are not peculiar to Kamaon. The Dom is found in many parts of India, and Rawat is the name of another widely disseminated race. The *Rajicaru* of Kamaon speak Telugu. They practise medicine. The tongue spoken as the hill dialect of Kamaon is in the main Hindi, but has affinities to the Bengali in some of the popular terminations, in the verb to be, and in some other particulars.

The *Chumang, Chamar*, or *Kohli* of the adjacent Himalayan province on the west, evidently belong to the same race. They are a degraded class, usually darker than the Kanet (or, proper, Kanawari), and some are said to have woolly hair.

Bhuksa.—In the hills of Kamaon, in the forests from Sabna on the Sarda to Chandpur on the Ganges, is a tribe called *Bhuksa*. They claim to be descendants of the Powar Rajput, to have been expelled from Dhar, and taken refuge first in Oudh, and then in their present location.

The *Kanet* is an agricultural race in the Simla Hills and east of the Sutlej. They are a local tribe, holding most of the land on the Simla Hills. They are inferior in position to Rajputs, more perhaps of the level of the Kurmi and Lodhi, but they are often educated, and are generally ministers to the Rajput chiefs. Their women are very nice looking, and all the tribe who are not (in the upper hills) in contact with Tartars are quite Aryan, though not very large. They follow a corrupted Hinduism; their villages contain Hindu and Buddhist temples, and the people worship at both; and their marriages are conducted by Lama priests according to the

ritual, and the Hindu and Buddhist Kanets intermarry. The northern Kanets are polyandrists, but one brother remains at home while the others are away on business, and the women are often childless. The southern Hindu Kanets are not polyandrists.

The Tibetan colony at Mohasu, just above Simla, are powerful, ruddy-looking people, entirely unlike Indians; their women are industrious, but very unattractive.

In Lower Kunawar the preponderating language is Hindi, and is called Milchan, but the Bhot preponderates in Upper Kunawar. The Lubrung or Kanam, and the Lidung or Lippa, are varieties of the Milchan. In Sungnam the word Theburskud is used to designate all variations from the regular form of speech. In Kunawar, Buddhism decreases in the central districts, and disappears the southern, where Brahmanism in an impure orm occurs with local gods and irregular priests, very hill having its deota or genius. Polyandry s general in Kunawar, from the higher classes nd lowest Chamars, one family having one wife, he elder brother being the more special husband. t is called Kurpa. The mean number of inhabitnts to a house in various parts of Kunawar is ix.

The *Kunawari* or Kanet are the principal race n Lower Kunawar. They are physically Aryans, ut are Tibetans in disposition and manners.

In the upper valleys of the Sutlej, in Spiti and Kunawar, are mixed races exhibiting much Tibetan lood, and in religion apparently more Buddhist han Hindu.

The Kohli of Kunawar are a distinct and egraded class, darker than the Kanet, and some re said to have woolly hair. Colonel Cunningham thinks it probable that they belong to he ancient Sudra or pre-Aryan race. They seem llied to the Doms of Kunawar. Indeed, Kohli of Simla, Garhwal, Kunawar, and the plains of Northern India call themselves indifferently Kohli r Chamarai. They are an aboriginal race. They re distinct from the Kanet, who regard the Kohli s out-castes, and neither eat nor intermarry with hem. In the Himalaya the Kohli are polyandrists. They are porters and labourers and weavers, illage musicians, playing on the pipe and tabor, ach tune with a marked character of its own. Every Kunawar village contains a portion of hem. The Kohli are not Chamars or curriers, ut are cultivators, weavers, palanquin-bearers, illage servants, fishermen. They worship snakes, lso the Gramma-devata or village lares et penates, nd are occasionally pujaris. They are cleanly; hey drink, but in moderation. In Gujerat many old petty chieftainships, with estates attached to hem. They are not allowed to enter temples or make offerings except by the hands of priests.

The *Bhotiá* race occupy Darma, Chandans, and Byans in the N.W. Himalaya.

Sipal is the name of the men of Siba in Darma. n Byans a dialect of Hindi is spoken. Byans Rikhi is a mythical saint, who is supposed by he people of Byans to be dwelling on the top f the Kelirông mountain. He is supposed to epresent the rishi Vyasa.

aptain W. C. Hay describes the Bhotias of in the N.W. Himalaya as a physically robust with strongly-marked, weather-beaten tenances, of middling height, with flat faces and noses, and in general small eyes, the skin of a light-brown colour, with a ruddy hue derived from the reflection of the sun from the snow. The smallness of the eye is particularly mentioned by observers in other localities, as in Bhutan.

The *Sutlej* people are amiable and gentle, free of low cunning, having the appearance of a mixed race between the Tartar and the common hillmen. They are fair, well made, and strong, but are filthy and indigent. The women have a toga fastened round the waist.

The *Kulu* province consists of the mountain basin of the Beas, and the west bank of the Sutlej. Sultanpur, its capital, is elevated 4584 feet. The chain bounding the Sutlej on the west is considerably higher than that on its east bank, and is crossed into Sukeyt by the Jalauri pass, elevated 12,000 feet. The province of Chumba bounds it on the west, and the physical features of Kulu and Chumba are similar. The poorer Kulu people wear only a blanket wound around the waist, and one end flung across the shoulders and pinned across the chest; men and women often dress alike, but the long hair of the women is plaited in one tress. The women of Kulu and the adjoining states are inordinately fond of ornaments. Both men and women suspend round the neck several amulets of mother-of-pearl engraved with mystical figures. Polygamy is common.

Dogar, an uneducated, ignorant tribe, originally Hindu or Chauhan Rajputs, but converted to Muhammadanism at some unremembered date. They dwell on the borders of the Panjab, chiefly along the banks of the Sutlej river. They are indifferent farmers and cultivators. Like the Pachada, the Dogar wears a waist-cloth or loongee.

The *Chilas* country is bounded on the north by the Indus river, on the south by the watershed of the ridge over Lulūsur lake, on the east by the watershed of the same ridge as above Lulūsur lake, culminating in the lofty peak of Munga Parbut. The *Astor* boundary marches with Chilas here on the west to a point beyond the village of *Sazeen*, where the Indus takes a turn to the south-west. Chilas affords good pasturage, but lies under snow for a considerable portion of the year.

The *Shcen*, claiming an Arab descent, are the proprietary and governing class. Crime is rare, women have more liberty and power than among Muhammadan tribes, but breaches of chastity are punished by death. They were visited in 1866 by Dr. Leitner at the request of the Bengal Asiatic Society. Their language seems distinct from Pushtu, Persian, and Hindi, and is not understood by their neighbours the Syud race, who inhabit Dareil and Tankir to the west of Gilgit. According to their own traditions, the inhabitants of Chilas were conquered about the middle of the 18th century, and converted to the Muhammadan faith. Up to about 1840 the Kaghan Syuds received quantities of gold dust as religious dues from the people of Chilas; but when the Syuds, aided by the Sikhs, failed in an attack on Chilas, the dues were abandoned. A second attack by the Sikh nation was successful, and a small annual tribute of 3 tolas of gold dust and 100 goats is paid to the Kashmir durbar.

The *Gilgit* territory is in lat. 35° N. and long.

74° E. The Indus river runs through it from N.E. to S.W. It is on the southern declivity of the Hindu Kush, between Chitral on the west and Baltistan (Little Tibet) on the east. In the Bannu valley there are races intermixed, of whom may be noticed the Dardu of Gilgit and Chilas. Gilgit, in Tibetan Gyilgyid, has an area of 2500 square miles on the right bank of the Indus.

The *Dard* race, lying along the Indus to the westward of Ladakh, speak three distinct dialects, and use the Persian character in writing. The three dialects of Dardu are called Shina, Khajuna, and Arniya. The *Shina* dialect is spoken by the peoples of Astor, Gilgit, and lower down in Chilas, Dareil, Kohli, and Palas, on both banks of the Indus; the *Khajuna* by the people of Hunza and Nager, and the *Arniya* in Yasan and Chitral. *Astor* has an area of 1600 square miles on the left bank of the Indus. The Dard or Durd are supposed by Vigne to be the Dadicæ (Δαδίκαι) of Herodotus, and the people who now occupy the country called Dardu. According to Burnes, the mir of Badakhshan, the chief of Darwaz in the valley of the Oxus, and the chiefs eastward of Darwaz who occupy the provinces of Kulub-Shughnan and Wakkan north of the Oxus, also the hill estates of Chitral, Gilgit, and Iskardo, are all held by chiefs who claim a Grecian descent. The whole of the princes who claim descent from Alexander are Tajak, who inhabited the country before it was overrun by Turki or Tartar tribes. The Kashmir people have their own peculiar language. The Balti people of Little Tibet say that Ladakh, Iskardo, Khopalu, Purik, Nager, Gilgit, and Astor are distinct Tibets.

Chaprung, in lat. 31° 27′ N., and long. 79° 33′ E., is described as a large populous place. When any man of property dies, they bruise the body to pieces, bones and all, and form it into balls, which they give to a large species of kite, which devour them. These birds are sacred, kept by the Lamas, and fed by them, or by people appointed for that purpose, who alone approach them; others dare not go near them, perhaps from superstitious motives, for they are held in great fear. This ceremony is very productive to the priesthood, an expenditure of very large sums being made on the decease of any great man, and the Lamas receiving presents of very fine and expensive caps. Poorer people are sometimes buried, and at others thrown into the river.—*Fraser's Himalaya Mountains*, p. 338.

The number of the houses of Ladakh is estimated at 30,000, with 210,000 inhabitants, or 433 persons in the square mile. In Ladakh the nuns and monks bear a large proportion to the population. It was subject to Lhassa until A.D. 1834, when it was seized by Zorawar Singh, general of the raja of Jamu. The Ladakh race call themselves *Bot-pa*, speak Tibetan, and profess the religion of Buddha under a hierarchy of monks called Lamas. The term Tibet is unknown to the people, as also to the Indians, who call them Bhotia, and their country Bhutan. Ladakh belongs partly to the Jamu raja, and partly to the British, and is Bhot along the banks of the Chandra and Bhaga, but Hindu after their junction. To the north of the Ladakh country the people of Yarkand and Khoten speak Turki. To the west, beyond Balti, the people of Astor, Gilgit, and Hunza-Nager speak different dialects of Dardu, while the Kashmiri have their own peculiar language. To the south, the people of Chumba, Kulu, and Bussahir speak a dialect of Hindi, and to the east and south-east the people of Rudok, Chang-Thang, and Ngari speak Tibetan only. In the Ladakh frontiers of the Western Himalaya, the Bhots salute by raising the back of both hands to a height even with the forehead, and then repeatedly describing a circle in the air with them by dropping the fingers downwards, and turning the palm inwards. This is similar to the Muhammadan practice of Billaen-lena, where a woman is supposed to take upon herself all the evils which would befal the person whom she addresses. Polyandry prevails in Ladakh. The brothers of one family have a single wife in common, and the children take name and obey, as head of the family, the eldest husband.

Beas.—Polyandry prevails in the Beas valley, but the general immorality is ascribed to the large numbers of Yarkandi traders.

TIBET is called by the Chinese Tsang, also Si Tsang. The Tibetans call their country Bod-yul, and the Chinese also call it Fuh-kwoh, or the land of Buddha. The term Tibet is from Tu-peh-teh (Tu-bod). It has four territorial provinces, viz. Tsien Tsang or Anterior Tibet; Wei or Chung Tsang, Central Tibet; How Tsang, Ulterior Tibet; and Gnari or Western Tibet. Tibet is now governed by China through the Buddhist hierarch, the Dalai Lama, and in this manner it is a dependency of China. (See Dalai Lama; Tsong-Kha-ba.) The Dalai Lama and Panshen Lama are aided by a council of four laymen, entitled Kalon or Kablon, *i.e.* Minister of State, under the direction in chief of the two Imperial Commissioners or Residents appointed from Pekin. The authority of the Chinese administration being rendered the more complete by the long minorities which are entailed at each successive re-embodiment of the two supreme ecclesiastical dignitaries.

China (Gyanak, TIB.) is on the east, India (Gyagar, TIB.) is to the south. A man of the country is called Bod-pa, and a woman Bod-mo. The Turk and Mongol races on the north of Tibet are called by the Tibetans Hor and Sok-po (Hor-Sok). The hill people of India who dwell next to the Tibetans are called by them by the general name of Mon or M'hon; their country, Mon-yul; a man, Mon or Mon-pa, and a woman, Mon-mo. Khapolor, Chorbad, and Keris on the Shayok river, Khartakshe, Totte, and Parguta on the Sing ge chu, Shigar on the Shigar river, and Balti and Rongdo on the Indus, are Tibetan districts. Little Tibet or Baltistan contains about 12,000 square miles, is about 170 miles long, and lies between 74° and 76° 35′ E. Little Tibet is called by the Kashmiri Sri Butan.

The Hun or Turk for 2000 years, up to the 3d century of the Christian era, predominated in the eastern part of the great plateau of Tibet. It was not, however, until B.C. 313 that the chief Tibetan tribes, the Hun or Ngari, Dzang, H'lassa, Wei or U, and Khan, were for the first time united with the State. In the 7th century of the Christian era its sway had extended from Kashmir on the one side to the Yo-long on the other. It continued to flourish for some centuries, frequently waging war on China, and compelling the emperor to accept ignominious conditions of peace. From the 7th to the 10th century of this era the

Tibetans extended their dominions along the whole length of the Himalayas, and into Kashmir at the one end, and into Assam and Bengal at the other. Bhutan is so completely Tibetanized, that it may be said to advance the Tibetan frontier near to the plains of Assam and Bengal. For a period of five or six centuries, up to the 12th century, Tibet held a large portion of the Himalayas, and seemingly their dominion extended also into the plains, in the sub-Himalayas, in Assam, and in Bengal. Chinese historians, indeed, relate that the Tsang dynasty, from the 7th to the 10th century, extended their conquests to the Bay of Bengal, to which they gave the name of the Tibetan Sea. Bengal appears to have been conquered about the middle of the 7th century.

In the 12th century the Chinese conquered Eastern Tibet, and towards the end of the century Independent Tibet was shorn of its power and prestige, and reduced within narrow limits. When Chengiz Khan, early in the 13th century, conquered Northern China, he overran Tibet, and brought to a final close the era of its political greatness. But though the West or Middle Tibetan so early in the Christian era crossed the snowy range, and occupied a considerable portion of the sub-Himalayas, and more or less modified their Gangetic inhabitants, their physical influence on most of the Gangetic tribes—Himalayan, Lowland, and Vindhyan—appears to have been so slight that it is now mostly imperceptible. It is certain that a great influx of them took place some centuries after Christ.

Tibetans do not seem to have dislodged the ancient tribes in the tract along the foot of the hills from Gauhati to Sylhet, but only to have conquered and modified them; and the Changlo and Abor languages appear to place it beyond doubt that it was chiefly through the partially Tibetanized tribes and languages along the northern margin of Assam, and in contact with the dominant Tibetan population behind them, that an ethnic Tibetan influence was maintained in the valley of Assam and the countries to the south of it. The races in this region are chiefly Bhot, Turk, and Mongol. The Balti people, the people of Little Tibet, the Bylta of Ptolemy, though Tibetan in language and appearance, are all Muhammadans, and differ from the more eastern Tibetans of Leh (who call themselves Bhotia or inhabitants of Bhot) by being taller and less stoutly made. Their language differs considerably from that of Leh, but only as one dialect differs from another. The Bhot have been extending westward. As a general rule, the Himalaya divide Hindustan from Bhotland, but there are Bhot in several parts south of the crest of those mighty mountains in Garhwal and Kamaon. From Simla, for several hundred miles to the east, all the passes through the snowy range are occupied by the Bhot. They have a monopoly of the trade across the Himalaya, are carriers, loading the goods on the backs of sheep.

The Tibetan element is absent beyond the Kali, i.e. in Kamaon, but in Bussahir it is strong where Tibetans occupy the higher tracts.

Garhwal is a non-regulation district under the N.W. Provinces of British India. It is a country of very great extent, though of small comparative value. Many of the larger rivers of Upper India, all those which form the origin of the Ganges, have their rise in its mountains, and hold their course through its territory. Srinuggur, the chief town, is on the south bank of the Aleknanda, about 20 miles above its junction with the Bhagirathi at Deo Prague, where a strip of level ground stretches along for 3 or 4 miles, forming the valley known by the same name as the town. The people of Garhwal are Bhot, dwelling in the passes and their neighbourhoods at heights above 6000 feet. The pass-men state that ridges which within the memory of man were covered with forest and pasture lands are now covered with snow, showing the extension of the snow zone. The Bhot here, as elsewhere, is an agriculturist, and is assisted by slaves, who live under the roofs of their masters. The people in the Mana, Niti, Juwar, and Byanse passes are supposed to be immigrants from Tibet who drove out an earlier body of Hindus, and many of the chief families trace their origin to a Tibetan locality. The inhabitants of the Darma pass are said to be a body of Mongol left in Kamaon by Timur. The Darma inter their dead for a time, and in the month Kartik exhume and burn them, but the other pass-men burn their dead on their demise. The Darma practise divination, taking their omens from the warm livers of sheep sacrificed for the purpose. The women of the Darma and Byanse pass dress alike, and these two clans eat the yak, and would eat the cow; while those of Mana, Niti, and Juwar abstain from beef of all kinds, and look down, as on an inferior caste, on the Darma and Byanse. The Juwar nearest India have the largest trade, and resort to an annual fair in September at Gartogh, the residence of the Lhassa viceroy. These passes are the roads from India to Nari or Gnari, Tibetan provinces of the Chinese empire. The Garhwal people have a passionate love of country and home.

The *Bhot* of Ladakh is strong, hardy, short, and square, with a decidedly Mongol physiognomy,—by which is meant a flat face, broad cheek, depressed nose, very large ears, oblique and narrow eye curtailed at the corners, black hair, and low stature, their average height being 5 feet 6·1 inches; the skulls are less Mongolian, having a capacity of 72 cubic inches, 80 cubic inches being a fair capacity for a European.

Towang-raj.—Proceeding from Kokonor to Yunnan, going from north to south, are the Sokpa, the Amdo, who now speak Tibetan; the Thochu, the Gyarung, and Manyak. These bear the Chinese designation of *Sifan* or Western Aliens, whilst the Tibetan call them Gyarang-bo. Turning westward, after passing through the Kham districts of Gyarung and Khwombo, we come to the region of the Takpa and Tak-yul, which is the Tow-ang-raj of the British in India. Of these the Gyarung are the most important tribe. They reckon 18 banners under 18 chiefs. In Tibetan, 'Gya' and Chinese 'Fan' have the same meaning, viz. foreign or alien.

In Southern Tibet, also, there are numerous scattered Horpa and Sokpa, as there are many Bodpa in Northern Tibet. Po or Pha means man. In Tibetan and several other cognate languages, po, pa, is restricted to the male sex, and mo, ma, to the female.

The *Sok* occupy the eastern part, and also the wide adjacent country called Koko-nor and Tangut by Europeans, and Sok-yul by the Tibetans.

The northern part of Tibet, lying beyond the Nyen-chhen-thangla range of mountains, and between it and the Kwan-leun or Kouen Lun chain, is occupied by two tribes, the Horpa and Sokpa. The Hor occupy the western part of that region, also a portion of Little Bokharia and of Zangaria, where they are designated Kao-tse by the Chinese, and Uigur or Ighur by themselves. Mr. Hodgson considers them to be Turk.

The eastern part of Tibet, between the elevated lake plateau and the Yun-long mountains, appears to be occupied by Mongol tribes called Sok. This word is said to mean pasture, and to be the root of the term Scythia.

The lake plateau is occupied by Turki tribes called Hor, a term which is said to mean highland.

The *Sifan* region is from 40 to 60 miles broad; it is a rugged, mountainous declivity from the lofty plateau of Khum to the low plain of Szechuen. Within it are the Takpa, and outside are the Gya-mi.

Horsok is a compound word used by the Tibetans to designate the nomades who occupy the whole northern part of Tibet, viz. that lying beyond the Nyen-ch'hen-thang-la range of mountains. These two races are the Hor or Horpa and the Sok or Sokpa. The Hor lying on the western half also occupies much of Little Bokharia and Zangaria, and the Sok dwell on the eastern half and the wide adjacent country called Koko-nor and Tangut by Europeans, and Sok-yul by Tibetans. South of the Thang-la chain are numerous scattered families of both tribes, dwelling amongst the Bodpa or Tibetans proper. The Chinese call the Horpa Kao-tse. The Horpa are a Turk race.

The term *Kao-tse*, used by the Chinese to designate the Horpa, is supposed by Mr. Hodgson to be the Khach'he of the Tibetans, literally 'wide mouths.' Mr. Hodgson thinks the Sokpa of the Tibetans the same as the Olet and Kalmuk of Remusat and Klaproth.

The *Chakpa* or Jagpa and the *Drokpa* or Brogpa are Bhot occupants of the central part of Northern Tibet. Mr. Hodgson supposed them a mixed race joined together for predatory purposes. They are robber bands between the Horpa and Sokpa, recruiting from the Bodpa (Tibetans proper), Horpa, Sokpa, and Drokpa. The Drokpa also dwell between the Horpa and Sokpa. They are distinct from the Dukpa or Brukpa of Bhutan.

KASHMIR DOMINION, as at present formed, comprises the provinces of Jamu, Kashmir, Kishtwar, Zanskar, Ladakh, and Balti, an area of 68,000 square miles. The territory is ruled by a Rajput sovereign of the Dogar clan; but the people of the vale of Kashmir are of Aryan descent. The hills westward from Kashmir are inhabited by Kukka and Bumba, but towards the river are Afghan tribes. In the hills south of Kashmir and west of the Jhelum to Attock and Kalabagh on the Indus, are Gukkar, Gujar, Khatir, Awan, Junjooh, and others. Eastward of Kashmir are the Bhot race, Balti, and Ladakh. The races and broken tribes of the region will be found noticed under 'Kashmir;' it will suffice here to mention that the more prominent are, Kashmiri, Dogra, Brahman, the Bamba, the Khatri, the Thakur, the Ch'hib, Jat, Gukkar, Gaddi of Jamu, Dard, Dom, Megh, Batal.

Skardo or Iskardo.—Little Tibet is so called by the people. It was conquered in 1840 for the raja Gulab Singh, by his general Zorawar Singh with his Dogra troops. Skardo is called by th Lamas of Ladakh, Skarma-m Do, meaning the en closed place or the starry place. Skardo is als designated Balti, Balti-yul, Balor, Palolo, an Nang Kao. Iskardo is a Muhammadan corruptio of the Tibetan name Skardo, or Kardo, as it is ver commonly pronounced. The Muhammadans o Asia, as a rule, are unable to pronounce tw consonants together, but prefix a vowel, as Mr i-Smith, Mr. i-Stewart.

rGylfo, the title of the ruler of Iskardo or Littl Tibet, is derived from two Balti words, rGyl powerful, and Fo, a man. The queen is style rGyl-mo. Mr. Vigne points to this as the origina of the title of Guelph, belonging to the roya family of Great Britain, and of the term Gylfe koniger, still used to designate the old kings o Denmark.

The mountains which surround the Iskardo plai rise at once with great abruptness, and are ver steep and bare. The houses of Iskardo are ver much scattered over a large extent of surface, s that there is no appearance of a town. The peopl occupying Little Tibet are the Byltæ of Ptolemy They have on the east the Khor country, which i inhabited by a people supposed to be the Chaur anoi-Scythæ of Ptolemy.

The *Balti* of Iskardo also dwell in the valley o the Indus, above the junction with the Gilgi river. Skardo is a Bhot tract, but the people ar Shiah Muhammadans. Their features indicate Tibetan origin, and their language is decidedly so They are a quiet people, and the Kashmir rule has enlisted many of them. The people are strong and hardy; they grow corn and cut water-course like the people of Rongdo, irrigating the land an using manure. They are fond of out-of-doo manly games.

Khor, a territory S.E. of Ladakh and eastward of the Byltæ. Its people are supposed by A Cunningham to be the Chauranoi-Scythæ o Ptolemy.

Nubra, *Pangong*, and *Rodok* districts, in th basin of the Shayok river and its affluents, lie on the S. flank of the Kouen Lun, from Balti to Nari, and have Ladakh as their southern boundary. With the exception of Nari, this is the most lofty and most sterile part of Tibet, the axis of the Kouen Lun being probably upwards of 18,500 feet, the valleys 16,000 to 17,000 feet, and numerous peaks rise 20,000 to 23,000 feet. The Kara-korum pass is 18,300; the salt Pangong lakes, 13,400 feet. The *Changpa* are a semi-nomade tribe near the Pangong Tso pass. They dwell, in their grazing grounds, under huts (galkol) made of the yak's hair. The people there call themselves Bhot.

Chango are a tribe of Hungrung Tartars occupying 378 square miles.

Chang-Thang dwell on the northern plains, to the north of Ladakh, supposed to be the Chatæ-Scythæ of Ptolemy.

The *Dras* district extends from Zojila to Chanagund. Dras adjoins Kashmir, the intercommunication being by the Zoji pass, a remarkable depression of 11,300 feet, through which flow the moist winds of Kashmir; and Dras is the most humid and fertile province of Tibet. Dras, its capital, is 10,150 feet above the sea, and consists of half a dozen hamlets dispersed over the inequalities of a spacious basin in the close-set hills.

Parang and *Zanskar*, *Piti* and *Guge*, are Tibetan districts; *Piti* and *Hungrung* are two valleys. That of the Piti river is entered from Kanawar by the Hungrung pass, elevated 14,800 feet; the Parang pass is 18,500, and leads over the range dividing the Parang from the Piti rivers. All east of Piti is Tibetan.

Zanskar occupies the north slope of the main Himalayan chain, parallel with Kishtwar on the south. Padum, the capital, is 12,000 feet above the sea.

NEPAL is an independent kingdom in the Central Himalaya, extending for 500 miles along the Himalaya, from the western extremity of Sikkim to the eastern border of Kamaon, from which it is separated by the river Kali. Its capital, known as Khatmandu, is called Yi-des by the Newar, and by the Parbattiah or Pariah race it is known as Kultipur. It is situated at the junction of the Bhagmutty and Bishmutty, is 4000 feet above the sea, and about 30 miles from the plains of India. The valley of Nepal intervenes between the snowy range and the valley of the Ganges, and has been a refuge in which Aryan and Bhot tribes have found a shelter, and notice of them will be found under Nepal, sufficing it here to mention that the ruling tribe, the Khas or Sahi, form part of the martial Gurkha race.

BHUTAN, on the N.E. of British India, is situated between lat. 26° 30′ and 28° N., and long. 88° 45′ to 92° 25′ E., and occupies from the southern declivities of the great central ridge of the Himalaya mountains to the foot of the inferior heights which form a talus at their base, and constitute the natural northern boundary of the Assam valley eastwards from the Sikkim to where the Brahmaputra passes through the mountains. Bhutan is one of the long narrow states lying upon the southern slopes of the Himalaya; the territory consists of a number of rough transverse chains of hills at right angles to the parent range, which forms the backbone of Asia, with precipitous valleys and glens, at the bottom of each of which runs a mountain stream, and the overlooking mountains are covered with snow in June and July.

In W. Bhutan, the mountain ranges are lofty and rugged, and the river courses very deep and generally narrow. At Panaka, the Pachu is only 3700 feet above the sea. The mountain mass, however, which descends from the axis of the Himalaya, to separate the Monas from the Subansiri, attains an elevation of at least 24,000 feet, as far south as latitude 28°. Three peaks upon this are visible from the Khassya mountains, and spurs descending from it were ascended to an elevation of nearly 12,000 feet by Mr. Booth in 1849, in a district north of Bishnath, in Upper Assam, which is inhabited by the Dophla race.

Bhutan is from Bhutant, the end of Bhot. Its capital is Tassisudon. The dominion is known to the Tibetans by several names,—Lho-pa-to, Lhonon-k'ha-zhi, and Lho-bruk-pe-yul, or simply Lho, the south. Lho-pa, therefore means a native of Bhutan, and this is the name by which the Bhutanese call themselves; but they are also known as the Duk-pa and the Bruk-pa. Duk means the sect of Lamaism prevalent, and ba or pa, of or belonging to. The Hindu shastras or sacred writings call the Bhutanese Pla-va, the Lepcha call them Pra. Dharma raja is the title of the spiritual head of Bhutan, and he is supposed to be an incarnation of Buddha.

Bhotia is the Sanskrit, and Tibetan the Anglo-Persian, name of the people who call themselves Bod-pa or native of Bod. The Newar of Nepal proper call the cis-nivean Bhotia, those south of the snows, by the name of Palu-sen, and the trans-nivean, those living beyond the snows. Thasen. The Chinese call the Mongol Tha-tha. Bhotia generally occupy Cachar, though some families are planted in the lower lands.

The population has eight principal and a few minor classes, all pure Mongolian, and in addition there are the Khampa, who live in tents and booths, and a vast number of Assamese and Bengali slaves. They are Buddhist, but eat the flesh of goats, sheep, and cattle. The poor people use wheat and barley. All classes use intoxicating liquors. The favourite drink is chong, prepared from wheat, barley, or rice; it has an agreeably acid taste.

The *Lhopa* is the dominant race, but they have a tradition that before they entered it, Bhutan, or at least the eastern part of it, was occupied by the Koch'h. The Lhopa are agricultural and industrious, employing artificial irrigation on their patches of soil in the valleys. They are also distillers, and make paper from the bark of the Diah tree. The Lhopa are tall, many being more than 6 feet high, and fairer than the people of the south of Europe. Hair black; eye small, black, with pointed corners, as if artificially stretched; eyebrow slightly shaded; eyelashes scarce; below the eyes, the face is broadest, and rather flat, but narrow from the cheek-bones to the chin; this character of the countenance being more developed in the characteristic Chinese farther east, to whose features this is the first approach. Their skins are remarkably smooth, and most of them arrive at a very advanced age before they can boast even the earliest rudiments of a beard; they cultivate whiskers, but the best they produce are of a scanty straggling growth.

The Lhopa are quarrelsome and cruel, but not brave; and Dr. Hunter says the rude, unlettered part are aimless, both morally and intellectually.

The higher classes are the Kham-pa, the Bhot-pa, and the Kushi.

The *Kampa* or *Kham-pa* are properly the Eastern Tibetans; but this nomadic tribe is spread widely over Tibet and a portion of China, and their name is also applied in Bhutan to the adjacent division of Tibet to the south of Tsang-po. The present royal family of Sikkim is a Kham-pa importation. A previous dynasty was the Tsang. Wang is a Chinese title equivalent to regulus, which has been adopted in Tibet, and the Bhutan class who bear it may probably be the descendants of the original Tibetan rulers during the Tsang dynasty.

The *Sangla*, the *Ramtang*, and the *Tebula* are inferior classes, who are not eligible for the higher offices of government. They are supposed to be remnants of the pre-Tibetan tribes of Bhutan, and to have been originally of the same stock with the Abor, etc., that is, the Gangetic race, although they have become assimilated to their Tibetan conquerors.

There are four dialects of Tibetan in use, viz. the Sangla, which is spoken south of Tassgong; the Bramhi in the north as far as Tongso; and the Galong and Bom-dang beyond the Bramhi, to the west.

The Bhutanese Lhopa, Dukpa, or Brukpa are an undoubted branch of the Tibetans in form, customs, and language, although they differ slightly from their trans-Himalaya relations. True Tibetans are spread over the higher habitable band of the mountains from Bhutan to Kamaon, or from the Dhansri to the Kali. They are called Rong-po, Siena, or Kath-Bhotia, Serpa, etc., but Rong-bo or lowlander is the name now applied by the Tibetans to the Bhotias or Tibetans on the southern side of the Himalaya, and it seems to have been formerly applied by the early Tibetan conquerors to some or all the Gangetic or Tibeto-Gangetic tribes.

The Lhopa or Bhutanese, from their unscrupulous marauding habits, are on bad terms with every one of their neighbours. Though nominally subject to Tibet, were the annual tribute withheld, it would not be inquired after, so anxious are the Tibetans to have no dealings with the Bhotia. For years all Bhotias entering Tibet were disarmed at the frontier, beyond which the tribute-bearers were permitted to proceed. The British annexed the Doars of Bhutan from the Lhopa in 1865; and the Sikkimese have, less than the Tibetans, to do with the Bhotia, whom they look upon as unscrupulous robbers, while to the east the Towang raja has to keep up a frontier force for the especial purposes of preventing Bhotia raids.

Tak or *Tak-pa* or Tak-poni is a district enclosed within the great bend of the Brahmaputra; it lies in a line from Lhassa to Jorhat in Assam, and overlies the north-eastern part of Bhutan. It is the country of the Tak race.

The Tak-pa language seems to be spoken only in the country of the Towang raja, on the upper habitable portion of the southern side of the Himalayas, to the east of Bhutan. It is more Sifan than Bhotian, though it has dialects of the latter at least on two sides of it. This province was conquered by the Tibetans.

SIKKIM, with 1600 square miles, consists of the valley of the Tista river, which with its tributaries drain the whole territory. Its great tributary is the Ranjit river, which, at first separated by a mountain range, joins it from the west, flowing for a short distance parallel to the plains, through a deep ravine not 1000 feet above the sea, to the north of an elevated transverse range. Being opposite to the Gangetic valley, it is open to the full force of the *monsoon*; its rains therefore are heavy, almost uninterrupted, and are accompanied by a dense fog and a saturated atmosphere. The rainy winds sweep almost without interruption up to the base of Kanchinjinga (28,178 feet), the loftiest mountain and most enormous mass of snow in the world. The snow-level is here 16,000 feet. The two principal sources of the Tista river are the Lachen and the Lachung; these run in two valleys, which are separated by a lofty snowy range projected to the south-west; the valleys are somewhat sheltered, and the perpetual snow-line rises to above 18,000 feet. From the level of the sea to an elevation of 12,000 feet, Sikkim is covered with dense forest of tall umbrageous trees. At 10,000 feet, on the summit of Tanglo, yew appears. There are in Sikkim about 2770 species of flowering plants, and 150 ferns. In the Darjiling district, in addition to the Europeans, Hindus, and Muhammadans from the plains, the population consists of Nepalese; of the Bhotia from Bhutan, Tibet, and Sikkim; of the Lepcha and Mechi, who are considered the prior occupants of Sikkim. The Rajbansi of Sikkim are the Koch or Kooch race, of the same descent as the raja of Koch-Bahar, on which account they call themselves Rajbansi. In the plains of Sikkim, the Rajbansi and Bengali are in equal numbers. The Mechi inhabit that portion of the Terai which lies under the hills. They are a migratory race, who live by cultivating the virgin soil. They have no caste distinctions.

The *Bhotia* race of Sikkim dwell in the valleys approaching the snowy range.

The *Mech* are the occupants of the Terai or sub-Himalayan range, who retain the manners of the mountaineers. Firing the forest is so easy in the drier months of the year, that a good deal of cultivation is met with on the spurs, at and below 5000 feet, the level most affected by the Lepcha, Limbu, and Sikkim Bhotia. The mountain slopes are so steep that the spurs or little shelves are the only sites for habitations between the very rare flats on the river banks and the mountain ridges, above 6000 feet, beyond which elevation cultivation is rarely if ever carried by the natives of Sikkim. The varieties of grain are different, but as many as eight or ten kinds are grown without irrigation by the Lepcha, and the produce is described as eighty fold. Much of this success is due to the great dampness of the climate; were it not for this, the culture of the grain would probably be abandoned by the Lepcha, who never remain for more than three seasons on one spot. The average rainfall at Naini Tal is 88 inches. Naini Tal is elevated 6500 feet on the last spurs of the Gogar, overhanging the plains of Rohilkhand. Almora is 15 miles farther than Naini Tal from the plains, and it is 5500 feet, but only 34 inches of rainfall. The fall at Darjiling is 165 inches. Oak trees, maple and other mountain trees, throw out great knots in the places to which the Balanophora attach themselves. These knots are hollowed out into wooden cups by the Lepcha of Tibet. Some of the Lepcha cups are supposed to be antidotes to poison; they are of a peculiar pale-coloured wood, and cost a great sum, but common cups cost only 4d. or 6d. They are all imported into Tibet from the Himalaya.

Darjiling, on the eastern end of the Himalaya, in lat. 27° N., and long. 88° E., is about 7168 feet above the sea. The tribes in and around Darjiling consist of Amatti, Bahir, Bhotia, Brahman, Chepang, Dhanuk, Dhanwar, Dhimal, Dom, Garo, Kewant, Koch, Lepcha, Limbu, Maralia, Mech, Murmi, Nepalese, Oraon, Rajput, Sanwar, Tharu.

The *Khu*, the *Magar*, and the *Gurung*, with a markedly Mongolian physiognomy, stature low, 5 feet 3 inches to 5 feet 8 inches; small hands. The Khu speak a Parbattiah or Sanskritic dialect of Hindi. The Magar and Gurung have separate dialects of their own, which are not Sanskritic. They are mountaineers, and make good soldiers.

The Bhotia, the Lepcha, and the Murmi have strongly-marked Mongolian features. The Bhotia and Lepcha are fair in colour, with powerful frames, feet and hands well developed, and they are active.

The *Murmi* are smaller in stature than the Bhotia and Lepcha. They speak languages of Tibetan origin.

The Limbu, the Kiranti, the Haiu, the Sanwar.

and the Chepang are mountaineers, of small stature, all of Mongolian type, which is most marked in the Limbu.

The *Michi*, the *Dhimal*, and the *Garo* inhabit the Terai or low lands at the foot of the mountains, and withstand the most deadly malaria. Their physiognomy is Mongolian, with a yellowish skin. They are not of the Hindu, Buddhist, or Muhammadan religions. They are not fond of soldiering.

The *Tharu* and *Dhanwar* live in the Terai. They are of a dark colour, are scarcely Mongolian in features, and they are either Buddhist or Muhammadans.

The Batur, Kebrut, the Amath, the Maralia, the Dhanuk, and the Dom live in the Terai, are dark coloured, and not Mongolians. They speak Hindi and Bengali, and follow Hinduism, but are deemed unclean.

The Koch'h or Rajbansi inhabit the Terai, Nepal, and Sikkim, and spread into the adjacent districts of Purniah, Rangpur, and Assam. They are of a dark colour, and follow Hinduism, but are deemed unclean castes.

Lepcha.—Sikkim and Darjiling is the land of the *Lepcha*, a Bhot race who are hemmed in between the Newar and other Nepal tribes and the Lhopa of Bhutan on the east, the Lepcha area being barely 50 miles in breadth, but they occupy an extent of about 100 miles from N.W. to S.E. along the southern face of the Himalayas, to the east and west of Darjiling, extending *i.e.* into Bhutan on the east and into Nepal on the west. Lepcha are also called the Deun-jong-maro. They are divided into two families, the Rong and the Khamba, but in physical appearance, in all essentials of language, religion, customs, and habits, they are now so amalgamated that they are to be regarded as the same people. Their traditions are that the Rong has always been in Sikkim, but there is no doubt that the Khamba came across the snowy range from Tibet into Sikkim in the beginning of the 17th century. Dr. A. Campbell believes that the Rong are of the same tribe and from the same locality in Tibet, but had emigrated long prior to the Khamba. The Khamba say they came from 'Kham,' a province of China, which they describe as about 30 days' journey to the east and north of Lhassa, and on the main road from that city to Pekin. The Lepcha are Buddhists, following the Lamas of Tibet and of their own tribe.

The Lepcha lama or priest can marry, and many of them engage in business. The Lepcha have a written character. The Lepcha have no caste distinctions, but they speak of themselves as belonging to one or other of the following sections:—Burphung Phucho, Udding Phucho, Thurjokh Phucho, Sundyang, Sugut, Tungyeld, Lucksom, Therim, Songme. They are gross feeders, eating all kinds of animal food, pork, beef, goat's flesh, mutton, the monkey, elephant, rhinoceros, the flesh of the cow, birds, and all kinds of grain and vegetables, fern tops, fungi, nettles, and mountain spinach. They are fond of fermented and spirituous liquors, a beer from the murwa, but are not given to drunkenness.

The Lepcha women perform all the field and house labour. The Lepcha man is idle, abhors all draft labour, but recently they have worked as chair-bearers, and in the tea plantations. The Lepcha do not marry young. They intermarry with the Limbu and Bhotia. The Lepcha bury or burn their dead. Their ailments are smallpox, rheumatism, and remittent fever, and goitre is known amongst them.

The Lepcha physiognomy is markedly Mongolian, stature short, from 4 feet 5 inches to 5 feet; face broad and flat, nose depressed, eye oblique, chin beardless, skin sallow and olive, with a little moustache on the lips; broad chested and strong armed, but small boned, with small wrists, hands, and feet. The Lepcha is honest, timid, and peaceful, with mild and frank features; a dirty, good-natured people, resembling in character the Mongol beyond the Chinese wall. The Lepcha throws over him loosely a cotton cloak with blue, white, and red stripes, and uses an overcoat with sleeves in the cold weather; a broad umbrella-shaped hat of leaves and a penthouse of leaves in the rains. The women dress in silk skirt and petticoat, with a sleeveless woollen cloak. The Lepcha man carries a long, heavy, and straight sword, serving for all purposes to which a knife or sword can be applied. They drink the fermented juice of the Eleusine coracana, murwa, an acidulous, refreshing, and slightly intoxicating drink, not unlike hock or sauterne in its flavour. They marry before maturity, the brides being purchased by money or service. The Lepcha, like the Borneo Dyak, kindle a fire by the friction of sticks.

The face is round, and the expression is remarkably lively and soft, which is the reverse of that of the Lhopa and West Tibetans, and their lively and inquisitive character does not belie it. The men have less muscular development than the Magar, Gurung, and Murmi, and other Parbattiah. They are fair, ruddy, and with Mongolian features, and have no beard. The women are proportionally short. They are poor agriculturists, and move from place to place, staying two or three years. The sword worn by every Lepcha is called Ban. It is the Chipsa of the Bhotia, a straight sword with a wooden scabbard, open along the side.

The *Limbu* is a border race in Sikkim and Nepal, but the Kirata, Kiranti, or Kichak as well as the Eaka and Rai are often included under this name; and Dr. Campbell informs us that in appearance they are very much alike. Limbu has therefore become the common appellation of the whole population of the mountainous country bordering between the Dūd Kosi and Konki rivers in Nepal, and they are also in small numbers eastwards to the Mechi river, which forms the coterminus of Nepal and Sikkim. The name is a dialectal variation from Ekthūmba. The Lepcha call them Tsang, in the belief that their original country was Tsang. The Limbu, Sanwar, and Chepang possess a small Mongolian type, strongest in the Limbu. The Limbu resemble the Rong, but are a little taller and more muscular, with the eye rather smaller; the nose also is somewhat smaller, with a somewhat high bridge. They are a hardy, hard-working race, engage in the cultivation of grain, and breed cattle, pigs, and poultry. They drink to excess. Their huts are made of split bamboo, and the roofs of leaves of the wild ginger and cardamom, guyed down with rattans. They have martial proclivities, and occasionally enlisted in the native army of British India. According to Dr. Campbell, the Limbu is

more pleasing to the ear than the Lepcha, being labial and palatal. If they ever had a written character it has been lost. They are partly Brahmanical and partly Buddhist; their great deity is called Shammung, but they have many minor deities. As a Limbu expires, the friends fire off a gun to give intimation to the gods; the body is burned, but they do not sacrifice or make offerings to the manes.

CEYLON ISLAND has an area of 24,702 square miles, and in 1881 a population of 2,759,738, of whom 1,469,553 were males and 1,290,185 females. It is under the rule of a Governor and Council, whose jurisdiction extends to Dependent Islands, with an area of 1060 square miles, comprising the Maldives, west of Ceylon, and the Cocos Islands, S.W. of Sumatra,—total area, 25,762 square miles. The population in 1844 was estimated at 1,442,062; in 1857 it amounted to 1,697,975, besides about 30,000 soldiers and foreigners. In 1871 the total population in the island was 2,406,262.

The mountain zone in the centre of the island is about 4000 square miles, its summits rising to between 3000 to 7000 feet, the highest mountain being Piduratalla galla, 8296 feet; Adam's Peak being 7353 feet; Neueraellia, 6200. The Mahaveliganga, the Ganga of Ptolemy's map, has a course of 150 miles to its embouchure at Trincomalee. The rich and well-watered delta between Colombo and Galle is an overgrown waste. The Singhalese, whose property it is, have covered it with cocoa-nut, bread-fruit, and jack-fruit trees, and on those they are content to live, or rather exist, passing the greater part of their time in sleep, while the women of their household work.

The races in 1881—

European,	4,836	Moormen,	184,542
Eurasians, Burghers,	17,886	Malays,	8,895
Singhalese,	1,846,614	Veddahs,	2,228
Tamils,	687,248	Others,	7,189

Arranged according to religion—

	Males.	Females.
Christians,	139,658	128,319
Buddhists,	888,357	809,713
Hindus,	328,779	264,851
Muhammadans,	111,339	86,136
Others,	1,420	866

Ceylon island has long been known to the people of the west, to Arabians, Africans, Jews, and Greeks. It is the Taprobane of the Greeks, which name appears to have been derived from Tamraparni (in Pali Tambapanni), a place said to have been near Putlam, where the Magadha colonists under Vijaya, B.C. 543, had landed, and afterwards it applied to the whole island. Tamraparni is also, however, the name of the principal river in Tinnevelly, opposite Ceylon. Milton writes of this people—

'From India and the Golden Chersonese
And utmost Indian isle Taprobane,
Dusk faces with white silken turbands wreathed.'

It has been several times overrun by conquering nations, and has also been aggressive. It was conquered by Vijaya B.C. 543; but in the early centuries of the Christian era there were wars with the Chola of the Peninsula, with alternate fortunes, and in the 12th century A.D. king Prakraina Bahu defeated the kings of the Southern India States, and also conquered Cambodia. In the 15th century A.D. a Chinese army penetrated to the hill country, defeated the Singhalese forces, and captured the king, whom they carried to China. Its northern portion was twice captured by the Tamil race; and in A.D. 1505, when the Portuguese arrived, it was divided under seven separate rulers. In 1656 the Dutch finally expelled the Portuguese, and the British landed in Ceylon in 1796. In 1815 the last king of Kandy, Vikrama Sinha, a cruel monster, was deposed and banished to India by the British.

The *Singhalese* are comparatively few in the north of the island, in Jaffna, Vanni, and Manaar, but increase to the south, where they are 90 per cent. of the population. On the other hand, the Tamil race are most numerous in the northern districts,—Jaffna 271,000, Eastern Province 69,243; on coffee estates 115,092, and scattered through the island 78,314. The Singhalese are 69·40 per cent., and the Tamil 22·21 per cent.

Kandyans inhabit the hill country, and are a hardy, robust race, only recently intermingling with the low country. Their language is made up of three component parts,—Elu (or Singhalese pure), the Pali, and the Sanskrit. They possess an extensive literature, and their religion is Buddhism. The low country Singhalese are either Buddhists, Roman Catholics, or Protestants.

Among the Kandyans polyandry was prevalent till 1861, and the wife had the possession of all the brothers. The children call the eldest brother father. A man could bring in another, not a relation, to have joint marital rights with himself; indeed, the first husband could so introduce as many as the wife consented to receive as husbands. According to Polybius, polyandry was practised in ancient Greece, and in Book xii. we read that it was an old and habitual practice in Sparta. In Kandy, in the Beena marriage, the husband resided in the wife's house, and the woman shared the family inheritance with her brothers. The husband, in this marriage, could be dismissed summarily by the family of the wife. In the Diga marriage, the wife left her own house for that of the husband,—forfeited all claim on the property of her parents, but acquired some claim on that of her husband, and the wife could not obtain divorce, unless with the full consent of the husband. Divorces were constantly sought for by women on trivial pretences. A child born within nine months of the divorce, must be maintained by the husband. The Kandyans are larger men than the Singhalese of the coast provinces. They are exceedingly indolent and thriftless.

Tamil people have been residing in Ceylon from unknown times, but many are recent immigrants. Their main occupation is agricultural. The (coolie) labourers, who come over in large numbers from the continent during the coffee season, are Tamilar.

Tennent describes the *Veddah* as miserable objects, active but timid, athletic though deformed, with large heads and misshapen limbs. Their long black hair and beards fall down to the middle in uncombed lumps; they stood before him with their faces bent towards the ground, and their restless eyes twinkled upwards with an expression of uneasiness and apprehension. The children were entirely naked, with misshapen joints, huge heads, and protuberant stomachs; the women were the most repulsive specimens of humanity he had ever seen in any country.

The forest Veddah dwell in hollow trees or caves.

subsist on game, which they kill with rudely-formed bows and arrows, wandering from jungle to jungle, as the game becomes scarce. They will not hold the slightest intercourse with any natives but those of their own tribe. The village Veddah dwell in certain districts, hold but slight intercourse with the other inhabitants of the island, will not intermarry nor mix with them, but can make themselves understood to the Singhalese.

The forest Veddah are dexterous hunters, and especially skilful in snaring the wild elephants. The two sections of the tribe do not intermarry, as they mutually distrust each other. They have their own headmen, whom they elect and obey. They use bows and arrows, and clubs of iron and wood. In 1871 their number was reduced to 534, of whom 459 were in the Central Province. They occupy a district about 90 miles long and 45 broad in the south-eastern side of Ceylon, lying between the sea and the base of the Badulla and Dovah Hills. According to Mr. Sirr, they are a remnant of the Yakko, the original inhabitants of Ceylon, who, 2000 years ago, after the conquest of the island by Vijaya and his followers, returned into the wilds, as the Koli in Gujerat, the Bhil in Malwa, the Patuah in Cuttack, the Khond in Gondwana, and the Beda in Mysore retired before conquerors. The Bisadæ or Besadæ, which in mediæval Greek is called Vesadæ, are alluded to in the tract of Palladius de Moribus Brachmanorum, written about A.D. 400; and the same name is applied by Ptolemy to a similar race inhabiting Northern India. The Veddah, in drawing the bow, employ their hands and their feet. They are omnivorous, and eat carrion and vermin, roots, grain, monkeys, fruit, birds, bats, crows, owls, and kites, but refuse the bear, elephant, and buffalo. Their language is a dialect of Singhalese, free from Sanskrit or Pali, but the vocabulary is very limited, and they have recourse to gestures and signs. They have no temples, idols, altars, prayers, or charms, but have a devil and spirit worship. They cover their dead with leaves in the jungle.

Rhodia, according to one tradition, were hunters who, on the eve of a solemn occasion, failing to obtain game, etc., murdered a child and sent its dismembered body to the king; another and more probable tradition is to the effect that this caste persisted in eating beef after its use as food had been prohibited. Their own traditions make them descendants from a daughter of King Vera-kumba, who in anger with his daughter gave her to a scavenger. They are mentioned in the Rajavali, written B.C. 204, and in ch. xlii. of Mahawanso, A.D. 589. The tenth chapter of the Mahawanso mentions that, B.C. 437, the king Pandukabhaya employed them in Anuradhapura as scavengers. The native laws forbade a Rhodia to approach a temple of Buddha or the Hindu gods; to build houses, or to live in any abode enclosed within walls, nor even to cultivate the soil or possess land; and, even to this day, their dwellings are mere sheds. They were forbidden to approach, much less to touch or breathe upon, a caste man, and all things they touch are unclean. The men wander about in parties or tribes seeking their precarious subsistence. Their women perform feats of legerdemain, and tell fortunes, and their want of chastity is proverbial. Their numbers do not exceed a thousand, and they are principally in the Kandyan province, at Saffragam, Dombera, Wallepane, etc. Nominally Buddhists, they are also spirit-worshippers. Rhodia, Rodeya, or Rodda, in Singhalese, literally means filth. In their social degradation they resemble the Cagot and Caqueax, who from time immemorial have been held in abhorrence in the valleys of the Pyrenees and the plains of Bretagne, Poitou, and Guienne.

The Rhodia is of tall stature, head well formed, features straight and regular, nose long and not flattened, lips thin, and appearance intelligent. The features and head of an average Rhodia and Kinnaraya are nearly identical with those of the European races. The Rhodia's head is dolichocephalic. They are Buddhists and devil-worshippers, but are not admitted inside the temples. They are polygamists and polyandrists. They are all uneducated, and cannot count above 50. Their language, containing about 350 words, is peculiar. They bury their dead.

Gahalaya are a low-caste predatory race, near Matelle in Ceylon, who acted as executioners in the times of the Kandyan kings.

Gattaroo, a low caste race in Ceylon.

Moorman is the designation in Ceylon for all persons professing the Muhammadan faith, other than Malays and Arabs. The costume of the men is a long petticoat, fastened round the waist and reaching to the heels. Tortoise-shell combs are worn by men as well as women. In the numerous excesses into which European costume is carried, the size of the back comb worn by ladies has never attained that of the Singhalese men, who also wear a narrow long bent comb across the forepart of the head; the lighter-coloured shell is most esteemed by them. Five pounds is a moderate price for a tortoise-shell back comb, which increases in value according to the size and quality of the shell. Hair-pins of tortoise-shell are worn by the women, gold and silver being substituted for full dress. These hair-pins are among the articles purchased by passengers in the steamboats.

The European population consists chiefly of British immigrants employed in the civil and military services or on the coffee and tea plantations. *Burgher* is a term properly applicable only to white persons of pure Dutch descent, of whom there are now but very few in Ceylon; but the name has, by courtesy, been given to all those who in India are styled Indo-Britons, Eurasians, Anglo-Indians, East Indians, or, now rarely, half-castes, namely, the descendants of Europeans by native women, therefore a race of mixed European and native origin. In 1871 they numbered only 5771.

The *Singhalese* or Elu language, according to Rask, belongs to the Turanian family of speech, but Aryan and Dravidian elements are intermixed, and in Ceylon a remnant of Buddhists is still to be found who use the Pali scriptures.

Maldive Islands, Zabiyah-ul-Mohli, form a vast group, estimated at twelve hundred, extending southward from lat. 7° 6½′ N. to 0° 42′ S. These multitudinous islands and rocks have about 470 miles in length from N. to S., and 70 miles in breadth, the islands being formed into large groups which the natives call atoll or atollon. Sir Charles Lyell says the word is Malay. Of these atolls there are nineteen, and they appear to be the

summits of coral mountains. The inhabitants are Muhammadans, governed by a sultan or king, and engaged in trade and navigation. Their ships are from 50 to 200 tons, and they visit Penang, the continent of India, and Arabia. They became Muhammadans in the 16th century, but their wives are not strictly secluded. They are a timid, inoffensive people, using a language different from those of the mainland or Ceylon, and they possess three written characters,—the Dewihi and Hakura, written from left to right, and the Arabic, written from right to left. The men are rather short, of a dark-copper colour. They are expert navigators and sailors, have schools for teaching navigation, make and repair nautical instruments, such as the astrolabe and quadrant, and translate into their own language from the English books, the rules of navigation.

The **Laccadive Islands** are so called from two Hindi words, Laksha dwipa, hundred islands. They are also called the Divi or Amin divi islands, are off the coast of Malabar, and extend from lat. 8° 30′ N. to the parallel of 13° 52′ N. Most of the islands are low and surrounded by steep coral reefs. They form a group of fourteen small islands, partly under the British and partly under the Bibi of Cannanore. The people are of Malayala origin, but are now Muhammadans, and mostly adhere to the Aliya Santana law of inheritance, or that of maternal descent. They are poor, quiet, and inoffensive. They are taught Arabic and Bal-tite, a dialect of Malayalam. They carry on a small trade with all the coast of Western India, which they visit in boats up to fifteen tons burden, carrying tortoise-shell, sea-slugs, mats, shells, shark-fins, cocoanuts, and coir.

Five islands, Amini, Kadamat, Kiltan, Chetlat, and Bitra, with a total area of 6½ or 7 square miles, are attached to the South Canara district; and other five, Agathi, Kowrathy, Kalpeni, Androt, and Minekoi, with an area of 7½ to 8 square miles, are under the Bibi of Cannanore. All the islands have lagoons. The population numbered, in 1871, 13,495; a few read the Koran in Arabic. According to Lassen, the language of the Laccadives and Maldives belongs to the Turanian family. It is Malayalam written in the Arabic character. They catch fish, turtle, and the holothuria. Grave crime is almost unknown. Rats swarm on the islands, and a revenue officer introduced the mungoose, species of Herpestes, and large owls to keep them down, as the rats were destroying the grain crops on the ground and the cocoanuts on the trees. In 1871 the islands were flooded during a storm, and a steamer laden with rice was sent to them, and in 1875 an hospital assistant and midwife were sent.

Andaman Islands have an area of 880·2 square miles, and a population in 1881 of 14,628, of whom 7440 were convicts on the penal settlement. The Andaman Islands lie in the direct track of ships navigating the eastern side of the Bay of Bengal, and have been twice actually occupied by a British establishment. Their inhabitants, the Mincopi, had the feeling of hostility and aversion towards strangers which is common to all the wilder Papuan tribes. They long continued to be fc kraina erly hostile to the colony of 1855. They are India ges of a type lower than that of any of all the the 15th races in the south and east of Asia, or even trated to the whole world Few of them exceed five feet in height. Their lower limbs are spare and ill-proportioned, their bellies protuberant, the complexion deep black, and the hair woolly. They have also a taste, so characteristic of the wilder Papuans, for daubing their heads with red ochre. They have canoes, but use small rafts when they wish to visit the islets. Both sexes go entirely naked, for the pieces of fringe that they wear about them are rather intended for ornament than as a covering. They obtain fish by descending to the shore at low water and spearing those that are left among the reefs by the receding tide, also shooting them with bows and arrows, and catching them with small hand-nets, and depositing them in long wicker baskets which they carry slung from their shoulders. All these are characteristics of the wilder coast Papuans, especially those who formerly occupied Tasmania, to whom, indeed, the Mincopi bear a resemblance so striking as to excite surprise that two tribes who must have been separated during many ages, and who reside in climates so different, should be distinguished by precisely the same characteristics. The only point of difference that can be detected consists in the knowledge on the part of the Andamans of the use of the bow and arrow, which was either never known to the Van Diemen's Land natives, or had been neglected in favour of the dart or throwing spear, which is far better adapted to the open nature of their country.

A large number of Mincopi who visited Ross Island during the Editor's stay in 1863 evinced great facility in imitating vocal sounds. They (Mincopi) roam in tribes, who speak different dialects unintelligible to each other; one of their dialects has been called Bojingijida. The tribes are at enmity with each other. The inhabitants of the Southern Andaman erect no houses, those of the Little Andaman erect beehive huts of the rudest character. Their marriage ceremony is extremely short and simple; their dead are interred immediately after death, or placed on a raised platform, and the site where the death occurred is abandoned. After two months, the bones of the deceased are cleaned and distributed, to be suspended round the neck, seemingly as charms. Women have sometimes a slight cincture of leaves, a bunch of which is suspended from the waist-belt behind. There are kitchen middens, some of great dimensions, one being 300 yards long, 50 yards broad, and 10 feet high, composed of shells and the bones of birds. The zoology is identical with that of Burma.

The **Malay Peninsula** is also known as the Eastern Peninsula, to distinguish it from the Western Peninsula of India. It is a long, narrow, mountainous tract, varying in breadth from 50 to 150 miles, and about 700 miles in length, on the east from Bankok at the head of the Gulf of Siam, in lat. 13° 58′ 30″ N., and long. 100° 34′ E., and on the west from the Tavoy river to Cape Ramunia, in lat. 1° 22′ 30″ N. The mountains of the interior rise 5000 and 6000 feet in height above the sea, one of them, Ladang, which the Portuguese named Mount Ophir, being 5600 feet high. The metallic ores obtainable are gold and tin, the latter in great abundance, and it is probably from the gold obtainable that the Peninsula has been supposed to be the Aurea Chersonesus. Newbold says (i. p. 431) that the

old obtained from the Malay Peninsula amounted
1 one year to 19,800 ounces.

The Portuguese and the Dutch have at times
eld possessions there, but the former were driven
ut by the latter nation, who ceded all to Great
